THE LIVES OF THE Moſt Eminent PERSONS

Who have flouriſhed in

GREAT-BRITAIN and *IRELAND*,

From the earlieſt Ages, down to the preſent Times.

G.

GATACRE, or, as he wrote his name in the latter part of his life, GATAKER (THOMAS), a profound Scholar, an acute Critic, an able Commentator, a famous Preacher, and one of the Aſſembly of Divines in the XVIIth century. He was deſcended from a very ancient family in the county of Salop; but his father, being a younger brother, was intended for a learned profeſſion, and by ſome very ſingular accidents was determined to take Holy Orders, and in proceſs of time became domeſtic Chaplain to that potent nobleman Robert Dudley Earl of Leiceſter, and Rector of the pariſh of St Edmund the King in Lombard-ſtreet (*a*), where, by his zealous preaching, he merited the title of a man of quick parts, and ſincere attachment to the Proteſtant religion [*A*]. His mother's name was

(*a*) Fuller's Worthies, Shropſhire, p. 3.

[*A*] *To the Proteſtant Religion.*] As to the name of this family, it is certain that it has been written both ways, Gatacre and Gataker, but the laſt ſeems to have been the old manner of ſpelling it, agreeable to the name of the village in Shropſhire, from whence it was taken (1); and it was very probably, upon this account, that the learned man, whoſe article is before us, departed from his father's manner of ſpelling; and, inſtead of Gatacre, wrote himſelf Gataker. As to his father, we have, ſo far as it goes, a very fair account of him, from the pen of Dr Thomas Fuller, which, as it is very ſhort, and, for it's ſubſtance, can ſcarce be reduced into a leſs compaſs, we will give it in his own words (2).

(1) Villare Anglicanum.

(2) Fuller's Worthies, Shropſhire, p. 3.

'Thomas Gataker, younger ſon of William Gataker, was a branch of an ancient family, ſo firmly 'planted by divine providence, at Gatacre-Hall, in 'this county, that they have flouriſhed the owners 'thereof, by an noninterrupted ſucceſſion from the 'time of King Edward the Confeſſor. This Thomas 'being deſigned a ſtudent for the Law, was brought up 'in the Temple, where, in the reign of Queen Mary, 'he was often preſent at the examination of perſecuted 'people. Their hard uſage made him pity their per'ſons, and admirable patience to approve their o'pinions. This was no ſooner perceived by his pa'rents, being of the old perſwaſion, but inſtantly they 'ſent him over to Louvain in the Low Countries, to 'win

was Margaret Pigott, deſcended from a very worthy family of that name, ſeated in Hertfordſhire (*b*). He was born in the parſonage-houſe of St Edmond the King in London, September 4, 1574, as he tells us himſelf (*c*) in his ſhort memoirs of his own life, written at the requeſt of a friend [*B*]. He received the firſt tincture of letters in his father's houſe, and gave very early marks of an uncommon genius, a moſt retentive memory, and ſurprizing application (*d*). He paſſed through the Grammar-ſchool by that time he was ſixteen, and in the year 1590 he was ſent to St John's college at Cambridge, where he diſtinguiſhed himſelf by his indefatigable diligence, being one of thoſe ſtudents who conſtantly attended the Greek lecture read by the famous Mr John Bois in his bed (*e*); and, many years after, Mr Gataker ſhewed that worthy perſon the notes he had taken at thoſe lectures, and, when he had raiſed himſelf to a high character in the learned world, gratefully acknowledged the aſſiſtance he had received from that learned perſon, in acquiring an accurate knowledge of the Greek tongue, and the helps he had from Mr Edward Lively in the Hebrew (*f*), adding thereby, to the reputation acquired by their proper labours, the credit of having had ſo extraordinary a perſon for their pupil. He had not been long at college before he loſt his father (*g*); but the early hopes he had given of his future proficiency, procured him ſuch aſſiſtance from his friends as enabled him to proſecute his ſtudies, which he did with ſuch ſucceſs that he was choſen a ſcholar on that foundation, and in due time commenced Maſter of Arts with ſingular applauſe (*h*). His learning and piety was by this time ſo conſpicuous, notwithſtanding his reſerved temper and great modeſty, that he was choſen, by the truſtees appointed by the Counteſs of Suſſex foundreſs of Sidney college, a Fellow of that foundation before the college was finiſhed (*i*). This unuſual circumſtance gave occaſion to an offer made him, which he accepted, of reſiding at the houſe of William Ayloffe, Eſq; afterwards Sir William Ayloff, Bart. at Barkſted, or Braxted Magna, in the county of Eſſex, that worthy perſon deſiring to perfect himſelf in the knowledge of the Hebrew tongue, which Mr Gataker undertook, as alſo to inſtruct his eldeſt ſon in polite literature (*). While he reſided in this family, he was deſired by Mrs Ayloffe, who was the daughter of John Sterne, of Melburne in Cambridgeſhire, Eſq; and a Lady of excellent ſenſe as well as unaffected piety, to read a chapter every morning in the Bible; which he very willingly did, expounding the ſenſe from the original languages with much perſpicuity, and, when he had ſo done, raiſing practical obſervations (*k*). It was in conſequence of this daily exerciſe, that, by the earneſt perſwaſion of ſeveral eminent perſons, he was at laſt prevailed upon to enter into Holy Orders (*l*) [*C*]. When Sidney College was compleated, and in a condition to

'win him to a compliance to the Popiſh religion; and, 'for his better encouragement, ſettled on him an 'eſtate of one hundred pounds per annum, old rent. 'All would not do. Whereupon his father recalled 'him home, and revoked his own grant to which his 'ſon did ſubmit, as unwilling to oppoſe the pleaſure 'of his parents, though no ſuch revocation could take 'effect, without his free conſent. He afterwards di'verted his mind from the moſt profitable to the moſt 'neceſſary ſtudy from Law to Divinity; and finding 'friends to breed him in Oxford, he became the pro'fitable Paſtor of St Edmond's in Lombard-ſtreet, Lon'don, where he died, Anno 1593.'

(3) Newcourt's Repertorium, Vol. I. p. 344.

Another writer furniſhes us with thoſe dates (3), which in this account are omitted. 'Thomas Gataere 'was Bachelor of Arts of Oxford, where he continued 'for ten or twelve years, and was afterwards of St Ma'ry Magdalen college in Cambridge, where he con'tinued for the ſpace of four years, or thereabouts. 'He was half a year in Louvain, at the beginning of 'Queen Mary's reign. He was ordained Deacon by 'the Biſhop of London, Auguſt the fourth, 1568, and 'Prieſt, by the ſame Biſhop, October the twenty-firſt 'following. He was admitted Vicar of Chriſt Church 'in 1576, which he reſigned in 1578.' Some fortune, though but a ſmall one, he left behind him, but many friends, more eſpecially amongſt the great men of the Law, with whom he had been in the earlier part of his life a fellow-ſtudent, and who, on that account, were afterwards very ready to teſtify their reſpect for his memory, by affording countenance and expreſſing kindneſs for his ſon.

[*B*] *Written at the requeſt of a friend.*] It would afford great ſatisfaction to ſuch as expend their own lives in endeavouring to do juſtice to the memories of others, if they could be thus furniſhed with hints ever ſo ſhort, of the principal facts and dates, from the pens of thoſe whoſe virtues they celebrate; ſome perhaps relying upon the ſplendour of their fame or fortune, may conſider this as unneceſſary, and yet Cardinal Wolſey, who wanted neither, might perhaps have entitled himſelf to a father, in a ſomewhat better ſtation than that of a Butcher (4); if inſtead of deſpiſing calumnies, he had condeſcended to refute them. Others conſider this as a piece of oſtentation, and ſo to avoid being thought vain, leave it not in the power of poſterity to do them juſtice.

(4) See Fiddes's Life of Wolſey.

This learned perſon had notions perfectly right in this particular, and has thereby ſaved us a great deal of trouble. His old friend and his ſon's tutor, Mr Richard Dugard, having quitted the Univerſity, and retired to a living of his in Lincolnſhire, where he ſpent his laſt years in piety and peace, formed a very laudable deſign of writing the lives of ſuch as had been fellows of Sidney College, a title he once enjoyed, and to which he was a conſiderable benefactor (5). Amongſt thoſe to whom he applied upon this occaſion, Mr Thomas Gataker was one, who gave him in a very narrow compaſs, a ſuccinct account of the principal events of his life, from his birth, to the ſeventy-ſecond year of his age, which ſhort memorial coming into the hands of his ſon, the Reverend Mr Charles Gataker, he communicated it to the world, when he publiſhed ſome additional books of Miſcellanies from his father's papers (6). Upon theſe memoirs, written in his own hand, was the following authentick certificate.

RI. DUGARD.

[*C*] *To enter into Holy Orders.*] In the ſpace of a year, as our author himſelf informs us, he went through all the Prophets in the Old Teſtament, and all the Apoſtolick Epiſtles in the New (7). While he was thus employed, the very Reverend Dr John Sterne, ſuffragan Biſhop of Colcheſter, viſiting the miſtreſs of the family to whom he was nearly related, happened to be preſent at this exerciſe, when Mr Gataker was explaining the firſt chapter of St Paul's Epiſtle to the Epheſians. And the Doctor being ſatisfied with the performance, and admiring the endowments of Mr Gataker, exhorted him

(7) Narrative of the Life and Death of Mr Gataker.

to receive thoſe who were to inhabit it, Mr Gataker, as his duty required, repaired thither, and commenced Tutor with great ſucceſs, and, amongſt others, Mr John Hoyle and Mr Thomas Pell, who became both of them afterwards Fellows of the college, were his pupils (*m*). While he was engaged in a collegiate life, he concurred with the Rev. Mr Abdias Aſhton, of St John's, and the Rev. Mr William Bedell, of Emanuel college, afterwards the famous Biſhop of Kilmore in Ireland, in a very pious and laudable deſign of preaching every Sunday in the adjacent country, where the people were in want of able Miniſters (*n*). Mr Gataker, in proſecution of this deſign, repaired every Sunday for ſix months to the ſeat of Sir Roger Burgoigne, and preached in the pariſh-church of Everton, a village ſeated on the confines of the counties of Cambridge, Bedford, and Huntingdon, the Vicar of which was commonly reported to be one hundred and thirty years old, but was certainly diſabled from performing his function, by age and infirmities (*o*). At the expiration of this time he was prevailed upon, by Mr Aſhton beforementioned, to reſide in the houſe of Sir William Cooke, near Charing-Croſs, as his Chaplain (*p*), Mr Gataker having, for certain reaſons, determined to leave the Univerſity and fix in London. He had not been long there, before his admirable talent in preaching gained him ſuch reputation, that it was propoſed to him to take ſome neceſſary ſteps in order to be choſen Preacher to the Honourable Society of Lincoln's-Inn; but to this, from his innate modeſty and diſtruſt of his own abilities, he was very little inclined, tho' he was ſure of the patronage of one of the firſt perſons in the Law, who had a great influence over that Society, and who was ſo far from thinking him unfit for the office from his backwardneſs, that he actually procured him to be choſen, without his taking any meaſures at all for that purpoſe (*q*) [*D*]. He held this honourable employment, tho' attended with but a very moderate ſalary, at firſt but forty, and at laſt not exceeding ſixty, pounds per annum, and punctually performed the duties of his function for ten years. In 1603 he went down to Cambridge to take his degree of Bachelor of Divinity; and it ſo fell out, that he preached at St Mary's on the very day that the news came of the death of Queen Elizabeth, when, by the direction of the Vice-Chancellor, he prayed for the preſent Supreme Governor, it being thought unſafe to name King James, till they received advice of his acceſſion by authority. About this time an alteration was made as to the hour of the lecture on the Lord's day at Lincoln's-Inn, occaſioned chiefly by Mr Gataker's taking notice in one of his ſermons, that it was as lawful for the huſbandman to follow his tillage, as for Counſellors

(*m*) Narrative of the Life and Death of Mr Gataker.

him inſtantly to take Holy Orders, whereby thoſe gifts might be authoriſed for publick uſe, and offered him his aſſiſtance in that buſineſs. But he well weighing the burthen of that calling, and modeſtly judging of his own abilities, thanked the doctor for his kind offer, but deferred the matter to further conſideration. Yet afterwards, by the advice of the Reverend Mr Henry Alvey, formerly his tutor, and the reiterated ſollicitations of Dr Sterne, he conſented to be ordained by that ſuffragan (8), and this ſeems to have been before his return to Cambridge in order to take poſſeſſion of his fellowſhip in Sidney College.

(8) Diſcourſe Apologetical, p. 33.

[*D*] *At all for that purpoſe*] It fell out by accident, that ſome of the members of this very learned ſociety, had been amongſt the number of his auditors (when he preached as his manner was occaſionally for any of his acquaintance) and being exceedingly pleaſed with his performance, could not help wiſhing for an opportunity to hear him oftener. Thoſe gentlemen offered him their aſſiſtance upon the vacancy, and alledged the facility of his introduction to that place, by the Lord Chief Juſtice Popham's intereſt, whom they knew to have had a great reſpect for Mr Gataker, as well as for his father, who had been his intimate friend and contemporary in the ſtudy of the Law (9). But our author, according to his uſual modeſty, declined the undertaking, and reſiſted the importunities even of his friend Mr Stock, till Dr Montague, maſter of Sidney College, repairing to London, and being acquainted with the deſign in hand, though he had it in his thoughts to invite Mr Gataker back to the College, that he might read an Hebrew Lecture, which had a ſalary annexed by the Lord Harrington, preſſed him with arguments and authority, encouraged him againſt his own diffidence, and gained him at laſt to conſent, that, without any ſuit made by him, the Lord Chief Juſtice Popham, ſhould recommend him to that Society (10). Thus he was choſen preacher of Lincoln's-Inn, towards the cloſe of the reign of Queen Elizabeth, and was much admired and careſſed there, when there were ſome perſons of the firſt character for integrity, as well as proficiency in the Laws, who were Benchers of that Houſe. He tells us himſelf, in the laſt year of his life, which ſhews at once the ſtrength of his memory and underſtanding, as well as the chearfulneſs of his temper, a very pleaſant paſſage upon this ſubject of his entertainment and converſation at Lincoln's-Inn. The truth is, ſays he, mine auditory there, or the generality of them, were not a people that affected change, either novelty or variety, but reſted well ſatisfied with my conſtant courſe and tenour of teaching, and very ſeldom therefore brought in any to preach in [illegible] room, in ſo much, I may truly ſay it, that ſcarce above twelve ſermons in all my ten years with them, were preached there by any beſide myſelf. Nor were they addicted to ſtray much abroad, one or two, taken much with Dr King, then Dean of Chriſt Church in Oxford, and parſon of St Andrew's in Holborn, uſed to repair thither to hear him, when they knew that he preached, and ſome few would now and then ſtep to Paul's Croſs. Among whom, that pleaſant gentleman Mr Thomas Hitchcock, though it were not frequent with him. Being miſſed one day at Chapel, by ſome of thoſe that uſed there to ſit near him; and coming late into the hall at dinner, and being thereupon demanded by one of them where he had been ſtraying abroad? I have been, quoth he, at Paul's Croſs. Thou wenteſt thither ſure to hear ſome news, ſaid the other. No truly, replied he, I went upon another occaſion, but I learned that indeed there, which I never heard of before, how the Aſs came by his long ears; for the preacher there, told us a ſtory out of a Jewiſh Rabbin, that Adam after he had named the creatures, called them one day again before him, to try whether they remembered the names that he had given them; and having by name, cited the Lion, the Lion drew near him, and the horſe likewiſe; but then calling to the Aſs in like manner, the Aſs having forgotten his name, like an Aſs, ſtood ſtill; whereupon Adam having beckoned to him with his hand, ſo ſoon as he came within his reach, caught him with both hands by the ears, and plucked him by them ſo ſhrewdly, that for his ſhort wit, he gave him a long pair of ears. Upon this ſtory told them, one of them told him he was well enough ſerved for his gadding abroad, he might have heard better and more uſeful matter, had he kept himſelf at home.

(9) He was alſo ſupported by Mr Crew, afterwards Chief Juſtice.

(10) Thomæ Gataker vita. Diſcourſe Apologetical, p. 43.

[*E*] *In*

lors to confer with their clients and give advice upon that day. This admonition was well received, and, inſtead of preaching at ſeven in the morning, as the practice had always been, he was deſired to preach at the uſual hour of morning ſervice. The Wedneſday's lecture was alſo transferred to Sunday in the afternoon; and this proviſion was made, that the ſpare hours in which the clients came to their Lawyer's chambers, ſhould be better employed. He was afterwards preſſed by ſome of the Society to take his Doctor's degree, which he declined becauſe he very well knew that he had not an income anſwerable to the dignity; and beſides the taking it was expenſive, and therefore he very wiſely choſe to remain undiſtinguiſhed, rather than debaſe the title or diſtreſs himſelf. He did not however leave Sir William Cook's family entirely, to whoſe Lady he was nearly related, but in the vacations went down to their ſeat in Northamptonſhire, and during his ſtay there preached conſtantly, ſometimes in their domeſtic chapel, and ſometimes in the pariſh church (r). In this he acted purely from the motive of Chriſtian piety, and without any view to worldly conſiderations, as very clearly appeared from an extraordinary circumſtance that does peculiar honour to his memory, and of which the reader will find ſome account in the notes [E]. His learned preaching in the chapel of that honourable Society, where he was fixed when in London, as it gave them much ſatisfaction, ſo it gained him no ſmall reputation, and might alſo have procured him conſiderable preferment. Sir Roger Owen would very willingly have fixed him in Shropſhire, and Sir William Sedley offered him a good living, of which he was patron, in the county of Kent, with which he might have kept what he already held. But that did not agree with his notion of things; for neither arguments could perſwade, nor examples induce him, to conceive that one man, at one time, could diſcharge his duty, having two cures of ſouls (s). He therefore choſe to remain where he was, and in the ſtate he was; his ſalary indeed was ſmall, but the employment honourable, and his condition ſafe. Beſides, it afforded him a great deal of leiſure to purſue his ſtudies, in which he was very aſſiduous, more eſpecially in that of the Holy Scriptures in their original languages, in the Fathers of the firſt ages in the Chriſtian Church, and of the beſt writers amongſt the Greeks and Romans (t). At length, in 1611, he was, not without ſome difficulty, prevailed upon to accept of the Rectory of Rotherhithe, or, as it is uſually pronounced, Redriff in Surry (u), a living of conſiderable value, with which he was much importuned to keep his former office; but that not being conſiſtent with his principles, he abſolutely declined [F]. After he entered into the poſſeſſion of

(t) Narrative of the Life and Death of Mr Gataker.

(u) Ibid.

[E] *In the Notes.*] There are few things in private and perſonal hiſtory, that ſtrike a well-diſpoſed mind, more than the deſcription of a kind of virtuous ſtruggles, or generous conteſts between ſouls above the vulgar level, who ſhall ſurpaſs the other in contemning thoſe ſordid advantages, to acquire which, is the ſole, or at leaſt, the ſupreme buſineſs of mankind. Such a relation we meet with in the Engliſh narrative of our author's life, wherein the fact of his continuing to officiate in Sir William Cook's family, as is mentioned in the text, being premiſed, it is then added (11): 'And 'this he did with anapoſtolical mind, not for filthy lucre, 'but freely making the Goſpel a burthen only to the diſ'penſer. Yet ſuch was the devotion of that religious 'pair, that they alſo would not ſerve God without 'coſt; for they afterwards, in conſideration of thoſe 'pains freely taken, ſettled upon Mr Gataker, an an'nuity of twenty pounds per annum, which he indeed 'received for ſome few years; but after, for certain 'reaſons, remitted unto the heir of that family, for'bearing to uſe the right he had, and forbidding his 'executor to claim any arrears of that annuity. This 'is mentioned, the rather, that the generous temper 'of his chriſtian ſoul, aiming at the higheſt good of 'others, more than his own temporal advantage, and 'infinitely removed from ſordid acquiſition of gain, or 'the proſtitution of his ſacred function unto ſecular 'deſigns, may be oppoſed to ſtop the impudent cla'mour of ſome, whoſe conſciences being both gauled 'and cauterized, prompted them to calumniate him as 'guilty of covetouſneſs. But his own pen writ the 'beſt apology, as indeed, according to that of the Na'zianzen; they that give him a juſt character and due 'commendation, had need to have alſo his eloquence.' It is worthy of obſervation, as it is another mark of his being as free from vanity, as from the love of money, that though he takes notice in his own Latin Memoirs, of every thing that looks like obligation from Sir William Cook and his Lady, yet there is not a ſyllable of this annuity, or of the motives that induced him to renounce it; nor is there any mention of it in his Apologetical Diſcourſe againſt the ſlanders of William Lilly.

(11) Narrative of the Life and Death of Mr Gataker.

[F] *He abſolutely declined.*] He was conſtrained by a very rude attack upon his character, to acquaint the world in his life-time, with the means by which he obtained, and the motives inducing him to accept, this living, which were in a few words theſe (12). That rectory being void, a perſon of an infamous life uſed his utmoſt efforts to ſucceed in it, in order to which, he, before the incumbent's death, had made terms with the mother of ſome orphans, in whoſe hands the patronage was ſuppoſed to be; upon this, ſome of the religious inhabitants caſt their eyes upon Mr Gataker, to gain whom, they added to their ſollicitations, the mediation of his friend Mr Richard Stock. And when he had by many reaſons remonſtrated to him, that it was of importance to religion, that an unworthy perſon ſhould not intrude into the living; he was at laſt prevailed on to accept it. This being repreſented to Sir Henry Hobart, then Attorney-General, by Mr Randolph Crew, afterwards Lord Chief Juſtice. Sir Henry, who before favoured other pretenſions to gratify ſome tenants of his in the pariſh, readily embraced the motion concerning the ſettling of Mr Gataker there, and wrote a letter to the Biſhop for the removal of all obſtructions which lay in the way, or might hinder the acceptance of the preſentation of Mr Gataker, which ſigned with the hands of all the three brethren who had a right in that advocation, was tendered on his behalf. 'The report of his remove, was no welcome news to 'many of that ſociety of Lincoln's-Inn, who fain 'would retain him; ſome whereof offered an enlarge'ment of his maintenance, for an argument to keep 'him; and others, repreſented the conſiſtence of both 'employments, by the help of an aſſiſtant. But he 'that made not his miniſtry in ἐργασίαν τοῦ βίου, a 'mere trade of his living here (as Gregory Nazianzen 'complained, ſome did in his time, and too many 'in our times do) nor would multiply burthens, when 'he deemed himſelf unfit for the leaſt, would not be 'wrought to a new reſolution.' The ſubſtance of this paſſage, is alſo to be met with in our author's Latin memoirs (13), only he adds, that he recommended to them circumſpection in the choice of his ſucceſſor.

(12) Diſcourſe Apologetical, p. 44. Narrative of the Life and Death of Mr Gataker.

(13) Thomæ Gataker vita.

[G] *At*

of this living, he applied himſelf to the diſcharge of his paſtoral function with indefatigable diligence, notwithſtanding an infirmity with which he had been troubled from his youth, and to which very probably his late and early ſtudies did not a little contribute, which was an almoſt perpetual head-ach (*w*): He had not before this time committed any of his learned labours to the preſs; and yet his fame was ſo great, that he ſeems to have held a regular correſpondence with that excellent perſon Dr Uſher, afterwards the moſt learned Primate of Ireland, from whom he received many letters, and to whom he wrote frequently (*x*). Some few of his epiſtles have been preſerved, and afford ſufficient teſtimonies of the nature and extent of his ſtudies, and of his care in the enquiring after, and preſerving, the unpubliſhed works of ſome of our ancient Divines; and of which letters, as they contain likewiſe very ſhining proofs of that modeſty and humility which are not always obſerved to accompany a profound ſkill in critical learning, ſome notice will be taken at the bottom of the page [*G*]. He was very careful in his pulpit, to preach not

(*w*) Thomæ Gatakeri vita.

(*x*) See thoſe Letters in the notes.

[*G*] *At the bottom of the page.*] Among the other excellent qualities of Dr Uſher, one was his induſtry in procuring, and his readineſs in making publick whatever remains of ancient authors came to his hand, and Mr Gataker having the like ſpirit, and having been applied to on this ſubject, by ſome of that great man's correſpondents, gave occaſion to the commerce between them. The firſt letter of Mr Gataker, is dated at Rotherhith, March the eighteenth, 1616 (14), in which he informs Dr Uſher, that he had in his hands, a manuſcript, containing among others, certain treatiſes which he could not then learn to have been printed, viz. *Gulielmus de Sancto Amore, de periculis noviſſimorum temporum*; as alſo divers things of Robert Groſthead, ſome time Biſhop of Lincoln, viz. An oration delivered in writing to the Pope at Lyons, whereof he found a piece recorded in *Catalogus Teſtium, Excerpta quædam ex ejuſdem Epiſtolis*; *Tractatus de oculo morali*; *de modo confeſtendi*; & *Sermons quidam.*

(14) Archbiſhop Uſher's Letters, publiſhed by Dr Rich. Parr, p. 37, 56.

'Some of theſe, ſays he, peradventure, if they be 'not abroad already, might not be unworthy to ſee 'the light, nor ſhould I be unwilling, if they ſhould 'be ſo eſteemed to bend my poor and weak endeavours 'that way. But of that oration to the Pope, certain 'lines, not many, are pared away in my copy, tho' 'ſo as the ſenſe of them may be gueſſed and gathered 'from the context; and in the other treatiſes, there 'are many faults that cannot eaſily or poſſibly, ſome 'of them without help of other copies, be amended. 'My deſire is to underſtand from you, whether at your 'being here in England, for I wot well how careful 'you were to make inquiry after ſuch monuments; 'you lighted upon any of theſe, and where, or in 'whoſe hands they were. There are beſides in this manuſcript, a commentary on Auguſtin de Civitate Dei, 'and a Poſtil on Eccleſiaſtes, with a treatiſe *de Modo prædicandi*, but theſe two imperfect, of nameleſs authors, 'beſides *Gulielm. Paris de Præbendis*; & *Malachiæ Minorith. de Veneno ſpirituali*; which two laſt I 'underſtand to have been publiſhed.'

In another letter to Dr Uſher, dated at Rotherhith, June the twenty fourth, 1617, he writes thus: 'I eſteem myſelf much beholden unto you, as for your 'former love, ſo for this your late kindneſs, in vouchſafing me ſo large a letter, with ſo full inſtructions 'concerning this buſineſs, that I was bold to break 'unto you, though the ſame, as by your information 'it appeareth, were wholly ſuperfluous. True it is, that 'though not fully purpoſed to do ought therein myſelf, willing rather to have offered mine endeavours 'and furtherance to ſome others. I ſuppoſed that 'thoſe two treatiſes, viz. that oration of the Biſhop's, 'and that of *Wilhelm* of *S. Amore*, might not be unworthy the publiſhing, had the one been perfect, 'and the other not yet publiſhed; for as for that of *Pariſienſis de Præbendis*, I had heard to be already 'abroad, and Geſner, in his Bibliotheca, hath *Tractatus 2 Argentin. impreſſ.* 1507, *de collatione & pluralitate Eccleſ. beneficiorum*, which may be ſeen the ſame one 'of them with this, as it is ſaid to be *gemmâ precioſior*, 'in that manuſcript you ſpeak of; ſo to be *auro pret.* 'in mine. But I perceive now by your inſtructions, tha' one is out already, and the other perfect and 'fit for the preſs, in the hands of one better furniſhed 'and fitter for the performance of ſuch work than myſelf, whom I would therefore incite to ſend what he 'hath perfect abroad, than by his perfect copy, having 'pieced out mine imperfect one to take his labours out 'of his hand. I have heard, ſince I wrote to you by 'Mr Bill, that Sir Henry Savill is about to publiſh 'Biſhop Groſthead's epiſtles, out of a manuſcript remaining in Merton College Library. That treatiſe '*de Oculo morali*, I lighted lately on in another manuſcript, bound together with Groſthead *in Decalog.* 'having this title before it. *Incipit Liber de Oculo mo 'rali, quem compoſuit Magiſter Petrus de Sapiere Lemovinenſis.* And I find it cited by *Petrus Reginaldetus*, 'a Friar, in his *Speculum finalis retributionis*, under 'the name of *Johannes de Pecham*, as the author of 'it. Neither ſeemeth it, though written honeſtly, 'yea wittily and learnedly, as the wit and learning of 'thoſe times was, to be of the ſame frame and ſtrain 'for gravity, that the other works of that Biſhop are, 'which alſo maketh me ſuſpect thoſe ſermons that in 'my manuſcript go under his name, ſhould not be hi' 'having lately at idle times run over ſome of them. If 'I meet with your countryman Malachy, at any time, 'I will not be unmindful of your requeſt. And if any 'good office may be performed by me for you here, 'either about the impreſſion of your learned and religious labours ſo eſteemed and deſired, not of myſelf 'alone, but of many others of greater judgment than 'myſelf, or in any other employment that my weak 'ability may extend itſelf unto, I ſhall be ready and 'glad upon any occaſion to do my beſt therein. I 'lighted lately upon an obſcure fellow, one Hieronymus Dungerſheim de Ochſenfart, who in anno 1514, 'publiſhed a conſtitation, dedicated to George, then 'Duke of Saxony, of the confeſſion of the Picards, 'which, whether it be the ſame with that which Gretſer, ſaith Luther, ſet out with his preface, I wot 'not. The title of it is, *Totius quaſi Scripturæ Apologia*, and the beginning of it, *In ſummi Dei maximo 'nomine & terribili, Amen. Nos Homines in terræ orbe 'quanquam ad ima labaſti, &c.* And though it be 'not entirely inſerted by him in his anſwer, yet ſo 'much is picked out of it, and ſet down in their 'words, as may ſhew in divers main points, their diſſent from them, and conſent with us. But it is not 'likely that this author, though obſcure and not worthy the light, had eſcaped your curious eye. Get 'ner ſeemeth miſtaken in him, when he ſaith, *Hieronymus Dungerſhein, ſcripſit Apologiam ſacræ Scriptu 'ræ Beomorum*, for he wrote not it, but againſt it.' It may not be amiſs to obſerve, that notwithſtanding our author was diſcouraged, partly by his own modeſty, and partly by information, that the treatiſe which he had mentioned of that famous Biſhop of Lincoln, was fitted for the preſs by another and better hand; yet it did not then appear; but was long afterwards publiſhed by the indefatigable Mr Edward Brown (15), in a large work of his dedicated to Dr William Sancroft, then Archbiſhop of Canterbury, in which is contained, not only this oration of the Biſhop of Lincoln's, delivered by him in writing to the Pope, Innocent the Fourth, and ſeveral Cardinals at Lyons, in the year 1250, but alſo ſeveral other treatiſes penned by that pious and prudent prelate, upon points of the higheſt importance to religion; from whence it fully appears, that the corruptions of the Church of Rome, had long before the time of Luther, been both diſcerned and expoſed by ſome of the wiſeſt and moſt learned men in the Church, whoſe writings were carefully preſerved, and diligently read, notwithſtanding the prevalence of the Papal au-

 authority

not only ſound but ſuitable doctrine, ſuch as might edify any Chriſtian congregation; but at the ſame time, be more particularly fit and applicable to thoſe before whom he preached (y). His deſire of diſcharging his duty in this reſpect led him, amongſt other ſubjects, to diſcourſe of one both curious and critical, which yet he brought home to common uſe. This was *the nature of* LOTS, about which much had been written, and more ſaid; from whence, in the opinion of our judicious Gataker, ſome very great inconveniencies had proceeded, ſuch as that luſorious lots, or, in plainer Engliſh, all games of chance were abſolutely unlawful, which filled the breaſts of conſcientious people with unneceſſary ſcruples; as, on the other hand, the notion that there was ſomething ſacred and ſupernatural in lots, drew people into a deceitful and dangerous relying upon them, in caſes not only improper but unlawful to have recourſe to them (z). He thought therefore, that going to the bottom of this matter, and enabling his congregation to have clear and diſtinct ideas of the nature,

(y) See his Dedication before his Diſcourſe of Lots, and his Vindication of that Treatiſe.

(z) This is particularly and learnedly treated in his laſt chapter.

thority ſtill maintained, and from ſiniſter views increaſed thoſe corruptions.

The collecting and publiſhing pieces of this nature, was at all times the beſt ſervice that could be rendered to the Proteſtant cauſe, though it could be only judged ſo by men of true learning, ſound underſtandings, and free ſentiments; for to men of leſs knowledge, warmer tempers, and narrower notions; the hunting after, recovering, and reviving the works of our ancient divines, is either looked upon as an ill-grounded and ſuperſtitious fondneſs for antiquity; or miſinterpreted, as proceeding from ſome ſecret inclinations, ſome latent regards for Popiſh doctrines; and hence it has frequently happened, that the wiſeſt and moſt reſolute, becauſe moſt enquiring and beſt inſtructed Proteſtants, have been ſtigmatized by men much beneath them in parts and learning, as if they had a biaſs to thoſe opinions, in the ſifting of which, they took ſo much pains; we may likewiſe refer to the ſame ſource, that indifference which is generally ſhewn for collections of this nature, which quickly ſink in their price, are commonly over-looked, and whatever noiſe they may make at firſt, are in a little time buried almoſt in as deep obſcurity as that from which they were drawn by their laborious publiſhers. Yet this detracts nothing from their real value in the ſentiments of ſerious and ſober minds, and as there will be always, even in the commonwealth of learning, a multitude of warm and haſty ſpirits, incapable of going through the fatigue of what they therefore decry as heavy and uſeleſs reading, yet there will be ever a few candid, curious, and circumſpect criticks, who will have a true ſenſe of the worth of ſuch collections; and will not think their pains thrown away in ſearching through theſe ancient records, from which it is manifeſt, not only how the plain and pure doctrines of the Goſpel have been corrupted, but in what manner thoſe corruptions were diſtinguiſhed and rejected by wiſe and good men, even at the very time they were introduced; by which the Popiſh plea of Univerſality is entirely and effectually overthrown, and the antiquity of the Proteſtant Religion, as it conſiſts in an oppoſition to the ſuper-induced and groundleſs doctrines of the Romiſh Church, is fully and fairly demonſtrated to ſuch as will go to the bottom of the diſpute, and not ſuffer themſelves to be borne down by bold pretences, or carried away by florid declamations.

It was the more neceſſary to inſiſt upon this point, becauſe theſe letters of Mr Gataker, ſhew, as indeed private letters will always ſhew, the true genius, and the real diſpoſition of the man, and will account for that hot and eager oppoſition his writings met with, when he ventured his opinions abroad from the preſs. For as he never wrote upon any ſubject which he had not fully ſtudied, and thoroughly examined what had been ſaid upon it by men of all ages and all parties; ſo his penetrating ſkill in diſtinguiſhing, and his honeſt zeal in ſupporting, truth, laid him continually open to the clamours of thoſe who had nothing in view, but the maintenance of thoſe ſyſtems to which they were attached from their education, or the magnifying ſuch notions as were popular in thoſe times; and by defending which, they were ſure to have a large herd of admirers, though their want of learning, and the weakneſs of their arguments, were ever ſo conſpicuous. But in theſe kind of diſputes, ſuch furious opponents were ſure to have the worſt; and how conſiderable ſoever they might be, either in figure or number, they ſerved only to heighten the luſtre of his triumph. For, as the modeſty of his nature with-held him from printing any thing till he was forty-five years of age; ſo by that time his judgment was ſo confirmed, and his learning ſupported by an extraordinary and almoſt incredible memory, extended to ſuch a degree, that he conſtantly carried his point, and effectually baffled all the attempts made to involope again in darkneſs and obſcurity, any ſubject that he had once propoſed to enlighten.

The great regularity of his life, his unblemiſhed character, and the general eſteem in which he was held by the greateſt and beſt men in the nation, fortified him ſufficiently againſt all thoſe low and little artifices, by which a writer, deficient in any of theſe reſpects, would certainly have ſuffered. But then he made no ill uſe of this, he had not the leaſt tincture either of ſpleen or arrogance in his nature; and though it be true, that he gave no quarter to the arguments of his adverſaries, yet nothing could provoke him to ſtrike at their perſons. He always remembered that the prize contended for, was truth, and that for the ſake of obtaining it, the publick undertook to ſit as judges; he was cautious therefore of letting fall any thing that was unbecoming of him to ſay, that of his antagoniſt was not fit to be ſaid, or that might be indecent or ungrateful for his readers to peruſe; yet he was not ſo ſcrupulous as to forbear diſcloſing vulgar errors, through fear of giving the multitude offence, his modeſty might hinder his preferment, but it never obſtructed his duty, he underſtood perfectly well how eaſily the people may be wrought either to ſuperſtition or profaneneſs, and no man was more ſenſible than he, that true religion was as far diſtant from the one, as from the other; he was well acquainted with the arts of hypocrites, and thought it as neceſſary to guard againſt them, as to avoid the allurements of open libertines. He underſtood that ſouls might be enſnared, as well as ſeduced, and that canting words, and a ſolemn ſhew of ſanctity, might enable preſuming, and ſometimes ſelf-intereſted, perſons, to bring a yoke very different from that of Chriſt, upon the necks of ſuch as liſtened to their diſcourſes, as oracles, and believe as the Jews do of their Rabbins, that their teachers expoſition of ſcripture, were as ſacred as the ſcriptures themſelves.

He thought it requiſite therefore upon certain occaſions, to declare himſelf in favour of Chriſtian Liberty, and to ſhew upon what looſe ground this ſpiritual tyranny ſtood, to vindicate the natural rights of reaſon in matters properly within it's cognizance, and to free ſuch as had really righteous intentions from thoſe vain terrors and unneceſſary apprehenſions with which ſuch as took a pleaſure in ruling their conſciences, alarmed and kept in awe their minds. In this, without doubt, he acted like a chriſtian Clergyman and prieſt of the Church of England, placing religion where it ought to be placed, in believing the truths delivered in the Goſpel, and in performing works worthy of ſuch a belief, not in ſtraining God's Commandments beyond their plain meaning, and introducing ſuch a ſtrictneſs, under colour of abundant ſanctity, as might bring men from thinking almoſt all things, to a perſwaſion that ſcarce any thing was lawful. We have a clear inſtance of this diſpoſition and conduct of his, in the very firſt work that he ſent abroad, a work univerſally conſidered at the time it appeared, and which (though more treatiſes than one, and in more than one language, have been taken out of it) very well deſerves to be read ſtill, of the occaſion of which, ſomething is ſaid in the text, and of it's nature and contents, we ſhall ſpeak more largely in the enſuing note.

[H] *At*

nature, uſe, and abuſe, of lots, might prove very beneficial, and therefore handled that matter, as his conſtant manner was, fully, freely, and fairly, without ſuſpecting however that this would oblige him to have recourſe to the preſs, and involve him in a long and troubleſome controverſy. Yet this unexpected effect it had, for ſome ſupercilious perſons immediately took occaſion from thence, to give out that he had defended dice and card-playing, with other falſe and groundleſs ſtories (*a*); which obliged him to publiſh his thoughts upon that ſubject in a ſmall treatiſe, in which it is hard to ſay whether the accuracy of the method, the concluſiveneſs of his reaſoning, or the prodigious learning diſplayed therein, deſerves moſt to be admired. This work of his he dedicated to Sir Henry Hobart, Bart. Chief Juſtice of the Common-Pleas; Peter Warburton, Eſq; and Humphrey Winch, Eſq; Juſtices in the ſame Court; Robert Houghton, Eſq; one of the Juſtices of the Court of King's-Bench; John Denham, Eſq; one of the Barons of the Exchequer; Randolph Crewe, Eſq; the King's Serjeant at Law; Thomas Harris, Eſq; Leonard Bawtree, Eſq; John More, Eſq; Charles Chibburn, Eſq; and Thomas Richardſon, Eſq; Serjeants at Law; Sir James Ley, his Majeſty's Attorney in the Court of Wards; and Thomas Spencer, Eſq; Cuſtos Brevium; together with all, and ſingular, the Benchers, Barriſters, and Students of Lincoln's-Inn, as a mark of his gratitude and reſpect for paſt favours, and to deſire their countenance and protection in reſpect to his preſent labours: This piece made a great noiſe in the world, and gained Mr Gataker, as indeed he deſerved, much reputation (*b*) [*H*]. In 1620, he made a ſhort excurſion, for a month in

(*a*) The Rev. Mr Balmford ſays in his Preface, *How will gameſters inſult the ſcrupulous now they have ſo learned a* Patron *of their* gaming?

(*b*) Fuller's Hiſt. of Cambridge, p. 154.

[*H*] *As indeed he deſerved much reputation*] This diſſertation, though containing the ſubſtance of ſeveral ſermons, is digeſted, as the reader will hereafter ſee, into an exact and very regular form; and though there is a prodigious number of quotations from authors who wrote in different languages, and upon a variety of ſubjects, yet theſe are thrown entirely into the margins, ſo that the text is an even eaſy and perſpicuous Engliſh ſtile, very elegant for thoſe times, and perfectly plain and intelligible in theſe. The title of this treatiſe at large, runs thus:

Of the Nature and Uſe of LOTS, *a Treatiſe Hiſtorical and Theological, written by* Thomas Gataker, B. *of* D. *ſometime Preacher at* Lincoln's-Inn, *and now Paſtor of* Rotherhith, Lond. 1619, *4to.*

This piece is dedicated to the Society of Lincoln's-Inn. In the preface to the judicious and ingenuous reader, he obſerves, that how backward he had ever heretofore been to publiſh ought by the preſs, they beſt know, ſays he, who having oft preſſed me thereunto, have never hitherto therein prevailed. 'Now a two-fold neceſſity is impoſed upon me of doing ſomewhat in this kind, partly by the importunity of divers Chriſtian friends, religious and judicious, who having either heard, being partakers of my publick miniſtry, or heard of by the report of others, or upon requeſt ſeen ſome part of this weak work, have not ceaſed to ſollicit the further publiſhing of it, as alſo partly, and more eſpecially by the iniquity of ſome others, who being of a contrary judgment on ſome particulars therein diſputed, have been more forward than was fit by unchriſtian ſlanders, and uncharitable cenſures, to tax and traduce both me and it. From whoſe unjuſt and undeſerved aſperſions, no way ſeemed better and readier to clear either, than by offering to open view to all, what I had before delivered in an obſcure auditory (to ſpeak of) among but few. And this thou haſt here good reader for effect and ſubſtance, the ſame that was then and there delivered, inlarged only with ſuch matter of hiſtory and humanity, as was not fit to peſter the pulpit, or incumber that auditory withal. He then remarks, that if any ſhall ſurmiſe, that writings in this kind may occaſion too much liberty, a thing that little needeth in this over licentious age; he anſwers briefly, firſt, that it is unequal, that for the looſeneſs of ſome diſſolute, the conſciences of thoſe that be godly diſpoſed, ſhould be entangled and enſnared; and ſecondly, that whoſoever ſhall take no more liberty than by one is here given, ſhall beſure to keep within the bounds of piety and ſobriety, of equity, and of charity, than which I know not what can be more required. For no ſiniſter end I proteſt before God's face, and in his fear undertook I this taſk, neither have I averred or defended aught therein, but what I am verily perſuaded to be agreeable to God's word.'

The firſt chapter treats of what a Lot is, and of lottery in general; the ſecond, of chance or caſualty, and of caſual events; the third, of the ſeveral ſorts or kinds of lots; the fourth, of ordinary lots ſerious; the fifth, of the lawfulneſs of ſuch lots, with cautions to be obſerved in the uſe of them; the ſixth, of ordinary lots luſorious, and of the lawfulneſs of them; the ſeventh, contains an anſwer to the principal objections againſt luſorious lots; the eighth, an anſwer to the arguments uſed againſt them leſs principal; the ninth, treats of cautions to be obſerved in the uſe of them; the tenth, of extraordinary or divinitary lots; the eleventh, of the unlawfulneſs of ſuch lots; the twelfth, contains an admonition to avoid them, with an anſwer to ſome arguments produced in defence of them, and the concluſion of the whole.

The ſecond edition of this treatiſe, reviſed, corrected, and enlarged, was printed in 1627. As the work had then received it's author's laſt hand, and was become as perfect as he could make it, we will quote from thence, the latter part of a chapter, in which he has laid down as wiſe and as juſt rules for regulating the conduct of ſuch as now and then, without prejudice either to their temper or ſpiritual concerns, inclined to divert themſelves at play; and this we ſhall do for two reaſons, firſt, becauſe this citation will very fully explain the nature, conduct, and end of the whole work; and next, becauſe we conceive it will fully juſtify the great character we have given of it; to which we may add, (which is no inconſiderable motive) that this paſſage cannot fail, both of entertaining and inſtructing the reader (16). 'Theſe are the cautions, ſays he, that I have thought good to propound, for the limiting and rectifying of the uſe of theſe games, which cautions, I confeſs, the moſt of them, are ſuch as concern game in general; of which, as well as of more ſerious and ſad matters, either civil or ſacred, account alſo muſt be given unto God; and in that regard, are not ſo proper and peculiar to this particular kind of lot. Yet I ſuppoſed it not amiſs to point at them, and in ſome ſort alſo, to preſs them partly, that I might not be taxed and cenſured as a pleader for ſin, and ſuch abuſes as are common, as well in theſe games, as in other, by means whereof, thoſe that condemn all lots uſed in game ſimply, are wont to take occaſion to make them in general the more odious; and partly alſo, that no prophane perſon that abuſeth any of theſe, or other the like games, might be able to take any colour of advantage, by ought that hath been ſpoken of the lawfulneſs of the games themſelves, in themſelves ſimply conſidered, to juſtify his own abuſe of them, in miſpending his time, or waſting his eſtate at them, or otherwiſe, inconſiderately and irreligiouſly abuſing them, which it may be ſome would have done, had I been ſilent in this part, and propounded ſuch cautions only, as the nature of the lot itſelf might ſeem to require.' Yea, but ſome will ſay, had it not been much better to have paſſed over all this with ſilence, knowing your judgment in this point to be ſuch, as differeth from divers very reverend and religious? Or is it not in this caſe, as one ſome time ſaid of images,

(16) Of the Nature and Uſe of Lots, p. 309.

in the ſummer, to viſit the United and Spaniſh Netherlands, where he gave much ſatiſfaction to the Proteſtants, by preaching in the Engliſh Church at Middleburgh, and no ſmall

images, an eaſy matter, wholly to take away the uſe of them, than to keep them free from abuſe.

Hereunto I anſwer: 'First, theſe abuſes are common to all kind of game, they accompany other games as well as theſe, in thoſe that be evil minded and prophanely diſpoſed. And the like therefore in that regard, may be ſaid either of all other games, or of any other particular game at leaſt in ordinary uſe. *Secondly*, it is true indeed, that where the uſe and the abuſe of a thing are ſo enwrapped and entangled together, that they cannot be eaſily ſevered the one from the other, there the uſe of the thing itſelf, if it be unneceſſary otherwiſe, would wholly be abandoned. But in theſe games, the uſe and the abuſe, may, for the moſt part, ſome ſpecial diſpoſitions only excepted, by thoſe that deſire to walk in the fear of God eaſily be ſevered. For, as for thoſe that make no conſcience of their courſes, they will not be diſſwaded from them, though it be never ſo evidently diſcovered unto them, in what manner they abuſe them, and by their abuſe of them, make that evil and unlawful to themſelves, that otherwiſe were not ſuch in itſelf. And for thoſe that fear God, they may with eaſe as well rectify and ſanctify theſe luſorious lots to themſelves, as they may any other games of the like uſe, and as eaſily ſever them from ſuch abuſes as are commonly committed in them, as they may other diſports, as draughts and bowls, and the like, that are commonly uſed, and generally allowed. *Thirdly*, though many godly diſſent, yet I am ſure many, and I ſuppoſe more by many, both reverend and religious concur, and the truth is needful to be known, eſpecially concerning matters in common practice, that men may have whereby to inform themſelves aright. And laſtly, though the minds and judgments of others were not known, yet were not a truth to be concealed, becauſe ſome few godly have denied or oppoſed it, and none publickly, by writing, have contradicted them in it, eſpecially being a point very needful to be known.

'For myſelf, I was at firſt the rather induced to deliver my judgment in the point the more largely, having entered into this diſcourſe of lots in general, by purſuit of that ſcripture that then I dealt with, tho' far then from any purpoſe to publiſh ought of this argument, upon theſe conſiderations. *Firſt*, I conſidered that there is a fault as well in ſtraitning, as in widening of God's way, and the ſubtilty of Satan, as well in the one as in the other. For in the one he doth as a juggler, that by putting a pair of falſe ſpectacles on a man's noſe, maketh the bridge ſeem broader than indeed it is, that he is to go over, that ſo he may without fear ſtep aſide and fall in, and ſo he dealeth with the diſſolute. In the other, he doeth as a Magician, that ſheweth a man the bridge that he is to paſs, thorow a falſe glaſs of another kind, that it repreſenteth it as narrow as the edge of a rapier, or the point of a needle, that ſo he may terrify him from attempting to go over it, and thus dealeth he with thoſe that be over timorous and full of ſcruple. And that it is not good therefore by poſſeſſion of men's minds with unneceſſary ſcruples, either to diſcourage thoſe that be coming on to ſome love and liking of the good ways of God, or to caſt thoſe that are already come on, into ſnares of men's knitting, tying them in ſtricter and ſtraiter bonds than God himſelf hath done, and making more things unlawful than the word of God hath made. Yea, that it is in truth a ſpice and a branch of ſuperſtition, as well for a man to ſuſpect that thoſe things diſpleaſe God, which indeed do not, as for a man to ſuppoſe that the creature can do that which indeed it cannot do.

'*Secondly*, I conſidered, that many, as I am verily perſwaded, truly fearing God and ſincerely religious, have uſed, and do commonly uſe, theſe games, and beſides, that many well affected are, and have been conſtrained in regard of ſcruple in this kind, to ſtrain themſelves to ſome inconveniencies by the refuſal of them, when by thoſe whom they have had dependance upon, or familiarity withal, they have been urged occaſionally thereunto. It ſeemed fit and needful therefore to be known what ground and warrant both the one had, and the other might have, for the uſe of them, which were I not upon due and diligent diſcuſſion, and that not of late only, undoubtedly perſwaded to be ſound and firm, far ſhould it have been from me ever to have opened my mouth in this argument.

'*Thirdly*, I conſidered the arguments and grounds whereupon theſe games are condemned, have made many ſtagger in the neceſſary uſe of ſerious civil lots, which by occaſion of bargains bought in common between them and others, they are enforced oft to uſe, but have doubted whether they might lawfully give conſent unto or no. That which was indeed the firſt occaſion of my ſearching and ſifting out more narrowly the nature of lots in general. And certain it is, admit we the principal arguments uſed againſt this kind of lots for good, and we utterly overthrow all kind of lots whatſoever.

'*Fourthly*, I conſidered the great offence and ſcandal that is taken by divers of contrary judgment againſt thoſe that uſe theſe games, tho' never ſo ſoberly and ſeaſonably as they ſuppoſe, on good ground, a means oft of much heart-burning and of breach of chriſtian affection, yea of peremptory, uncharitable, and unchriſtian cenſuring either other, ſuch being commonly our corruption, and the natural diſpoſition of the moſt that diverſity of judgment, eſpecially manifeſted by practice breedeth alienation of affection, though indeed it ought not ſo to do, conſidering therefore that theſe games can hardly be wholly removed, being ſo common, ſo general, ſo uſual with the moſt every where; I ſuppoſed it would not be unfit to aſſay, if by diſcovery of the ground of them, ſuch ſcandal and offence might be ſtayed, and chriſtian concord and amity in part procured and maintained between ſuch as were before diverſly minded in this matter; ſo many of them at leaſt as might hear and apprehend the force and weight of the former arguments, and be brought to ſee the invalidity and inſufficiency of their own grounds againſt them. Wherein, what I have done (mine endeavour hath been to do it) let the judicious and impartial whoſoever be judges.

'To draw to a concluſion, I could wiſh in this caſe, as the Apoſtle doth in ſome other caſes, *that every one were affected in this point as myſelf*, to wit, that albeit in judgment, they be rightly informed of the truth concerning the lawfulneſs of theſe games in themſelves; yet that in godly diſcretion, which I wiſh, yet without prejudice to any that uſe them as they ought, they would rather abandon them, and forbear the uſe of them, conſidering the too-common and ordinary abuſe of them, and that many, it may be, among whom they live, may remain unreſolved and unſatisfied concerning the lawfulneſs of them. But becauſe this is rather matter of wiſh than of hope, my ſecond ſuit ſhall be the ſame with that which the apoſtle maketh in the like caſe to either ſide: *let not him that* playeth *condemn him that* playeth not, *nor let him that* playeth not, *condemne him that* playeth. For why contemneſt thou thy brother, may I well ſay to the one, why condemneſt thou thy brother? may I as well ſay to the other. Why contemneſt thou thy brother, as too ſtrict and ſtrait laced, for forbearing of that thing which he maketh ſcruple and doubt of, and hath no neceſſity to do? and why on the other ſide condemneſt thou thy brother, as too diſſolute and looſe girt for the doing of that which he hath ſufficient ground and warrant for out of God's word? and to both ſides ſay I, and would to God I might with both ſides prevail, not for this alone, but for all other controverſies a foot among us at this preſent. Let us follow thoſe things that may further peace, and ſeek after the truth, either of us in love ready to yield with Apollos to any, be he never ſo mean, that being otherwiſe minded than we are, ſhall be able more thoroughly to inſtruct us in ought that we were not ſo fully informed of before.' In the laſt chapter of his work, he very fully, as well as very learnedly, explodes the uſe of divinatory lots, and all the ſuperſti-

tious

ſmall diſpleaſure to the Engliſh Catholics, as they ſtiled themſelves, in thoſe parts, the remains of ſuch as had fled thither in the reign of Queen Elizabeth, and afterwards in conſequence of the ſtorm they brought upon themſelves, by the gun-powder-treaſon, ſoon after her ſucceſſor was ſeated on the Throne. The ſource of this uneaſineſs was the freedom and boldneſs with which he diſputed againſt the abſeſt of their Prieſts, and tho' there might be reaſons why it was impoſſible he ſhould convert them, yet they could not help being confounded, which they and their followers reſented exceedingly. His mother therefore had cauſe to be apprehenſive of this ſhort tour, as knowing our author's zeal, and the provocation his works had already given to a party that have never been very famous for their moderation (c). At his return he applied himſelf with his former diligence to his beloved ſtudies, and the duties of his charge. His ſhort ſtay however in Holland, led him into a very high opinion of the people's zeal for the Proteſtant Religion, inſomuch that he became perſwaded we could never differ with them even about national points, without injuring the Proteſtant intereſt, and having once imbibed this notion his temper made him very warm in it; a very ſtrong inſtance of which will be found in the notes (d) [I]. The conteſt raiſed by his Treatiſe on Lots ſtill ſubſiſted, and a very warm writer who had been miſled by common report into an opinion that he had been very ill uſed by our author, and that too in a public manner, tendered what he took to be a refutation of his doctrine, to thoſe who were then intruſted with the licenſing whatever paſſed the preſs. But his performance, being written with greater appearance of anger than argument, was ſtopped, this he conſidered as a new injury, of which he complained ſo loudly, that our author, who had nothing in view but truth, interpoſed, and opened a paſſage as well for his adverſary as for himſelf, being truly convinced that his character was in much more danger of ſuffering by private reports, which he could have no opportunity of refuting, than by any thing his adverſary could urge againſt him in print. How juſtly he thought in this particular, and how ably, as well as amply, he confuted the objections raiſed againſt his work, the reader will be in ſome meaſure informed

(c) Narrative of the Life and Death of Mr Gataker, p. 5

(d) Archbiſhop Uſher's Letters, p. 76.

tious methods of endeavouring to diſcover future events, which have been invented by wicked, believed and practiſed by weak people; concluding, that tho' extraordinary lots, that is, ſuch as the immediate interpoſition of God was expected in, might be in ſome caſes, and to ſome perſons lawful, yet now they are no longer lawful to any, and ought therefore to be diſuſed.

[I] *In the notes.*] There were very probably many letters written by our author to Dr Uſher between thoſe which the reader has already ſeen, and this that we are about to give him, which we may leſs wonder are loſt, than that this is preſerved, which might probably happen from his Lordſhip's being in a particular manner moved by it, for he was himſelf extreamly attentive to the general courſe of things, and might very probably concur with our author in his ſentiments, and deplore thoſe evils of which no man had a more clear foreſight. This letter is dated September twenty-ninth 1621, from Rotherhith, and runs thus (17).

(17) Archbiſhop Uſher's Letters, p. 76.

'My duty to your lordſhip remembred. This meſſenger ſo fitly offering himſelf unto me, albeit it 'were the ſabbath-even, and I caſt behind-hand in 'my ſtudies by abſence from home, yet I could not 'but in a line or two ſalute your Lordſhip, and thereby ſignify my continued and deſerved remembrance 'of you, and hearty deſire of your welfare. By this 'time I preſume your Lordſhip is ſettled in your 'weighty charge of overſight, wherein I beſeech the 'Lord in mercy to bleſs your labours and endeavours, 'to the glory of his own name and the good of his 'Church, never more in our times oppugned and oppoſed by mighty and malicious adverſaries both at 'home and abroad, never in foreign parts generally 'more diſtracted and diſtreſſed than at the preſent. 'Out of France daily news of murthers and maſſacres, 'cities and towns taken, and all ſorts put to the ſword. 'Nor are thoſe few that ſtand out yet likely to hold 'long againſt the power of ſo great a Prince, having no ſuccours from without. In the Palatinate 'likewiſe all is reported to go to ruin. Nor do the 'Hollanders fit for ought I ſee any ſurer, the rather 'for that the coals that have been heretofore kindled 'againſt them about tranſportation of coin, and 'the fine impoſed for it, the quarrels of the Eaſt 'Indies, and the command of the narrow ſeas, the 'interrupting of the trade into Flanders, &c. are daily 'more and more blown up, and fire beginneth to 'break out, which I pray God do not burn up both 'them and us too. I doubt not, worthy Sir, but you 'ſee as well, yea much better I ſuppoſe, than myſelf 'and many others, as being able farther to pierce into 'the ſtate of the times, and the conſequents of theſe 'things, what need the forlorn flock of Chriſt hath of 'hearts and hands to help to repair her ruins, and to 'fence that part of the fold that as yet is not ſo openly broken in upon, againſt the inouſions of ſuch ra'venous wolves, as having prevailed ſo freely againſt 'the other parts, will not in likelihood leave it alſo 'unaſſaulted; as alſo what need ſhe hath if ever of 'prayers and tears (her ancient principal armour) unto 'him who hath the hearts and hands of all men in 'his hand, and whoſe help (our only hope as things 'now ſtand) is oft-times then moſt preſent when all 'human helps and hopes do fail. But theſe lamentable occurrents carry me further than I had purpoſed when I put pen to paper. I ſhall be right 'glad to hear of your Lordſhip's health and welfare, 'which the Lord vouchſafe to continue, gladder to ſee 'the remainder of your former learned and laborious 'work abroad. The Lord bleſs and protect you: 'And thus ready to do your Lordſhip any ſervice I 'may in theſe parts, I reſt, &c.' In producing this letter, and commending the honeſt zeal of it's author, we do not by any means intend to juſtify his ſentiments with reſpect to the politics they contain, in which how well ſoever he meant, it is more than probable he was in ſome points very much deceived. Thoſe who at that time oppoſed the meaſures of the Court, laboured to have it believed that it was an injury to the Proteſtant intereſt for us to differ with the Dutch, even as to points wherein our civil intereſts manifeſtly ſuffered, and repreſented every thing that was done in order either to ſupport our rights or repair our loſſes, as proceeding from Popiſh counſels, which had a very bad effect. The fines for exporting bullion were in conſequence of trials at law and convictions, tho' after all but one third of thoſe fines was levied; our Merchants and the Nation were great ſufferers by what paſſed in the Eaſt Indies; the invading our dominion in the Britiſh ſeas was prejudicial to the honour of the Crown; and the ſearching, rifling, and taking ſhips bound to Flanders was detrimental to our commerce. But when the ends for which theſe ſuggeſtions were thrown out, to miſlead well-meaning people, who were no politicians, were once brought about as they propoſed, thoſe who ſuggeſted them tacked about, took up the thread where they forced their

informed at the bottom of the page (e) [K]. It was really a pity that ſo great and good a man as he, ſhould have been ſo often interrupted as he was, by the impertinent and yet bitter animadverſions of ſuch as envied the high reputation, that of courſe attended the repeated ſpecimens he gave of extenſive learning, accompanied with very uncommon modeſty, which inſtead of preventing, as in reaſon it ought to have done, perhaps excited their attacks. His zeal for the Proteſtant Religion, and his obſerving how much the Papiſts, more eſpecially amongſt weak people, preſſed the direct words of ſcripture, as containing in them the doctrine of Tranſubſtantiation; he reſolved to ſhew, and that in the moſt convincing manner, how little reaſon they had to value themſelves upon this head, and having driven them from this, which was their ſtrongeſt poſt, he proſecuted his attack, and obliged them to quit every other (f). This was a real and ſeaſonable ſervice to the Church, and which very deſervedly rendered him conſpicuous in the eyes of the moſt worthy perſons of thoſe times, who admired his fortitude in reſpect to points of importance, as much as his humility and willingneſs to ſubmit for peace-ſake in matters of leſs conſequence. In 1642, when the Parliament thought proper to call together the Weſtminſter Synod, otherwiſe ſtiled the Aſſembly of Divines, they were very careful to intermix with the warm Preſbyterians, many of another character, ſuch as Archbiſhop Uſher, Biſhop Weſtford, Biſhop Prideaux, Dr Holdſworth, Dr Hammond, Dr Wincop, Dr Sanderſon, and Dr Hacket, who would not attend as conceiving it no legal Convocation, the King having declared againſt it, but Biſhop Reynolds, Dr Featley, Dr Twiſt, Dr Arrowſmith, Dr Tuckney, Dr Lightfoot, and Mr Gataker, did at leaſt at firſt, and laboured to do all the good, and prevent all the ill that was in their power (g). When the Covenant was propoſed to this ſynod, Mr Gataker and ſeveral others declared their judgments to be for Epiſcopacy, tho' at the ſame time they expreſſed their diſlike of the Lay Chancellor's Court in every dioceſe, and of whatever elſe they took to be the remains of Popery; and tho' they could not carry their point, yet they obtained a conſiderable qualification before they were brought to ſubſcribe. His endeavours here for promoting truth, and ſuppreſſing errors, were equally ſerious and ſincere, and his ſtudy of peace was ſo remarkable, that when his reaſon concerning Chriſt's obedience in order to our juſtification could not obtain the aſſent of the majority of that Aſſembly, by whom the queſtion was determined contrary to his ſenſe, his own law of unity impoſed upon him ſilence, and hindered him from publiſhing thoſe diſcourſes, which he had compoſed upon the ſubject (h). While he was thus employed, he had an offer made him by the Earl of Manchester of the maſterſhip of Trinity College, which is looked upon as the moſt conſiderable preferment in the Univerſity of Cambridge (i). This was probably upon the turning out of Dr Thomas Comber, Dean of Carliſle, who about ten years before, being Vice-Chancellor of the Univerſity, had entertained their Majeſties King Charles the firſt, and his Queen Henrietta Maria in Trinity College, and had cauſed plays to be acted for their diverſion (k). But Mr Gataker, whom no advantages could tempt to what might afterwards ſit heavy on his mind, refuſed it. This great preferment was thereupon beſtowed

Sovereign to let it fall, made the Act of Navigation to ſecure their own trade, inſiſted upon the right of the flag founded on the ſupreme dominion over the Britiſh ſeas, and compelled the Dutch to part with a large ſum of money in ſatisfaction of thoſe acts of oppreſſion which the Engliſh had ſuſtained in the Eaſt Indies, and with over-looking which (tho' themſelves compelled it) they had, and others copying them have reproached the two preceding reigns (18).

(18) See the Engliſh Tranſlation of Selden's *Mare clauſum*, by Marchmont Needham, by order of the long Parliament, and his Appendix.

[K] *At the bottom of the page.*] The title of this Work at large runs thus.

A juſt defence of certain paſſages in a former treatiſe concerning the nature and uſe of Lots, *againſt ſuch exceptions and* oppoſitions *as have been made thereunto by Mr* J. B. *i. e.* John Balmford, *wherein the inſufficiency of his* Anſwers *given to the* Arguments *brought in defence of a* Luſorious Lot *is manifeſted, the imbecility of his* Arguments *produced againſt the ſame further diſcovered; and the point itſelf in controverſy more fully cleared; by* Thomas Gataker, B. *of* D. *and author of the former treatiſe.* Lond. 1623. 4to.

This treatiſe was in a manner extorted from him by the ſtrange behaviour of Mr Balmford and his friends, by whom a report was ſpread, that the Doctor, by whom Mr Gataker's book was licenſed, was ſenſible of the wrong done by him to Mr Balmford, and had declared that if the treatiſe on Lots were to be licenſed again he would not do it. This was to give ſome colour to Mr Balmford's writing againſt Mr Gataker, and to raiſe a rumour in the world, that the very Doctor who licenſed his book was ſorry for it, and perhaps Mr Gataker himſelf aſhamed of the cauſe he had undertaken to defend. In this ſhort work (in which however all Mr Balmford's arguments are included) our author vindicates his former ſentiments, and rejoins to the replies that his antagoniſt had made. The licenſer before referred to was the famous Dr Daniel Featly, at that time the archbiſhop's chaplain, who in a letter dated from Croydon, September the ſecond 1623, prefixed to this defence, gives the following judgment of it.

Sir, 'I have peruſed your anſwer to Mr B. his pamphlet againſt you, wherein you have ſo cleared 'the point in controverſy between you, that I much 'pity your opponent's hard lot to fall upon ſuch a 'ſubject and tenet concerning Lots, as afforded him ſo 'ſmall ſtore of objections againſt your opinion, that he 'was even conſtrained, according to the manner of 'ſome old Roman Orators noted by Quintilian, Cauſ-'ſarum vacua convitiis implere. Neither the matter 'in hand about which learned Proteſtants may differ 'in judgment without breach of charity, or prejudice 'to Chriſtian unity, nor your handling it dogmati-'cally and ſcholaſtically without any gall at all, could 'occaſion ſuch heats. I cannot imagine therefore 'what ſhould ſo move him but the badneſs of his 'cauſe, and the weakneſs of his own arguments, which 'he ſeeth by your handling them to be like wire 'ſtrings ill nealed, which would not endure the leaſt 'ſtraining. For albeit I confeſs, that we are all apt 'to take too much hold of any point of liberty reach-'ed unto us out of God's word; and in particular I 'cannot but deplore, ſortem ſortis, the Lot of Lot 'itſelf which hath been, and is too much by the li-'centious, abuſed, and thereby in a ſort defamed, 'eſpecially in carding and dicing; yet God's truth

'muſt

showed to Dr Thomas Hill, then Fellow of Emanuel College. As for our author, content with his own preferment, and more ambitious of doing good to others than of exalting himself, he applied himself in those turbulent times to his ancient studies, which could give offence to no party, and which might entitle him to the gratitude and approbation of the learned world. It was with this view that he published his laborious and judicious discourse on the name by which God made himself known to Moses, and the people of Israel. In this performance he shewed himself a very great master of Hebrew, and it was so well relished by all competent judges of so profound and so judicious a dissertation, that it has been often reprinted since (*l*) [*L*]. His continual application to the study of the best Greek authors, his retentive memory, his piercing penetration, and accurate judgment, enabled him to look into the very principles and elements of that copious, elegant, and expressive language. At first sight, this might seem beneath the attention of so great a man, but our author resolved to vindicate his enquiries of this kind, and to shew how much and how far the thorough knowledge of Grammatical Learning tends to the improvement of Science. He was aware, that the singularities of his opinion might tend to weaken his reputation, if they were not clearly and fully made out. He knew that they did not spring either from a naked imagination, or an affectation of opposing common opinions; but in reality were the produce of much reading and reflection, and that they had, to him at least, the appearance of certain tho' not vulgar truths. It was from those motives therefore, that he ventured to publish a work which would scarce have been considered from any other hand, but which from its own merit, and the respect due to its learned author's skill, more especially in Greek literature, has been very well received, and very much commended by able as well as candid judges (*m*) [*M*]. As intent as he was upon these deep and critical studies, they hindered not the exact performance of his function, or his close attendance in the Assembly of Divines, so long as he conceived it of any use. He yielded obedience also to the command laid upon him of writing annotations upon the Prophets, and performed it in such a manner, that some have wished to see his commentaries printed alone; yet in the midst of these occupations, he never declined applications of any sort, that he thought had a tendency to the public good.

(*l*) Vide Præfat. Hadr. Reland.

(*m*) See the learned Preface before his Opera Critica.

* must not be suppressed because of man's errors, neither is it a safe way to go about to cure an error in practice by another error in judgment, I mean to reform the abuse in Juforic lots, by totally condemning the use itself of them. Tho' a surgeon mean ever so well in letting his patient blood who needeth it, yet if he strike not the right vein, he had better have spared his pains. The sin too rampant in sports and games now a-dales is not in using the Lot, but in not observing those rules and cautions in these and other recreations, which are judiciously and piously set down by you in your compleat treatise of Lots. Let those cautions be observed, and set aside the authority of some divines, whose persons they have in admiration above others, what is there in the casual falling of the dye or dealing of the cards, more than in the fall of a coyte, or lighting of an arrow nearer or further, or the turning of a bowl, to ensnare the conscience? Art more ruleth the one, and nature the other, God's providence and concurrence being equal in either. For, to conclude that because some lots have been consecrated to an holy use sometimes, therefore all Lots are sacred, is a feeble kind of arguing. And to impose a special and immediate work of God's providence upon the casual event of the Lot, more than upon other natural accidents and deliberate actions of men, is a temerarious and groundless assertion. And furthermore, to charge all those servants of God, who moderately use their Christian liberty in these games, with so heinous a sin as is the prophaning of a thing sacred, or taking in vain God's deciding judgments, is an uncharitable censure. The Lord open the eyes of all that seek to serve him in sincerity and singleness of heart, that neither by enlarging their Christian liberty they open a gap to licentiousness, nor yet by too much restraining it lay a snare on weak consciences. To deliver you my judgment and advice in a word, satis actum est, you have sifted this point of Lots to the bran. Let me advise you hereafter, non reciprocare terram contentionis de ludis fortiariis, but rather to employ your able pen against the sorcerers of Egypt now abounding in every place, and making advantage of the least difference among us, who hold the like precious faith purged from the dross of their superstition. This advice I know you will take in good part, as proceeding from, &c.'

About twelve years after this, he found himself under the necessity of publishing in Latin a Defence of his sentiments, against two very learned men who had written upon the same subject, the title of that treatise runs thus:

Thomæ Gatakeri Londinatis ANTITHESIS *partim* Gulielmi Amesii *partim* Gisberti Voetii *de* SORTE *Thesibus reposita*. Lond. 1637. 4to.

[*L*] *And which has been often reprinted since.*] The title of this very curious and, with respect to literature, instructive treatise, runs at large thus:

De nomine Tetragrammato *Dissertatio, quâ vocis* JEHOVAH *apud nostros receptæ usus defenditur, & a quorundam cavillationibus iniquis pariter atque inanibus vindicatur*, Lond. 1645. 8vo. that is, *A* Dissertation *on the* Tetragrammatick *or four lettered* name, *in which the use of the word* JEHOVAH *(which in Hebrew is written with four letters) as it is received amongst us, is defended and vindicated, against certain unjust and groundless cavils.* This book was reprinted in 1652, it is likewise inserted amongst his *Opera Critica*, and found a place also amongst the ten Discourses upon this subject, collected and published by Hadrian Reland, of which the five first written by John Drusius, Sixtinus Amama, Lewis Capel, John Buxtorff, and James Alting, opposed the received usage which is defended in the other five Dissertations, the first written by Nicholas Fuller, the second by our author, and the other three by John Leusden.

[*M*] *As well as candid judges.*] The title of this learned critical treatise ran at large in the following words:

De Diphthongis *seu* Bivocalibus *Dissertatio Philologica, in qua Literarum quarundam soni germanus natura genuina figura nova & scriptura vetus veraque investigatur.* Lond. 1646, 8vo. that is, *A Philological* Dissertation *upon* Diphthongs, *or* double Vowels, *in which the true sound, the genuine nature, the new form, and the old and true way of writing certain letters is discussed.* This piece is also printed amongst his *Opera Critica*. The point aimed at in this discourse, was to shew that in reality there are no diphthongs, and that it is impossible two vowels should be so blended together as to enter into one syllable. We have observed in the text, that this was one of our author's singularities. Amongst the notes upon a celebrated treatise (19), written to expose the defects of learned men, there

(19) De la Charlatanerie des Savans par Mr Menkin; avec des Remarques Critiques de différens Auteurs, 1721. 12mo. p. 132.

good. His moderation was the moſt diſtinguiſhing part of his character, but when he found that under colour of aſſerting liberty of conſcience, many were inclined to maintain dangerous and immoral notions, and that aſſuming the ſpecious pretence of expounding the ſcriptures freely, they ran into wild and extravagant doctrines, he thought it became him to oppoſe them, and he did it with great freedom and ſpirit. This could not fail of exciting him enemies amongſt ſuch as took great liberties, even with men of the faireſt characters, and were never at a loſs to aſcribe the moſt regular behaviour to mean and unworthy motives, according as occaſion required; Mr Gataker bore this with ſilence and patience, or juſtified himſelf as he was well able to do, by ſtating and explaining his own conduct. He held his rectory of Rotherhith by a legal tenure, and exerciſed his Miniſtry in the ſame manner, which was ſo ſatisfactory to his own mind, that, tho' often ſollicited, he would never part with it for preferments of greater value. He was frugal in his manner of living, and by that means eaſy in his circumſtances, which induced ſome, tho' very unjuſtly, to repreſent him as a lover of money. He differed more than once with the very learned Dr Lightfoot, more eſpecially about the power of the Church, in their meetings at the Aſſembly, but tho' they were oppoſite in ſentiments, Lightfoot at that time being eſteemed an Eraſtian, and ſometimes debated warmly, yet they never loſt their tempers, or had any rancour againſt each other on account of theſe diſputes (*n*); at firſt, authority ſeemed to be on the ſide of our author, but it ſhifted by degrees, and came at length to be clearly with the oppoſite party. For the Parliament intended to uſe the ſynod at Weſtminſter as their inſtrument, and not to ſuffer them to aſſume any power of their own, and once this was carried ſo far, as that ſome mention was made of the hard word *premunire*, which made the better ſort of thoſe who compoſed it, and who had hitherto laboured to ſupport the dignity of the Aſſembly, leſs active in their conduct, and, in proceſs of time, leſs conſtant in their attendance (*o*). In this ſituation the defending the doctrines and diſcipline of the Church of Chriſt, in open and in private conferences, from the pulpit, and from the preſs, became more and more neceſſary, which induced Mr Gataker, tho' naturally inclined to privacy as well as quiet, to diſtinguiſh himſelf in both ways, in which he was countenanced and ſupported by ſuch of his old friends as were ſtill living, and of whom there were ſome in conſiderable employments, and many others who from their rank and figure in the world, preſerved him from the violence of the times, and maintained him in the poſſeſſion of his legal rights (*p*). It would be no difficult thing to enter into the particulars of many if not of moſt of the diſputes in which he was thus engaged, but as this would ſerve only to extend an article already of an extraordinary length, we ſhall content ourſelves with indicating the titles of the works publiſhed by him on different occaſions at the bottom of the page [*N*]. But as he advanced in

(*n*) See Strype's Memoirs relating to the Life of Dr John Lightfoot.

(*o*) Fuller's Church Hiſtory Cent. XVII. p. 214, 215.

(*p*) Narrative of the Life and Death of Mr Gataker.

there is one which relates to our author, which we ſhall both tranſcribe and tranſlate. 'The criticks, 'ſays this writer, have made it a queſtion whether 'the q ought neceſſarily to be followed by a u. 'Thomas Gataker was ſo ſtrongly perſuaded of the contrary, that he cauſed the Emperor Marcus Antoni'nus's Annotations to be printed at Cambridge in '1652, with the q ſingle throughout the book, as for 'example, *qi, qa, qod*, which could not but ſhock the 'the ſight of every reader; but tho' we ſhould be 'content to paſs this by in Gataker, I do not think 'we ought to pardon the bookſellers of Holland, who 'have cauſed the ſame orthography to be obſerved 'throughout his whole *Opera Critica*, printed at 'Utrecht in 1698.' We will not enter into this controverſy, or pretend to ſay whether our author was right or wrong in his Orthography; this however is certain, that how diſagreeable ſoever the words might be to the ſight, they were ſtill as legible one way as the other, from whence one would imagine, that the author of the critical note which we have before cited, was not very converſant with Gataker's works, ſince if he had, he might have found another ſingularity much more to his purpoſe, which is, our author's frequently writing v for u, which is not only diſagreeable to the eye, but difficult to be expreſſed by the tongue. A ſhort paſſage from one of his learned pieces will beſt explain his manner of writing, and his meaning (*zz*).

(*zz*) Gataker Opera Critica, p. 6.

Nam quod *Æolicæum literarum vis, quæ in villâ, qa cavum & favum dicunt, formosum duriorem facere Fabio videtur*. Hac ſaltem in parte diſſentientes prorſus habet, criticorum ſeculi noſtri par nobile, Juſtum Lipſium ac Joannem Voſſium, qi utercque huic literæ, ille *in Dialogo de recta pronunciatione ling. Qam tamen inter *jucundiſſimas* illas, qibus *carere* ait *linguam Latinam*, recenſere Fabium, nonnulli ſunt opinati.

[*N*] *At the bottom of the page.*] In compoſing this article, we have mentioned all the conſiderable works of

in years, the inceſſant labours of his body and his brain brought on infirmities, which ſlackened his ſpeed, but did not wholly ſtop the progreſs of his ſtudies; for even under theſe, and when confined by the direction of his Phyſicians to his chamber, he was continually employed, if not in reading, at leaſt in meditating on what he had read, to which if he did not owe the ſtrength, yet we may with probability preſume he thereby preſerved his memory, which was equally retentive and correct to the laſt (q). But when, through the excellence of his conſtitution, his temperate manner of living, and the ſkill of thoſe worthy perſons of the Faculty, to whoſe care he committed himſelf, he recovered a moderate ſhare of health, he betook himſelf again to the functions of his Miniſtry, and getting too ſoon into the pulpit, where he ſpent himſelf ſo far, that he ſtrained a vein in his lungs, for which being then about ſeventy three years old he ſuffered an emiſſion of blood, by which, and by other means, he eſcaped that danger. But when he had recruited his health, he reſumed his preaching till a relapſe into that ſpitting of blood, for which he again permitted a vein to be opened, for revulſion, laid him under a neceſſity of forbearing the pulpit, tho' he never gave over the adminiſtration of the ſacraments, nor his uſual ſhort diſcourſes at funerals ſuitable to the occaſion (r). The chief part of his time was now ſpent in ſtudy, and in compoſing ſeveral learned Works. He publiſhed in 1648 his diſcourſe on the ſtyle of the New Teſtament, in which he oppoſed the ſentiment of Pfochenius, who maintained that there were no Hebraiſms in thoſe ſacred writings, and endeavoured to prove this as well by authorities as arguments; all which our author undertook to overthrow, which in the opinion of the beſt critics he moſt effectually did, and which was more than doing this, he ſo clearly and conciſely explained the true meaning of many texts in the Old, as well as the New Teſtament; corrected ſuch a variety of paſſages in ancient authors, and diſcovered ſuch a conſummate ſkill in the living as well as dead languages, as very juſtly gained him the character of one of the

(q) His Memory was in our Times conſidered as extraordinary.

(r) Narrative of the Life and Death of Mr Gataker.

of our author in the text, have given the beſt account we could of the moſt important of them in the notes, and of ſome others relating chiefly to the diſputes of thoſe times, and are hardly now to be met with tho' ſought with the greateſt care, we will give ſome particulars here. Many of Mr Gataker's ſermons were printed, ſoon after they were preached, by themſelves, but as his reputation increaſed, theſe, or at leaſt moſt of them, were ſought out and brought into one volume, ſo that the titles of theſe ſermons thus collected being ſet down will anſwer the end, as well as if we were to conſider them as ſo many different pieces.

Theſe titles are, DAVID's *Inſtructor*; *The* Chriſtian Man's *Care*; *The Spiritual* Watch; *The* Gain *of* Godlineſs *with Self-ſufficiency*; *The juſt Man's* Joy *with ſigns of Sincerity*; JACOB's *Thankfulneſs*; DAVID's *Remembrances*; NOAH's *Obedience*; *An Anniverſary Memorial of* England's *Delivery in* 1588; *Sorrow for* Sion; GOD's *Parley with Princes, with an Appeal from them to* HIM; Eleazer's *Prayer*, a Marriage Sermon; *A* Good Wife GOD's *Gift*; *A* Wife *indeed*; *Marriage Duties*; Death's *Advantage*; *The* Benefit *of a* good Name, *and a* good End; ABRAHAM's *Deceaſe, delivered at the Funeral of* Mr Richard Stock, *late paſtor of* All-Hallows, Bread-ſtreet, *dedicated to Sir* Heary Yelverton, *Knight*; Jeroboam's *Son's Deceaſe*; Chriſtian *Conſtancy crowned by* CHRIST.

It is not clear whether any, and if any, which of theſe was that ſermon which Sir James Leigh, who was afterwards Earl of Marlborough, and his lady, heard him preach upon his firſt coming from the univerſity. There is ſomething in the tale pleaſant enough, more eſpecially when we conſider it as told by himſelf; an argument certainly of a chearful diſpoſition ſpringing from a mind at eaſe, and told too in the very laſt year of his life, which as well from infirmities as age, he might well expect it to be (21).

(21) Diſcourſe Apologetical, p. 34.

'The truth is, ſays he, I was but young, and ſeemed 'younger than indeed I was. In regard whereof it 'might not altogether undeſervedly have been deem-'ed of me, that I had flown out of the neſt before I 'was well fledged, and that it had been better for me, 'as David willed his embaſſadors returning from the 'Ammonites, to have ſtayed at Jericho among the 'ſons of the Prophets until my beard had been better 'grown. Nor may it be amiſs here to recreate my 'reader with a plain *Corydon*'s cenſure about that time 'paſt on me. Mr Leigh, afterwards Sir James Leigh, 'and Lord Treaſurer, was that year reader at Lin-'coln's-Inn, and having his family in town, both he 'and his wife heard me preach one Lord's-day at 'Martin's in the Fields. Whence after return from 'the ſermon, Mrs Leigh was pleaſed to aſk an old 'ſervant, with whom by reaſon of long continuance in 'the family they were wont to talk more familiarly, '*How he liked the preacher?* who returned her this 'blunt anſwer, *That he was a pretty pert boy, but he 'made a reaſonable good ſermon.* Not many weeks 'after, Mr Leigh returning from Lincoln's-Inn, told 'his wife he would tell her ſome news; *That young 'man*, ſaid he, *whom you heard at St Martin's is 'choſen our* Lecturer *at* Lincoln's-Inn; which the old 'fellow ſtanding by when he heard, aſkt, *Whether the 'benchers would be taught by ſuch a boy as he.* However it pleaſed God ſo to diſpoſe of it, that I was 'courteouſly entertained by them, nor was my youth 'in contempt with them, but I received as much reſpect from them as I could deſire, yea, much more 'than I could expect.'

Beſides theſe, we have three other diſcourſes in quarto, intitled,

[O] *Of one of the ablest Philologists of that age.*] The work referred to in the text bears this title.

Thomæ Gatakeri Londinatis *de Novi Testamenti stylo Dissertatio: qua viri doctissimi* Sebastiani Pfochenii *de Linguæ Græcæ Novi Testamenti puritate, in qua Hebraismis quæ vulgo finguntur quam plurimis sacræ detrahi dicitur diatribe ad examen revocatur; Scriptorumque tum sacrorum tum profanorum loca aliquam multa aliter explicantur atque illustrantur. Cum indicibus necessariis.* Lond. 1648. 4to. that is, *A Dissertation upon the Style of the New Testament, in which the* Treatise *of that learned Man* Sebastian Pfochenius *concerning the Purity of the Greek* Tongue, *as it is used in the* Sacred Writings, *and in which it is said that most of those* Hebraisms, *as they are commonly reputed, are shown not so to be, is thoroughly examined, and abundance of passages not only in* sacred, *but also in* prophane *authors are explained and illustrated; with necessary indexes.*

Our author himself tells us in the first chapter of his Dissertation, that meeting in a friend's well-furnished library with this treatise of Sebastian Pfochenius, a German Divine, which was published in 1629, he read it with great attention, for tho' small in bulk, he found it very weighty in matter, and abundantly full of good literature. But notwithstanding this, he found many of the author's sentiments repugnant to his own, and in his judgment also not agreeable to the truth. He saw likewise, that many learned and great men were censured without cause, and sometimes represented as speaking a language very different from what he took to be their real sentiments. These observations induced him to examine a multitude of questions started in that treatise, or which naturally flow from those that are therein treated, in respect to all which he shows a candour every way equal to his skill in criticism. He does not use harsh expressions, or hard names, but contents himself with discovering mistakes, in shewing the grounds upon which he took them to be. In following this method he opens a field of very curious and instructive learning, and shews such a quickness of penetration, such a soundness of judgment, and such a compass of reading, as are truly admirable. He begins with refuting a principle that Pfochenius had assumed, *viz.* that the Greek, Latin, German, &c. are original tongues, whereas in Gataker's opinion it is very difficult to know what are original tongues, but with respect to the Latin he maintains that it is not so. He shews from the authority both of ancients and moderns, that it was understood to be a compound of several languages spoken by the Sabines, Oscans, and other old inhabitants of Italy, but more especially of Greek; and to demonstrate this more effectually, he takes the five first lines of Virgil, one of the purest and most elegant of the Latin poets, and proves that there is hardly a single word in them which is not derived from the Greek. Thus he lays the very foundation of Pfochenius's system, by making it evident, that there can be no assurance of the purity of any language, in the sense that he understands it.

In his fifth chapter he states Pfochenius's three principal questions, first, whether the text of the New Testament be truly Greek, or not different from that used by prophane authors. Next, whether if Homer, Pindar, Plato, Demosthenes, &c. were to rise from the dead, they would be able to understand the New Testament? and lastly, by what name the language of that book is to be called, whether Græcanick, Hellenistick, or Grecian? Our author observes, that this last question is a mere dispute about words, about which there has been dispute enough already, and with which he will have nothing to do. On the other two questions he speaks his opinion plainly. When it is alledged in proof of the first, that the phrases used by the writers of the New Testament, are likewise used by prophane authors, he denies that this is conclusive; for, says he, who that has any taste of the purity of the Latin tongue, will allow that it is to be found in scholastic writings, notwithstanding that the words, and even the phrases in which Cicero, Sallust, Livy, Terence, &c. wrote are here and there found in them? He adds farther, that those who do not see that tho' the sacred writers used the same words, and even the same phrases that are to be found in profane authors in another manner than they do, and to convey a different sense, must not only be said to see indifferently and obscurely, but that they willingly shut their eyes. He then produces many Latin words used by the sacred writers, tho' written in Greek characters, or disguised with Greek terminations. He also produces Hebrew and Syriac words to the same purpose, and from hence he concludes, that tho' Pfochenius could really shew, which however he undertakes to render manifest that he has not done, that the sacred writers make use of a multitude of phrases which are to be met with in the best prophane authors, yet this would not come up to what he has asserted, if the former have also used many words and phrases which are not to be met with in authors who are allowed to write pure Greek.

As to the second question, he tells Pfochenius, that it can be granted or denied him only in part. But that notwithstanding some places might in some measure be understood by those great men he mentions, if it was possible for them to come from the dead, yet this would go but a little way in proving what he has asserted, because tho' they might understand some part, yet other parts they could not understand. He puts a parallel case in reference to the writings of Apuleius, which, says he, if Cicero were to rise from the dead, he might for the most part understand; but would any competent judge conclude from thence, that the Latin of Apuleius resembles that of Tully, or of the age in which Tully wrote. But, says Pfochenius, Paul conversed with the Greeks of his time, and was he not understood by them, and if by them, why not by the Ancients? I could readily grant you that, says our author, and yet deny the consequence that you would draw from it; for the Greek language in itself was much declined in the times of the Apostles, by the admission of a multitude of exotic words and phrases borrowed from the Italians, Sicilians, Cyrenians, and Carthaginians, partly from their being under the same government with them, and partly from their commercial intercourse with those nations. But after all, says he, if Demosthenes could live again, it is most likely that he would find many obstacles in reading Paul's writings, and would object to many of the words and phrases that occur in them; he then quotes a long passage from Beza's Annotations on the Acts of the Apostles, wherein that learned Commentator shews the reasons why the Apostles were not studious in respect to their stile, but endeavoured rather to make themselves understood by those with whom they conversed, than to render their discourses elegant from their pure and correct manner of speaking.

In the same manner he proceeds through the rest of his treatise, explaining, as they occur, a multitude of passages in sacred and profane authors, correcting some and commending other critics who have gone before him in the same way, but with so much mildness and moderation,

he judged it proper to detach that diſſertation, and to ſend it abroad as it was, that he might diſcover what reception this larger work might meet with, from the Republick of Letters; and finding this ſpecimen univerſally applauded, this determined him in the year 1651, to publiſh the two firſt books of his CINNUS, the whole of that performance being divided into ſix (t) [P]. His natural modeſty, as well as his chriſtian moderation, hindered him from making himſelf near ſo much conſidered, as from his great abilities, and numerous friends he otherwiſe might have been; yet notwithſtanding the mildneſs of his temper, and his averſion to whatever might render him the theme of publick diſcourſe, ſuch an unparalleled occaſion as that of the King's trial moved him to make a publick declaration of his ſentiments. He was accordingly the firſt of the forty-ſeven London Miniſters,

(t) See his Preface to both theſe Pieces.

moderation, with ſuch apparent candour and reſpect to truth above all things, that it is impoſſible for the reader not to perceive, that in oppoſing Pfochenius he has nothing leſs in view than to raiſe his reputation on the ruins of his whom he refutes. For we ought to remark, that it was very excuſable in our author to call ſuch a writer to a ſevere account, as had endeavoured to eſtabliſh a paradox at the expence of ſo many learned perſons characters who had maintained the contrary; and this probably with a view to manifeſt his own ſkill in arguing, and the acquaintance that he certainly had with the beſt and pureſt writers in the Greek language. Neither was our author alone in this oppoſition, for others ſet themſelves to overturn the ſame ſyſtem with far leſs ceremony in reſpect to its inventor. In the forty-fourth chapter, Mr Gataker gives us a recapitulation of the whole diſpute between him and Pfochenius, and obſerves that the true ſtate of the queſtion is, whether the ſtyle of the New Teſtament in Greek, is every where the ſame with that uſed by the ancient writers of thoſe times, when the language was in its greateſt purity? Or whether it is not ſuch as frequently admits of Hebraiſms and Syriaſms? Pfochenius affirms the former, and denies the latter, and, in order to maintain his point, produces about an hundred places, in which he aſſerts that the phraſes and modes of expreſſion which are accounted Hebraiſms or Syriaſms, are to be found among thoſe ancient writers.

But Mr Gataker, in anſwer to this, obſerves, I. That with regard to ſome of thoſe expreſſions which are propoſed as Hebraiſms, it is not certain from Pfochenius that any author had ever repreſented them as ſuch, ſince he names none, and it is by no means probable with relation to ſome of thoſe phraſes; nor if any writer ſhould ſay this expreſſes that Hebrew manner of ſpeaking, or This is taken from that of the Hebrews, does he therefore neceſſarily affirm it to be an Hebraiſm, any more than if a perſon ſhould ſay, This expreſſion of Virgil anſwers to that of Homer, or Horace borrowed this from Callimachus, would he therefore aſſert that Virgil or Horace adapted themſelves to the Greek idiom in thoſe places. II. That there are not a few expreſſions which Pfochenius does not prove to have been in uſe among the Antients, ſince he either cites writers only of the lower age, or miſtakes the ſenſe of thoſe antient ones whom he quotes, and often gives them an oppoſite meaning to the true one. III. That Pfochenius endeavoured to prove ſeveral expreſſions to have been uſed by the Ancients merely from the writings of the Poets, eſpecially the tragic writers, whereas the idioms of languages cannot juſtly be fixed from the expreſſions of Poets, eſpecially tragic authors, for otherwiſe many paſſages in Catullus, Horace, Silius, and Statius, would not be accounted Helleniſms when they really are ſo. If theſe paſſages be deducted from Pfochenius's hundred, they will make a conſiderable abatement of the number. IV. That with reſpect to ſome expreſſions which are ſometimes found among the ancient Greek writers, but are acknowledged to be very common with the Hebrews, why may not they be juſtly ſuppoſed to have been derived from the Hebrew manner of ſpeaking into other languages? Pfochenius indeed affirms, that it is not at all probable that Plato, Euripides, Lucian, &c. who were greatly averſe to the Jews, and their manners and cuſtoms, would abandon the elegance and propriety of their own language, and imitate the Hebrews in their ſtyle. But Mr Gataker thinks that there is no ſtrength in this reaſoning, ſince we may call upon Pfochenius to ſhew whence it appears that Plato and Euripides, to omit Lucian an Atheiſt, who ridicules all religion, were averſe to the Jews, and their manners and cuſtoms. With reſpect to Plato, the contrary is very evident from the teſtimony of not a few, and thoſe conſiderable writers. Beſides every perſon who is converſant in the books of the old Pagans, will ſee that they have borrowed many things from the Jewiſh writings, laws, rites, and inſtitutions. It is very abſurd therefore to ſuppoſe, that they could not or would not imitate any of their modes of ſpeaking when they ſtudiouſly followed their cuſtoms and inſtitutions in a variety of reſpects. But ſuppoſing, in order to gratify Pfochenius, that all the Greeks had a prodigious averſion to the Jews, it was never heard that men of learning, and deſirous of knowledge, ever conceived ſo great an hatred to any nation, as not to ſearch into the writings and monuments of it, and extract thence whatever they found for their own purpoſe.

But not to inſiſt upon theſe points, we may aſk whether the Greeks were always averſe to the Phœnicians and Syrians, and other nations bordering upon the Jews, as they are repreſented by Pfochenius to have been to the Jews? But by means of thoſe nations, tho' the Greeks had had no commerce with the Jews, ſeveral modes of ſpeaking might have been derived from the latter to the former, ſince it is well known to thoſe who are converſant in the Oriental tongues, that the languages of the nations above mentioned are clearly deſcended from the ancient Hebrew. What Pfochenius mentions of the abſurdity of ſuppoſing the Greeks to abandon the elegance and propriety of their own language, and imitate the Hebrew ſtyle, is of no weight, ſince it does not follow that thoſe people muſt violate the elegance of their mother tongue, who admit into it modes of expreſſion not common to it before, this being uſual among all nations in all ages. But granting to Pfochenius, that of all the expreſſions which he cites, there is not one peculiar to the Hebrews, or which he has not ſhewn to be familiar to the antient Greek writers; yet it would not follow from hence, that the ſtyle of the New Teſtament is every where the ſame with that of the Antients, or free intirely from Hebraiſms or Syriaſms. For if a perſon ſhould aſſert that Herodotus did not write in the Ionic dialect, nor Theocritus in the Doric, and to prove this ſhould produce an hundred or two hundred words from the writings of both, which are of the common dialect, would this be admitted as a ſolid argument, when ſix hundred or more words might be urged on the contrary ſide, which are remote from the common dialect, and intirely Ionic or Doric. Mr Gataker concludes with obſerving, that notwithſtanding all that Pfochenius has urged, he does not doubt but that near ſix hundred phraſes might be produced from the New Teſtament, and a much greater number from the Greek verſion of the Old Teſtament, the purity of which Pfochenius ſeems tacitly to maintain, in which there are plain characters of the Hebrew or Syriac tongues, and not the leaſt reſemblance of the antient Greek tongue, as far as has been hitherto diſcovered by men of the greateſt learning and diligence. The venerable Primate of Ireland (23), than whom there could not be a better judge, ſhewed his reſpect for our author and his performance, by ſending it with his own Annals as a preſent to Dr Arnold Boate, then at Paris. The judicious Marhoff ſpeaking of this treatiſe ſays (24), Pfochenio *ſeſe* Thomas Gatakerus *oppoſuit, magnum in omni re literaria nomen.*

(24) Polyhiſt. literar. l. iv. 6. 19.

[P] *Being divided into ſix.*] The title of this work, expreſſed in it's full extent, runs thus:

Thomæ

ſters, who ſubſcribed that Remonſtrance to the General and army, of which Mr Collier gives the ſubſtance, and which at the ſame time he honeſtly applauds. In it they put them in mind of their duty to the Parliament, and of the obligations themſelves and that Parliament were under to defend his Majeſty's perſon, and to maintain his juſt rights; they told him that the one could not be injured, or the other invaded, without manifeſt breach of many ſolemn oaths, and particularly of the Covenant, they taught them to diſtinguiſh between God's approbation and permiſſion; ſet in its true light, the folly of pretending to ſecret impulſes to vindicate the breaking God's written laws; they made it evident, that neceſſity was a falſe plea; and concluded with adviſing them to follow John the Baptiſt's rule, to do violence to no man, and made no ſcruple to tell them, that if they perſiſted in their deſign, their ſin would find them out (*u*). He ſaw with ſorrow all that happened afterwards, keeping himſelf as retired as he could, attentive only to his paſtoral function and his ſtudies, tho' as we obſerved he did not publiſh the two firſt books of his Miſcellanies till the year 1651. The ſame year he printed a ſmall piece upon infant baptiſm, which was very much admired (*w*). He was very knowing in that controverſy, and beſides this wrote ſeveral other Diſcourſes, in which he treated the main queſtions with great ſeriouſneſs and ſolidity, of which ſome farther notice will be taken in the notes [*Q*]. In 1652 he obliged the world with his moſt excellent edition of the Emperor Marcus Antoninus's Meditations, to which he prefixed a preliminary diſcourſe on the Philoſophy of the Stoics, which by the univerſal conſent of the ableſt critics at home and abroad, is allowed to be a moſt compleat and correct treatiſe, as well as a moſt uſeful compendium of rational morality (*x*). He added likewiſe an exact tranſlation together with a commentary. He had in ſome of his former works given ſome occaſional ſpecimens of his perfect acquaintance with the works of this Imperial Philoſopher, whoſe eſteem has been always as high with the learned as his ſtation was in the world, and therefore, when this came abroad much was expected from it, a circumſtance rarely favourable to books, and which yet proved remarkably ſo to this, as the reader may find from a concurrence of learned teſtimonies [*R*]. When it appeared that he was rather ſuſpected than countenanced by the State, there were ſome in his pariſh who took advantage of his ſituation

(*u*) Eccleſiaſtical Hiſtory, Vol. ii. p. 859, 860.

(*w*) Diſcourſe Apologetical, p. 62.

(*x*) Occaſioned by his Diſpute with Dr Ward.

Thomæ Gatakeri Londinatis CINNUS; *ſive* adverſaria miſcellanea *animadverſionum variarum libris ſex comprehenſa: quorum primores duo nunc primitius prodeunt reliquis deinceps* (DEO *favente*) *ſeorſim infecturis*. Lond. 1651. in 4to. That is, *A Collection of miſcellaneous remarks, the whole divided into* ſix *Books, of which* two *are at preſent publiſhed, and the reſt ſhall,* God *willing, follow in due time.* In his preface our author ſhews, that theſe collections came abroad in order to diſcharge his promiſe when he publiſhed his diſſertation on the ſtile of the New Teſtament; which promiſe he had complied with ſooner, if he had not been called upon to execute that part of the annotations on the Scriptures, aſſigned him by the committee of parliament, with other members of the Aſſembly of Weſtminſter, and by a dangerous eruption of blood, by which he was brought very low, and for a long time withheld from his ſtudies; the firſt book is divided into eleven, the ſecond into twenty chapters, for the moſt part independent of each other. The account we have given at large of his book againſt Pfochenius, renders it unneceſſary for us to inſiſt upon this performance, becauſe it is entirely of the ſame nature, except it's tending to no particular point, but diſcovering it's author's ſenſe on difficult paſſages in the Old and New Teſtaments, the primitive Fathers, modern Critics, and as his ſubjects occaſionally led him, illuſtrating a vaſt variety of obſcure or perplexed places in prophane authors, both Greek and Latin; neither are there wanting ſome obſervations on words and phraſes in our own language. This work was received abroad with the higheſt commendation; and Morhoff particularly applauds the author for his ſingular happineſs, in diſtinguiſhing the true ſenſe of the moſt difficult paſſages, and of making it appear to the learned writer, that what he defends is the true ſenſe, and this, in few words, without any oſtentation, or without inſulting any of thoſe whom he corrects; but, on the contrary, commonly aſcribing their miſtakes, ſometimes to a ſlip of memory, and at others, to the bad editions of the books they uſed. The remaining books of this collection were publiſhed after his deceaſe, by his ſon Mr Charles Gataker, under the following title:

Adverſaria Miſcellanea Poſthuma, in quibus ſacræ Scripturæ primo deinde aliorum Scriptorum loci multis Lux affunditur. Lond. 1659. fol.

[*Q*] *In the notes.*] We have already ſpoken ſo much in another article, that it will not be neceſſary to detain the reader longer here, than barely to give him the titles of the two Latin diſcourſes penned by our author, which in point of learning, reaſoning, and modeſty, are not at all inferior to any that have fallen from his pen.

De Baptiſmatis Infantilis vi & efficacia Diſceptatio privatim habita inter V. C. Dom. Samuelem Wardum, *theologiæ ſacræ* doctorem, *& in academia* Cantabrigienſi *Profeſſorem*, & Thomam Gatakerum. Lond. 1651. 8vo. *A* private Conference *concerning the Force and Efficacy of* Infant Baptiſm, *between* Dr Samuel Ward, *and* Thomas Gataker.

Strictura ad Epiſtolam Joannis Davenantii *de Baptiſmo Infantum*. Lond. 1654. in 8vo. *Remarks upon the Epiſtle of* John Davenant *concerning* Infant Baptiſm.

[*R*] *From a concurrence of learned teſtimonies.*] There is hardly any performance handed down to us from the Ancients, which has been ſo highly and ſo juſtly praiſed, as theſe meditations of the Emperor Marcus Antoninus, ſtiled by way of excellence, and ſure without prejudice to his imperial dignity, the Philoſopher. If we may believe a very able writer, and a very judicious critic, this treatiſe of his is the utmoſt ſtretch of human underſtanding, and the nobleſt monument human wiſdom ever erected. But notwithſtanding this, few books had ſuffered more, indeed ſcarce any ſo much, by the injuries of time; ſo that the great credit it was in with the learned, could not be ſaid to proceed from a judgment formed upon the whole work, but from ſuch pieces of it as were in the beſt condition, and from the beauty and luſtre of which they very reaſonably concluded, that all was of a piece when it fell from his pen, and therefore deplored the many wounds it had received by a ſeries of unhappy accidents; they were far from aſcribing any of it's defects to it's great author, but did all imaginable juſtice to his learned labours, with whatever imperfections they came to their hands. It was publiſhed in Greek by Conrad Geſner, and a Latin tranſlation added by William Xylander, which had paſſed through ſeveral editions. Mr Gataker found both the text and the tranſlation exceedingly faulty, and ſpent near forty years in conſidering how the former might be amended, and a new tranſlation made, which might do juſtice to ſo exquiſite a piece.

He

sion, and no longer paid him their share of the compoſition for the tythes of their houſes, which upon a law ſuit amicably conducted had been decreed him in the court of Exchequer,

He found prodigious difficulties in the progreſs of this undertaking, being able to meet with very few manuſcript copies, and receiving but very ſlender helps from thoſe learned perſons, whoſe aſſiſtance he ſollicited in the progreſs of his endeavours. He ſent indeed to the celebrated Salmaſius a liſt of his principal difficulties, who returned him an anſwer, which he very gratefully acknowledges, in which he commends his undertaking, but at the ſame time gives him a diſmal proſpect of the obſtacles he was to overcome, ſuch as innumerable corruptions, frequent chaſms, more frequent tranſpoſitions, and many other misfortunes, which he promiſed him his aid in removing; which however his frequent journies, and other accidents, prevented his performing. Mr Gataker, nevertheleſs went on, and with the few helps he had, his own ſagacity, and the compariſon of paſſages cited with the printed copies, at length brought his deſign to bear, and, to the great ſatisfaction of the learned world, publiſhed his admirable edition of this valuable work about two years before his death, under the following title.

MARCI ANTONINI *Imperatoris* de rebus ſuis *ſive* de iis quæ ad ſe pertinere cenſebat *Libri* xii. *cum Verſione* Latinâ *& Commentariis* Gatakeri, Cambridge 1652. in 4to. that is, *The Emperor* Marcus Antoninus *his twelve books of his* own Affairs, *or of* thoſe things which he underſtood to concern himſelf, *with a* Latin *Tranſlation and Commentaries*. This was printed again in 1697. with the addition of the Emperor's life by Mr Dacier, together with ſome ſelect notes of the ſame author, by Dr George Stanhope, who dedicated it to the Lord Chancellor Somers; in which dedication there is a high character given of our author. The firſt thing that ſtrikes us in his edition, is his preliminary diſcourſe, in which the principles of the Stoicks are compared with the Peripateticks, with the old Academicks, and more eſpecially with the Epicurean Sect: the remaining writings likewiſe of the Stoick Philoſophers, Seneca, Epictetus, and particularly thoſe of our Emperor Marcus Antoninus, are briefly examined, and a ſuccinct account is given of the nature and deſign of the work. A piece which has been always conſidered as one of the moſt finiſhed in it's kind, written with great ſtrength and perſpicuity, full of excellent matter, collected with infinite diligence; in a word, ſmall in ſize, but very weighty in its contents. His account of the principal doctrines of the Stoicks is a proper and a ſufficient inſtance of this; take them as they have been tranſlated by Mr Collier. "Theſe "Philoſophers, ſays our author, have admirable no-"tions. They hold that God Almighty governs the "univerſe, that his Providence is not only general, "but particular, and reaches to perſons and things: "that he preſides over human affairs; that he aſſiſts "men not only in the greateſt concerns, in the exer-"ciſes of virtue, but alſo ſupplies them with the con-"veniencies of life. And therefore that God ought "to be worſhipped above all things, and applied to "upon all occaſions, that we ſhould have him always "in our thoughts, acknowledge his power, reſign to "his wiſdom, and adore his goodneſs for all the ſa-"tisfactions of our being. To ſubmit to his Provi-"dence without reſerve: to be pleaſed with his ad-"miniſtration, and fully perſwaded that the ſcheme "of the world could not have been mended, nor the "ſubordination of things more ſuitably adjuſted, nor "all events have been better timed for the common "advantage: and therefore that 'tis the duty of all "mankind to obey the ſignal, and follow the inti-"mations of Heaven with all the alacrity imaginable: "that the poſt aſſigned us by Providence muſt be "maintained with reſolution, and that we ought to "die a thouſand times over rather than deſert it. "Theſe are the Stoicks principles concerning the "Deity, and the regard due to him. Let us now "examine how they ſtand affected towards mankind. "And here their precepts are no leſs extraordinary "than in the former caſe. For they declare plainly "that we muſt love all mankind heartily, and, with-"out a complement; that we muſt ſollicit their inte-"reſt, bear with their infirmities, and do no manner "of injury to any mortal: that a man ſhould not "think himſelf born only for his private ſatisfaction, "but exert his ſtrength for the publick advantage, "and make his life as ſignificant to the world as 'tis "poſſible: that the conſcience of a good action ſhould "content him without the proſpect of fame or re-"ward: that he ſhould never be tired with the exer-"ciſe of good nature, but purſue one kindneſs ſo "cloſely with another, that there may be no room "for any inſignificant ſpaces of life to come between: "that a man ought to look upon a generous action as "a reward to itſelf, and that we oblige ourſelves by "doing a good turn to another; and therefore that "'tis a piece of meanneſs to ramble abroad, and graſp "at intereſt or applauſe. Farther: that the poliſhing "our reaſon, and the governing our will, is the moſt "noble employment, and that nothing ought to be "preferred to the practice of honeſty. And laſtly, "that a man ſhould ſtand immovably by his reaſon: "that no clamour of appetite ſhould call him off: "that no loſs of fortune, no menaces of death, no "extremities of torture ſhould make him give way, or "frighten him from a known duty. Theſe are ſome "of the noble ſentences we meet with in the writings "of the Stoicks. What ſtrains of piety, what inſtan-"ces of humanity, what flights of greatneſs are here!"

Our author afterwards obſerves, that Seneca, Epictetus, and the Emperor Antoninus, were the great pillars of the Stoick Philoſophy, judging however, that the firſt was far inferior to the two laſt, and amongſt other reaſons he gives theſe. "He is, ſays he, gay ſome-"times when he ſhould be ſolemn, and flouriſhes when "he ſhould ſtrike home. He makes a paſs with a "pin, and rather pricks than pierces it. He gives "you ſometimes a turn of fancy inſtead of ſolid proof; "his notions are now and then ſo ſuperfine, that the "leaſt reſiſtance turns the edge of them. They have "generally a point, but no weight of body for exe-"cution. This may be looked on as an exceſs of "clear dealing, but I am not the firſt that have taken "this freedom with Seneca; ſeveral great men have "paſſed the ſame judgment upon him long ſince. "However, I deſire not to be underſtood as if I had a "mind to detract from the worth, or diſcourage the "reading of this philoſopher, who was really a perſon "of an extraordinary genius, and has always had men "of ſenſe and learning to admire him. My meaning "is only to ſhew, that this Roman failed a little in "the points of gravity and fortitude, ſo peculiar to "the Stoicks: and that Epictetus, and Marcus Anto-"ninus, out-did him both in their pens and their "practice. Theſe two perſons, though in contrary "ſtations, and in the remoteſt diſtance of circum-"ſtances imaginable, the one being a poor ſlave, and "the other the greateſt monarch in the univerſe: "theſe two perſons, I ſay, have ſhewed the force of "the Stoical Philoſophy, and how ſtrongly it operates "under all diverſities of condition, and that not only "by a comprehenſive body of refined morality in their "writings, but alſo by an illuſtrious example every "way agreeable to the nobleneſs of the precepts de-"livered." He goes on to compare the Emperor's morality with that of the Goſpel, that it's excellence might appear by bringing it to the higheſt teſt; and, laſtly, he ſhews how he came to undertake, and in what manner he has executed this performance; after the preliminary diſcourſe follow the teſtimonies in favour of the author, firſt from the Greeks, amongſt whom we find Suidas, Dion Caſſius, Herodian, Ariſtides, Philoſtratus, Galen, and many others; amongſt the Latins, Julius Capitolinus, Avidius Caſſius, Aurelius Victor, Eutropius, Tertullian, Oroſius, &c. Amongſt the moderns, Petrarch, Sebaſtian Munſter, John Bodin, Juſtus Lipſius, Iſaac Caſaubon, Claudius Salmaſius, and many others. We then come to the text corrected throughout in many places, reſtored, properly pointed and divided, various of the chaſms filled up, the various readings in the margin, with a perpetual commentary, in which dark paſſages are explained, and corrections accounted for, the author's ſenſe ſupported from other writers on the ſame ſubject, hiſtorical paſſages illuſtrated, ſuch as are alluded to only, produced and applied, with the parallel read-

quer, and in ſatisfaction for which he conſented to accept of forty pounds a year; yet for all this he never attempted to diſquiet them, but bore patiently, not this only, but ſeveral other acts of injuſtice, notwithſtanding which he could not avoid the cenſure of evil tongues (*y*). In the evening of his days, when he earneſtly deſired that repoſe which his labours had ſo well deſerved, he found himſelf very warmly attacked by an active and angry adverſary infinitely beneath him in point of knowledge, but who had credit with ſome great men in the government, and who was looked upon as a perſon of tranſcendent abilities by the vulgar. This was the famous Aſtrologer William Lilly, who finding that our author had a very bad opinion of the art he profeſſed, and ſtill a worſe of himſelf, had the confidence to fall upon him in print (*z*), but met with the ſucceſs which he might eaſily have foreſeen. For Mr Gataker being fully poſſeſſed of all the ſacred and prophane learning relative to this ſubject, not only defended himſelf with great ſtrength of argument, but very clearly detected all the plauſible ſophiſms that could be urged in ſupport of this pretended ſcience (*a*) [*S*]. Yet notwithſtanding he convinced the judicious and impartial

(*y*) A Diſcourſe Apologetical, &c.

(*z*) In his *Anus tenebroſus.*

(*a*) See this point cleared in the Note.

ings throughout, ſo as to make this piece in ſeveral paſſages a comment upon itſelf, the author diſcovering his true meaning, where briefly expreſſed in one place by what he has ſaid more at large on the ſame topic in another. Upon the whole, it may be truly ſaid, and indeed has been ſaid, by the moſt able and judicious criticks, that this admirable piece came in quite another dreſs from our author's hand than it had appeared in before; and tho' it cannot be affirmed that all the wounds are healed, or that no ſcars appear, yet we may with juſtice avow, that the body looks fair and ſound, at leaſt in compariſon of what it was, and fully juſtifies the numerous commendations that have been beſtowed upon it. It was indeed the work of many years, but then he had frequent avocations; the duties of his function required much of his time; his infirmities hindered him not a little; but beſides all this, it was not barely the amending and explaining his author that required ſo much pains, but the fulfilling of his own deſign, which was to render the work of Antoninus, and his commentary upon it, a compleat body of the Stoick Philoſophy, or, in other words, a perfect ſyſtem of rational morality, ſublime in ſentiment, and yet not ſuperior to practice. *It is*, ſays the judicious Morhoff, (25) and after him the candid Father Niceron, (26), *a treaſury, in which will be found the juſt reflections, the wiſe obſervations, the noble maxims of all the great writers of antiquity, as well* Romans *as* Greeks, *repoſited in their proper places.* Not heaped together to ſhew the author's vaſt reading, but diſpoſed with ſo much prudence, that he ſeems to have inſerted nothing but what either the ſentiments or the expreſſions of his author ſuggeſted. Yet ſo far is he from aſſuming any merit either from his indefatigable diligence, or from that ſucceſs of which he could not but be a very competent judge; that, on the contrary, he modeſtly deſires his reader would not examine his performance with rigour, but conſider it as the work of an old man broken with age and ſickneſs, not altogether his own maſter, writing as his occaſions would permit, liable to miſtakes, ſenſible of overſights, and deſirous therefore of beſpeaking a mild and compaſſionate reception from ſuch as conſidering the difficulty of the taſk, and the accidents which diſabled him from coming up entirely to what he propoſed, would accept his good-will in excuſe of his defects, and allow ſomething for his endeavours, tho' attended with imperfections. All this he delivers with ſuch apparent truth, and with ſuch viſible ſincerity, that one cannot help ſtanding as much amazed at his humility, as at his perſeverance and good fortune, in bringing ſo acceptable a tribute to the Republic of Letters.

(25) Polyhiſt. literar. l. 1. §. 1.

(26) Memoires pour ſervir a la Hiſtoire des Hommes illuſtres. Tom. viii. p. 85.

[*S*] *In ſupport of this pretended ſcience.*] The ground of this controverſy was our author's, Mr Gataker's, Annotations upon the ſecond verſe of the tenth chapter of the prophet Jeremiah, in which chapter the ſacred writer warns the Jews againſt two great ſins, to which they might be particularly tempted in the places of their captivity, liſtening to the predictions of Aſtrologers, and complying with the practice of idolaters: it was in handling the firſt of theſe that our author gave offence to William Lilly, who had been a great agent for a certain faction during the civil war, and thereby a fatal inſtrument of much miſchief to church and ſtate. Our author therefore apprehended it his duty to expoſe the vanity of predictions from the ſtars, and to ſhew ſuch as were truly Chriſtians, that it was not only folly and ignorance, but downright wickedneſs to rely upon them. His expoſition is in itſelf ſo curious, ſo full of ſolid ſenſe and ſound learning, and ſo effectually deſtroys the credit of that deluſive art, by which, in all ages, weak and wandering minds are apt to be miſled; that, as well for this this reaſon as to ſet the point under our conſideration in it's proper light, we will tranſcribe what he has delivered (27).

(27) In the ſecond Volume of the Aſſembly's Annotations, which cannot be more particularly cited as it is not paged.

Thus ſaith the Lord, learn not the way of the Heathen.] Becauſe the Jewiſh people were a great party of them to go in captivity into Babylon, and other the regions adjacent, yea, many of them in likelihood were in captivity already, (ſee ver. 11. ch. xxiv. 1. and xxix. 1, 2.) God by the prophet endeavoureth to confirm and ſtrengthen them, the pious eſpecially among them, (for ſuch alſo there were of them, chap. xxiv. 5. Ezek. xi. 16.) againſt thoſe ſuperſtitions and vanities that were rife in thoſe parts, and they might be in danger, being exiles and captives in a ſtrange land, to be ſtrongly tempted unto: Heb. *Learn not to the way*, where either the particle is ſuperfluous, omitted therefore Pſal. cvi. 35, chap. xii. 16. or elſe it may be rendered, *Accuſtom not yourſelves to the way of the Heathen*; and ſo ſome render it, *do not imitate them*, ſee chap. ix. 5. their *way*, that is, their ſuperſtitious courſes, Lev. xviii. 3. and xx. 23.

And be not diſmayed at the ſigns of Heaven.] The firſt head of ſuperſtitions, which he beginneth with, is Aſtrology, a ſtudy and practice ſo rife among them, in thoſe parts, Iſai xlvii. 13. that the profeſſors and practiſers of it not with them alone, Dan. ii. 2. and v. 7. but among other nations alſo are generally deſigned by the name of *Caldeans*, ſee Strabo, l. 17. Cicero of *Divination*, l. 2. Pliny, l. 6. c. 26. *Aſtrology*, I ſay, not that which we commonly term *Aſtronomy*, whereby the true nature and motion of the celeſtial bodies are by grounds of reaſon and rules of art, thence taking their riſe, enquired into and diſcovered; but that *judiciary aſtrology*, as it is uſually ſtiled, whereby men take upon them, from the poſtures and aſpects of them, to foretel the iſſue of human affairs, either publick or private, and what caſual events ſhall befal either perſons or people: a practice grown of late with us into great eſteem, being either countenanced or connived at by thoſe in authority with us, though having entered themſelves; and cauſed others with them to enter into a religious bond of a ſolemn oath and *Covenant*, to endeavour the *extirpation* of all thoſe things among us that are *contrary to ſound doctrine, and the power of godlineſs*, whereof this is none of the leaſt. For the original whereof (ſince it hath not, nor can be ſhewed to have any ground from the light of nature, or natural reaſon, we ſhall not need to go far to find it out) we have a blind but inſolent buzzard (I may well ſo term him) among us, one that profeſſeth himſelf no ſmall doctor in theſe impoſtures and dotages, (wherewith he hath bewitched not a few with us eſteeming his predictions as no other than divine oracles) and taketh upon him, by the ſtars, to ſteer the affairs of our ſtate, pretending *to read in the book of Heaven* all that he writes, who will ſufficiently inform us herein. Now this man to juſtify the warrantableneſs of this his practice telleth us, that *the good Angels of God in former ages, at firſt by perſonal conference acquainted the ſons of men with this learning of the ſtars; and thoſe holy men*, ſaith he, *ſo inſtructed, living many years, and*

in

impartial enquirers into the ſubject of the vanity of this deluſive doctrine; yet he could never ſilence his ſelf-conceited and obſtinate antagoniſt, who, to ſay the truth, had his bread

in purer airs, where they curiouſly obſerved the planets, and their motion, brought this art to ſome maturity, without the leaſt hint of ſuperſtition. But, *as the ſons of men fell from God in divine worſhip, ſo in ſlitting and ſhifting their habitations, they forgat the purer part of this art, and in ſome countries added ſuperſtitious conceptions.* The holy Angels then belike by this man's relation, did at firſt inform thoſe holy men, which they could not otherwiſe have known, of the nature of the planets, to wit that *Saturn* was a *melancholick malignant* planet, *Mars a choleric and litigious* one, *Mercury a thieviſh*, *Venus a laſcivious and wanton* one, and that they do accordingly affect and diſpoſe ſuch people or perſons, as are either bred under them, or whom they have ſpecial relation unto. For theſe and the like ridiculous fopperies and impious calumniations of thoſe glorious creatures, are with them as the popiſh purgatory with the Papiſts, the main grounds and principles of their whole art; which being taken away the whole fabrick and frame of their ſuperſtitious ſtructures will preſently fail and fall flat to the ground, as with thoſe other, all their maſſes, dirges, obites, pardons, and indulgences, if you deny them their purgatory, which becauſe they can produce no clear ſcripture for, they run with theſe men to their forged revelations. But whence theſe frivolous conceits, and irreligious ſurmiſes, concerning thoſe celeſtial bodies, (which if you queſtion you ſhake the ground of all their conjectural ſkill) and their original may well be conjectured from the very names the heathen impoſed upon them, being borrowed from their counterfeit deities, whom they deemed ſo qualified; aſſure ourſelves we may, that God's holy Angels never raiſed any ſuch foul aſperſions, and groundleſs defamations, upon thoſe pure and ſpotleſs creatures, far from and wholly uncapable of any tincture of ſuch vicious diſpoſitions. But all that this man relateth, we may if we pleaſe, and be ſo ſilly as ſo to do, take upon his credit, for he telleth us not what times thoſe were wherein it was thus, or who thoſe holy men were, unto whom the holy Angels at firſt revealed thoſe things, or out of what records he hath theſe relations concerning ſuch pretended revelations. And, as little reaſon have we to engage our faith to his antagoniſt, another fowl of the ſame feather, that flieth yet ſomewhat higher than he, and pretending *his predictions to be grounded on art and nature*, telleth us that we may not miſdoubt or queſtion his art, that *this art was deduced from God to Adam, to Seth, to Abraham*, for proof whereof he referreth us to a knight of note for his ſtudies in this kind, who in favour indeed of this art, which he was overmuch addicted to and beſotted with, affirmeth in part what he ſaith, but bringeth no better proof of it, than a tale out of Joſeph the Jew, who in his *Antiquities*, l. 1. c. 3. telleth us, that *thoſe of Seth's iſſue living long, and without diſturbance, gave themſelves to the ſtudy of heavenly things, and the conſtitution or adminiſtration of them; and becauſe Adam had foretold a twofold deſtruction of the world that ſhould come, the one by water, the other by fire, they left the ſum of what they had of that kind of learning obſerved, engraven on two pillars, of brick the one, of ſtone the other*; but neither is any word in the Jew, of this their *judicial aſtrology*, nor of any ſkill in this kind, or any other by God imparted unto Adam, which they yet father upon him, and the whole relation of the *two pillars* ſeems as true as that, which he addeth of the continuance of the latter of them in Syria unto his time. And indeed, if any ſons of Adam ever had any ſuch immediate communion, either with God himſelf, or his holy Angels, it muſt be thoſe antient patriarchs Abraham, Iſaac, and Jacob, and thoſe prophets of God among his people, unto whom God uſed ſometime immediately, ſometime by the miniſtry of Angels, to impart his mind concerning future events, as well publick as private; but no where in ſcripture read we, that God did this either by the natural courſe of the celeſtial ſigns, or as from thence to be obſerved, nor undoubtedly had any ſuch art, and ſkill been taught the godly ones among God's people, whether by God himſelf or his Angels, would they either have concealed it from them, or much leſs committed it unto Paynims and Pagans, and by ſuch have tranſmitted it unto poſterity, for from ſuch incorrupt times it crept in among Chriſtians, being yet ever among them liable to cenſure, nor was any in the ancient Church that had profeſſed ſuch arts, admitted into the profeſſion of Chriſtianity, unleſs that, firſt, they renounced thoſe damnable practices, and recanted ſuch their ſuperſtitious conceits. But men may eaſily gueſs what Angels they were, that acquainted men at firſt with theſe things, and ſet them on work to buſie their brains about ſuch matters, as neither light of nature nor grounds of reaſon were able to inform them of, but muſt have ſome revelation either divine, or angelical, or diabolical rather, for the finding of them out. So far are God himſelf and his prophets from taking notice hereof, as ſome ſuch heavenly diſcovery or giving any approbation thereunto, that God by them ſometime derideth it, Eſay xliv. 25. and xlvii. 13. and ſometime diſſwadeth and condemneth it as an heatheniſh practice, not beſitting his people to heed, as here ſo elſe where Deut. xviii. 10, 14. From the prince of the air, therefore, it may juſtly, by this man's own grounds and grants, be deemed to have proceeded at firſt, by him taught the heathen, that were ruled and ſwayed by him, and from them together, with the worſhip of them in their idols, conveyed unto God's own people. For what of further obſervation he ſubjoyneth to omit, that thoſe ridiculous principles muſt firſt be made good, 'ere any obſervation can be grounded upon them; the like did the heathen magicians report of their charms, and other ſuperſtitious divinations by the flight of fowls, and from the bowels of beaſts, to wit, that obſervations had been made of them for many hundreds of years. See Pliny l. 28. c. 2. and this, and thoſe, may well go together one with the other, unto him that was the firſt founder of them the *father of lies*, John viii. 44.

And be not diſmayed at the ſigns of Heaven.] As if the event of things, or the iſſue of your affairs, depended upon them, which thoſe fond *ſtar gazers* bare people in hand, and took upon them thereby to determine and foretel what good or bad ſucceſs mens deſigns ſhould have, Eſay xlvii 12, 13. Howbeit ſigns there are of two ſorts; firſt, natural and ordinary, the ſtars themſelves being ſet in the ſky to diſtinguiſh the times and ſeaſons of the year, to which may be added the conjunctions of them one with another, or oppoſitions of them one to another, whence the eclipſes of ſome of them at ſometime do proceed, and theſe are thoſe ſigns which coming in a conſtant courſe, and continued tenor (in regard whereof men ſkilful therein are able, either going backward to tell how it hath been with them for thouſands of years paſt, or looking forwards how it will be for as many, if the world itſelf ſhould ſo long continue): God would not have his people to be affected or affrighted with, as if in regard of them, or from them, any evil in the ſucceſs of their affairs could betide them; other *ſigns* there are extraordinary in dreadful apparitions, beſides the ordinary courſe of the creatures, by which the Lord doth ſometime give notice unto his people of his diſpleaſure, and warning of enſuing wrath, and theſe God doth not inhibit his people to be affected with, and taking of them unto heart. See Joel ii. 30, 31. Luke xxi. 11, 25.

For the heathen are diſmayed at them]. Or rather *though the heathen be diſmayed at them.* Though they be ſo ſilly or ſuperſtitious, as to be therewith thus affected; yet ought ye not ſo to be. So is the particle very frequently uſed in our verſions, alſo not ſeldom expreſſed, Gen. viii. 21. Joſh. xvii. 18. Pſal. xxiii. 4. Eſay xii. 1. Dan. ix. 9. Mic. vii. 8. Hab. iii. 17.

For the cuſtoms of the people are vain.] Heb. *The ſtatutes* or *ordinances of the people*, (that is thoſe courſes of this nature, which people of ſeveral countries herein concurring do, as if it were ſome ſacred or divine ordinance, very preciſely and ſuperſtitiouſly obſerve)

—*vanity*

bread in ſome meaſure at ſtake, and was therefore bound by the ſtrongeſt tie imaginable to defend that craft by which he lived (b). It is no wonder, therefore, that writing and publiſhing

(b) He was aſſiſted by Henry Carpenter, John Gadbury, &c.

—*vanity itſelf*, i. e. *are each of them exceeding vain*, as vain as *vanity itſelf*, and a matter therefore very ill beſeeming ſuch as profeſs themſelves to be God's people, as did the Jews then, and as Chriſtians at this day do, to be taken and carried away with ſuch frivolous and ridiculous fancies and ſopperies.

Theſe annotations rouzed all the tribe of Aſtrologers againſt our learned author, from the higheſt to the loweſt. William Lilly, John Swan, and Sir Chriſtopher Heydon, conceived themſelves to be perſonally attacked, and therefore fell upon him without mercy, as if he had been guilty of ſome very great offence; and the more liberty was taken in this reſpect, becauſe it was well enough known, that thoſe in power would be pleaſed to ſee a divine of great credit with the people, and who had ſignified his diſapprobation of things that were then doing, humbled. Upon this our author wrote a diſcourſe in defence of himſelf, and of all that he had advanced againſt the illuminated tribe of ſtar gazers, under the following title.

A Vindication *of the* Annotations *on* Jeremiah *Chap.* X. ver. 2. *againſt the ſcurrilous aſperſions of that grand impoſtor* Mr William Lilly; *as alſo againſt the various expoſitions of two of his advocates*, Mr John Swan, *and another by him cited but not named. Together with the annotations themſelves; wherein the pretended grounds of* judiciary aſtrology, and *the* ſcripture proofs *produced for it, are diſcuſſed and refuted. By the author of the* Annotations, Lond. 1653. in 4to. In this treatiſe he dealt very roundly with his opponents, and with that ſcience of which they profeſſed themſelves maſters; enforced all that he had ſaid againſt it, by ſolid arguments, and produced in ſupport of his own ſentiments, a numerous train of authorities, and amongſt others alledged this, that, having aſked the celebrated mathematician, Mr Henry Briggs (28) what his ſentiments were concerning Aſtrology, he anſwered readily, *that it was a ſyſtem of groundleſs conceits*. William Lilly perceiving the deep impreſſion theſe pieces made upon the wiſer ſort of people, grew ſtill more angry; and, therefore, in a diſcourſe upon a comet which appeared in 1652, and which he prefixed to his Aſtrological Predictions for 1654, he writes thus (29). 'My 'diſcourſe may the more freely be admitted public 'view, ſith no meaner a man then T. G. B. D. i. e. 'Thomas Gataker, Bachelor of Divinity, parſon, 'rector, or rather receiver of the tithes, profits, and 'all appurtenances of church duties of Redriff near 'London, (tho' my ſimple antagoniſt) ſith he, I ſay, 'in thoſe pitiful and illiterate annotations of his, upon 'Jer x. ver. 2 ſeems to warrant this inquiry, nay 'he doth poſitively affirm it lawful. Theſe are that 'old ſilenced or dumb miniſter's words, as himſelf ren'ders them in his impudent pamphlet, writ againſt 'me, containing twenty-ſix ſheets of ſcolding, viz. 'Other ſigns there are extraordinary, thus maſter Ga'taker, formerly a ſtiff prelate preaching impudently 'for the liberties or ſports of the Sabbath, viz. cards, 'dice, &c. afterwards in hope of Biſhops, Deans, or 'Chapter Lands, a pretended Preſbyterian, ſince its 'decay, the poor man is mute, and hath willingly 'ſilenced himſelf from preaching, and now like a 'child teaches, or is taught, a new mode of ſpelling 'to his proſelytes, and cants the art of lying and 'ſcolding to the wives of Billinſgate, himſelf being 'unmarried.' In his poſtcript to the ſame almanack he has more to the ſame purpoſe, and in this kind of ſcurrilous war, he wanted not ſome allies, as will appear from the title of our reverend author's reply to his ill uſage and ill language.

(28) Vindication of the Annotations, p. 19.

(29) Merlini Anglici Ephemeris or Aſtrological predictions for 1654.

A Diſcourſe Apologetical, *wherein* Lilies *lewd and lowd lies in his* Merlin *or* Paſquil *for the year* 1654, *are clearly laid open; his ſhameful deſertion of his own cauſe is further diſcovered; his ſhameleſs ſlanders fully refuted, and his malicious and murtherous mind, inciting to a general* maſſacre *of* God's miniſters, *from his own pen evidently evinced; together with an advertiſement concerning* two *allegations produced in the cloſe of his* poſtſcript; *and a* poſtſcript *concerning an* epiſtle dedicatory *of one* J. Gadburie, *by* Thomas Gataker, B. D. *author of the* Annotations *on* Jer. x. ver. 2. *and of the vindication of them*. Lond. 1654. 4to (30).

(30) This is the Treatiſe we have ſo often cited.

In this treatiſe our author takes occaſion to ſpeak of the moſt conſiderable tranſactions of his life, relates at large, the manner in which he arrived at his ſeveral preferments, and very fully refutes all the malicious and idle reflections, that Lilly and his aſſociates had thrown upon him. Amongſt other particulars he mentions his ſentiments upon church-government, profeſſing that he was never an advocate for the power and ſplendour of the Prelacy, but that on the other hand he had ever inclined to a moderate epiſcopacy; that as for the ſake of doing good in his generation, he had ſubmitted to the Biſhops, ſo when they were taken away by what he eſteemed the ſupreme power, he had ſubmitted to that likewiſe, but never ſought any, nay, on the contrary, had refuſed preferment from both ſides. This muſt have been written but a very little while before his death, which gave great ſatisfaction to Lilly, and thoſe of his party; who as they had ſerved to run down the royaliſts in favour of the parliament, and the Church of England, to gratify the non-conformiſts; ſo now they were as ready to run down the parliament in behalf of Oliver Cromwell, and to aſperſe the Preſbyterians, who had honeſtly and courageouſly oppoſed the King's murder to gratify the ſectaries.

Lilly in particular in the preface to his Aſtrological Predictions for the year 1655, inſiſts largely upon this ſubject, and in the poſtſcript ſpeaks thus of our author then lately deceaſed, for that poſtſcript is dated November the eleventh 1654. 'Our pen doth willingly 'paſs by ſome injurious ſpeeches delivered publickly in 'a ſermon, at Maſter Gataker's funeral, by a very un'worthy aſhye mouth. We honoured Maſter GATAKER 'whilſt alive, accounted him a man of as much learning 'and reading as any, and endued with as much cho'ler and ſpleen as any mortal man. We wiſh he had 'kept cloſe unto the text, when he commented on 'Jeremiah chap x. ver. 2. and not beſpattered our'ſelf with very obſcene language, not befitting a man 'of gravity, eſpecially in a commentary upon a text 'of ſcripture, for which many learned Divines have 'much condemned his raſhneſs or illguided zeal. But 'he is dead, having left very few Divines of our Eng'liſh nation comparable, or equal in learning, unto 'himſelf, eſpecially in Hiſtory or the Hebrew tongue. 'We predicted his death as it fell out in Auguſt 1654, 'and we were ſo civil as to beſtow an epitaph upon 'him, viz. *Hoc in tumbo jacet preſbyter*, &c. ſeriouſly 'he miſtook our meaning in every particle of his forty ſheets of paper wrote againſt us.'

We will conclude this note, with ſhewing the diſingenuity and equivocation of Lilly's falſe prediction, and counterfeit moderation. At the cloſe of his obſervations on the month of Auguſt 1654, ſtands this line by itſelf, *Hoc in tumbo jacet preſbyter & nebulo*, that is in Engliſh, as coarſe as his Latin, *Here in his tomb lies a preſbyter and knave, or worthleſs fellow*. Now with what juſtice this line at the end of Auguſt can be ſtiled a prediction of the death of Mr Gataker, which happened on the twenty-ſeventh of July, is left to the reader to decide. It was a very great chance, if either ſome eminent man in that perſwaſion had not died, or the party itſelf received ſome mortification, to which this ſtroke might be applied; for it was an ordinary artifice of his, to throw out ſuch ambiguous oracles, and then to entitle them prophecies of ſuch events, as either reſembled, or by his ſophiſtry could be brought to reſemble, them. If inſtead of placing it at the bottom of his obſervations, he had ſet it at the top, it would have run againſt the very day in which Mr Gataker was interred, which had been a lucky hit indeed; but as it ſtood in his almanack, none but himſelf would have had the aſſurance to have called it a prediction After weeping like a crocodile over the aſhes of a good man, whom he had inſulted to his laſt breath, he moſt ſhamefully hides a falſhood under an &c. in hopes that his readers would forget what that &c. ſtood for. If Mr Gataker was *a knave*

nothing so frequently as he did, he should persecute our author to the end of his days, or that happening to out-live him, he should as he did insult him in his grave contrary to all the rules either of religion or humanity (c). As for the pious and learned Mr Gataker, he continued to pursue the same useful and innocent course of life, till years, infirmities, and perpetual labours, wore him out. He was very willing to have resigned his living of Rotherhith, if the person who had the right of presentation would have fixed upon an able and learned Minister, which he pressed for several years together, as being not more weak for sustaining, than weary of bearing on his shoulders a burthen which, however envied, was to him very uneasy, but with which however he was compelled to travel to the grave. He was seized with a fainting fit on Friday July the seventh 1654, as his historian relates (d), or rather on the ninth of that month as we are told by his son (e). It happened about day-break, and by speedy and skilful assistance he was quickly brought to himself, but continued very weak and feeble, as well as sensible of his approaching end. Three days after he was seized with a fever, with which under these circumstances, and at his time of life, he was very little able to struggle; on the twenty-eighth he lost the use of the lower part of his body, but retained his senses clear and strong to the very last: towards evening the next day his son prayed by him, in which prayers he also joined with great fervency, and being seized soon after with his last agony, expired in the eightieth year of his age (f). He was interred on the first of August following at his own church, and his funeral sermon preached by his old and faithful friend Mr Simeon Ashe, which discourse was not long after published, with a narrative of Mr Gataker's life, and acts; at the close of this there are several copies of verses as well in Latin as in English, in honour of his memory (g). He would never suffer his picture to be taken, but the following is said to be a just description of his person. He was of a middle stature, a thin body, a lively countenance, and fresh complexion; of a temperate diet, a free and chearful conversation, addicted to study, but not secluding himself from useful company; of a quick apprehension, sharp reason, solid judgment, and so extraordinary a memory, that tho' he used no common-place book, yet he had in readiness whatever he had read, as his prodigious number of quotations shew. His house was a private seminary for divers young gentlemen of this nation, and many foreigners resorted to him, and lodged at his house in order to receive from him advice in their studies (b). His extensive learning was admired by the great men abroad, as Salmasius, and others, with whom he held a correspondence; and at the bottom of the page we shall collect a few of the many testimonies in honour of this great man and his writings, which have fallen from the pens as well of foreign writers as of our own nation [T]. He was in the course of his long life four

knave or *a worthless person*, why this high character of him? But if he deserved this character and a better, what did this man deserve for fixing upon him such an epitaph? In the beginning of this note the reader has Mr Gataker's detection of astrology, and in the close of it we have detected the art of his adversary.

[T] *From the pens as well of foreign writers as of our own nation.*] As the course of our author's life and labours, was attended with many circumstances, that recommended him to the esteem and veneration of men of true learning and sincere piety; so, as he well observed himself, there wanted not other circumstances, that kept him from making so great a figure as he might have done in his life-time, and which it is possible may have also operated upon his memory. He was a man so moderate and conscientious, that he could not go the length of any party, which was the true reason of his not accepting preferments. In the reigns of King James and King Charles, he disliked the high notions that were regarded, as the maxims of the government by churchmen, which he rightly foresaw would be fatal, not only to them but to the Church. This kept him at a distance from those that were in highest authority, and tho' his patrons at Lincolns-Inn would have procured him a prebend at least, yet he refused it; and when it appeared he was not to be gained, it was natural to hold him suspected, in which state he continued for many years. When he came to sit in the Assembly of Divines, for which he never received any thing, he drew upon himself the dislike at least if not the hatred of such as were zealous for the Hierarchy; but when he declared himself in that Assembly in favour of Episcopacy, and excepted against the solemn league and covenant, till the words were so altered, as to be understood to exclude only Ecclesiastical Courts, and what he and those of his own opinion took to be exorbitant in the power of Bishops, he lost the affections of the other party, who were for destroying episcopacy root and branch. His open declaration against the subsequent proceedings of those who resolved all power and authority, into that of the sword, heightened the aversion of the dominant faction to his person, and exposed him to that ill treatment he met with from their tools, who, as we have shewn in the last note, charged him with inconstancy, changing sides, and squaring his doctrines to the times; whereas in truth he was always consistent in his principles, and instead of shifting from party to party, was never the instrument of any party, but lived contented upon a very small provision, at most one hundred pounds per annum, and was reviled for keeping that.

Yet as we have said he had the esteem and veneration of the wise and moderate of all parties, grounded solely upon a true sense of his merit. Mr Edward Leigh, his contemporary, and who was well acquainted with him, has given him this short and just character (31). 'Thomas Gataker, of the Gatakers of Gataker in Shropshire, a solid judicious and pious Divine, as his divers learned Latin and English treatises shew.' Dr Edmund Calamy gives the following account of those which are stiled the Assembly's Annotations, and bestows therein just praises upon our author, the whole passage is very curious and instructive, and therefore we will not curtail it (32). 'There is one work unjustly ascribed to this Assembly, and that is the Annotations on the Bible which commonly bear their name. It is true, as is hinted in the preface before the said notes, the same parliament that called the Assembly, employed the authors of those annotations: for letters were directed to them by the chairmen of the committee for religion, urging their undertaking that work: and they were by order of that committee furnished with whatsoever books were needful. It is also true, that several of those that were concerned in it, were members of the Assembly: and yet it was not undertaken by the direction, or with the consent of the Assembly, nor were the major part members of the Assembly, nor did any deputed by the Assembly review the work when it was finished: so that it cannot upon any account

four times married. First to the widow of Mr William Cupper, who by her first husband had two daughters, towards whom the affection of Mr Gataker in their tender years was so extraordinary, and his care of providing them suitable matches in their riper age so manifest, as well as his tenderness for their children, and whatever regarded the families, into which they married, that the generality of the world made no doubt of their being his own children; yet by this wife he had only one son, of whom she died in childbed. He bore both his father's names, lived to man's estate, visited most parts of the world, and returning home much improved in every respect, died in his father's house; his second wife was the daughter of the Reverend Mr Charles Pinner, by whom he had a son Charles, whom we have already mentioned as attending his father in his last moments, and publishing some of his Posthumous Works. Of this son his second wife died in childbed, so that he was twice a widower in the space of a few years, and having two young children of his own to bring up, brought up also those daughters of his first wife with them, so that it was purely an act of christian beneficence, and did not at all proceed from any influence their mother might have upon his mind: some years after the death of his second he married his third wife, who was the sister of Sir George and Sir John Farwel, by whom he had three children, a son and a daughter who died before him, and another daughter who survived him. His fourth wife was the widow of a citizen, with whom he lived twenty-four years, and survived her two years within a few days (*i*). The reader has now seen the best account we can give of his public and his private life; and as his modesty restrained him not only from seeking, but from accepting, preferments, hindered him from so much as leaving his picture to posterity, and living and dying kept him from every thing that had even the smallest appearance of ostentation: so perhaps it was in compliance with his desire that not so much as a tombstone was erected where is body laid (*k*). But notwithstanding this, a learned and ingenious foreigner, the celebrated Hermannus Witsius, has erected a most noble monument to his memory, by collecting into one volume, and publishing with great care and correctness, all his critical works, a monument far more lasting then either brass or marble, for it will last as long as there is any sense of true religion, or any regard to true taste in literature [*U*], the

'count be said to be theirs. However it was a good 'work in its season, and I shall add the names of the 'true authors, as far as my best enquiry would help 'me to intelligence. Mr Lee, Sub-Dean of Chester, 'did the Pentateuch. Dr Gouge had the two books 'of Kings, and Chronicles, Ezra, Nehemiah, and 'Esther, for his province. Mr Meric Casaubon did 'the Psalms, Mr Francis Taylor the Proverbs, and 'Dr Reignolds Ecclesiastes; Mr Smalwood, who was 'recommended by Archbishop Usher, did Solomon's 'Song. The learned Gataker did Isaiah, Jeremiah, 'and Lamentations: and is in the opinion of many 'competent judges, exceeded by no commentator, 'antient or modern, on those books. Ezekiel, Daniel, 'and the small prophets, were in the first edition done 'by Mr Pemberton, and in the second by Bishop 'Richardson. The notes on the four Evangelists are 'Mr Ley's, and those on St Paul's Epistles, Dr 'Featley's, which latter are broken and imperfect, on 'the account of the author's dying, before he had re-'vised or finished them. There were also two other 'persons concerned in this work, viz. Mr Downame 'and Mr Reading, who might probably have the 'other parts of scripture allotted them that are not 'here mentioned.'

Mr Archdeacon Echard, speaking of our author's death, delivers himself thus (33). 'Thomas Gataker, 'of an ancient family in Shropshire, was educated in St 'John's College in Cambridge, and elected Fellow of 'Sidney College while it was building, where he be-'came remarkable for his skill in the Greek and He-'brew tongues. He was afterwards rector of Rother-'hith in Surry, and the most celebrated among the 'Assembly of Divines, being highly esteemed by 'Salmasius and other foreigners; and it is hard to say 'which is most remarkable, his exemplary piety, and 'charity, his polite literature, or his humility and 'modesty in refusing preferments.'

The celebrated Morhoff in his large and learned work, speaks of almost all our author's writings, that appeared in Latin, with the praises they deserve; but with that brevity, which the nature of his own design required. In reference to his edition of the Emperor Antoninus's Meditations, he delivers himself more largely than usual in these words (34). 'Opera illa, 'quam in Antoninum impendit Gatakerus, plane 'egregia est. Primum premisit luculentam dissertа-'tionem de disciplina stoica, in qua eam confert cum 'peripatetica, & academica vetere, epicurea, &c. 'Variæ lectiones notentur in margine, parallelismus 'autorum, in Antonino occurrentium, ad minutias 'usque eos ostendit, lateri appositus. Denique com-'mentarii uberrimi, aliorum philosophorum sententias 'græcas, latinas, Antonini effatis respondentes, mag-'no cumulo congerunt ut librum hunc non immerito 'pandectas doctrinæ moralis stoicæ dicere possis.' Axemius stiles him (35), *a writer of infinite learning and accurate judgment*. The celebrated Bayle mentions him with all the respect possible (36). Mr Colomies gives him the following character (37), 'Of all 'the critics of this age who have employed their pens 'in illustrating polite learning, there are very few, if 'indeed there are any, who deserve to be preferred to 'Thomas Gataker for diligence and accuracy, in ex-'plaining those authors whose writings he has exami-'ned.' Yet this curious and inquisitive person, whose peculiar talent lay in discovering the excellence, or the errors of the books he perused, was very far from sparing our critic; on the contrary, in looking over his works he mentions a few, and but a very few places, with which he was not entirely satisfied, and of these perhaps there is more than one, in respect to which severe judges might doubt whether his censures were well founded. Baillet has a chapter concerning his writings (38), in which he acknowledges his profound skill in the learned languages, his great accuracy and admirable sagacity; but adds, that he was sometimes so bold in his conjectures, that even his greatest admirers durst not adhere to his singular opinions. It is to be wished that he had explained himself more clearly upon this subject, and had pointed out what these opinions were. Sir Thomas Pope Blount speaking of him occasionally, calls him vir κεῖσε τῶν (39).

[*U*] *To true taste in literature.*] The title of this collection at large runs thus;

THOMÆ GATAKERI opera critica *Dissertatio de N. Instrumenti stylo. Cinnus sive adversaria miscellanea. Adversaria miscellanea posthuma.* Marci Antonini *Imperatoris de rebus suis Libri* XII *Commentario perpetuo explicati. Opuscula varia. Omnia singulari cura recensita, ab infinitis typotheta rummendis expurgata, multorum græcæ dictorum latina interpretatione illustrata, & locupletissimis accuratissimisque indicibus ornata.* Trajecti *ad* Rhenum, 1698. fo. At the head of this collection stands a dedication, addressed to all who are inclined

panegyrick before it is conciſe, perſpicuous, and polite; affords us a true picture of the author, and does that juſtice to his candour, learning, and piety, that a long life ſpent in the exerciſe of virtue, and promoting uſeful knowledge ſo well deſerved.

inclined to cultivate the ſtudy of the ſacred ſcriptures, and ſound divinity, in which the learned Witſius begins with obſerving, that ſuch as collect and publiſh the labours of great and able men, render thereby greater ſervice to the commonwealth of letters, than by ſending abroad new, but leſs perfect productions of their own. He then mentions the pains he has taken to facilitate the ſtudies of youth, as his ſtation required, and declares he never had greater hopes of being uſeful in that reſpect, than by putting this book into the hands of the publick. He is perſwaded there will appear a very wide difference between his own writings and thoſe of Gataker, but their ſuperiority, continues he, can be to none better known, by none more readily acknowledged, than by himſelf. This, ſays he, is that Thomas Gataker, whoſe venerable name is ſo highly celebrated, that he muſt be a ſtranger in the commonwealth of learning, who is not acquainted with him, and a very ill judge of merit, who does not ſet a juſt value upon his exquiſite knowledge, and rare virtues; if I ſhould ſay that he has had few equals in this age, in his knowledge of the moſt abſtruſe antiquities, and more eſpecially in regard to Greek literature, I ſhould not be beſide the truth. In this and other commendations he profeſſes to ſpeak for himſelf, and in that reſpect declares for his own part, he knew none who had better underſtood, or had more religiouſly dedicated his labours, to make others perfectly underſtand the ſacred writings, than he; after this, he largely expatiates on the proper uſe he had made of his comprehenſive learning, and perfect acquaintance with profane authors, all which, as became him, he piouſly conſecrated to the explaining and illuſtrating the ſacred word of God. Such is the ſcope of his large and elegant diſcourſe, which the learned readers will no doubt be better pleaſed to ſee in his own words.

Quantum enim mea qualiacunque ſcripta a doctiſſimi iſtius viri operibus accurationis, elegantiæ diffuſiſſimæque eruditionis laude ſuperentur, & quanto ex hiſce major utilitas in lectoris commodum redundatura ſit, nemo me melius intelligit, nemo candidius teſtabitur. Is eſt GATAKERUS, eaque venerandi nominis iſtius celebritas, ut peregrinum in republica literaria eſſe neceſſe ſit qui eum ignorat, & iniquum meritorum æſtimatorem, qui tam præclaræ eruditioni rariſque virtutibus ſuum non ſtatuit pretium. Paucos eſſe ſi dixero qui in abſtruſioris antiquitatis, Græcanicæ præſertim, peritia paria hoc ſeculo præſtiterint, a vero fortaſſis oratio mea non abludet. At fuerint aliqui quibus ad ſecularis literaturæ ſtudia plus ab aliis occupationibus ſuis otii fuerit, quoſque idcirco in iſthac eruditionis parte noſtro huic anteponendos eſſe nonnulli arbitrentur. Ego uti eorum judicio pertinaciter obniti nolim; ita, mea quoque libertate uſus, ingenue profiteor, neminem me noſſe, qui literas ſuas ſanctius habuerit, eaſque veræ virtuti promovendæ, & divinis voluminibus illuſtrandis religioſus dicaverit. Ex omni hominum genere vix ulli mihi infeliciores iis eſſe videntur, qui, Græcæ Romanæque literaturæ elegantia capti; ſacrorum liborum ſimplicitatem faſtidiunt, quales & patrum, & noſtra hæc ætas aliquammultos tulit. Hi enim profanæ ſapientiæ faſtu inflati, non modo ſibimetipſis inutile efficiunt maximum illud divinæ beneficentiæ munus, quo ſolo perennis ac duratura conciliatur felicitas; dum circa rerum inania inſanientes ea quæ ſolida ac ſtabilia ſunt temere neglectui habent: ſed & ingenti oppido injuria ſanctiſſima afficiunt oracula. Non eo ſolum nomine, quod ſalubrem illum animorum paſtum levibus poſtponant ſcitamentis; verum etiam quod dominatum ſibi quendam in ea ſoleant arrogare ſcripta, quorum Majeſtati omnem ſe ſapientiam obſequioſa fidei religione ſubmittere opportet. Hæc enim ad exotica illa examinare non verentur: atque ubi, cum rebus, tum verbis, totoque orationis contextu, plurimum ab illis diſcrepare deprehendunt, vix temperant ſibi, quin vel aliena interpretatione aliorſum flectant, vel ſtilum ita vertant ut delicatulos aures ſuas minus offendat. Hinc licentiam ſibi ſumunt nonnulla addendi, alia demendi, aliqua etiam tranſponendi ac transformandi, prout præjudiciis aliunde hauſtis, neque optimo conſilio in ſacra iſta illatis, conſentaneum eſſe videtur. Quarum rerum tam dira paſſim occurrant exempla, ut horrorem piis lectorum animis incutiant. Alia prorſus GATAKERO noſtro mens fuit: quippe qui unctione quæ a ſancto illo proficiſcitur largiter delibutus, & ab ipſo edoctus Deo, ſingulas ſacrarum literarum pericopas, ut totidem oracula, venerabundus exoſculabatur; ac de cæleſti earum origine firmiter perſuaſus, in omnibus ſapientiam Deo dignam cum incredibili animi voluptate deprehendebat. Sapientiam, in quam, ad quam ipſi cæleſtes ſtupent genii, dum in recondita illius myſteria introſpicere ſatagunt. Sapientiam, quam nemo principum hujus ſeculi cognovit; & ad quam omnis illorum imaginaria & fucata ſapientia GATAKERO noſtro ſordeſcebat, & pro ſtultitia reputabatur: niſi quatenus aliqua ſe reſiduæ lucis, in divinum hoc ſacrarium inferendæ, ſcintillatione commendat. In hoc ſacrario inveniebat, guſtabat, plenoque ore hauriebat, ſanctiſſimas illas delicias, quæ penitas afficiunt medullas, & quas terreſtres animæ nec cupiunt, nec capiunt, nec intelligunt. Quæ in animum admiſſæ mundanorum omnium amorum expectorant, cæleſtium rerum deſiderium acuunt, efficiuntque ut ea denuum vita eſſe videatur, quæ in ſacrarum meditatione literarum, veluti in Dei contubernio, tranſigitur. Ita factum eſt, ut ſecularium librorum lectio excurſas quidam, & animi majoribus intenti expatiatio GATAKERO fuerit; unde ad divina identidem regrediebatur. Neque regrediebatur, niſi opimis locupletates ſpoliis, in Auguſto hoc æternæ veritatis templo, Deo ac Virtuti dedicandis. Huic enim rei omne ejus ſtudium, omnis opera, omnis eruditio ſacra erat. E

GAUDEN, or GAWDING (John) ſucceſſively biſhop of Exeter and Worceſter in the laſt century, was born, in the year 1605 (*a*), at Mayland in Eſſex, of which pariſh his Father was Vicar (*b*) [*A*]. His education in Grammar-learning was at St Edmund's-bury in Suffolk; from whence, at the age of ſixteen, being admitted a Student of St John's College in Cambridge, he made great proficiency in his ſtudies, and there took the degrees in Arts. About the year 1630, he removed to Wadham-College in Oxford, where he became tutor to Francis and William Ruſſel, ſons of Sir William Ruſſel of Chipenham in the county of Cambridge, Bart. (whoſe daughter he had newly married) and, after their departure, to other gentlemen, and perſons of quality. While he continued there he appeared to be a man of great parts, which he very much improved by an uncommon induſtry, ſpending moſt part of the day and night in his ſtudies (*c*). July 22, 1635, he took the degree of Batchelor in Divinity, as a member of Wadham College (*d*); and became Chaplain to Robert Earl of Warwick, Rector of Brightwell in Berkſhire, and Vicar of Chipenham aforeſaid (*e*). On the 8th of July 1641, he took the degree of Doctor in Divinity (*f*). As he was Chaplain in a family that were notoriouſly diſſatisfied at the Court's meaſures, he took the ſame bias from the firſt, and ran with the

[*B*] *And*

the common cant of the times, againſt pictures, images, and ſuperſtitious formalities, &c. [B], as is manifeſt from a ſermon of his, preached November 29, 1640. before the Houſe of Commons: which was ſo agreeable to them, that they made him a preſent of a large ſilver tankard (g) [C]. In 1641, he was preſented to the Rectory of Bocking in Eſſex. He had his firſt preſentation from the parliament; but not looking upon it as a ſafe hold for ſo great and reputable a benefice, which is called a Deanery, through the interceſſion of friends, he procured himſelf to be collated thereto by Archbiſhop Laud, the rightful patron, then in the Tower. At Bocking, he contracted a friendſhip with his neighbour Mr Edward Symonds, Rector of Raine; of which ſome uſe will be made by and by (b). Dr Gauden held his preferment after the breaking out of the civil wars, and forbore the uſe of the Common-Prayer; tho' we are told, it was continued longer in his Church than in any thereabouts (i). In 1643, he was choſen one of the Aſſembly of Divines, through the recommendation of Sir Dudly North, and Thomas Chichley Eſq; Knights for the county of Cambridge; but was ſhuffled out, as he ſays, by a ſecret committee, and an unknown ſleight of hand, becauſe he was for regulating, not rooting up, Epiſcopacy (k). We are alſo aſſured, that he took the Covenant (l): notwithſtanding he ſeems to deny it [D]; and publiſhed in 1643, certain doubts and ſcruples of conſcience about taking the ſolemn League and Covenant [E]. However, he openly continued in the Parliament's intereſt, till he found they went beyond their firſt pretenſions, and the expectations of himſelf and other good men. When he diſcovered that, he endeavoured to redeem his error, by bending to the contrary extreme (m): and, not only wrote a Proteſtation, and a juſt Invective againſt the murtherers of K. Charles I. [F], but alſo aſſiſted in publiſhing that King's Meditations, as will be ſhewn in the ſequel of this article. Still he enjoyed his preferment during the ſeveral periods of the Uſurpation, halting between the oppoſite parties; and being only a ſecret, or rather an ambiguous and falſe friend to the Royal cauſe. However for ſome time before the Reſtoration he muſt have been diſſatisfied with the various forms of Government ſet up in this kingdom; ſince, within that period, he compoſed a *folio* volume of 700 pages [G], (a work

(m) Dr Walker, ubi ſupra, p. 6.

[B] *And ran with the common cant of the times, againſt pictures, images, &c.*] This is evident from the following paſſage of the ſermon referred to above, among other inſtances. 'To ſet up *lying vanities*, 'pictures, and images, and to cry down praying and 'preaching, whereby thoſe toyles may be uſeful and 'neceſſary to the ignorant (becauſe untaught) people. 'Is *this to love the truth?* To ſuffer *Idolatry*, or ſuper-'ſtitious formalities in ſerving God to get ground upon 'our opinions and practices. Is *this to love the truth?* (2) *Quæ quo nudior eò venuſtior*; which *the leſſe it* 'hath of painting, the *more it hath of true lovelineſſe* 'and native beauty. Are not the lengthen and in-'creaſe of ceremonious *ſhadowes*, a preſage and ſigne of 'the ſhortning of our *Day* and ſetting of our *Sunne*, 'or diminiſhing of our *light*.' (3) — However, he ſpeaks afterwards with due abhorrence of civil wars.

'That *we* in this Iland, (ſays he) are divided from 'all nations is our ſafety under God, and by the pro-'vidence of our gracious Soveraigne: but to be *divided* 'among ourſelves will be *infallibly our ruine*. *Si colli-'dimur, frangimur.* — *Civil warres* can neither me-'rit nor expect *Laurells*, triumphs nor trophees: the 'memory and monuments of them are beſt, when 'buried in oblivion; *victory itſelfe is ſad*, and aſhamed 'of itſelfe; *weeping*, dejected, and bluſhing with its 'owne blood unnaturally and barbaroufly ſpilt; as hav-'ing fought not ſo much againſt enemies as *humanity*; 'not ſo much conquering others, as waſting and de-'ſtroying itſelfe. — O! then (adds he) let us all 'take up thoughts, reſolutions, &c for *peace*: away 'with all *bitterneſſe*, *ſtrife*, *malice*, *jealouſies*, and all 'thoſe *diveliſh maximes* of ſevering the intereſts of the 'prince and the people as inconſiſtent; whereas right-'ly conſidered they are, as the head with the body; 'united, both are ſafe and firme; ſevered, both inevi-'tably ruine (4).'

(2) The text was Zech. viii. 19.

(3) Sermon, p. 31, 32.

(4) Ibid. p. 38, 39.

[C] *That they made him a preſent of a large ſilver tankard.*] With this honorary inſcription upon it, *Donum Honorarium Populi Anglicani in Parliamento congregati Johanni Gauden*, &c. which conſtantly went about his houſe (5).

(5) Dr Walker, ubi ſupra, p. 6.

[D] *Notwithſtanding he ſeems to deny it.*] I ſay he only *ſeems* to deny it. For, inſtead of affirming plainly and poſitively that *he never took it*; which would have been the moſt eaſy and natural way, if it had been the truth; he uſes a thouſand words, to ſhew the unlawfulneſs of the Covenant, as being 'inconſiſtent with 'former oaths, the laws of the land, the preſervation 'of Epiſcopal government in its juſt rights and enjoy-'ments, and thoſe duties of equity and charity, which 'every one owed to God or man;' and therefore that it was no way binding againſt thoſe prior obligations: or, that no 'man could be bound to any thing before, 'or after ſuch a Covenant, but what is juſt and honeſt '(6).' Indeed he 'aſſures the world, in one place '(7), that he never *took* any oaths, but thoſe *appointed* 'by law, no *proteſtation*, no *engagement*, no league, 'vow, or *negative oath*, and for this Covenant he of-'fered freely to ſome principal authors of it, his many 'juſt ſcruples and objections againſt it, both as to its 'matter and authority.'—But the reader may obſerve, he doth not put the Covenant among the things which he never took; and quibbles greatly about that point. Conſidering, how ſtrictly every man above the age of eighteen, and every miniſter in particular (8), was enjoined to take the Covenant, and withal what conſiderable preferments Dr Gauden enjoyed, it is not credible that he ſhould eſcape taking it among the reſt. Eſpecially as it is affirmed by his intimate acquaintance, and fellow-chaplain at Lees, Dr Walker, that he took the ſaid Covenant.

(8) See Ordinance of 2 February 1643-4. in Huſbands's Collections, and elſewhere.

[E] *Certain doubts and ſcruples, &c.*] The whole title of this treatiſe, was, *Certain ſcruples and doubts of conſcience about taking the ſolemn League and Covenant*, tendred to the *conſideration of Sir Laur Bromfield, and Zach. Croſton*. Lond. 1643, and 1660. 4to.

[F] *And not only wrote a Proteſtation, and a juſt Invective againſt the murtherers of K. Charles I.*] The Proteſtation was intituled, 'The Religious and Loyal 'Proteſtation of John Gauden Doctor in Divinity, a-'gainſt the preſent declared purpoſes and proceedings 'of the army and others about the trying and deſtroy-'ing our ſovereign Lord the King. Sent to a colonel 'to be preſented to the Lord Fairfax and his general 'council of officers, the fifth of January 1648.' London 1648, 4to. — The juſt invective was written in 1648, but not publiſhed till 1662, as appears by the title, which was thus, 'A juſt Invective againſt thoſe 'of the army and their abbettors, who murthered K. 'Charles I. on the 30th of Jan. 1648, with ſome 'other poetic pieces in Latin, referring to thoſe tra-'gical times, written 10 Febr. 1648.' Lond. 1662.

[G] *He compoſed a folio volume of 700 pages.*] It is intituled, Ἱερὰ Δάκρυα. *Eccleſiæ Anglicanæ Suſpiria*. 'The tears, ſighs, complaints, and prayers 'of the Church of England: ſetting forth her former 'conſtitution, compared with her preſent condition; 'alſo the viſible *cauſes*, and probable *cures*, of her 'diſtempers. In IV. books.' Lond. 1659. fol.

[H] *And*

(a work that could not coſt leſs than three years, or more), wherein he ſpeaks in as zealous a manner for the Church of England, and with as much bitterneſs againſt the ſectaries, as the moſt rigid Epiſcopalian. Thus, having had either better luck, or better foreſight, than the reſt of his complying brethren, he reconciled himſelf betimes to Monarchy and Epiſcopacy: and 'having lived, (as his own words are) to ſee that the joy of hypocrites, 'the proſperity of the wicked, and the triumph of violent men is but ſhort (n),' he heartily came into all the Court's meaſures at the Reſtoration. When, being a puſhing man, and making a great merit of having publiſhed, and, as ſome ſay, written, the Pourtraicture of K. Charles I. [H] he was made one of the King's Chaplains, and promoted to the Biſhopric

(n) Preface to his Anti-Baal-Berith, p. 1.

[H] *And making a great merit of having publiſhed, and as ſome ſay, written, the Pourtraicture of K. Charles* I.] That is, the book intituled, 'Εικὼν 'Βασιλικὴ. The Pourtraicture of his ſacred Majeſtie 'in his ſolitudes and ſufferings.' Much hath been ſaid, and written, upon the queſtion, whether that book was compoſed by K. Charles I. or by Dr Gauden.

Thoſe who maintain, that Dr Gauden was both the author and publiſher of Εικὼν Βασιλικὴ, ground themſelves upon theſe authorities. I. Upon certain papers, found at one Mr Arthur North's, a merchant in London; among which there was a letter of Dr Gauden, then biſhop of Exeter, to the Lord Chancellor Hyde, dated 28 Decemb. 1661, and a petition to K. Charles II. wherein the biſhop declares, what hazards he had run of life and eſtate; and what great advantage had accrued to the Crown by his ſervice: adding theſe *ambiguous* words, that what he had done was *for the comforting and incouraging of the King's friends, expoſing his enemies, and converting, &c. that what was done like a King, ſhould have a King-like retribution*, &c.——In a letter to the Duke of York of the 17th Jan. 1661, he ſtrongly urges the great ſervice he had done, and importunately begs his Royal Highneſs to intercede for him with the King.——And the Lord Chancellor Hyde, in a letter to him dated 13 March 1661, has this paſſage, *the particular you mention, has indeed been imparted to me as a ſecret; I am ſorry I ever knew it, and when it ceaſes to be a ſecret, it will pleaſe none but Mr Milton.*

II. There was alſo among thoſe papers, a letter of Mrs Gauden to her Son John, after the biſhop's death; wherein ſhe called that book *the Jewel*; ſaid, *that her huſband hoped to make a fortune by it*; and that *ſhe had a letter of a very great man's, which would clear up* that he writ it.——She moreover left a long ſtory, or narrative, importing in ſubſtance, "that her huſband penned that book, in order to ſhew the world, that the King's parts and piety were not inferiour to Cromwell's. He gave it at firſt the title of *Suſpiria Regalia*; and his deſign was, to have it put forth, as by ſome perſon who had found the papers in his Majeſty's chambers at Holmeby, being by chance left or ſcattered there. When he had writ it, he ſhewed it to my Lord Capel, who did highly approve of it; and tho' he thought it would do very well to have it printed, yet he ſaid it was not fit to do ſo without his Majeſty's approbation. He ſent therefore a copy of it to the King, by the Marquis of Hertford, when he was going to the treaty in the iſle of Wight. At his Lordſhip's return, *Dr Gauden went to him, and he told the Doctor*, 'that *his Majeſty* 'having had ſome of thoſe eſſays read to him by *Bp* 'Duppa, did exceedingly approve of them, and aſked 'whether they could not be put out in ſome other 'name (9). Biſhop Duppa reply'd, that the deſign 'was, the world ſhould take them to be his Majeſty's. 'Whereupon the King deſired time to conſider of it.' And that was all the account the Marquis could give of it, neither did he know what was become of the manuſcript. However Dr Gauden, in order to ſave his Majeſty's life, by endeavouring to move the hearts and affections of the people as much as might be towards him; immediately reſolved to print it with all ſpeed; having a copy of that which he ſent to the King. The inſtrument he employed to get it printed, was Mr Edward Symonds; and he got Mr Royſton to print it. When it was about half-printed, a diſcovery was made of it, and all the ſheets then wrought off were deſtroyed. Notwithſtanding all this, Dr Gauden attempted the printing of it again, but could by no means get it finiſhed till ſome few days after his Majeſty was deſtroyed. When it came out, the people then in power were not only extremely diſpleaſed at it, but alſo infinitely ſollicitous to find out the author: and took the MS. which had been ſent to the King: whereupon, they appointed a committee to examine the buſineſs. Of which Dr Gauden having notice, he withdrew privately in the night from his own houſe to Sir John Wentworth's near Yarmouth, on purpoſe to convey himſelf beyond ſea (10). But Mr Symonds, who had been taken in a diſguiſe, dying before he came to his examination: and the committee not being able to find out any thing by any means whatever; the Doctor altered his reſolution of going out of England. After the Reſtoration, he expected a ſuitable reward for his endeavours to ſerve K. Charles I. and II. in that book." But, whether in being the author, or publiſher of it, I am certain his words, as related above, are far from determining.——Theſe authorities were firſt produced by Edmund Ludlow (11), and J. Toland (12), perſons full of inveterate prejudices againſt the memory of K. Charles, and enemies to the very name of old Royaliſts.

(9) This is directly contrary to Dr Ant. Walker's account.

(10) His publiſhing of that book, was ſufficient to expoſe him to Cromwell's cruelty and rage; whether he was the author of it, or no.

(11) In a pamphlet intituled, *Truth brought to Light*, &c. Lond. 1693, 4to. p. 35, &c.

III. The next authority is that of Dr Anthony Walker, once Rector of Fyfield in Eſſex; who affirmed in print, that Εικὼν Βασιλικὴ 'was written by Dr Gauden (except two chapters writ by Bp Duppa).' His reaſons for it were theſe; 1. 'Dr Gauden, ſome 'time before the whole was finiſhed, was pleaſed to 'acquaint him [A. Walker] with his deſign, and 'ſhewed him the heads of divers chapters, and ſome 'of the diſcourſes written of them; and, after ſome 'time ſpent in peruſal, aſkt his opinion concerning the 'ſame. 2. Being both together in London, they 'went to Dr Duppa biſhop of Salisbury (whom 'Dr Gauden had acquainted with his deſign) to fetch 'what he had left with his Lordſhip to be peruſed, or 'to ſhew what he had further written. And, as they 'were returning, Dr Gauden told Dr Walker, that 'the biſhop had undertaken thoſe points, which are 'the 16th and 24th chapters in the printed book. 3. 'Dr Gauden delivered a copy of it to the Marquis of 'Hertford, when he went to the treaty at the iſle of 'Wight, and intreated his Lordſhip to deliver it to 'his Majeſty, if he could obtain a private opportunity, 'and to know his Majeſty's pleaſure concerning it. '*But he never knew certainly whether the King ever ſaw it* (13). 4. The Duke of York knew that Dr 'Gauden had writ it; but he could not poſitively 'and certainly ſay, that K. Charles II. knew ſo 'much; for he was never pleaſed to take expreſs notice of it to Dr Gauden. 5. Mrs Gauden, Mr Gifford (who wrote the copy mentioned above in article the 3d), and Dr Walker believed it; and when 'they ſpake of that book, in Dr Gauden's preſence or 'abſence, they did it without the leaſt doubt of his 'having writ it. 6. Dr Gauden delivered to Dr Walker, with his own hand, the laſt part of the copy 'that was ſent up to be printed: and, after he had 'ſhewed it him, and ſealed it up, gave him ſtrict 'caution, with what warineſs to carry and deliver it. 'And, according to his direction he delivered it Saturday Dec. 23, 1648. And, a few days after the 'impreſſion was finiſhed, he received ſix books (14).'

(12) In his Amyntor, p. 107, &c. Neither of them ſaw Mr North's papers, but only had extracts of them.

(13) Compare this with Mrs Gauden's Narrative; which it contradicts.

(14) A true Account of the Author of Εικὼν Βασιλικὴ &c. by Anth. Walker, D. D. Lond. 1692, 4to p. 3, 4, 5, 6.

As for the Earl of Angleſey's *Memorandum*, ſee it above, with obſervations upon it, under the article.

On the other hand, thoſe who affirm that K. Charles I. was the author of that book, alledge the following arguments to ſupport their opinion. I. Part of that book, written with the King's own hand, was taken in his cabinet, among the reſt of his papers, at the fatal battle of Naſeby June 14, 1645. His Majeſty being more concerned at the loſs of thoſe his

Bishopric of Exeter, then vacant (o); to which he was elected November 3, 1660. confirmed the 17th and consecrated the next day (p). Tho' that Bishopric yielded him twenty

(o) By the death of Dr Ralph Brownrigg. He had succeeded that Bishop in the office of Preacher at the Temple, in 1659.

(p) Reg. Juxon. But his own Regr. says he was consecrated Dec. 2. J. Le Neve's Fasti, ed. 1716. p. 34.

his private thoughts and meditations, than of his other papers which fell that day into the enemies hands; he employed his Chaplain Dr Gorge, who had attended him in that battle, to retrieve them out of Sir Thomas Fairfax's hands. Through Dr Gorge's, and Archbishop Usher's interceſſion (15), Sir Thomas reſtored them again, at laſt, with great difficulty, and after a conſiderable time: and ſent them back to his Majeſty, at Hampton-Court, by Mr Robert Huntington, Major of Cromwell's own regiment. The Major having read them over, before he delivered them, found, they were the ſame for *matter* and *form* with thoſe Meditations in the printed book [Εἰκὼν Βασιλικὴ]. When he delivered them to the King, his Majeſty appeared very joyful, and ſaid, He eſteemed them more than all the jewels he had loſt in the cabinet (16). This account the Major gave at ſeveral times, and to ſeveral creditable perſons, who atteſted it; namely, Sir William Courtney, Richard Duke, Eſq; Mr Cave Beck, of Ipſwich, and under his own hand to Sir William Dugdale (17).——Agreeable to Major Huntington's teſtimony, is the account given in a book intituled *The Princely Pellican* (18), publiſhed in 1649. namely, That 'at Naſeby, thoſe divine Meditations 'were ſeiz'd by the enemy, with other papers of con-'cern, being incloſed in a Cabinet reſerved for that 'purpoſe; and that by the benignity of the Conqueror, 'or divine Providence rather, it was recovered above 'all expectance, and returned to his Majeſty's hand; 'which infinitely cheared him.'

Long's Examination of Dr Walker's Account, &c. Lond. 1703. 4to. p. 37, 38. Dr Hollingworth's Character of K. Charles I. p. 27. Dugdale's View of the Troubles, p. 380.

(18) p. 22.

II. Dr Billingham of Emmanuel-College Cambr. did wait upon King Charles after he was ſeized by the Army in 1647. and when his Majeſty was walking in the Garden, had by a ſpecial favour from thoſe about him, admittance into his bed-chamber, where he ſaw and read under the King's own hand, freſh writ, a whole chapter of the King's book (19).

III. Dr Gauden himſelf often affirm'd, That he was fully convinced, that the Εἰκὼν Βασιλικὴ was intirely the King's work (20).

IV. The Earl of Manchester, (when ſome Divines at his table queſtioned the King's being author of that book,) took occaſion expreſsly to tell them, *that he ſaw the Book when taken at Naſeby, written with the King's own hand*, ſo far as it relates to that time; adding, that he knew the King's hand ſo well as he did his own (21).

(19) Hollingworth's Defence, ut ſupra. p. 22.

(20) Ibid. p. 19. and T. Long, as above, p. 4.

V. Oliver Cromwell, making a viſit to the Lady Wenwood, and finding that book in her chamber, 'Madam, ſaid he, I ſee you have Charles Stuart's 'book in your keeping? Yes, my Lord, ſaid the La-'dy, but do you believe he was the author of it? Yes 'moſt certainly, ſaid Cromwell, I know it his—he 'was a perfect hypocrite (22).'

(21) Several evidences, &c. as above by J. Young. p. 6.

(22) Ibid. p. 7.

VI. Anton Croke, a Colonel and creature of Cromwell's, and an inveterate enemy to the King and the Royaliſts, declared, that he had ſeen a copy of *Icon Baſilice* of the King's own writing, and that he never doubted him to be the Author (23).

(23) Ibid. p. 8.

VII. Dr Edward Hooker certified, 'That Mr Edward Symonds conſulted him about printing the 'King's book (he being then corrector of a preſs) and 'told him, that his Majeſty was pleaſed to thank him 'for his *Vindication* &c. and to deliver him the copy 'of the *R. Icon*, written with his own hand, which 'he well knew, and that his Majeſty took it from un-'der his blew watchet waſtcoat, when he gave it him, 'ſaying it was all the requital he could make him, and 'bid him uſe it to his beſt advantage (24).' And Mr Symonds declared, upon his death-bed, to Dr Bathurſt, *that it was the King's own work* (25).

(24) Ibid. p. 29.

(25) Ibid. p. 27, 28. and Hollingworth's Defence, p. 21.

VIII. Mr Symonds being intimately acquainted with Dr Gauden, by reaſon of the nearneſs of Rayne and Bocking, ſhewed and lent the MS. to the Doctor, who took a copy of it. As he was obliged to return it ſoon; therefore beſides what other time he imploy'd in it, he ſate up one whole night to tranſcribe it: as William Allen, who then attended upon him, hath teſtified (26). After Mr Symonds's death, Dr Gauden might perhaps pretend to be the author of that book, as there was not any man living that could detect the plagiariſm. And his ſmall concern in the printing it, gave ſome umbrage to the fraudulent pretence.—— Theſe are the moſt conſiſtent and probable Arguments, that have been uſed to prove, that K. Charles I. and not Dr Gauden, was the Author of Εἰκὼν Βασιλικὴ.

(26) Several evidences, &c. as above, p. 8, 67. and Wagſtaffe's Vindication, p. 32. and Defence, p. 63.

But, beſides theſe *external* evidences, there are *internal* ones, taken from a ſtrict and cloſe examination of the Book itſelf; which plainly demonſtrate, that it was not Dr Gauden's compoſure. And that is the very great and viſible difference there is between the ſtyle of that book and of the Doctor's numerous writings. For, it is neither his diction, phraſeology, nor manner of expreſſion. Whatever he writ or publiſhed, is in a verboſe, looſe, and empty ſtyle, full of tautologies, affected bombaſt, and ſcraps of Latin (27). Whereas, in the judgment of Bp Burnet (28) and moſt others, 'There is, in the King's Book, a nobleneſs 'and juſtneſs of thought, with a greatneſs of ſtyle, 'that made it to be look'd on as the beſt writ book in 'the Engliſh language.——*And* this is certain, (adds he) that Gauden never writ any thing with that 'force, his other writings being ſuch, that no man 'from a Likeneſs of ſtyle would think him capable of 'writing ſo extraordinary a Book as that is.'

(27) See T. Long as above, p. 54, &c. Several evidences, &c. p. 10.

(28) Hiſtory of his own Time, edit. 1724. fol. p. 50.

Moreover (which doth not ſeem to have been obſerved before) the *manner of Spelling* there, is not like that uſed by Dr Gauden in his voluminous works. For inſtance, moſt of the final *e*'s are left out in the Εἰκὼν: as in *ſom*, *ſens*, &c. Double *ee*'s, are almoſt conſtantly uſed, as in *thee*, *mee*, &c. And, in words ending in *y*, the final *y*, is always turn'd into—*ie*; there being ſcarce any exception, unleſs in ſome monoſyllables, as *my*, *thy*, &c.——All which was not Dr Gauden's method, as appears by inſpection of his works.

Bp Kennett's judicious obſervations upon the point in hand, ſhall conclude this note. 'After much and 'long enquiry and conſideration, the Truth ſeems to 'lye between the two extreams as in many other caſes. 'It is highly probable, that K. Charles amidſt his ſo-'litudes and ſufferings did write moſt of thoſe Eſſays 'and Meditations upon the particular occaſions, and 'ſoon after the ſpecial times to which they were adap-'ted: And that ſuch Papers written by the King's 'own hand were committed to a loyal chaplain Mr 'Edward Symonds, Miniſter of Rayne in Eſſex, to 'convey them to the preſs with all privacy in London, 'or elſewhere. But he being interrupted by ſequeſtra-'tion, and under a neceſſity of flying and abſconding, 'delivered the Royal papers to his friend and neigh-'bour Dr Gauden, who being a man of an enterpriſing 'genius and a very luxuriant fancy, and finding him-'ſelf the more at liberty by the abſence of Mr 'Symonds, would not let them paſs without ſome-'what of his own additions, and (as he thought) im-'provements of them. Accordingly he enlarged the 'draught with ſome new heads, and prevailed with 'Biſhop Duppa to give him one chapter; and moſt 'likely of his own invention threw in moſt (if not all) 'of the ejaculations and devotions at the end of each 'ſubject (29), and ſet the title of his own deviſing. '——When he had thus dreſſed up the King's Papers, 'he thought it decent to ſend and ſhew them for his 'Majeſty's approbation. This he did by the Earl of 'Southampton going down to wait upon the King in 'his confinement in the iſle of Wight. Whether the 'King had time to reviſe the papers, and give his 'aſſent to the publiſhing of them (as ſome affirm) does 'not ſo well appear; but it ſeems probable, that Dr 'Gauden hearing nothing of the King's diſlike or 'reſtraint, and finding his violent death to be ſoon 'after the univerſal ſubject of wonder and lamentation, 'he got the impreſſion wrought off within a month af-'ter the tragedy was acted, and the cry of the times 'ſoon made way for ſeveral editions. Having had ſo 'much of his hand in it, it was natural for his ambi-'tion at the King's return to aſſume the honour of it, 'tho' his firſt pretenſions reached no farther than 'writing a part of it. However, upon this great ſhare 'of concern in it, he was very preſſing for preferment

(29) This it carrying the ſuppoſition too far, as is plain from what hath been obſerved a little before.

'at

twenty thouſand pounds in fines, in a few months (q), yet he was not ſatisfied with that, but importuned his Majeſty to tranſlate him to the rich ſee of Wincheſter; alledging, that Exeter had a high rack but a low manger; and pleading his deſert and great ſervices (r). However, he was forced to ſit down contented with the Biſhopric of Worceſter, (and not a mean one neither;) to which he was elected May 23, 1662, and confirmed June 10 (s). But his diſappointment in Wincheſter ſtuck ſo cloſe to him, that the regret and vexation is thought to have thrown him into a violent fit of the ſtone and ſtrangury, which put an end to his life the 20th of September following, when he was aged but 57 (t). He was buried in the choir of Worceſter-cathedral; and over his grave was ſoon after erected a fair monument, containing his effigies to the middle in his epiſcopal habit, with an inſcription below (u). Having enjoyed his great preferments but a very little while; alſo the charge of his removing from Exeter to Worceſter having been conſiderable; and his widow being left with four ſons and a daughter; ſhe petitioned the King for the half year's profits of the laſt Biſhopric; and, in all probability, preſented at the ſame time the Narrative mentioned in note [H]. But her petition was rejected (w); which unqueſtionably moved her reſentment, and made her inſiſt upon her huſband's having had a greater ſhare in K. Charles the firſt's Meditations, than he really had: eſpecially as he was no longer in being to contradict her. As to Bp Gauden's character; Ant. Wood ſays (x), that he was 'eſteemed by all that knew 'him a very comely perſon, a man of vaſt parts, and one that had been ſtrangely im-'proved by unwearied labour: and that he was much reſorted to for his moſt admirable 'and edifying way of preaching.' But he is repreſented by others in a more unfavourable light, on account of his ambiguous and unſteady conduct both with regard to the Royaliſts and Preſbyterians: and more eſpecially, ſince the controverſy about his being the author of Εἰκὼν Βασιλικὴ was ſet on foot. For, he is deſcribed as an inconſtant, uncertain, ambiguous, and lukewarm perſon, and charged with vanity and folly (y): as a man of a very ambitious temper, coverous of preferment, haſty and impatient in the purſuit of it (z); and as the unhappy blemiſh and reproach of the ſacred order (a). It is certain, as Bp Kennet obſerves, that he was capable of under-work, and made himſelf a tool to the Court, by the moſt ſordid hopes of greater favour in it; for, in 1662, he drew up a Declaration for Liberty of Conſcience extending to Papiſts, of which a few copies were printed off, tho' preſently called in: and he was about the ſame time employed to draw up another Declaration of Indulgence to the Quakers, by an exemption from all oaths; though he little enjoyed the price of that ſervile compliance (b). The ſeveral pieces he publiſhed, beſides thoſe already mentioned in the body of this article, are ſet down in the note below [I].

C

GAY [John] an excellent poet, was born in the year 1688, at or near Barnſtaple (*a*) in Devonſhire, and educated at the free-ſchool there under a maſter (*b*) who was well qualified to give him a juſt taſte of claſſical learning. Being deſcended of an ancient family [*A*], whoſe eſtate was greatly impaired (*c*), his friends thought proper to place him in a way of improving his fortune by trade. In this deſign he was put apprentice to a Silk-mercer in London. But that ſtation not ſuiting his liberal ſpirit, he began to ſhew his diſguſt to a ſhop, almoſt from his firſt entrance therein, and giving little attendance, and leſs attention to the buſineſs, he procured a releaſe upon eaſy terms, and in a few years took a final leave of his maſter (*d*). Having thus honourably got free from an ill-brooked reſtraint, he followed the bent of his genius, and it was not long before he gave the Public ſome admirable proofs of the character for which he was formed by nature (*e*) [*B*]. Theſe firſt ſpecimens of his poetical talents, added to the ſweetneſs of his temper, and an almoſt unexampled ſimplicity of manners, immediately procured him the eſteem and affection of ſeveral of his brother Poets, and particularly endeared him to Mr Pope, who was of the ſame age with him. In the ſociety of ſuch friends he paſſed a few years cultivating his muſe in that kind of improvident indolence and independency (*f*), which only could make him perfectly happy. But his taſte of life being too elegant for his fortune, he gladly accepted an offer made to him in 1712, of living with the Ducheſs of Monmouth, as her ſecretary [*C*]. This ſituation ſet him at full leiſure to indulge his poetic vein (*g*), and a remarkable incident [*D*], the following year, furniſhed him with an opportunity of making it particularly ſerviceable to his friend Mr Pope. In this ſpirit he compoſed his *Shepherd's Week* [*E*], and

(*g*) His celebrated Poem *Trivia* was wrote about this time.

(*c*) In his Epiſtle Mr Methuen, we find him complaining in theſe terms. But now that wight in poverty muſt mourn, Who was (O cruel ſtars!) a Poet born. *In the 2d Vol. of his Poems.*

[*A*] *Deſcended of an ancient family.*] Mr Riſdon (1) obſerves, that Gilbert le Gay, who gave name to the family, was ſettled at a place called Hampton-Gay, in Oxfordſhire, and that by a match with the daughter and heir of the family of Cartoyſe, or Curtis, he came into the poſſeſſion of the lordſhip of Goldworthy in Devonſhire, which was the ancient dwelling of the name of Gay for many deſcents.

[*B*] *Some proofs of the character for which he was formed by nature.*] The principal of theſe is his Rural Sports, a Georgic The poem is addreſſed to Mr Pope, who, in a letter to Mr Cromwell, dated Dec. 7. 1711 (2), having acknowledged the favour, takes notice of a play that our author had then upon the ſtocks, alluding, doubtleſs, to his comedy called *The Wife of Bath*, which was acted in 1714 at the Theatre in Lincoln's-Inn-Fields, but with no ſucceſs. It was then printed in 4to. He reviſed and altered it in 1729, when it was brought again upon the ſame ſtage, and met with the ſame bad reception. Dean Swift had no opinion of this ſecond attempt, tho' Mr Pope had. 'I had never (ſays the Dean to Mr Gay) (3) much hopes of your vamped play, although Mr Pope ſeemed to have, and although it were ever ſo good. But you ſhould have done like the parſons, and changed your text, I mean the title and the names of the perſons. After all it was an effect of idleneſs, for you are in the prime of life, when invention and judgment go together.'

[*C*] *Secretary to the Ducheſs of Monmouth.*] This place furniſhed ſome recruits which were very ſeaſonable. Mr Gay's purſe was an unerring barometer of his ſpirits, and when theſe ran low, (tho' talkativeneſs was far from being his foible) the continual dread of a ſervile dependance filled his mouth too full of complaints. The Dean, as his manner was, deals very plainly with him on this head. 'I never charged you, ſays he, (4) for not talking, but the dubious ſtate of your affairs in thoſe days, was too much the ſubject.' This may ſerve as a fit contraſt to the delicacy with which Mr Pope touches the ſame ſtring on the preſent occaſion. After many congratulations, he concludes his letter (5) thus: 'I ſhall ſee you this winter with much greater pleaſure than I could the laſt, and I hope ſo much of your time, as your attendance on the Ducheſs will allow you to ſpare to any friend, will not be thought loſt to one, who is as much ſo as any man. I muſt alſo put you in mind, tho' you are now ſecretary to this Lady, that you are ſecretary to nine other Ladies, and are to write ſometimes for them too. *He who is forced to live wholly upon thoſe Ladies favours, is indeed in as precarious a condition, as any He who does what Chaucer ſays for ſuſtenance*; but they are very agreeable companions, like other ladies, when a man only paſſes a night or ſo with them at his leiſure and away.'

[*D*] *A remarkable incident.*] It was an affront which had been lately put upon Mr Pope by his great rival in paſtoral poetry, Mr Phillips: of this we have the following account, in a letter of Mr Pope to Mr Craggs, dated June 8. 1714 (6). 'The queſtion you aſk in relation to Mr Addiſon and Phillips, I ſhall anſwer in a few words. Mr Phillips did expreſs himſelf with much indignation againſt me one evening at Button's coffee-houſe (as I was told), ſaying, that I was entered into a cabal with Dean Swift and others, to write againſt the Whig intereſt, and in particular to undermine his own reputation, and that of his friends Steele and Addiſon. But Mr Phillips never opened his lips to my face on this or any other like occaſion; tho' I was almoſt every night in the ſame room with him, nor ever offered me any indecorum.' He then proceeds to relate Mr Addiſon's and Lord Halifax's kindneſs to him in procuring ſubſcriptions to his tranſlation of Homer's Iliad, and goes on thus: 'However Phillips did all he could ſecretly to continue the report with the Hanover club, and kept in his hands the ſubſcriptions paid for me to him as ſecretary to that club.—*It is to this management of Phillips, that the world owes Mr Gay's Paſtorals.*'

(6) Ibid. Vol. 7.

[*E*] *Shepherd's Week.*] As there cannot be an inſtance given of greater friendſhip in an author, than is this undertaking by Mr Gay; ſo nothing could be ſweeter than the ſucceſs of it to Mr Pope; for although his Paſtorals were allowed to excell in the Arcadian ſtile, yet thoſe of his rival, formed upon Spencer's plan, had carried the prize; a true rural ſimplicity being generally eſteemed the proper characteriſtic of the paſtoral poem: but this rival had the mortification to ſee his garland blaſted, at the appearance of Mr Gay's piece, which being found ſtill more exquiſitely pure in that taſte, obtained far the loudeſt applauſe. Our author in the proem marks the defect of his predeceſſor, and in doing it gives a notable proof of his own perfection. 'Great marvel, ſays he, hath it been (and that not unworthily) to divers worthy wits, that in this our iſland of Britain, in all rare ſciences ſo greatly abounding, more eſpecially in all kinds of poeſy highly flouriſhing, no poet, tho' otherwiſe of notable cunning in roundelays, hath hit on the right ſimple eclogue after the true ancient guiſe of Theocritus, beſide this mine attempt.—Certes ſuch it behoveth a paſtoral to be, as nature in the country aſſordeth, and the manner alſo meetly copied from the ruſtical folk therein.' The following ſpecimen will ſhew how perfectly he has executed this plan. It is the conteſt among the lovers for the prize of beauty to their reſpective miſtreſſes.

Lobbin Clout.

'My Blouzalinda is the blitheſt laſs!
'Than primroſe ſweeter, or the clover graſs.

'Fair is the king-cup that in meadow blows,
'Fair is the daiſy that beſide her grows,

'Fair

and printed it with a dedication to Lord Bolingbroke (*b*), in 1714. The ſame year he reſigned his poſt to the Ducheſs, being appointed to attend the Earl of Clarendon in the like character on an embaſſy from Queen Anne to the Court of Hanover [*F*]. The Queen's death put an end to all his tow'ring hopes; however, upon his return home ſoon after, under the weight of that misfortune, he was received with the warmeſt welcome by his never-failing friend abovementioned, who adviſed him withal to puſh the advantage which his laſt employ had given him of being perſonally known to the new Sovereign and his Family [*G*]. Accordingly he took the opportunity of making his court to the Princeſs of Wales (*i*), [afterwards Queen Caroline] on the arrival of her Royal Highneſs in England ſhortly after (*k*). This compliment was well received, and our author's Farce intitled *The What d' ye call it*, being brought upon the ſtage [*H*] before the end of the ſeaſon, both their

(*b*) The Dean in 1722 calls this dedication Mr Gay's Original Sin againſt the Court. Pope's Works. Ibid. letter VI.

(*i*) See his Epiſtle to a Lady, occaſioned by the arrival of her Royal Highneſs the Princeſs of Wales.

(*k*) She arrived with the two eldeſt Princeſſes, Oct. 13, 1714. and Mr Pope's advice, is dated Sept. 23.

' Fair is the gilliflow'r, of gardens ſweet,
' Fair is the marygold, for pottage meet;
' But Blouzalind's than gilliflow'r more fair,
' Than daiſy, marygold, or king-cup, rare.

Cuddy.

' My brown Buxoma is the feateſt maid
' That e'er at wake delightſome gambol play'd.
' Clean as young lambkins, or the gooſe's down,
' And like the gold-finch in her Sunday-gown;
' The witleſs lamb may ſport upon the plain,
' The friſking kid delight the gaping ſwain,
' The wanton calf may ſkip with many a bound,
' And my cur, Tray, play deſteſt feats around;
' But neither lamb, nor kid, nor calf, nor Tray,
' Dance like Buxoma on the firſt of May.

Lobbin Clout.

' Sweet is my toil when Blouzalind is near,
' Of her bereft, 'tis winter all the year;
' With her, no ſultry ſummer's heat I know;
' In winter, when ſhe's nigh, with love I glow:
' Come, Blouzalinda, eaſe thy ſwain's deſire,
' My ſummer's ſhadow, and my winter's fire.

The following lines from Mr Phillips on the like conteſt, being ſet in this place, will bring the difference into full light.

' Mild as a lamb, and harmleſs as a dove,
' True as the turtle, is the maid I love;
' How we in ſecret love I ſhall not ſay;
' Divine her name, and I give up the day.

By this ſpecimen we ſee, that even in ſome places where this poet can't be charged with want of ſimplicity, though the character of the country is retained, yet it is evident, the true manner of the ruſtical folk therein is not *meetly* copied. In the former every thing is not only in character, but beautifully ſo. Thus Vandyke painted, ever copying nature with the moſt religious exactneſs, and ever ſhewing it beautiful In the dedication, Mr Gay thus deſcribes his own dreſs at that time, when he was waiting for Court favours.

' I ſold my ſheep and lambkins too
' For ſilver loops and garment blue. &c.

Mr Pope took an opportunity of touching upon this vanity in a very humorous letter to the Dean (7), who had with equal humour offered him twenty guineas to turn Proteſtant. This the former propoſes to do upon a ſubſcription proportionable to that of the Dean, but with certain conditions, one of which is, that a ſufficient ſum be advanced to purchaſe (according to the practice of the Romiſh Church) the ſalvation of the ſouls of ſome of his friends, amongſt whom he reckons Mr Gay. ' There is one ——, ſays he, ' will die ' within theſe few months, with one Jervas, who hath ' grievouſly offended in making the likeneſs of almoſt ' all things in Heaven above, and Earth below; and ' one Mr Gay, an unhappy youth, who writes Paſto' rals during the time of divine ſervice, *whoſe caſe is* ' *the more deplorable, as he hath miſerably laviſhed a-* ' *way all that ſilver he ſhould have reſerved for his* ' *ſoul's health, in buttons and loops for his coat.*'

(7) dated Dec. 8, 1713, and inſerted in Lord Orrery's account of Swift. Letter V.

[*F*] *An embaſſy to the Court of Hanover.*] The occaſion of this embaſſy was, the demand that had been made by Baron Schutz, Envoy-extraordinary from the Elector of Hanover, of a writ for ſummoning the Electoral Prince *his preſent Majeſty, to ſit in the* Houſe of Lords as Duke of Cambridge (8).

(8) See more of this in the Earl of Halifax's Article.

[*G*] *Mr Pope received him with the warmeſt welcome, and adviſed him to puſh the advantage, &c.*] This letter is dated Sept. 23. 1714 (9), and begins thus: ' Dear Mr Gay, Welcome to your na' tive ſoil, welcome to your friends, thrice welcome to ' me! whether returned in glory, bleſs'd with Court' intereſt, the love and familiarity of the Great, and ' filled with agreeable hopes, or melancholy with de' jection, contemplative of the change of fortune, and ' doubtful for the future; whether returned a tri' umphant Whig, or deſponding Tory, equally all ' hail! equally beloved, and welcome to me.—I know ' you will be an honeſt man, and an inoffenſive one; ' incapable of being ſo much of either party, as to be ' good for nothing. Therefore once more, whatever ' you are, or in whatſoever ſtate you are, all hail!' After apologizing for not having written to Mr Gay while abroad, on account of the taſk he had ſet himſelf in carrying on the tranſlation of Homer, which was now finiſhed, he continues in the ſame vein as before. ' Rejoice with me, O my friend, that my labour is ' over; come and make merry with me in much feaſt' ing. We will feed among the lilies (10) (by the ' lilies, I mean the ladies). Are not the Roſalindaes ' of Britain, as charming as the Blouzalindaes of the ' Hague? Or, have the two great paſtoral poets of our ' nation renounced love at the ſame time? For Phillips, ' immortal Phillips! hath deſerted, yea, and in a ruſtic ' manner, kicked his Roſalind.' Mr Pope writes this letter from Bath, whither giving his friend this hearty invitation, ' Talk not of expences, Homer ſhall ſup' port his children.' He concludes thus: ' Pardon me ' if I add a word of advice in the poetical way. Write ' ſomething on the King, or Prince, or Princeſs. On ' whatſoever foot you may be with the Court, this can ' do no harm.'

(9) It is in the 8th Vol. of Mr Pope's Works.

(10) This may perhaps allude to the following lines in Phillips's Paſtorals. Breathe ſoft, ye Winds, ye Waters, gently flow, Shield her, ye trees, ye flowers around her grow. Ye ſwains, I beg you paſs in ſilence by, My Love in yonder vale aſleep does lie. Compare theſe with Canticles. Ch. xi. 5. In this view Mr Pope's tranſition is beautiful.

[*H*] *The What d' y' call it was brought upon the ſtage.*] He called it a tragi-comi-paſtoral farce. It has been always eſteemed a maſter-piece of our author, and the tide of party, which ran extremely high at this time, threw out many curious remarks upon it to his no ſmall diverſion, as is ſeen in ſome letters to Mr Congreve. In one of which dated March 10. 1714-15 (11), he writes thus: ' The farce of the What ' d' ye call it has occaſioned many different ſpeculations ' in the town, ſome looking upon it as meer jeſt upon ' the tragic poets, others as a ſatire upon the late war; ' Mr Cromwell hearing none of the words †, and ſeeing ' the action to be tragical, was much aſtoniſhed to find the ' audience laugh, and ſays the Prince and Princeſs muſt ' doubtleſs be under no ſmall amazement on the ſame ' account. Several Templers, and others of the more ' vociferous kind of critics, went with a reſolution to ' hiſs, and confeſſed they were forced to laugh ſo much, ' that they forgot the deſign they came with. The ' Court in general has in a very particular manner come ' into the jeſt, and the three firſt nights (notwithſtand' ing two of them were Court nights) were diſtinguiſhed ' by very full audiences of the firſt quality. The com' mon people of the pit and gallery received it at firſt ' with great gravity and ſedateneſs, ſome few with ' tears; but after the third day they alſo took the ' hint, and have ever ſince been very loud in their ' claps. There are ſtill ſome ſober men, who cannot ' be of the general opinion; but the laughers are ſo ' much the majority, that one or two critics ſeem deter' mined to undeceive the town at their proper coſt by ' writing grave diſſertations againſt it. To encourage ' them in this laudable deſign, it is reſolved, a preface ' ſhall be prefixed to the farce in vindication of the

(11) In Pope's Works, Vol. 8.

† By reaſon of his deafneſs.

their Royal Highneſſes honoured it with their preſence. The very kind reception, he met with from perſons of the firſt diſtinction at this time, filled him with the fond hopes of more ſubſtantial favours [I]; and the failure of theſe (i) made too deep an impreſſion upon his tender nature, which upon that account was but ill ſuited to the wavering ſtate of a ſlender fortune. To divert this melancholy, Mr Pulteney (m) took our author in company with him to Aix [K] in France in the year 1717, and the following year he was invited by Lord Harcourt to his ſeat in Oxfordſhire [L]. In 1720 he publiſhed his poems by

(i) The Princeſs of Wales was delivered of a young Prince, Nov. 20, 1717. And Mr Pope in a letter dated the 8th of that month gives him joy of this Prince, becauſe ſays he he is the only Prince from whom you have had no expectations and no diſappointment. See Pope's Works, Vol. 8.

(m) He was then out of favour at Court, having reſigned his place of Secretary at War the April before. Salmon's Chronol. Hiſtorian. in the Year 1717.

'nature and dignity of this new way of writing (12).' Accordingly there came out ſoon after, *A compleat Key to the What d' ye call it*, which was written by one Griffin, a player, aſſiſted by Lewis Theobald. Upon this Mr Gay, in a letter to Mr Congreve, dated April ſeventh 1715 (13), makes the following remarks: 'There is a ſixpenny pamphlet lately publiſhed upon 'the tragedy of the *What d' ye call it*, wherein he 'with much judgment and learning, calls me a block-'head, and Mr. Pope a knave. His grand charge is 'againſt the Pilgrim's Progreſs (14), which, he ſays, is 'directly levelled at Cato's reading Plato. To back 'this cenſure, he goes on to tell you, that the pilgrim's 'being mentioned to be the eighth edition, makes the 'reflection evident, the tragedy of Cato having juſt 'eight times (as he quaintly expreſſes it) viſited the 'preſs. He has alſo endeavoured to ſhew, that every 'particular paſſage of the play leads to ſome fine part 'of that tragedy, which he ſays I have injudiciouſly and 'profoundly abuſed.' *The What d' ye call it* (15) was alſo attacked by Mr (afterwards Judge) Burnet, in one of his papers called the Grumbler.

[I] *Filled him with the hopes of more ſubſtantial favours.*] It was in this flow of ſpirits, that the *Three hours after marriage* was brought upon the ſtage, and he bore the ill ſucceſs (16) of it very manfully, as is evident from the following letter (17). 'Dear Pope, too late 'I ſee and confeſs myſelf miſtaken in relation to the 'comedy: yet I do not think, had I followed your 'advice, and only introduced the mummy, that the 'abſence of the crocodile (18) had ſaved it. I cannot 'help laughing myſelf (though the vulgar do not con-'ſider, that it was deſigned to look very ridiculous) to 'think, how the poor monſter and mummy were daſhed 'at their reception; and when the cry was loudeſt, 'that if the thing had been wrote by another, I ſhould 'have deemed the Town in ſome meaſure miſtaken: 'and, as to your apprehenſion that this may do us any 'future injury, do not think it. The Doctor has a 'more valuable name than can be hurt by any thing of 'this nature, and your's is doubly ſafe. I will (if any 'ſhame there be) take it all to myſelf, as indeed I 'ought, the motion being firſt mine, and never heartily 'approved of by you. As to what your early enemy 'ſaid at the Duke of Dorſet's, and Mr Pulteney's, you 'will live to prove him a falſe prophet, as you have 'already a liar, and a flatterer, and a poet in ſpight 'of nature. Whether I ſhall do ſo or no, you can 'beſt tell; for with the continuance of your dear-'friendſhip and aſſiſtance, never yet witheld from me, 'I dare promiſe as much.

'I beg of you not to ſuffer this or any thing elſe 'to hurt your health. As I have publickly ſaid, that 'I was aſſiſted by two friends (19), I ſhall ſtill continue 'in the ſame ſtory, profeſſing obſtinate ſilence about Dr 'Arbuthnot and yourſelf. I am going to-morrow to 'Hampton-court for a week notwithſtanding the bad-'neſs of the weather; where, though I am to mix 'with Quality, I ſhall ſee nothing half ſo engaging as 'you, my dear friend. I am (not at all caſt down) 'your ſincere friend,

'JOHN GAY.

The ſatire of this play ſeems to be levelled at Dr Woodward in the character of Foſſile, which was admirably repreſented by the beſt comedian of that time in his ſtyle of acting Mr Johnſon, as was that of Mrs Foſſile by Mrs Oldfield (20); but no advantage in the acting was able to ſupport it. How greatly Mr Pope intereſted himſelf in it's reception, we are informed by Mr Cibber (21), who likewiſe tells us he had a fling at it in the character of Bays, when the Rehearſal was acted ſoon after. Thus upon the coming of the two Kings of Brentford from the clouds into the throne again, inſtead of what his part directed, he ſaid. *Now, Sir, this revolution I had ſome thoughts of introducing by a quite different contrivance; but my deſign taking air, ſome of your ſharp wits I found had made uſe of it before me; otherwiſe I intended to have ſtolen one of them in the ſhape of a mummy, and t'other in that of a crocodile.* This was ſo much reſented by Mr Pope, that, after the play, coming behind the ſcenes in an extraordinary agitation of ſpirits, he fell upon the actor in very foul language; and Mr Cibber's perſiſting in the ſame inſult ſeveral ſucceeding nights, is aſſigned by him for the firſt cauſe of Mr Pope's perſecuting him with his pen ever afterwards.

[K] *He was taken by Mr Pulteney to Aix.*] He had been entertained the year before with a viſit to his own country [Devonſhire] at the expence of the Earl of Burlington, and had repaid his Lordſhip with a humorous account of the journey (22). He made the ſame return for this ſucceeding favour of Mr Pulteney. This jaunting about with ſome decent appointments, was one of the ſweeteſt pleaſures of his life, and never failed of provoking his muſe. However, Dr Swift rallies the foible with his uſual kind ſeverity. 'I wiſh (ſays he to him in '1729) you had a little villakin in his [Pope's] neigh-'bourhood; but you are yet too volatile, and any Lady 'with a coach and ſix horſes, would carry you to Japan.' The ſame foible comes again croſs the Dean's mind in 1732, when he writes thus to his friend. 'I find by 'the whole caſt of your letter, that you are as giddy and 'as volatile as ever, juſt the reverſe of Mr Pope, who 'hath always loved a domeſtic life from his youth. I 'was going to wiſh you had ſome little place that you 'could call your own; but I profeſs I do not know you 'well enough to contrive any one ſyſtem of life that 'would pleaſe you. You pretend to preach up riding 'and walking to the Ducheſs; yet, from my knowledge 'of you after twenty years, you always joined a violent 'deſire of perpetually ſhifting places and company, with 'a rooted lazineſs, and an utter impatience of fatigue. 'A coach and ſix horſes is the utmoſt exerciſe you can 'bear, and this only when you can fill it with ſuch com-'pany as is beſt ſuited to your taſte (23).'

[L] *He went to Stanton-Harcourt, in Oxfordſhire.*] Here an unfortunate accident again engaged his muſe jointly with Mr Pope; of this he ſent an account to Mr Elijah Fenton in a letter (24), ſoon after it had happened. 'The only news, ſays he, that you can expect to 'have from me here, is news from Heaven; for I am 'quite out of the world, and there is ſcarce any thing 'can reach me, except the noiſe of thunder.' Upon that ſubject he proceeds (in contraſt to Horace) to acquaint his friend, that Blenheim ſtood untouched in the neighbourhood, while a cock of barley in the next field to them, was conſumed to aſhes. 'Would to God, con-'tinues he, that this heap of barley had been all that 'had periſhed! For, unhappily beneath this little 'ſhelter, ſat two much more conſtant lovers, than ever 'were found in romance under the ſhade of a beech-'tree. [illegible] Hewet was a well-ſet man, of about five-'and-t[illegible] Sarah Drew might be rather called 'com[illegible] beautiful, and was about the ſame age. 'They had paſſed through the various labours of the 'year together with the greateſt ſatisfaction; if ſhe 'milked, it was his morning and evening care to bring 'the cows to her hand; it was but laſt fair, that he 'bought her a preſent of green ſilk for her ſtraw-hat, 'and the poſy on her ſilver ring was of his chuſing. 'Their love was the talk of the whole neighbourhood; 'for ſcandal never affirmed, that they had any other 'views, than the lawful poſſeſſion of each other in 'marriage. It was that very morning, that he had ob-'tained the conſent of her parents, and it was but 'till 'the next week they were to wait to be happy. Per-'haps in the intervals of their work, they were now 'talking

(12) This was executed with incomparable humour.

(24) It is dated Auguſt 3, 1718, and the lightning fell the laſt day of July. Ibid. Vol. 8.

by subscription with good success (*n*), but this was presently damped by the misfortune he had of being involved in the general calamity which happened [*M*] that remarkable year. So that by degrees he fell into such an utter despondency as, being attended with the cholic, brought his life in danger. In this unhappy condition he removed for the benefit of the air in 1722 to Hampstead, where he received some very tender proofs of Mr Pope's affection [*N*]. Recovering from this disorder, he finished, in 1724, his tragedy called *the Captives*; which being honoured with a particular mark of favour from her Royal Highness the Princess of Wales (*o*), he was further encouraged to write a set of fables [*O*] in verse, for the use of the Duke

(n) See his Epistle to Mr Methuen, quoted above.

(o) Viz. that of hearing him read it to her in Manuscript.

'talking of their wedding-cloaths, and John was suiting several sorts of poppies and field flowers to her 'complexion to chuse her knot for the wedding-day. 'While they were thus busied (it was on the last of July, 'between two and three in the afternoon) the clouds 'grew black, and such a storm of lightning and thun-'der ensued, that all the labourers made the best of 'their way to what shelter the trees and hedges af-'forded. Sarah was frightened, and fell down in a 'swoon on a heap of barley; John, who never separated 'from her, sat down by her, having raked toge-'ther two or three heaps the better to secure her from 'the storm. Immediately there was heard so loud a 'crack, as if Heaven had split asunder: every one was 'now sollicitous for the safety of his neighbour, and 'called to one another throughout the field. No an-'swer being returned to those who called to our lovers, 'they stepped to the place where they lay; they per-'ceived the barley all in a flame, and then 'spied this 'faithful pair, John with one arm about Sarah's neck, 'and the other held over her as to screen her from the 'lightning. They were struck dead, and stiffned in this 'tender posture. Sarah's left eye-brow was singed, 'and there appeared a black spot on her breast: her 'lover was all over black, but not the least signs of 'life were found in either. Attended by their melan-'choly companions, they were conveyed to the town, 'and the next day were interred in Stanton-Harcourt 'church-yard. My Lord Harcourt, at Mr Pope's and 'my request, has caused a stone to be placed over them, 'upon condition that we furnished the epitaph, which 'is as follows:

When eastern lovers feed the sun'ral fire,
On the same pile the faithful pair expire.
Here pitying Heav'n that virtue mutual found,
And blasted both, that it might neither wound.
Hearts so sincere th' Almighty saw well pleas'd,
Sent his own light'ning, and the victims seiz'd.

It is thus our poet entertained his friends when he was properly himself, which ought to be remembered in reading the remark of a noble author (25), who, speaking of Mr Gay's letters to Dr Swift, observes, 'they have nothing in them striking, or commendatory, 'and his sentiments only those of an honest, good-'natured man:' it will presently appear that in that correspondence we never see him but in an ill state of health, and under some dejection of spirits; besides, it is allowed he had an awful regard of the Dean as his father, it might have been said, as his preceptor.

(25) Lord Orrery in his account of the Life and Writings of Dr Swift, Letter the XXth.

[*M*] *Involved in the calamity of that year.*] No body will be surprized that a person of Mr Gay's turn was caught in the alluring snare that was laid at this time by the projectors of the South-Sea scheme. He had the ill luck to be possessed of as much original stock as swelled to the imaginary value of about ten thousand pounds. Upon which, Mr Pope and Mr Fenton [illegible] others, not a little delighted with the prospect of [illegible] their friend settled in an independent fortune, to [illegible] possibly necessary to support his spirit in chearfulness, were very assiduous in urging him to sell: he gave them an absolute denial, and even treated the advice (as thousands did at that time) with an air of disdain. Then they endeavoured to prevail on him at least to let as much stock go, as would raise wherewithal to purchase an annuity of one hundred pounds for his life; observing to him, that by this means he would be placed out of the reach of want, and be sure *of a clean shirt and a shoulder of mutton every day* (26). It was further added, that this prudent step was very consistent with any higher views which might possibly arise, since the remainder was enough to give him still a considerable hand in the play, of which he should also wait the event with much less anxiety after this necessary provision; but all this preaching, however sound the doctrine, was given to the winds. Their friend was seized with the general new spirit of prophecy of much greater things than they simply talked of, and all this while lived suitably to that prospect; nor was this spirit quenched, but in the general inundation that presently broke the charm, and stripped poor Gay even of the small pittance of his original stock. This original stock seems to be the thousand pounds, about the disposal of which we are told (27) our author had a consultation with his friends, when Mr Lewis Lord Oxford's steward advised him to intrust it to the funds, and live upon the interest; Dr Arbuthnot to intrust it to providence, and live upon the principal; and Mr Pope was for purchasing an annuity for life; *fecistis probe*, says the author of this story, *interior sum multo quam dudum* †. Dr Swift, who was also for his buying an annuity, having received no agreeable answer, in reply thereto tells him, *You are the most refractory, honest, good-natured man I ever knew* (28).

(26) That was the Expression of Mr Fenton, from whom we had the account of this particular.

(27) By Mr Warburton in a note to Letter XXIXth in Vol. 9. of Pope's Works. edit. 1753.

† Well done; you have hung a little more upon the tenters than before.

(28) Ibid.

[*N*] *He received some tender proofs of Mr Pope's affection.*] Mr Pope's mother lying very ill at this time hindered him from visiting his friend in person, he therefore wrote to him in the following most affectionate terms: 'In the afflicting prospect before 'me, I know nothing that can so much alleviate 'it, as the view now given me (heaven grant it may 'increase) of your recovery—May your health augment 'as fast as I fear her's must decline; I believe that 'would be very fast—May the life that is added to 'you be passed in good fortune and tranquillity, rather 'from your own giving to yourself, than from any ex-'pectations or trust in others—May you and I live to-'gether without wishing more felicity or acquisitions 'than friendship can give and receive, without obliga-'tions to greatness.

'*P. S.* As I told you in my last letter, I repeat it 'in this; do not think of writing to me. The Doctor, 'Mrs Howard, and Mrs Blount, give me daily ac-'counts of you.'

In another letter he expresses himself thus: 'No 'words can tell you the great concern I feel for you; 'I assure you it was not, and is not lessened, by the im-'mediate apprehension I have now every day lain un-'der of losing my mother. Be assured no duty less 'than that should have kept me one day from at-'tending your condition. I would come and take a 'room by you at Hampstead to be with you daily, 'were she not still in danger of death. I have con-'stantly had particular accounts of you from the doctor, 'which have not ceased to alarm me. God preserve 'your life, and restore your health. I really beg it 'for my own sake, for I feel I love you more than I 'thought in health, though I always loved you a great 'deal.' He then made a proposal to attend him to the southern parts, as soon as he should recover strength enough for the journey; and concludes thus: 'Dear 'Gay, be as chearful as your sufferings will permit: 'God is a better friend than a Court; even any honest 'man is better. I promise you my entire friendship in 'all events, heartily praying for your recovery.

'*P. S.* Do not write if you are ever so able; the 'doctor tells me all (29).'

(29) These two Letters are in Vol. 8. of Pope's Works, without a date.

[*O*] *Encouraged to write a set of fables.*] Dean Swift, who informs us that our author was promised a reward for this piece, intimates likewise his opinion how that promise came to put on the face of an affront. 'It must be allowed, says the Dean (30), speaking of 'the Beggar's Opera, this is not the first of Mr Gay's 'works wherein he hath been faulty with respect to 'courtiers and statesmen; for to omit his other pieces, 'even

(30) The Intelligencer, No. III. p. 23. published in 1729.

Duke of Cumberland; theſe he publiſhed in 1726, with a ſuitable dedication to that Prince (*p*), who was then very young. Upon the acceſſion of his preſent Majeſty to the Crown the following year, in ſettling Queen Caroline's Houſhold, the Poſt of Gentleman-Uſher to the youngeſt Princeſs Louiſa, was marked out for Mr Gay; but he declined the offer as unworthy of him [*P*], and his famous Beggar's Opera [*Q*] appeared upon the ſtage early in the enſuing ſeaſon (*q*). The unparallelled ſucceſs of that piece induced him to carry on the plan in a ſecond part, which being excluded the theatre by the Lord Chamberlain [*R*], our author thought proper to print it by ſubſcription, and the

(*p*) This was againſt Mr Pope's advice. See Remark [*U*].

(*q*) Viz. in the beginning of November 1727.

'even in his fables, publiſhed within two years paſt; 'and dedicated to the Duke of Cumberland, for which 'he was promiſed a reward, he hath been thought 'ſomewhat too bold upon courtiers.'

[*P*] *He declined the offer as unworthy of him.*] Our author gives an account of this matter to his laſt mentioned friend (31), intimating the excuſe he had made in a letter to her Majeſty, was his being too far advanced in life. 'So, continues he, now all my ex'pectations are vaniſhed, and I have no proſpect but 'in depending wholly upon myſelf, and my own con'duct. As I am uſed to diſappointments, I can bear 'them; but, as I can have no more hopes, I can 'no more be diſappointed; ſo that I am in a bleſſed 'condition (32). Theſe laſt words are an echo of thoſe which had been ſent him on this occaſion by Mr Pope, who writes thus: *I have many years ago magniſied in my own mind*, and repeated to you a ninth Beatitude, added to the eight in Scripture, 'Bleſſed 'is he who expects nothing, for he ſhall never be diſap'pointed.'—He afterwards declares his approbation of the excuſe ſent by Lord Grantham to the Queen, and concludes in theſe remarkable terms: 'Dear Gay, 'adieu! I can add a plain uncourtly ſpeech, While you 'are no-body's ſervant, you may be any one's friend; 'and as ſuch I embrace you in all conditions of life. 'While I have a ſhilling, you ſhall have ſix-pence, nay, 'eight-pence, if I can contrive to live upon a groat (33).' The Dean, two years afterwards, revenged his cauſe in the following lines (34).'

(31) See Letter xxviii. in Pope's Works, Vol. 9. edit. Warb.

(32) The Dean in anſwer is very merry upon his excuſe to the Queen, and obſerves that Oliver Cromwell did not begin to appear till he was older, Letter xxixi

(33) This Letter is dated, Oct. 6, 1727. See Ibid. Vol. 8.

(34) See his Verſes to Dr Delany, occaſioned by his Epiſtle to his Excellency, John Lord Carteret.

> Thus Gay the hare with many friends,
> Twice ſeven long years at Court attends;
> Who under tales conveying truth
> To virtue form'd a princely youth;
> Who paid his courtſhip with the crowd,
> As far as modiſh pride allow'd;
> Rejects a ſervile uſher's place,
> And leaves St James's in diſgrace.

[*Q*] *His famous Beggar's Opera.*] This piece was received with greater applauſe than was ever known. Beſides being acted in London 63 days without interruption, and renewed the next ſeaſon with equal applauſe, it ſpread into all the great towns of England, was play'd in many places to the 30th and 40th time, at Bath and Briſtol 50, &c. It made its progreſs into Wales, Scotland, and Ireland, where it was performed 24 days ſucceſſively. The Ladies carried about with them the favourite ſongs of it in fans, and houſes were furniſhed with it in ſcreens. The fame of it was not confined to the author only. The perſon who acted Polly, 'till then obſcure, became all at once the favourite of the town: her pictures were engraved, and ſold in great numbers; her life written, books of letters and verſes to her publiſhed, and pamphlets made even of her ſayings and jeſts. Furthermore, it drove out of England (for that ſeaſon) the Italian Opera, which had carried all before it for ten years (35). Dr Swift attributes (36) this unprecedented, and almoſt incredible ſucceſs, to a peculiar merit in the performance, wherein what we call the point of humour is exactly hit; a point, he obſerves, 'which whoever can right'ly touch, will never fail of pleaſing a great majority; 'and which in its perfection, is allowed to be much 'preferable to wit, if it be not rather the moſt uſeful 'and agreeable ſpecies of it.' The Dean likewiſe remarks, that in this piece the author '*hath by a turn of 'humour, entirely new placed vices of all kinds in the 'ſtrongeſt and moſt odious light, and thereby done emi'nent ſervice both to religion and morality.*' He then proceeds to vindicate this aſſertion, by examining the ſeveral particulars; after which, upon the whole, he concludes, that '*nothing but ſervile attachment to a 'party, affectation of ſingularity, lamentable dulneſs, 'miſtaken zeal, or ſtudied hypocriſy, can have the leaſt 'reaſonable objection againſt this excellent moral per'formance.*' This, it muſt be owned, was to the purpoſe, ſince the Beggar's Opera lay moſt expoſed on the ſide of morality, and was at that time warmly attacked from the pulpit (37). Another method to ruin its character on that account, was taken by Mr Colley Cibber, who introduced on the ſtage a rival piece drawn upon the ſame general plan, where none but virtuous characters were exhibited. But let the author himſelf tell us the fate of this attempt: 'After the vaſt ſucceſs, 'ſays he (38), of that new ſpecies of dramatic poetry, 'the Beggar's Opera, the year following I was ſo ſtupid 'as to attempt ſomething of the ſame kind upon a quite 'different foundation, that of recommending virtue 'and innocence, which I ignorantly thought might not 'have a leſs pretence to favour, than ſetting greatneſs 'and authority in a contemptible, and the moſt vulgar 'vice and wickedneſs in an amiable light. But behold how 'fondly I was miſtaken! *Love in a riddle*, for ſo my new'fangled performance was called, was as vilely damn'd 'and hooted at, as ſo vain a preſumption in the idle 'cauſe of virtue could deſerve.—Yet this, continues 'Mr Cibber, is not what I complain of I will allow 'my poetry to have been as much below the other, as 'taſte or criticiſm can ſink it. I will grant likewiſe, 'that the applauded author of the Beggar's Opera had 'in that piece more ſkilfully gratified the public taſte, 'than all the brighteſt authors that ever writ before 'him; and I have ſometimes thought, from the mo'deſty of his motto, *Non hæc novimus eſſe nihil* (39), 'that he gave them that performance as a ſatire on the 'depravity of their judgment, (as Ben Johnſon of old 'was ſaid to have given his *Bartholomew-fair* in ridi'cule of the vulgar taſte which had diſliked his *Sejanus*), 'and by artfully ſeducing them to be the champions of 'the immoralities he deteſted, he ſhould be amply re'venged on their former ſeverity and ignorance (40). 'This were indeed a triumph which the author of Cato 'might have envied. Cato, 'tis true, ſucceeded; but 'reached not by full forty days the progreſs and ap'plauſes of the Beggar's Opera. Will it however, ad'mit of a queſtion, Which of the two compoſitions a 'good writer would rather wiſh to have been the au'thor of? Yet on the other ſide, muſt we not allow, 'that to have taken a whole nation, high and low, in'to a general applauſe, has ſhewn a power in poetry, 'which (though often attempted in the ſame kind) 'none but this one author could ever yet arrive at.' Thus did Mr Cibber ſtrain his voice againſt the Beggar's Opera in 1740, but all in vain. We have ſeen that deathleſs performance ſince flouriſh as before, and ſucceeding Pollies make their fortunes by it.

(39) This inſtance of his modeſty is not forgotten by the author of the abovecited note to the Dunciad.

(40) In condemning ſome of his former plays.

[*R*] *Excluded the ſtage by the Lord Chamberlain.*] The title of it is *Polly, or a ſecond part of the Beggar's Opera.* To conceive an idea of the ferment raiſed by this ſuppreſſion, we muſt compare what our author ſays, with [redacted] are told by Mr Cibber. The firſt intimates [redacted] it had been given him by ſome as a reaſon for the prohibition, that he had written many diſaffected libels, and ſeditious pamphlets; by others, that particularly in this piece he had been charged with writing immoralities; that it was filled with ſlander and calumny againſt ſome particular great perſons, and that Majeſty itſelf was endeavoured to be brought into ridicule and contempt. In anſwer to the firſt, he proteſts his innocence, and ſolemnly declares his loyalty; for the reſt, he appeals to the play, which he gives as the reaſon of printing it. Here we perceive how high the tide ran at Court. In the next place, Mr Cibber will tell us, what an uproar was raiſed in the town: 'Va'rious, ſays he (42), were the ſpeculations upon this 'act

(41) In the Preface to Polly.

(42) In his Apology, &c. p. 144. ubi ſupra.

the advantage he made of it that way, might well be deemed a ſufficient ballance for any ſuppoſed damage from the prohibition; eſpecially as he was taken immediately into the protection of the Duke and Ducheſs of Queenſberry, who made his cafe their own (r), and uſed him with an uncommon degree of kindneſs. But theſe extraordinary favours, beſides the heartening reflections which the new eclat of his poetical fame muſt needs inſpire, aſſiſted too with the diverſions that were affectionately ſuggeſted by Mr Pope [S], and the conſtant leſſons with equal affection inculcated by Dr Swift [T], all put together, were not able intirely to remove a certain painful ſenſe of his ill fortune at Court, *hærebat lateri lethalis arundo.* In a little time he relapſed into his old diſtemper the cholic (s), after which he lived, or rather languiſhed the remainder of his days under an incurable dejection of ſpirits [U], reſiding moſtly at Amesbury, a ſeat of his noble Patron's, near Stone-henge upon Salisbury-plain. In ſo ſweet a retirement he was not without ſome chearful intervals, which he ſtill enjoyed in the company of his muſe (t). In the winter ſeaſons he came with the family to London, and was at their houſe in Burlington-gardens, when he was ſuddenly ſeized with a violent inflammatory fever, which in three days put a period to his life [W], on the 4th of December, 1732. After a very decent funeral ſolemnity [X] his body was interred on the 23d of that month, in the ſouth croſs-iſle over againſt Chaucer's tomb in Weſtminſter-Abbey, where a handſome monument is erected to his memory by the juſt-mentioned illuſtrious perſons, with an inſcription by Mr Pope, to which we muſt refer for his character [Y]. He died inteſtate, ſo

(r) They both quitted the Court on this occaſion.

(s) See a letter to him from Mr Pope, 25 Oct. 1730.

(t) Beſides reviſing the Wife of Bath, he compoſed ſome more Fables, which were added to a new edition printed ſoon after his death, as alſo the Opera of Achilles.

' act of power. Some thought that the author, others ' that the town was hardly dealt with; a third ſort, ' who perhaps had envied him the ſucceſs of his firſt ' part, affirmed when it was printed, that whatever ' the intention might be, the fact was in his favour; ' that he had been a greater gainer by ſubſcriptions to ' his copy, than he could have been by a bare theatrical repreſentation.' He then goes on to tell us, how greatly he ſuffered by this ferment. ' Soon after this ' prohibition, my performance was to come upon the ' ſtage, at a time when many people were out of humour at the late diſappointment, and ſeemed willing ' to lay hold of any pretence of making a reprizal. ' Great umbrage was taken that I was permitted to ' have the whole Town to myſelf, by this abſolute forbiddance of what they had more mind to have been ' entertained with. And ſome few days before my ' bawble was acted, I was informed, that a ſtrong party ' would be made againſt it. Accordingly *Love in a* ' *Riddle* was aſſaſſinated. Indeed it held up its head a ' ſecond day, and would have ſpoke for mercy, but ' was not ſuffered.—Not even the preſence of a royal ' Heir apparent could protect it.'

[S] *The diverſions ſuggeſted by Mr Pope.*] Among others, he propoſed the royal hermitage (built by the Queen in Richmond Gardens) as a good occaſion for Mr Gay to try his muſe upon; urging, that it was expected from him by ſeveral of his friends. One ſhould not bear in mind, continues he, all one's life, any little indignity one receives from a Court. But all this dear friend's arguments availed nothing; he anſwers them all, and concludes, that he *knew* himſelf unworthy of Royal Patronage (43).

(43) Theſe two Letters are dated in 1732. See Pope's Works, Vol. 9.

[T] *The leſſons of Dr Swift.*] Almoſt every letter the Dean wrote to him at that time had ſome inſtance of theſe pointed kindneſſes. Lord Orrery (44), in his remarks on theſe letters between Swift and Gay, having obſerved, that the latter loved the former to a degree of veneration, and that the friendſhip was returned with great ſincerity, concludes, that ' Swift ' writes to him [Gay] in the ſame ſtrain as he would ' have written to a ſon, and ſeems to diſtinguiſh him ' as the correſpondent to whom he had not the leaſt ' grain of reſerve.'

(44) In his Account of the Life and Writings of Dr Swift, &c. Letter xx.

[U] *He languiſhed under an incurable dejection of ſpirits.*] The whole ſeries of the letters between him and his two (ſo often mentioned) friends, affords a melancholy proof of this truth. The following extract (45) will be ſufficient to produce for a ſample. ' Dear Mr Pope, ' My melancholy increaſes, and every hour threatens me ' with ſome return of my diſtemper; nay, I think I ' may rather ſay, I have it on me. Not the divine ' looks, the kind favours and expreſſions of the divine ' Ducheſs, who hereafter ſhall be in place of a Queen ' to me, nay ſhe ſhall be my Queen, nor the inexpreſſible goodneſs of the Duke, can in the leaſt chear ' me. The drawing-room no more receives light from ' theſe two ſtars. There is now (what Milton ſays is in ' Hell) darkneſs viſible.—O that I had never known ' what a Court was! Dear Pope, what a barren ſoil (to ' me ſo) have I been ſtriving to produce ſomething ' out of! Why did I not take your advice, before my ' writing fables for the Duke, not to write them, or ' rather to write them for ſome young Nobleman? It ' is my very hard fate, I muſt get nothing, write for ' them, or againſt them.'

(45) From a letter in Pope's Works, as above.

[W] *Put a period to his life.*] He was attended by two phyſicians, beſides Dr Arbuthnot, who thought him irrecoverable from the beginning, and that it ended in a mortification of his bowels. The Doctor obſerves, it was the moſt precipitate caſe he ever knew. Hence it is that Mr Pope (46) calls it an unexpected death; it could be ſo to him only in that view (47), ſince Mr Gay had prepared him for it in ſeveral letters. After a Somerſetſhire journey, in the preceding ſummer, for his health, he writes (48), that he was little better for it, and began to fear the illneſs he had ſo long and ſo often complained of, inherent in his conſtitution; and concludes, that he had nothing for it but patience. In another letter he expreſſes himſelf in the following terms:—' I ' find myſelf in ſuch a ſtrange confuſion, and depreſſion ' of ſpirits, that I have not ſtrength even to make my ' will; though I perceive, by many warnings, I have ' no continuing city here. I begin to look upon my' ſelf as one already dead, and deſire my dear Mr Pope, ' whom I love as my own ſoul, if you ſurvive me, as ' you certainly will, if a ſtone ſhould mark the place ' of my grave, ſee theſe words put upon it.

' *Life is a jeſt, and all things ſhew it:*
' *I thought ſo once, but now I know it.*

' With what you may think proper. If any body ' ſhould aſk, how I could communicate this after death? ' Let it be known, it is not meant ſo, but my preſent ſen' timents in life (49). What the bearer brings beſide ' this letter, ſhould I die without a will, which I am ' the likelier to do, as the law will ſettle my ſmall ' eſtate much as I ſhould myſelf, let it remain with ' you, as it has long done with me, a remembrance of ' a dead friend. But there is none like you, living or ' dead (50).'

(46) In a Letter to Swift the 22d, Vol. 9. of his Works, edit. 1742.

(47) It was far from being ſo to Dr Swift, as appears from his remarkable indorſement to the above Letter, viz. On my dear friend Mr Gay's death, received Dec. 15, but not read till the 20th by an impulſe foreboding ſome misfortune.

(48) In a Letter dated Oct. 7, 1732.

(49) In this light the objection againſt the double rhyme has leſs weight.

(50) See Pope's Works, Vol. 9.

[X] *After a very decent funeral ſolemnity.*] His body was brought by the company of Upholders from the Duke of Queenſberry's, to Exeter 'Change in the Strand; whence, after lying in very decent ſtate, it was drawn in a hearſe trimmed with plumes of black and white feathers, attended with three mourning coaches and ſix horſes to Weſtminſter-Abbey, at eight o'clock in the evening, on Dec. 23. The pall was ſupported by the Earl of Cheſterfield, Lord Viſcount Cornbury, the Hon. Mr Berkeley, General Dormer, Mr Gore, and Mr Pope; the ſervice being performed by the preſent Dean, Dr Wilcox, Biſhop of Rocheſter, the Choir attending (51).

(51) See Mr Gay's Life printed in 1733.

[Y] *His character.*] It would be tedious to inſert an inſcription ſo well known. We ſhall only take notice, that the laſt line in the poetical part was written at firſt thus, *Striking their aching boſoms—here lies Gay*; but upon Dr Swift's admonition of the cacophony in the two participles, Mr Pope altered it as it now ſtands

so that his fortune, which was not large (*u*), fell (as he desired it should) (*w*) to his two widow sisters (*x*). The week before his death he gave the play-house his opera called *Achilles*, which was acted soon after with applause [*Z*]. Since this there came out a comedy, said to be written by him, called *the Distressed Wife*, the second edition of which was printed in 1750; and very lately his name has appeared to a humourous piece with this title, *The Rehearsal at Goatham.*

(*u*) About 3000 l.

(*w*) See Remark [*U*].

(*x*) Katharine and Joanna, the first was the relict of Mr Baller, and the other of Mr Fortescue. See the dedication to his Life in 1733, 8vo.

stands (52). His friend's moral character is here finely drawn, and perhaps he was the more solicitous to exert himself on that head, as it had been grossly misrepresented, particularly by Mr Jacob (53), which procured him a place in the Dunciad (54).

(52) See Letter, 66 in Vol. 9. of Pope's Works edit. 1742.

(53) See Mr Gay's Life in his Lives of the Poets.

(54) In Book III. lines 149, 150, first edition.

[*Z*] *Achilles was acted with applause.*] The profits of it were given to his sisters (55). It was very assiduously patroniz'd by the Duke of Queensberry, who, Mr Pope observes, acted more than the part of a brother to our author. His papers fell partly into Mr Pope's hands; who, for as much as did so, no doubt took care (as he promised Dr Swift) to suppress things unworthy of him; but he expresses his concern in regard to the rest, which were at the discretion of the administrators, whose partiality he was afraid of (56). Upon the whole, his account does by no means lessen the authenticity of those few pieces mentioned above, which have been published in Mr Gay's name, since his death. P

(55) So says Mr Theoph. Cibber in the Life of Gay, Vol. 4. of the Poets Lives.

(56) See Letter 64, in Vol. 9. of his Works 1742, as also Letters 65, and 67.

GELLIBRAND [HENRY] a very able Mathematician, a learned Writer, and Astronomy Professor in Gresham College in the XVIIth century. He was the grandson of John Gellibrand, who resided, and who died at St Paul's-Cray in Kent, Nov. 25. 1588. and the son of Mr Henry Gellibrand some time Fellow of All-Souls College in Oxford, who marrying and settling at the place before mentioned, died there August 15, 1615 (*a*). This Henry of whom we are treating, was the eldest of his five sons, and a native of the City of London, being born in the Parish of St Botolph Aldersgate, Nov. 17, 1597 (*b*). The same year that his father died, he was admitted a Commoner of Trinity College in Oxford, being then in his eighteenth year. He took his degree of Bachelor of Arts Nov. 25, 1619, at which time, as Wood tells us in his blunt manner, he was esteemed to have no great matter in him (*c*); but happening to hear one of Sir Henry Savile's Mathematical Lectures, either by pure accident, or to save the sconce of a groat if he had been absent, he was so much taken with it, that he applied himself immediately to that noble science (*d*). This tho' treated as a wonder by Anthony Wood, is no more than what fell out to Des Chales, Paschal, and other eminent mathematicians. Our author pursued this study with so much vigour, that before he took his degree of Master of Arts, which was May 26, 1623, he was distinguished, and esteemed for his great knowledge therein, both in the University, and at London. To the first perhaps his making a dial, which yet remains on the east side of the old quadrangle of Trinity College might contribute, and the latter in a great measure arose from his intimate acquaintance with the celebrated Mr Henry Briggs, and other able mathematicians, who flourished at that time (*e*). He was, while Bachelor of Arts, curate of Chidringstone in Kent, but it is probable resigned it that he might pursue his mathematical studies with the greater freedom. Upon the death of the ingenious Mr Edmund Gunter, December 10, 1620. Mr Briggs encouraged our young mathematician to become a candidate for his Professorship at Gresham College (*f*). Upon this occasion he had a certificate from the Rector of that parish, in which he had officiated as curate, and from others of the Clergy in Kent, in respect to his learning and piety; and another from the President, Vice-President, and Fellows of Trinity College in Oxford, which is conceived in very strong terms, and acknowledges not only his assiduity in his studies, but his great frankness in the communication of knowledge, as also his disinterestedness in contenting himself with his own little patrimony, that the pursuit of preferment might prove no detriment to his studies. In all probability these papers had great weight since within a few days after, viz. January 2, 1626, he was elected Astronomy Professor (*g*). He lived from that time as he had done before in a close intimacy with Mr Henry Briggs, who took great pleasure in communicating to him his mathematical notions and discoveries, and at the time of his decease he recommended to Mr Gellibrand the perfecting and publishing a large book, which he did not live to finish (*h*). Some time after this, one William Beale, who was Mr Gellibrand's servant, published, with his master's knowledge and consent, an Almanack for the year 1631, in which the saints names usually put were omitted, and the names of other saints and martyrs mentioned in Mr Fox's book were placed in their room, for which Mr Gellibrand was brought into some trouble (*i*) [*A*]. This might very probably retard the publication of the BRITISH TRIGONOMETRY, which as he had undertaken to perfect at the request of Mr Briggs, so there wanted not several other eminent persons who pressed him very much upon the same head to whom he gave full satisfaction, by causing that work when compleat to be printed in Holland in 1633, which was received with very great applause (*k*) [*B*]. The same year there came abroad at the end of

Mr

[*A*] *Was brought into some trouble.* The person chiefly offended with this almanack, was Dr William Laud, then Bishop of London, afterwards Archbishop of Canterbury; and by his means, it is said, that Mr Gellibrand, and his servant Beale, were called into the High-Commission Court; where however they escaped censure, by shewing that this was no innovation of theirs, but had been done before, and pleading also, that they had no ill intention. After Mr Gellibrand's death, this was made part of the accusation against Archbishop Laud, and Major Thomas Gellibrand was produced before the House of Peers as a witness upon this Prelate's prosecution (1).

(1) Prynn's Canterbury's Doom, p. 513

[*B*] *Which was received with great applause.*] The title of this work at large runs thus: Trigonometrin Britannica, *sive*, De doctrina triangulorum: Libri duo Quorum

Mr Thomas James's account of his voyage, for the discovery of a north-west passage, and wintering in Hudson's Bay a short discourse of our author's concerning the longitude, which at that season was very much admired, and which notwithstanding the great improvements that have been since made, may be very justly stiled a curious and a useful piece, even now (*l*) [C]. It is commonly believed that our author made the discovery of the variation of the Magnetic Needle, and this upon the credit of a very great man, who has positively affirmed it, but in this, without doubt there is an error as will be shewn more largely in another place (*m*). In respect to this, however, thus much is true, that Mr Gellibrand was extreamly well acquainted with, and wrote a very learned book upon the subject, which has been and ever will be esteemed by competent judges [D]. He wrote

(*l*) Appendix to Thomas James's Voyage for Discovery of the N. West-Passage, &c. Lond. 1633. 4to.

(*m*) See the Article of GUNTER [Edmond] in this Dictionary.

Quorum prior continet constructionem canonis sinuum, tangentium, & secantium, una cum logarithmis sinuum & tangentium ad gradus & graduum centesimas, & ad minuta & secunda centesimis respondentia: a clarissimo doctissimo integerrimoque viro domino *Henrico Briggio*, Geometriæ in celeberrima academia Oxonienſi professore Saviliano dignissimo, paulo ante inopinatam ipsius è terris emigrationem compositus. Posterior vero usum sive applicationem canonis in resolutione triangulorum tam planorum, quam sphæricorum, è geometricis fundamentis petita, calculo facillimo eximiisque compendis exhibet ab *Henrico Gellibrand* Astronomiæ in collegio Gresshamensi apud Londinenses professore constructus. Goudæ 1633. fol. that is, 'British Trigonometry, or 'the Doctrine of Triangles, in two Books; the first of 'which contains the construction of the canon of sines, 'tangents, and secants, together with the logarithms 'of sines and tangents, &c. by that famous, learned, 'and worthy man, Mr *Henry Briggs*, late Savilian 'Professor of Geometry in the celebrated university of 'Oxford, composed by him a little before his unexpected death. The latter shewing the use or application of the canon in the resolution of plain and 'spherical triangles upon the principles of Geometry, 'and by a short and easy method of calculation, by 'Henry Gellibrand, Professor of Astronomy in Gresham 'College, London.' Printed at Gouda, 1633. folio.' Mr John Newton, in the year 1658, published a work of the like import, and under the same title; the first part of which, analogous to that of Mr Briggs, was his own; but the second a translation of our author's work into English (2).

(2) Wood's Athen. Oxon. Vol. II. col. 632.

[C] *A curious and a useful piece, even now.*] The title of this little piece is, *An* Appendix *concerning* Longitude, Lond. 1633. 4to, in three leaves. The beginning of this treatise is at once so weighty, and so perspicuous, and represents some points of useful knowledge in so clear, and at the same time in so concise a manner, that the reader cannot but be pleased to peruse it.

'Latitude and longitude are two primary affections 'of the earth; by the help of these two doth the Geographer strive to represent the parts of the earth, that 'they may keep symmetry and harmony with the 'whole. Latitude then is an arch of the meridian 'comprehended between the equator and a parallel; 'but longitude is an arch of the equator, intercepted 'by the prime meridian, and the meridian of a place, 'the difference of longitude being the difference of 'two meridians. The measure of the former is the 'meridian, the equator of this latter. For the exact 'setting of latitudes, we have many and absolute helps; 'so that the error, if there any happen, ought to be 'imputed to the imperfect handling of the artist. But 'the longitude of a meridian, is that which hath, and 'still weareth the greatest masters of Geography. Nevertheless, hath not the wise Creator left man unfurnished of many excellent helps to attain his desire: 'for besides eclipses, especially of the moon (whose 'leisure we must often wait, and perhaps go without, 'if the Heavens be not propitious to us) we have the 'concourse of quick-paced inferior planets, with superior slow ones, or their appulses with some fixed star 'of known place, or else some other artifice derived 'from their motions and positions. As for the magnetical needle, to argue a longitude from its variation, 'is altogether without ground; and though well-furnished seamen are able by their dead reckonings, as 'they term them, to determine the difference of meridians somewhat near, yet by reason of the unknown 'quantity of a degree in a given measure, which is the 'rule of the ship's way, varieties of adverse winds, different sets of tides, and other involved incumbrances, 'they come often wide of the mark they aim at. The 'best way yet known to the world, is that which is deduced from the celestial appearances, which being 'performed by judicious artists, may in a short time 'rectify our geographical and hydrographical charts hitherto in most places foully distorted. It is my intent 'here to give an instance from two several observations 'drawn from the celestial bodies, by the author of this 'discourse, in his discovery for the north-west at the 'bottom of the Bay, being his wintering-place, and 'called by the name of Charlton, which for judgment, 'circumspection, and exactness, may compare with 'most: the first, from the eclipse of the moon; the 'second, from the moon's meridian of Heaven, or her 'coming to the plane of his meridian of Charlton.' This eclipse happened Oct. 9. 1631. and it so fell out, that Mr Gellibrand himself observed the eclipse at the same time at Gresham College, from whence he determines the longitude of Charlton to be west from London 79 deg. 30 min. by the second method he determined it to be one degree less, and to shew that this was no very considerable error, as things then stood, he gives an instance of much greater variations with respect to Rome and Nurembergh, and this from the observations of the best Astronomers Europe had produced. Regimontanus making this difference 36, Werner 32, Appian 34, Mestlin and Origan 33, Stofler 18, Maginus 26, Schoner 12, Mercator and Hondius as much, Stadius 13, Jansonius 10, Longomontanus 16, Lansperg 10, Kepler by two observations on two lunar eclipses, but 4 minutes of time. The reader must observe, that every four minutes of time makes a whole degree in longitude; so that the difference between the first and last of these computations, is no less than eight whole degrees, which will afford a competent judge of these things, matter of great speculation. Some and even great errors, without doubt, there must be in several of these operations; but that they did not wholly proceed from such inaccuracies, there is good ground to suspect. At the end of some copies of Captain James's voyage, there is another discourse after this of Mr Gellibrand's, with this singular address, *To the venerable* artists, *and younger* students *in* Divinity *in the famous university of* Cambridge; subscribed X. Z. but said to be written by Mr W. W. Whoever was the author, it is a very curious piece, and may be reckoned among the first apologies in our language, for the free exercise of thought in Philosophy, and on this account has been very properly reprinted in a late Collection of Voyages and Travels, to which we shall refer the reader for its contents (3).

(3) Harris's Voyages, Lond. 1748. Vol. II. P. 435.

[D] *And ever will be esteemed by competent judges.*] The title of this curious and most considered of all Mr Gellibrand's works, runs thus: *A Discourse* mathematical *on the* Variation *of the* magnetic Needle. *Together with the admirable diminution lately discovered.* London, 1635. 4to.

At the opening of his work, our author declares his chief intention to be the treating of the deflection of the needle from the terrestrial meridian, together with that abstruse and admirable variation of the variation lately discovered to the world. The variation then, is the deflection of the magnetical meridian, from the terrestrial, the horizon determining its quantity and quality. These meridians sometimes are coincident, and in such cases there can be no variation. Sometimes again, they are different; and then, that hemisphere wherein either extremity of the needle lies, denominates its quality; for if it be the eastern hemisphere, it

wrote beſides theſe ſeveral other treatiſes in his own profeſſion, which were publiſhed ſome before and ſome after his death; which added to the great reputation that he had before obtained, and raiſed very high expectations of what he might perform in the courſe of his ſtudies; and others of his labours, there are yet remaining in manuſcript, which are no way inferior either in merit or importance to thoſe which are publiſhed (*n*), and which taken together

(*n*) Wood's Athen. Oxon. Vol. I. p. 623. Ward's Lives of Greſham Profeſſors, p. 32, 83.

it is called eaſterly variation; if the weſtern, weſterly. And the horizon, ſuppoſed (as all great circles are) to be divided into 360 parts, and each part ſubdivided into centeſms, or milleſms, defines the quantity, as 10, 20, 30, &c. parts of variation. He then remarks, that for the more diſtinct proceeding, and to give ſome ſatisfaction to thoſe who are not altogether mathematical, it will not be impertinent to the preſent purpoſe, to give ſome probable reaſon for this variation, or ſwerving of the needle from the meridians of moſt places. Take a vigorous magnet, convert it into a ſpherical body, and having found its poles, delineate the ſame with meridians, æquinoctials, and parallels, then take a fine ſewing needle, and applying it to the interſection of a meridian and the equinoctial, it will be found preciſely to point out the poles of the ſtone; and if the needle be moved towards either pole, according to its own direction, it will trace out a circle over the ſaid magnetic pole. But if this ſpherical magnet ſhall have a part of it excavated, as admit about the forty-fifth parallel, and forty-fifth meridian, or degree of longitude, the needle moved forwards from the aforeſaid interſection, as ſoon as it ſhall draw near to the limb of this excavation, will forthwith leave its former poſition, as lying in the plane of the prime meridian, and incline to the other ſolid ſide, not reſpecting at all the aforeſaid poles; and this deflection we call the variation of the needle. And the greater will this variation be, the nearer it approaches to the poles. For whereas before the excavation, each ſide being alike potent, the needle, like an upright and indifferent arbiter, inclined to neither part; after the excavation it will convert itſelf to the more ſolid ſide, rejecting the imperfect and defective, and ſo much the more powerfully, by how much the other ſide ſhall be found to have loſt more of its magnetic vigorous ſubſtance. The like will fall out if the needle be ſo placed as that it ſhall biſect the excavated part; for then it will accurately point out the true poles of the ſtone formerly found, but ſuddenly ſwerve from them after any little diſlocation, ſtrongly applying itſelf to the more ſolid one. As it is with this little, ſo likewiſe with the greater magnet of the earth, whoſe ſolid magnetic parts are great continents; the defective excavated, the deep and vaſt channel of the ſea. For if there were obſervations made in the mid-way between the eaſterly coaſt of China, and this weſtern of Europe, it is very probable there would be found no variation at all, the terreſtrial and magnetical meridians being congrual. But if we ſhall incline to either ſide, as admit to the weſtward, the needle will in like manner move itſelf to the eaſtern continent, as the more prevalent ſide, the channel of the ſea being a part deficient of the ſpherical body of the earth, and the needle finding no encouragement to apply itſelf thereto. And ſo likewiſe for the ocean, which palliates the imperfect parts of the earth; it is evident, that if the needle ſhall equally divide the marine diſtance between two continents, there will be found no variation, as having both the meridians united, the needle equally diſpoſing itſelf to either continent. But if we ſhall ſwerve from this mediety, it will preponderate with the next continent. Our author obſerves, that with reſpect to the variation of the needle, it was a maxim laid down by our learned countryman Dr Gilbert, *that in the ſame place the variation is always the ſame.* This Mr Gellibrand adds, was an aſſertion, that for any thing he ever heard, had never been queſtioned; but notwithſtanding this, magnetical experiments ſhewed that the variation is accompanied with a variation. This he proves by obſervations made by Mr Burrows, at Limehouſe, near London, in 1580. who found the variation there to be 11 deg. 15 min. or near one point of the compaſs: whereas in 1622 Mr Gunter, Profeſſor of Aſtronomy at Greſham College, found the variation in the ſame place to be but 6 deg. 13 min. and our author, in 1634. with ſome friends, had recourſe to Deptford, where Mr Gunter had before made the ſame obſervations with thoſe at Limehouſe, and found it not much to exceed 4 deg. It is evident enough from hence, that this variation of the variation was firſt obſerved, at leaſt in England, by Mr Gunter; and from the beſt accounts we have hitherto had, was not obſerved ſo early any where elſe. At the cloſe of his treatiſe our author, who was very far from being a poſitive or an aſſuming man, proceeds thus (4). 'I will 'not here enter into a diſpute concerning the cauſe of 'this ſenſible diminution, whether it may be imputed 'to the magnet, or the earth, or both. It is not un- 'known to the world, how the greateſt maſters of 'Aſtronomy which this age hath afforded, for the 'more eaſy ſolving the apparent anomalar motions of 'the fixed and erratique celeſtial lights, and avoiding 'that ſupervacaneous furniture of the Ancients, do with 'all alacrity embrace that admirable Copernican hy- 'pothefis of the diurnal, annual, and ſecular motions 'of the earth; inſomuch as conferring with that great 'aſtronomer D. Phil. Lanſberg, in Zealand, about 'aſtronomical matters, he did moſt ſeriouſly affirm un- 'to me, he ſhould never be diſſuaded from that truth. 'This, which he was pleaſed to ſtile a truth, I ſhould 'readily receive as an hypotheſis, and ſo be eaſily led 'on to the conſideration of the imbecility of man's ap- 'prehenſion, as not able rightly to conceive of this ad- 'mirable opifice of God, or frame of the world, with- 'out falling ſoul on ſo great an abſurdity. Yet ſure 'I am, it is a probable inducement to ſhake a wavering 'underſtanding. And, which adds ſomewhat more, I 'underſtand by Galilæus, a Florentine, and moſt acute 'and learned mathematician, that an Italian gentle- 'man, of the family of the Marſilii, hath lately found 'the mutation of the terreſtrial meridians, and penned 'a treatiſe thereof, not yet publiſhed, which the ſaid 'Galilæus hath ſeen and read con ſtupore, not without 'amazement. His words are theſe: Surge di preſente 'una quinta novita, &c. which in Engliſh runs thus: 'Now there ariſeth a fifth novelty; from which we may 'argue the mobility of the terreſtrial globe, by the 'means of that which moſt ſubtilly the moſt illuſtrious 'gentleman, Sign. Cæſar, of the moſt noble family of 'the Marſilii of Bologna, a Lyncean academic, alſo 'hath diſcovered, who in a moſt learned tract plainly 'ſheweth, how he hath obſerved a continual mutation, 'although very ſlow, in the meridian line; which diſ- 'courſe, which with wonder I lately ſaw, I hope he 'will impart to all thoſe who are ſtudious of the won- 'ders of nature. Surely if it be ſo, the due conſidera- 'tion of the premiſes doth, as I conceive, lay o- 'pen a fair way for the ſolving of that irregular motion 'imputed to the axis of the earth; I mean the altera- 'ble obliquity of the ecliptic, which to deny (as ſome 'yet do, not without great violence offered to the An- 'tients) I ſhall hardly, without very ſtrong arguments, 'be perſuaded. I pretermit likewiſe, a ſuppoſition 'which might be made of the correſpondent motion of 'the pole of the magnet, with thoſe of ſome of the pla- 'nets, and divers other conceits, which muſt be all left 'to future times to diſcover, this invention be- 'ing but newly preſented to the world in its infancy.' It may perhaps afford the reader ſome ſatisfaction, if we add, that in 1657 there was no variation at all at London, and that in 1747. the variation being obſerved by the accurate Mr George Graham, at his houſe in Fleet-ſtreet, it was found 17 deg. 40 min. weſt (5). We will take the liberty of making a ſmall addition to theſe obſervations, which is, that there is a variation even in this ſecond variation, which is ſlower when it firſt recedes from its due direction, and quicker as the deflection increaſes. If any eſtabliſhed learned ſociety would direct very exact obſervations to be made of the magnetic variation every month for a courſe of years, and if two ſuch aſſemblies, in places at a conſiderable diſtance, would concur in obſerving punctually all lunar eclipſes, and would communicate the reſult of theſe obſervations conſtantly, we ſhould in a few years learn more of this matter, than hitherto we have done in above a century and a quarter.

[E] *Should*

together, fully ſhew that his diligence and application were equal to his ſagacity and penetration, and that he did great honour to the learned foundation to which he belonged; and fully anſwered the hopes that were entertained of him, when his friends at the Univerſity recommended him thither, as one that had a great genius for mathematical learning, and was willing that the world ſhould be the better for it [*E*]. His ſituation at the college, free converſe with the lovers of mathematical ſtudies, and diligent enquiries, gave him an opportunity of contributing much to the improvement of navigation, which probably would have owed more to him, had he lived longer. But he was taken off yet earlier in life than his predeceſſor Mr Gunter, for he died on the ninth of February 1636, in the fortieth year of his age, and was buried likewiſe in the church of St Peter the Poor, without any tomb or inſcription to his memory (*o*). Dr Hannibal Potter, formerly his tutor in Trinity College, and afterwards Preſident of it, preached his funeral ſermon, in which he commended his piety and worth (*p*). It will not be amiſs to add here concerning this learned man Dr Hannibal Potter, that he was ejected from his office of Preſident of Trinity Hall by the parliament, in which he was ſucceeded firſt by Robert Harris Bachelor in Divinity, next by William Hawes Maſter of Arts, then by Dr Seth Ward ſucceſſively Biſhop of Exeter and Saliſbury, but ſurviving to 1660, he was reſtored to his juſt rights, and remained Preſident to his death, after which his corps was interred in the chapel belonging to that learned foundation (*q*). He had himſelf a mathematical diſpoſition, and his brother the Reverend Mr Francis Potter ſet up the dial on the north ſide of the old quadrangle by which he is ſtill remembered (*r*).

[*E*] *Should be the better for it.*] The titles of ſuch works of our author as have been publiſhed ſhall follow.

A Preface to the Sciographia *of* John Wells, *of* Brembridge, *in* Hampſhire, Eſq; Lond. 1635. 8vo.

An Inſtitution trigonometrical, *explaining the doctrine of the dimenſions of* plain and ſpherical triangles, *after the moſt exact and compendious way, by tables of* ſines, tangents, ſecants, *and* logarithms; *with the application thereof to queſtions of Aſtronomy and Navigation.* Lond. 8vo. After the deceaſe of the author, this book, having been corrected and enlarged by William Leybourn, was re-printed at London in 1652. 8vo.

An Epitome *of* Navigation; to which were added,

Several neceſſary tables pertaining to Navigation: as, a triangular canon logarithmical, or a table of artificial ſines and tangents, &c. Two chiliads, or the logarithms of abſolute numbers, from an unite to 2000. An appendix concerning the uſe of the fore-ſtaff, quadrant, and nocturnal, in Navigation. Lond. 1674. 8vo.

Oratio in laudem Gaſſendi *aſtronomiæ habita in aula Aedis Chriſti Oxon.* that is, 'An Oration in praiſe of 'the Aſtronomy of Gaſſendus, ſpoken in the hall of 'Chriſt-Church in Oxford.' At what time this was ſpoken does not appear, but in all probability it was before he left the Univerſity.

Beſides theſe, he wrote alſo ſome other pieces, which have not yet ſeen the light; as

At the end of his *Trigonometria Britannica* he ſays, that he had by him *Integram eclipſium doctrinam*, or the doctrine of eclipſes, which he deſigned to have added to that treatiſe, but that the printer could not wait till he had reviſed and fitted it for the preſs.

'Aſtronomia lunaris *ſive* Diatriba in appulſum lunæ 'ad lucidam Pleiadum per triangulorum ratiocinia è ta-'bulis ac hypotheſibus *Ptolemæi, Alphonſi, Copernici, Tychonis, Longomontani, & Lanſbergii.*' That is, Lunary Aſtronomy, or a diſcourſe upon the appulſe of the moon to the bright ſtar (which is the third) in the conſtellation of the Pleiades, according to the hypotheſes of the moſt eminent aſtronomers. In the beginning of this work, he mentions the day on which the obſervation was taken that gave riſe to this diſcourſe, which was Dec. 20. 1634. at St Paul's Cray, in Kent. This little piece, fairly written in his own hand, is now in the poſſeſſion of Sir Hans Sloane, Bart. A. Wood mentions likewiſe a treatiſe of *Building of ſhips*, left by him in MS. which after his death came into the hands of Edward Lord Conway. E

GILBERT [Sir HUMPHREY], a gentleman equally diſtinguiſhed by his great abilities, and heroic courage, in the reign of Queen Elizabeth. He deſcended from a very ancient and honourable family in the county of Devon, as the induſtrious and very learned collectors of that Shire unanimouſly agree (*a*) [*A*]. His father's name was Otho Gilbert of Greenway, Eſq; his mother Katherine daughter of Sir Philip Champernon of Modbury, in the ſame county, who afterwards married Walter Ralegh of Fardel, Eſq; and by him was mother to the famous Sir Walter Ralegh, who was no leſs allied to him by

(*a*) Collection of Arms, &c. of the ancient families in Devonſhire, by Sir J. Northcote, Bart. MS. Mr Weſtcot's Pedigrees of families in the County of Devon, MS. Sir William Pole's Deſcription of Devonſhire.

[*A*] *Unanimouſly agree.*] If we may rely upon the authority of Mr Thomas Weſtcot, who ſpent many years in ſearching into the deſcents of the moſt antient families in this county, we muſt believe that this houſe, of which we are now ſpeaking, was fixed here in the time of the Saxons; for his words are expreſs, *that* Gilbert *poſſeſſed lands in* Manaton, *in or near* Dartmoor, *in* Edward *the Confeſſor's days* (1). The moſt ſkilful genealogiſts however, have not been able to trace up this pedigree near ſo high; in excuſe of which however it is ſaid, that it was very differently ſpelt, which very much increaſes thoſe difficulties that commonly attend on ſuch enquiries (2). It is agreed, that Jilbert, Jerebert, and Giſlebert, are all the ſame name with Gilbert (3). The old family ſeat was at Greenway, near Brixam, ſtanding very pleaſantly on the eaſt ſide of the river Dart, upon a riſing ground about a mile from Dartmouth, and had a large quantity of lands with a Royalty belonging to it (4). Thomas Gilbert, of Greenway, had a ſon Jeffery, who marrying Joan, daughter and coheireſs of William Compton, of Compton, near Torbay, in the ſame county, brought that eſtate into the family, in the reign of King Edward II (5). From him deſcended Otis or Otho Gilbert, who in the 15th of Edward IV. was High-Sheriff of this county, and who was afterwards knighted (6). There were alſo many other eminent men of this family, which have intermarried with ſome of the moſt honourable houſes in the weſt of England; ſuch as Champernon, Croker, Hill, Chudleigh, Ager, Molineux, Pomeroy, &c. and have yielded matches to others; in particular to the noble family of the Granvils, from whom deſcended the Earls of Bath, and the preſent Earl of Granvile (7). They have married alſo divers daughters and heireſſes, as Compton, Champernon, Valetort (whereby they touch the Blood Royal) Reynward, Trenoch, Littleton, alias Weſtcot, Kelly, and others (8). We may therefore juſtly affirm, that this of which we are ſpeaking was ſcarce inferior to any gentleman's family in England (9).

by genius than by blood [*B*]. The gentleman of whom we are now writing is thought to have been born Anno Domini 1539, and, tho' a ſecond ſon, derived from his father, who had a good eſtate, and was a good oeconomiſt, a very conſiderable fortune. But it was principally to his mother's care, that he owed that excellent education, firſt at Eton, and next at Oxford, which enabled him to make the figure he did in the world, and to diſtinguiſh himſelf in an age ſo fruitful of great men (*b*). His genius naturally led him to the ſtudies of Coſmography, Navigation, and the art of war, which he improved by a diligent application, as well as by continual practice, for after a ſhort ſtay at Court, where he was introduced to the Queen's knowledge by his aunt (*c*), he expoſed himſelf early in the ſervice of his country, and acquired a great reputation from his actions, before any of his great projects reached the public ear (*d*) [*C*]. The firſt place in which notice was taken of his ripe judgment, as well as daring courage, was in the expedition to Newhaven Anno Dom. 1563, where he behaved with ſo much prudence, and his attempts were attended with ſo great ſucceſs, that tho' then but a young man he was much admired, and his prudence and modeſty raiſed high expectations in all who knew him (*e*). In ſeveral expeditions undertaken in thoſe troubleſome times he added to his fortune, as well as to his fame, and being at all times ready, both in diſcourſe and with his pen, to render a reaſon for his own conduct, and to apologize for others, he came to be very juſtly conſidered by ſome of the moſt eminent perſons in the court of Queen Elizabeth, as one capable of rendering his country great ſervice, particularly in Ireland, where men of true abilities, were at that juncture much wanted (*f*). Their conceptions concurring with Mr Gilbert's views, and with that ambition of making himſelf known by great atchievements, which was the ruling paſſion of his mind, he accepted the advantageous offers that were made him, and paſſing over into that iſland, arrived by merit at the honourable poſt of commander in chief and governor of the province of Munſter, where in Anno Dom. 1569, he performed great things with a handful of men, and became more dreaded by the Iriſh, than any Engliſhman employed in that ſervice (*g*) [*D*]. In an action at Kilkenny,

[*B*] *By genius than by blood.*] It is very remarkable that the lady mentioned in the text, Mrs Katherine Champernon, had by two huſbands five ſons all of whom were made Knights, in a reign when that honour was as ſparingly beſtowed, as it has been laviſhly conferred in others (10). As for Sir Carew and Sir Walter Raleigh, our author's half brothers, they will be mentioned in another part of this Work, and therefore we ſhall ſpeak in this note of thoſe only that were of the whole blood. His elder brother, Sir John Gilbert, received that honour from Queen Elizabeth, in 1570 (11), and was Sheriff of Devonſhire four years, and afterwards (12) he is alſo ſaid to have been Cuſtos Rotulorum of the county, and a man of ſuch conſummate prudence, that ſcarce any thing in thoſe parts was done without conſulting him (13). He was likewiſe diſtinguiſhed for his charity and beneficence to the poor, which gained him univerſal reputation. He married the daughter of Sir Richard Chudleigh, of Aſhton, by whom he had no iſſue, and lies buried with her in the cathedral church of St Peter, in the city of Exeter (14). The younger brother of our hero was Sir Adrian Gilbert, who was alſo a perſon of great worth and learning. He it was that a little after his brother, Sir Humphry Gilbert's death, took out a patent for a diſcovery of a north-weſt paſſage; under which the famous John Davis was ſent to diſcover and actually did diſcover the ſtreights that bear his name (15). He alſo recovered the ſilver mines at Combe-Martin in Devonſhire, which were afterwards wrought with more credit than profit by Sir Bevois Bulmer (16). We might mention other marks of this gentleman's great learning and public ſpirit, but theſe are ſufficient for our purpoſe, and will abundantly account to the reader for that general ſupport which Sir Humphry Gilbert's projects met with, whether ſucceſsful or not, and even after his death; for not only his family, but his friends, ſupported his very laſt project, in which he periſhed (17); and whether they were gainers by it or not, this is very certain, that the nation has drawn a perpetual benefit ever ſince from the diſcoveries made by him, and proſecuted by thoſe who aſſiſted him.

[*C*] *Reached the public ear.*] His father, Mr Otho Gilbert, died when this ſon of his was very young, but had ſo great expectations from the extraordinary ſpirit and quickneſs which he diſcovered even while a child, that he made a good proviſion for him, and particularly deſired that the utmoſt care might be taken of his education. It is very ſingular, that though he was ſo much admired and diſtinguiſhed for his writings, there is no mention at all made of him by Anthony Wood. When he came from the univerſity, there was, it ſeems, an intention of ſending him to the inns of court, which was in that age (and a good cuſtom it was) the uſual method of finiſhing a gentleman's education; but his aunt, Mrs Katherine Aſhley, who waited upon Queen Elizabeth, was ſo extremely pleaſed with her nephew, and had ſo good an opinion of his parts, that inſtead of ſuffering him to be made acquainted with the Laws, ſhe would needs introduce him at Court; and there he was for ſome time not only in the Queen's ſervice, but in her favour, who would often confer with him in matters of learning, and in all probability about his favourite ſtudies of Coſmography and Navigation (18), which could not but be favourable to his fortunes in the ſucceeding part of his life, and entitle him to ſuch marks of his Sovereign's favour, as even his great merit would ſcarce have procured, if he not been ſo early brought into her majeſty's family. This produced in the breaſt of our hero ſo true an affection, and ſo warm a loyalty to his Sovereign, that there is ſcarce an action of his life that has eſcaped oblivion, which is not tinctured therewith. In 1571, when he ſerved in Parliament as Burgeſs for Plymouth, he drew upon himſelf very ill treatment from one Mr Wentworth, for the pains he took to moderate that licentiouſneſs of ſpeech, which he conceived might become as dangerous to the liberties of the ſubject, as offenſive to the Queen's prerogative (19). He was not however ſo much a courtier, as either to deſire to paſs his days in eaſe and pleaſure, or to dream of arriving at great things, but by patience and perſeverance in a road beſet with perils, as clearly appears by the choice he made of a device (20), as the cuſtom of thoſe times was, and which very probably he did when he was a young man, and juſt entering into the world, viz. *Mars* and *Mercury* joined by a *croſs*, with this motto, *Quid non? i. e.* What not? intimating, that almoſt any thing may be atchieved, if to ſtrength and wit there is added patience.

[*D*] *Than any Engliſhman employed in that ſervice.*] The reputation our young ſoldier had acquired under the command of Ambroſe Earl of Warwick, raiſed him ſo high in the general eſteem of the Court, that he ſeems to have gone to Ireland with no ordinary circumſtances of favour and confidence, as may be collected from the letters of Sir Henry Sidney, then Lord Deputy, both before and after his arrival (21); by whom he was immediately made a Captain upon that eſtabliſhment; a command of greater weight, and conſequently of more honour, than it is now: and he was farther,

(21) Sydney's State Papers, Vol. I. p. 28, 36, 38.

Kilkenny, under the command of Sir Peter Carew, Captain Gilbert, and Captain Davels, with only ten private men, had the courage to begin the charge, by which they opened a path to a glorious victory, which ſtruck the Iriſh with amazement (*b*). His march directly to Limerick, and the conſternation which appeared in the people thereupon, induced the proud Earl of Glencar or Glencarty to offer his ſubmiſſion, and this being accepted, he and Mac Donnogh came to the governor, and acknowledged their offences upon their knees. Having thus reſtored the quiet of the province, his next care was to provide for its continuance, which with great ſpirit and vigilance he performed, putting proper garriſons into all the ſtrong places that were requiſite to keep the rebellious natives in awe, and proper magiſtrates into the towns, that ſtrict juſtice might be done to thoſe who remained in their duty (*i*). When he had ſettled all in the beſt order poſſible, he went to make a report of what he had done to the Lord Deputy Sir Henry Sydney, who to ſhew his approbation of his ſervices, conferred on him the honour of Knighthood at Drogheda on New-year's-day 1569-70, and ſoon after granted him licence to repair to England, where his private affairs at that time required his preſence (*k*). His ſucceſſor in his government was Sir John Perrot, who had the title given him of Lord Preſident of Munſter, and who in thoſe days was generally believed to be the Queen's natural brother. It was not long after his return to England, that he married a young lady, who was an heireſs, which added conſiderably to his fortune, but abated nothing of his public ſpirit, for in 1572 he ſailed with a ſquadron of nine ſhips to Flanders, with a reinforcement for Colonel Thomas Morgan, who at that time meditated the recovery of the port of Fluſhing (*l*). How long he continued there does not appear, but upon his return to England he ſeems to have reſumed his ſtudies with freſh vigour, and to have formed a deſign of adding to the glory of his Queen and Country by ſome generous and uſeful undertaking, worthy of that great reputation which he had already obtained, as well for extenſive learning as undaunted courage (*m*). The firſt public diſcovery he made, both of his mathematical knowledge, and of his patriot intentions, was in his diſcourſe to prove that there is a north-weſt paſſage to the Eaſt Indies, which was firſt printed in the year 1576, tho' in all probability it was written ſome time before (*n*). It is a very plain, methodical, and judicious piece [*E*], at the cloſe of which there is an account of another treatiſe of

(*b*) Supply of Iriſh Chronicles, by Hooker, p. 132.

farther, by that noble perſon's intereſt, choſen a member of that Parliament, which ſat in 1568 (22). But, in order to give the reader a more diſtinct idea of theſe tranſactions, it will be requiſite to acquaint him with the nature of that rebellion, in the ſuppreſſion of which our hero was employed. Whilſt the Lord Deputy and the Parliament were endeavouring the proſperity and peace of Ireland, by enacting good and wholſome laws, others were as buſy to put all into diſorder and confuſion; for ſome of the looſer ſort of the Iriſh Lords were diſtaſted to that degree at the loſs of their Captainries, and Iriſh extortions, as alſo at the impoſt on wine, that they reſolved by force to procure the repeal of thoſe laws, or at leaſt prevent the execution of them, and ſo making religion their pretence, they confederated together (23). James Fitzmorris was the ringleader of all this miſchief; he added to the general grievances, the particular injuries done to his own family by the impriſonment of the Earl of Deſmond, and his brother, Sir John; and he inveigled the Earl of Glencarty, by telling him that the Queen was to be married to the Earl of Leiceſter, and that thereupon the Lord Deputy, who married that Earl's ſiſter, was to be King of Ireland; and when the Earl of Glencarty was once engaged, Mac Donnogh, and many more of the Cartyes, came in of courſe; and Fitzgerald, Seneſchal of Imokilly, was as forward in this rebellion as any of them; and although Sir Edmund Butler, who was Seneſchal to his brother, the Earl of Ormond, and conſequently hated all the family of Deſmond, and had formerly ſerved againſt James Fitzmorris, yet, becauſe he did not dare to appear before commiſſioners ſent by the Lord Deputy to Kilkenny, to examine and redreſs the grievous complaints made againſt him, and partly thro' zeal for the Catholic Cauſe, and fondneſs of the Iriſh uſurpations, he joined with the reſt of the rebels (24). The confederates being reſolved to make ſomething conſiderable for their own benefit of this rebellion, if it were poſſible, ſent the titular Biſhops of Caſhel and Emly, and the youngeſt brother of the Earl of Deſmond, as their Ambaſſadors to the Pope and the King of Spain, to implore aid and aſſiſtance to reſcue their religion and country from the tyranny and oppreſſion of Queen Elizabeth (25). It was for the ſuppreſſing this rebellion, that Mr Gilbert was raiſed to the rank of Colonel, which ſeems to have been in thoſe days a title of ſupreme command; for his forces conſiſted of 100 horſe, 400 regular foot, and a certain number of that kind of Iriſh militia diſtinguiſhed by the name of Kerns (26). When he was ſent over to the aſſiſtance of the Dutch he had the ſame title, and is reported to have been the firſt Engliſhman that bore it in that ſervice, where he was inſtrumental in ſettling the new diſcipline, as is evident from the following letter of Mr Camden's, to Sir Edward Cecil, afterwards Lord Viſcount Wimbleton (27). 'The propoſition you make is out of the reach of my profeſſion, and not of antiquity, but of late memory. By reaſon of Sir Robert Cotton's abſence, I can impart nothing from him as yet, and for my own obſervation, it is very ſlender. Only I remember, that after Captain Morgan in the year 1572, had firſt carried to Fluſhing 300 Engliſh, and had procured Sir Humphry Gilbert to bring over more, and to be Colonel of the Engliſh there, a new military diſcipline was ſhortly after brought in, and the new march, by ſome that had ſerved the Duke of Alva, and entertained eſpecially by the important inſtance of Sir Roger Williams, although ſtrong oppoſition was then made againſt it by Captain Pykeman, and after by Captain Read, antient leaders, and Sir William Pelham, who were ſcornfully termed by the contrary party, St George's ſouldados, and Sir John Smith, who had ſerved under the Conſtable Momorancy, twice in Hungary, at Penon de Velez, and Malta, yea, and under Dalva, encountered with his pen againſt the new diſcipline, and did write much, which was never publiſhed.' We may very well collect from hence, that if Sir Humphry Gilbert had been a man who had nothing in view but his own ſatisfaction and intereſt, in ſome eaſy, honourable, and beneficial employment, he had by this time raiſed himſelf to ſuch a height in the Queen's eſteem, to ſo great credit with her Miniſters, more eſpecially of the Leiceſtrian faction, and ſuch extenſive reputation amongſt perſons of diſtinction throughout the kingdom, that he might without difficulty have fixed himſelf where he pleaſed, ſince he that ſoars upon the wings of favour and merit, can hardly fail of reaching any height.

[*E*] *It is a very plain, methodical, and judicious piece.*] We may aſſert, without any danger of being thought to flatter the memory of this moſt worthy perſon,

of Navigation, which he had then written, and intended alſo to publiſh, and which is now probably loſt. The deſign of this diſcourſe was in all likelyhood to ſtir up a ſpirit of diſcovery

ſon, that there is no treatiſe written in that age of ſpeculative and practical knowledge in our country, that has come down to us with more honour to it's author, in point of various and extenſive learning, ſoundneſs and ſagacity of judgment, or of clearneſs and candour in all that he has delivered; and therefore we may preſume it will be very agreeable to our ingenious and inquiſitive readers, if we give them an abſtract of this little work, that is not in every hand, and the rather, becauſe this is a ſubject as warmly debated, and of which as high hopes have been entertained in our days, as in his. The title equally plain and modeſt, runs at large thus (28):

(28) Hakluyt's Voyages, tom. III. p. 11.

A Diſcourſe *written by Sir* Humphry Gilbert, *Knt. to prove a paſſage by the* North weſt *to* Cathaia *and the* Eaſt-Indies. The firſt thing worthy of obſervation in this curious and inſtructive piece, is the natural, perſpicuous, and accurate method in which it is written, being divided into *ten* chapters, each of which fully anſwers it's title, and comprehends all if not more than can be expected from it. In the *firſt* he undertakes to prove by authority, that America is an iſland, and conſequently, that there is a paſſage on the north ſide of it to Cathaia, China, and the Eaſt-Indies. In this he lays down all that is delivered by antient authors concerning the great iſland of Atlantis, compares the opinions of later writers, who have endeavoured to render thoſe accounts more intelligible, and who are all of them led from thence to conclude, that America is an iſland. He then proceeds to the maps and charts publiſhed by the beſt Geographers, from which the ſame thing appears; and foreſeeing that an objection might be made againſt this method of reaſoning, taken from the incertainty that there may be, whether theſe writers did not ſpeak more confidently than they ought to do of things with which they were but indifferently acquainted; he undertakes to make it manifeſt, that the paſſage by ſea to Muſcovy, which was eſteemed the great glory of their own times, was really known 700 years before. His own words upon this head will beſt content the reader, if he can bear (which ſure may be eaſily done) with his ſtyle, that is now a little antiquated. 'What moves, (ſays he) 'theſe learned men to affirm thus much, I know not, 'or to what end ſo many and ſundry travellers of both 'ages have allowed the ſame. But I conjecture, that 'they would never have ſo conſtantly affirmed, or notified 'their opinions therein to the world, if they had not had 'great good cauſe, and many probable reaſons, to have 'led them thereunto. Now, leaſt you ſhould make 'ſmall account of antient writers, or of their experi'ences which travelled long before our times, reckon'ing their authority amongſt fables of no importance, 'I have, for the better aſſurance of thoſe proofs, ſet 'down ſome part of a diſcourſe written in the Saxon 'tongue, and tranſlated into Engliſh by M. Nowel, 'ſervant to Sir William Cecil, Lord Burleigh, and 'Lord High-Treaſurer of England; wherein there is 'deſcribed a Navigation which one Ochther made 'in the time of King Alfred, King of Weſt Saxe, 'anno 871 the words of which diſcourſe were theſe: '*He ſailed right north, having always the deſart land* '*on the ſtarboard, and on the larboard the main ſea,* '*continuing his courſe until he perceived that the coaſt* '*bowed directly towards the eaſt, or elſe the ſea opened* '*into the land, he could not tell how far, where he* '*was compelled to ſtay until he had a weſtern wind, or* '*ſomewhat upon the north; and ſailed thence directly* '*eaſt along the coaſt, ſo far as he was able in four* '*days, where he was again enforced to tarry until he had* '*a north wind, becauſe the coaſt there bowed directly to*'*wards the ſouth, or at leaſt opened he knew not how* '*far into the land; ſo that he ſailed thence along the* '*coaſt continually full ſouth, ſo far as he could travel in* '*the ſpace of five days; where he diſcovered a mighty ri*'*ver, which opened far into the land, and in the entry* '*of this river he turned back again.* Whereby it ap'peareth, that he went the very ſame way that we now 'do yearly trade by St Nicholas into Muſcovy, 'which way no man in our age knew for certainty to 'be by ſea, until it was ſince diſcovered by our 'Engliſhmen in the reign of King Edward VI. but 'thought before that time, that Groenland had joined 'to Normoria, Byarmia, &c. and therefore was ac'counted a new diſcovery, being nothing ſo indeed, as 'by this diſcourſe of Ochther appeareth. Neverthe'leſs, if any man ſhould have taken this voyage in 'hand by the encouragement of this only author, he 'ſhould have been thought but ſimple; conſidering, 'that this Navigation was written ſo many years paſt, 'in ſo barbarous a tongue, by one only obſcure author; 'and yet we in theſe our days find, by our own ex'periences, his former reports to be true. How much 'more then ought we to believe this paſſage to Cataia 'to be verified by the opinions of all the beſt both 'antique and modern Geographers, and plainly ſet 'out in the beſt and moſt allowed maps, charts, 'globes, coſmographical tables, and diſcourſes of this 'our age, and by the reſt not denied, but left as a 'matter doubtful?' The deſign of his *ſecond* chapter is to prove that there is ſuch a paſſage by reaſon and argument; as in the former chapter he had ſhewn himſelf an excellent Coſmographer, ſo in this, he makes it clearly appear, that he was a very knowing Seaman; all bodies of water growing ſhallower as they approach either to ſhore or ſource, he thinks, that the ſea growing ſtill deeper in this north-weſt courſe, argues a paſſage to ſome mighty ocean, rather than to any coaſt. If America had not been an iſland, he thinks, that the Tartars or the Japoneſe would have found ſome way into it, which was never alledged; or that ſome beaſts at leaſt would have found their way over mountains impaſſable to man; but our eldeſt travellers into Aſia, never heard there any thing of America; nor did the firſt conquerors of America find the leaſt reaſon to believe the inhabitants of that part of the world had any knowledge of Aſia; neither were any beaſts ſeen, that with any ſhadow of reaſon could be judged to come from thence. He proceeds next to the doctrine of tides and currents, concerning which he diſcourſes with great judgment and perſpicuity, ſupporting all along his arguments by facts, and concluding with this remarkable doctrine, which is the beſt hitherto laid down, in favour of ſuch a paſſage, viz. *That the current in the great* ocean *could not have been maintained to run continually one way from the beginning of the world unto this day, had there not been ſome thorough paſſage by the fact aforeſaid, and ſo by circular motion be brought again to maintain itſelf.* For the tides and courſes of the ſea are maintained by their interchangeable motions, as freſh rivers are by ſprings, by ebbing and flowing, by rarefaction and condenſation.

The ſcope of the *third* chapter is to eſtabliſh from facts, that part of this north-weſt paſſage has been already viſited by ſeveral eminent perſons, which affords a ſtrong probability that the reſt may be diſcovered. He obſerves, that Marco Polo affirms, he ſailed 500 miles north-eaſt from the continent of Aſia, and found the ſea all open; Franciſcus Vaſques de Coronado, ſays he, paſſing from Mexico by Cevola, through the country of Quivira, to Siera Nevada, found there a great ſea, where were certain ſhips laden with merchandize, carrying in their prows the pictures of certain birds, called Alcatrazi, part whereof were made of gold, and part of ſilver; who ſignified by ſigns, they were thirty days coming thither; which likewiſe proveth America by experience to be diſjoined from Cataia on that part, by a great ſea, becauſe they could not come from any part of America, as natives thereof; for, that ſo far as is diſcovered, there hath not been found there any one ſhip of that country. He cites alſo John de Barros to prove this opinion is received in China, and Franciſco Lopez de Gomara, who poſitively aſſerts America to be an iſland, and ſhews how it lies in reſpect to Groenland. It is at the cloſe of this chapter that the paſſage occurs concerning Sebaſtian Cabot, of which we ſhall hereafter have occaſion to ſpeak at large.

In his *fourth* chapter he produces evidence in order to make it plain, that this paſſage has been actually ſailed thorough. He alledges firſt the authority of Gemma Friſius, who ſays, that there went from Europe three bretliren through this ſtreight, from whence it took the

name

diſcovery in his countrymen, and to facilitate a deſign he had formed for planting unknown countries, as well as for the diſcovery of the north-weſt paſſage; for that he had ſtill

name of *Fretum trium fratrum*; he next quotes Pliny, who ſpeaks of certain Indians caſt upon the coaſt of Germany; he mentions another inſtance of the ſame kind, which happened anno Dom. 1160. and upon theſe grounds he aſſerts, they could come no other way than by this north-weſt paſſage.

In his *fifth* chapter he offers the reaſons upon which this poſition is founded. The paſſage, he thinks by the Cape of Good-Hope, muſt have been utterly impaſſable to an Indian veſſel. He alledges the ſame thing with reſpect to Africa. In caſe they had come by a ſouth-eaſt paſſage he ſhews, that they muſt have touched on other European countries, before they came to Germany. To have gone through the ſtreights of Magellan was too hard a taſk in his opinion for ſo ſlight a veſſel; and if any ſhould conclude, that theſe people did not come from India, but from Africa, or America, he refutes this by obſerving, that the inhabitants of both theſe parts of the globe never had, ſo far as we know, before the arrival of the Europeans, any ſhips in which they made uſe of ſails.

In his *ſixth* chapter he produces many arguments to render it more than probable, that either there is no north-eaſt paſſage, or if ſuch a paſſage there be, it can only be paſſable for a ſmall part of the year. What he has delivered upon this part of his ſubject, is not only very rational, and diſcuſſed throughout with the utmoſt ſagacity, but his obſervations have been many of them verified by the attempts that have been made ſince his time; ſo that to one who is well verſed in the nature of this diſpute, and is alſo well acquainted with the hiſtory of the endeavours uſed to diſcover it, cannot fail of entertaining a very high opinion of Sir Humphry Gilbert's ſtyle and penetration, from the weight and ſhrewdneſs of his remarks upon this topic.

The buſineſs of the *ſeventh* chapter is to enforce the point before laid down, that if thoſe Indians came not by any of the other paſſages but by the north-weſt, then this has been certainly paſſed, and there muſt be ſuch a paſſage open. His ſuggeſtions to facilitate the full perſwaſion of this, are ſo happily imagined, and ſo conciſely expreſſed, that it may not be amiſs to give ſome few of them in his own words. 'Firſt, the one half of the winds of the compaſs 'might bring them by the north-weſt, beating always 'between two ſheets, with which kind of ſailing the 'Indians are only acquainted, not having any uſe of a 'bow-line, or quarter-wind, without the which no 'ſhip can poſſibly come, either by the ſouth-eaſt, 'ſouth-weſt, or north-eaſt, having ſo many ſundry 'capes to double, whereunto are required ſuch change 'and ſhift of winds. And it ſeemeth likely, that they 'ſhould come by the north-weſt, becauſe the coaſt 'whereon they were driven lay eaſt from this our paſ'ſage; and every wind doth naturally drive a ſhip to an 'oppoſite point from whence it bloweth, not being 'otherwiſe guided by art, which the Indians do ut'terly want; and therefore it ſeemeth that they came 'directly through this our fret, which they might do 'with one wind; for if they had come by the cape de 'Buona Speranca, then muſt they (as aforeſaid) have 'fallen upon the ſouth parts of America; and if by 'the fret of Magellan, then upon the coaſts of Afric, 'Spain, Portugal, France, Ireland, or England; and 'by the north-eaſt, then upon the coaſts of Cerenceſſi, 'Tartary, Lappia iſland, Terra de Labrador, &c. 'and upon theſe coaſts, as aforeſaid, they have never 'been found; ſo that by all likelihood they could ne'ver have come without ſhipwreck upon the coaſts of 'Germany, if they had firſt ſtricken upon the coaſts of 'ſo many countries, wanting both art and ſhipping to 'make orderly diſcovery, and altogether ignorant both 'in the art of navigation, and alſo of the rocks, flats, 'ſands, or havens, of thoſe parts of the world, which in 'moſt of theſe places are plentiful.' He then mentions other inſtances of perſons who had paſſed this ſtreight, and then concludes with a fact that fell within the compaſs of his own knowledge. 'There was, ſays he, 'one Salvaterra, a gentleman of Victoria, in Spain, 'that came by chance out of the Weſt-Indies into Ire'land, anno 1568, who affirmed the north-weſt paſ'ſage from us to Cataia conſtantly to be believed in 'America navigable; and further ſaid, in the preſence 'of Sir Henry Sydney (then Lord Deputy of Ireland) in 'my hearing, that a friar of Mexico, called Andrew Ur'daneta, more than eight years before his then coming 'into Ireland, told him, that he came from Mer du 'Sur into Germany through this north-weſt paſſage, 'and ſhewed Salvaterra at that time (being then with 'him in Mexico) a ſea-card, made by his own expe'rience and travel in that voyage, wherein was plainly 'ſet down and deſcribed this north-weſt paſſage, agree'ing in all points with Ortelius's map. And further 'this friar told the King of Portugal, as he returned 'by that country homeward, that there was (of cer'tainty) ſuch a paſſage north-weſt from England, and 'that he meant to publiſh the ſame; which done, the 'King moſt earneſtly deſired him not in any wiſe to 'diſcloſe or make the paſſage known to any nation; 'for that, ſaid the King, if England had knowledge 'and experience thereof, it would greatly hinder both 'the King of Spain and me. This friar (as Salvaterra 'reported) was the greateſt diſcoverer by ſea that hath 'been in our age. Alſo Salvaterra being perſwaded 'of this paſſage by the friar Urdaneta, and by the 'common opinion of the Spaniards inhabiting Ame'rica, offered moſt willingly to accompany me in this 'diſcovery, which it is like he would not have done if 'he had ſtood in doubt thereof.'

The *eighth* chapter contains the reaſons that were advanced by our author at the Council-table, in the preſence of her Majeſty and the Lords, to ſhew, that the arguments offered by Mr Anthony Jenkinſon, as to the probability of a north-eaſt paſſage, were not convincing. It ſeems, Mr Jenkinſon, who was a very great traveller, and to whom his countrymen are indebted for many uſeful informations, did not at all conteſt the probability of a north-weſt paſſage; but, from the general tradition amongſt the people in the northern parts of Ruſſia, concluded, that there was alſo a paſſage to the north-eaſt. The reaſons alledged by Mr Jenkinſon are certainly far enough from being concluſive, and the anſwers of Sir Humphry Gilbert overthrow them plainly; but then, theſe are very far from being the ſtrongeſt arguments that might be urged to prove there was ſuch a paſſage. One thing deſerves particular attention, that this was a matter diſcuſſed before the Privy-Council, and even in the preſence of Queen Elizabeth. In her reign, not only matters relating to the Crown, but ſuch affairs as had any relation to her ſubjects welfare, paſſed for concerns of State, and were treated accordingly.

The *ninth* chapter comprehends the motives upon which, ſuppoſing that there is a north-eaſt paſſage to the Indies, this by the north-weſt ſhould be preferred. He obſerves, that all circumſtances conſidered, the paſſage is ſhorter, the voyage far ſafer, and more wholſome, the return eaſy, the neceſſary winds (both going and coming) more certain, and above all, the power of maintaining ourſelves in poſſeſſion of the north-weſt paſſage, as long as we continue ſuperior to our neighbours in a naval force.

In the *tenth* chapter are laid down the advantages that would attend this diſcovery, ſuch as the putting it in our power to obtain larger quantities of the moſt valuable commodities of the Eaſt, and at leſs expence than any other nation, by which we might be enabled to ſell them cheaper; the carrying on this trade by the exchange of our own commodities, inſtead of ſending ſilver; the increaſing our manufactures at home, eſtabliſhing uſeful colonies abroad, augmenting our ſhipping, multiplying our ſeamen, and giving a new incitement to the induſtry of our people of all ranks. He afterwards mentions ſeveral circumſtances that may farther prove, as well the certainty as the facility of ſucceeding in this undertaking, concluding his whole diſcourſe in the following manner: 'Further, becauſe it 'ſufficeth not only to know that ſuch a thing there is, 'without ability to perform the ſame, I will at leiſure 'make you partaker of another ſimple diſcourſe of na'vigation, wherein I have not a little travelled to 'make myſelf as ſufficient to bring theſe things to ef-

ſtill this among other public ſpirited and glorious projects in view, is plain from the letters patents granted to his brother Adrian Gilbert (*o*). For the preſent, however, he adhered to his deſign of planting, and with that view procured from the Queen, an ample patent, dated at Weſtminſter June 11, 1578, wherein he had full powers given him to undertake the diſcovery of the northern parts of America, and to inhabit and poſſeſs any lands, which at that time were unſettled by Chriſtian Princes, or their ſubjects (*p*). Immediately after procuring theſe letters patents, Sir Humphry applied himſelf to the getting aſſociates in ſo great an undertaking, wherein at firſt he ſeemed to be very ſucceſsful, his reputation for knowledge being very great, and his credit as a commander thoroughly eſtabliſhed; yet when the project came to be actually executed, many receded from their agreements, and others, even after the fleet was prepared, ſeparated themſelves, and choſe to run their own fortunes in their own way (*q*). Theſe diſappointments, however, did not hinder Sir Humphry from proſecuting his ſcheme, in which he was ſeconded by his brother Sir Walter Raleigh, and a few other friends of unſhaken reſolutions. With theſe he ſailed to Newfoundland, where he continued but a ſhort time, and being then compelled to return, he in his paſſage home met with ſome Spaniſh veſſels from whom he cleared himſelf but not without great difficulty. This ſeems to have been in the ſummer of 1579, but we have a very dark account of it, without either dates or circumſtances, further than thoſe which have been already given (*r*). Yet his miſcarriage in this his firſt undertaking, was far from diſcouraging him; for after his return he went on as chearfully as he had done before, in procuring freſh aſſiſtance for compleating what he had intended, and for promoting Chriſtian knowledge, by means of Engliſh ſettlements in undiſcovered lands. This conduct of his is ſufficient to ſhew not only the ſteadineſs of his courage, but the extent of his credit, ſince after ſuch a diſappointment, another commander would ſcarce have perſwaded any adventurers to join with him, which, however, was not by any means his caſe (*s*) [*F*]. At this time it is moſt probable he received from

'fect, as I have been ready to offer myſelf therein. 'And therein I have deviſed to amend the errors of 'uſual ſea-cards, whoſe common fault is to make the degrees of longitude in every latitude of one like bigneſs; 'and have alſo deviſed therein a ſpherical inſtrument 'with a compaſs of variation, for the perfect knowing 'of the longitude; and a preciſe order to prick the 'ſea-card, together with certain infallible rules for the 'ſhortening of any diſcovery, to know at the firſt entering of any fret, whether it lie open to the ocean more 'ways than one, how far ſoever the ſea ſtretcheth 'itſelf into the land. Deſiring you hereafter never to 'miſlike with me for the taking in hand of any laudable and honeſt enterprize: for, *if through* pleaſure 'or idleneſs *we purchaſe* ſhame, *the* pleaſure *vaniſheth*, 'but *the* ſhame *remaineth* for ever.'

The great credit of the author, and the high reputation which his treatiſe had obtained amongſt the beſt judges, was in all probability the reaſon that ſo great hopes were raiſed of the expedition by Capt. Martin Frobiſher, who ſailed the very ſame year this piece was publiſhed, in order to carry this deſign into execution, and make the actual diſcovery of a north-weſt paſſage; and though that great man failed, yet ſo ſtrong an impreſſion was made by the facts and arguments alledged by Sir Humphry, that his brother afterwards formed a company under the Queen's letters patents (29), which was ſtiled *The Collegues of the Fellowſhip for the Diſcovery of the* North-West *Paſſage*, in which Sir Walter Raleigh, and other perſons of diſtinction, were likewiſe concerned.

(29) Oldys's Life of Sir Walter Raleigh, p. 27.

[*F*] *Was not by any means his caſe.*] In this note we ſhall endeavour to diſcuſs thoſe points relating to the life of our author, in reſpect to which, ſome who have gone before us are ſtrangely miſtaken. The Rev. Mr Prince, in his life of Sir Humphry Gilbert, aſſures us, that he was knighted by Queen Elizabeth in 1577 (30); whereas we have ſhewn the reader, that he was really knighted by the Lord Deputy of Ireland near ſeven years before. It is true, that he cites a great authority for this (31), and is therefore the more excuſable, but that he is in an error notwithſtanding, may not only be proved by the teſtimony of Mr Hooker, who was well acquainted with Sir Humphry, ſat in Parliament with him at Dublin, wrote a hiſtory of things which paſſed under his own eye, ſingled out Captain Gilbert as his countryman and acquaintance, that he might furniſh the world with ſuch notices about him, as might otherwiſe be buried in oblivion, and dedicated his book to his brother Sir Walter Raleigh (32); but from an inconteſtable evidence, which is a letter of Sir Thomas Smith, Secretary of State to Queen Elizabeth, to Sir Sir Francis Walſingham, in which he ſtiles him Sir Humphry Gilbert, in 1572 (33), as Camden alſo does (34), and other writers, who could not be miſtaken.

(33) Sir Dudley Diggs's compleat Embaſſador, p. 299.

(34) Camdeni & illuſtrium Virorum Epiſtolæ, p. 350, 351.

But there is another and a greater error in Prince's Life, for which he cites no authority, and for which indeed it is impoſſible that any authority ſhould be cited. The caſe is this; inſtead of two, he will needs have it, that Sir Humphry Gilbert made three expeditions for diſcovery, but gives us the dates of none, except the laſt. The firſt voyage, he ſays, was undertaken by himſelf, to his great charge and hazard, and was almoſt overthrown in the prime, by the failure of divers of the adventurers in their contracts and promiſes (35). If he had ſtopped here, it had been well, becauſe this is matter of fact; but, ſays he, though in this he failed in a great meaſure of his expectation, yet being of a noble diſpoſition he was not daunted, and ſo proceeded to a ſecond voyage, wherein he made great diſcoveries, and gave name to a certain fretum in the northern ſeas, called Gilbert's Streights, to this day. Now this voyage was not only unknown to that worthy regiſter of the great actions performed by our countrymen at ſea, Mr Hakluyt, but to Captain Edward Hales, who mentions very particularly his firſt attempt in that copious and accurate account which he gives us of his ſecond expedition, wherein he was Rear Admiral, in the Golden Hind, of which he was both captain and owner; it was alſo unknown to his intimate friend, Sir George Peckham, who contributed largely to his laſt expedition, and wrote an excellent book to vindicate his friend's memory, and in ſupport of his undertaking, immediately after his deceaſe. But what is ſtill ſtranger, and indeed not a little abſurd, Mr Prince, who makes both theſe expeditions the conſequences of his patent, as indeed they muſt have been, places them nevertheleſs before the year 1577, whereas the patent bears date on the 11th of June, 1578 (36). That there can be no miſtake in figures, is evident from that motive which preſſed him to his laſt undertaking, viz the fear that his patent would expire, as it muſt have done if he did not take poſſeſſion of ſome country within the ſpace of ſix years. Now that time would have been much more than elapſed, if he had made two fruitleſs expeditions under that patent before 1577, for he ſailed on his laſt adventure the very day that the ſixth year commenced from the date of his patent, viz. June the 11th, 1583.

(35) Worthies of Devon. p. 327.

(36) See the Patent as before referred to in Hakluyt.

But however, all this is very accurate, or at leaſt very pardonable, in compariſon of another writer, who though an Engliſhman born, was ſo little maſter of his mother-

from that gracious princeſs Queen Elizabeth, as a mark of her peculiar favour an emblematical Jewel, being a ſmall anchor (*t*) of beaten gold, with a large pearl at the peak, which he wore ever after at his breaſt; ſo that he had the ſatisfaction of perceiving that his credit with the Queen was not weakened, either by diſtance or diſaſters, the ſenſe of which (ſuch was the loyalty of thoſe times) gave him the courage to affront any dangers, ſince he was now ſure of not being ſhipwrecked at home. One thing which accelerated this ſecond expedition of Sir Humphry's, was, that, tho' his patent was perpetual, yet there was a clauſe in it, by which it was declared void, in caſe no poſſeſſion was taken within the ſpace of ſix years. This term drawing to a cloſe, he in the ſpring of the year 1583 haſtened his friends in their preparations, ſo that by the firſt of June his little fleet was in readineſs to ſail. It conſiſted of five ſhips, 1. The Delight, of the burthen of one hundred and twenty tons, Admiral, in which went the General Sir Humphry Gilbert, and under him Captain William Winter. II. The bark Ralegh, a ſtout new ſhip of two hundred tons, Vice-Admiral, built, manned, and victualled, at the expence of Sir Walter, then Mr Ralegh, under the command of Mr Butler. III. The Golden Hind, of forty tons, Rear-Admiral, commanded by Captain Edward Hayes, who was alſo her owner. IV. The Swallow, of like burthen, commanded by Captain Maurice Brown. V. The Squirrel, of the burthen of ten tons, under the command of Captain William Andrews (*u*). They ſailed from Plymouth on the 11th of June, and on the 13th the bark Ralegh returned, the Captain, and moſt of thoſe on board her, falling ſick of a contagious diſtemper. On the 30th of the ſame month the reſt of the fleet had ſight of Newfoundland. On the third of Auguſt they landed, the General read his commiſſion, which was ſubmitted to by all the Engliſh veſſels upon the coaſt, and on the fifth he took poſſeſſion of the harbour of St John, in the name of the Queen of England, and granted as her patentee certain leaſes, unto ſuch as were willing to take them. At the ſame time a diſcovery was made of a very rich ſilver mine, by one Daniel, a Saxon (*w*), an able miner, brought by the General for that purpoſe. Sir Humphry now inclined to put to ſea again, in order to make the beſt uſe of his time in diſcovering as far as poſſible, and having ſent home the Swallow, with ſuch as were ſick or diſcouraged through the hardſhips they had already undergone, he left the harbour of St John's in 47° 40′ N. L. on the 20th of Auguſt, himſelf in the ſmall ſloop called the Squirrel, becauſe being light ſhe was the fitter for entering all creeks and harbours, Captain Brown in the Delight, and Captain Hayes in the Golden Hind (*x*). On the 27th they found themſelves in the latitude of 44°, and tho' the weather was fair, and in all appearance like to continue ſo, yet on the 29th of Auguſt in the evening a ſudden ſtorm aroſe wherein the Delight was loſt, twelve men only eſcaping in her boat (*y*). This was a fatal blow to Sir Humphry Gilbert, not only with reſpect to the value of the ſhip and the lives of the men, but alſo in regard to his future hopes, for in her he loſt his Saxon miner, and with him the ſilver ore, which had been dug in Newfoundland, and of which he was ſo confident as to tell ſome of his friends, that he doubted not to borrow

mother-tongue, that from a very plain quotation in one of our old chronicles, he took it into his head, that Sir Humphry Gilbert flouriſhed in the reign of Henry the VIIth; we will firſt produce the paſſage that occaſioned this blunder, and then the life itſelf, which is very ſhort. 'This year 1489 (but it ought to be 1497) 'ſays John Stowe (37), one Sebaſtian Gabato, the ſon 'of a Genoeſe, born in Briſtol, profeſſing himſelf to 'be expert in knowledge of the circuit of the world, 'and iſlands of the ſame, as by his charts and other 'reaſonable demonſtrations he ſhewed, cauſed the 'King to man and victual a ſhip at Briſtol to ſearch 'for an iſland which he knew to be repleniſhed with 'rich commodities; in the ſhip divers merchants of 'London adventured ſmall ſtocks, and in the company 'of this ſhip ſailed alſo out of Briſtol three or four 'ſmall ſhips fraught with ſleight and groſs wares, as 'courſe cloth, caps, laces, points, and ſuch other. 'Sir Humphry Gilbert, Knight, in his book intituled 'A Diſcovery for a new Paſſage to Cataia, writeth thus: 'Sebaſtian Gabato, by his perſonal experience and 'travel, hath ſet forth and deſcribed this paſſage in 'his charts, which are yet to be ſeen in the Queen's 'Majeſty's Privy-Gallery at Whitehall, who was ſent 'to make this diſcovery by King Henry the VIIth, 'and entered the ſame fret, affirming that he ſailed 'very far weſtward with a quarter of the north on the 'north ſide of Terra de Labrador, the 11th of June, 'until he came to the ſeptentrional latitude of 67 ⅓ deg. 'and finding the ſeas ſtill open, ſaid that he might, 'and would have gone to Cataia, if the enmity of the 'maſter and mariners had not been'

(37) Chronicles, p. 480, 481.

The life written by Pits is conceived in the following terms. 'Humfredus Gilbertus (38) Anglus Equeſtris 'ordinis, vir Mathematicarum ſcientiarum peritiſſimus, 'navigationis valdè expertus, cujus chartæ totius mundi, & aliæ particularium regionum dicuntur adhuc in 'magno precio haberi, & Londini in domo regia, quæ 'vulgo Alba Aula dicitur, ſervari. Hic Henrici ſeptimi Regis juſſu & expenſis varias navigationes ad inveſtigandas terras novas ſuſcepit. Scripſit *Itineraria 'multa, Libras plures. De Navigatione ad terram* 'Cataiam, *Librum unum*. Et chartas exquiſitas multas. 'Claruit Anno Domini 1500, dum in Anglia rerum 'potiretur Henricus hujus nominis ſeptimus.' That is, Humphry Gilbert, an Engliſh Knight, was a perſon thoroughly verſed in the mathematical ſciences, very ſkilful in navigation, whoſe maps of the whole world, and of many particular countries, are ſaid to be ſtill much eſteemed, and are yet preſerved in the Royal Palace at London, which is ſtiled Whitehall. This gentleman, by the command and at the expence of Henry the VIIth, undertook ſeveral expeditions for the diſcovery of new countries. He wrote accounts of many of his voyages in ſeveral books; of the navigation to the land of Cathaia, in one book; we have likewiſe ſeveral excellent charts of his drawing. He flouriſhed Anno Domini 1500, in the reign of Henry the VIIth.

(38) De illuſtribus Angliæ Scriptoribus, p. 866.

This is an admirable feature of Dr Pits, and is a convincing proof of his knowledge and accuracy in writing lives; but as wonderful as this is, it is perhaps not leſs ſo, that this life ſhould be tranſcribed into the works of a learned prelate (39), not only without alteration, but without the leaſt notice taken of the error of Pits. The deſire of ſetting theſe matters right, and preventing poſterity from being miſled, while that is a thing practicable, induced us to ſtate theſe points ſo largely, that there might not remain ſo much as a ſhadow of doubt concerning them.

(39) Bibliotheca Britannica Hibernica, ſive de Scriptoribus, &c. p. 316.

[G] That

borrow ten thouſand pounds of the Queen for his next voyage (z) [G]. On the ſecond of September he went on board the Golden Hind, in order to have his foot dreſſed, which by accident he had hurt in treading on a nail. He remained on board for that day, and thoſe who were in the veſſel, did all that in them lay, to perſwade him to make his voyage home in her, which he abſolutely refuſed to do, affirming, that he would never deſert his bark, in which, or his little crew, with whom, he had eſcaped ſo many dangers (a). A generous, but fatal reſolution; for the veſſel being too ſmall to reſiſt the ſwell of thoſe tempeſtuous ſeas, about midnight on the 9th of September was ſwallowed up and never ſeen more. In the evening, when they were in great danger, Sir Humphry was ſeen ſitting in the ſtern of the ſhip, with a book in his hand, and was often heard to ſay with a loud voice, *Courage, my lads! we are as near Heaven at ſea, as at land* (b). Thus he died like a chriſtian hero, full of hopes, as having the teſtimony of a good conſcience. Mr Edward Hayes, who accompanied Sir Humphry in his voyage, and who hath left us an account of it, affirms, that he was principally determined to his fatal reſolution of ſailing in the Squirrel, by a malicious report that had been ſpread of his being timorous at ſea. Upon which he very juſtly obſerves, that it was rather raſhneſs, than adviſed reſolution, to prefer the wind of a vain report to the weight of his own life. Other particulars he mentions, amongſt which there are ſome very worthy of the reader's knowledge (c) [H]. As to the perſon of this wife and brave man, it was ſuch as recommended him

(b) Mr Haies account of this Voyage.

(c) See alſo Sir George Peckham's Relation.

[G] *That he doubted not to borrow ten thouſand pounds of the Queen for his next voyage.*] In order to give the reader the beſt ſatisfaction in our power upon this ſubject, which ſome time or other perhaps may be of uſe, we muſt have recourſe to that deſcription of Newfoundland, which was penned by Captain Edward Haies upon the ſpot, with great perſpicuity and accuracy, and with ſuch intrinſic marks of veracity, as cannot eſcape the notice of an intelligent reader. After deſcribing the produce of the ſea, lakes, and rivers, he goes on thus.

(40) Hakluyt's Voyages, tom. III. p. 153, 154.

' (40) Upon the land beaſts of ſundry kinds, red ' deer, buffaloes, bears, ounces, or leopards, ſome ' greater, and ſome leſſer, wolves, foxes, which to ' the northward a little further, are black, whoſe fur ' is eſteemed in ſome countries of Europe very rich; ' otters, beavers, martins, and, in the opinion of moſt ' men that ſaw it, the General had brought unto him ' a fable alive, which he ſent unto his brother Sir John ' Gilbert, Knight, of Devonſhire, but it was never ' delivered, as after I underſtood. We could not ob' ſerve the hundredth part of creatures in thoſe uninha' bited lands, but theſe mentioned may induce us to ' glory the magnificent God, who hath ſuperabundant' ly repleniſhed the earth with creatures, ſerving for ' the uſe of man, though man hath not uſed the fifth ' part of the ſame, which the more doth aggravate the ' fault and fooliſh ſloth in many of our nation, chuſing ' rather to live indirectly, and very miſerably to live ' and die within this realm, peſtered with inhabitants, ' than to adventure as becometh men to obtain an ha' bitation in thoſe remote lands, in which nature very ' prodigally doth miniſter unto men's endeavours, and ' for art to work upon. For, beſides theſe already ' recounted, and infinite more, the mountains gene' rally make ſhew of mineral: iron very common; ' lead, and ſomewhere copper; I will not aver of ' richer metals, albeit, by the circumſtances following, ' more than hope may be conceived thereof. For ' amongſt other charges given to enquire out the ſingu' larities of this country, the General was moſt curious ' in the ſearch of metals, commanding the mineral-man ' and refiner eſpecially to be diligent. The ſame was a ' Saxon born, honeſt, and religious, named Daniel; who ' after ſearch, brought at firſt ſome ſort of ore, ſeeming ' rather to be iron than other metal. The next time ' he found ore which with no ſmall ſhew of content' ment he delivered unto the General, uſing proteſta' tion, that if ſilver were the thing that might ſatisfy ' the General and his followers, there it was, adviſing ' him to ſeek no further, the peril whereof he under' took upon his life (as dear unto him as the Crown of ' England unto her Majeſty, that I may uſe his own ' words) if it fell not out accordingly. Myſelf at this ' inſtant liker to die than to live, could not follow this ' confident opinion of our refiner to my own ſatiſ' faction; but afterward demanding our General's opi' nion therein, and to have ſome part of the ore. He re' plied, Content yourſelf, I have ſeen enough, and were it ' but to ſatisfy my private humour, I would proceed no ' further. The promiſe unto my friends, and neceſſity ' to bring alſo the ſouth countries within compaſs of ' my patent near expired, as we have already done ' theſe north parts, do only perſwade me further. ' And touching the ore, I have ſent it aboard, where' of I would have no ſpeech to be made, ſo long as ' we remain within harbour, here being both Por' tugals, Biſcains, and Frenchmen not far off, from ' whom muſt be kept any bruit, or muttering of ſuch ' matter. When we are at ſea, proof ſhall be made; ' if it be to our deſire, we may return the ſooner hi' ther again: whoſe anſwer I judged reaſonable, and ' contenting one well wherewith, I will conclude this ' narration and deſcription of Newfoundland ' We ſhall in the ſucceeding note afford the reader further evidence of Sir Humphry Gilbert's being thoroughly perſwaded of the truth of this report of the Saxon miner. It muſt indeed be allowed, that Sir George Peckham does not inſiſt upon this point, which perhaps might ariſe from his not being thoroughly apprized of it, ſince in the beginning of his treatiſe, he ſpeaks of Sir Humphry's death, as a thing not abſolutely certain; ſo that he muſt have publiſhed his book immediately after Captain Haies returned in the Golden Hind to England. However in this work of his we find a paſſage, that perhaps is not very far wide of the ſubject, and which at the ſame time will acquaint the reader with the cauſes why this worthy gentleman was not in every thing ſo explicit as might be expected (41).

(41) True report of the late diſcoveries, and poſſeſſion taken in the right of the Crown of England of the Newfoundlands, by that valiant, and worthy gentleman Sir Humphry Gilbert, Cap. V. towards the end.

' Beſides all this, ſays he, if credit may be given to ' the inhabitants of the ſame ſoil, a certain river doth ' thereunto adjoin, which leadeth to a place abound' ing with rich ſubſtance. I do not hereby mean the ' paſſage to the Moluccas, whereof before I made ' mention. And it is not to be omitted, how that ' about two years paſt, certain merchants of St Malo ' in France, did hire a ſhip out of the iſland of Jerſey, ' to the end that they would keep that trade ſecret ' from their countrymen; and they would admit no ' mariner, other than the ſhip-boy belonging to the ' ſaid ſhip, to go with them, which ſhip was about ' ſeventy ton. I do know the ſhip and the boy very ' well, and familiarly acquainted with the owner, ' which voyage proved very beneficial. To conclude, ' this which is already ſaid, may ſuffice any man of rea' ſonable diſpoſition, to ſerve for a taſte, until ſuch ' time as it ſhall pleaſe Almighty God, through our ' own induſtry, to ſend us better tidings. In the mean ' ſeaſon, if any man well affected to this journey ſhall ' ſtand in doubt of any matter of importance touching ' the ſame, he may ſatisfy himſelf with the judgment ' and liking of ſuch of good calling and credit, as are ' principal dealers herein; for it is not neceſſary in this ' treatiſe publickly to ſet forth the whole ſecrets of the ' voyage.'

[H] *Very worthy of the reader's knowledge.*] After having related at large the loſs of the Delight, which was ſtiled their Admiral, Captain Haies acquaints us, that this diſaſter ſunk the ſpirits of the men in both ſhips (42). ' Thoſe (ſays he) in the frigate were al' ready

(42) Capt. Haies Relation in Hakluyt, Vol. III. p. 157, 158, 159.

him ſo eſteem and veneration at firſt ſight; his ſtature was beyond the ordinary ſize, his complexion ſanguine, and his conſtitution very robuſt *(d)*. The compaſs of his learning, and

(d) Supply of Iriſh Chronicles, by John Hooker, p. 136.

'ready pinched with ſpare allowance, and want of 'cloaths chiefly, whereupon they beſought the General 'to return for England before they all periſhed; and 'unto them of the Golden Hinde they made ſigns 'of their diſtreſs, pointing to their mouths, and to 'their cloaths, thin, and ragged; then immediately 'they alſo of the Golden Hinde grew to be of the 'ſame opinion and deſire to return home. The for-'mer reaſons having alſo moved the General to have 'compaſſion of his poor men, in whom he ſaw no 'want of goodwill, but of means fit to perform the 'action they came for, reſolved upon retiring, and 'calling the Captain and Maſter of the Hinde, he 'yielded them many reaſons inforcing this unexpected 'return; withal, proteſting himſelf greatly ſatisfied 'with that he had ſeen and knew already. Reite-'rating theſe words, *Be content, we have ſeen enough, 'and take no care of expence paſt; I will ſet you forth 'royally the next ſpring, if God ſends us ſafe home. 'Therefore I pray you let us no longer ſtrive here, 'where we fight againſt the elements.* Omitting cir-'cumſtance, how unwillingly the Captain and Maſter 'of the Hinde condeſcended to this motion, his own 'company can teſtify; yet comforted with the Gene-'ral's promiſes of a ſpeedy return at ſpring, and in-'duced by other apparent reaſons, proving an impoſ-'ſibility to accompliſh the action at that time, it was 'concluded on all hands to retire.

'So upon Saturday in the afternoon, the 31ſt of 'Auguſt, we changed our courſe, and returned back 'for England; at which very inſtant, even in winding 'about, there paſſed along between us and towards 'the land, which we now forſook, a very lion, to our 'ſeeming, in ſhape, hair, and colour; not ſwimming 'after the manner of a beaſt, by moving of his feet, but 'rather ſliding upon the water with his whole body, 'excepting the legs, in ſight, neither yet diving un-'der, and again riſing above the water, as the manner 'is of whales, dolphins, tunnies, porpoiſes, and all 'other fiſh; but confidently ſhewing himſelf above 'water without hiding, notwithſtanding we preſented 'ourſelves in open view and geſture to amaze him, as 'all creatures will be commonly at a ſudden gaze on 'ſight of man. Thus he paſſed along turning his 'head to and fro, yawning and gaping wide, with 'ugly demonſtration of long teeth, and glaring eyes; 'and to bid us a farewel (coming right againſt the 'Hinde) he ſent forth a horrible voice, roaring and 'bellowing as doth a lion, which ſpectacle we all be-'held ſo far as we were able to diſcern the ſame, as 'men prone to wonder at every ſtrange thing, as this 'doubtleſs was, to ſee a lion in the ocean ſea, or fiſh 'in ſhape of a lion; what opinion others had thereof, 'and chiefly the General himſelf, I forbear to deliver, 'but he took it for bonum omen, rejoicing that he 'was to war againſt ſuch an enemy, if it were the 'devil.

'The wind was large for England at our return, 'but very high, and the ſea rough, inſomuch as the 'frigate wherein the General went was almoſt ſwal-'lowed up. Monday in the afternoon we paſſed in 'the ſight of Cape Race, having made as much way 'in little more than two days and nights back again, 'as before we had done in eight days, from Cape Race 'unto the place where our ſhip periſhed; which hin-'drance thitherward, and ſpeed back again, is to be 'imputed unto the ſwift current, as well as to the 'winds, which we had more large in our return. 'This Monday the General came aboard the Hinde 'to have the ſurgeon of the Hinde to dreſs his foot, 'which he hurt by treading upon a nail; at which time 'we comforted each other with hope of hard ſucceſs 'to be all paſt, and of the good to come. So agree-'ing to carry our lights always by night, that we 'might keep together, he departed into his frigate, 'being by no means to be intreated to tarry in the 'Hinde, which had been more for his ſecurity. Im-'mediately after followed a ſharp ſtorm, which we 'overpaſſed for that time, praiſed be God. The wea-'ther fair, the General came aboard the Hinde again 'to make merry together with the captain, maſter, 'and company, which was the laſt meeting, and con-'tinued there from morning until night; during which 'time there paſſed ſundry diſcourſes touching affairs 'paſt, and to come, lamenting greatly the loſs of his 'great ſhip, more of the men, but moſt of all, of his 'books and notes, and what elſe I know not, for 'which he was out of meaſure grieved, the ſame 'doubtleſs being ſome matter of more importance 'than his books, which I could not draw from him; 'yet by circumſtance, I gathered the ſame to be the 'ore which Daniel the Saxon had brought unto him 'in the Newfoundland. Whatſoever it was, the re-'membrance touched him ſo deep, as not to be able 'to contain himſelf he beat his boy in great rage 'even at the ſame time, ſo long after the miſcarrying 'of the great ſhip; becauſe, upon a fair day, when 'we were becalmed upon the coaſt of Newfoundland, 'near unto Cape Race, he ſent his boy aboard the Admi-'ral to fetch certain things, amongſt which this being 'chief, was yet forgotten and left behind. After 'which time he could never conveniently ſend again 'aboard the great ſhip, much leſs he doubted her ruin 'ſo near at hand.

'Herein my opinion was better confirmed, diverſly 'and by ſundry conjectures, which maketh me have 'the greater hope of this rich mine; for whereas the 'General had never before good conceit of theſe 'north parts of the world, now his mind was 'wholly fixed upon the Newfoundland; and as before 'he refuſed not to grant aſſignments liberally to them 'that required the ſame into theſe north parts, now 'he became contrarily affected, refuſing to make any 'ſo large grants, eſpecially of St John's, which cer-'tain Engliſh merchants made ſuit for, offering to 'employ their money and travel upon the ſame; yet 'neither by their own ſuit, nor of others of his own 'company, whom he ſeemed willing to pleaſure, it 'could be obtained. Alſo laying down his deter-'mination in the ſpring following, for diſpoſing of his 'voyage then to be re-attempted, he aſſigned the cap-'tain and maſter of the Golden Hinde unto the ſouth 'diſcovery, and reſerved unto himſelf the north, af-'firming, that this voyage had won his heart from the 'ſouth, and that he was now become a northern man 'altogether. Laſt, being demanded what means he 'had at his arrival in England to compaſs the charges 'of ſo great preparation as he intended to make the 'next ſpring, having determined upon two fleets, one 'for the ſouth, another for the north. *Leave that to 'me*, he replied, *I will aſk a penny of no man; I will 'bring good tidings unto her Majeſty, who will be ſo 'gracious to lend me ten thouſand pounds; willing us 'therefore to be of good cheer, for he did thank God* (he 'ſaid) *with all his heart for that he had ſeen, the 'ſame being enough for us all, and that we needed not 'to ſeek any further.* And theſe laſt words he would 'often repeat with demonſtration of great fervency of 'mind, being himſelf very confident and ſettled in be-'lief of ineſtimable good by this voyage, which the 'greater number of his followers nevertheleſs miſtruſt-'ed altogether, not being made partakers of thoſe ſe-'crets which the General kept unto himſelf; yet all 'of them that are living may be witneſſes of his 'words and proteſtations, which ſparingly I have de-'livered.

'Leaving the iſſue of this good hope unto God, 'who knoweth the truth only; and can at his good 'pleaſure bring the ſame to light, I will haſten to the 'end of this tragedy, which muſt be knit up in the 'perſon of our General. And as it was God's ordi-'nance upon him, even ſo the vehement perſwaſion and 'intreaty of his friends, could nothing avail to divert 'him from a wilful reſolution of going through in his 'frigate, which was overcharged upon their decks 'with fights, nettings, and ſmall artillery, too cum-'berſome for ſo ſmall a boat, that was to paſs through 'the ocean ſea at that ſeaſon of the year, when by 'courſe we might expect much ſtorm of foul weather, 'whereof indeed we had enough. But when he was in-'treated by the captain, maſter, and other his well-'wiſhers of the Hinde, not to venture in the frigate,

and the ſtrength of his judgment made him remarkable for his prudence, when a very young man, tho' he was naturally of a warm and haſty temper. His love for his country, and his zeal for the Queen's ſervice led him into undertakings and expences beyond his fortune, which induced the famous Mr Camden to make the following remark upon his demiſe (e), 'about this time, ſays he, Sir Humphry Gilbert periſhed at ſea. A man of 'a bold and blyth temper, equally diſtinguiſhed for the arts of war and peace, he was 'loſt in his paſſage home, from that part of north America, upon which we have be-'ſtowed the name of Newfoundland; and whither he ſailed but a little before, having 'ſold a part of his patrimony, upon the hopes of what might ariſe from a Colony, which 'he intended to erect there. But when he had publickly aſſerted the right of the Engliſh 'Crown to that country, firſt diſcovered by Sebaſtian Cabot for Henry the ſeventh, Anno 'Dom. 1497, and had made leaſes to ſeveral of his companions, he by ſhipwrecks, and 'the want of every neceſſary, was ſo diſtreſſed, that he was obliged to give over his 'deſign, having learned too late, what his example may teach others, that the difficulty 'of planting colonies, in diſtant parts of the world, at the expence of private men, is 'far beyond what he, and many more thro' a fond credulity, and to their own loſs, had 'perſwaded themſelves.' It is eaſy to conceive how many, and how great obſtacles were to be overcome in eſtabliſhing the doctrine of plantations; when ſo candid, ſo judicious, and ſo public ſpirited a man, as Camden really was, could think in this manner, and miſtake the glorious ſchemes of a patriot, for the mercenary views of a projector (f). It was to vindicate Sir Humphry Gilbert's character in this reſpect, to do juſtice to his virtues, and to offer that incenſe to his memory, which as a confeſſor and martyr for the good and glory of his country, ſo worthy, ſo learned, ſo pious a man deſerved, that this article was compoſed. For to ſpeak the truth, and no more than the truth, he and his brother Sir Walter Raleigh were the parents of our plantations (g), laid the foundation of the Engliſh trade, and conſequently of our power at ſea, points of ſuch high importance, that they can never be treated too copiouſly, or with too much emphaſis [I]. Beſides theſe titles to

'this was his anſwer: *I will not forſake my little company going homeward, with whom I have paſſed ſo many ſtorms and perils.* And in very truth, he was 'urged to be ſo over-hard by hard reports given of 'him, that he was afraid of the ſea, albeit this was 'rather raſhneſs, than adviſed reſolution, to prefer the 'wind of a vain report to the weight of his own life. 'Seeing he would not bend to reaſon, he had proviſion 'out of the Hinde, ſuch as was wanting aboard his 'frigate, and ſo we committed him to God's pro-'tection, and ſet him aboard his pinnace, we being 'more than 300 leagues onward of our way home. 'By that time we had brought the iſlands of *Açores* 'ſouth of us, yet we then keeping much to the north, 'until we had got into the height and elevation of 'England, we met with very foul weather, and terrible 'ſeas, breaking ſhort and high, pyramid-wiſe. The 'reaſon whereof ſeemed to proceed either of hilly 'grounds, high and low within the ſea, as we ſee 'hills and dales upon the land, upon which the ſeas 'do mount and fall; or elſe the cauſe proceedeth of 'diverſity of winds ſhifting often in ſundry points, all 'which having power to move the great ocean, which 'again is not preſently ſettled, ſo many ſeas do en-'counter together, as there had been diverſity of 'winds. Howſoever it cometh to paſs, men which all 'their life-time had occupied the ſea, never ſaw more 'outrageous ſeas. We had alſo upon our main-yard 'an apparition of a little fire by night, which ſeamen 'do call Caſtor and Pollux; but we had only one 'which they make an evil ſign of more tempeſt; the 'ſame is uſual in ſtorms. Monday the ninth of Sep-'tember in the afternoon, the frigate was near caſt 'away, oppreſſed by waves, yet at that time reco-'vered; and giving forth ſigns of joy, the General 'ſitting abaft with a book in his hand, cried out unto us 'in the Hinde, ſo oft as we did approach within hear-'ing, *We are as near to Heaven by ſea, as by land.* 'Reiterating the ſame ſpeech, well beſeeming a ſoldier, 'reſolute in JESUS CHRIST, as I can teſtify he was, 'the ſame Monday night about 12 of the clock, or 'not after, the frigate being a-head of us in the Golden 'Hinde, ſuddenly her lights were out; whereof, as it 'were in a moment, we loſt the ſight; and withal, our 'watch cry'd, the General was caſt away; which was 'too true: for in that moment the frigate was de-'voured and ſwallowed up of the ſea. Yet ſtill we 'looked out all that night, and ever after, until we 'arrived upon the coaſt of England. Omitting no 'ſmall fail at ſea unto which we gave not the tokens 'between us agreed upon, to have perfect knowledge 'of each other, if we ſhould at any time be ſe-'parated.'

[I] *Or with too much emphaſis*] It is aſſerted in the text, that Sir Humphry Gilbert and Sir Walter Raleigh were the parents of our plantations, and the great authors of our extenſive trade and naval power. It is fit that this ſhould be proved: with reſpect to Sir Humphry Gilbert, it was ſaid at the time, and univerſally admitted for a fact, that he was the firſt perſon who carried men out of this nation with an intent to ſettle; that with this view he took poſſeſſion for the Queen, and under her authority for himſelf, proclaimed her title, publiſhed laws, and granted lands. It is true no people ſtaid at that time, but they ſettled there afterwards in virtue of his leaſes. Sir Walter Raleigh was a joint-adventurer with him, and the very year that Sir Humphry Gilbert periſhed, took out a new patent for the ſame purpoſes, and of the like tenure with that of Sir Humphry; upon which he immediately proceeded, and ſent a colony at his own expence to ſettle upon the Continent, which gave a beginning to the reduction and improvement of that country, which was called Virginia (43). Having mentioned this, it will be proper to put the reader in mind, that he is not to underſtand this ſtrictly of the country now ſo called, but for almoſt all that we now poſſeſs upon the continent of North America, from the Carolina's to Nova Scotia (44). Some indeed are very poſitive, that this name was impoſed by Queen Elizabeth, in alluſion to herſelf, as a virgin Queen, and it may be ſo; but it is generally believed, that this title was in people's mouths ſome years before this royal nomination; and it is pretty evident, that the firſt fruitleſs attempt of Sir Humphry Gilbert was directed towards that country, which will qualify at leaſt, the inſcription upon the globe placed in, and the verſes under his picture, if it be his, which is left entirely to the reader's judgment. But that himſelf, his half-brother Sir Walter Raleigh, his brother of the whole blood Sir Adrian Gilbert, or his friend and aſſociate Sir George Peckham, were chiefly moved to theſe adventures, from the conſideration of private advantage, cannot be ſurmiſed. No; they had greater and far more noble views: they aimed at civilizing and converting the natives of thoſe countries, the promoting induſtry, virtue, and laudable ambition at home. In ſhort, they were patriots, patriots of the old rock, deſirous of meriting the love of their country by ſerving it. They were men of great and generous minds; and if they

(43) Oldys's Life of Sir Walter Raleigh, p. 23.

(44) Britiſh Empire in America, Vol. I. p. 345.

to fame, from his ſword and from his pen, he was a great orator likewiſe, and merited much of his country, by his ſpeeches in the Iriſh and Engliſh houſe of commons (*b*), where he ſteadily ſupported the true intereſt of theſe nations, with an eloquence founded on his zeal for truth, and the ſervice of the public, ſupported by ſound reaſon, and adorned with learning, and that inexpreſſible beauty in diſcourſe, which is the effect of true genius, the greateſt gift of heaven, and the moſt diſtinguiſhed excellence, with which mortals are endowed. A word or two now of his private character. He was a man eſteemed in his country, beloved by his friends, and to whom thoſe who were not ſo, could object only a little too much warmth (*i*), and what they ſtiled a preſumption, which was, in truth, a generous enthuſiaſm, which little minds calumniate, becauſe they cannot comprehend (*k*). He married (as we obſerved) out of the court of his glorious miſtreſs, a lady of diſtinguiſhed birth and fortune, Ann the daughter of Sir Anthony Ager of Kent (*l*), by whom, Prince tells us, he had nine ſons (*m*). Hooker who knew him perſonally, and wrote immediately after his death, ſays, but five (*n*), and one daughter, in which they both agree. His eldeſt ſon, Sir John Gilbert, through the default of heirs-male, became the heir of the family, and was ſtiled of Greenway and Compton, in the County of Devon, Knight (*o*). He followed his father's example, and tho' he died in the flower of his age acquired the character of a gallant ſoldier, and a great officer (*p*), but left no iſſue, which was the caſe of all his brethren, except the youngeſt Raleigh Gilbert, Eſq; (*q*), who made a great figure at ſea, and had the happineſs to execute ſome part of that plan, which his father had the honour to contrive. He married the daughter of Mr Kelly, by whom he had Ager Gilbert, Eſq; (*r*), who eſpouſed the daughter of Edmund Walrond, Eſq; and by her had iſſue Humphry Gilbert, who parted with the ancient ſeat of Greenway, and fixed himſelf at Compton near Torbay. This was the gentleman to whom the Reverend Mr Prince owed many informations, and in whoſe houſe he ſaw an original picture of this his illuſtrious anceſtor, which he thus deſcribes. In one hand he held a General's ſtaff, while the other reſted upon a globe, with this word VIRGINIA written thereon, having the golden anchor with the pearl a-peak, hanging to his breaſt, at the bottom were theſe verſes, which tho' none of the ſmoothеſt are yet ſenſible, and claim the reader's notice, on another account which we ſhall preſently mention (*s*).

Here may you ſee the portraict of his face,
Who for his country's honour oft did trace
Along the deep, and made a noble way
Unto thy growing fame, VIRGINIA.
The *picture* of his *mind*, if ye do crave it,
Look upon *Virtue's picture*, and ye have it.

A very intelligent and judicious writer has intimated, that poſſibly this might not be the picture of Sir Humphry Gilbert, but of his half-brother Sir Walter Raleigh (*t*), or one might be tempted to gueſs it was the pourtrait of his ſon Captain Raleigh Gilbert, who it is certain made a voyage to Virginia, A. D. 1607, on the behalf of his uncle Sir Walter, an account of which voyage was publiſhed after his return, and was very inſtrumental in ſpreading the fame, and procuring the ſettlement of that noble country (*u*). Upon mature deliberation, however, there is nothing improbable in following the common opinion, that this picture was painted for Sir Humphry Gilbert, ſince it might be done ſoon after the return of him, and his brother Sir Walter Raleigh from their voyage for a diſcovery in 1579, when it is ſuppoſed that he received that jewel from the Queen. This accounts for there being no mention of his expedition to Newfoundland, or his death (*w*). It may be objected that it would be a ſtrange piece of vanity, to have his picture with theſe verſes done in his life-time, and hung up in his own houſe; but to this we may eaſily reply, that this picture might be drawn by the direction of his brother Sir John Gilbert, and with the reſt of his effects come afterwards into the poſſeſſion of Sir Humphry's deſcendants as heirs by the collateral line (*x*). However this matter be, it is very certain, that this gentleman's life and death (*y*) was a continual commentary upon

(*t*) Oldys's Life of Sir Walter Raleigh.

they formed projects, they were projects founded on the moſt glorious baſis, that of national utility. That in this, they had likewiſe a regard to the welfare of their families, and had great hopes of enriching them, is true; and why not? They hazarded their perſons and their fortunes, and they had a juſt right to recompence; but as this recompence could never have been received, till thoſe benefits aroſe to the nation which they promiſed, this can take nothing from their fame, for the labourer is ever worthy of his hire; and he who expects a reward out of the riches he procures his country, ought not to be thought mercenary. But in purſuit of theſe glorious ends, Sir Humphry Gilbert, injured his fortune. What then? His ſcheme was far from being chimerical, and though fruitleſs to himſelf, it was fruitful to his country. In twenty years after his deceaſe, there were 250 ſhips from the weſt of England (45) annually employed in the Newfoundland fiſhery; theſe ſhips ſailed in March, and returned in September; they employed at leaſt 10,000 ſeamen, fiſhermen, and ſhoremen, who ſpent every winter at home what they got in their ſummer fiſhery, that is upwards of 100,000l. excluſive of the perſons employed in England, in building and rigging their ſhips, and other neceſſary ſervices, and the profits of this trade, which were very conſiderable (46). Could an Engliſhman

upon his own generous maxim (z), *that he is not worthy to live at all, who for fear or danger of* death *ſhunneth his* country's ſervice, *or his* own honour; *ſince* death *is inevitable, and the* fame *of* virtue *immortal.*

(z) At the cloſe of his Diſcourſe on the northweſt paſſage.

man live or die to better purpoſe? Can the misfortune of ſo great a man be denied a tear? Or is it poſſible to contemplate his virtues, without owning that they deſerve to be for ever remembered? Towards this, if the preſent article can at all contribute, it will do honour to the book; and we may hope, will contribute to propagate that ſpirit which diſtinguiſhed the age Sir Humphry Gilbert lived in, and which we ſincerely wiſh might diſtinguiſh this, in the eyes of our poſterity. E

GILBERT, or GILBERD [*A*] [WILLIAM] a moſt learned Phyſician in the XVIth and beginning of the XVIIth century, and author of the book *De Magnete*, &c. [i. e. of the load-ſtone,] was born at Colcheſter in the year 1540 [*B*]. He was the eldeſt ſon of Hierome Gilberd, gent. [*C*], ſome time Recorder of that borough (*a*). Anth. Wood aſſerts (*b*), that 'he was educated in both our Univerſities, but whether 'in Oxon firſt or Cambridge, he could not juſtly tell:' The epitaph on his monument mentions only Cambridge. After having ſtudied ſome time there, but how long we have no certain account; he travelled into foreign countries, where probably he had the degree of Doctor of Phyſic conferred upon him (*c*); for he doth not appear to have taken it in either of our Univerſities. At his return to England, being juſtly famed for his learning, knowledge in Philoſophy, and admirable ſkill in Chemiſtry, he was choſen a member of the College of Phyſicians in London (*d*) [*D*]; and practiſed in that city for above thirty years with great applauſe and equal ſucceſs (*e*). In which time being grown in the higheſt reputation, he was ſent for to Court, and became chief Phyſician to Queen Elizabeth (*f*); who had ſo great a value for him, that ſhe allowed him an annual penſion to encourage him in his ſtudies (*g*). He was alſo chief Phyſician to K. James I. (*b*). In 1600 he publiſhed his book of the Load-ſtone, which being the firſt regular ſyſtem on that curious ſubject [*E*], and confirmed by many experiments, (a method not much uſed at

(*b*) Epitaph.

[*A*] *Gilbert*, or *Gilberd.*] The firſt, is the manner in which his name is written by all authors, who make mention of him or his writings. But the latter is uſed both in his own epitaph, and his father's; and in the Records of the town of Colcheſter: And therefore ſeems the trueſt.

[*B*] *Was born at Colcheſter in the year* 1540.] This I collect from his epitaph, in which he is ſaid to have been in the 63d year of his age, Novemb. 30. 1603, when he died.

[*C*] *The eldeſt ſon of Hierome Gilberd*, gent.] This gentleman was born at Clare in Suffolk; admitted a free burgeſs of Colcheſter in 1553 (1), and ſome time Recorder of that borough. He died in 1583, as appears by his epitaph, formerly on a braſs plate in the church of H. Trinity, Colcheſter, but now gone. 'Here 'lyeth the body of Iherome Gilberd, ſome time Re-'corder of this towne of Colcheſter, and Elizabeth his 'firſt wife, and Margaret his daughter; he died 23 of 'May 1583 (2).'

(1) Record book of Colcheſter, called the Oath-book, p. 215.

(2) R. Symonds's Collect. in the Heralds Off. Vol. I. fol. 437.

[*D*] *He was choſen a member of the College of Phyſicians in London.*] The author of the article *Gilbert* (Dr *William*), in the General Dictionary, is guilty at leaſt of an inaccuracy in the following paſſage: 'And 'at his return being famed for his learning, and his 'profound ſkill in Philoſophy and Chemiſtry, *and his* 'book *De Magnete*, he became Fellow of the College 'of Phyſicians at London, and Phyſician in ordinary 'to Queen Elizabeth.'——For it is hardly credible, that Dr Gilberd ſhould practiſe above 27 years in London, and be ſeveral years Phyſician to Queen Elizabeth, before he was admitted a member of the College of Phyſicians. And therefore he was unqueſtionably a member of it, long before he was *famed* for *his book De Magnete*; which was publiſhed only about three years before his deceaſe.

[*E*] *In* 1600 *he publiſhed his book of the Loadſtone*, &c.] The title of it was, *De Magnete, magneticiſque Corporibus, & de magno magnete Tellure, Phyſiologia nova.* Lond. 1600. fol. i. e. 'Of the Magnet (or 'Loadſtone) and magnetical bodies, and of that great 'Magnet, the Earth.' To which he added afterwards an Appendix of ſix or eight ſheets; but whether printed, we cannot find. This edition is ſcarce; but the book hath been re-printed abroad, particularly in Germany, with a preface by Wolfgang Lochman, M. D. 'In the firſt chapter, he gives an account of what had 'been written by the Ancients and Moderns con-'cerning the Loadſtone; notes that its Verticity to 'the Poles was firſt obſerved about three or four 'hundred years ago; mentions, with due praiſe, the 'obſervations of our countrymen Thomas Harriot, 'Robert Hues, Edward Wright, and Abraham Ken-'dal, on its properties; and the writings of William 'Borough, concerning the variation of the compaſs; 'of William Barlow, in his Supplement; and of 'Robert Norman, in his new attractives, who firſt 'found out the declination of the needle. In the ſe-'cond chapter, he mentions the various names of the 'Loadſtone; and, among the reſt, that of Magnes, 'from Magneſia, a country of Macedon, abounding in 'iron: and obſerves, that Euripides the poet was the 'firſt who gave it the name of *Magnes.*——In the reſt 'of the book, he treats of the various phænomena and 'properties of this moſt curious and valuable mineral, 'the Loadſtone, under theſe four heads; 1. Its At-'traction; 2. Its Direction to the Poles of the Earth, 'and the Earth's verticity and fixedneſs to certain 'points of the world; 3. Its Variation; 4. Its Decli-'nation: All which he illuſtrates by divers curious 'experiments, and diagrams. Theſe ſeveral proper-'ties he derives from the magnetical nature of the 'Earth, which he ſuppoſes to be a great Magnet.—— 'And ſhews the great uſe of the Declination of the 'Loadſtone in finding out the Latitude.' This book hath received its due praiſes from the moſt learned men. The great Lord Verulam ſtyles it, 'a painful 'and experimental work (3);' and mentions it in many other places with applauſe: As doth alſo Dr Hakewill, who ſays, Dr Gilbert 'hath written in Latine a 'large and learned Diſcourſe of the properties of this 'Stone (4).' Sir Kenelm Digby honours the author with the name of 'an admirable ſearcher into the na-'ture of the Loadſtone (5).' The moſt learned Dr Jſ. Barrow takes alſo proper notice of him (6). But Dr Gilberd having, in the firſt chapt. of his Iſt Book, animadverted upon Joſeph Scaliger's opinion, [*Exercitat. in Cardanum*, 131.] that hypercritic, brings him under his laſh; ſaying, in his ſupercilious way, That he had ſhewed his learning more than the nature of the Loadſtone: And that he had performed nothing worthy of the expectation which he had raiſed.—— *Guliſmus Gilbertus——ante triennium tres ampliſſimos commentarios de ea re* [de Magnete] *edidit, quibus magis mihi probavit doctrinam ſuam quam Magnetis naturam* (7).——*Quidam Anglus ante triennium libro de Magnete edito, nihil expectatione eâ, quam excitârat, protulit* (8).

[*F*] *But*

at that time,) was well received in the world. But it ſeems to have met with a better reception abroad than at home [F]. And, to detract from him, A. Wood ſays (i), that twenty years before he publiſhed this book, Mr William Barlow had knowledge in the Magnet (k)[G]: Which might be true, for Dr Gilbert mentions him with due honour. But Dr Gilbert was the firſt who obliged the world with his experiments and obſervations on that ſubject, Dr Barlow's not being publiſhed till 1616 (l). And how far he might be indebted to the former, we have no certain account. Beſides his book *de Magnete*, Dr Gilbert writ another piece [H]: And was the inventor of two moſt ingenious and neceſſary inſtruments for ſea-men, to find out the Latitude of any place without the help of the ſun, moon, and ſtars [I]. He died, unmarried, November 30, 1603, aged 63 (m), and was buried in the chancel of the church of Holy Trinity in Colcheſter, where there is a handſome monument for him [K]. By his will, he gave all his books in his library, his globes, inſtruments, and cabinet of minerals to the College of Phyſicians, London. His picture is in the Schools-gallery at Oxford, which ſhews him to have been of ſtature, tall, and of a chearful countenance. He had four brothers, Ambroſe; William, a Proctor in the Arches; Hierom; and George (n).

(m) From his epitaph.

(n) Wood, ubi ſupra, col. 321.

[F] *But it ſeems to have met with a better reception abroad than at home.*] This is intimated in the following paſſage in his epitaph. *Librum de Magnete apud* Exteros *celebrem in rem nauticam compoſuit.* However, it met with due commendation from ſeveral learned men at home, as appears by the laſt note but one.

[G] *A. Wood ſays, that twenty years before he publiſhed this book, Mr William Barlow had knowledge in the Magnet.*] But there is great reaſon to queſtion the truth of this ſtory of Mr Wood's. For, according to him, Mr Barlow did not publiſh his *Magnetical Advertiſement* till the year 1616. And Edward Wright obſerves, in his encomiaſtic epiſtle to Dr Gilberd, that the Doctor had kept his Book *de Magnete* almoſt eighteen years by him, before publication. Mr Wright's words are, *Optimis igitur auſpiciis [doctiſſime D D. Gilberte] in lucem prodeat Magnetica Philoſophia tua, non in nonum tantum annum (quod Horatius præcipit) ſed in alterum jam fere novennium preſſa, quam plurimis laboribus, ſtudiis, vigiliis, artificiis, ſumptibuſque tuis non modicis, per tot continuos annos e tenebris demum denſaque caligine otioſe exiliterque philoſophantium, infinitis artificioſe adhibitis experimentis eruta.* Παρεγκωμιαστικὸν, at the beginning of the Book.

[H] *Dr Gilbert writ another piece.*] It was publiſhed at Amſterdam 1651. 4to, from a MS. in the Library of Sir William Boſwell, Knt. under the title of *De mundo noſtro ſublunari Philoſophia nova.* i. e. Of our ſublunar world.

[I] *And was the inventor of two moſt ingenious and neceſſary inſtruments, &c.*] This invention of his was publiſhed by Thomas Blondeville, in a book intituled, 'Theoriques of the Planets, together with the making 'of two Inſtruments for Seamen to find out the Lati-'tude without ſeeing of Sun, Moon, or Stars, invented 'by Dr Gilbert.' Lond. 1602. 4to.

[K] *Where there is a handſome monument for him.*] A print of it is to be ſeen in the Hiſtory and Antiquities of Colcheſter, by P. M. The Epitaph thereon is very unelegant, and hardly Latin, as appears by the beginning of it; which is thus. *Poſuerunt hunc Tumulum Ambroſius & Gulielmus Gilberd, in memoriam pietatis fraterne Gulielmo Gilberd ſeniori Armigero, & Medicinæ Doctori. Hic primævus Filius Hieronimi Gilberd Armigeri, Natus erat Villæ Colceſtriæ,* &c. The reſt is incorporated into the text of this Article. C

GLANVILL [JOSEPH] an eminent Divine, a general ſcholar, and a very polite writer in the XVIIth century. He was the ſon of a merchant at Plymouth, and was deſcended from an ancient and honourable family ſeated near Taviſtock in the county of Devon (a). We have no account preſerved either of the place or manner in which he received the firſt rudiments of a learned education, ſince if there had, it is highly probable they would have been communicated to one or other of thoſe learned Divines, who manifeſted an earneſt deſire of recommending his memory with honour to poſterity (b). It is however probable, that the quickneſs of his parts diſtinguiſhed him even in his tender years, ſince we find him entered of Exeter College in the Univerſity of Oxford, under the tuition of Mr Samuel Conant, April 19th, 1652 (c). He took the degree of Bachelor of Arts in the ſame Univerſity October the 11th 1655 (d). In the midſt of the following ſummer, he thought proper to remove to Lincoln College, the Reverend Mr Paul Hood being then Rector of that learned foundation (e). June the 29th, 1658. he took the degree of Maſter of Arts (f), and about that time was appointed chaplain to Francis Rous, Eſq; Provoſt of Eaton College, and one of thoſe, whom the Protector Oliver deſigned a member of his other houſe (g). But this patron of his dying very ſoon after, Mr Glanvill returned back to Lincoln College, where Mr Wood tells us he became a great admirer of Mr Richard Baxter, and a zealous perſon for a Commonwealth (h), the former is certainly true, but there ſeems to be ſome proof wanting of the latter, ſince immediately on the reſtitution of the government in Church and State, by the Reſtoration of King Charles the ſecond, Mr Glanvill ſhewed great readineſs in conforming, as other eminent and learned perſons, who had been educated in thoſe unhappy times, alſo did, without deſerving in the leaſt to be reproached for turning about, becauſe in all probability they followed the light of reaſon and their own conſciences (i) [A]. At leaſt

[A] *They followed the light of reaſon and their own conſciences.*] It is really a point of juſtice due to the memory of this worthy perſon, to wipe off the ſtain of ſo ill-grounded and ſo ill-mannered a reflection as, *that after the* Reſtoration *he turned about, and became a* Latitudinarian (1). We ought to conſider that he came a boy of ſixteen to the univerſity, about four years after the King's murder, and the ſubverſion of the Conſtitution. His buſineſs there was not to give but to receive leſſons, and to make the moſt of that education that was then to be had in the univerſity. There could be nothing criminal in retiring from thence to live in the lodgings of Mr Francis Rous, then Provoſt of Eaton, who was himſelf a notorious time-ſerver, had been

(1) Wood's Athen. Oxon. Vol. II. col. 663.

leaſt thus much is certain, that tho' Mr Glanvill differed in opinion from many of his old friends, yet was he very far from falling out with them; on the contrary, he ſhewed them very great civilities, particularly to Mr Richard Baxter, in defence of whom he would have written, if Mr Baxter himſelf had not diſſuaded him that he might run no riſk of loſing preferment out of reſpect to him (*k*). As a proof of his ſincerity in this, and of his full confidence in the friendſhip of Mr Glanvill, he ſuffered him to ſee and peruſe a treatiſe of his own, in anſwer to what had been written againſt him by the Biſhop of Worceſter, which he ſhewed to no other perſon whatſoever (*l*). Another point of his conduct expoſed him alſo to the cenſure of Mr Wood; for notwithſtanding all the benefits he derived from that ſevere diſcipline, for which his college and tutor were famous, yet he regretted that he was not bred at Cambridge, becauſe there in his opinion he might have gained an earlier and more thorough knowledge of thoſe notions that were then current under the title of the New Philoſophy (*m*). To theſe ſentiments, however, he was ſo much addicted, and thought the promoting them of ſo great conſequence, that when he was but juſt entered the twenty-fifth year of his age, he ventured to write in defence of them, and publiſhed ſoon after this treatiſe to which his name was prefixed (*n*), in ſupport of a free enquiry, a philoſophy founded upon reaſon and experiment, and againſt the tyranny, which under the name and authority of Ariſtotle had been ſo long exerciſed in the ſchools [*B*]. This

Speaker of that little Parliament which, with his aſſiſtance, ſurrendering their power to General Cromwell, afforded him the colour of aſſuming the ſupreme authority, which ſervice procured him this place and dignity; and indeed *Oliver* could not well do leſs than make that gentleman a Lord, who had made him a Prince (2). But what was this to Mr Glanvill? He had no ſhare whatever in theſe tranſactions; and before he had time to contemplate the character of his patron, he loſt him. At his return to Oxford it is acknowledged, that he ſhewed a ſtrong inclination for the new Philoſophy; that is, he knew and was willing to follow the light as ſoon as he ſaw it. Let us hear what Biſhop Sprat, who was in the ſame ſituation, ſays upon this ſubject, and whoſe apology muſt ſatisfy every rational and candid peruſer (3). 'I dare appeal, ſays he, to all unintereſted men who knew the temper of that place, 'and eſpecially to thoſe who were my own contemporaries there, of whom I can name very many, whom 'the happy Reſtoration of the kingdom's peace found 'as well inclined to ſerve their Prince and the Church, 'as if they had been bred up in the moſt proſperous 'condition of their country. This was undoubtedly 'ſo: nor indeed could it be otherwiſe; for ſuch ſpiritual frenzies which did then bear rule, can never 'ſtand long before a clear and a deep ſkill in nature. 'It is almoſt impoſſible that they who converſe much 'with the ſubtilty of things, ſhould be deluded by ſuch 'thick deceits. There is but one better charm in the 'world than real Philoſophy, to allay the impulſes of 'the falſe ſpirit, and that is the bleſſed preſence and aſſiſtance of the true.' To be ſatisfied as to the matter of fact, and that we may be ſure this eloquent writer does not impoſe upon us, let us remember, that at the ſame time with Joſeph Glanvill, A. M. Dr Simon Patrick, Dr Edward Stillingfleet, Dr John Tillotſon, Dr Samuel Parker, Dr Simon Ford, Dr John Worthington, Dr Edward Reynolds, Dr John Conant, Dr Edward Rainbow, Dr Richard Cumberland, and very many more, who had had their education and their benefices during the iniquity of the late times, had ſenſe and learning ſufficient to ſhake off their prejudices, and to rejoice in a reſtored and eſtabliſhed Church (4). Theſe are the aſſertions and the ſentiments of a very judicious hiſtorian, and learned prelate, and we have no room (notwithſtanding Wood's inſinuations) to doubt of their truth.

[*B*] *Had been ſo long exerciſed in the ſchools.*] The title of this book at large runs thus:

The Vanity *of* Dogmatizing; *or Confidence in opinions, manifeſted in a diſcourſe of the ſhortneſs and uncertainty of our knowledge, and its cauſes; with ſome reflections on* Peripateticiſm, *and an apology for* Philoſophy. *By* Joſ. Glanvill, M. A. Lond. 1661. in 12mo.

It is addreſſed to the Reverend Mr Joſeph Maynard, B. D. afterwards Doctor in Divinity, and Rector of Exeter College in Oxford. This dedication is dated from Cecil-Houſe in the Strand, March 1. 1660. Then follows a ſhort preface, and after that three copies of verſes to the ingenious author. In this treatiſe our author aſſigns ſeveral reaſons for the ſhortneſs of human knowledge. 1. That knowledge lies deep, and is therefore difficult. 2. Becauſe we can perceive nothing but by proportion to our ſenſes, from the impoſtures and deceits of our ſenſes, the fallacy of our imaginations, the precipitancy of our underſtandings, the intereſt which our affections have in our dijudications. He afterwards makes ſeveral reflections on the peripatetic Philoſophy, and obſerves that it is litigious, and hath no ſettled ſignification of words, that it gives no ſatisfactory account of the phænomena, and is unfit for new diſcoveries, and hath been the author of no one invention, that it is in many things impious and ſelf-contradictory. For proof of this he tells us, that Ariſtotle held that the Reſurrection is impoſſible, that God underſtands not all things, that the world was from eternity, that there is no ſubſtantial form, but moves ſome orb, that the firſt mover moves by an eternal immutable neceſſity, that if the world and motion were not from eternity, then God was idle. Of the Ariſtotelian contradictions, ſays he, Gaſſendus hath preſented us with a catalogue, of which theſe are but a few. Ariſtotle in one place ſaith, that the ſcintillation of the planets is not ſeen, becauſe of their propinquity, but that of the riſing and ſetting ſun is, becauſe of it's diſtance; and yet in another place he makes the ſun nearer us than they are. He aſſerts, that the elements are not eternal, and endeavours to prove it, and yet makes the world ſo, and the elements it's parts. In his meteors he ſays, that no dew is produced in the wind, and yet afterwards admits it under the ſouth, and none under the north. In one place he defines a vapour humid and cold, and in another humid and hot. He affirms the faculty of ſpeaking to be a ſenſe, and yet before he allowed but five. In one place, that nature doth all things beſt; and in another, that it makes more evil than good. And ſomewhere he contradicts himſelf within one line, ſaying, that an immoveable mover hath no principle of motion.

Mr Glanvill then proceeds to ſhew, that dogmatizing is the effect of ignorance, inhabits with untamed paſſions, and an ungoverned ſpirit, is a great diſturber in the world, is ill-mannered and immodeſt, holds men captive in error, betrays a narrowneſs of ſpirit. In the laſt chapter he gives us an apology for Philoſophy, and vindicates it from the imputation of irreligion; and aſſerts, that next after the divine word, it is one of the beſt friends to piety. Neither is it any more juſtly accountable for the impious irregularities of ſome that have paid an homage to it's ſhrine, than religion itſelf, for the ſinful extravagancies both opiniative and practical, of high pretenders to it. It is a vulgar conceit, that Philoſophy holds a confederacy with Atheiſm itſelf; but moſt injurious, for nothing can better antidote us againſt it: and they may as well ſay, that Phyſicians are only murderers. A *philoſophic Atheiſt* is as good ſenſe (that is as much nonſenſe) as a *divine one*. His matter was new and of importance, his manner very eaſy and florid, which gave his book a great courſe in the world.

[C] *Which*

This ſmall diſcourſe made him known in the literary world, and raiſed him alſo ſome conſiderable antagoniſts, againſt whom he defended himſelf with great ſpirit (o), which to ſay the truth was the more eaſy for him to do, ſince they did not take notice of the moſt exceptionable paſſages in his book, which however he was prudent enough to omit upon a reviſal [C]. About this time he entered into Holy Orders, and became not long after Rector of Wimbiſh in the county of Eſſex, which ſeems to have been his firſt eccleſiaſtical preferment (p). In the ſucceeding year however he met with a better preferment, for Mr John Humfrey being ejected from the vicarage of Frome Selwood in Somerſetſhire, our author was preſented thereto by Sir James Thynne, in the beginning of November 1662 (q). He publiſhed the ſame year, but was ſo cautious as not to put his name to it, a very ingenious diſcourſe on the fundamental point of the ancient eaſtern philoſophy, from

(o) Prince's Worthies of Devon, p. 351.

(p) Kennet's Regiſter, p. 529.

(q) Calamy's Life of Baxter, Vol. ii. p. 615.

[C] *Which however he was prudent enough to omit upon a reviſal.*] Amongſt theſe paſſages there is one which ſhall be produced here, not only as a thing curious and extraordinary, not to ſay extravagant, but becauſe it will give the reader a better conception of our author's diſpoſition and capacity, than the moſt laboured character could do. He had a quick and lively genius, a ready flow, but not a great command of words, and began with handling ſubjects which it required much experience, and a judgment more ſolid than could be expected in a man of his years to manage in a maſterly manner. Theſe were the ſentiments of Dr Beal, as appears in a letter of his to the honourable Mr Boyle, in which he commends and cenſures our author with equal candour (5).

(5) Boyle's Works, Vol. V. p. 488.

But now to the paſſage (6). 'That one man, ſays 'he, ſhould be able to bind the thoughts of another, 'and determine them to their particular objects, will 'be reckoned in the firſt rank of impoſſibles; yet 'by the power of advanced imagination, it may very 'probably be effected; and the ſtory abounds with 'inſtances. I'll trouble the reader but with one, and 'the hands from which I had it make me ſecure of the 'truth on't.

(6) Vanity of Dogmatizing, Chap. xx. p. 195, & ſeq.

'There was very lately a lad in the univerſity of Ox'ford, who being of very pregnant and ready parts, 'and yet wanting the encouragement of preferment, was 'by his poverty forced to leave his ſtudies there, and 'to caſt himſelf upon the wide world for a livelihood. 'Now his neceſſities growing daily on him, and want'ing the help of friends to relieve him, he was at laſt 'forced to join himſelf to a company of vagabond 'gypſies, whom occaſionally he met with, and to fol'low their trade for a maintenance. Among theſe 'extravagant people, by the inſinuating ſubtilty of his 'carriage, he quickly got ſo much of their love and 'eſteem, as that they diſcovered to him their myſtery; 'in the practice of which, by the pregnancy of his 'wit and parts, he ſoon grew ſo good a proficient, as 'to be able to out-do his inſtructors. After he had 'been a pretty while well exerciſed in the trade, there 'chanced to ride by a couple of ſcholars who had for'merly been of his acquaintance. The ſcholars had 'quickly ſpied out their old friend among the gypſies, 'and their amazement to ſee him among ſuch ſociety, 'had well nigh diſcovered him; but by a ſign, he pre'vented their owning him before that crew: and 'taking one of them aſide privately, deſired him with 'his friend to go to an inn not far diſtant thence, pro'miſing there to come to them. They accordingly 'went thither, and he follows: After their firſt ſalu'tations, his friends enquire how he came to lead ſo 'odd a life as that was, and to join himſelf with ſuch 'a cheating beggarly company. The ſcholar gypſy 'having given them an account of the neceſſity which 'drove him to that kind of life, told them, that the 'people he went with were not ſuch impoſtors as they 'were taken for, but that they had a traditional kind 'of learning among them, and could do wonders by 'the power of imagination, and that himſelf had 'learnt much of their art, and improved it further 'than themſelves could. And to evince the truth of 'what he told them, he ſaid, he would remove into 'another room, leaving them to diſcourſe together, 'and upon his return, tell them the ſum of what they 'had talked of; which accordingly he performed, 'giving them a full account of what had paſſed be'tween them in his abſence. The ſcholars being a'mazed at ſo unexpected a diſcovery, earneſtly deſired 'him to unriddle the myſtery. In which he gave 'them ſatisfaction, by telling them, that what he did 'was by the power of imagination, his fancy binding 'theirs; and that himſelf had dictated to them the diſ'courſe they held together while he was from them: 'That there were warrantable ways of heightening 'the imagination to that pitch as to bind another's; 'and that when he had compaſſed the whole ſecret, 'of ſome parts of which he ſaid he was yet ignorant, he 'intended to leave their company, and give the world 'an account of what he had learned.

'Now that this ſtrange power of the imagination is 'no impoſſibility, the wonderful figuatures of the fœtus 'cauſed by the imagination of the mother, is no con'temptible item. The ſympathies of laughing and 'gaping together are reſolved into this principle; and 'I ſee not why the fancy of one man, may not deter'mine the cogitation of another, rightly qualified, as 'eaſily as his bodily motion. This influence ſeems to 'be no more unreaſonable, than that of one ſtring of a 'lute upon another, when a ſtroke on it cauſeth a pro'portionable motion in the ſympathizing conſort, which 'is diſtant from it, and not ſenſibly touched. Now if 'this notion be ſtrictly verifiable, it will yield us a good 'account how angels inject thoughts into our minds, 'and know our cogitations; and here we may ſee the 'ſource of ſome kinds of faſcination. If we are pre'judiced againſt the ſpeculation, becauſe we cannot 'conceive the manner of ſo ſtrange an operation, we 'ſhall indeed receive no help from the common Philoſo'phy; but yet the hypotheſis of a mundane ſoul, lately 'revived by that incomparable Platoniſt and Carteſian 'Dr H. More, will handſomely relieve us. Or, if 'any would rather have a mechanical account, I think 'it may probably be made out ſome ſuch way as fol'lows. Imagination is inward ſenſe; to ſenſe is re'quired a motion of certain filaments of the brain, and 'conſequently in imagination there is the like; they 'only differing in this, that the motion of the one pro'ceeds immediately from external objects, but that of 'the other hath it's immediate riſe within us. Now 'then, when any part of the brain is ſtrongly agitated, 'that which is next, and moſt capable to receive the 'motive impreſs, muſt in like manner be moved. 'Now we cannot conceive any thing more capable of 'motion than the fluid matter that is interſperſed a'mong all bodies, and contiguous to them. So then 'the agitated parts of the brain, begetting a motion 'in the proxime æther, it is propagated through the 'liquid medium, as we ſee the motion is which is 'cauſed by a ſtone thrown into the water. Now when 'the thus moved matter meets with any thing like that 'from which it received it's primary impreſs, it will 'proportionably move it, as it is in muſical ſtrings 'tuned uniſons. And thus the motion being conveyed 'from the brain of one man to the fancy of another, 'it is there received from the inſtrument of convey'ance, the ſubtile matter and the ſame kind of ſtrings 'being moved and much, what after the ſame man'ner as in the firſt imaginant; the ſoul is awakened 'to the ſame apprehenſions as were they that cauſed 'them. I pretend not to any exactneſs or infal'libility in this account, foreſeeing many ſcruples 'that muſt be removed to make it perfect. It is only 'an hint of the poſſibility of mechanically ſolving the 'phænomenon, though very likely it may require ma'ny other circumſtances compleatly to make it out.' Our author in proceſs of time came to think and write in a very different manner.

[D] *Or*

from which moſt of their capital doctrines where deduced, and, which by many plauſible arguments he endeavoured to ſhew, was not contradictory to, or incompatible with, revealed religion (r) [D]. The foundation of the Royal Society for promoting thoſe ends, and encouraging thoſe enquiries, which had been the ſubject of our author's firſt treatiſe, encouraged him to reſume his labours in the ſame cauſe of free ſpeculation, upon which he publiſhed a work new at leaſt in title (s), tho' in reſpect to the matter not very different from his former diſcourſe, except that it was cloſer, more methodical, and free from thoſe conjectures and ſuſpicious narratives, which with ſenſible people had hurt the credit of the former. By this judicious management the new work was much better received, and obtained a very good character, amongſt ſuch as were deſirous of ſeeing the road to truth made as plain and laid as open as it was poſſible [E]. To this he added a defence of his former book againſt Mr White, a famous champion of the Church of Rome, and of the Ariſtotelian philoſophy (t), the whole being cloſed with a ſhort epiſtolary diſcourſe concerning Ariſtotle, one of the moſt ſolid and ſenſible performances that ever fell from our author's pen, and with which, tho' his antagoniſts were very angry, yet, except beſtowing hard names, they were utterly unable to return him any anſwer [F]. In juſtice to his zeal

(r) Kennet's Regiſter, p. 735.

(s) Athen. Oxon. Vol. ii. col. 665.

(t) See an account of this anſwer in the note.

[D] *Or incompatible with revealed religon.*] The title of this book is as follows:

Lux Orientalis: *or an* Enquiry *into the opinion of the* eaſtern Sages, *concerning the* pre-exiſtence *of* ſouls: *being a* Key *to unlock the grand* myſteries *of* Providence, *in relation to man's* ſin *and* miſery Lond. 1662. in 12mo.

It is dedicated to Francis Willoughby, Eſq; a gentleman of great wiſdom and learning (7). In the preface he remarks, that his deſign in this book is only an innocent repreſentation of an ancient and probable opinion, which I conceive, ſays he, may contribute ſomewhat towards the clearing and vindicating the divine attributes, and ſo repreſenting the ever bleſſed Deity as a more fit object of love and adoration, than the opinions of the world make him.——For there is nothing more for the intereſt of religion, than that God be repreſented to his creatures as amiable and lovely, which cannot be better done than by clearing up his providence and dealing with the ſons of men, and diſcovering them to be full of equity, ſweetneſs, and benignity. In this treatiſe he propoſes the ſeveral opinions concerning the original of ſouls, and obſerves, that the daily creation of them is inconſiſtent with the divine attributes; that the traduction of them is impoſſible, and the reaſons for it weak and frivolous. He then exhorts his readers to look towards the ancient ſages, thoſe eaſtern ſophi, who have filled the world with the fame of their wiſdom, and then obſerves, that it was the opinion of the Indian Brachmans, the Perſian Magi, the Egyptian Gymnoſophiſts, the Jewiſh Rabbins, ſome of the Grecian Philoſophers, and Chriſtian Fathers, that the ſouls of men were created all at firſt, and at ſeveral times and occaſions, upon forfeiture of their better life and condition, dropped down into theſe terreſtrial bodies. This the learned among the Jews made a part of their Cabala, and pretend to have received it from their great law-giver, Moſes. Our author proceeds to remark, that the Scripture ſaith nothing againſt it; that it's ſilence is no prejudice to this doctrine, but rather an argument for it, as the caſe ſtands; that pre-exiſtence was the common opinion in our Saviour's time; that our forgetting the former ſtate was no argument to diſprove it; that the proof of the poſſibility of pre-exiſtence would be ſufficient, all other hypotheſes being abſurd and contradictory; but, that it is proved alſo by poſitive arguments; that an argument for it may be drawn from the conſideration of the divine goodneſs, which always doth what is beſt; that another argument may be drawn from the great variety of men's ſpeculative inclinations, and the diverſity of our genius's. He then ſhews what countenance it hath from the Old and New Teſtament, and afterwards ſtates a philoſophical hypotheſis of the ſoul's pre-exiſtence, ſo as to juſtify the commendations he had beſtowed on this fundamental point of oriental Theology.

(7) Wood's Faſt. Oxon. Vol. II. col. 139.

[E] *And laid as open as it was poſſible.*] The title of this piece at large runs in theſe words:

Scepſis Scientifica: *or* Confeſs'd Ignorance *the way to* Science: *in an* Eſſay *on the* Vanity *of* dogmatizing, *and* confident opinion. Lond. 1665. 4to.

The imprimatur is dated Oct. 18. 1664. It is dedicated to the Royal Society in ſo copious a manner, that this diſcourſe takes up 28 pages. Henry Oldenberg, Eſq; in a letter of his to the Hon. Mr Boyle, dated Decemb. 10. the ſame year, acquaints him (8), 'that 'this work had been preſented by Lord Brereton to the 'Society, and the addreſs prefixed thereto read, 'in which dedication, ſays he, the author expreſſeth a 'very great reſpect to the ſaid Body, and their deſign, 'which I was very glad (and ſo were others) to find to 'be ſo well underſtood at laſt by ſome, though I fear 'the great expectation he raiſeth of their enterprize, 'may be of more prejudice than advantage to them, if 'they be not competently endowed with a revenue to 'carry on their undertakings.'

(8) Boyle's Works, Vol. V. p. 328.

We have intimated in the text, and the fact is really ſo, that this is no more than his former book againſt dogmatizing reviewed and more cloſely digeſted, all ſuch paſſages (and particularly that reſpecting the Oxford ſcholar) being rejected, as might be attended with difficulty of proof; and perhaps when he was making this reviſal, it would have been as well to have thrown out the doctrine, as the example; which however with his reaſoning upon it, is ſtill retained. This book makes a better appearance, and is of a larger ſize, than his former treatiſe, which notwithſtanding is rather contracted than enlarged; for though our author has given it as his opinion, that he was more fortunate in his firſt thoughts than in his corrections, yet his practice does by no means agree with that aſſertion; ſince it is not eaſy to find a writer (at leaſt of his rank) who has reviewed his performances oftener, or altered them more, of which in the courſe of this article we ſhall give the reader abundant proofs.

[F] *They were utterly unable to return him any anſwer.*] The adverſary againſt whom our author was to vindicate his book, was already known to the learned world by ſeveral names, calling himſelf ſometimes Thomas Albius, ſometimes Thomas Anglus, and ſometimes Thomas Anglus ex Albiis, each of which appellations belongs to, and is the ſame with, Thomas White, ſecond ſon of Richard White, of Hutton in Eſſex, Eſq; by Mary his wife, daughter of Edmund Plowden, the great lawyer in the reign of Queen Elizabeth (9); which Thomas White having been always from his childhood a Catholic became at length a ſecular prieſt, and a noted philoſopher, as his writings ſhew, ſays honeſt Anthony Wood who had a kindneſs for theſe ſort of people, tho' the chief merit of this gentleman was his being a great diſciple of Sir Kenelm Digby, and a ſteady advocate for the peripatetic Philoſophy. He wrote againſt our author in Latin, and gave his treatiſe the following fanciful title,

(9) Wood's Athen. Oxon. Vol. II. col. 665.

Sciri, *ſive*, Sceptices & Scepticorum *a Jure Diſputationis* Excluſio.

This induced Mr Glanvill to intitle his anſwer, that it might bear ſome ſimilitude to the diſcourſe it was intended to refute,

Scire tuum nihil eſt: *or the* Author's defence *of the* vanity of dogmatizing, *againſt the exceptions of the learned* Thomas Albius, *in his late* Sciri.

—— *No doubt but ye are the men, and wiſdom ſhall die with you.* Job.

In this anſwer our author ſets down the objections of his antagoniſt in his own words in Latin, and then his anſwers

zeal as well as out of reſpect to his abilities, our author was choſen a Member of the Royal Society (*u*), a circumſtance, that as on the one hand it did him a great deal of honour, ſo on the other it expoſed him to a heavy load of envy from ſome, and kept up the reſentment of others, who could not think of quitting the beaten path, or bear to ſee thoſe principles ridiculed in their old age, to which they had paid ſo great deference in their youth. But however, the countenance given him by his friends, and the credit he had obtained by his writings, raiſed his courage ſo much, that he ventured in the ſucceeding year, which was 1666, to deliver his ſentiments upon another knotty point, about which the moſt judicious perſons were not then and perhaps never will be agreed (*w*). This was the ſubject of witchcraft [*G*], and proved the beginning of a controverſy, that laſted as long as his life, and was managed with great warmth, and abundance of plauſible arguments on both ſides. June 23d 1666, he was inducted into the Rectory of St Peter and St Paul at Bath (*x*), in which city he from that time fixed his reſidence, yet had not been long there before he found himſelf ſurrounded with new opponents, who undertook the defence of Ariſtotle (*y*), and the old philoſophy, and treated our author Glanvill with as much aſperity for having drawn his pen againſt them, as if the authority of that philoſopher had been ſacred (*z*), or that any ſyſtem of opinions ought to claim implicit reverence independent of their foundation in truth. Mr Glanvill however had a ſpirit that was not to be ſubdued by ſuch treatment, and therefore inſtead of receding in the leaſt from his former ſentiments, he ſupported them upon all occaſions with great firmneſs, and with that fluency of language, for which he was particularly diſtinguiſhed, a circumſtance of no weight at all with his adverſaries (*a*), who pretended that Reaſon ought to have greater reſpect paid it than Rhetoric; as, on the other hand, the friends of our author

anſwers in Engliſh, from which it appears, that whereas Mr White repreſented Mr Glanvill as a Sceptic, and wrote againſt him, though with many commendations of his abilities, as ſuch he is therein miſtaken, Mr Glanvill having no intention to maintain what are ſtrictly and properly ſtiled Sceptical Principles, but to oppoſe Confidence in Opinions; the truth and certainty of which cannot be proved as prejudicial to learning and knowledge.

In his *Letter to a* Friend, *concerning* Ariſtotle, which contains but 22 pages, he in a very clear and cloſe chain of reaſoning, juſtifies his oppoſition to the received authority of thoſe doctrines that have been long taught in the ſchools, under the ſanction of that Philoſopher's name. In reſpect to theſe he obſerves, that whatever fondneſs later ages may have expreſſed for him, the pious fathers of the firſt and pureſt ages of Chriſtianity ſhewed no ſuch veneration for Ariſtotle, but frequently reproved his notions with a keen and impartial ſeverity, of which he gives various inſtances. He next remarks, that Ariſtotle roſe into all this credit after his works came into the hands of the Arabians, and in an age when ignorance was epidemic. He then ſhews that it is very doubtful, whether the greateſt part of the pieces that paſs under the name of this philoſopher are his or not, which he diſcuſſes with much learning and candour. He mentions alſo that irreverence with which Ariſtotle treated all other philoſophers; ſo that in oppoſing him, he only follows his own example. He proceeds then to ſhew, that the Corpuſcularian and Atomical Philoſophy was prior in point of time to that of Ariſtotle; ſo that ſuch as eſpouſe it, ought to be eſteemed rather defenders, than deſpiſers of antiquity. He produces the authority of many ancient and eſteemed authors, to ſhew that the morals of Ariſtotle were none of the beſt; and laſtly he proves, that he borrowed almoſt all he wrote, and was not over ready to acknowledge from whom he borrowed; qualities that did not ſeem to warrant any exceſſive reſpect to him.

[*G*] *This was the ſubject of Witchcraft.*] The title of this book of his ſtood originally thus, though frequently altered in ſubſequent editions.

Some Philoſophical Conſiderations *touching the* Being *of* Witches, *and* Witchcraft. Lond. 1666 4to.

It was in the form of an epiſtle to Robert Hunt, Eſq; a Juſtice of the Peace, who had been very active in taking the examinations againſt ſeveral ſuppoſed witches; but the book being burnt in the great fire at London in the beginning of September the ſame year, it was re-printed there again in 1667. in the ſame ſize. Again, under the title of *A Blow at* modern Sadduciſm, *in ſome* Philoſophical Conſiderations *about* Witchcraft. Lond. 1668. 4to. To this book are ſubjoined *A* Relation *of the famed* Diſturbance *at the* Houſe *of Mr* Mumpeſſon, *and Reflections on* Drollery *and* Atheiſm. In 1668 he publiſhed *Palpable Evidence of* Spirits *and* Witchcraft, *in an account of the famed diſturbance by a* Drummer *in the houſe of Mr* Mumpeſſon. Lond. 1668. This is the ſame with the *Relation* abovementioned, only the title altered. *A Whip for the Droll* Fiddler *to the* Atheiſt, *being Reflections on* Drollery *and* Atheiſm. Lond. 1668. This is likewiſe moſtly the ſame with the *Reflections on Drollery*, &c. above-mentioned.

Sadduciſmus Triumphatus, *or full and plain Evidence concerning* Witches *and* Apparitions, *in* two *parts*. Lond. 1681. in 8vo. and there again in 1682. with large additions, by Dr Henry More, the editor of both editions. The *firſt* part treats of the poſſibility, the *ſecond* of the real exiſtence of Witches, with a letter to Dr Henry More, upon the ſame ſubject. The firſt part conſiſts of his conſiderations touching the being of witchcraft, re-printed here the fifth time. The ſecond part contains an anſwer to part of *the Diſplay of ſuppoſed Witchcraft*, &c. by Mr John Webſter, *Practitioner in Phyſic and Chirurgery in the Weſt Riding of Yorkſhire*, printed at London 1667, in folio, and Mr Glanvill's former relation of the famed diſturbance at the houſe of Mr Mumpeſſon, and a ſecond narrative of it enlarged with a collection of twenty ſix modern relations. The author's imperfect preface to the ſecond part gives an account of the ſeveral editions of his former treatiſe of Witches, and relates the many motives which induced him to make thoſe large additions in that edition. The perſon who peruſed his papers after his death, digeſted his materials which were left ſomewhat imperfect, and ſupplied what was wanting by advertiſements through the whole work. The laſt advertiſement is the moſt conſiderable; and as an appendix to the firſt part, concerning the poſſibility of apparitions, &c. is added *An Account of the* nature *of a* Spirit, tranſlated out of the two laſt chapters of Dr More's *Enchiridion Metaphyſicum*. We ſhall have occaſion to mention the firſt of theſe pieces in another note; but it may not be amiſs before we cloſe this to obſerve, that in the laſt edition of it, it was dedicated to Charles Duke of Richmond and Lenox, and that dedication is dated from Bath June 8. 1668. At the time he was making his collection of relations, our author held a correſpondence with the great Mr Boyle, who gave him many very juſt cautions about his management of ſo tender a ſubject, and hinted to him, that the credit of Religion might ſuffer from weak arguments upon ſuch topicks (10). In his anſwers Mr Glanvill profeſſes himſelf much obliged for thoſe kind admonitions, and promiſes him to be exceeding careful in the choice of his relations.

(10) Boyle's Works, Vol. V. p. 244. 628.

thor conceived, that if Reaſon had not been on his ſide, he could never have maintained his diſpute with ſo much viſible advantage, or thoſe who oppoſed him driven to take ſhelter in ſcurrilous language, and groundleſs aſperſions (*b*) [*H*]. But not relying upon theſe deciſions, which however ſatisfactory in regard to his behaviour in a perſonal diſpute, were of little or no force towards ſettling a point of ſuch high importance to the public; he reſolved once more to carry his cauſe before that tribunal, and to appeal on the behalf of truth and ſcience, to the candid judges of that age, and to poſterity (*c*), which he did in a ſmall but elegant treatiſe, that added highly and juſtly to his reputation, and which is ſtill very much eſteemed by the curious, being become ſo ſcarce as not to be met with in other hands (*d*) [*I*]. That applauſe which our author received from ſome of the moſt eminent

(*d*) Britiſh Librarian, p. 116.

[*H*] *To take ſhelter in ſcurrilous language and groundleſs aſperſions.*] The reader will eaſily perceive, from what has been ſaid in the text, that our author's writing in defence of the new Philoſophy, engaged him in a kind of literary war, from the very time that his firſt book appeared, which he probably hoped might have received ſome check upon his retiring from the univerſity to Bath; but even there he found many opponents, who not being ſo well able to deal with him themſelves, contrived in the year 1667 (11) to carry him to the houſe of a brother Clergyman, the Rev. Mr Robert Croſs, Vicar of Great Chew, near Penſford in Somerſetſhire, who was a great admirer of Ariſtotle, and a violent defender of the peripatetic Philoſophy, as Mr Glanvill found to his coſt, who not having been previouſly informed of this intended altercation, was in ſome meaſure ſurprized, and did not anſwer with that quickneſs and facility which otherwiſe he would have done. Upon this Croſs, who ſaw his advantage, and was none of the moſt humane adverſaries, declaimed paſſionately againſt modern innovators, and maintained poſitively, that Ariſtotle alone had more advantages for acquiring knowledge than the Royal Society, or all the preſent age had, or could have, and that for this ſtrong reaſon, becauſe he had ſurveyed all Aſia. However, our author ſoon recovered himſelf, and in ſome future converſations, and by letters, ſtrove to make good that cauſe for which he was an advocate, and in ſupport more eſpecially of the Royal Society, and their proceedings, of which aſſembly knowing him to be a member, Mr Croſs had not only ſpoke with intemperate freedom, but with the utmoſt virulence and contempt. After this controverſy had been carried on for ſome time in this manner, by which our author was conſtrained to bend his thoughts, particularly to the compariſon between the old and new methods of philoſophiſing, the jejune dryneſs of the former, and the prolific vigour of the latter, he ſaw it would be no difficult buſineſs to draw up an entertaining and inſtructive account of modern improvements, and daily experience convinced him, that nothing could be more expedient or even neceſſary for the ſupport of his private character, vindicating the honour of the Royal Society, or affording proper information to the public.

(11) Wood's Athen. Oxon. Vol. II. col. 753.

[*I*] *As not to be met with in other hands.*] The title of this ſmall but valuable performance runs thus: PLUS ULTRA: or *The Progreſs and Advancement of* Knowledge *ſince the days of* Ariſtotle. *In an account of ſome of the moſt remarkable* late Improvements *of practical uſeful Learning to encourage* philoſophical Endeavours. *Occaſioned by a Conference with one of the Notional Way.* By Joſeph Glanvill. Lond. 1668. in 12mo. The *Imprimatur* is dated May 2. 1668. After his dedication to William (Pierce) Biſhop of Bath and Wells, and his preface to the Clergy of that dioceſe, we come to the work itſelf, which in the running title is called Modern Improvements of uſeful Knowledge, and is divided into eighteen chapters, though the whole is written by way of letter to a friend. He remarks at the very entrance of his work, that the two principal ways of promoting knowledge, are firſt, by enlarging the hiſtory of things, and ſecondly, by improving intercourſe; and in theſe reſpects this age hath great advantages from the improvements of Mathematics, particularly of Arithmetic, Algebra and Geometry, Aſtronomy, Optics and Geography. He then obſerves, that uſeful knowledge is aſſiſted by the inſtruments lately invented, as the teleſcope, microſcope, thermometer, barometer, and air-pump, and by the modern improvements of Natural Hiſtory. That the later ages have great advantages for ſpreading and communicating knowledge, particularly by printing, the compaſs, and the Royal Society. Our author ſhews the reaſons of the inſtitution of that Society, and their deſigns, and gives an account of what Mr Boyle had then done for the promotion of uſeful knowledge, and what he had by him not then publiſhed, and points out the reaſons for the world to expect greater things of the Royal Society.

He next ſhews the abſurdity of making compariſon between the advantages which Ariſtotle had for knowledge, and thoſe of later ages; and concludes with certain obſervations about the cenſure of Atheiſm applied to philoſophical men, and an apology for the Royal Society, and other generous Philoſophers; and with regard to himſelf, he gives us the following account: In his firſt education he was continually inſtructed into a religious and faſt adherence to every thing which he was taught, and a dread of diſſenting in the leaſt article. This diſcipline he underwent in his younger days, and thought very ſtrangely of thoſe who believe any thing different from the opinions of their inſtructors. But advancing in years, and coming to a freer exerciſe of his own mind, he began to make reflexions upon the vaſt diverſity and variety of apprehenſions and religions in the world. He conſidered, that they were all as confident in their way, as he was in that wherein he was inſtructed; and the greateſt part had nothing but their education for their inducement. He thought how eaſy we are in our firſt age, and that the children muſt believe; yet men, eſpecially thoſe bred in the way of ſtudy, muſt try. He conſidered what he ſhould firſt adviſe an Heathen or Mahometan to do, who had been brought up to idolatry and fables, and upon the conſultation with himſelf concluded, that it ſhould be to look about him, and to examine other religions, regarding his own with the ſame eye of indifferency and ſuſpenſion, as if he had never been born under that faith, which was a thing extrinſic and accidental, and therefore not fit to make an argument to engage a reaſonable belief; and when he had ſo thought, he turned the tables, and took the counſel himſelf. He therefore bent his chief ſtudies and endeavours to know the truth of the Chriſtian Faith; and after the foundations laid in the ſettling the grand article, the Being of a God, and the conſequent doctrines of a Natural Theology, he ſat down to enquire about the authority of the holy Scripture; not that he poſitively doubted or diſtruſted their veracity, but that he might have a firm bottom, and be able to give an account of his Faith and Hope. In his enquiry the firſt diſcourſes he met with on the ſubject did not at all ſatisfy, but ſeemed weak and greatly obnoxious. But in the progreſs of his ſearch, he lighted upon thoſe grounds which, I thank God, ſays he, quieted my mind, and gave me the moſt demonſtrative aſſurance that the nature of the thing could bear, of the truth and certainty of thoſe ſacred writings, which undoubtedly contain the fulleſt diſcoveries of the divine wiſdom and perfections, which I infinitely admire, and ſhall eternally adore that goodneſs that bleſſed the ſons of men with ſuch clear diſcoveries of his will. And though I perceive that the follies and ſuperſtitions of ſects, who have the holy oracles always in their mouths, and preſs them for the ſervice of their conceits, have prejudiced ſome of the pretenders to reaſon againſt them; yet this I ſee, that the wiſer, freer, better, and more reaſonable any man is, the greater ſtill is his veneration of thoſe holy records, and the reliſh of them increaſeth with our improvements in virtue and goodneſs. The very learned Morhoff cenſures this book, and in doing it ſays ſome very coarſe things of this nation, which however is the leſs wonderful

eminent men, as well in point of knowledge as rank; from this excellent performance, raiſed the reſentment of his adverſaries to a very high degree, which they diſcovered in ſome railing and abuſive pieces (*e*), to which Mr Glanvill replied with great vehemence and ſpirit, but at the ſame time intermixed a little too much of that kind of language by which he had been provoked (*f*); which however had in ſome meaſure its effect, and might perhaps contribute to his being leſs diſturbed afterwards (*g*) [*K*]. His credit was now ſo thoroughly eſtabliſhed, that he was frequently called upon to preach before numerous aſſemblies, and on many ſolemn occaſions. Amongſt theſe one was at a viſitation of the dioceſe, and his diſcourſe at that time on the harmony between Religion and Reaſon was not only exactly ſuitable to the ſeaſon and the audience, but in itſelf ſo perfectly adapted to that weighty and delicate ſubject, as to meet with general approbation (*b*) [*L*]. He was

(*e*) See Stubbe's Letters to Mr Boyle.

(*f*) Athen. Oxon. Vol. ii. col. 562.

(*b*) Prince's Worthies of Devon. p. 351.

wonderful when we conſider, that from his own words it appears he had never ſeen it, but took the character of it from Stubbe's anſwer, and Cauſabon's epiſtle, which led him to believe, that Mr Glanvill had ſpoken diſreſpectfully of all ages and all nations but his own; whereas nothing can be more remote from the ſcope and tendency of his book, which differs very little from thoſe of his former treatiſes that Morhoff had ſeen, read, and commended (12).

(12) Polyhiſtor. literar.

[*K*] *To his being leſs diſturbed afterwards.*] In ſome chapters of the book mentioned in the preceding note, our author has treated the old Somerſetſhire Vicar with a degree of raillery, which however it might pleaſe the bulk of his readers, muſt naturally give him who was the ſubject of it much uneaſineſs. Mr Croſs thereupon ſet pen to paper, and wrote not ſo much a defence of his own ſentiments, as a reply to thoſe railleries; but the preſs being at that time under a licence, it was, upon peruſal, rejected by ſuch as had that power committed to them, both at Oxford and at London; and this, as our author ſays, for it's incomparable railing and impertinence. Mr Glanvill notwithſtanding, by his intereſt, procuring an account of the contents of it, ſent it in a private letter to Dr Ingelo; which letter afterwards coming into a friend's hands in London, was printed at London, and called the Chew Gazette; but there were not 100 copies of it, and thoſe all given into private hands. In this letter Mr Glanvill preſented a collection of ſome of the ſcurrilous names which Mr Croſs had called him, recited about ſixteen of his groſs falſhoods, diſcovered the contemptible impertinency of the book, and gave a ſpecimen of the learning which Mr Croſs ſhewed in ſchool-ſcraps, little ends of verſe, and children's phraſes, which are, ſays our author, all the reading he diſcovers. Theſe things are in brief repreſented in the Gazette, and much more largely in a Latin account of his performance, which I have ready by me. After this letter was abroad, Mr Croſs wrote ballads againſt our author, and engaged Mr Henry Stubbe, the Phyſician of Warwick, in his defence, who publiſhed a book intituled,

The Plus Ultra *reduced to a* Non-Plus: *or a* Specimen *of ſome* Animadverſions *upon the* Plus Ultra *of Mr* Joſeph Glanvill; *with divers enquiries made about ſeveral matters.* Lond. 1670. 4to.

This occaſioned our author to publiſh

A Prefatory Anſwer *to Mr* Henry Stubbe, *the* Doctor *of* Warwick. *Wherein the malignity of his temper, the hypocriſy of his pretences, the falſhood of his reports, and the impertinency of his arguings and quotations, in his animadverſions on* Plus Ultra, *are diſcovered.* By Joſ. Glanvill. Lond. 1671. 12mo. This piece is addreſſed to his much honoured friend Francis Godolphin, Eſq;

Upon this Mr Stubbe wrote *A Preface againſt* Eccbolius Glanvill, *Fellow of the Royal Society*, ſubjoined to his *Reply unto a* Letter *written to Mr* Henry Stubbe, *in defence of the* Hiſtory *of the* Royal Society. Oxford, 1671. 4to.

He fell upon him likewiſe in his *Epiſtolary Diſcourſe concerning* Phlebotomy, *in oppoſition to* George Thomſon, *Pſeudo-Chymiſt, a pretended* Diſciple *to the Lord* Verulam. Lond. 1671. 4to.

Mr Glanvill immediately publiſhed *A farther Diſcovery of Mr* Stubbe, *in a brief reply to the laſt pamphlet againſt* Joſeph Glanvill. Lond. 1671. 8vo. To this tract is ſubjoined *Ad Clerum Somerſetenſem Epiſtola* ΠΡΟΣΦΩΝΗΣΙΣ.

Dr Meric Cauſabon alſo made ſome reflections upon our author's *Plus Ultra*, in a *Letter* to *Peter du Moulin*, D. D &c. *concerning Natural and Experimental Philoſophy, and ſome books lately ſet out about it.* Cambridge, 1669. 4to.

In this letter Dr Cauſabon vindicates Ariſtotle from the imputations thrown upon him by Mr Glanvill, who he obſerves doth not want words to ſet out his matter to the beſt advantage; and remarks, that whereas a long inventory is given by our author of things lately diſcovered that were not known to the Antients, it would have been the part of an impartial man to have told us at the ſame time, that we have loſt ſome things, alſo known to the Antients, and what they are, which happily might deſerve as much reſpect, ſo much at leaſt, as not to be paſſed in ſilence. Many ſuch things, beſides what is collected by Pancirollus, in a treatiſe of that argument, have been obſerved by more than one, Phyſicians and others, all which I cannot call to mind ſuddenly. But after all theſe, and many other reflections of the ſame kind, Cauſabon, who was a man of great candour, and conſiderable knowledge, at the cloſe of his letter delivers himſelf thus: 'What I 'had to except againſt the book you brought me, 'I have told you; I muſt now thank you for it: for 'in very truth, his Divinity at the end, which is ſome-'what myſtical, (I hope I do not underſtand it) and 'thoſe two particulars, his contempt of Ariſtotle, and 'his cenſuring all other learning beſides Experimental 'Philoſophy, and what tendeth to it, as uſeleſs and 'mere wrangling, and diſputing excepted; I have read 'the reſt, wherein he doth give us an exact account of 'late diſcoveries, with much pleaſure. For tho' I think 'many ages may paſs before the uſe of many of thoſe 'particulars are known, yet Ariſtotle hath taught me '(and he proves it excellently) that nothing can be in na-'ture ſo mean, or ſo vile, but deſerves to be taken no-'tice of, and will afford to an ingenious ſpeculative man 'matter of pleaſure and delight.' Mr Glanvill mentions this piece of Dr Cauſabon at the end of the preface to his Prefatory Anſwer to Mr Henry Stubbe, and tells us, that he had anſwered the ſtrictures of that reverend man in a particular diſcourſe, *which I think*, ſays he, *to publiſh next, when I reckon with Mr* Stubbe.

But notwithſtanding our author never publiſhed any thing upon this head; only ſome years afterwards he judged it expedient to give this account of his conduct, 'The learned Dr Meric Cauſabon writ reflections on this 'eſſay in a letter to Dr Peter du Moulin, who it 'ſeems had preſented it to him. They were printed 'in the year 1669, and my anſwers ſoon after ready: 'but conſidering that the Doctor allowed all that 'which was my main deſign, and only oppoſed his own 'miſtakes and ſuſpicions, I thought fit to ſuppreſs my 'reply, and was the rather ſilent, becauſe not willing 'to appear in a controverſy with a perſon of fame and 'learning, who had treated me with ſo much civility, 'and in a way ſo different from that of my other aſ-'ſailants.'

[*L*] *To meet with general approbation.*] The title of this piece at large is conceived in the following terms:

ΛΟΓΟΥ ΘΡΗΚΕΙΑ,: or *a ſeaſonable* Recommendation *and* Defence *of* Reaſon *in the affairs of* Religion, *againſt* Infidelity, Scepticiſm, *and* Fanaticiſm *of all ſorts.* Lond. 1670. 4to. It is a diſcourſe on Rom. xii. the latter part of verſe 1, addreſſed *ad Clerum:*

Our

was encouraged from thence to print it thrice; at firſt without his name, afterwards added to a piece which he owned, and a third time in another form. His ſucceſs in this performance encouraged him to proceed ſomewhat farther in the ſame track, and as he found that there ſtill remained an unaccountable animoſity in the boſoms of ſome learned and good men, againſt the new methods propoſed for the advancement of uſeful knowledge, from

Our author begins with obſerving, that there is nothing which hath done ſo much miſchief to Chriſtianity, as the diſparagement of reaſon, under pretence of reſpect and favour to religion; ſince hereby the very foundations of the Chriſtian Faith have been undermined, and the world prepared for Atheiſm. Whereas, to repreſent the fair agreement that is between reaſon and religion, is the moſt ſeaſonable ſervice that can be done unto both; ſince hereby religion will be reſcued from the impious accuſation of it's being groundleſs and imaginary, and reaſon alſo defended againſt the unjuſt charge of thoſe that would make this beam of God prophane and irreligious. Our author's deſign is to ſhew, that religion is a reaſonable thing; in treating of which propoſition, he 1. States what he means by religion, and what by reaſon. 2. Demonſtrates their harmony and agreement. 3. Diſables the main objections which are alledged againſt the uſe of reaſon in the affairs of Faith. 4. Improves all by ſome inferences and advices.

With regard to the firſt particular he obſerves, that the name of religion ſignifies binding, and ſo imports duty, and all duty is compriſed under theſe two generals, worſhip and virtue. Worſhip comprehends all our duties to God; virtue all thoſe which relate to our neighbour, or ourſelves. Religion then primarily conſiſts in theſe. But duty cannot be performed without knowledge; and ſome principles there muſt be which muſt direct theſe practices; and thoſe which diſcover and direct them in thoſe actions of duty are called principles of reaſon. Theſe are of two ſorts; ſome are, 1. Fundamental and eſſential, others acceſſory and aſſiſting. Fundamental principles are ſuch as are ſuppoſed to the duties of religion, one or more, and ſuch as are abſolutely neceſſary to the performance of them reſpectively. Of this ſort our author mentions four. 1. That there is a God of infinite perfection. 2. That we are ſinners, and expoſed to his diſpleaſure. This is neceſſary to confeſſion of ſins and repentance; parts of worſhip. 3. That God is our maker, and the author of all our bleſſings. This is neceſſary to the duties of prayer, praiſe, and adoration. 4. That there is moral good and evil; without this there can be no charity, humility, juſtice, purity, or the reſt. The acceſſory and aſſiſting principles are, 1. That God will pardon us if we repent. 2. That he will aſſiſt us if we endeavour. 3. That he will accept of ſervices that are imperfect, if they are ſincere. 4. That he will reward or puniſh in another world, according to what we have done in this.

This Mr Glanvill eſteems to be the ſum of religion in general, and that Chriſtianity takes in all thoſe duties, and all the principles, advancing the duties to nobler meaſures, and encouraging them by new motives and aſſiſtances, and ſuperadding two other inſtances, Baptiſm and the Lord's Supper. And for the principles, it confirms thoſe of natural religion, and explains them further, and diſcovers ſome few new ones. And all theſe, ſays he, both of the former and latter ſort, are contained in the Creed. Here are all the fundamentals of religion, and the main aſſiſting principles alſo. And I call nothing elſe religion but plain duties, and theſe acknowledged principles, and though our Church requires our aſſent to more propoſitions, yet thoſe are only articles of communion, not doctrines abſolutely neceſſary to ſalvation. And if we go beyond the Creed for the eſſentials of faith, who can tell where we ſhall ſtop? The ſum of religion primarily is duty, and duty is all that which God hath commanded to be done by his word or our reaſons, and we have the ſubſtance of theſe in the Commandments. Religion alſo, in a ſecondary ſenſe, conſiſts in ſome principles relating to the worſhip of God and of his Son, in the ways of devout and virtuous living, and theſe are compriſed in that ſummary of belief called the Apoſtles Creed. This I take to be religion; and this religion I ſhall prove to be reaſonable. But I cannot undertake for all the opinions ſome men are pleaſed to call orthodox; nor for all thoſe that by many private perſons, and ſome Churches, are counted eſſential articles of faith and ſalvation.

Our author then proceeds to fix the proper notion of reaſon, which is ſometimes taken for reaſon in the faculty, which is the underſtanding, and at other times for reaſon in the object, which conſiſts in thoſe principles and concluſions by which the underſtanding is informed. This latter is meant in the diſpute concerning the agreement or diſagreement of reaſon and religion. Having premiſed this, our author goes on to his ſecond point, to ſhew that religion is reaſonable; which implies two things, viz. That reaſon is a friend to religion, and that religion is ſo to reaſon. From theſe two reſults their correſpondence and agreement. Under the firſt branch he obſerves, that with regard to the principles of religion, which are called Faith, reaſon greatly befriends them. 1. By proving ſome of thoſe principles. 2. By defending all. Having ſhewn how ſerviceable reaſon is to religion, he next proves, that religion befriends reaſon; for which purpoſe he offers ſome teſtimonies of Scripture in which God himſelf, and Chriſt and his apoſtles, own and acknowledge reaſon. From this diſcourſe he draws the following inferences. 1. Reaſon is certain and infallible. 2. Reaſon is, in a ſenſe, the word of God. 3. The belief of our reaſon is an exerciſe of faith, and faith is an act of reaſon. 4. No principle of reaſon contradicts any article of faith. 5. When any thing is pretended from reaſon againſt any article of faith, we ought not to cut the knot by denying reaſon, but endeavour to untie it by anſwering the argument; and it is certain it may be fairly anſwered. 6. When any thing is offered us for an article of faith that ſeems to contradict reaſon, we ought to ſee that there be good cauſe to believe that this is divinely revealed, and in the ſenſe propounded. 7. There is nothing that God hath revealed to oblige our faith, but he hath given us reaſon to believe that he hath revealed it. 8. A man may hold an erroneous opinion from a miſtaken ſenſe of Scripture, and deny what is the truth of the propoſition, and what is the right meaning of the text, and yet not err in faith. 9. In ſearching after the ſenſe of Scripture, we ought to conſult the principles of reaſon as we do other Scriptures. 10. The eſſentials of religion are ſo plainly revealed, that no man can miſs them that hath not a mighty corrupt biaſs in his will and affections to infatuate and blind his underſtanding.

Theſe are ſome propoſitions, ſays Mr Glanvill, that follow from my diſcourſe, and from one another. The better they are conſidered, the more their force will be perceived; and I think they may ſerve for many very conſiderable purpoſes of religion, charity, and the peace of mankind. He then addreſſes himſelf to his brethren of the clergy in the following reflections. 1. To diſclaim reaſon as an enemy to religion, tends to the introduction of Atheiſm, Infidelity, and Scepticiſm, and hath already brought in a flood of theſe upon us. 2. The denial of reaſon in religion, hath been the principal engine that heretics and enthuſiaſts have uſed againſt the faith, and that which lays us open to infinite follies and impoſtures. 3. By the ſame way great advantage is given to the Church of Rome; againſt whom, if we argue from reaſon, it would not only be diſingenuous, but ridiculous, to diſclaim the authority of reaſon, if urged on her behalf againſt us. On the whole he concludes clearly, that without adhering to reaſon, and acknowledging it in a certain ſenſe for our great guide in matters of religion, there can be no ſecurity againſt the tyranny of eccleſiaſtical power; or which late experience had ſhewn to be a worſe tyranny, that of fanatic ſpirits, men carried away with the fervour of their imaginations, and who were in the right to deſpiſe and declaim againſt reaſon, which they could not either uſe in their own cauſe, or ſuffer to be urged in behalf of any other.

from an apprehenſion that they might be dangerous to concerns of a higher nature, he determined, that as he had ſhewn the connexion between Reaſon and Religion, he would likewiſe explain the ſtrict correſpondence between Religion and the new Philoſophy (*i*). This he performed with equal ſuccinctneſs and perſpicuity, and merited thereby the thanks of the wiſeſt and beſt men in the nation, as well as the particular acknowledgments of the members of the Royal Society, in ſupport of whoſe laborious and laudable endeavours this treatiſe was chiefly written (*k*) [*M*]. He was in other reſpects far from being a lazy or uſeleſs member of that learned Society (*l*); but, on the contrary, contributed chearfully to the maintenance of that reputation, which from their vigorous efforts to promote a uſeful and practical knowledge of the works of nature and art, had ſo juſtly eſtabliſhed their reputation at home and abroad (*m*) [*N*]. In July 1672, he exchanged the vicarage of Frome

(*m*) Philoſophical Tranſactions, No. 28, 39, 49

[*M*] *This treatiſe was chiefly written*] The title of this treatiſe at large runs thus:

PHILOSOPHIA PIA: or, *A Diſcourſe of the religious temper and tendencies of the* Experimental Philoſophy *which is profeſſed by the* Royal Society. Lond. 1671. 8vo.

This ſuccinct but very ſolid performance he addreſſed to that very learned prelate Dr Seth Ward, then Biſhop of Saliſbury. In this treatiſe he undertakes to diſcuſs theſe four points. That God is to be praiſed for his works. That his works are to be ſtudied by thoſe that would praiſe him for them. That the ſtudy of nature and God's work is very ſerviceable to religion. That the miniſters and profeſſors of religion ought not to diſcourage, but promote, the knowledge of nature and the works of it's author. In diſcuſſing the firſt point he ſhews, that what is called the religion of nature, ariſes from the conſideration of the works of God, and conſiſts chiefly in paying him that homage which unbiaſſed reaſon will teach us is due to a Being of ſuch infinite wiſdom and goodneſs as is expreſſed in them. He farther ſhews, that in ſcripture God himſelf inſiſts upon his works as demonſtrations of his attributes; that holy men, inſpired by him, make theſe the topic of their hymns and praiſes, and that the ſabbath was ſet apart and hallowed for this very purpoſe, that men might have time to contemplate the works of God, and from thence be made ſenſible of their obligation to bleſs and fear him. As to the ſecond head, he remarks, that as this is our higheſt duty, ſo it claims our higheſt attention, that God is pleaſed with rational ſervice, and that it is impoſſible to praiſe him ſincerely, unleſs we do it ſenſibly, and from a thorough perſwaſion of the truth of thoſe praiſes we offer, which never can be had but from a ſteady and cloſe application to the ſtudy of his works. In reference to the third point, he clearly demonſtrates, that this ſtudy leads to the very perfection of religion, by obliging us to ſee and take notice of the Almighty in every thing that we behold or enjoy; and if, ſays he, this knowledge of nature be abuſed to different and contrary purpoſes, natural wiſdom is not in fault, but the perverſe will of him who turns this excellent inſtrument of religion upon itſelf. But that the knowledge of nature may be uſed to a nobler purpoſe, appears from the aſſiſtance that it affords againſt the capital enemies of religion, which are atheiſm, ſadduciſm, ſuperſtition, enthuſiaſm, and the humour of diſputing. He inſiſts at large upon each of theſe points, after which he paſſes to the fourth head, and upon that he remarks, that from what he has already proved, it is clear that the miniſters and profeſſors of religion ought to encourage what has a viſible tendency to ſupport it, and that it is a very great prejudice to ſuppoſe that they ſtray beyond the proper bounds of their function, whenever they bend their ſtudies towards Natural Philoſophy; whereas in truth it is a part, and a very valuable part, of Theology. He then anſwers two objections; the firſt grounded on St Paul's declaration, that he deſired to know nothing but Chriſt, and him crucified; he ſuggeſts that by nothing, muſt be underſtood in this place, nothing inconſiſtent with, or withdrawing the mind from, that important and neceſſary office; for otherwiſe, this would exclude all kind of ſcience, however innocent, however neceſſary; and taking in this diſtinction St Paul's declaration, does by no means extend to this point.

The ſecond objection is taken from the repeated cautions given by the ſame Apoſtle, againſt being led away by vain Philoſophy. To this he replies, that the caution is very juſt with reſpect to a notional, captious, and wrangling Philoſophy, which ſerves only to waſte time, to excite heats, and to draw mankind from the purſuit of truth; but has nothing to do with a prudent enquiry into the operations of nature, which muſt be attended with a conviction of the divine interpoſition in all things, ſince experiment is a kind of natural revelation, conducting thoſe who purſue it to the knowledge of truth and it's author; and therefore Natural Philoſophy is not that vain Philoſophy which the Apoſtle condemned. He adds, that by their progreſs in theſe ſtudies, men enlarge their faculties, purify their deſires, elevate their views, conceive humbly of themſelves, and reverently of him from whom they come, and in whoſe hands they are. His concluſion is thus; the ſtudy of God's works, joined with thoſe pious ſentiments they deſerve, is a kind of anticipation of Heaven; and next after the contemplations of his word, and the wonders of his mercy diſcovered in our redemption, it is one of the beſt and nobleſt employments, the moſt becoming a reaſonable creature, and ſuch a one as is taught by the moſt reaſonable and excellent religion in the world.

[*N*] *Their reputation at home and abroad.*] It frequently happens, that men of lively parts and happy abilities for writing, when materials are in their power, labour notwithſtanding under ſuch defects, in point of attention and application, as render it very unfit for ſuch long and ſerious enquiries, as are abſolutely requiſite towards promoting the views of an active ſociety, in procuring that kind of intelligence which can only increaſe the ſtock, or if I may be allowed the expreſſion, the capital of real merit. It is therefore very extraordinary to find in Mr Glanvill, the ſame ability and the ſame readineſs in one way as in the other; and it is certainly a piece of juſtice due to his memory, to ſet this in a clear and ſtrong light, and this the rather becauſe ſuch as have given us memoirs of him paſs it by, either from want of attention, or want of information. The proofs of what we have advanced lie in the Philoſophical Tranſactions of the Royal Society (13); from whence it appears, that he aſſiſted diligently in the execution of the moſt arduous ſervice on which he could be put by that learned body; that is, in anſwering clearly, cautiouſly, and circumſtantially, thoſe queries that were directed to him about the mines in Mendip-hills, and theſe alſo that reſpect the Bath; from which, becauſe they are very curious, we will make an extract in his own words, for the information and entertainment of the reader.

(13) Philoſophical Tranſactions of the Royal Society, No. xlix.

The country round this city is very hilly and uneven, but the hills lie in no order; they are generally rocky and ſteep from ſouth-weſt and by-weſt to north-and-by-north; the whole tract of the country, within five and ſeven miles, abounds with coal-mines, more or leſs. But there are no other conſiderable mines that I can hear of nearer than Mendip, which is ten miles hence, excepting ſome of lead, at Berry in Glouceſterſhire, which lies upon the north of this place about four or five miles diſtant.

The hills for the moſt part afford a free-ſtone, and on the north-weſt of Lanſdown, which has that ſituation to the town, and is juſt above it, the ſtones digged there are a ſort of hard ſtone, commonly called a lyas, blue and white, poliſhable.

The town and baths are of very great antiquity. Beſides what I find in very ancient chronicles to that purpoſe, one of our great antiquaries (Mr P.) aſſerts, that theſe baths were 800 years before Chriſt; which if ſo would

Frome for the rectory of Streat, with the chapel of Walton annexed, in Somerſetſhire, with Mr Richard Jenkins, M. A. (*n*). About the ſame time he was appointed one of the Chaplains in ordinary to King Charles the IId. (*o*). A perſon of honour and great fame, and for whoſe learning and univerſal accompliſhments our author profeſſes a high and juſt veneration, having preſſed him to reviſe and re-publiſh his diſcourſe on the uſefulneſs of Philoſophy, in the ſupport of true Religion, he took from thence an occaſion to review ſeveral other pieces of his, and together with one new diſcourſe, publiſhed them altogether in a volume, under the modeſt title of Eſſays; though in reality they might have been entituled his

(*n*) Athen. Oxon. Vol. II. col. 663.

(*o*) Prince's Worthies of Devon. p. 351.

would give occaſion to enquire, how conſiſtent with it that hypotheſis concerning the cauſe of the heat of theſe waters would be, which makes it to be the fermentation of minerals *in fieri*; and whether it be likely that the minerals through which theſe waters paſs, ſhould be in that ſtate of imperfection ſo many hundred years; and that the whole diſpoſed matter in thoſe places ſhould not be perfectly concreted in ſo great a tract of time. You doubtleſs know the other conjecture, which ſuppoſeth the cauſe of this heat to be, that two ſtreams having run through and imbibed certain ſorts of different minerals, meet at laſt, after they have been deeply impregnated, and mingle their liquors, from which commixture ariſes a great fermentation that cauſes heat; like as we ſee it is in vitriol and tartar, which, though ſeparately they are not hot, yet when mingled, beget an intenſe heat and ebullition between them. This ſeems to me a probable cauſe of the laſtingneſs of the heat of of theſe waters. But it is not my buſineſs to offer hypotheſes; therefore, craving pardon for this digreſſion, I proceed in my account.

It is affirmed here, that the town for the moſt part is built upon a quagmire, though the places all about it very firm ground. Some workmen that have been employed in digging, have found a mine ten feet deep without the north gate, the higheſt place of the town at ſeven. The earth between is a kind of rubbiſh, ſometimes they find pitching a man's length underground, and paſſages for the water to paſs; ſeven or or eight feet down they have met with oyſter ſhells.

The town and country circumjacent generally abound with cold ſprings; and in ſome places the hot and cold ariſe very near each other: in one place within two yards, and in others within eight or nine of the main baths.

The guides of the croſs bath inform me, that when there is a great weſt wind abroad, ſtanding by the ſprings they feel a cold air ariſing from beneath; if the wind be at eaſt, and the morning cloſe, with a little miſling rain, the croſs bath is ſo hot as ſcarce to be endured, when the King's and hot baths are colder than uſual. In other winds, let the weather be how it will, this bath is temperate. The ſprings that bubble moſt are coldeſt. The croſs bath fills in ſixteen hours, both in winter and ſummer, without any difference from heat or cold, floods or drought. That of the King's in twelve or fourteen. A man may better (ordinarily) endure four hours bathing in the croſs bath, than 1 ½ in the others. In the Queen's bath, which hath no ſprings of it's own, but comes all out of the King's, they have found under a flat ſtone, which upon occaſion was taken up, a tunnel and a yielding mud in and under it, into which they thruſt a pike, but could feel no bottom. In the King's bath there is a ſpring ſo hot that it is ſcarce ſufferable, ſo that they are fain to turn much of it away for fear of inflaming the bath. The hotteſt ſpring will not harden an egg.

The bath water does not paſs through the body like other mineral waters, but if you put in ſalt it purgeth preſently. Upon ſettlement it affords a black mud, uſeful in aches, applied by way of cataplaſm, to ſome more ſucceſsful than the very waters. The like it depoſits upon diſtillation, and no other. Nor hath any more been diſcovered, upon all the chymical examinations that have come to our knowledge. One Dr Aſtendorff found that the colour of the ſalt drawn from the King's and hot bath was yellow; that which was extracted from the croſs bath white. This Doctor concluded, that the croſs bath had more of allum and nitre than the hotter baths, which abound more with ſulphur. And yet that bath looſens ſhrunk ſinews, by which it ſhould ſeem it abounds not much with allum. It is harſher to the taſte than the other baths, and ſoaks the hands more. A man cannot drink half the quantity of ſtrong drinks in the bath that he can out of it; but if he hath drank before to exceſs, it allays much, and is a great refreſhment to the body. The bath provoketh urine.

The bath guides live to a very great age, ſometimes to near 100 years, ordinarily, if they are temperate, to 70. There are two at this time above 80, a man and his wife. In the croſs bath the guides have obſerved a certain black fly with ſcaled wings in the form of a lady cow, but ſomewhat bigger. They ſay it ſhoots quick in the water, and ſometimes bites. It lives under the water, and is never found but in very hot weather: they ſuppoſe it comes up with the ſprings; it is not to be ſeen elſewhere. I had one of thoſe inſects ſent me laſt year, which I preſerved 'till I came to London, intending to have given it you, but I know not how I loſt it there.

The croſs bath eats out ſilver exceedingly; and I am told, that a ſhilling, in a week's time, hath been ſo eaten by it, that it might be wound about one's finger. The baths agree (as the vulgar ſpeaks) with braſs, but not with iron; for they will eat out a ring of this metal in ſeven years, when braſs rings ſeem to receive no prejudice at all from it.

When women have waſhed their hair with the mixture of beaten eggs and oatmeal, this will poiſon the bath ſo as to beget a moſt noiſome ſmell, caſting a ſea-green on the water, which otherwiſe is very pure and limpid; this will taint the very walls, and there is no cleanſing of it but by drawing the bath.

In ſummer the baths purge up a green ſcum on the top, but in winter never; but then leave a yellow on the walls. The walls that keep in the hot ſprings are very deep ſet and large; 10 feet thick and 14 deep from the level of the ſtreet. The cement of the wall is tallow, clay, lime, and beaten bricks In the year 1659 the hot bath (a bath particularly ſo called, of equal heat with the King's bath) was much impaired by the breaking out of a ſpring, which the workmen at laſt found again and reſtored. In digging they came to a firm foundation of factitious matter, which had holes in it like a pumice-ſtone, through which the water played, ſo that 'tis like the ſprings are brought together by art; which probably was the necromancy the people of ancient times believed and reported to have contrived and made theſe baths; as in a very ancient manuſcript chronicle I find theſe words, *When* Lud Hidibras *was dead*, Bladud, *his ſon, a great Nygromancer, (ſo it is there writ) was made King, and he made the wonder of the hot bath by his Nygromancy, and he reigned 21 years, and after he died, and lies at the new* Troy. And in another old chronicle it is ſaid, that King Bladud ſent to Athens for Necromancers to effect this great buſineſs, who it is like were no other than cunning artificers, well ſkilled in architecture and mechanics. It hath been obſerved, that leaves like thoſe of olives come ſometimes out of the pump of the hot bath.

What our author barely hints, as to the artificial conſtruction of theſe baths by the Britiſh King Bladud, who is reported to have reigned here before the coming of Cæſar; and that not by the help of Magic, but of an art far ſuperior, that of genuine Philoſophy, which, as Lord Bacon long ago obſerved, can only enable man to know and to command nature, may poſſibly deſerve the reader's attention; and perhaps it will not diſpleaſe him, if we refer to a very ancient poetical fragment, which the ingenious Mr Selden has preſerved from oblivion, and which (under the appearance of ſimple credulity) may very poſſibly conceal a greater ſecret than has been hitherto ſuſpected by moſt of it's peruſers (14).

(14) Commentary on Drayton's Poly-Olbion, under the Title of Illuſtrations on the third Song.

his Philoſophical Works(*p*), for theſe treatiſes ought to be regarded as his laſt and moſt mature conſiderations on the ſeveral uſeful and important ſubjects, which in the courſe of fifteen years had employed his thoughts, and exerciſed his pen (*q*); and therefore of theſe, as is very requiſite, we ſhall give a diſtinct and comprehenſive account at the bottom of the page [*O*]. In the ſame year that this treatiſe came abroad, which was 1676, he loſt his old antagoniſt Dr Henry Stubbe; who coming to attend ſome of his patients at Bath, and going from thence on a viſit to Briſtol, had the misfortune in his return, to fall from his horſe into a ſhallow river, where he was drowned; and his corps being afterwards interred in the great church at Bath, near the tomb of Biſhop Mountague, Mr Glanvill did honour to his memory in a funeral ſermon which he preached upon that occaſion (*r*). June 22. 1678, our author was inſtalled Prebendary of Worceſter, in the room of Mr Henry Greiſly (*s*), then lately deceaſed, which it is ſaid was procured by the intereſt of his patron and his wife's relation, the Marquis of Worceſter (*t*); but might as probably proceed from the kindneſs of that pious and worthy prelate, Dr James Fleetwood, then Biſhop of this dioceſe (*u*). This conjecture is the more reaſonable, ſince a little before he attained this which was his laſt preferment, he had publiſhed a diſcourſe concerning preaching, which was generally well received, and underſtood to be equally ſeaſonable and uſeful in diſſwading young gentlemen from that immethodical and enthuſiaſtical manner of haranguing, which had been the vice of the preceding times, and that affectation of wit and fine ſpeaking, which began to be faſhionable in thoſe times; inſtead of which, he recommended a plain and practical purſuit of the moral duties recommended in the Sacred Writings, as the true eloquence

(*p*) See the Preface to thoſe Eſſays.

[*O*] *At the bottom of the page.*] The title at large, if we may ſo ſpeak of a very ſhort one, runs thus:

ESSAYS *on ſeveral important ſubjects in* Philoſophy *and* Religion. *By* Joſeph Glanvill, *Chaplain in ordinary to his Majeſty, and Fellow of the* Royal Society. Lond. 1676. 4to.

To this work is prefixed a very polite dedication to Henry Marquis and Earl of Worceſter, in which he acknowledges his own obligations fairly, and at the ſame time applauds his patron highly for his generoſity, loyalty, hoſpitality, perfect œconomy of his houſhold, and ſincere regard for piety and religion, virtues ſtrange in other places, but which ſeem to have been, and what is yet more ſingular, are ſtill hereditary in the illuſtrious houſe of Beaufort. There follows next a ſhort preface, in which the author's reaſons for writing are aſſigned, and ſome ſhort account given of each eſſay. There are *ſeven* in all, the titles of which, for the reaſons that are aſſigned in the text, we will ſet down with a very conciſe view of their contents. I. *Againſt* Confidence *in* Philoſophy, *and matters of* Speculation. p. 33. The reaſon of putting the pages is to ſhew the ſize of each diſcourſe; for though they are digeſted into a volume, yet they are ſo printed as that they might have been publiſhed ſeparate. This firſt eſſay comprehends the ſubſtance of his Vanity of Dogmatizing, and of his Scepcis Scientifica, but diſpoſed into a better method, the ſtrain of reaſoning cloſer, the language more correct, and, in ſhort, the whole diſcourſe very much improved, and at the ſame time not a little curtailed. II. *Of* Scepticiſm *and* Certainty, *in a ſhort* Reply *to the learned Mr* Thomas White. p. 31. This is digeſted into the form of a letter to a friend, which not only comprehends whatever is inſtructive or material in the Defence which he publiſhed againſt Mr White's Sciri, but alſo a great deal of new matter brought into a narrow compaſs, which ſerves to illuſtrate the ſubject, and to ſatisfy without cloying the judicious and inquiſitive peruſer. III. *Modern Improvements*, or *uſeful Knowledge*. p. 56. This comprehends the ſubſtance of his *Plus Ultra*, freed from thoſe digreſſions and altercations which were of very little conſequence to the public, and the exciſion plainly prove the ſincerity of the author in the declaration made by him in the preface, that he engaged in quarrels very unwillingly, and quitted them as ſoon as he could. As it ſtands in this collection, there are very few pieces in our language that can enter into competition with it, with reſpect either to the pleaſure that it gives in the peruſal, or the improvement that may be drawn from it upon reflection. IV. *The* Uſefulneſs *of* real Philoſophy *to* Religion. p. 43. This takes in the ſubſtance of the treatiſe which he entitled *Philoſophia Pia*, which he was commanded by one of his patrons to reprint, and which put him upon reviſing his other pieces. V. *The* Agreement *of* Reaſon *and* Religion. p. 28. As to this, the author ſpeaks thus in his preface: It contains the ſubſtance of many thoughts and anxieties about that important matter in a little compaſs. My chief care was to ſtate and repreſent the whole affair clearly, which I think I have done. The ſubject hath been written on by divers ſince, who ſome of them have perplexed the matter again; others have added no one thought. They have written a great deal, I wiſh I could ſay to purpoſe. I know this freedom is capable of a wrong interpretation, but I am urged to it by a little vexation, that the pretenders to ſuch a ſubject ſhould afford me no advantage for the improving my conceptions on it. VI. *Againſt* Modern Sadduciſm *in the matter of* Witches *and* Apparitions. p. 61. Though this is the longeſt of all his performances, yet it is reduced as well as the reſt, in compariſon of the ſize in which it before appeared. It is alſo very conſiderably improved, inſomuch that even thoſe who differ widely from our author's opinion, cannot help owning, that he has ſet it in the faireſt light poſſible, and done as much towards throwing light upon ſo obſcure, ſo embarraſſed, and ſo diſagreeable a ſubject, as could well be expected, and even more. However, when it had again paſſed his pen, and was uſhered into the world, though ſtill under his name, yet with all the helps that could be given it by his friend Mr Henry More, the famous Bayle could not help expreſſing his regret, that men of ſo great parts ſhould employ their time, and beſtow ſuch incredible pains, upon a topic that could never procure any tolerable returns of approbation or applauſe. VII. *Antifanatic* Theology *and Free* Philoſophy. p. 58. This piece is entirely new, and is a kind of ſupplement to the philoſophical romance of the celebrated Lord Bacon. In it our author takes occaſion to cenſure, and even to expoſe the follies, abſurdities, and outrages, that followed from the prevailing ſpirit of Fanaticiſm during the Uſurpation. He has indeed painted them with great freedom, and with a boldneſs which ſhews him to have been very able in that kind of writing. He ſays, that the only good proceeding from this heterogeneous mixture of miſchiefs, was that ſalutary fermentation by which the minds of mankind were freed from their former prejudices, and wonderfully diſpoſed to receive that admirable ſettlement in Church and State once more, that had been ſo wantonly deſtroyed. This deſerves the more conſideration, as our author was a very ſincere, and even a zealous Proteſtant, tho' not at all inclined to ſeverity and perſecution. He had felt the inconveniencies of Enthuſiaſm, and he was very apprehenſive of thoſe evils that naturally fill up the train of ſuperſtition. In this diſcourſe he warns the reader againſt both, and points out to him the only remedy, which in his judgment is the adhering firmly to a Church equally rational in her doctrines, and moderate in her diſcipline.

[*P*] *As*

quence of the pulpit (w) [P]. He was himſelf a great preacher in this way, as appeared from many of his diſcourſes printed in his life-time, with other pathetical and eloquent exhortations to a religious and virtuous life (x), as well as other pieces that were made public after his deceaſe, of which ſomewhat ſhall be ſaid in the notes (y) [Q]. His laſt work, which hardly came from the preſs while he was yet living, expreſſed his ſincere and even zealous affection for the Proteſtant Religion, without any view to preferment, or temporal intereſts; ſince it is thought he would have been queſtioned if he had lived for that treatiſe, which without queſtion aroſe from the overflowings of his heart, and his pious concern for that Church, to the ſervice of which he had ſo long dedicated his labours. This performance however added much to his reputation, and made his loſs ſo much the more regretted (z) [R]. He was attacked in the autumn of the year 1680 by a fever, into which

(y) Prince's Worthies of Devon. p. 353.

(z) Athen. Oxon. Vol. II. col. 667.

[P] *As the true eloquence of the pulpit.*] The title of this little piece is conceived in the following terms: *An* Eſſay *concerning* Preaching; *written for the direction of a* young Divine, *and uſeful alſo for the* People, *in order to profitable hearing.* Lond 1678. in 12mo. Our author's name is not prefixed to it The imprimatur is dated Dec. 6. 1677.

This eſſay is addreſſed to Mr Charles Fountain. Mr Glanvill tells us, that he purpoſely kept himſelf from reading any other writers on this ſubject, that he might freely without biaſs give his own apprehenſions; but that ſince the papers were written and tranſcribed, he had looked over two or three of the chief of thoſe diſcourſes, and was exceedingly encouraged, by finding that his conceptions as to the main are not only conſiſtent but very agreeable with theirs. At the end of this eſſay, is a letter to a Member of Parliament concerning the ſtate of miniſters in corporations and great towns With this eſſay is likewiſe printed *a ſeaſonable* Defence *of* Preaching, *and the* plain way *of it.* Written by way of dialogue.

[Q] *Somewhat ſhall be ſaid in the notes.*] We are here to mention the titles of our author's ſmaller works, which conſiſted of

Several ſermons, as *A* Faſt *ſermon on King* Charles *the* Firſt's *Martyrdom*, on Rom. xii. 2. Lond. 1667. Catholic Charity *recommended, in a* ſermon *before the Lord Mayor of* London, on 1 Pet part 1. part of the 22d verſe, in order to the abating the animoſities among Chriſtians that have been occaſioned by differences in religion. Lond. 1669. in 4to. *An earneſt* Invitation *to the* Lord's Supper. Lond. 1673, 1674, 1677, in 12mo. *Seaſonable* Reflections *and* Diſcourſes, *in order to the conviction and cure of the* ſcoffing Infidelity *of a degenerate age.* Lond. 1676. 8vo. This conſiſts of four ſermons, viz. 1. *The* Sin *and* Danger *of* ſcoffing *at* Religion, on 2 Pet. iii. 3. 2. *The* Church's Contempts *from* profane *and* fanatic enemies, on Pſalm cxxiii. 3, 4. 3. Moral Evidence *of a* Life *to come*, on Matt. xxii. 32. 4. *The* Serious Conſiderations *of a future* Judgment, on Acts xvii. 31. He likewiſe publiſhed two diſcourſes, viz. *A* Diſcourſe *of* Truth, *by Dr* George Ruſt, *Biſhop of* Dromore *in* Ireland. And *The* Way *to* Happineſs *and* Salvation. Lond. 1677. 12mo. Theſe diſcourſes were printed in 1683 in 8vo. with this title, Two choice and uſeful Treatiſes; the one *Lux Orientalis*, &c. the other a *Diſcourſe of Truth.* By the late Rev. Dr George Ruſt, Lord Biſhop of Dromore in Ireland, with annotations on them by Dr Henry More. Theſe annotations are full as large as the diſcourſes themſelves. The title to the latter annotations on Dr Ruſt's diſcourſe runs thus: Annotations on the *Diſcourſe* of *Truth*; in which is inſerted by way of digreſſion, a brief Return to Mr Baxter's Reply, which he calls *A* Placid Collation *with the learned Dr* Henry More, *occaſioned by the Doctor's* Anſwer *to a* Letter *of the learned* Philothoriſt. *Wherunto is annexed a devotional* Hymn, *tranſlated for the uſe of the ſincere* Lovers *of* true Piety. Dr Ruſt's diſcourſe of Truth was afterwards printed in his Remains, collected and publiſhed by Henry Hallywell. Lond. 1686. 4to. Letters *to the Dutcheſs of* Newcaſtle. *A* Letter *to the Earl of* Briſtol, *with another to a* Friend, *of the* Uſefulneſs *of the* univerſal Character, *with the way of learning it.* This was never printed (15). Some *Diſcourſes, Sermons*, and *Remains.* Lond. 1681. 4to. with our author's picture before them. Theſe ſermons, which were in number eleven, were moſt of them printed before ſeparately. Dr Anthony Horneck was the editor of this collection, and placed before it a character of the author, the more to be depended upon becauſe he knew him intimately, and therefore could not be deceived, and becauſe he himſelf was a man of primitive integrity, and conſequently one who would not deceive others. Of this the reader will hear more in it's proper place; at preſent let us intreat him to conſider how many uſeful works this learned and worthy man publiſhed in leſs than twenty years, all devoted to the nobleſt purpoſes, ſuch as extending the faculties of the mind, right directions to the motions of the heart, and then he will ceaſe to wonder, that he triumphed over all oppoſition, even that which is laſt overcome by the learned, envy; and was as univerſally beloved, as for his generous public ſpirit and unbounded benevolence he deſerved.

(15) Thoreſby's Antiquities of Leeds, p. 535.

[R] *So much the more regretted.*] The title of this ſmall treatiſe runs thus:

The zealous and impartial Proteſtant: *ſhewing ſome great but leſs heeded dangers of* Popery, &c. *in a letter to a* Member *of* Parliament. Lond. 1681 4to.

There was a great warmth in this gentleman's writings when he was a young man, and we need not wonder that he retained it to the laſt, ſince he died before he was an old one. This was not however either an over-bearing fondneſs for his own opinions, or a bitter ill-natured furious zeal againſt thoſe with whom he differed; but the pure effects of his ſincerity, and that frame of temper which was natural to him. We muſt not interpret it here or in any of his other performances as the effects of reſentment, but rather as a proof of his being in earneſt. It is not eaſy to offer to the reader's conſideration a ſtronger argument of this, than obſerving, that he provoked equally both of the contending factions, ſtiled in his writings Fanatics and Papiſts. If he had been at all afraid of abuſe, he would certainly have avoided the one, if he had conſtantly attended to his intereſt, he would not have ventured upon the other; and if he had ſtudied his own eaſe, he would have declined both. But being as he really was a man of a free ſpirit, he firſt of all applied himſelf with indefatigable care to the ſearch of truth, and having found it, he became a bold and conſtant advocate for it upon all occaſions, and againſt all it's enemies. It was this diſpoſition that induced him to preach very pathetically, againſt what he took to be the reigning errors of the times, which were on one ſide an inclination to miſtake private opinions ſupported by conſtitutional fervour, for a kind of divine inſpiration, and conſequently placing religion too much in ſpeculative notions, without a due reſpect either to moral duties or to Chriſtian charity. On the other hand, a proneneſs to ſuperſtition, a willingneſs to prefer authority to reaſon, and an abſurd deference for the traditions of men, how irreconcileable ſoever to the word of God. Whatever calmer people might find of imprudence in this conduct, there was certainly nothing in it either mean or unworthy of a clergyman of the Church of England; and though it might ſometimes expoſe him to hard treatment from his adverſaries, yet without queſtion it recommended him to the regard and eſteem of well meaning and honeſt men. He ſuffered while living not a little from the reproaches of thoſe who thought he had deſerted them, becauſe he was bred amongſt them, and if he had not ceaſed to live at the very time he did, he would have run an eminent hazard of being perſecuted by the oppoſite party. Yet, as it generally happens in ſuch caſes, his memory was far from being injured from theſe remarkable indications of a mind equally

which, notwithſtanding all the care of his Phyſicians, he relapſed, and breathed his laſt in his own houſe at Bath, October the 4th, in the ſame year, about the age of forty-four. He was buried in his own pariſh-church on the 9th of that month, when the Rev. Mr Joſeph Pleydell, Archdeacon of Chicheſter, preached his funeral ſermon, which was afterwards publiſhed, and which, with Dr Anthony Horneck's character, did juſt honour to the memory of ſo good a man [*S*]. But as a farther teſtimony of the care of his family, and that in a place where he had lived ſo many years, and had preached with ſo much ſucceſs, there might be ſome monument dedicated to his memory, a decent tablet was erected, with a modeſt inſcription thereon, in the Abbey church [*T*]. He had two wives; the name of the firſt was Mrs Mary Stocker, and the ſecond, whom he left a widow, Mrs Selwin; but it does not appear that he had any children by either. He was ſucceeded in his Rectory of Bath by William Clement, of Chriſt-Church; in his Prebend of the cathedral church of Worceſter by Ralph Battel, A. M. of Peter-houſe in Cambridge; and in his Rectory of Streat with Walton by Charles Thirlby, Archdeacon of Wells.

GODDARD,

equally incapable of fear or of diſſimulation, and thoſe who had formerly treated him with a degree of rudeneſs, through a haſty ſuſpicion, that a removal from them was advancing ſo much nearer Popery, willingly acknowledged their miſtake, and approved his honeſt deſign in this treatiſe (16) to forewarn ſuch as were leſs attentive to the danger they were in from the artificial practices of the enemies to our conſtitution in Church and State; ſo that by this ſmall piece he ſeemed to have ſet a ſeal upon his religious principles, and to have ſhewn himſelf in every reſpect a conſiſtent member of the Church of England.

(16) See Mr Richard Baxter's ſecond Part of a true Defence of a mere Nonconformiſt, &c. Lond. 1680. 4to.

[*S*] *To the memory of ſo good a man.*] The worthy preacher of his funeral ſermon thus took his leave of the audience upon that mournful occaſion: 'I had once thought to have given you his character, but I am not aſhamed to tell you I found myſelf not able to do it worthy of him. And calling to mind a ſaying of one of the Roman Hiſtorians, I ſoon deſiſted from any farther attempt of it; who when he was reckoning up ſome of the great men of that age, Virgil and Ovid, Livy and Salluſt, and going to commend them, ſtops and concludes thus: 'Men of eminency, as their admiration is great, ſo is their cenſure full of difficulty.' Dr Horneck's character of our author is pretty long; we will therefore borrow from it only a few ſentences. 'The author of theſe diſcourſes (Mr Glanvill) as his wit lay out of the common road, ſo this genuine offspring of his fertile brain ſoars above the common level of eccleſiaſtical orations. Death ſeemed to envy the vaſt parts of ſo great a man, and in the aſcent of his age ſnatched him away, when the learned world expected ſome of his greateſt attempts and enterprizes. As he valued no notions that were mean and trivial, ſo thoſe he hath ſent abroad favour of more than ordinary genius. His ſoul ſeemed to be ſpun of a finer thread than thoſe of other mortals, and things looked with another face when they paſſed through the quicker fire of his laboratory. Some curious artiſts, though their work is materially the ſame with that of meaner artificers, yet the ſhape they give it, and the neatneſs of the fabrick, makes it ſeem a thing compoſed of different ingredients. Even the moſt obvious truths coming from our author received a greater luſtre, and that meat which familiarity made in a manner nauſeous to ſome nicer palates, when dreſſed with his ſauce, became more poignant, and conſequently more acceptable. His diſcourſes from the pulpit, as they were very ſolid, ſo they were (which is the grace and life of them) pathetic, and by his zeal and fervour one might gueſs how big his deſire unto God for Iſrael was that they might be ſaved. Though he met with diſappointments ſometimes, yet he remembered he was a Chriſtian, and as he was not without his croſſes, ſo he carried himſelf under them like a true philoſopher. His mind ſeemed to be ſerene when things went moſt contrary to his wiſhes; and whatever ſtorm the inconſtancy and fickleneſs of ſublunary objects threw upon him within, ſtill he felt a calm beyond that of Socrates, when the ungrateful Athenians ſent him the fatal draught to drink his death and ruin.' We might add many other teſtimonies to theſe, but it may be ſufficient to ſay, that able and worthy men of all Churches commended while they differed from him, which as it is a ſure ſo it is a very ſingular teſtimony of his extraordinary merit. Amongſt theſe the moſt eminent were the learned Mr White, a member of the Church of Rome; the celebrated Nonconformiſt, Mr Richard Baxter; the famous Peter Bayle; and Dr Meric Cauſabon, of our own Church.

[*T*] *With a modeſt inſcription thereon in the Abbey church.*] He lies buried in the north iſle, and on a large blue ſtone the following memorial is engraven, as we have procured it to be very exactly copied by a perſon on whoſe fidelity we can depend, who was at Bath in the ſummer of 1752.

Adverte Viator!
Deponuntur hic Exuviæ Joſephi
Glanvile, nuper Carolo 2do à Sacris; Wigornienſis Eccleſiæ Prebendarii; Regali Societatis Socii, & Civitatis hujus
Rectoris.

Qui poſt 42 inſumptos Annos, in Studio & Contemplatione, Verbi & Operum Dei, bis recidiva fatigatus febre ad Æternam Requiem aſpiravit
4 die Nov. 1680.

Uxor ejus ſecunda Margarita (e Selwinorum Proſapia)
Mœrens poſuit.

In Engliſh thus:

Turn thy Eyes hither, Paſſenger!
Here are depoſited the Remains
of Joſeph Glanvill, late Chaplain to Charles the ſecond,
of Worceſter Cathedral Prebendary,
of the Royal Society a Member,
and of this City Rector.

Who, after twenty-four Years,
conſumed in the Study and Contemplation
of the Word, and of the Works of God,
worn out by his Relapſe into a fever,
aſpired to everlaſting reſt
Nov. 4th, 1680.

His ſecond Wife Margaret, ſprung from the Selwyns
(of Glouceſterſhire)
Placed with Grief this Stone.

As this inſcription is to be found not in one but in ſeveral books, we ſhould not have given it a place here, but with a view to correct a ſtrange miſtake that has hitherto eſcaped without notice. This is the tranſpoſition of the figures 42 for 24. That this muſt be ſo appears from hence, that Mr Glanvill at the time of his deceaſe was but forty-four, as appears not only from Wood's account (17), but from a circumſtance mentioned in the dedication of the firſt book he publiſhed, as well as from the time at which he took his degrees; but more clearly ſtill from the conſideration of the date when rectified, which points to the year 1666, when he became Rector of the Abbey church at Bath; a circumſtance that puts the correction beyond all doubt, by rendering the inſcription clear and conſiſtent. E

(17) Athen. Oxon. Vol. II. col. 662.

GODDARD [Dr JONATHAN], a learned writer, an excellent Chemiſt, and a celebrated Phyſician, in the XVIIth century. He was the ſon of Henry Goddard, a rich ſhip-builder at Deptford; but was himſelf a native of Greenwich, in the ſame county of Kent, and born there about the year 1617 (a). We are not told where he received the firſt rudiments of learning; but it is certain, that in the year 1632, being then fifteen years of age, he was admitted a commoner of Magdalen-Hall in Oxford (b); where he continued until he was of ſtanding for the degree of Bachelor of Arts, and then travelled for his improvement in the knowledge of Phyſic (c). After his return, having taken the degree of Bachelor in that faculty at Chriſt-College in Cambridge, upon the 7th of November 1640, he promiſed to obey the laws and ſtatutes of the College of Phyſicians London (d). Upon the twentieth of January 1642, he proceeded Doctor of Phyſic at Catherine-Hall in Cambridge, being then a practitioner in London (e), and December the twenty-ſecond following he was admitted a candidate of the College of Phyſicians, and afterwards elected a Fellow on the fourth of November 1646, and appointed to read the Anatomy Lecture March the fourth the enſuing year (f) [A]. He had then lodgings in Wood-ſtreet where Dr Wilkins, Dr Ent, Dr Gliſſon, Dr Wallis, Mr Foſter, with other learned and inquiſitive perſons ſometimes met to improve and cultivate the New Philoſophy, ſeveral of which company removed to Oxford where they purſued the ſame deſign (g). He was afterwards Phyſician to General Cromwell, and attended him firſt into Ireland and then into Scotland (h). On the ninth of December 1651, he was appointed Warden of Merton College in Oxford, by the parliament, upon the reſignation of Sir Nathaniel Brent (i), and January the fourteenth the ſame year, was incorporated Doctor of Phyſic in that univerſity (k). The year following Cromwell, who was then in Scotland, being Chancellor of the univerſity of Oxford, did by an inſtrument, bearing date October the ſixteenth, conſtitute him, together with Dr Owen, Dean of Chriſt-Church-College, Dr Wilkins, Warden of Wadham, Dr Goodwin, Preſident of Magdalen, and his own brother-in-law Mr Peter French, Prebendary of Chriſt-Church, or any three or more, of them to act as his Delegates in all matters relating to grants or diſpenſations that required his aſſent (l). And in 1653, Dr Goddard was choſen ſingly to repreſent the univerſity in parliament, and alſo one of the Council of State (m) [B]. Upon the ſeventh of November 1655, he was elected Profeſſor of Phyſic in Greſham-College in the room of Dr Winſton then lately deceaſed (n). He continued in his headſhip of Merton-College, till the reſtoration of King Charles the ſecond in 1660, when he was removed by a letter from His Majeſty, bearing date July the third; who claiming the right of nomination during the vacancy

[A] *The enſuing year.*] At this ſeaſon, by a happy conjunction of men of the greateſt abilities, the art of medicine began to be freed from thoſe falſe and fallacious notions with which it had been hitherto encumbered (1). It was quickly diſcerned, as ſoon as this reformation came to be attempted, that the beſt foundation which could be laid for the ſuperſtructure of extenſive knowledge and ſucceſsful practice was the thorough knowledge of Anatomy. That this might be rendered more clear and certain, the great improvements made a few years before ſet in a true light, and their conſequences rendered more apparent, were the great ends propoſed in Dr Goddard's lectures. As he undertook them with great chearfulneſs, ſo he performed them with equal alacrity and accuracy, diſcourſing in a rational and perſpicuous manner on the wonders of the human frame, and explaining to his auditors, with an eaſy and unaffected eloquence, the wiſdom of the ſupreme Being in the diſpoſition of the various parts of the body of man, ſuitable to the purpoſes for which he was created, and after which it is in vain to enquire by any other method than that of Diſſection (2). It was from theſe lectures that his great reputation took it's riſe, and therefore he carefully preſerved and fitted them for the preſs, as the indefatigable Anthony Wood informs us; and yet the public has not been hitherto ſo happy as to receive them from the preſs, though it is highly probable, that if he had not been taken away by a ſudden death, he would either have publiſhed them himſelf, or directed the publication of them after his deceaſe (3); for his learning was not more extenſive than his zeal for the ſervice of ſociety, and as his own knowledge was grounded upon reaſon and experiment, ſo he was always ready to communicate thoſe lights to others, which he would have wiſhed to have received himſelf; and to put poſterity into poſſeſſion of thoſe advantages which were derived to him from a natural ſagacity, aſſiſted by an indefatigable application.

(3) Wood's Athen. Oxon.' Vol. ii. col. 538.

[B] *And alſo one of the Council of State.*] In the zenith of his fortunes Dr Goddard ſhewed himſelf a true patron of learning, and omitted no opportunity of doing kind offices to thoſe who ſtood in need of them, of rewarding ſuch as were conſpicuous for their merit, or of paying all poſſible reſpect to thoſe who were at that time the ornaments of the univerſity for eloquence or ſcience, and this without any diſtinction of party, having none of that narrowneſs of mind which was the common failing of the great men of thoſe times (4). This it was that engaged Mr Edmund Dickenſon, who was afterwards Phyſician to King Charles the ſecond, to dedicate to him that book, which was the ground-work of his reputation, in which he paid him very high compliments, and in very elegant Latin (5). He was alſo one of thoſe four eminent perſons to whom Dr John Wallis dedicated a celebrated work of his (6); but amongſt all the addreſſes of this ſort, was that of Mr Seth Ward, afterwards Biſhop of Saliſbury, and one of the greateſt men of that age. 'You, Sir, ſays he, excel 'in every kind of literature, profoundly verſed in Phy-'ſic, and in Natural Hiſtory, in what relates to Che-'miſtry the moſt diſtinguiſhed in the College of Phyſi-'cians, accurately ſkilled in all the learned tongues; be-'ſides all this, diſtinguiſhed and moſt ſucceſsful in the 'practice of Phyſic; deſervedly conſpicuous in the ma-'nagement of public affairs with the utmoſt prudence, 'and the higheſt reputation for integrity. In the Ma-'thematical Sciences alſo you have exerciſed your ta-'lents with the greateſt approbation, and long ago, 'the firſt, as far as my knowledge reaches, of the 'Engliſh nation, you contrived and wrought moſt ex-'cellent teleſcopes.' He then proceeds to his moral character, and commends him for his generous diſpoſition, his candour, affability, and benevolence to all good and learned men. Let us add, before we put an end to this note, that he was the firſt patron of honeſt Anthony Wood, who dedicated to him his brother's ſermons, which he publiſhed in 1655, and ſent it him to London bound in blue Turkey leather, with gilt leaves, as he has carefully ſet it down in the hiſtory of his own life, where, as Warden of Merton College, he always mentions Dr Goddard with marks of kindneſs and reſpect (7).

[C] As

vacancy of the ſee of Canterbury, appointed Dr Edward Reynolds, his Chaplain, and ſoon after Biſhop of Norwich, to be Warden of that college as ſucceſſor to Sir Nathaniel Brent, no notice being taken of Dr Goddard (*o*). After this he ſettled himſelf at Greſham-College, and was continued a Fellow of the College of Phyſicians by their new charter in 1663 (*p*), and being likewiſe nominated one of the firſt Council of the Royal Society in their charter the ſame year (*q*), he became very zealous and ſerviceable in promoting the deſign of that inſtitution. For being an accurate and experienced Chemiſt, he employed his elaboratory at the college, in trying, from time to time, many curious experiments for the uſe of the Society, as well as for making his own medicines (*r*) [*C*]. He was not barely an able and ſucceſsful Phyſician, but alſo a very conſcientious man in his practice, and exceedingly jealous of the honour of his profeſſion, which induced him to write two treatiſes upon a ſubject that muſt have been otherwiſe diſagreeable to him, and which, notwithſtanding, he handled with ſo much critical caution, and with ſuch an air of decency and dignity, as put it out of the power even of thoſe who were ready enough to find fault, to fix any cenſure upon them (*s*) [*D*]. Upon that diſmal deſtruction, which the greateſt

[*C*] *As well as for making his own medicines.*] His reputation for Chemiſtry had riſen ſo high, that Anthony Wood ſeems to inſinuate, the Royal Society, at it's firſt inſtitution, was not a little obliged to him for the experiments made for their ſervice in his elaboratory at Greſham-College; or in his own rough expreſſion, when any curious experiment was to be done, they made him their drudge 'till they could obtain to the bottom of it. He did not however always labour for nothing, if it be true, which is very confidently affirmed, that he ſold the ſecret of making the Guttæ Anglicanæ, or Engliſh Drops, to King Charles the ſecond for 5000*l.* of which precious receipt this is ſaid to be a true copy (8):

(8) From a large collection of curious Receipts in ſeveral languages, MS.

'Take five pounds of human cranium of a perſon 'hanged, or dead of ſome violent death, two pounds of 'dried vipers, two pounds of hartſhorn, and two of *ivo*-'ry, mince the whole ſmall, put it in two or three re-'torts, and diſtil it in a reverberatory furnace, with the 'ſame precautions as are ordinarily uſed in diſtilling 'hartſhorn and vipers to extract their volatile ſalt. When 'the veſſels or receivers are cold, unlute them and ſhake 'them well, in order to looſen the volatile ſalt from the 'ſides of the veſſels. Pour the whole into a large glaſs 'cucurbite, and filtrate it through a brown paper, in or-'der to ſeparate the oil, which is here uſeleſs: put the fil-'trated liquor in a glaſs retort, with a ſand heat, and fit a 'glaſs thereto as a recipient; take care all things be well 'luted, and make a cohobation of the ſaid matters at 'three times; but by the way, add all the ſalt before 'ſeparated from the receivers, and after the ſaid three 'cohobations, unlute the retorts and pour the whole 'into a matraſs with a long neck, to which fit a ſuita-'ble capital and receiver, lute all the joinings on each 'with a wet bladder, and ſet the veſſel in a ſand heat, 'by this means the volatile ſalt will be ſublimed and 'ſtick to the capital and upper part of the matraſs. 'Continue the fire 'till ſpirit enough hath roſe to fuſe 'and diſſolve the ſalt which aroſe firſt, then take all 'the fire out of the furnace, that the diſtillation may 'proceed no further, which is a circumſtance of the 'laſt importance, without which the medicine would 'be weakened by too much phlegm. As to the doſe 'of this remedy, they begin with ſeven or eight drops, 'increaſing by degrees to forty or fifty on preſſing oc-'caſions, as in apoplexies, lethargies, weakneſſes, &c.'

The real compoſition of the Guttæ however is ſomewhat controverted. Dr Liſter aſſures us, that he had the ſecret communicated to him by King Charles the ſecond, and that it is no other than the volatile ſpirit of raw ſilk rectified with oil of cinnamon, or other eſſential oil. The ſame author aſſures us, he had found by experience that the Guttæ Anglicanæ, were not in any reſpect preferable to the common volatile ſpirits of hartſhorn and ſal ammoniac, except that the ſmell is more ſupportable (9). It will not always however be found expedient, to take the ſentiments of one great man of the ſame faculty in prejudice to the preſcription of another; and whoever conſiders what the honourable and learned Mr Boyle has written upon ſubjects of the ſame nature (10), will be inclined to think, that if there be any thing due to authority, it is at leaſt equal on the ſide of Dr Goddard. Let us alſo add, that theſe drops were not calculated for the relief of perſons in ſlow and chronical caſes, but in violent and acute diſtempers, when if their operation had not been certain and apparent, it is not eaſy to conceive how they could have gained their author any credit; and if they were, why it ſhould be taken from him.

(9) See the article LISTER [MARTIN], in this work.

(10) Boyle's Works, Vol. IV. p. 306, 316.

[*D*] *To fix any cenſure upon them.*] The title of the firſt of theſe two diſcourſes was,

A Diſcourſe concerning Phyſic, *and the many* abuſes *thereof by the* Apothecaries. Lond. 1668. 8vo (11).

(11) Philoſophical Tranſactions, No. xli. p. 836.

One author obſerves, that at the time of writing this treatiſe, the greateſt part of the Apothecaries were far from being poſſeſſed of that degree of knowledge, requiſite to fit them for the due execution of their own employment, notwithſtanding which they were very deſirous of invading that of the Phyſician, and of preſcribing as well as compounding medicines; an evil upon which he expatiates very largely, and ſhews with what prejudicial conſequences it is attended with regard to the art of Phyſic, the progreſs of which it retards, the credit of Phyſicians, which ſuffers often for other men's faults; and the patients themſelves, who while they ſeek to avoid expence, are brought into a condition that lays them under a neceſſity of parting with much more money than might have purchaſed health at firſt. The remedy he propoſes, as only capable of removing all theſe miſchiefs, is that Phyſicians make their own medicines. This he obſerves would in the firſt place make all cures more ſpeedy and more cheap, at the ſame time, that it would remove all fear of having bad medicines employed from a motive of gain, with reſpect to which, ſays he, no man having the intereſt would then have the power, nor any having the power could have the intereſt, to prepare medicines unfaithfully. In the next place he clearly demonſtrates, that this would be highly beneficial to the Phyſician, as it would bring to his ſight and knowledge many particulars that muſt otherwiſe eſcape them; he goes even ſo far as to tell them, that without having recourſe to this, or ſome method very like it, the art of Phyſic muſt remain where it is, as wanting the neceſſary power to proceed further. In ſupport of this he ſays, that Phyſicians in former ages were well acquainted with moſt things which they diſpenſed, mixed them with their own hands, and very carefully obſerved their effects, otherwiſe there had been no ſuch art as that of Phyſic; and from thence he infers, that the ſureſt and moſt certain way of extending this art, is to reſume this manner of proceeding. The peruſal of books, in his judgment, is very far from being ſufficient to give a Phyſician any true notion of the qualities, virtues, or doſes of the Materia Medica, becauſe theſe are taken upon truſt, and it is never reaſonable to depend upon other men's eyes and underſtanding, where we may employ our own. Laſtly, he inſiſts upon it, that it is the duty of a Phyſician, ſince without taking this precaution he can never be thoroughly ſatisfied that he has done, or rather that all has been done for his patient it was in his power to do, which if he cannot be, he acts a part unbecoming his profeſſion, below the behaviour of his predeceſſors, and unworthy of a liberal education. He ſuggeſts, that for want of this method, many excellent and efficacious medicines are kept as ſecrets, becauſe the inventors and owners of them are afraid of riſking their own reputations, by putting their receipts into the hands of men who have no other view than to get money, and who may therefore be tempted to pre-

pare

greateſt part of the city of London ſuſtained, in 1666, he quitted Greſham-College, as the other profeſſors did, in order to leave a place ſo convenient, as that is, by its ſituation to be applied to the uſe of the city, and for the management of public affairs (*t*). He proſecuted however, a very great variety of learned labours, with indefatigable diligence, and alſo wrought for the Royal Society, for which he had a tender affection, as having known it in embryo, as well as a high eſteem on account of that ſpirit of promoting uſeful knowledge which influenced all their proceedings, in ſupport of which he communicated to them a very ſhort diſcourſe on the art of making wine (*u*), which, how far it has been juſtified by future experiments will appear in the notes [*E*]. He likewiſe afforded them

(*t*) Ward's Lives of Greſham Profeſſors, p. 271.

(*u*) Bp Sprat's Hiſtory of the R. S. p. 193.

pare them in the manner by which they may get moſt money. Throughout the whole treatiſe there are interſperſed a great variety of phyſical and philoſophical remarks, and other curioſities, which will ever render it a very valuable performance in the opinion of candid and competent judges. It was alſo allowed at the time that the author's temper and moderation were as conſpicuous therein as his learning and abilities. His ſecond treatiſe upon the ſame ſubject bears the following title:

A Diſcourſe *ſetting forth the* unhappy condition *of the* Practice *of* Phyſic *in* London. *Lond.* 1669. 4to.

[*E*] *Will appear in the notes.*] When the eloquent Hiſtorian of the Royal Society undertook that important work, there is no doubt that his greateſt care was employed about thoſe ſpecimens which he produced of the Society's proceedings; and amongſt theſe we may ſafely affirm, there is none of greater importance than the following ſuccinct paper, which for it's manner, as well as matter, may be eſteemed a maſter-piece (12) in it's kind, and which bears this title:

(12) Hiſtory of the Royal Society, p. 293.

A Propoſal *for making* Wine, *by Dr* Goddard.

'It is recommended to the care of ſome ſkilful 'planters in Barbadoes, to try whether good wine may 'not be made out of the juice of ſugar-canes. That 'which may induce them to believe this work to be 'poſſible is this obſervation, that the juice of wine, 'when it is dried, does always granulate into ſugar, as 'appears in raiſins, or dried grapes; and alſo that in 'thoſe veſſels wherein acute or unfermented wine is 'put, the ſides are wont to be covered over with a 'cruſt of ſugar. Hence it may be gathered, that 'there is ſo great a likeneſs of the liquor of the cane 'to that of the vine, that it may probably be brought 'to ſerve for the ſame uſes. If this attempt ſhall 'ſucceed, the advantages of it will be very conſider'able; for the Engliſh being the chief maſters of the 'ſugar trade, and that falling very much in it's price 'of late years, while all other outlandiſh productions 'are riſen in their value, it would be a great benefit to 'this kingdom, as well as to our weſtern plantations, 'if part of our ſugar, which is now in a manner a 'mere drug, might be turned into wine, which is a 'foreign commodity, and grows every day dearer; 'eſpecially ſeeing this might be done by only bruiſing 'and preſſing the canes, which would be a far leſs la'bour and charge, than the way by which ſugar is now 'made.'

Upon this the learned Dr Shaw has made a very full practical commentary, which ſome time or other will in all probability produce the deſired effect, and put us in poſſeſſion of thoſe liquors by art, which have not been beſtowed upon us by nature. His words are theſe (13):

(13) Chemical Lectures, p. 119.

Thoſe who have never been in wine countries, or otherwiſe made themſelves acquainted with the nature and common preparation of wines, proceed in their judgment of them according to report, popular notions, and the immediate information of the ſenſes. Thus for inſtance, Red Port wines, to pleaſe the common palate, muſt be bright, deep-coloured, rough, rich, and racy, two or three years old, &c. and when this or any other notion comes once to be eſtabliſhed as the criterion of wine, the cooper is thence directed how to hit the general taſte, and make a ſaleable commodity. Upon the ſame foundation, Philoſophical Chemiſtry inſtructs us to imitate the wine-coopers, and from almoſt any ſweet and tart vegetable juice to make ſaleable wines, even Sacks, Mountains, Sherries, or Ports, all which, by the way, are uſually mixed liquors, though the baſis of them all is the juice of the grape. This juice of the grape being chemically examined and conſidered, proves to be no more than a large proportion of real ſugar diſſolved in water, with the addition only of a certain flavour in the juice of the grape according the vine. Whence we lay it down as an axiom, and the reſult of a careful enquiry, that a ſaccharine ſubſtance is the baſis of wines. For ſugar is not peculiar to the ſugar-cane, but obtainable alſo from grapes; and accordingly we often find large grains thereof in dried raiſins, particularly thoſe of Malaga, that have laid for ſome time, and ſweat together, whereby they run into candy, a ſaccharine efflorescence, and actual grains of ſugar. So again, it is cuſtomary in France to evaporate the juice of the grape 'till it becomes congulable in the cold, and in this ſtate to uſe it as a moiſt ſugar, under the name of Reſiné. And the ſame thing is to be underſtood as practicable in malt, or wort, and the ſweet juices of all vegetables that afford a wine by fermentation. Hence therefore we may derive a ſet of rules for boiling down, or otherwiſe procuring, the eſſential matter of wines in a ſmall bulk, and preſerving it ſound and ſerviceable for many years, in order to the making of all kinds of wines, vinegars, and brandies, even in countries where no vines grow. And this diſcovery alſo affords great light into the true nature and uſes of vinous and acetous fermentation. To illuſtrate and confirm this diſcovery by an example upon the footing of the preſent experiment, Take 2 C ½ of double refined ſugar; put it into a pipe or wine-veſſel of two hogſheads; fill the veſſel within four gallons of the top, with pure ſpring water; ſet it in a warm place or wine-vault; add three or four pounds of freſh ale yeaſt, or rather of new wine yeaſt, and the liquor in a few months time will ferment into a ſound, colourleſs, and flavourleſs wine, and remain ſuſceptible of any colour at pleaſure, ſo as with the ſtain called turnſol, to be made of the true claret colour, and with a little eſſential vegetable oil of any particular flavour required. And this is delivered as an experiment that ſucceds to great perfection, ſo as to ſhew a rational and practicable method of producing wines in the ſugar colonies, or elſewhere, that ſhall rival thoſe of France, Italy, or Spain; and if the nature of fermentation be well underſtood, the proceſs may be greatly ſhortened in point of time, and other advantages.

When Dr Goddard's propoſal is read by itſelf, it ſeems to be no more than a philoſophic conjecture, the certainty of which one may be eaſily led to doubt, ſince many things appear plauſible in theory, that will by no means ſucceed when attempts are made to carry them into practice; but when we adjoin Dr Peter Shaw's experiment, the caſe is put beyond all doubt, and the only ground of ſurprize that remains is this, that ſo little uſe ſhould be made of ſo important a diſcovery. Perhaps one reaſon may be, that both papers have been ſeldom read together, which was the principal reaſon for inſerting them here; and to this let us be permitted to add a remark or two more. In theſe warm climates grapes have not hitherto been brought to any perfection, with reſpect to making wine, yet they grow there naturally, their cluſters being very large, and finely flavoured for eating; whence one might be tempted to conceive, that by the help of Chemiſtry, an eſſential oil might be extracted, that would give an high, rich, and grateful flavour to the ſugar wine. It is very poſſible, that a few trials of this ſort, under the direction of a ſkilful perſon, might lead to an unexpected and unhoped for degree of perfection; ſince it is a matter of the utmoſt notoriety, that Madeira wine and other liquors are very highly improved, by being barely carried into that climate. Add to all this, that what Dr Goddard propoſed is founded in political as

well

them many other and moſt uſeful communications, ſome of which are printed in their Tranſactions, and many more are preſerved in their Regiſters, which ſerve as monuments of his extenſive and various learning (*w*), juſtifying the high commendation given him by ſome of the greateſt perſons living at that time, and whoſe writings, as well as his own, will ever do honour to that age and this nation [*F*]. As ſoon as things were in ſome meaſure ſettled, and the public tranquillity reſtored, he returned to his lodgings and his ſtudies at Greſham College, where he continued to the time of his death, which was very ſudden and unexpected (*x*). He uſed to meet a ſelect number of his learned friends at a place in Bloomſbury, where they diſcourſed of philoſophic ſubjects, and in his return from thence on the evening of the twenty-fourth of March 1674, he was ſeized with an apoplectick fit in Cheapſide near the corner of Woodſtreet, and dropped down dead (*y*). He left behind him a very well choſen library of books finely bound, which he intended to have made a preſent to the Royal Society, as an addition to the Arundel library, but dying without a will his intention was defeated, and they fell to his heir at Law, who was his nephew by his ſiſter, at that time a ſcholar in Caius College in Cambridge (*z*), his body lies buried in St Helen's church, on the north ſide of the chancel near the rails of the communion table without any monument.

(*w*) See their titles in the Notes.

(*x*) Athen. Oxon. Vol. II. col. 538.

(*y*) Ward's Lives of Greſham Profeſſors, p. 271.

(*z*) Athen. Oxon. Vol. II. col. 538.

well as philoſophical reaſon; for, by this means we might gain what is now a foreign commodity, and run very little riſk of being rivalled by the French, who would hardly ſuffer their colonies to interfere with one of the principal branches of their domeſtic commerce

[*F*] *Will ever do honour to that age, and this nation.*] Beſides the two treatiſes already mentioned, and his anatomical lecture, which has never been publiſhed, our author wrote many other pieces upon different ſubjects, ſome of which were printed in his lifetime, ſome after his deceaſe, and ſome are ſtill preſerved in the regiſters of the Royal Society, and have not been hitherto printed.

Of thoſe printed in his life-time, excluſive of what have been already mentioned, there were but two.

I. *Some Obſervations concerning the* Texture *and* ſimilar Parts *of the* Body *of a* Tree; *which may alſo hold in ſhrubs, and other woody plants* (14).

(14) Regiſters of the Royal Society, Vol. I. p. 5.

The ſubſtance of this diſcourſe has been publiſhed by one of the ableſt and moſt ingenious writers in our language, with this juſt encomium upon our author (15). 'What I am about to add, ſays he, concerning the 'texture and ſimilar parts of the body of trees, which may 'alſo hold in ſhrubs, and other ligneous plants, is both 'a curious and rational account of their anatomization, 'and worthy of the ſagacious enquiry of that incom-'parably learned perſon, Dr Goddard, as I find it en-'tered amongſt other of thoſe precious collections of 'this illuſtrious Society.'

(15) Evelyn's Silva, Lond. 1670. fol. p. 159.

II. Experiments *of a Stone called* Oculus mundi.

This is a very rare, and, conſidered in that light, a precious ſtone, of which we find but very little ſaid, even by very accurate writers of Natural Hiſtory. It is an opake ſtone, in colour reſembling marble, or rather ivory, and when put into common water, becomes in no very long time tranſparent and full of luſtre, but when taken out, it very quickly recovers its former appearance. The great Mr Boyle thinks this may be accounted for by ſaying (16), that the water entering the crooked pores of the ſtone, rectifies them for the time, and ſo renders them pervious to the rays of light; and, in confirmation of his ſentiment, he appeals to theſe experiments of our author, whom he calls a learned member of the Royal Society; which manifeſtly proves, that the ſtone when thoroughly wiped, is nevertheleſs found by a nice balance to weigh more when it is taken out of the water, than when it was put in.

(16) Boyle's Works, Vol. II. p. 85. Vol. IV. p. 222. Vol. V. p. 95.

The following pieces were publiſhed after his death.

Obſervations of a Cameleon (17).

(17) Philoſophical Tranſactions No. CXXXVII. p. 930.

Experiments of refining Gold *with* Antimony (18).

Arcana Goddardiana. Theſe are ſome receipts publiſhed at the end of the ſecond edition of the *Pharmacopœia Bateana.* Lond. 1691

(18) Philoſophical Tranſactions, No. CXXXVIII. p. 935.

Experiments *of weighing* Glaſs-canes, *with the* Cylinders *of* Quickſilver *in them, according to the* Torricellian *Experiment.*

Theſe were read before the Royal Society, Aug. 6. 1662, and entered in their regiſters, and with other accounts of the ſame kind, afterwards printed in Dr Wallis's *Mechanica* (19).

(19) Vol. I. p. 185.

The following are entered in the regiſters of the Royal Society, but have not been printed.

A brief experimental Account of the Production *of ſome* Colours, *by a mixture of ſeveral liquors, either having little or no colour, or being of different colours from thoſe produced* (20).

(20) Vol. I. p. 3.

An Experiment of Exhalation *raiſed from* Water, *and returning to* Water *again* (21).

(21) Vol. II. p. 83.

About that time he likewiſe made ſome other experiments, relating to water, which may be ſeen in p. 93 and 97 of the ſame volume.

An Experiment of a Glaſs Tube *and* Quickſilver (22).

(22) Vol. II. p. 225.

By this experiment was ſhewn the preſſure of the air, by the adhefion of the finger to the orifice of that part of the tube from which the air had been expelled by the quickſilver.

A diſcourſe upon Eggs, *containing* ten *ſigns whereby to diſtinguiſh* new Eggs *from thoſe which are* ſtale (23).

(23) Vol. III. p. 8.

An Experiment to ſhew that Spirit *of* Wine *in a veſſel* exhauſted of air, *becomes* lighter (24).

(24) Vol. III. p. 18.

Obſervations upon the Experiments *of ſeveral* liquors *in a* tube *of about* thirty-ſix *foot in length, erected* perpendicularly, *in order to ſhew their* comparative weight (25).

(25) Vol. III. p. 60.

De mercurio Quæſtiones tres, *a* Johanne Baptiſti Signi, *medico* Florentino, *per* Joh. Bapt. Gorniani, *coram reg. ſocietate propoſitæ: Cum reſponſionibus medicorum* Londinenſium *quorundam ex eadem ſocietate* (26).

(26) Vol. IV. p. 65.

This was brought in by Dr Goddard, and read June 10. 1669.

An Experiment to ſhew whether the Muſcles *of an* Animal *in their* action, *are bigger or leſs in their* total *ſum of dimenſions* (27).

(27) Vol. IV. p. 95.

By this experiment it appeared, that the dimenſions of a muſcle are leſs in it's contraction than relaxation.

E

GODWYNE, GODWINE, GODWIN, or GOODWIN Earl of Kent, and alſo Earl, or Duke of the Weſt Saxons. One of the greateſt captains, and one of the ableſt ſtateſmen, of whom any notice remains in our hiſtories before what is ſtiled the Norman Conqueſt (*a*). His actions are repreſented in various and contradictory lights, by different writers, ſo that hitherto, whatever memoirs have been collected concerning him, are ſo dark, ſo embarraſſed, and ſo inconſiſtent, that it is very difficult, if not impoſſible, to frame any juſt notion of his conduct and character, which nevertheleſs appears to be highly neceſſary, towards underſtanding the true ſources of that great revolution,

(*a*) See Caxton, Cooper's Chronicle, Holinſhed, Speed, Daniel, Milton, Baker, Rapin, &c.

which happened in England, within a few years after his demiſe [*A*]. He was deſcended from an ancient noble Saxon family, and inherited a great eſtate from his anceſtors, and it is probable, he was Earl of Kent, before Knute or Canutus, the firſt of our Daniſh Kings, came to the throne, which the beſt authorities we have place in A. D. 1017 (*b*). In the third year of that prince's reign, his affairs making it neceſſary for him to return into his hereditary dominions, which were attacked by the Vandals or Swedes, he ſailed thither with a very numerous fleet, and a potent army, compoſed of Engliſh as well as Danes (*c*). The former were commanded in chief by Earl Godwin, and when they came into the field, and were encamped not far from the enemy, advice was brought to the King early one morning, that the Engliſh had left their quarters, and were either fled or had deſerted. Knute upon this advanced towards the enemy's camp, and ſaw with ſurprize, that it was abandoned, and none left in it but dead or wounded men (*d*). But he was quickly informed that Earl Godwin, taking the advantage of a dark night, had entered it ſuddenly, and tho' far inferior in ſtrength had routed the Vandals, and was then in purſuit of them. This gave him a very high opinion of Earl Godwin, and created ſuch an affection in him for the Engliſh nation, that he treated them ever after with the ſame kindneſs and cordiality that he did the Danes (*e*). On his return to England the next year, he rewarded Earl Godwin with very large grants, but it does not appear from any of our writers, whether it was before or after this expedition that he married the King's daughter (*f*); but tho' moſt of our ancient chronicles maintain the contrary, there are very ſtrong reaſons, which prove he had no other wife than this daughter of the King's, whom it is more than probable he married at the very entrance of his reign, when by ſuch alliances he fought at leaſt to ſtrengthen his own intereſt, and to blend in proceſs of time the two nations (*g*) [*B*]. The King went twice or thrice at leaſt after this

[*A*] *Which happened in England within a few years after his demiſe.*] The principal and eſſential point in all Hiſtory is truth; for without that, whatever there may be of elegance in the compoſition, or of weight and ſagacity in reflections, or whatever value it may have in any other reſpects, ſuch a work is not Hiſtory. A man of great talents, and one who is maſter of a fine ſtyle, may out of a few facts placed in bad order, and told in a very rough manner, frame not only a pleaſant and paſſable, but a very plauſible relation; which, if his materials in general be deſtroyed, will be received with poſterity for true Hiſtory. Or if a man who is a little more ſcrupulous, and has likewiſe a greater degree of diligence, ſhall aſſemble a large heap of materials, and reſolve to bring them all in, ranged in the beſt order he is able, though inconſiſtent and contradictory, his labours may alſo find acceptance with many, though it is impoſſible they ſhould ſatisfy the inquiſitive and well-judging few. Inſtances of both kinds may be found in the general hiſtories of moſt nations in Europe, but more eſpecially in our own; which, for this reaſon, in theſe early periods particularly, has been juſtly cenſured as incertain, dark, and perplexed (1). To avoid abſolutely theſe objections in the form of a General Hiſtory, muſt be a work of very great difficulty, or rather, to ſpeak freely and impartially, altogether impracticable. Our ingenious, judicious, and laborious Antiquary, Mr William Lambard, ſaw this, and therefore long ago fell into our method; that is, he framed an alphabetical catalogue of the principal articles in our Old Hiſtory eſpecially, and ranged under each head what he could collect concerning it out of ancient writers, with his own remarks, out of which he propoſed to draw ſeveral regular and correct pieces, in which things ſhould be repreſented methodically, and as near the truth as it was poſſible (2). Since his time we have, through the commendable induſtry of many great men, ſuch as Sir Henry Savile, Mr Camden, Sir Roger Twyſden, Mr Selden, Biſhop Fell, Dr Gale, Mr Hearne, and many others, recovered a multitude of ancient writers relating to Engliſh Hiſtory. But if this has added to the quantity of materials, it has added no leſs to that perplexity which was before ſo great and ſo formidable a bar, to the reducing the tranſactions of our anceſtors into a tolerable degree of order and certainty. The only way to come at this, is not barely to conſider what is ſaid by a multitude of writers of the ſame perſons and things, but to weigh the authorities of theſe writers, to conſider the reſpective advantages and diſadvantages under which they wrote, the viſible ſpirit and deſign of their writings, their ſeveral capacities for the taſks they reſpectively undertook; and, in ſhort, whatever elſe may contribute to diſtinguiſh where they deſerved credit, and where they ought to be rejected. If this can poſſibly be done, the likelieſt method of doing it is to take up ſingle threads, and to purſue them with as ſtrict an eye as may be, 'till we have freed them from beginning to end, as far as we are able, from all embarraſſments, and ſo as to produce them even and ſtrait to the contemplation and cenſure of proper judges. This is what, by way of inſtance, we have done with regard to Earl Godwin, the ſeries of whoſe actions deſerves to be traced with as much accuracy as any character whatever of like antiquity. The way in which we have traced it, is to place in the text the facts that are preſerved by authors of the greateſt credit, and who lived neareſt his own time, who conſequently had the beſt opportunities of knowing what they wrote, and who were the leaſt likely to deceive themſelves, or attempt to deceive others. In the notes we have occaſionally given an account of the authorities upon which we relied, of the facts which we have rejected, and the motives which led us to reject them, and have alſo added circumſtances that are diſcovered from the compariſon of facts, and which tend to eſtabliſh the credit and certainty of this great man's Hiſtory, as we have delivered it.

(1) See the learned Mr Bolton's diſcourſes upon the Engliſh Hiſtory, printed at the end of Trivet's Annals. Milton's Introduction to the Hiſtory of England; and Biſhop Nicholſon's Account of the Hiſtorians within this period.

(2) Alphabetical deſcription of the chief places in England and Wales, London 4to 1730.

[*B*] *And to blend in proceſs of time the two nations.*] There is nothing ſaid in the Saxon chronicle concerning the marriage of Earl Godwin, ſo that all that can be collected on this head is from writers of far leſs antiquity, which is the true reaſon of it's appearing ſo incertain and obſcure. Some ſay, that he married the ſiſter, others the daughter, of King Knute, but none of our writers mention the name of this lady (3). However, they are pleaſed to tell us, that ſhe was a very wicked woman, and that ſhe cauſed the handſomeſt children, but more eſpecially girls, that could be met with in England, to be ſtolen, and ſent over into Denmark, where ſhe ſold them, and accumulated thereby immenſe riches (4). They add, that ſhe was killed by a thunder-bolt, and that Godwin had had only one ſon by her, who, while a child, riding an unruly horſe, given him by the King, his grandfather, or uncle, into the river Thames, was there thrown into the water and drowned (5). After which Earl Godwin married another wife, of whoſe family there is not a ſyllable any where ſaid, and by her had ſix or ſeven ſons, and one daughter. But Polydor Virgil, following the lights given him by ſome of our ancient Hiſtorians, which are now loſt, and agreeing with foreign writers that are ſtill remaining, ſets this matter in a very clear and conſiſtent light; ſo much the more to be conſidered, as for for want of this key the whole ſtory of Godwin and his family, their great influence and unbounded authority, is very intricate, if not unintelligible; but this once known,

(3) Willielmus Malmeſburienſis de Geſtis Regum Anglorum, lib. ii. Dugdale's Baronage, Vol. I.

(5) Hen. Knyghton.

this into Denmark, but whether Earl Godwin attended him or not, or whether he accompanied him to Rome, or in his expedition into Scotland after his return from thence, does not appear (*b*). It is moſt likely that he did not, but that the King left him in England, as one upon whom he could ſafely rely, and who in his abſence was able to keep the kingdom in peace. We aſſert this the rather, becauſe of the vaſt power he had, at the time of this monarch's death; which he muſt have attained gradually, as other great men died, or fell into the King's diſpleaſure, while he remained firm in his favour, and may be preſumed to have preſerved himſelf, partly by his ſervices, but chiefly by his alliance (*i*). On the demiſe of this monarch, Anno Domini 1036, there was an aſſembly held of all the great men in the kingdom, to determine whom they ſhould raiſe to the throne; in which Earl Leofric, and moſt of the governors of the countries north of the river Thames, and the ſeamen of London, were for Harold ſirnamed Harefoot, the ſon of Elgiva the daughter of Ælfem, Earl of Hampſhire, by the deceaſed King, for, as to the ſtory of his being a ſuppoſititious child, and the ſon of a Shoemaker impoſed upon the King by that lady, it is very improbable, from this circumſtance of his having ſo ſtrong a party amongſt the nobility, and his being at the ſame time ſo acceptable to the people (*k*). However this was vehemently oppoſed by Earl Godwin, and the Weſt-Saxon lords, who, tho' they could not prevail to ſet him aſide, yet they obtained in favour of the Queen Dowager Emma or Ymma, who had been the wife of Ethelred, as well as of Knute, that ſhe ſhould continue to reſide at Wincheſter, with the domeſticks of the King her ſon, and ſhould enjoy all the country of the Weſt-Saxons, that was under the government of Godwin (*l*). In this year moſt writers place the murther of Alfred, the eldeſt ſon of Queen Emma by King Ethelred, but of this there is not a word in the Saxon Chronicle, nor was it inſerted in any chronicle till after the Conqueſt, as is evident from what William of Malmeſbury ſays, that he took it upon common fame and would not warrant the truth of it (*m*). It is alſo plain that the murther of this prince was originally aſcribed to his mother; but after the Normans came in, the monks were ſo complaiſant as to diſcharge her of this heavy load, and lay it wholly upon the ſhoulders of Earl Godwin (*n*) [C]. The next year Queen Emma was baniſhed, and retired for ſhelter

known, becomes as plain and probable as can be. Canutus then upon the death of Edmund Ironſide, becoming King both of the Danes and Engliſh, fought to enlarge his intereſt, and to ſecure his family, by intermixing the two nations, as is ſaid in the text; upon which he married himſelf an Engliſh lady, the daughter of the Earl or Duke of Hampſhire, and gave his daughter in marriage to Earl Godwin, whoſe name was Thira (6), which the Engliſh altered into Githa, and thus ſhe was ſiſter to King Knute, that is to Hardecnute, or Canutus the ſecond (7). The reaſon why the monks after the Conqueſt were ſo extremely deſirous to confuſe and hide this matter, was to prevent poſterity from ſeeing what the nature of that title was by which Harold claimed the Crown; for if they had owned him to be the grandſon of Knute, or Canutus the Great, it might have been thought at leaſt as good as that of William the Norman, who was not deſcended either from the Saxon or the Daniſh Line (8). That Godwin married a Daniſh princeſs, was a thing too notorious to be denied, and that he had iſſue by her, might have been preſerved by tradition; but theſe being removed out of the way by the thunder-bolt and the ſkittiſh horſe, Harold, and the reſt of his children, were attributed to another wife (9). But as there is a fatality that attends liars, ſo we have an ancient abbey chronicle which betrays all this, and that by endeavouring to ſupport it. We have therein a moſt horrid picture drawn of Swayn Earl of Shropſhire (10), who is ſaid to have been one of the proudeſt and haughtieſt perſons of his time, fancying himſelf to be deſcended from Swayn King of Denmark; nor would he be perſwaded out of this, tho' his father, Earl Godwin, and his mother, Lady Githa, came and aſſured him, that he was their own child, and not of any ſuch lineage as he pretended. This ſilly tale is plainly grounded upon a tradition, that Earl Swayn, of whom we ſhall ſpeak hereafter, valued himſelf very much upon his being the great-grandſon of the Daniſh monarch of the ſame name, who made no inconſiderable figure in that conqueſt, which was afterwards finiſhed and compleated by his ſon Knute.

(10) Regiſtrum Wigorniæ in Biblioth. Cottoniana. Monaſticon Anglicanum, Vol. I. p. 133.

[C] *And lay it wholly upon the ſhoulders of Earl Godwin*] We have in another place obſerved, that the Saxon Chronicle is ſilent on this head, and, which is ſtill more extraordinary, takes no notice at all of this Alfred, ſuppoſed to be the elder brother of Edward the Confeſſor. Eadmerus, another Hiſtorian, who lived near theſe times, is as ſilent, and it is very improbable, that if he had ever heard or believed this ſtory, would have ſtiled Godwin, as he does, a magnanimous Earl (11). Walter of Hemingford, a man of judgment and veracity, in his introduction to his Hiſtory (12), ſpeaks largely of Godwin, but without the leaſt hint of this tranſaction. It is however true, that in the annals of Wincheſter, though this fact is not related at large, yet it is more than once mentioned, with inſinuations that Queen Emma and Earl Godwin were equally involved in it; but all this is to make way for the ſtory of Queen Emma's penance (13). Yet in that ſtory Robert Archbiſhop of Canterbury, in his ſpeech to the Biſhops, who are ſaid to have favoured the Queen, charges her, and her only, without any mention of Earl Godwin. His words are theſe: 'How can you have the confidence (ſpeaking to the 'Biſhops) to take upon you the defence of that beaſt, 'rather than woman, who hath ſo much detracted 'from the King, her ſon, and yet calls her paramour 'the Anointed of the Lord: ſhe offers herſelf to purge 'the Biſhop, but who ſhall purge her, who conſented to 'the death of her ſon Alfred, and prepared poiſon for 'his brother Edward? But if ſhe deſires to be acquitted, let her walk blindfold and barefoot over nine red-'hot ploughſhares, four for herſelf, and five for the Bi-'ſhops; and if ſhe eſcapes, let her be reputed innocent.' We ſee then, that according to this chronicle, the Queen and the Earl were both ſuſpected; but from the Archbiſhop's ſpeech, one would ſuppoſe the fault lay chiefly in her. Take the whole fact therefore together, and the Queen muſt be acquitted, in virtue of her purgation; but take that as it ought to be taken, for a fable invented by the monks, and to which no regard was paid by the beſt ancient Hiſtorians, and the whole buſineſs falls to the ground (14). This will appear ſtill the more clearly from the ſubject of the following note, which will ſet the true character of Godwin in a proper light, and ſhew that if he had great power and influence at this time, he uſed it well and wiſely; for ſurely he who ſet up Edward, might have ſet up his own ſon as eaſily, if he had been ſo ambitious as he is repreſented; or if he had apprehended any difficulty therein, might have dealt with Edward as he is ſaid to have done with his brother Alfred; but as he did neither, we ought in common juſtice to conclude, that his memory was much injured from a ſuperſtitious regard to

ſhelter to Baldwin Earl of Flanders, who gave her a retreat in the city of Bruges. But why ſhe went thither, rather than to her own country of Normandy, unleſs it was becauſe of the cloſe alliance between this Earl and our Earl Godwin, is not eaſy to diſcover (o). What ſhare Earl Godwin had in this monarch's adminiſtration, is not to be diſcovered from our moſt authentic hiſtory, but if there be any truth in what ſome writers ſuggeſt, that he was ever obliged to leave England (p), after the death of King Knute, this is moſt likely to be the time, neither is it improbable, that he might attend the Queen-Dowager, and return with her and her ſon (q). For Harold dying at Oxford on the 17th of March 1039, Hardecnute came with a great fleet to Sandwich a week before Midſummer, and was there received as King, both by the Engliſh and Danes, for which as the Saxon Annals ſay, they were but ill rewarded (r). But as to his cauſing his brother's body to be taken up and thrown into the Thames, and his proſecution of Earl Godwin, for his cruelty towards his brother (s), thoſe Annals are entirely ſilent, and it may be with good reaſon, of which the reader will meet with ſome proofs in the notes [D]. The next year his brother Edward came over from Normandy, and ſeems to have remained at court till the death of the King, which happened on the eighth of June 1041, at Lambeth at a wedding (t), thro' drunkenneſs, as ſome writers ſay; and, as others ſuggeſt, not without ſuſpicion of poiſon (u). However it happened a great confuſion enſued, for tho' but half a Dane himſelf, yet having been educated and reigning in that country, during the life of his brother Harold, he was entirely addicted to their cuſtoms, had a great confidence in them, and levied exorbitant ſums upon his Engliſh ſubjects for their profit (w). This incenſed the nation to ſuch a degree, that they unanimouſly declared they would exclude the whole line of Knute, and never ſuffer any Dane to bear the regal title in this kingdom. They alſo expelled the Danes wherever they were ſettled, and obliged them to return home, reſolving to convert the day of the King's death into an anniverſary feſtival, for the extinction of the Daniſh tyranny in England (x). In this perilous ſituation of things, Edward the ſon of King Ethelred and Queen Emma, neither of whom were at all beloved by the people, was under great anxiety and terror (y). He was naturally of a timorous diſpoſition, and, according to the beſt accounts we have, ſo little ambitious, or at leaſt had ſo little hope of ſucceeding his brother, that the care of his own ſafety occupied all his thoughts. It was with this view, that with the greateſt teſtimonies of fear and diſtreſs, he applied himſelf to Earl Godwin, as the only perſon who could protect him, and procure him a ſafe paſſage into Normandy, which was all he deſired (z). Upon his propoſing this to that Earl, who received him with all imaginable marks of kindneſs and tenderneſs, he told him, it was a notion unworthy of his blood and birth, that he was the ſon of a King, and of a Queen, that he was arrived at a mature age, was of a mild and peaceable diſpoſition, very capable, if he would apply his thoughts to the adminiſtration of public affairs, of repairing the miſchiefs the nation had ſo long ſuffered; and that at all events, it was infinitely more glorious for him to live a King in his own, than a wretched and miſerable exile in a foreign country (a). By theſe and other diſcourſes of this ſort, Edward was prevailed upon not to act himſelf, but to ſuffer Godwin to act as he thought proper, who in a meeting of the nobility, held at Gillingham, by the diſplay of that eloquence for which he was ſo famous, and thro' the influence he had upon the minds of the nobility, procured Edward to be choſen, which choice was afterwards confirmed at London, where he was declared King (b). As there was a great ſcarcity of proviſions that year, and a prodigious mortality amongſt the cattle, the ceremony of

to the fame of Edward the Confeſſor, one of the weakeſt, none of the mildeſt of our monarchs, and whoſe beſt title to the throne aroſe from the affection of Earl Godwin to the Saxon Line.

[D] *With ſome proofs in the notes.*] If Queen Emma ſuffered under her ſon, Edward the Confeſſor, for being an accomplice at leaſt in the murther of his brother; Earl Godwin, if we will believe Simeon of Durham, and other writers, had been both purged and puniſhed for it before (15). King Hardecnute, ſay they, was no ſooner ſeated on the throne, than Alfric, Archbiſhop of York, charged Earl Godwin and Biſhop Living with having conſpired the death of Prince Alfred; upon which charge the Biſhop was convicted, and removed from his Biſhoprick, but reſtored ſome time after for a ſum of money. Earl Godwin had ſhared the ſame fate if he had not pacified the King by a preſent of a moſt magnificent galley, which had a ſtern gelt with gold, manned by eighty choſen ſoldiers, having gold bracelets on their arms, weighing ſixteen ounces each, and the reſt of their arms ſuitable. But all this would not have done, if the Earl had not taken his oath, that what he did, he did by the expreſs command of King Harold; ſo that he was the inſtrument only, and not the contriver, of this tragedy. This King might indeed very readily credit him almoſt without an oath, if we could believe it true, that he was one of thoſe, who by this King's order had dug up his brother's body, and after cutting off the head, had thrown it into the Thames (16). But farther ſtill, if there was the leaſt truth in this, Queen Emma muſt have been abſolutely innocent; and after this open enquiry and trial, Edward the Confeſſor could not be at all in the dark about the death of his brother; for which notwithſtanding, he is not only ſaid to have put his mother to her purgation, but even after her death to have brought Earl Godwin to a new trial for this fact, and that in a ſolemn manner, before his Peers; which ſo great a man as Mr Selden believed to be true (17), and cites it as the original of ſuch kind of proceedings in Parliament. But how ſtrange after all this muſt it appear, that there is not a word of theſe three trials, any more than of the murther of Alfred, in the Saxon Annals, in the Hiſtory of Eadmerus, or in any other author of equal credit. The judicious reader therefore will not wonder, that we conſider them all in the ſame light, as the inventions of later times, and ſubject, like all invented hiſtories, to ſuch variations and abſurdities, as plainly ſhew them to ſuch as will be at the pains to compare and conſider them, to be but mere inventions, which ought to have been long ago exploded from our Hiſtories.

the Coronation was put off to the next ſpring, when the King was inaugurated with great ſolemnity at Wincheſter upon Eaſter-Day, which happened that year upon the eleventh of April (*c*). What we have ſaid is taken chiefly from Malmeſbury, a very diligent, and, for the times in which he lived, a very learned Hiſtorian. But ſurely if any credit be due to our ancient Abbey chronicles, that of Wincheſter (*d*) claims it as to this fact, and therefore the reader will find the account of this tranſaction literally tranſlated from thence at the bottom of the page [*E*]. Upon this occaſion Archbiſhop Eadſig preached the firſt Coronation ſermon of which we have any remembrance preſerved, and therein very freely told both the King and the people their duty (*e*). The ſame year, that is A D. 1042, the King reunited to his Domain, the lands which his mother Queen Emma had held, and took from her all the treaſures ſhe had amaſſed, becauſe he thought ſhe had treated him unkindly while under his misfortunes (*f*). In ſome ancient chronicles this

(*e*) Chron. Saxon.

(*f*) Annal. Winton. Chron. Saxon. Rogeri de Hovedon.

[*E*] *At the bottom of the page.*] We hope in this note to ſatisfy the reader, in as great a degree as the nature of this attempt will admit, that we have truth on our ſide, and that in vindicating the character of Earl Godwin, againſt the current of our common hiſtories, we have done what it became us to do, in ſupport of truth, in regard to the memory of the dead, and in juſtice to poſterity. We have ſuggeſted, that our ancient abbey chronicles were altered and interpolated after the Conqueſt, and that amongſt many other reaſons which might be mentioned, the Saxon chronicle deſerves the utmoſt reſpect, becauſe it has viſibly ſuffered leſs in this reſpect than almoſt any other (18). We promiſed the reader in this note to prove from the ancient chronicle of the church of Wincheſter, that Edward the Confeſſor was raiſed to the throne purely by the favour and aſſiſtance of Earl Godwin; we ſhall prove this, and make good the obſervations before-mentioned at the ſame time. There is, or at leaſt there was, in the Cotton Library, an ancient copy of the annals (19) before-mentioned, ending in the year 1086, and from thence we will literally tranſlate this curious paſſage: 'The King being dead, (Hardecnute) the 'care of the kingdom, with the conſent of the Queen 'and the council of the Nobles, was committed to 'Earl Godwin, 'till a perſon worthy of that dignity 'ſhould be elected King. Edward, the ſon of Emma, 'being at that time in a woful condition, three Dukes of 'Normandy, his relations, two Richards and a Robert 'being dead, had no friend in that country, William, 'the ſon of Robert, a youth, being at that time with the 'King of France. Having no reaſon to hope ſo much as 'a ſpark of pity from his mother in this deſperate ſtate, 'thought it ſafer to ſupplicate an open enemy, than 'to apply to a pretended friend; leaving therefore 'Normandy, and ſailing into England, when he had 'landed at Southampton, avoiding his mother, who 'was then at Wincheſter, he went directly to Godwin, 'at London, a man ſuppoſed to be no friend to him, 'and to have been the murderer of his brother. There 'one morning very early getting into his bed-chamber, 'he proſtrated himſelf upon the ground, with his arms 'ſtretched out in the very form of a croſs before God-'win, who was but juſt awake. To whom Godwin ſaid, 'Who, and what wretch art thou, and what would 'thou have? Stand up, that I may ſee thee To this 'anſwered Edward, I am indeed a poor ſervant of 'thine, who, without any fault of my own, have been 'an exile even from my youth; ſave, I beſeech thee, 'my life; and then burſt out into a violent flood of 'tears. Godwin, extremely moved with the tears and 'miſery of this ſupplicant, promiſed him, with an 'oath, that he ſhould be ſafe. Riſe, riſe, (ſaid he) 'and doubt not of ſecurity; by the face of St Luke, 'thou ſhalt not die: be not afraid to truſt me with thy 'ſecret, whoever thou art. To this he replied, I am 'Edward, the youngeſt ſon of Ethelred; let me, I be-'ſeech thee, find favour in thy ſight. For thy own 'good, returned Godwin, haſt thou come to me, and 'what I have ſworn ſhall not be in vain. I will be to 'thee a father, and thou ſhalt be to me a ſon. Only 'ſwear to me, by God and thy own ſoul, that thou 'wilt take my daughter to wife, and ſuffer me to re-'main the firſt man in the kingdom, and I will give 'to thee the realm of England. He having ſworn, 'Godwin kiſſed him, and commanded him to go be-'fore him to Wincheſter, and not to make himſelf 'known to any man, nor even to his mother. Edward 'therefore came in a mean habit to Wincheſter, and 'eat ſometimes in his mother's Court, ſometimes in 'the houſe of the Biſhop, but unknown, while in the 'mean time he diligently endeavoured to find out their 'ſentiments. In the mean time Godwin ſummoned 'all the Nobility to attend the Queen at Wincheſter, in 'order to proceed to the choice of a King; and there 'accordingly they met in the epiſcopal church. God-'win ſat on the Queen's left hand, becauſe the Arch-'biſhop ſat on the right, having Edward at his feet, 'with his hood over his face. After having explained 'his intentions in a long ſpeech, he put his hand upon 'the head of Edward, the Queen knowing nothing of 'the myſtery, lifted him up, and ſhewing him to all 'the aſſembly, who were extremely ſurprized, Behold, 'ſaid he, your King. This is Edward, the Son of 'this Queen Emma, and of Ethelred, King of the 'Engliſh nation. Him I elect for King, and to him 'I firſt do homage. After ſome diſputes the election 'was conſented to, though it diſpleaſed many; but at 'that time there were none who durſt openly oppoſe 'Godwin.'

'This, though it might ſuffice for our purpoſe at preſent, ſhall not be all that we will quote from this chronicle, for what follows may very probably be as entertaining to the reader, as ſhewing what the general ſenſe of men was in thoſe times. 'Edward, ſon of Ethel-'red, King of England, thus elected, was crowned 'alſo at Wincheſter. He took to wife Weditha, but 'both of them preſerved their virginity. He honoured 'Godwin above all men; as for his mother, he neither 'reverenced nor deſpiſed her in public. Many there 'were who had befriended him in exile, that came to 'him from Normandy; amongſt theſe was one Robert, 'whom in proceſs of time he made firſt Biſhop of 'London, and afterwards Archbiſhop of Canterbury. 'Edward had his mind ſo tainted by the invidious ſug-'geſtions of this Archbiſhop, that he grew at length 'to ſuch bitterneſs, as to expel Earl Godwin, who had 'made him King, and whoſe daughter he had married, 'from his councils; and having deſpoiled him and his 'family of their honours, beſtowed them among their 'enemies. He took from Queen Emma, his mother, 'all that ſhe poſſeſſed, and cauſed her to be confined 'in the abbey of Werewell, where he allowed her a 'very ſcanty ſubſiſtence. Alwine, Biſhop of Wincheſter, 'who was ſaid to be familiar with his mother, he 'ſtripped of his patrimonial eſtate, and forbid him, 'upon pain of death, to ſet his foot without the city 'of Wincheſter.' This, if it be true, or if it comes any thing near the truth, ſhews what great obligations Edward, ſurnamed the Confeſſor, lay under to Earl Godwin, and there is no doubt that paſſages of the like kind were found in other chronicles of thoſe days; in which, though they have tolerably eſcaped later revolutions, they are now wanting, and in many of them things are inſerted that are utterly inconſiſtent with them; yet they appear to have had ſuch weight with William of Malmeſbury (20), that it is plain he took the ſubſtance of them into his book; but this was purely the effects of his own diligence and good ſenſe; for other Hiſtorians of that time adopted the common notions out of reſpect for the Normans; for it was out of compliment to them that theſe alterations were made; and if the Saxon chronicle, and this of Wincheſter, had not eſcaped, William of Malmſbury's account would have run the hazard of being thought of his own invention.

(18) See the learned Biſhop Gibſon's excellent preface, prefixed to his edition of that Chronicle.

(20) De Geſtis Regum Anglorum, lib. II.

this is ſaid to have been done by the advice of Earl Godwin, and Biſhop Living, the ſucceeding times a long ſtory was told of the Queen's being ſuſpected of too much familiarity with Alwin then Biſhop of Wincheſter; and that the Earl charged both her and him with being the authors of prince Alfred's death, and the Queen with an attempt to poiſon Edward himſelf, upon which having paſſed the trial of the Ordeal, ſhe in memory of the nine burning plough-ſhares, over which ſhe went blindfold unhurt, gave nine manors to the church of Wincheſter, and was thereupon reſtored to the King's favour (*g*). But of all this, not a word in the Saxon Annals, in the hiſtory of Eadmerus, or in William of Malmeſbury. As for thoſe who penned the annals probably they never heard of it, and for the other two writers, they had more ſenſe and regard to veracity, than to ſet it down if they did. A. D. 1043, Archbiſhop Eadſig being very infirm, intreated the King that he might reſign his ſee to Siward Abbot of Abington, which, at the inſtance of Earl Godwin, he was permitted to do; and it is ſaid in the annals (*b*), that this affair was tranſacted with much ſecrecy, becauſe the Archbiſhop apprehended, if his intention was publickly known, ſome perſon of leſs probity and learning would by dint of intereſt or of money (theſe are the very words in the chronicle) have thruſt himſelf into the See. The ſame year the King married Egitha, which ſome have ſoftened into Editha, the daughter of Earl Godwin, a lady not only of great beauty and piety, but of conſiderable learning alſo, and a great encourager of it in others, as Ingulphus of his own knowlege and experience, as having participated of her bounty, acknowledges (*i*). But the King, either out of ſecret hatred to her father, as ſome ſay (*k*), or from an unreaſonable and unwarrantable zeal for chaſtity, as others aſſert, never lived with her as a wife (*l*), tho' nothing of this appears in the Annals, and Malmeſbury, who mentions both cauſes as we do doubtfully, very roundly declares afterwards, that he will not anſwer for the fact (*m*). In 1045, Earl Swayn, one of Godwin's ſons, left the kingdom, and retired to Flanders, on account, as we are told, of his violating the chaſtity of an Abbeſs (*n*). The next year, the King being at Sandwich, with a great fleet to repel the Daniſh pirates that waſted the coaſt, Earl Swayn came thither to him, and had prevailed upon the King to reſtore him to his honours and eſtate; but that his own brother Harold, and his couſin Beorn, hindered it, aſſuring the King that he was unworthy of his mercy, upon which he had four days time given him to retire (*o*). He not long after met with his father and his couſin Beorn at ſea, and having got the latter on board his ſhip, carried him away to the iſland of Axmouth and there murthered him, of which his relations at London having notice, and of the church where he was interred, they removed his corps to Wincheſter, and buried it there by that of his uncle King Knute (*p*). In 1047 there was a great council held at London, and ſoon after the King pardoned Earl Swayn (*q*). This year died Archbiſhop Eadſig, who upon the demiſe of Siward had reſumed his See, to which upon this vacancy the King promoted Robert, who was a Norman, and who was ſuſpected, as Malmeſbury obſerves, to have infuſed into the King's boſom, a jealouſy and hatred of Earl Godwin, which quickly broke out with great fury upon the following occaſion (*r*). Euſtace Earl of Boloigne, who had married the King's ſiſter, came over to make him a viſit, and in his return paſſing from Canterbury to Dover, he ſent ſome of his retinue, when he was within a mile of the place, to take up quarters for him, in which behaving themſelves very rudely, and one of them attempting to thruſt himſelf into a houſe without the owner's leave, wounded him, upon which the townſman killed him in his own defence. This ſo provoked Earl Euſtace, that he broke into the man's houſe, and not ſatisfied with killing him would have puniſhed others, which excited a great tumult, wherein more than twenty of the townſmen were killed, and nineteen of his own people (*s*). Upon this, with the few that were left, he fled to the King, and told him a lamentable ſtory, laying all the fault on the town's people, to which the King too readily yielding belief, diſpatched his orders to Earl Godwin not to hear, but to puniſh the people of Dover. The Earl, who as the Annals ſay, thought it hard to be made the deſtroyer of thoſe who were under his protection, delayed going, and inſinuated to the King that it would be right to hear both ſides (*t*). About this time the Welſh having invaded Herefordſhire, which was within the limits of Earl Swayn's government, plundered the country and built a fort there; the King ſummoned the nobility to Glouceſter, but Earl Godwin and his ſons, who thought that force was beſt repelled by force, had aſſembled a great army, and were upon the point of attacking the Welſh, when they were ſummoned to attend the King at this council; for the Welſhmen had applied to Edward, and made him believe that they were not the aggreſſors in this buſineſs, but that Earl Godwin and his aſſociates had aſſembled theſe forces for bad purpoſes (*u*). The King having with him Earl Siward, Earl Leofric, and moſt of the nobility in the northern parts of his kingdom about him, endeavoured to induce them to act againſt Earl Godwin, and thoſe of his party. The Earl and his ſons having notice of this, remained firm, notwithſtanding, tho' ſuch as were with them thought it a grievous thing, as the Saxon Annals ſay, to act againſt their prince (*w*); but Malmeſbury with great probability affirms, that Earl Godwin gave poſitive orders to his army not to act offenſively, but to repel force by force, in caſe they were attacked. However, if more moderate counſels had not interfered, a civil war had certainly enſued. The nobility about the King having prevailed upon

him, to let matters reſt as they were, and to ſummon a great council at London in the beginning of September, both parties ſeparated without coming to blows (*x*). At the meeting of the great council, where the Lords both of the Southern and Northern Provinces were preſent, Earl Swayn was declared an outlaw, and Earl Godwin and Earl Harold were cited to appear and give an account of their proceedings (*y*). The two Earls declared themſelves ready to come, provided they had hoſtages given them for their ſecurity. This was refuſed, and they were again ſummoned to appear, with no more than twelve in their company, and as they declined this they had five days given them to quit the kingdom (*z*). Earl Godwin and Earl Swayn went immediately to Flanders, to Earl Baldwin, and Harold retired into Ireland (*a*). As ſoon as the King knew they were gone, he cauſed his Queen to be ſeized, and having taken from her her lands, and whatever money ſhe had; he ſent her to the nunnery of Werewell, where ſhe was committed to the cuſtody of his ſiſter, tho' it does not appear that this unhappy princeſs was charged with any offence, but was puniſhed for the fault, or rather for the King's ſuſpicion, of her father (*b*) [*F*]. The King likewiſe to ſhew his reſentment ſtill more, gave the county of Earl Swayn, to Earl Odda; and that of Harold, to Earl Elfgar the ſon of Earl Leofric (*c*). In 1052, died Queen Emma on the ſixth of May (*d*), and the King ordered a fleet to aſſemble at Sandwich, under the command of Earl Rolfe and Earl Odda; however Earl Godwin came with a ſquadron from Flanders, to a point of land near Rumney in Kent, of which the Earls having notice they ſailed after him (*e*). But he having early intelligence of their motions, retired to Penſey in Suſſex, and from thence returned to Flanders; but the King's fleet, thro' the fault of thoſe who commanded it, diſperſed, and the ſeamen returned home (*f*). Earl Godwin having notice of this, put to ſea again as ſoon as poſſible, and being joined at the Iſle of Wight by his ſon Harold, with nine ſhips from Ireland, they ſailed along the coaſt of Suſſex, and took out of every port what ſhips there were in it, and having done the like on the coaſt of Kent, they came to the Buoy in the Nore, and ſo directly up the river (*g*). The King had moſt of the nobility about him, and a conſiderable force; Earl Godwin however, and thoſe of his party, ſent a very ſubmiſſive meſſage to the King, deſiring to be reſtored to their honours and eſtates, of which they had been unjuſtly deprived (*h*). To this the King ſhewed himſelf ſo much averſe, that the Earl had much difficulty to hinder thoſe of his party from committing hoſtilities (*i*). At length, by the interpoſition of Biſhop Stigand, and other prudent men, a negotiation was ſet on foot, hoſtages given, and a peace concluded (*k*). Upon this the Norman Archbiſhop Robert, with moſt of his party, withdrew, being reſolved to paſs over into France, and in their way committed many outrages and murthers (*l*). In a ſhort time after a great council was called at London, purſuant to the treaty, at which moſt of the nobility were preſent, and there, upon a full hearing, Earl Godwin and his ſons were acquitted, reſtored to the King's favour, and to all the honours and preferments they had formerly enjoyed (*m*) [*G*]. The Queen

[*F*] *For the King's ſuſpicion of her father.*] The uſage that Edward gave this lady, joined perhaps to the ſtrange reaſon which Malmeſbury ſays he aſſigned for it, that ſhe alone ſhould not enjoy peace and plenty, when her father and all the reſt of her family were plunged into difficulties and diſtreſs, has countenanced the opinion, that the King married this lady purely to ſatisfy the ambition of her father. But it may not be amiſs to conſider, that if this had really been the caſe, the King would certainly have married her ſooner; whereas from the Saxon chronicle it appears that he did not marry her 'till the third year of his reign (21), which argues no ſuch haſte on her father's ſide. It may be alſo, that ſhe was not marriageable before, notwithſtanding what is ſaid of Prince Alfred's falling a victim ſix years before to the contempt he ſhewed the father, in rejecting his only daughter. By the way, let us reflect a little on the inconſiſtencies into which theſe writers fall, by endeavouring to vent their ſpleen againſt this family, without regard not only to the truth of Hiſtory, and the genuine ſtate of things, but even to their own relations. For, Where was the great inequality of this match? or, Why ſhould this young Prince refuſe it?

(21) Chron. Saxon.

He was an adventurer only, and had no good title to the Crown, but for want of a better; that is, becauſe Edward, the father of Edgar Atheling, the ſon of Edmund Ironſide, and this prince's own nephew, was not within the reach of the Engliſh. What hurt therefore would it have done him, or his title, to have married the grand daughter of Canutus the Great? or, Why might not this determine Edward to have Egitha for a Queen, though not for a wife? Certain it is, that his behaviour towards her at all times was none of the beſt; which, joined to her own eaſy and affable behaviour, the envy of Courts, and the malice of the Normans, drew upon her calumnies, to which poſſibly the ears of her weak huſband were not always ſhut. But Malmeſbury, who mentions theſe, tells us alſo, that when ſhe died, pretty late in the reign of King William, ſhe fully cleared herſelf by a ſolemn declaration on her death-bed, that ſhe had never given any cauſe for theſe ſuſpicions (22). It was, to ſay the truth, no very high commendation of Edward the Confeſſor, that though he was awed by his counſellors, and governed by his flatterers, yet he was a very tyrant to his wife, and his mother, whom he committed both to the ſame place, after treating them both in the ſame manner; that is, in the words of the old Annaliſt, after ſtripping them to the laſt farthing (23). And as to his Queen, allowing her only one maid, as the Saxon chronicle affirms, it may be the ill uſage of the Queen-Confort contributed to break the heart of the Queen-Mother; for it is certain, if any thing in theſe times can be ſo, that ſhe died before the Queen was reſtored to her meek huſband's favour. By the way, if we yield entire credit to the chronicle of Wincheſter, this will be the more probable; for in that we have ſeen Earl Godwin was ſo far from accuſing Queen Emma, that he was diſgraced with her; and it may be, that upon his reconciliation the marriage took place. At all events the King's conduct in this particular was univerſally condemned; and no wonder, ſince he ſhewed himſelf thereby to be no better a man as a King, than as a huſband.

(22) De Geſtis Regum Anglorum, lib. II.

(23) Annal. Winton.

[*G*] *They had formerly enjoyed.*] The learned Lawyer and great Antiquary mentioned in the text, is the famous Mr Selden; he, ſpeaking of the juriſdiction exerciſed in the great Council, or Witenagemote, tells us, that it conſiſted either in a deliberative power, which

Queen was likewiſe ſent for back to Court, and had reſtitution made of whatever had been taken from her. Robert was deprived of the Archbiſhoprick, in which he was ſucceeded

which concerned their aſſenting to new laws, and adviſing in matters of ſtate, or in a judicial, which was of giving judgments upon ſuits or complaints in the ſame court (24). He gives inſtances of all theſe; and in ſpeaking to the laſt, the caſe of criminal proceedings, ſays he, is that againſt Earl Godwin. He having had a trial before the Lords, under King Hardecnute, *(coram proceribus regni licet falſo ſe purgarat*, ſaith Bromton) touching the death of Alfred, ſon to King Ethelred, and brother to him that was afterwards Edward the Confeſſor, had fled out of England, and that as it ſeems upon ſome judgment of baniſhment, or at leaſt of an oulawry given againſt him, and that alſo in a Witenagemote, or Parliament. And upon his return, with hope of Edward the Confeſſor's favour, he ſollicited the Lords to intercede for him with the King. In the time of his return the Witenagemote or Parliament ſat at London.

(24) Titles of Honour, p. 525.

He then proceeds to give the words of the Hiſtorian in Latin, which in Engliſh are to this effect (25): That the King having ſummoned a great council, as ſoon as he there beheld Earl Godwin, immediately accuſed him before them all of having betrayed and murthered his brother, Prince Alfred, in theſe words: 'Thou traytor, Godwin, I accuſe thee of the death 'of Alfred, my brother, whom thou haſt traiterouſly 'murthered; and for the proof of this, I refer myſelf 'to the judgment of *curiæ veſtræ*, *i. e.* your court.' Then the King proceeded thus: 'You, moſt noble 'Lords, the Earls and Barons of the kingdom, you, 'who are my liegemen, being here aſſembled, have 'heard my appeal, as alſo the anſwer of Earl Godwin. 'I will, that you now give a right ſentence between 'us in this my appeal, and afford due juſtice therein.' Then the Earls and Barons, having maturely debated this matter among themſelves, ſome were for giving judgment for the King, but others differed from them, ſaying, that Earl Godwin had never been obliged to the King by either homage, ſervice, or fealty, and therefore could be no traytor to him; and beſides, that he had not killed the Prince with his own hands. But others replied, that no Earl, Baron, nor any other ſubject of the King, could by law wage battle againſt him in his appeal, but ought upon the whole matter to ſubmit himſelf to the King's mercy, and offer him reaſonable amends. Then Leofric, Earl of Cheſter, who was an upright and ſincere man, both with reſpect to God, and the world, ſpoke thus: 'Earl Godwin, 'who next to the King, is indeed a perſon of the beſt 'quality in England, cannot deny, but that by his counſels 'Alfred, the King's brother, was killed; and therefore 'my opinion is, that both himſelf, and his ſons, and 'twelve of us Earls, that are his friends and kinſmen, 'ſhould appear humbly before the King, each of us 'carrying as much gold and ſilver as he can hold in 'his arms, and offering it to him, moſt humbly ſup'plicate for his pardon; and then the King ſhould re'mit to the Earl all rancour and anger whatſoever a'gainſt him; and having received his homage and 'fealty, peaceably reſtore to him all his lands.' To this the aſſembly agreed; and thoſe that were appointed, loading themſelves with treaſure after the manner aforeſaid, went unto the King, ſhewing him the order and manner of their judgment, which he being unwilling to contradict, complied with, and ſo ratified whatever they had before decreed. 'The circumſtances, ſays 'Mr Selden, that belong to this caſe, are variouſly 'expreſſed in the publiſhed ſtories of William of 'Malmeſbury, Huntingdon, Hoveden, Florentius, and 'others. But it ſeems by Florentius, that this was in 'the Conſilium, as he calls it, or Witenagemote, held 'in 1052, or the ninth year of the Confeſſor: for 'then, he ſays, was the Earl reconciled to the King's 'favour in that court, though neither he, nor any 'other, relate this proceeding as Bromton doth.'

(25) Johan. Bromton, col. 936, 937, 938.

But, as Mr Tyrrel very well obſerves (26), it is ſurprizing that Mr Selden did not ſee, that if there had been any truth in this ſtory, it muſt have happened at leaſt ten years before; for the year to which he fixes was not, as he ſuppoſes, the ninth, but the twelfth year of Edward's reign; and if this tranſaction could ever have happened, it muſt have happened in the ſecond. Indeed the author who reports it acknowledges he did not believe it, for he ſaw that it was big with abſurdities and contradictions. Yet in the main, and for the purpoſe for which he brings it, Mr Selden is certainly right; for there was a great council in the year 1052, in which Earl Godwin might be ſaid, with great propriety, to be tried by his Peers. We will give the reader a much better authority than that which we have ſubverted, and this is the Saxon chronicle, which relates the whole matter thus (27): 'A great Council, (27) Chronicon. '(the Saxon words are *Mycel Gemote)* without London, 'was then ſummoned, (that is, in ſome place near 'London) and there all the Earls and other Noblemen 'met in this Council; in which aſſembly Earl Godwin 'made his defence, and purged himſelf there before 'Edward the King, his Lord, ſhewing himſelf to be 'entirely free from the crime that had been objected 'to him, to his ſon Harold, and to all the reſt of his 'ſons. The King thereupon received the ſaid Earl 'and all the reſt of his ſons into full friendſhip, 'and reſtored him to his whole county, and whatever 'he before poſſeſſed, as he likewiſe did to all who 'were with him. The King likewiſe reſtored to his 'Lady, that is, to the Queen, whatever ſhe formerly 'poſſeſſed. There alſo, by unanimous conſent, Ro'bert, the Archbiſhop, and all the Frenchmen, were 'outlawed, becauſe that they were the principal inſtru'ments of the enmity that had ariſen between the 'King and Earl Godwin; and Biſhop Stigand was pro'moted to the Archbiſhoprick of Canterbury.' As there can be nothing clearer or plainer than this, ſo the reader cannot but acknowledge, that it comes up as fully to Mr Selden's propoſition, in regard to the juriſdiction of theſe great Councils, as what he is pleaſed to call the record preſerved by the Hiſtorian whom he cites; in which there are not only ſeveral words in the original which were not in uſe in the Saxon times, and which conſequently prove, that it cannot be the tranſcript of any record, but alſo various circumſtances that ſhew it was written long after the time, from popular rumours only, and full of contradictions. For if it happened as the chronicle expreſsly ſays, it did happen early in the Confeſſor's reign, then the King muſt have afterwards married the daughter of a man who ſtood in a manner ſelf-convicted of his brother's murther, who fled for it, and who with the aſſiſtance of his friends, had commuted his crime for a ſum of money.

(26) General Hiſtory of Britain, Vol. I. p. 84.

But if, with Mr Selden, we place this record in 1052, we muſt then admit, that the King, with all this in his heart, and with a full perſwaſion that Earl Godwin was both a murtherer and a traytor, had married his daughter, and intruſted him with the conduct of all his affairs, and which is ſtill worſe, after a confeſſion of theſe crimes, received him again into his favour. But there *is* an expreſſion in what Mr Selden calls a record, which is equally irreconcilable to both dates; for Earl Leofric is made to ſay, that after the King, Earl Godwin was the moſt conſiderable man in the realm. Now this was impoſſible if he was an outlaw, and had been ſo for years, as muſt have been the caſe in 1042; neither was it true ten years after, for even then he had been driven out of his country, and was ſuing to be reſtored. One obſervation more, and we will conclude. The crime imputed to the Earl, and of which he cleared himſelf before this Council, could not be the murther of the King's brother; for in that Harold, and the reſt of his ſons, were never ſaid to have any concern; indeed how ſhould they, when the eldeſt could not have been more than twenty, and ſome of them might have been in their cradles. Upon the whole, the Saxon chronicle ſhews, that the King, miſled by his affection for his brother-in-law, had commanded Godwin Earl of Kent to puniſh the people of Dover unjuſtly, that through the inſinuations of his foreign favourites, he had reſented his not complying with theſe orders, as an act of treaſon; that for this he had driven him and his whole family into exile without a hearing; that theſe points being made out in a great Council, who were

ceeded by Stigand, and with moſt of the Normans were baniſhed the kingdom, for having been the great inſtruments in the late troubles (*n*). But Earl Godwin did not live long to enjoy this return of proſperity, for on the fifteenth of April 1053, he departed this life, and was buried in the old monaſtery at Wincheſter (*o*) [*H*] His widow lady Githa, who

(*n*) Chron. Waiteri Hemingford. Sim. Dunelm.

(*o*) Annal. Winton. Chron. Saxon. Allured Bever

were the proper judges between the King and his Nobles, Earl Godwin, and all his family, were reſtored to their juſt rights, and the foreign favourites baniſhed. But theſe forcigners becoming afterwards maſters of this kingdom, and having an intereſt in corrupting this period of our hiſtory, did as much in that reſpect as they could, and out of their maſs of fictions and falſhood, by the aſſiſtance of the Saxon chronicle, the only authentic authority yet remaining, we have once more recovered the truth.

[*H*] *And was buried in the old monaſtery at Wincheſter*.] All men, however great and potent, muſt leave the felicities of this world, and account for the uſe they made of them in the next. But if in his life-time the fortune of Earl Godwin was envied, and his actions traduced after his deceaſe, his death hath furniſhed ſtill more matter, though the commonalt of all accidents that befel him, than the reſt. It may afford the reader ſome entertainment, as well as information, to ſee how the ſtories told upon this head have been gradually augmented, to a degree beyond all power of belief. In the Saxon chronicle, and in that of Wincheſter, the fact is ſet down as in the text, that is, the Earl's death, the time of it, and the place where he was buried. In the chronicles of Durham (28) we read, that the King keeping his Eaſter week at Wincheſter, Earl Godwin being as uſual at the King's table in the holidays, was ſuddenly ſtruck with ſo violent a diſeaſe, that he fell from his ſeat. Upon this his three ſons, the Earls Harold, Toſty, and Gyrth, took him up, and carried him into the King's chamber, hoping that in a little time he would come out of his fit; but he growing worſe and worſe, died upon the fifth day after, which was the fifteenth of April. Another Hiſtorian tells us (29), that Godwin, the King's father-in-law, ſitting with him at table, addreſſed him in theſe words: 'It has been often told 'thee, O King, though falſely, that I have conſpired 'againſt thee; but if the God of Heaven be true and 'juſt, let not this morſel of bread paſs through me, if 'I ever ſo much as thought of working thy deſtruction.' But God, true and juſt, heard the voice of this traytor, ſo that ſtrangled with that bit of bread, he went to taſte the pains of death eternal. William of Malmeſbury (30) has a different ſtory; he ſays, that ſome diſcourſe aroſe concerning the King's brother Alfred, upon which Earl Godwin ſaid, 'As often, O King, as this 'ſubject is mentioned, I ſee plainly with what counte'nance you look upon me; but let not God ſuffer this 'morſel to be ſwallowed by me, if I had any know'ledge of the contrivances to his prejudice, or to 'your's.' Having ſaid this, and put the bit of bread he had in his hand into his mouth, he was inſtantly choaked with it

(29) Abbreviationes Chronicorum Autore Radulfo de Diceto, col. 476.

(30) De Geſtis Regum Anglorum, lib. II.

But the profeſſed Hiſtorian of Edward the Confeſſor intending to add the laſt hand to this fine tale, after having told us what a wicked wretch this Godwin was, and how he had thruſt out all the King's Norman friends and favourites, was thus by his own confeſſion puniſhed by the hand of God (31). Upon a certain feaſt day, when Godwin, with other Nobles, was at the King's table, it happened while they were at dinner, that the cup-bearer made a falſe ſtep through haſte, but as he tripped with one foot, he recovered himſelf immediately on the other, without ſlipping down. Of this many of thoſe who were preſent took notice, ſaying, that one foot came in luckily to the aſſiſtance of the other; upon which the Earl, to throw in his jeſt amongſt the reſt, added, 'So brother ſhould aſſiſt bro'ther, when either ſtands in need.' The King turning towards him replied, 'So might my brother have 'helped me, if Godwin had not interpoſed.' Upon this the Earl was much caſt down, and with a countenance full of ſorrow he ſaid, 'I know, O King, that in 'your own mind you ſtill look upon me as the author 'of his death, and that you ſtill yield credit to thoſe 'who have ſtiled me a traytor to him and to thee; 'but God, who knows the ſecrets of all hearts, ſhall 'judge, and ſo let this morſel which I hold in my 'hand paſs through my throat without doing me hurt, 'as he knows that neither guilt of treaſon towards 'thee, or knowledge of thy brother's death, reſts in 'me.' Having ſaid this, and put the piece into his mouth, he ſwallowed it half down; but then he tried in vain to get it farther, and ſtruggling next to force it up, it ſtuck faſt; the courſe of the ſprings of life being ſtopped, his eyes turned, and his arms became ſtiff. The King ſeeing his miſerable death, and fully perſwaded in himſelf that it was the effect of divine judgment, he ſaid to thoſe who ſtood by, 'Drag out this 'dog.' His ſons upon this came, and taking him from under the table, laid him on a bed, where in a very little time the traytor breathed his laſt.

(31) Ailredus Abbas Rievallis de vitæ & miraculis Edwardi Confeſſoris, col. 394, 395.

Though the abbot of Reveſby did his beſt to illuſtrate this ſtory, yet being rather a florid than an accurate writer, there are ſome unlucky eſcapes; for, either this Confeſſor had no conſcience, or he would not have expected that his elder brother would have ſerved him, ſeated on a throne. He would have been cautious alſo of behaving in ſuch a manner to the father of his Queen; and, his meek ſpirit conſidered, he never would have called him dog in his laſt minutes, and preſently after put it in the power of his ſons to revenge the indignity. The worſt of all is, the abbot has not told us where this happened; and therefore ſome who wrote after him have laid the ſcene at Wincheſter, while others have transferred it to Windſor (32). One of our antiquaries ſays, that Wulſtan Biſhop of Worceſter curſed the bread (33); another writer ſays, that before the Earl ſwallowed it, the King bleſſed it (34). One no doubt is as true as the other; but we muſt not ſuppoſe, that all monks were ſo blind or ſo bad as to believe this tale, for Eadmerus of Canterbury, and Walter of Hemmingford, are both ſilent. After an interval of ages comes Polydor Virgil, and to ſhew the quickneſs of Italian wit, adds a very conſiderable circumſtance that ſlipped the abbot of Reveſby's invention (35). He ſays, yet indeed it had been ſaid before him, though not in conjunction with the abbot's ſtory, that it was Harold, who being the King's cup-bearer, ſtumbled, and occaſioned all this miſchief. But it is time to leave theſe ſimple falſhoods to the reader's contempt, and not purſue them any farther, though that might be eaſily done, as they are falſhoods as much unworthy of criticiſm as of credit. But we cannot conclude this note without producing a very authentic teſtimony in ſupport of the truth that we aſſert, and in diſproof of all this long legend of lies. We ſtand indebted for this to the honeſt and diligent John Stowe, whoſe care and induſtry in collecting the materials of our hiſtory could be only equalled by his integrity. He had in his cuſtody a manuſcript life of Edward the Confeſſor, which after the Saxon Chronicle, was perhaps the moſt authentic piece of hiſtory that eſcaped the general wreck of all that regarded the Saxon conſtitution. Out of this curious work he has extracted the following paſſages in relation to this great man's death, and the impreſſion it made upon the Engliſh nation; which therefore we ſhall tranſcribe in his own words: 'Duke Godwin and his ſons being reconciled 'to the King, and the country being quiet, in the 'ſecond year after died the ſaid duke, of happy me'mory, whoſe death was the ſorrow of the people; 'him their father; him the nouriſher of them and the 'kingdom; with continual weeping they bewailed. 'He was buried with worthy honour in the old mo'naſtery of Wincheſter, giving to the ſame church 'gifts, ornaments, and rents of lands. Harold ſuc'ceeded in his dukedom, which was a great com'fort to the whole Engliſh nation; for in virtue both 'of body and mind he excelled all people, as another 'Judas Macchabeus, and was a friend to his country, 'diligently ſupplying his father's place, and walking 'in his ſteps; that is to ſay, in patience, mercy, and 'affability, to well-willers; but to diſquiet perſons, 'thieves, and robbers, with a lion's countenance, he 'threatened

who had great poſſeſſions gave, according to the cuſtom of thoſe times, very liberally to ſeveral churches, that they might pray for his ſoul's health, and particularly to that of Wincheſter, the manors of Bleodan and Craukumb, with ornaments of different kinds (p). He was ſeized at the time of his deceaſe of an immenſe eſtate in different counties, of which we are able to give no account with any tolerable degree of accuracy, but from a moſt authentic record it appears (q), that amongſt others he held theſe Leleburne, Fereburne, Seleſburne, Boltone, Herbretreton, Brunſell, Coteham, Hore, Hancheſt, Fulcheſtan, Romenel, Eſtefort, Oiſtreham, and Boltune in Kent. Dodimere, Iver, Erbentone, Hiham, Wilendone, Radetone, Wineltone, Toringes, Leſtone, Bercheham, Silleton, Lorentone, Trovorde, Tocherſt, Stodeham, Botendone, Seleham, Tadeham, Borne, Gontone, Eſtone, Icemore, Clepinges, Beneſtede, Hentone, Laneſwic, Rotingedene, Briſtelmeſtune, Berchinges, Fochinges, Saleſcome, Herſt, Pluntune, Bercham, Bedling, Wilſtaneſtune, Congeltune, Apleſham, Ordinges, Dentune, How, Eſſingetune, Walſingtune, and Etune in Suſſex; and Stantune in Herefordſhire, Witley in Surry, Sudbertune, Wallope, Alwartone, Funtley, Hallege, Ceptune, Seneorde, Hamledune, Bockeland, Copenore, and Sudtune in Hampſhire. Out of his poſſeſſions he gave in his lifetime to the cathedral of Canterbury, the towns and lordſhips of Stiſtede and Cogſhall in Eſſex; as alſo Chich, which he received from the gift of King Canute (r), tho' ſome have not ſcrupled amongſt other crimes to charge him with injuſtice done to the Church. In reſpect to his widow and his poſterity, we ſhall give a ſuccinct account of them at the bottom of the page [I]. The modern hiſtorians have treated his character as indifferently as the Monkiſh

(p) Annal. Winton.

(q) Domeſd. Kanc.

(r) W. Thorn. col. 2224.

'threatened his juſt ſeverity.' Thus much addeth he out of the ancient monument intituled Vita Edwardi (36).

[I] *At the bottom of the page.*] We have already proved clearly, that the lady Githa was the ſame perſon with her whom Polydor Virgil calls Thira, the daughter of Knute, and the ſiſter of Hardecnute (37). It appears that ſhe had conſiderable eſtates in different counties, from the ſurvey taken in the time of the Conqueror, viz. Hertinges, Tractone, Meredone, Mundreham, Weſtmeſtan, and Odemanſcote, in Suſſex, Cerdenord, in Berks, Otringtone, in Devon, as alſo of Edeſtoche and Stoches, in the county of Bucks (38). She obtained from the Conquerer the body of her ſon King Harold, and cauſed it to be interred at Waltham-Abbey. After this ſhe was one of thoſe perſons of great quality whom the Conqueror blocked up at Exeter, from whence however ſhe had the good luck to make her eſcape, and retiring into France, carried with her great riches (39). By this lady he had ſix, ſome writers ſay ſeven, ſons, and one daughter; of theſe it is moſt probable, that Swegen, or Swægn, as the Saxons called him, Suane, or Swane, according to our manner of writing, was the eldeſt. He was Earl of the counties of Oxford, Glouceſter, Hereford, Somerſet, Berks, and as ſome ſay of Salop alſo (40). That he was Earl of one or more of them ſo early as 1045, is out of doubt (41); and a very indifferent character we have of him in all our hiſtories. His firſt exploit was ſeducing Egiva abbeſs of Leominſter, whom he kept as his wife for a year, and becauſe the King and the Archbiſhop of Canterbury would not allow him to make her ſo, he quitted the realm (42). In 1046 he returned, and endeavoured to obtain his pardon; at which time he murthered his couſin, Earl Beorn, of which we have a large account in the Saxon Chronicle; ſo that there is no foundation for ſaying that work was penned by a monk, partial to Godwin and his family (43). He was however afterwards pardoned, and reſtored to his honours, but fell into diſgrace again at the ſame time with his father, and for his ſake (44). Malmeſbury ſays he was a man of a perverſe diſpoſition, diſloyal to the King, and one who tarniſhed the honour of his illuſtrious family by turning pyrate (45), which in thoſe times was no great diſgrace. After his laſt baniſhment he went barefoot to Jeruſalem, and died in his return, ſome ſay of a cold, and others in battle (46). He was married, tho' we know not well to whom, and left iſſue a ſon, Hæcun (47), of whom we ſhall ſpeak hereafter. Harold, the ſecond ſon, deſerves more than a note, and therefore we ſhall ſay nothing of him here. The third was Wlnoth, or Walnoth, of whom we have very little to ſay; he ſome way or other fell into the hands of the Normans, with his nephew Hæcun, and after the Conqueſt was brought over hither, and died a priſoner at Saliſbury (49). The fourth ſon, though ſome make him the ſecond, was Toſti, who A. D. 1056 was made Earl of Northumberland by King Edward, as ſome ſay, becauſe Waltheof, the ſon of Earl Siward, was a child (49); but the Saxon Chronicle informs us, that he was made Earl of the Eaſt Angles the year before, when Earl Elfgar was baniſhed (50). He was a bold reſolute man, as appears by his uſage of Pope Nicholas the ſecond; for accompanying Aldred, who was elected Archbiſhop of York, to Rome, his Holineſs refuſed him the pall, and in his return he was robbed; upon which Earl Toſti told the Pope, that if he did not make the Biſhop amends, he would ſtop it out of the revenues he received from England, where he muſt not expect that his cenſures ſhould do much execution, when they could not terrify thieves at his own door; upon which the Pontiff granted Aldred the pall, and all that he deſired (51). He was with his brother Harold in the expedition againſt the Welſh, and behaved very bravely (52). A. D. 1064 the people of Northumberland expelled Toſti, and murthered all who acted under his authority, and elected Morker, the ſon of Elfgar, for their Earl; upon which King Edward ſent Harold to pacify them, which he did without reſtoring his brother; upon which Toſti fled into Flanders, where he had married Judith, the daughter of Earl Baldwin (53). He returned again in 1066 with a ſtrong ſquadron and a good army, but was beat by Earl Eadwin, and forced to retire; but having joined Harold King of Norway, who had a fleet of 300 ſail, and a vaſt army, they defeated Earl Morker and Earl Eadwin, but ſoon after were beat by King Harold at Stamford bridge, and both of them ſlain (54). He was the founder of the monaſtery of Tinmouth, and had large eſtates in different counties, but it does not appear he had any iſſue. The fifth was Gyrth, who was ſo highly in King Edward's favour, that we find him ſubſcribing a charter as an Earl ſo early as 1044 (55); when he muſt have been a very young man he likewiſe ſubſcribed other charters, but there is yet extant an original Saxon charter directed to him, which, becauſe it is very ſhort, and very curious, we will tranſcribe in Engliſh (56). 'Edward, King, 'greeteth Wlfy, Biſhop, and Gyrth, Earl, and all my 'Nobles in Oxfordſhire. And I tell you, that I have 'given to Chriſt and St Peter into Weſtminſter 'that ſmall village wherein I was born, by name 'Githſhepe, and one Hyche at Merſce, ſcot-free and 'rent-free, with all the things which belong thereunto 'in wood and field, in meadows and waters, with 'church, and with the immunities of the church, as 'fully, and as largely, and as free, as it ſtood in mine 'own hand, as alſo as my mother Imme, upon my 'right of primogeniture, for my maintenance gave it 'me entire, and bequeathed it to the family.' He is ſaid to have been a young man of knowledge and virtue far above his years (57), and behaving himſelf very bravely, was killed with his brother at the fatal battle of Haſtings

(57) Hen. Huntingdon.

Monkiſh writers, upon whom they relied, and finding different relations of his behaviour, and wide chaſms in his hiſtory, they reconciled the former, and filled up the latter, according to their own notions of things, as the reader will be thoroughly ſatisfied, if he takes the trouble to conſult and compare them (s). One thing very remarkable with regard to this hiſtory is, that not only the moſt authentick chronicle we have, reports none of the crimes that are commonly charged upon this nobleman; but the moſt judicious hiſtorians, in their order of ſucceſſion, have likewiſe paſſed them over in ſilence, and are content to tranſmit him to poſterity, as a bold, eloquent, factious perſon, who during the reign of a very weak prince managed all things at his will, which in ſome meaſure may be true (t). As for the crowd of tranſcribers, who followed one another implicitly, except what they added from the mouth of common fame, or to make their court to their reſpective patrons, they have indeed treated him very ill; and from theſe the Norman writers and the Normanized hiſtorians, from whom came our chronicles in verſe, who when the ſtudy of our antiquities came to be revived were too much reſpected, with regard to what they delivered, as to theſe early times, have uſed him much worſe (u). From them the Engliſh hiſtorians in the two laſt centuries took very freely, and upon their faith, and upon a ſuppoſition, that it was to little purpoſe to aim at coming at truth in theſe times of confuſion, is the true ſource of that inconſiſtency which appears in all the accounts hitherto publiſhed of this great Earl. Sir William Dugdale (w) and Mr Tyrrel (x) indeed have ſhewn more judgment and greater impartiality than any of the reſt. Yet both of them ſeem to think him guilty of the murther of Alfred, and what ſeems to juſtify them therein, are the imputations of the ſame kind in the Annals of Wincheſter (y). But to this we may oppoſe not only the ſilence of the Saxon Chronicle, but the apparent and irreconcileable contradictions viſible in all the accounts of this matter, as hath been largely ſhewn, both in this and in a former article, from whence the certainty of that fact is unqueſtionably deſtroyed. If we may be indulged a conjecture, it ſhould ſeem moſt probable if this prince was really killed at all, that he came over with his brother, at the inſtance of Queen Emma in the laſt year of the reign of Hardecnute, and was then treacherouſly deſtroyed, upon which his brother Edward fled in great fear to Normandy (z), from whence he came again when the ſupreme authority was committed to Earl Godwin, upon Hardecnute's death, which however it is very hard to conceive, he would have done, if he had looked upon Earl Godwin, as concerned in that fact; and as to the Annals of Wincheſter, it is not difficult to perceive that they have undergone ſome interpolation, ſince there ſtill remains a paſſage in them in regard to Queen Emma's courſe of life, during the reign of her favourite ſon Hardecnute, which is not very conſiſtent with the tale of her purgation. When therefore that was to be put in, whatever tended to fix the death of Alfred upon her was to be put out, and this ſeems to have thrown it upon Godwin. But as Queen Emma's diſgrace was prior to the King's marriage with that Earl's daughter, it is very improbable that he was then loaded with this charge; and as to what is ſaid in thoſe Annals of the Norman Archbiſhop ſtirring up the King againſt both the Queen and the Earl, it ſeems to be confounding facts that happened at very different times; for when Queen Emma fell into diſgrace, he was not either Biſhop or Archbiſhop, tho' he might be the author of it nevertheleſs, as he certainly was of the King's enmity to Earl Godwin, notwithſtanding the obligations he had to him, and as we have ſeen was depoſed and baniſhed for it, by judgment of his Peers. We will cloſe this long article with two obſervations; the firſt is, that if the remark made by ſeveral of our hiſtorians be true, that tho' Edward the Confeſſor was not either a wiſe or a brave prince, yet he was generally ſucceſsful, it ought in a great meaſure to be aſcribed to the abilities of Earl Godwin and his ſons, by whom all the ſucceſſes in his reign were obtained. The ſecond, that the public ruin of the Engliſh nation, and of the Engliſh conſtitution, by the Norman invaſion, was the conſequence of the diviſions in and deſtruction of this family; ſo that if ever there was a great man, who flouriſhed in this country, whoſe character and conduct deſerved to be examined with care and candour, this is he.

GODWIN [THOMAS], a learned Divine, an excellent Preacher, and Biſhop of Bath and Wells, in the reign of Queen Elizabeth. He was a native of the pleaſant town of Ockingham in the county of Berks (a), but we know nothing of his parents, who very probably were but in low circumſtances. He received the firſt tincture of letters in the free ſchool of that place (b), and the pregnancy of his parts, recommended him to Dr Richard Layton Archdeacon of Bucks, and rector of Brington in the county of Northampton, a zealous Reformer, and one of the viſitors of monaſteries, who kept him ſome time in his houſe (c), and about the year 1538, ſent him to the Univerſity of Oxford, where

where he was entered of Magdalen College (*d*). His patron becoming the year after Dean of York, exhibited to him as long as he lived, and other friends, raiſed by his own merit, ſupplied his loſs in that great man (*e*). In 1544, he became Probationer, and the next year Bachelor of Arts, and Fellow of his college (*f*). His zeal for the Reformation drew upon him ſome ill will, which with a proſpect of bad times, made him very gladly embrace the rectorſhip of Brackley ſchool in Northamptonſhire, which was in the gift of his college, and having quitted his fellowſhip, he retired thither in 1549 (*g*); while he preſided in this ſchool, he took to wife Iſabella the daughter of Nicholas Purefoy of Shalſton in the county of Bucks, Eſq; and what time he could ſpare from his ſchool, he ſpent in the ſtudy of Divinity and Phyſic, making great proficiency in both (*h*). In 1555, he took his degree of Bachelor of Phyſick, by the practice of which faculty he maintained his family during the reign of Queen Mary, when he ſeems to have quitted his ſchool on account of the perſecution he met with from Dr Bonner, Biſhop of London (*i*). In the beginning of the reign of Queen Elizabeth, he received Holy Orders from the hands of Dr Nicholas Bullyngham, Biſhop of London, to whom he became chaplain; and by his favour had often the honour to preach before the Queen; who was ſo well pleaſed with the gravity of his perſon, and his plain and pathetic oratory, that, for eighteen years together, he was conſtantly one of her Lent Preachers (*k*). But notwithſtanding this brought him into public notice, and high reputation, it was ſome years before he had any preferment; at length on the removal of Thomas Sampſon, Bachelor of Divinity, who was deprived for Non-Conformity by the definitive ſentence of Archbiſhop Parker, he in the month of June 1565, was promoted to the Deanery of Chriſt-Church Oxford (*l*), and in the month of December in the ſame year, he had the prebend of Milton Eccleſia beſtowed upon him, by his kind patron Biſhop Bullyngham, on the death of Richard Mawde Maſter of Arts (*m*). In the ſpring of the ſucceeding year, he was promoted to the Deanery of Canterbury, on the demiſe of that famous ſtateſman Dr Nicholas Wotton, who was the firſt Dean of that church, and at the ſame time Dean of York (*n*). In the Autumn he attended Queen Elizabeth in her pompous viſit to the univerſity of Oxford, at which time he took his degree of Doctor in Divinity with ſingular applauſe [*A*]. During the time he enjoyed this deanery, the houſe at Canterbury was much damaged by fire, and that at Charthan in great want of repair; ſo that the Chapter threatened him with a ſuit for dilapidation, which he prevented by rebuilding the deanery (*o*). After he had remained eighteen years at Canterbury, within which ſpace he exchanged his prebend of Milton-Eccleſia for that of Leighton-Boſard, on the deprivation of Gabriel White (*p*); he was promoted to the ſee of Bath and Wells, when it had been three years vacant, by the death of Dr Gilbert Barkley; and was ſucceeded in his deanery by Dr Richard Rogers, ſuffragan Biſhop of Dover (*q*). He was confirmed Biſhop and Paſtor of the church of St Andrew's, Wells, September the 11th, in the pariſh of St Mary le Bow, London, and and was conſecrated on Sunday September the thirteenth, 1584, by the Archbiſhop, at Lambeth, the Biſhops of London and Rocheſter aſſiſting (*r*). This laſt promotion, whether proceeding from the Queen's affection, or from the good Archbiſhop's great regard for him, was far from being conducive to his honour, in point of public character, or to his happineſs, in reſpect to private life. There was, at the time he was raiſed to the epiſcopal dignity, a very high diſtaſte among the courtiers againſt the Clergy and the Church, but more eſpecially againſt the Biſhops; not ſo much from any difference in point of doctrine, though that was likewiſe pretended, as on account of their revenues, of which they were eager to ſpoil them, and were not at all at a loſs for plauſible pretences to cover their unjuſt proceedings (*s*). Our Prelate felt this very early, and it found him in a condition which

[*A*] *With ſingular applauſe.*] We have ſeveral ſhort, and one very full account of this viſit of the Queen's; from whence it appears, that ſhe ſet out from Woodſtock for Oxford on Saturday the firſt of Auguſt, and remained in that city till the Friday following, being attended by the Dean of Toledo, then Ambaſſador from his Catholic Majeſty; the Marquis of Northampton; the Earls of Warwick, Suſſex, Huntingdon, Rutland, Oxford, and Ormond; the Biſhops of Saliſbury and Rocheſter, Lord Howard of Effingham, then Lord Chamberlain; Windſor, Stafford, Strange, Sheffield, Montjoy, Henry Seymour, Gray, and Paget (1) On every day the Queen was entertained with academical exerciſes of different kinds; in which the wits of the ableſt men in that age, and perhaps there have been few abler in any, were ſtretched to the utmoſt, to merit the applauſe of ſo illuſtrious an audience; but more eſpecially after the Queen, of the Spaniſh Ambaſſador, and Sir William Cecil, Chancellor of the univerſity of Cambridge. On Thurſday the Queen was preſent at a divinity-act, in which Dr Lawrence Humphries was defendant; and the Doctors, Godwin, Weſtphaling, Overton, Calfehill, and Peirce, were opponents. Dr Jewel, Biſhop of Saliſbury, acted as moderator. At the concluſion, the Queen herſelf made a ſpeech, at the earneſt requeſt of the Spaniſh Ambaſſador, the Earl of Leiceſter, Chancellor of this univerſity, and Sir William Cecil, which muſt have been extempore, ſince, in the ſeveral relations which are ſtill preſerved of this tranſaction, the copies of this ſpeech differ widely in point of expreſſion, though ſcarce at all in ſubſtance (2). The next day, in the afternoon, ſhe left Oxford, being accompanied by the heads of the univerſity to Shotover-Hill, where the public orator, Mr Roger Marbec, made a ſhort ſpeech; which ended, the Queen gave him her hand to kiſs, turning her eyes towards the city, ſhe ſaid, *Vale Academia inclyta, valete ſubditi fidiſſimi, valete ſcholares chariſſimi, Deumque ſtudiis veſtris propitium habeatis; Valete! Valete!* Farewel illuſtrious univerſity, farewel moſt faithful ſubjects, farewel moſt dear ſcholars, may Providence be ever propitious to your ſtudies; farewel! farewel! The large account we have of this royal viſit, was written for the ſatisfaction of William Lord Brooke, Baron of Cobham, and Sir William Petre, both Privy-Counſellors to her Majeſty.

[*B*] *In*

which made him feel it very ſenſibly. He was drawing towards ſeventy, ſubject to ſeveral infirmities, and ſo broken with the gout that he was ſcarce able to ſtand. To govern his family, that he might bend the whole of his abilities to the diſcharge of his duty, he married a ſecond wife, who was the widow of a trader of London, of years very ſuitable to his own; for which, notwithſtanding, he was ſtrangely miſrepreſented to the Queen, ſo that he entirely loſt her favour; and was abandoned to the fury of his perſecutors, who ſought, by all the methods they could contrive, either to fright or to weary him, into granting a long leaſe of one of the beſt manors belonging to his ſee (*t*). What the iſſue was, as well as what the circumſtances were, of this unequal contention, between favourites in the fulneſs of power, and a poor old Prelate, decayed in credit, and declining in health, the reader may learn from the pen of a perſon of diſtinction, who was an eye-witneſs of the whole, and an actor in ſome part of the buſineſs (*u*) [*B*]. This unlucky and troubleſome diſpute, with it's conſequences, contributed not a little to deject his mind; and thereby augmented the ſtrength of his diſeaſe, and the feebleneſs of his body (*w*). In the ſummer of 1587, Dr Whitgift, Archbiſhop of Canterbury, viſited his dioceſe (*x*). The two ſucceeding years his health became more and more impaired, till at length, being attacked by

(*x*) Regiſtr. Whitgift.

[*B*] *In ſome part of the buſineſs.*] We find ſome mention made of this affair by Fuller (3) and other writers, particularly Wood (4), who, except naming the great favourite, who was Sir Walter Raleigh, has nothing but what he collected and contracted from the original account, which is ſo well worth the reader's peruſal, and ſo ſingular in it's kind, it would be doing him an injury not to inſert it (5). 'He came to 'the place, ſays Sir John, as well qualified for a Biſhop 'as might be, unreprovable, without ſimony, given 'to good hoſpitality, quiet, kind, affable, a widower, 'and in the Queen's good opinion. Non minor eſt 'virtus quam quærere parta tueri. There is not leſs abi'lity ſhewn in keeping than in acquiring. If he had held 'on as clear as he entered, I ſhould have highly ex'tolled him: but ſee his misfortune that firſt loſt him 'the Queen's favour, and after forced him to another 'miſchief. Being aged and diſeaſed, and lame of the 'gout, he married (as ſome thought for opinion of 'wealth) a widow of London. A chief favourite of 'that time, whom I am ſorry to have occaſion to name 'again in this kind, had laboured to get the manor of Ban'well from this Biſhopric; and diſdaining the repulſe, 'now hearing this intempeſtive marriage, took advan'tage thereof, cauſed it to be told the Queen, know'ing how much ſhe miſliked ſuch matches, and inſtant'ly purſued the Biſhop with letters and mandates for 'the manor of Banwell for one hundred years. The 'good Biſhop, not expecting ſuch a ſudden tempeſt, 'was greatly perplext; yet a while he held out, and 'endured many ſharp meſſages from the Queen, of 'which myſelf carried him one, delivered me by my 'Lord of Leiceſter, who ſeemed to favour the Biſhop, 'and diſlike the Knight for moleſting him; but they 'were ſoon agreed, like Pilot and Herod to condemn 'Chriſt. Never was harmleſs man ſo traduced to his 'ſovereign: it was ſaid that he had married a girl of 'twenty years old, with a great portion; that he had 'conveyed half the biſhopric to her; that becauſe 'he had the gout he could not ſtand to his marriage; 'with ſuch ſcoffs, to make him ridiculous to the vul'gar, and render him odious to the Queen. The good 'Earl of Bedford happening to be preſent when theſe 'tales were told, and knowing the Londoner's widow 'the Biſhop had married, ſaid merrily to the Queen 'after his dry manner, *Madam, I know not how much 'the woman is above twenty, but I know a ſon of her's 'is but little under forty.* But this rather marred than 'mended the matter. One ſaid, *Majus peccatum ha'bet*, He hath therefore the greater ſin. Ano'ther told of three ſorts of marriage; of God's 'making, as when Adam and Eve, two young folks, 'were coupled; of man's making, when one is old 'and the other young, as Joſeph's marriage; and of 'the Devil's making, when two old folkes marry, 'not for comfort, but for covetouſneſs, and ſuch they 'ſaid was this. The concluſion to the premiſes was 'this, that to pacify his perſecutors, and to ſave Ban'well, he was fain to part with Wilſcombe for ninety'nine years, (I would it had been one hundred) 'and ſo purchaſed his peace. Thus the biſhopric, as 'well as the Biſhop, were puniſhed; who wiſhed in 'his heart he had never taken this preferment, to 'foile himſelf in his decrepid age with that ſtain that 'all his life he had abhorred; and to be made an in'ſtrument of another man's ſacrilege, and uſed like a 'leaden conduit-pipe to convey waters to others, and 'drink nothing but the dregs, and droſs, and ruſt it'ſelf. Wherefore right honeſtly and modeſtly, and 'no leſs learnedly, writes his own ſon of him, in the 'fore-named treatiſe. *O! illum fœlicem, ſi fœlix manere 'maluiſſet, quam regiminis eccleſiaſtici laboris, tum ſuſci'pere, cum laboribus impar, fractus ſenio, neceſſum illi 'fuerit aliorum uti auxilio*, &c. (6) *i. e.* O happy he, if he would rather have remained happy (where he then was) than to undergo the labours of eccleſiaſtical government, when he grew unable to travel, broken with age, conſtrained to uſe the help of others, who, though their duty required their care of ſo good natured an old man, yet they proving, as moſt do, negligent of others good, and too greedy of their own, overthrew both. For my part, though I loved him well, and ſome of his actions, yet in this caſe, I can make no other apology for him, nor uſe no other plea in his defence, but ſuch as unable debtors do, that when they are ſued upon juſt occaſions, plead per minas; or rather to liken him to an huſbandman, that dwelling near a Judge that was a great builder, and coming one day, among divers other neighbours, with carriages, ſome of ſtone, ſome tin: the ſteward, as the manner of the country was, provided two tables for their dinners; for thoſe that came upon requeſt, powdered beef, and perhaps veniſon; for thoſe that came for hire, poor-john and apple-pies; and having invited them to ſit down in his Lordſhip's name, telling them, one board was for them that came in love, the other for thoſe that came for money: this huſbandman and his hind ſat not down at either; the which the ſteward imputing to ſimplicity, repeated his former words again, praying them to ſit down accordingly; but he anſwered, for there is craft in the clouted ſhoe, he ſaw no table for him, for he came neither for love nor money, but for very fear: and even ſo I dare anſwer for this Biſhop; he neither gave Wilſcombe for love, nor ſold it for money, but lett it for fear. How ſtrangely he was intrapped in the unfit marriage: I know not if it may be called a marriage, *Non Hymenæus adeſt illi, non gratia lecto.* Himſelf proteſted to me, with tears in his eyes, he took her but for a guide to his houſe, and for the reſt (they were his own words) he lived with her as Joſeph did with our Lady. Setting this one diſgrace of his aſide, he was a man very well eſteemed in the country, beloved of all men for his great hoſpitality; of the better ſort, for his kind entertainment, and pleaſant diſcourſe, at his table; his reading had been much, his judgment and doctrine ſound, his government mild and not violent, his mind charitable; and therefore I *would* not, but when he loſt this life, he won Heaven; according to his word, win God, win all. This I ſay truly of him, which his ſon was not ſo fit to ſay, for fear perhaps of the fooliſh ſaying, yet wiſe enough if it be well underſtood, *Nemo laudat patrem, niſi improbus filius, i. e.* none ſo loud about a father's worth as a worthleſs ſon.'

(3) Fuller's Worthies, Berks, p. 92.

(5) Brief View of the ſtate of the Church of England, p. 3.

(6) See the Note [B] in the next Article.

by an ague, which became at laſt an obſtinate quartan, he was adviſed by his Phyſicians to try whether his native air in Windſor-Foreſt might not contribute to his recovery; and coming with this intention to Ockingham, he there breathed his laſt, November the ninth, 1590, in the ſeventy-third year of his age (y). His corps lies interred in the pariſh church (z), on the ſouth ſide of the chancel; and againſt the eaſt wall, on a black marble table, enchaſed in white, there is a modeſt and elegant inſcription for the preſervation of his memory, penned and erected by his ſon, of whom in the next article [C].

(y) Fuller's Worthies, Berks, p. 92. Godwini de Præſulibus Angliæ. Hiſt. & Antiquit. Oxonienſis.

(z) Rawlinſon's Additions to Aſhmole's Berkſhire, Vol. I. p. xxxi. Godwini de Præſulibus Angliæ, Lond. 1616. 4to p. 444. Wood's Athen. Oxon. Vol. I. col. 687.

[C] *Erected by his ſon, &c.*] Dr Francis Godwin ſpeaks very decently of this act of duty, which he ſays was performed, in a manner rather ſuited to the circumſtances of him who dedicated, than the merit of his memory to whom it was dedicated (7). The inſcription, which deſerves reading, is printed correctly only in one book of great price (8); and there, without a tranſlation, which we hope will render what follows acceptable here.

Sacred to the Memory
Of the moſt beloved Parent,
The truly reverend Father,
Thomas Godwyn,
Doctor of Divinity,
Of Chriſt Church in Oxford firſt,
Of Canterbury afterwards, Dean,
Laſtly Biſhop of Bath and Wells,
Who born in this town.
Here alſo (whether in hopes of recovery,
And by direction of Phyſicians he retired) broken by a Quartan,
He quitted this mortal ſtate, Nov. 19. 1590.
From his conſecration the ſeventh year,
And lies here, expecting the coming of the great GOD.
This (monument) hath placed
His ſon Francis Godwyn, Subdean of Exeter.

(9) Ockingham is celebrated for it's excellent air and pleaſant ſituation.

E

GODWIN [FRANCIS], ſon to the former, an able Divine, an extenſive Scholar, a candid Hiſtorian, an elegant Writer in the Latin tongue, and ſucceſſively Biſhop of Landaff and Hereford, in the beginning of the XVIIth century. He was born at Havington, in Orlington hundred, in Northamptonſhire; he calls it Havington (a), when writing in Engliſh; but in his Latin book, the letter being reverſed, we read Hannington, which is copied by Wood (b) and all ſubſequent writers, though there is really no ſuch place in that county (c). His father had at this time, 1561, no proviſion made for him; but as his affairs quickly changed for the better, he cauſed this ſon of his to be very carefully educated; nor was this diligence employed in vain, ſince the admirable capacity of his ſon Francis, diſcovered itſelf ſo early, and with ſuch luſtre, that in his ſixteenth year he was ſent to the univerſity of Oxford (d), and in 1578 he was elected ſcholar of Chriſt-Church (e). He ſtudied there with great reputation, and took his degree of Bachelor of Arts, January the thirteenth 1580, being of the ſame ſtanding with the famous Henry Cuffe, already mentioned in this work (f). March 16th, 1583, he was admitted to the degree of Maſter of Arts (g), and was at that time accounted one of the moſt ingenious perſons, as well as aſſiduous ſtudents, in the univerſity. He gave a very ſignal inſtance of the elevation, as well as elegance of his genius, in a little treatiſe he wrote about this time, on a very curious and ſublime ſubject; and as he ſhewed the brilliancy of his wit, and the acuteneſs of his underſtanding, in the compoſition of this treatiſe, ſo he diſcovered a degree of prudence ſcarce to be expected in ſo young a man, in confiding this book only to a few particular friends, and not ſuffering it to go abroad into the world; which if he had done, it would, in all probability, rather have injured than raiſed his reputation (b) [A]. About this time alſo, he wrote another little work, in a manner no leſs

[A] *Than raiſed his reputation.*] There are but few inſtances in the Hiſtory of Literature, where the imagination and judgment keep equal pace, and very few works in which a vigorous fancy appears, that the underſtanding is able to keep in exact diſcipline, ſo as never to be carried away by it. It is the extreme rarity of theſe works that gives them their high value. Don Quixote was a moral romance, in that reſpect eaſily comprehended, and univerſally applauded. Our author's was a philoſophical fiction; and the important truths he had in view ſo elevated, that very few had the leaſt conception of them; in ſo much, that thoſe who have admired the book were rather pleaſed with the vivacity of the fable, than ſenſible of the ſolidity of the ſubject; which is the true reaſon, that at this day it is ſo little regarded, and the moſt convincing mark of it's author's foreſight, and true apprehenſion of mankind, who hid this candle under a buſhel ſo long as he lived. It was printed about five years after his death by E. M. of Chriſt-Church (i), and appeared under this title:

The Man *in the* Moon; *or a* Diſcourſe *of a* Voyage *thither*. *By* Domingo Gonſales. Lond. 1638, and 1657. 8vo.

The editor in his preface tells us, 'That this piece is 'an eſſay of fancy, where invention is ſhewed with 'judgment, and it was not the author's intention, 'ſays he, to diſcourſe thee into a belief of each parti-'cular circumſtance. It is fit thou allow him a liberty 'of conceit, where thou takeſt to thyſelf a liberty of 'judgment.

(i) Wood's Athenæ Oxonienſis, Vol. I. col. 582.

leſs ingenious, and on a ſubject ſtill more obſcure; which he likewiſe ſuppreſſed at this juncture, though he ſuffered it to be publiſhed towards the cloſe of his life, as will be obſerved in it's proper place. We have no diſtinct account of the time when he received Holy Orders, but in all probability it was as early as might be, for, on the 11th of June, 1587, he was collated to the ſubdeanery of Exeter, being then a Canon in the cathedral church of Wells (*i*). In 1590, he went with his old friend, the learned Camden, into Wales, in ſearch of antiquities (*k*); and he was ſcarce returned from thence before his father died (*l*). It is impoſſible to affirm, at this diſtance of time, when he conceived the plan of that great work which gave riſe to his fortune, as well as his reputation; but there is nothing improbable in ſuppoſing that it was either at or before this time, and that this journey might have ſome relation to it; at leaſt it is certain, that within four years after, he executed a very conſiderable article of it (*m*); for which he had the beſt materials, and in a manner very

'judgment. In ſubſtance thou haſt here a new diſco-
'very of a new world, which perchance may find little
'better entertainment in thy opinion than that of Co-
'lumbus, at firſt in the eſteem of all men. Yet his
'then but poor eſpial of America, betrayed unto know-
'ledge ſo much as hath ſince increaſed into a vaſt
'plantation, and the then unknown, to be now of as
'large extent as all the other known world. That
'there ſhould be antipodes, was once thought as great a
'paradox, as now that the moon ſhould be habitable.
'But the knowledge of this may ſeem more proper for
'this our diſcovering age, in which our Galilæus's can
'by advantage of their teleſcopes gaze the ſun into
'ſpots, and deſcry mountains in the moon. But this
'and more in the enſuing diſcourſe I leave to thy can-
'did cenſure, and the faithful relation of the little eye-
'witneſs, our great diſcoverer.' Whoever this E. M. was, and it is a wonder that Anthony Wood did not let us into the ſecret, he was certainly a perſon of quick penetration, or received the key of this little work from it's author. It was tranſlated into French, and publiſhed under the following title (2):

(2) P. Niceron Memoires pour l'Hiſtoire des Hommes illuſt. tom. xxii. p. 168.

L' Homme dans la Lune: *ou le Voyage Chimerique fait au Monde de la* Lune, *découvert, par* Dominique Gonzales, *Avanturier Eſpagnol. A La* Haye, 1651, *in* 12*mo.*

The ſhadow of this performance is, that Domingo Gonſales, a bold whimſical enterprizing Spaniard, after having run through a variety of adventures, being ſhipwrecked with a negro ſervant on an uninhabited iſland, diſcovered by the fertility of his invention, a variety of curious and uſeful ſecrets, which gradually led him to attempt a paſſage through the air in a machine ſupported by ganza's, or a kind of wild geeſe, and that after various experiments, he was at length borne away by theſe flying courſers from the top of the pike of Teneriff to the moon. The ſenſe is, that if ever diſcoveries ſhall be made of ſuch a paſſage, it is moſt likely that the profundity of the Spaniſh genius will reach it, and poſſibly their romantic ſpirit lead them to the attempt. But whatever becomes of the fable, which is ſo pleaſantly managed, and ſo well ſuſtained, that it has amuſed the bulk of readers without looking farther; the judicious peruſer will plainly perceive, that our author has hinted a multitude of philoſophic truths little underſtood in thoſe times, and perhaps no where more clearly, elegantly, or ſatisfactorily repreſented, than in this treatiſe. He not only gives his reader to underſtand, that this earth is a planet in reſpect to the ſun, and a moon to the moon, but he ſhews likewiſe the effects this would have on a ſpectator placed between our earth and the moon; he diſcourſes truly and correctly of gravity and attraction; ſhews the reaſon why the latter muſt be weaker in the moon, and what may very poſſibly be it's effects; deſcants upon the length of lunar days and nights, and from thence gives a plauſible account why the inhabitants of that world ſtand in need of a larger moon than we. He conjectures, that ſince we ſee but one ſide of the moon, becauſe her rotation on her own axis, and her revolution about the earth is performed exactly in the ſame time, that there is ſome extraordinary proviſion for light on the other ſide, with a multitude of ſingularities of the like nature. Mr Wood and ſeveral others have thought, that Biſhop Wilkins borrowed from our author; but much of this does not appear, though it is true he wrote two treatiſes on part of the ſubjects included in this, the one entitled, *A Diſcovery of a* New World: *or a Diſcourſe tending to prove that it is probable there may be another habitable* World *in the* Moon; and the other, *A Diſcourſe concerning a* New Planet, *which is our* Earth. At the cloſe of the firſt he gives us his thoughts of this performance (3), with which we ſhall conclude this long note. 'Having thus finiſhed (ſays Biſhop Wil-
'kins) this diſcourſe, I chanced upon a late fancy
'under the feigned name of Domingo Gonſales, written
'by a late reverend and learned Biſhop. In which
'there is delivered a pleaſant and well contrived fancy
'concerning a voyage to this other world. He ſup-
'poſeth that there is a natural and uſual paſſage for
'many creatures betwixt our earth and this planet.
'Thus he ſays, thoſe great multitudes of locuſts, where-
'with divers countries have been deſtroyed, do proceed
'from thence. And if we peruſe the authors who treat
'of them, we ſhall find that many times they fly in num-
'berleſs troops, or ſwarms; and for ſundry days toge-
'ther, before they fall, are ſeen over thoſe places in great
'high clouds, ſuch as coming nearer are of extenſion
'enough to obſcure the day, and hinder the light of
'the ſun. From which, together with divers other
'ſuch relations, he concludes, that it is not altogether
'improbable they ſhould proceed from the moon.
'Thus likewiſe he ſuppoſeth the ſwallows, cuckows,
'nightingales, with divers other fowl which are with
'us only half a year, to fly up thither when they go
'from us. Amongſt which kind there is a wild ſwan
'in the Eaſt Indies, which at certain ſeaſons of the
'year do conſtantly take their flight thither. Now
'this bird being of a great ſtrength, able to continue
'for a long flight, as alſo going uſually in flocks, like
'our wild geeſe, he ſuppoſeth that many of them to-
'gether might be taught to carry the weight of a
'man, eſpecially if an engine were ſo contrived, as he
'thinks it might, that each of them ſhould bear an
'equal ſhare in the burthen. So that by this means it
'is eaſily conceivable, how once every year a man
'might finiſh ſuch a voyage, going along with theſe
'birds at the beginning of winter, and again returning
'with them at the ſpring. And here, one that had a
'ſtrong fancy were better able to ſet forth the great
'benefit and pleaſure to be had by ſuch a journey. And
'that whether you conſider the ſtrangeneſs of the
'perſons, language, art, policy, religion of thoſe inha-
'bitants, together with the new traffick that might be
'brought thence. In brief, do but conſider the plea-
'ſure and profit of thoſe later diſcoveries in America,
'and we muſt needs conclude this to be inconceivably
'beyond it.' Biſhop Wilkins's two treatiſes are very ſeriouſly and ſolidly written, and with much labour and learning, diſcuſſing thoroughly ſome, but not all the points that had been illuſtrated by our prelate, whoſe tract excluſive of Don Gonſales's adventures, which are only the vehicle of his inſtructions, does not comprehend more lines than there are pages in the other two diſcourſes. It is not at all wonderful, that at the time he wrote this treatiſe he was unwilling to publiſh it, neither is it ſtrange that for half a century after his deceaſe, the whimſy of this work ſhould be more regarded than it's wiſdom; but that ſince the publication and univerſal reception of the new Philoſophy, this admirable piece ſhould remain ſtill neglected, is not eaſily to be explained; and for this reaſon we have taken ſome pains to revive the credit of this ſingular performance, *by ſetting it in a true point of light.*

(3) Diſcovery of a New World, p. 185, 186, 187.

very different from that in which his whole work was at firſt publiſhed, a circumſtance very little atttended to by thoſe who have hitherto given us his memoirs, and which therefore we look upon ourſelves obliged to explain and illuſtrate [B]. On the thirtieth of January, 1595, he took the degree of Doctor in Divinity (n), being then Rector of Samford-Orcais in Somerſetſhire, Prebendary of St Decuman in the church of Wells, Reſidentiary there, Rector of Biſhop's Lidiard, by the reſignation of the vicarage of Weſton in Zoyland, all in the ſame county; and Subdean of Exeter. He was eſteemed by the beſt judges a very able Preacher, and is commended by a very judicious Critic for honeſty and boldneſs in this character, when a very young man; in which, upon ſifting the matter cloſely, he loſt nothing either in point of ſafety or reputation; on the contrary, he came to be conſidered at the Court, and elſewhere, as a man of ſenſe and ſpirit, and one who had a true notion of the importance of his function (o) [C]. He never publiſhed, however, but one Latin ſermon, on the third verſe of the fifth chapter of St Luke. After much meditation, he ſent abroad his Catalogue of the Biſhops of England, a work, though ſhort and imperfect in itſelf, and which no man knew better than he did, yet admirable, conſidering the time in which it was wrote, the age of it's author, who was then ſcarce forty, and the prodigious difficulties that attended the collecting materials in thoſe times (p), of which a ſtronger argument cannot well be offered, than the ſlender improvements that have

(p) Hiſt. & Antiquitates Oxonienſis, p. 262.

[B] *To explain and illuſtrate.*] There is a very fair manuſcript preſerved in the library of Trinity College at Cambridge, of our author's own hand writing, conſiſting of 100 pages, with a very neat index at the end, which bears this title, *Hunc Catalogum, conſcripſit Francis Godwyn, Eccleſiæ Wellenſis Canonicus, Anno Domini* 1595. *Anno Reg. Eliz.* 38. A Duw, a digon. *that is*, Francis Godwyn, Canon of the Church of Wells, wrote this Catalogue, in the year 1595, and 38th of Q. Elizabeth. Win GOD, win all. This muſt be underſtood of the beginning of the year, ſince at the end we have this date, Dec. 15. 1594. It is larger, more elegant, and in ſome things more accurate, than the article of the Biſhops of this ſee of Bath and Wells, even in the laſt edition of his elaborate work. We owe the publication of it to the indefatigable Thomas Hearne (4), who ſtood himſelf indebted for it to his worthy friend and patron Beaupre Bell, Eſq; a great lover, as well as an excellent judge, of all things relating to Britiſh Antiquities. Some years before, Mr Hearne had publiſhed a part of it, and with it the following extract of a letter from the late learned Mr Thomas Baker, of St John's, in the ſame univerſity (5). 'This account of Gul. de Marchia being 'ſent me from Mr Bell, from a MS at Trin. Coll. of 'Francis Godwin, then Canon of Wells, ann. 1595, 'with an intimation of conveying it to you; I ſend it, 'but leave it entirely to you to make what uſe of it 'you pleaſe, if it be of any. The MS is a very fair 'one, and certainly wrote by Fr. Godwin, being his 'firſt eſſay. How he came to alter ſo much in this, 'and ſeveral other of the Biſhops of Bath and Wells, I 'cannot ſay. The catalogue contains only the Biſhops 'of Bath and Wells.' The plaineſt and moſt probable account of this matter ſeems to be this, that our author compoſed his whole work originally in Latin, but was prevailed upon by his friends to make an eſſay of the reception it would meet with by giving the ſubſtance of it in Engliſh. That he made no ſecret of this Hiſtory of Bath and Wells, and conſequently made no alterations from clandeſtine motives, appears from hence, that he actually communicated it to Sir John Harrington, who cites from it what he ſays of the father, Dr Thomas Godwin, which paſſage is not now to be found either in ſubſtance in the Engliſh, or in the ſame, or words to the like purpoſe, in his Latin work, as it now appears. But as Sir John has not cited the whole paſſage that is wanting in the printed work, and as it contains an apology for his not giving a longer character, and inſiſting more largely in commendation of ſo good a parent, becauſe he ſays, he had rather the world in general ſhould enquire, why he did not render him juſt praiſes, than that a few malevolent evil-ſpeaking perſons ſhould demand, why he did praiſe him, we will inſert the whole paſſage; whence the reader will ſee, that though extremely juſt, and natural within four years after his death, it became leſs ſo at the diſtance of fourteen, and was therefore entirely omitted (6). 'O! illum ſe-'liceſm, ſi felix maluiſſet manere, quam regimines ec-'cleſiaſtici labores, tum ſuſcipere, cum laboribus impar, 'fractus ſenio, invalidus corpore, neceſſum illi fuerit ali-'orum uti auxilio. Qui quanquam ii delecti fuerint, 'qui omnium maxime debuerint optimi ſenis famæ & 'ſaluti proſpicere: tamen (quod evinere ſolet) tanquam 'in re aliena negligentiores facti, de ſua tantum folli-'citi, utranque perdiderunt. Hic vero expectare quis 'jure poſſit, ut quantos olim labores extant laverit in 'propaganda veritate evangelica, quam ſtudioſe pie-'tatem ſociaſque virtutes coluerit, gregem denique, ſibi 'commiſſum, quam ſollicite cuſto dierit ſaltem paucis 'commemorarem. Sed cum præclara virtus præconem 'aut encomiaſtam nuſquam deſideret; & modeſtiæ meæ 'magis congruum, & ad gloriam illius propagandam 'commodius exiſtimo, ab aliis poſthac laudes ejus decan-'tari, quibus fidem derogare non poſſit ſanguinis propin-'quitas, ac interim, quæri potius a ceteris mortalibus, 'cur non laudaverim, quam à calumniatoribus paucis & 'malevolis, cur laudaverim.'

[C] *Of the importance of his function.*] In thoſe days, when the generality of people manifeſted a great zeal for religion, it ſometimes fell out, as in theſe, that their actions and ordinary courſe of life did not ſeem to expreſs any lively ſenſe of religion at all. In caſes of this ſort ſome of the Clergy, and amongſt theſe Mr Godwin, thought it his duty to reprehend ſuch vices as were moſt glaring and moſt common in the preſence of thoſe who were moſt addicted or expoſed to the ſtrongeſt temptations to them. Thus he ſuited his ſermon to his auditors, not to tickle their ears with the condemnation of thoſe vices from which they were moſt exempt, and the applauſe of thoſe virtues for which they were moſt diſtinguiſhed; but by an honeſt and free repreſentation of thoſe ill qualities, with which they either were or might be infected; neither made he any diſtinction in conditions, but made his court to the great, if he made it at all, by ſhewing them they were but men, and often ſinful men, of whoſe ſouls therefore the ſame care was to be taken as of the meaneſt of the people (7). 'Before 'his going to Exeter, ſays Sir John Harrington, I had 'ſome acquaintance with him, and have heard him 'preach more than once at our aſſizes, and elſe-'where; his manner was to be ſharp againſt the vices 'moſt abounding in that time, ſacrilege, ſimony, 'contempt of God in his miniſters, and want of 'charity. Amongſt other of his ſermons, preaching 'once of Dives and Lazarus, he ſaid, *that though the* 'Scriptures *had not expreſſed plainly who* Dives *was*, 'yet by his cloaths and face, he might be bold to affirm, 'he was at the leaſt a Juſtice *of* Peace, *and perhaps of* 'Oyer *and* Terminer *too*. This ſpeech was ſo ill 'taken by ſome guilty conſciences, that a great matter 'was inforced to be made of it, that it was a dan-'gerous and ſeditious ſpeech; and why, forſooth? 'Becauſe it was a dear year. But ſee how a man's 'enemies ſometimes do him as much good as his 'friends, their fond accuſation, and his diſcreet ju-'ſtification, made him both better known and more 'reſpected by them that were able to do him moſt 'good.' No perſonal or malevolent ſarcaſm, but a juſt intimation, that no ſuperiority of rank cancels the ties of humanity, or the obligations of charity.

(7) Brief View of the State of the Church of England, p. 166, 167.

[D] *To*

have been made since. This Catalogue, concise as it was, met with such general approbation, that Queen Elizabeth bestowed upon him immediately the bishopric of Landaff, which had not been above two months vacant (*q*), and to which he was consecrated, November the second, 1601: the reward was royal, but consisted rather in title than in substance; for this bishopric, now small, was then so small, that it did not produce more than one hundred and fifty pounds a year (*r*); and therefore, as well in regard to him, as for the sake of the service which he had lately rendered to the commonwealth of letters, and the Church [*D*], he had liberty to keep one of his dignities, which seems to

(*q*) Fuller's Church History, Cent. XVII. book x. p. 2.

(*r*) Godwin's catalogue of English Bishops, p. 534.

[*D*] *To the commonwealth of letters and the Church.*] The digesting into a regular chronological order the succession of prelates in the respective dioceses within this kingdom, as simple and plain a scheme as it may now appear, was never attempted before the time of Dr Godwin; no wonder therefore that his essays were faulty, or that he revised and corrected them so many times. His coming abroad at first was the greatest difficulty, and on this perhaps he had never ventured, if the rank and power of his patron and the Queen's favour had not encouraged him. The title is as follows:

A Catalogue *of the* Bishops *of* England *since the first planting of the* Christian Religion *in this Island; together with a brief* History *of their* Lives *and* memorable Actions, *so near as can be gathered out of* Antiquity. *By* F. G. *Sub-Dean of* Exeter. Lond. 1601. in 4to.

It is dedicated to the Right Honourable Sir Thomas *Sackvyll*, Baron of Buckhurst, Knight of the most noble Order of the Garter, Lord High Treasurer of England, and Chancellor of the university of Oxford, to whom he was chaplain. In his preface Dr Godwin tells us, 'that 'his delight in the study of *History* and Antiquities, 'had been somewhat greater than was needful for a 'man who had dedicated himself and his labours unto 'the service of God's Church in the Ministry, which 'fault he had long before in some sort reformed, by 'restraining himself within the compass of such anti-'quities as seemed to concern only ecclesiastical causes 'or persons. That his collections, with regard to mat-'ters ecclesiastical, could add nothing unto Mr Fox's 'large and painful work; but, that in the other kind, 'relating to ecclesiastical persons, what many years 'reading and observation could yield unto him, he had 'seven or eight years before comprized into a volume, 'which with some additions he was now induced to 'publish. The principal reason, says he, that moved 'me thereunto is in effect, that which Tacitus saith 'every Historiographer should propose unto himself, 'Ne virtutes sileantur, utque pravis dictis factisque ex 'posterate & infamiâ metus sit.' In the latter of these, the faults of those men of whom I am to write, I need not greatly to pain myself; for it is not to be denied, that the most part of the Chroniclers and Historiographers of our age have been hard enough, at least upon the Prelates and Clergy of former times, every where, like Cham's discovering the nakedness of these fathers, but seldom or never endeavouring with Sem to hide the same, much less affording unto them any honourable mention, never so well deserved. This kind of dealing, though happily intended to good purposes, might not expect that success and blessing at God's hand, that the plain and sincere truth is wont to find. These men impugning somewhat too furiously the superstition and errors which the Clergy of former times in a great measure through ignorance did teach and defend, whilst the rather to discredit their doctrine they depraved their persons, it hath pleased God that this uncharitable course should fort to some other effect than was intended, and that such as without his great mercy was like to have caused an inconvenience of little less importance, I will not say greater, than that which our late Reformation had redressed. For in the vulgar sort, which distinguish not so easily between persons and things, it bred a conceit not only that the men were wicked, and so their doctrine corrupt, although I know the consequence to be weak, but also their functions and callings to be utterly unlawful and anti-christian; which opinion once received in the minds of the multitude, gave occasion of divers plots, coloured with the plausible shew of reformation, but indeed principally aiming at the goods and revenues of the Church, the temporal rewards of learning, which being once taken away, what confusion is like to follow we may easily see by the effects it bringeth forth elsewhere. Those countries that heretofore have yielded great plenty of able work-folks for the Lord's vineyard, now that brood is spent which attained learning the rewards yet standing whole, they hardly can shew a man able to set pen to paper in defence of the truth. Yea even amongst us, although the godly and excellent care of her Majesty hath preserved the state of this our Church, in such sort as I think no other reformed Church of Christendom any thing near comparable unto it, yet the example of others, the known greediness of so many sacrilegious cormorants as await daily the destruction of the same, and the doubt least it will decay, for that we cannot hope for the like piety in all succeeding princes, it so far forth discourageth men from the study of Divinity, as the best wits daily refuse the universities, or Divinity at the least, which in some other countries is accounted the surest way to advancement, and rather betake themselves to any other kind of life. Hereof it cometh to pass, that every age bringeth forth less plenty of learned men than other amongst us. He also *remarks*, which is particularly worth the reader's attention, that he is not to expect any copious discourse of the lives and actions of the Bishops *of his* own time, or near it, since he had purposely avoided to set down any thing of them, but what either he found written by others, or else remaineth to be seen in public record. And that he hath taken this course because he judged it neither seemly to praise, nor safe to reprehend (how justly soever) those men, who either by themselves, their near friends, or posterity then living, might seem either to have allured him to flatter, or deterred him from disclosing that truth which otherwise he would have uttered. Neither did he think it needful to say much of them, who being either present in action, or fresh in memory, were sufficiently known. And whereas he has passed over in silence two sees, he was obliged to it by want of some necessary instructions, which by reason of the distance of his dwelling from them, he had not means to attain, although he had endeavoured it. He therefore desired all men who were able to yield him help for the supplying of whatsoever might seem wanting either in those sees, or any other.

It was by way of supplement to this edition, that Sir John Harrington wrote the short treatise that has been so often mentioned, for the use of Prince Henry, son to King James, with whom he was in great favour. It rises higher in many places than the close of our author's book, but goes no lower than the year 1608. It was not intended for public view, otherwise in all probability the author would not have expressed himself so freely; but of this more in it's proper place, that is, in the article of the author, who well deserves one; but it may not be amiss to present the reader here with his character of our author, and his books. 'Of this Bishop (says he) I may speak sparingly, or 'rather spare all speech, considering that every leaf of 'his worthy work is a sufficient testimony of his vir-'tuous mind, indefatigable industry, and infinite read-'ing; for even as we see commonly those gentlemen 'that are well descended, and better bred, are most 'careful to preserve the true memory and pedigree of 'their ancestors, which the base and ignorant, because 'they could not conserve, will seem to condemn. So 'this worthy Bishop, collecting so diligently, and re-'lating so faithfully, the succession and lives of so 'many of our Christian most reverend Bishops in for-'mer ages, doth prove himself more by spiritual than 'carnal birth, to come of those ancestors of whom it 'was long before prophesied by the princely Prophet, 'Instead of thy fathers, thou shalt have children 'whom thou shalt make Princes in all places.'

to have been his ſubdeanery of Exeter (*s*); and alſo to take the rectory of Kingſton-Seymour, in the dioceſe of Bath and Wells (*t*); which whatever favours they may be in appearance, yet without them the biſhopric had been none. He ſucceeded Dr William Morgan, who was tranſlated to St Aſaph, and to whoſe pious care he always profeſſed himſelf obliged, for having made the biſhopric what it was, and for having opened a path for him to make it better (*u*). While he continued in this ſee, which was ſixteen years, he employed his leiſure hours in the improvement of his Catalogue, and in making collections relative to our Civil and Eccleſiaſtical Hiſtory (*w*). In 1615, he publiſhed another edition of his Catalogue, with conſiderable additions, and more conſiderable alterations, which he dedicated to King James. But by ſome very unlucky accident, this new Catalogue was moſt wretchedly and erroneouſly printed, through the author's being at a great diſtance from the preſs; and therefore, to gratify the deſire of the Public, and to comply with the advice of his learned friends, he reſolved to publiſh it the next year, as he originally intended, in Latin; which he accordingly did, with the King's Licence; and in this alſo he made conſiderable alterations, but with great propriety, as he was ſenſible, that though his two Engliſh Catalogues could only benefit his own countrymen, this would be read and examined throughout Europe (*x*). He alſo ſent abroad in the ſame year, and in the ſame language, from the collections before-mentioned, the annals of thoſe three Engliſh reigns preceding that in which he was born, digeſted into ſo clear and conciſe a method, as recommended it equally to the lovers of hiſtory (*y*), and to ſuch as had a true reliſh of the beauties of an elegant Latin ſtile (*z*), in which he certainly fell ſhort of none of his contemporaries; in which he has been imitated by few, and exceeded by none [*E*]. In conſideration of theſe learned labours, King James tranſlated him

(*z*) Nicholſon's Hiſt. Library, p. 85.

The title of the ſecond edition of his book in Engliſh ran thus: *A* Catalogue *of the Biſhops of* England *ſince the firſt planting of* Chriſtian *Religion in this Iſland. Together with a brief* Hiſtory *of their* Lives *and memorable* Actions, *ſo near as can be gathered out of* Antiquity. *Whereunto is prefixed, A* Diſcourſe *concerning the firſt* Converſion *of our* Britain *unto* Chriſtian *Religion. By* Francis Godwin, *now Biſhop of* Llandaff. London: Printed for Thomas Adams. 1615.

In this the two biſhoprics formerly omitted were ſupplied, many things added in the courſe of the work, and at the end there is a diſcourſe concerning ſuch Engliſhmen, as had either been, or in our hiſtories were reputed Cardinals of the Church of Rome; and this for two reaſons, firſt, becauſe theſe perſons were in themſelves eminent and memorable in many reſpects; and next, becauſe Ciaconius had publiſhed a very florid but falſe account of them, which our author held it his duty to refute. The Latin work, incomparably more perfect in every reſpect, is thus entitled,

De Præſulibus Angliæ *Commentarius: Omnium Epiſcoporum, necnon & Cardinalium ejuſdem gentis, nomina, tempora, Seriem, atque actiones maximè memorabiles ab ultima antiquitate repetita complexus. Per Franciſcum Godwinum, Epiſcopum Landavenſem.* Londini *ex Officina* Nortoniana *apud Joannem Billium.* 1616. 4to.

This as well as the laſt Engliſh edition is dedicated to King James, and indeed except ſome ſmall alterations, the dedications are pretty much the ſame; the preface however is longer, and very different from that prefixed to the foregoing edition. In it he gives an account of the riſe and progreſs of his undertaking; he ſays, that more than twenty years before he began to make a Catalogue of Engliſh Biſhops, intending nothing more than that title expreſſed; but by degrees, according to the Latin proverb, his jug was become a Jar. The firſt edition he ſays his friends wrought or rather wrung from him in Engliſh; the latter he greatly enlarged, but that it was ſo ill printed he could ſcarce own it. This accident induced him to recollect and to reflect on the advice given him long before by many of his learned friends, which was to put his work into Latin, which he accordingly did. At the cloſe he promiſes, in caſe proper materials were furniſhed him by thoſe who had it in their power, to ſend abroad like Catalogues of the Biſhops in Scotland and Ireland. This edition is elegantly, though not very correctly printed.

[*E*] *In which he has been imitated by few, and exceeded by none.*] We will ſpeak of this work and of it's different editions in this place, that we may keep within bounds as much as poſſible. The title of it runs thus:

Rerum Anglicarum Henrico viii. *Edvardo* vi. *& Maria regnantibus Annales.* Lond. 1616. in fol. ib. 1628. and 1630. in 4to and fol.

The Biſhop in his preface obſerves, that he had undertaken this work when he was paſſed fifty years of age, with a view to excite others of greater abilities to write the Hiſtory of thoſe reigns, and to ſatisfy the deſires of foreigners; who not without cauſe complain, that thoſe times, than which for 1000 years there have not been any more memorable, with regard to remarkable revolutions, were not deſcribed by any perſon except in a ſlight manner, and as if the writer had not intended any ſuch thing. He in this excepts Polydor Virgil, who was not only ignorant of our language and conſtitution, but alſo wrote the firſt of theſe reigns, which was the only one he wrote, partially, in abuſe both of K. Henry and Cardinal Wolſey, that he might make his court to Queen Mary; notwithſtanding which the methodical elegance of his hiſtory gained it that credit which truth only deſerved, and was another juſt reaſon for his taking up the pen. He tells us therefore he had written in ſuch a way, that though many things proper to an Hiſtorian might be wanting in him, yet he is confident his endeavour would find acceptance with many. Other writers may have here (as it were) a ſtorehouſe, from whence they may ſupply themſelves with ſome materials which help to raiſe an everlaſting monument. Foreigners likewiſe, ignorant of the Engliſh tongue, may have ſome knowledge of thoſe times, 'till ſome other ſhould ariſe, who ſhall compile an Hiſtory of our nation, worthy the majeſty of the Britiſh name. He aſſures us, that he has in this work been ſo obſervant of impartiality, ſincerity, and truth, that he feared nothing ſo much as a domeſtic anger for not being pious enough, becauſe he would not be over pious. Many contend, that a good Prince ſhould be μὴ πονηρὸς, ἀλλ' ἡμιπονηρὸς.

This he thinks no man will affirm of an Hiſtorian, though ſome ſeem to be of that opinion; ſo that he will be thought to fail of his duty either to God or his country, who in writing Hiſtory will not be at leaſt ἡμιπονηρὸς, who by affirming uncertainties as known truths, ſhall not yield much to his affections, if they be but joined with the love of religion and his country. But how much do they injure truth, ſays our author, who from lies and falſhood deſire help to ſupport her? But we have no need of them; and if we had, yet it would not do us much ſervice to rely on ſuch weak advantages, ſince one pious lye detected, proves more hurtful than a thouſand others, although ſo artfully contrived as to eſcape diſcovery, can prove profitable. For an example of this we need ſeek no farther than the Papiſts, whoſe feigned miracles, impoſtures, and legends, have made

even

him from Landaff to Hereford (*a*), where he ſucceeded Dr Robert Bennet; and through the care of that reverend prelate, and his predeceſſor, Dr Herbert Weſtphaling, he found the houſes at Hereford and at Whitborne in excellent condition, which he gratefully acknowledged, and did juſtice to their memories, in that reſpect, to poſterity (*b*). He was conſecrated, November 28th, 1617, being then in his fifty-ſixth year (*c*). There, in as great a degree as the duties of his function and ſome bodily infirmities would permit, he proſecuted his ſtudies, but very prudently aimed rather at perfecting the works he had already publiſhed, than to inveſtigate new ſubjects. Accordingly, in 1621, he publiſhed an Appendix to his Latin Commentaries, on the ſucceſſion of Engliſh Biſhops, in that language, and in them ſpeaks very highly, of Archbiſhop Abbot, of Canterbury, and Dr Williams, Biſhop of Lincoln, and afterwards Archbiſhop of York (*d*). But his complements to them, though very well turned, are mighty conciſe. In reſpect to Dr King, Biſhop of London, then lately deceaſed, he vindicates, with great ſtrength of argument, and with becoming vehemence, the character of that good man, from the infamous calumny of dying a Papiſt; which defence takes up more room than he affords to three or four Prelates that were then living (*e*). By this he put his ſeal to that undertaking, and left it in the beſt condition it was in his power to leave it to ſucceeding times. Yet, however honeſt our author's intentions, whatever candour he expreſſed in the execution of them, they have been, as what has there been, ſo well deſigned, or ſo well put together, that has not been expoſed to cenſure [*F*]. It is a ſhade that always attends the light of Fame, more eſpecially

even what is true ſuſpected. Wherefore I am well content, that truth, which in ſpite of all oppoſition will at length be every where victorious, ſhall prevail with me. I have done to my power. Politely, eloquently, politicly, I could not write. Truly, and *ſide Atticâ*, I could. If I have done amiſs in any point, it is not out of malice, but error. Degory Whear tells us, that theſe annals are written *non magis ſuccinctâ, quam laudabili brevitate* (8), which Dr Nicholſon obſerves to be our author's *juſt character, and that he was a perfect maſter of the Latin tongue* (9). We might cite in farther ſupport of this, ſeveral foreign teſtimonies, which we decline, becauſe theſe ought to weigh little either for or againſt an Engliſh Hiſtorian, who is entitled by the law of reaſon to what would be granted him by the law of the land, an equal trial in which his countrymen are to be his judges. A reverend prelate has taken his Life of Queen Mary into his collection of Engliſh Hiſtory, and certainly it would have been no diſcredit to it, if the annals of the other two reigns had been added alſo; for our Hiſtorians are in nothing ſo defective as in method, and even thoſe who are the moſt careful in reſpect to facts, are but too apt to be negligent in point of dates. Theſe annals, when publiſhed for the third time in Latin, were likewiſe rendered into Engliſh, and that in ſuch a manner as made them in ſome meaſure a new work; and this too, if not of our author's writing, yet in ſome degree of his dictating, and ſent into the world with his allowance. They came out under the following title,

(8) Relationes Hyemales, Oxon. 1637. p. 144.

(9) Hiſtorical Library, p. 85.

'Annales of England: containing the Reigns of 'Henry the VIIIth, Edward the VIth, and Queen 'Mary. Written in Latin by the Right Honourable 'and Right Reverend Father in God Francis Lord 'Biſhop of Hereford. Thus engliſhed, corrected, and 'enlarged, with the Author's Conſent, by Morgan 'Godwyn.' In the preface to the tranſlation his ſon tells us, that he hopes the reader will not object againſt the omiſſion of ſome things in them, the knowledge whereof is to our natives ſo innate, that now to inſert them, were as bad as to farce with tautologies, and make this little volume nauſeous. Yet hath it loſt nothing of it's bulk, whatſoever it hath of it's ſplendor, thoſe defalcations being here and there in the courſe of this Hiſtory ſupplied with not unneceſſary additions, whereto the author's approbation and conſent was not wanting. Theſe Engliſh Annals have alſo been deſervedly admired.

[*F*] *That has not been expoſed to cenſure.*] In his life time he was hariſhly treated in private by a perſon of great worth and learning, whom one could ſcarce have thought capable of uſing ſuch courſe language towards a prelate of our author's rank and learning, and this on the account only of a very ſmall hiſtorical miſtake It occurs indeed in a private letter, viz. from Sir Henry Savil, to Mr Camden, dated Feb. 26. 1617 (10); but inſtead of excuſing, this heightens the offence; becauſe it was attacking and leſſening the the character of a man of letters in ſuch a way, as he had it not in his power to defend himſelf. It runs thus: 'Sir, I find in the Biſhop of Hereford's book of 'Biſhops, a babble of one William Sever, Biſhop of 'Dureſme, ſon (as he faith) of a ſievemaker, Warden 'of Merton College, and Provoſt of Eton, made 'Biſhop of Carliſle 1496, and tranſlated to Durham '*(ut videtur)* 1502, and died anno 1505. True it is, 'that Henry Sever was firſt Provoſt, and ſo named in 'the Act of Parliament, of Eton Foundation; and the 'ſame man was afterwards Warden of Merton College, 'where he had his breeding, as kinſman to our foun'der, and as our Regiſter ſays, peaè alter fundator. 'He lies buried in that church, as Warden there, and 'never Biſhop, as I remember, though he had twelve 'or fourteen eccleſiaſtical promotions, as by a pardon 'in Edward the fourth's time, to the college, I find 'him ſtiled. Beſides, the times cannot agree: Eton 'College was founded in 1440, ſo that to 1505 he 'muſt live ſixty-five years afterwards, to the latter end 'of Henry the ſeventh; whereas, in Merton College, 'we had two or three wardens in the mean time, Gi'gur and Fitz-James. I pray you adviſe with Mr 'Linſey, the Biſhop of Durham's chaplain, with you, 'what he findeth in Hiſtoriâ Dunelmenſi, touching 'that man, and at your leiſure let me underſtand from 'you.'

(10) Camdeni Epiſtolæ. p. 219.

All that our Prelate had ſaid was this, that William Sever, according to common report, was a native of Shinkley, the ſon of a poor man, who made ſieves for his bread, and, in the Engliſh of thoſe times, was ſtiled *a Sieveyer*; and his ſon having no other, took the name of his father's trade for a ſurname (11). This, it ſeems, Sir Henry took for a great affront; but being fully ſatisfied, by Mr Camden's means, that there was no connection between William Sever, Biſhop of Durham, and his predeceſſor Henry Sever, Warden of Merton, and Provoſt of Eaton, he came into pretty good temper again, and could mention the Biſhop of Landaff (though he was then tranſlated to Hereford, and this as great a miſtake as that which he had cenſured) with ſome degree of patience (12). The Oxford Antiquary, according to his uſual cuſtom, ſpeaks of him what he thought, good and ill, in that blunt language which was peculiar to him (13). 'He was, 'ſays he, a good man, a grave Divine, ſkilful Mathe'matician, excellent Philoſopher, pure Latiniſt, and 'incomparable Hiſtorian, being no leſs critical in Hi'ſtories than the learned Selden. A perſon alſo he 'was, ſo celebrated by many in his time, whether at 'home or beyond the ſeas, that his memory cannot 'otherwiſe but be precious in ſucceeding ages, for his 'indefatigable pains and travel, in collecting the ſuc'ceſſion of all the Biſhops of England and Wales, ſince 'the firſt planting of the Goſpel among the Chriſtians; 'not pretermitting ſuch of the Britiſh Church, or any 'that have been remembered by the care and diligence 'of preceding writers, or had been kept in memory 'in

especially in the literary world. Our Prelate knew it well; but, like a wise and great man, regarded it least; for, out of his zeal to truth, and public utility, he was ever ready to combat envy, and justify science, however misrepresented or misunderstood (f). This

(f) See his Prefaces in Latin and English.

' in any old monument or record. But as he hath, in ' those his infinite labours, endeavoured, out of a pu- ' ritannical pique, to bring a scandal on the antient Ca- ' tholic Bishops; and to advance the credit of those ' that were married since the Reformation, he being ' one of that number, for the credit of the Protestant ' cause: so comes one afterwards, by name William ' Prynne, a crop-eared and stigmatized Presbyterian, ' the most inveterate enemy to the Bishops that ever ' appeared in our horizon; who thence, from his la- ' bours, takes all advantages, whether truth or not ' truth, to raise arguments against, or bring a scandal ' upon, the prelatical function. Take heed therefore ' of being partial, lest others light candles from your ' torch, and thereby, in the end, you lend a helping ' hand for the cutting your own throat.' The full and proper answer to this is to be found in the Bishop's preface to the first edition of his Catalogue (14). Mr Prynne could find nothing there which was of the Bishop's invention; and as he was very well acquainted with the original authors, from whence our author took all his facts, he might, and no doubt he would, have had recourse to them, if this Prelate had never wrote at all. But we come now to a writer, who has saved us some trouble, by collecting and abridging the scandal thrown upon the Bishop and his work by other pens (15). ' Francis Godwin was most fortunate in ' his Commentary, as he calls it, on this subject, being ' himself advanced to the episcopal order, for the good ' services that Queen Elizabeth thought he had done ' the Church by that book. It was twice published in ' English, equally full of the author's and printer's mi- ' stakes. The faults of the latter edition, especially, ' were so very gross, that they put him upon the spee- ' dy dispatch of another in Latin, which came out the ' next year. The style of this is very neat and clean; ' and he seems to have taken more pains in polishing ' it, than in gathering together all the materials of his ' history. He quotes no authorities, expecting, be- ' like, that posterity should acquiesce in his, singly, ' without enquiring any farther. He is particularly ' ungrateful to the author of the *Antiquitates Britan- ' nicæ*, from whom he has borrowed (by the great) ' his account of the see of Canterbury, varying only ' the phrase, and sometimes for the worse. The like ' carriage he is guilty of, towards Bale, Camden, and ' others: but what is most especially notorious, is, his ' transcribing out of Joseline and Mason, what he pre- ' tends to have had immediately from the Archives and ' Registraries, from the year 1559 to his own time. ' He is also frequently guilty of chronological mistakes, ' a too confident reliance on the authorities of counter- ' feit Charters, in Ingulfus and others, an uncertain ' calculation of years, beginning some at Michaelmas, ' and others at Christmas, &c. as his authors blindly ' led him: And lastly, a contenting himself with false ' and imperfect catalogues of the Prelates, in almost ' every diocese. These are the failures wherewith he ' stands charged by Mr Wharton, who modestly assures ' us, that a better progress had been made in these ' matters, by himself, within the compass of eighteen ' months, than by this Bishop in twenty years. Our ' Oxford Antiquary further complains, that he puri- ' tannically vilified Popish Bishops, with a design there- ' by to advance the credit of those since the Reforma- ' tion: whereby he had given unlucky advantages to ' William Prynne, the professed enemy of episcopacy, ' who made ill use of his book. I will not say that ' either of these censurers are mistaken: but I must ' observe to the reader, that each of them intend- ' ed to have furnished us with a view of this part ' of our ecclesiastical history, of his own drawing; ' and therefore, like all new builders, they must be ' allowed to spy more faults in the old fabrick than ' others can.' Insidious praise is of all others the foul- est kind of railing, and yet in this some writers take great delight. Henry Wharton and Anthony Wood were not of this kind; they often censured wrong, but they always thought themselves in the right. Here three authors are introduced, two abusing the third; and he who introduces them, sneering at all three, and darting at them through each other's sides. Hereafter, it may be, Providence will indulge us an opportunity of saying something for the other two, at present it is our duty to defend Bishop Godwin, not because we have written his life, but because he is injured. As to the charge of his borrowing, and not citing, the fact is false, as the reader, upon consulting the Bishop's book, will see with his own eyes. A single and a short quotation, will, in a great measure, prove this, and demonstrate that our author was not either negligent in consulting the best authors, or disposed to conceal those helps he received from them. Speaking of the first Christian King in this island, he says (16), ' It is time for me ' now to say somewhat of a certain epistle, written, as ' we find delivered by Eleutherius, Bishop of Rome, ' unto King Lucius. The copy of which epistle was ' first found, for ought I can discern, in an old Chro- ' nicle, entituled Brutus, amongst certain laws or sta- ' tutes of the Saxons. The occasion thereof was, that ' Lucius, some time after his conversion, (but whether ' before or after his baptism appeareth not) made re- ' quest unto Eleutherius to send him some kind of ab- ' stract of the Roman Laws, whereby he might esta- ' blish a settled order of government in his dominions. ' Now whereas the Druids, they were the judges of ' all matters both spiritual and temporal, the abolishing ' of them made an alteration in politic matters, as well ' as ecclesiastical, or concerning religion. So that the ' cause of reformation in both kinds being one and the ' self same, I see no reason why we should not think that ' the remedy of both was likewise sought at once. ' And true it is, that the author of the book, called ' Antiquitates Britannicæ, affirmeth, how that Elvan ' and Medwin made the foresaid motion for the Ro- ' man laws, at their being with Eleutherius before ' the baptism of Lucius, and then received answer. ' So doth Mr Fox: and the reverend father, of happy ' memory, Bishop Jewell, seemeth to be of the same ' opinion. Yet, because the authors of our great ' Chronicle, Holinshed and the rest, deliver, not only ' that this motion was made after the baptism of Lu- ' cius; but also, setting down precisely the particular ' time, do say it was in the third year after his conversion. ' I will not take upon me to pronounce either one way ' or other, but leave it unto the reader's judgment ' and discretion to determine.' In his first Catalogue of the Bishops of Bath and Wells, he quotes plentiful- ly; perhaps, when he came to print, he was deterred, by heaps of mistakes, from loading his margins; how- ever, for such a work as he intended, he cites abun- dance of authorities, Bale, fifty times at least. At the head of the article of Norwich, it is said, *collected for the most part out of* Mr Alexander Nevill, *his* Norwi- cus, *by* R. T. At the head of that of Exeter, we read, *this Discourse following is taken for the most part* verbatim, *out of Master* John Hooker's *Catalogue of the Bishops of* Exeter. This has not much the air of arrogating the merit of other men's labours to himself. That he took from moderns what he would have under- stood to be transcribed from ancient authors, is a suspicion without proof, and, we are pretty sure, is without foun- dation; for his writings manifest, that he had read those ancient authors, and therefore he might use them as well at first as at second hand (17). That he did not cite Mr Camden is true, but that the modesty of this great man induced him to desire his friends not to cite him is as true; so that now the wonder ceases, with- out bringing any charge of ingratitude on the memory of Bishop Godwin (18). That he might be mistaken as to ancient charters shall be granted, as well as that he might not be infallible in respect to dates; but then it must be also granted, that some who were very learned men mistook before him, and that many who thought themselves so have been mistaken since. The new edition of this work, elegantly and accurate- ly printed, has removed these (with regard to him) unavoidable defects, entirely.

[G] *Has*

This induced him to communicate to King James that ſecret, of which he wrote a diſcourſe at the univerſity; and thereby ſatisfied the King, that it was a fact, and not a fiction (*g*). In 1628, he publiſhed the ſecond edition of his Annals, which was much more correctly printed than the former; and this, without any of the high-ſtown complements which were the vice of that age, from which, however, few writers were freer than himſelf, he dedicated to King Charles (*b*). The year following, he publiſhed that diſcourſe, written in his youth, on a very myſterious ſubject; and with deſign, in ſo obſcure a ſtyle, that though many have gueſſed at it, yet his riddle, to this day, has never met with a clear ſolution (*i*) [*G*]. In 1630, he publiſhed a third edition of his Annals, which ſhews how kind

[*G*] *Has never met with a clear ſolution*]. This ſmall piece, which conſiſted but of two ſheets, and which is now ſo extremely ſcarce, that it is to be found only in the cloſets of the curious, was publiſhed under the following ſuccinct title.

Nuncius Inanimatus. Utopia, 1629. 8vo. i. e. *The Inanimate Courier*. The deſign of it was to point out ſeveral methods of conveying intelligence, ſecretly, ſpeedily, and ſafely; a matter frequently of great importance to private men, and ſometimes of much more conſequence to perſons in public office. In the firſt place, he gives an account of ſuch inventions as were practiſed by the Ancients, the memory of which is come down to poſterity; and then he aſſerts, that one who is a proficient in the art which he profeſſes, may tell whatever he pleaſes to another perſon at a diſtance, who is alike ſkilful, if he be within a quarter of a mile, though beſieged, or lying hid, or, perchance, detained in any place which is not directly known to him that ſends the tidings, and, if known, yet not acceſſible. 'Let nobody come near him, ſays he (19), ſecure the 'body in a priſon, let the hands be bound, hood-wink 'the face, but be not troubleſome any other way, and 'he ſhall underſtand the words of his abſent friends, 'if this liberty be not taken away from him, that he 'may be able to do thoſe things which are wont ſometimes to be done by freemen, or may do them without fear or danger. I ſay, moreover, that if the 'place be known where a friend reſides, to whom our 'meſſage ſhould be brought, and if both enjoy a full 'liberty, the cauſes being before agreed upon which 'conduce to the diſpoſition of the means, any thing 'may be told ſuch a friend, without any meſſenger 'going between each, or any living creature, though 'he be a hundred, nay, perchance, a thouſand, miles 'off, and that in a ſhort ſpace of time, perchance an 'hour, or, it may be, ſomewhat leſs. Theſe things, 'ſome whiſperingly ſay, are ſtrange and wonderful, 'but they are not ſo ſoon to be believed. But what 'doth ſeem ſo wonderful and incredible? you have 'yet but this only in the genus and ſpecies; behold 'an individual is preſented to thy eyes which thou 'wilt leſs believe. Tell unto this my nuncio at London, in as few words as may be, what you deſire 'may be told to me dwelling at Briſtol, Wells, or, if 'you will, rather at Exeter, for I do not much regard 'the length of the way, ſo it is but paſſable; I ſay, 'tell him at London, and that juſt about noon, any 'one whole verſe of the ſacred Scriptures I will ſee 'that he ſhall perform our commands in the deſigned 'place (mark what I ſay) before the high noon of the 'ſame day. Do not raſhly pronounce this propoſal 'impoſſible, for the courſe of the ſun makes the noon 'later by ſome minutes at Briſtol than at London. 'This it is that you wonder at, that this meſſenger 'ſhould exceed the heavenly motion thereof in ſwiftneſs. This he will do, will do it, I ſay, if there be 'need, or elſe I am the vaineſt perſon of all that know 'how either to ſpeak or write. What, ſpeak I of 'towers or cities that are beſieged? Our inanimate 'nuncio, not fearing any thing, will paſs through 'whole troops of enemies. A trench digged almoſt as 'low as Hell, or a wall, though higher than thoſe of 'Babylon, ſhall not hinder his journey, but he will 'faithfully perform the meſſage, ſo it be in as conciſe 'terms as may be, of him that ſent him, though beſieged; or whether he would have it told to him 'that is beſieged, and that with ſuch incredible ſwiftneſs, if he be to be found within five or ſeven miles, 'though I doubt not but it may be done effectually 'within twenty miles.' It is evident from what our author ſays, that he had two, and thoſe very oppoſite, deſigns in writing this treatiſe; the firſt was, to extol the advantages reſulting from his ſecret; and the ſecond, to avoid, in the doing this, letting ſlip any ſuch expreſſion as ſhould abſolutely reveal it. It ſhould ſeem, that nothing by his art could be done but by agreement ſettled between the parties who enter into this correſpondence; in the firſt caſe, firing guns, ringing bells, ſounding a trumpet, &c might probably be intended; in the ſecond, diſpoſing of candles, torches, or beacons, which ſignals being repeated at proper diſtances, would certainly perform all he promiſes; and in the third, bombs, granadoes, or rockets, might do the buſineſs, or, in ſome caſes, ſmokes. Theſe explanations will, perhaps, appear more clearly, by reading the following paragraph from our author, wherein he ſeems willing to be a little more explicit. 'You have 'here three promiſes of this my nuncio preſented to 'your conſideration, perchance it will be worth our 'while to ſhew how they differ among themſelves, for 'perſpicuity's ſake. In the firſt, I ſet forth the ſubtlety of deceiving, in the ſecond, the ſwiftneſs of it's 'paſſage, in the third, it's unconquered power and 'ſtrength in penetrating all things. That in the firſt 'place will eaſily be performed without any coſt or labour of any one, ſave him that ſends; but it hath 'this inconvenience, that it's frequent uſe will not free 'us from ſuſpicion. That in the ſecond place is very 'often effected without any help from others, and in 'ſome places almoſt without any charge; but, for the 'moſt part, it will do little or nothing without preparation, and that ſuch, that for each mile it will 'coſt five pounds, more or leſs, if it be deſigned for 'perpetual uſe; and nothing can be done without the 'countenance and authority of the magiſtrate, who can 'eaſily, if he pleaſe, hinder our nuncio's journey. As 'concerning the third, truly it requireth no great 'charge, but it muſt be obſerved, that he that doth 'act be ſettled in a place without danger, where he 'may reſiſt his enemies force until he hath perfected 'his work; and here we muſt not deny, that the condition of him that ſends in, is worſe than that of him 'that ſends out.' It may be, the reader will be inclined to think a little contemptibly of the methods here inſinuated, from an apprehenſion that they are things obvious enough, and the knowledge perhaps that they are things frequently practiſed. To this it may be anſwered, that all things are obvious when they are once explained; but, 'till it was explained, Columbus's egg was as much a wonder as his voyage to the new world. That theſe things were not known then is certain; that they have been ſince brought into frequent uſe, proves nothing more than that our author's judgment was as ſtrong as his imagination was vigorous, which, we muſt repeat it, are circumſtances rarely united. But it may be ſaid, why promiſe new lights, and exhibit only dark clouds? Why ſpend ſo much time to ſhew the value of a ſecret without diſcloſing it? or why entertain the world with a long chain of riddles and hard ſayings? The anſwer to this is not difficult; our author did not intend his ſecrets for the uſe of the vulgar, he wrote to men of ſuperior underſtandings, knowing that by a compariſon of circumſtances they would certainly attain his true meaning; and he wrote for perſons of ſuperior rank, who were in a ſituation to apply his diſcoveries for public benefit. At the time he wrote he had many things to apprehend, of which modern writers ſtand not at all in fear, which was another motive to his being reſerved, and that his aim was not tinctured either with vanity or ſelf-intereſt is evident, from his puſhing this matter no farther than he did. His own words will convince the reader of the truth of what has been ſaid, 'He that ſhall rightly underſtand (and by exam-

(19) Nuncius inanimatus, §. xix.

kind a reception they met with; since, though penned in Latin, and no translation till at this time, they were thrice printed in fourteen years. At this juncture also appeared a Latin paper of his, respecting the value of Roman money, which shewed how perfect a master he was of classical learning, and how correct a taste he had in most kinds of literature (*k*) [*H*]. In the latter part of his life, he fell into a low and languishing disease, which

(*k*) Hakewell's Apology for Divine Providence, Lond. 1630. folio.

' ples they are more clear than the sun in it's meridian ' splendour) how sounds of this nature are reported to ' a place far distant, will never question the verity ' hereof. And here, lest any one should timorously ' suspect these things to be effected by unlawful and ' condemned arts, in the presence of that God, who is ' both the greatest and best, I protest and openly de- ' nounce, that this discipline contains in it nothing that ' is unlawful or contrary to the laws either of God or ' man; and that many things are done by the help of ' arithmetic, geometry, and music; the rest, if not by ' usual yet by lawful means, and that at a very small ' cost, I had almost said none at all, for certainly ma- ' ny things may be performed in this kind without the ' least expence or loss that can be imagined. And see- ' ing that it is so, I leave it to the judgment of those ' that are judicious, to consider how much and how far ' these our inventions may be profitable to the Com- ' monwealth for the future. If they are defective let ' them die, and, like an untimely birth, let them not ' see the light, or, if they chance to see the light, let ' them not enjoy it ever so little, but forthwith vanish ' into nothing. Yet I my self think the use of this art ' to be very great, as well in times of peace as war, ' and I thought it my duty to bestow some pains in the ' delivery thereof, which I will not do so willingly, ' lest that when it shall be made known to many, we ' cannot use or practise these things in their due time.'

About eighteen years after, this treatise was printed, and, about fourteen after our author's death, there came abroad an English translation which bore this title.

NUNCIUS INANIMATUS, or, *The Mysterious Messenger, unlocking the Secrets of Mens Hearts, by* F. G. B. *of* H. It was near fifty years a secret who made this translation, but at length it came out; for the learned Dr Thomas Smith, in a letter to Mr Hearne, dated August 16, 1705 (20), hath these words, ' Of what ' authority the little note you mention concerning Bi- ' shop Godwin's speaking brazen head is, I know not. ' I am satisfied, that his Nuncius Inanimatus, which I ' translated into English almost fifty years since, at the ' request of the bookseller who printed it, was designed ' only in the way of wit and fancy for an amusement.' In another letter, dated the thirteenth of September following, he carries the thing still farther. ' I have ' not had by me, says he, I believe these forty years, ' the English translation of Bishop Godwin's *Nuncius* ' *Inanimatus*, which I wholly neglected and threw by ' as a trivial and puerile sort of exercise; and I fear ' that both it and the Latin original are irretrievable.' It is plain the Bishop's secret remains still a secret, for the Doctor, who made a very good translation of a book he did not understand. A Divine, who was our author's contemporary, and second to none either in point of learning or sagacity, has given a very different account of this treatise (21); and these are his words. ' Among the rare inventions, says he, which this pre- ' sent age hath afforded, Nuncius Inanimatus may just- ' ly challenge a place; and it were to be wished, that ' being an experiment of so great consequence, greater ' notice were taken of it by the higher powers than hi- ' therto hath been.' Bishop Wilkins was somewhat indebted to our author for what he has delivered to the world on similar subjects (22); perhaps it will not be displeasing to see in plain terms a secret of this nature, known to neither of these Prelates, free from all disguise, and which never yet appeared in our language.

The INKS of SECRECY.

' Take of good litharge half an ounce, pick it clean, and powder it very carefully, then dissolve it in two ounces of spring water; with this ink write your true meaning. Take two or three corks, burn them carefully as long as they will flame, then quench them with a little brandy. This being reduced to a fine powder, mix with gum water, and then you have a second ink, in which write over the former what you would have thought your meaning. Your friend, to whom this shall be addressed, must take one ounce of orpiment, finely powdered and sifted, with two ounces of quick lime, being put into a wine pint of water, and well shaken, let him apply this softly with a sponge, upon which the covering letters will vanish, and the secret sense of the epistle will appear. A little practice will make this easy.

[*H*] *In most kinds of literature.*] This Dissertation upon the Roman SESTERCE and TALENT, as our author penned it in Latin, is preserved at the end of his learned friend Dr Hakewell's very valuable work; he observes, that (23) *unus sestertius, five nummus*, in the masculine gender, signifies a piece of money worth about *two pence*, or, more exactly, *ten* of them made *nineteen pence*. A thousand sesterces made a *sestertium* in the neuter gender. In regard to the talent, he remarks, that the Ancients made use of many, such as, the Attic, Euboic, Æginian, Hebraic, and Babylonish, and that when the word occurs alone, it is always to be understood of the Attic talent, the worth of which he fixes at *one hundred and ninety pounds* sterling. This is one instance, and we will produce another of his willingness to oblige his friends, by communicating to them whatever he judged worthy of their notice, or useful to any particular branch of study in which they were engaged. The judicious Camden, at least seven years after the publishing his Latin History of English Bishops, in which he is supposed to have been wanting in respect to him, speaking of the great antiquity of Kaer Lheion, or Caerleon, in Monmouthshire, delivers himself, in regard to our Prelate, thus (24). ' In confirmation of ' this, I have taken care to add some antient inscrip- ' tions, lately dug up there, and communicated to me ' by the Right Reverend Father in God, Francis God- ' win, Lord Bishop of Landaff, a lover of venerable ' antiquity, and all other good literature.' In the year 1602, some labourers digging in a meadow adjoining, found, on a chequered pavement, a statue of a person, in a short trussed habit, with a quiver and arrows, the head, hands, and feet broken off; and also the fragment of an altar, with an inscription of fair large characters about three inches long, erected by Haterianus, lieutenant-general of Augustus, and Propætor of the province of Cilicia. These inscriptions, which are preserved in Camden, are in the garden walls of Moinscourt, then the house of the Bishop of Landaff, and which became afterwards the seat of Thomas Lister, Esq; (25). He also furnished such informations as he thought acceptable to Dr Holland, who translated the Britannia with the approbation of Camden, insomuch, that some have accounted the English to be almost as much his as the Latin; in the description of Monmouthshire (26), we find this testimony of gratitude to our Prelate. ' Adjoining to port Skeweth (says he) ' is Sudbroke, the church whereof, called Trinity ' Chapel, standeth so near the sea, that the vicinity of ' so tyrannous a neighbour hath spoiled it of half the ' church yard, as it hath done also of an old fortifica- ' tion lying thereby, which was compassed with a tri- ' ple ditch and three rampiers as high as an ordinary ' house, cast in form of a bow, the string whereof is ' the sea-cliff. That this was a Roman work, the ' Britain bricks and Roman coins there found are most ' certain arguments, among which, the Reverend Fa- ' ther in God, Francis, Bishop of Landaff, (by whose ' information I write this) imparted unto me, of his ' kindness, one of the greatest pieces that ever I saw, ' coined of Corinthian copper, by the city of Elaia, ' in the lesser Asia, to the honour of the Emperor Se- ' verus, with this Greek inscription, ΑΥΤ. Λ. CEIITI. ' CEBHROC. ΠΕΡ. that is, the Emperor Cæsar Lu- ' cius Septimius Severus Pertinax. And, on the re- ' verse, an horseman, with a trophee erected before ' him, but the letters not legible, save under him, ' ΕΛΑΙΩΝ, that is, of the Elaians, which kind of ' great pieces the Italians call Medaglioni, and were ex- ' traordinary

which he bore with invincible patience, and which brought him gradually to his end, towards the close of the month of April, 1633, when he wanted about a year of his father's age (l). His corps was interred in the chancel of his church, at Whitborne, which, with the manor, belongs to the Bishops of Hereford, and lies about fourteen miles from that city (m). He was, as those who lived in his times, and nearest them, confess, and as his writings incontestably prove, an admirable writer, and a general scholar (n). His stile in Latin has been highly commended, and never censured. In English, he wrote with great perspicuity and elegance, always equal to his subject, without any of those high-flown metaphors, strained comparisons, or preposterous affectations of wit, which disfigure many of the books published in his time. His learning was solid, and so was his judgment; yet there was nothing affected in the one, or overbearing in the other; on the contrary, his modesty is every where conspicuous, and he is equally tender in censure and in panegyrick. Yet his zeal for the Protestant religion, as professed by the Church of England, appears every where with a decent warmth; which, as it procured him many enemies amongst the Puritans and Papists, ought to endear his memory to all who have a just sense of our religion, and a proper respect for that cause which he maintained (o). As to his private life, though it has received some severe strictures from a modern pen, on account of the preferments he bestowed on his children (p); yet one of those children has sufficiently vindicated his character, in the account of it which he gave to Anthony Wood, importing that 'he was esteemed a good preacher, and a strict liver; but so much employed in his studies, and matters of religion, that he was, as it were, a stranger to the world, and the things thereof (q).' Such a man, how honest, how upright soever, might be imposed upon, but not seduced. There is however no proof of the former, and it would be very uncharitable to take it for granted, against a prelate otherwise so eminent in every respect. If, in the vindication of this good Bishop's fame, we have expressed some degree of warmth, let not the reader be displeased. It would be surely unkind to refuse justice to his memory who has preserved the memories of many, or to see unmoved a Prelate, whose life was devoted to the rescuing other men's reputations from oblivion, now when death has rendered him incapable of defending it, unfairly injured in his own. He married, when a young man, the daughter of Dr John Woolton, Bishop of Exeter (r), by whom he had many children; but we can speak with any tolerable degree of certainty of four only, three sons and a daughter. Thomas Godwin, Vicar of Newland, Rector of Whitborne, Prebendary of Landaff, Prebendary of Bullingham in the cathedral church of Hereford, Chancellor of that diocese, and Doctor of Divinity. He died in 1644 (s). Morgan Godwin, Bachelor of Arts, of Christ-Church, Bachelor of the Civil Law, of Pembroke College, Master of the free school at Newland in Gloucestershire, Prebendary of Warham, in the cathedral church of Hereford, and Archdeacon of Salop, in the same diocese; to both which he was collated by his father in 1631 (t); and was also Doctor of Laws of the university of Dublin, as appears by a petition of his relict to the corporation, for the relief of Minister's Widows: he died in 1645, being turned out of every thing during the rebellion, and leaving a widow and five children in such distressed circumstaces, that she was constrained to apply for that charity, and received it (u). Charles Godwin, who was beneficed at Monmouth (w). The Bishop's daughter was married to Dr John Hughes (x), Rector of Kingsland, Prebendary of Landaff, Prebendary also of Junkabarrow, in the cathedral of Hereford, and archdeacon of Hereford; he died, and was buried in his church at Kingsland, in the year 1648, being then near seventy years of age (y). Dr Godwin was succeeded in his Bishoprick by Dr William Juxon, Dean of Worcester; who, before his consecration, was removed to London. The bishopric was then bestowed on Dr Godfrey Goodman, Bishop of Gloucester, but he being a scrupulous man, and unwilling to take a second bishopric, waved it; so that at length,

'traordinary coins, not for common uſe, but coined 'by the emperors, either to be diſtributed by the way 'of largeſs in triumphs, or to be ſent for tokens to 'men well deſerving; or elſe by free cities, to the glo-'ry and memory of good princes.' We will conclude with a letter from our Prelate to the learned Camden, which will ſhew his candour, his diligence, his communicative diſpoſition, with that warmth of affection and flow of ſincerity which muſt have rendered him amiable while living, and ought to endear his memory to poſterity (27). 'I ſend you here encloſed the co-'py of an old charter, which myſelf long ſince writ 'out of the autographum, remaining in the archives of 'the church of Wells. It ſeemeth to me that you have 'not hitherto lighted upon it, and I perſwade myſelf 'that Leland's conceit of naming Wells Theodorodu-'num had his grounds here. For as Theodoric, by 'corruption of ſpeech, became Tidder, ſo he might 'happily think Tiddington to be derived of Theodo-'rici dunum. This name of Theodoricus putteth me 'in mind of Theodoricus, rex and martyr, that lieth 'entombed here in our church of Marthern, and gave 'unto the place the name of Merthir Tendric, that is, 'the martyrdom of Tendric. His tomb, partly ru-'nated, I have repaired, and added a memorial or 'epitaph, the copy whereof I ſend you alſo encloſed. 'My author for what I have there ſet down, is our book 'of Landaff, called St Taylor's Book, which I per-'ceive you have not ſeen. It is a very venerable an-'tiquity, and, if ever I come to London again, I will 'bring it with me, that you may peruſe it if you pleaſe. 'The church of Exeter hath divers charters of Saxon 'kings, which methinks it were good you did ſee. 'If ever you travel that way you ſhall do well to make 'means for a ſight of them; otherwiſe, I do not think but 'by the means of my friends, I could in time get them 'copied for you. If you adviſe me ſo to do I will do 'my endeavour. You ſee how eaſily I take any oc-'caſion to talk with you, nay rather to you I ſhould 'ſay. For how often I provoke you to talk to me in 'that

(27) Camdeni Epiſtolæ, p. 109.

length, Dr Auguſtine Lindſell, Biſhop of Peterborough, was tranſlated thither, and confirmed March the 24th, 1633, who was found dead in his ſtudy, November 6, 1634, being a perſon of diſtinguiſhed character for learning and piety (z).

(z) Ath. Oxon. Vol. I. col. 583, Survey of Cathedrals, Vol. II. p. 525, 526.

' that your incomparable work no man knoweth that ' ſeeth not how much time I ſpend in reading again ' and again of the ſame. For it and many other un- ' deſerved kindneſſes I reſt much beholden unto you, ' which I wiſh I may one day have means but in part ' to requite. In the mean time, with my heartieſt ſa- ' lutation, I make an end, committing you to God. ' Marthern, May 27, 1608.'

In all old evidences, not above 300 years, I find it called Marthern, but before that Marthir Tenderic.

Your very aſſured, Fr. Landavens.

E

GOWER [JOHN], or as ſome think with probability enough Sir John, an eminent Engliſh poet, in the XIVth Century, and contemporary with the famous Chaucer. We are told, by the indefatigable Leland, that according to the information he had received, he was of the ancient family of the Gowers of Stitenham, in Yorkſhire (a), which Bale repeating (b), and after him Pits (c), and Fuller (d), make him poſitively aſſert, tho' in his own opinion doubtful, and perhaps all circumſtances conſidered, notwithſtanding its being now generally received falſe, or at leaſt improbable [A]. But it is very certain that of whatever family he was, he came into the world with great advantages, and had a liberal and extenſive education, tho' we are in the dark as to the places in which he received it. The only thing that can be affirmed of him with certainty, is, that he applied his great abilities both natural and acquired, to the ſtudy of the municipal laws of this kingdom, according to the laudable cuſtom of thoſe times, when gentlemen finiſhed their education in the Inns of Court (e). He was a member of the honourable Society of the Inner Temple, and there it was Chaucer found him very eminent and much conſidered in his profeſſion (f), and there that ſtrict friendſhip grew between them, which has been ſo much celebrated by other writers, and of which they left ſuch ample teſtimonies themſelves [B].

He

[A] *Falſe, or at leaſt improbable.* The words of Leland are, ' deſcended originally, as I have been told, ' from the family ſeated at Stitenham in the county of ' York ;' ex Stitenhamo villa Eboracenſis provinciæ, ut ego accepi originem ducens (1). Fuller gives this paſſage in theſe words, John Gower was born, ſaith Leland, at Stitenham, (in the North Riding in Bulmore Wapentake) of a knightly family (2). Leland does indeed ſay, that he was himſelf a Knight, but nothing of the family; yet Fuller is not to blame, ſince he wrote not from Leland's work, but from Bale's tranſcript. But we have more concerning our author in another work of Leland. In one place he ſays (3), ' The houſe of Gower the Poëte, ſum tyme chief Juge ' of the commune place, yet remaynith at Stitenham ' yn Yorkſhir, and diverſe of them ſyns have beene ' Knightes. There be other of the Gowers thereabout, men of veri meane landes. There be alſo of ' the Gowers men of meane landes in Richemontſhire. ' There is alſo a gentilman of landes cawllid Gower ' in Wiceſtreſhire.' According to this account, we ought to entitle him, Sir John Gower, Knight, Chief Juſtice of the Common Pleas: yet in another place Leland has this memorandum (4). ' Mr Ferrares told ' me, that Gower the Juge could not be the man that ' write the bookes yn Engliſch. For he ſaid that ' Gower the Juge was about Edward the ſecundes ' tyme.' We have fought with ſome care for this Judge Gower, but have not been able to meet with any thing relating to him, either in the reign beforementioned, or any other. It is however highly probable there was a Judge of this name, and not at all improbable that our Poet was the ſame man. That he was not of the family of Stitenham, which is that of the preſent Earl Gower, may be inferred from the wide difference between their arms: thoſe of the Gowers of Stitenham are (5) barry of eight argent and gules over all a croſs flory ſable. Creſt, on a wreath a wolf paſſant argent, collar'd and chained or. But the arms of our poet were (6), argent, a cheveron, azure, the leopard's heads thereon, or, their tongues, gules, two angels ſupporters, and on the creſt a talbot. Weever, a moſt indefatigable man, and perfectly well acquainted with our author's works, aſſerts that he was of a Kentiſh family (7). Yet, in the title-page of the firſt printed edition of the only work of his extant, he is ſaid to be a native (8) of Wales. Leland alſo mentions branches of this family ſettled in many other places (9).

[B] *And of which they left ſuch ample teſtimonies themſelves.*] There was a great likeneſs in their tempers, and though Gower was the elder man, yet probably there was not any conſiderable difference between their ages. There is another circumſtance not mentioned by any author, that might very likely contribute to endear them to each other, and that was, their being of the ſame party. Chaucer had addicted himſelf to John of Gaunt, Duke of Lancaſter, one of the uncles of King Richard; and our author, Gower, adhered as ſteadily to Thomas of Woodſtock, Duke of Glouceſter, another of his uncles; and ſo warm he was in his attachment, that he not only celebrates him often in his poem, hiſtorically and allegorically, but likewiſe directed that his badge, or cognizance of the ſwan, to be annexed to that collar which was the enſign of his dignity, whatever it was, which appeared on the ſtatue placed on his tomb, as we ſhall ſhew hereafter (10). Beſides, John Gower was as much offended with, and cenſured as freely, the vices of the clergy, as Chaucer had done; and therefore no wonder that they were ſo very intimate, that they conferred together about their works, and that ſometimes they argued warmly with each other without anger, and rallied without pique, of which Leland ſpeaks with ſo much pleaſure, and obſerves, that the only real diſpute between them was, which ſhould honour the other moſt. At the cloſe of his admirable poem of Troilus and Creſſide, Chaucer has theſe words (11),

(10) Anſtis's Regiſter of the Order of the Garter, Vol. I. p. 116.

(11) Chaucer's Works, by Urry, p. 333.

O moral Gower, this boke I directe
To the, and to the philoſophicall Strode,
To vouchſafe there nede is for to correcte
Of your benignities and zelis gode.

In the language of our days, thus,

O moral Gower! this little book I ſend
To thee, and to the philoſophic Stroud,
Perfect what's right, what's wrong in it amend,
As friends to me, and furtherers of good.

Gower, on the other hand, in the laſt work he publiſhed, introduces Venus ſpeaking to him, thus (12).

(12) T. Barthelette's edition of the Confeſſio Amantis, A. D. 1532. fol. 190.

—— Grete well Chaucer, whan ye mete,
As my diſciple and my poete,
For in the flours of his youth,
In ſondrie wiſe, as he well couth

Of

He was ſingularly learned, whether we reſpect words or things, and had a great genius for poetry, in which he ſought to accommodate the ſevereſt ſentiments to the ſweeteſt language. He tried this (according to the notions of thoſe times) with ſucceſs, in the French tongue. This led him to attempt imitating Ovid with more pains than profit (*g*), (ſays Leland) which has been excuſed at the expence of the age in which he lived, as being at leaſt half barbarous in the ſentiments of the critics; but perhaps it would be more juſt to conſider, how little the matter ſuited with the manner, and that thoſe works of Ovid, in which he ſhews himſelf moſt learned and wiſe, are not the moſt eſteemed. This however had a good effect, for it induced him to try what could be done in his own language, in which he acquitted himſelf harmoniouſly and happily. All theſe three pieces which make the bulk of his works have a connection with, and a dependance on, each other, ſo as to appear manifeſtly efforts of the ſame genius. But theſe writings did not at all interrupt, much leſs take from the reputation of his graver ſtudies (*b*). On the contrary they heightened his character extremely, and with good reaſon, as they not only ſhewed he had eſcaped the infection of thoſe luxurious times, but had alſo the courage and virtue to attempt ſtemming the tide of corruption, by taking the only method left, of inſtilling principles of morality and good ſenſe, in the garb of pleaſant tales. This accounts likewiſe for his perſiſting in this ſtile of writing, as knowing this alone in that wild and wanton age could procure him a hearing, which it did, and he was eſteemed for his knowledge and integrity, even by thoſe who had no great inclination to imitate either, which however has been the cauſe, that all theſe pieces, either in print or manuſcript, have been preſerved to our days (*i*) [*C*]. He was known to and admired by King

(*b*) Leland, Bale, Pits, Holinſhed, Stowe, &c.

(*i*) Chiefly in the Cotton and Bodleian Libraries.

Of detees, and of ſonges glade,
The which he for my ſake made,
The londe fulfilled is over all;
Whereof to him in ſpeciall
Above all other I am moſt holde.
For thy nowe in his daies olde
Thou ſhalt hym tell this meſſage,
That he upon his later age,
To ſette an ende of all his werke,
As he whiche is myn owne clerke,
Do make his *teſtament of Love*,
As thou haſt done thy ſhrifte above,
So that my courte it may recorde.

The ſenſe in modern Engliſh.

Greet Chaucer when you him next ſee,
My pupil and my poet he,
Who in his youth fit age for ſong,
Of tales and ditties ſweet a throng,
Made for my ſake, and with his lays
Through all this iſland ſpread my praiſe.
For which, as merit ſtill ſhould riſe,
Him beyond other bards I prize.
But now his ſilver locks appear,
To him from me this meſſage bear;
That as my own eſpecial clerk,
Of Genius th' expiring ſpark,
Shall breathe his *teſtament of love*;
As thou haſt done thy † ſhrift above.

[*C*] *Have been preſerved to our days.*] The firſt of theſe works, intitled *Speculum Meditantis*, of which there are two copies in the Bodleian Library, is written in French, in ten books (13). The title at large runs thus,

(13) NE. F. 8, 9. Fairfax, 3.

I. 'Un traitteé, ſelonc les auctours, pour enſampler 'les amants marietz, au fin qils la foy de lour ſeints 'eſpouſailles, pourront per fine loyalte guarder, & al 'honeur de Dieu ſalvement tener.' Pr. *Le creature de tout creature*. Which has been rendered, A treatiſe, exhorting, by examples drawn from many authors, married perſons joined through love, to keep the faith of their holy eſpouſals with ſteady loyalty, and to the honour of God to hold themſelves chaſte. Beginning, *The creature of all creatures*. It does not appear that either Bale or Pits had ever ſeen this piece, and John Stowe, who had a fair manuſcript of that treatiſe of which we are next to ſpeak, had never ſeen this (14).

(14) Annals, p. 326.

II. *Vox Clamantis*, in Latin verſe, compriſed in ſeven books. There is a copy likewiſe of this in the Bodleian Library, and more than one in that of All Souls College (15); it is alſo much more frequent in private hands. This is a kind of chronicle or hiſtory of the inſurrection of the commons, in the reign of Richard II. The reader perhaps will be pleaſed to ſee a ſpecimen of this work, but he muſt excuſe us from a tranſlation, which would be very difficult if not impoſſible. It is the poet's viſion, in the eleventh chapter of the firſt book.

(15) MS. Bodl. Laud. F. 24. Digby. vii. 138. in Coll. Omn. Animarum, 26.

Watte vocat, cui Thomæ venit neque Symme retardat,
Betteque Gibbe ſimul Hykke venire jubent.
Colle furit, quem Gibbe juvat nocumenta parantes,
Cum quibus ad dampnum Wille coire vovet.
Grigge rapit, dum Dawe ſtrepit, comes eſt quibus Hobbe
Lorkin & in medio non minor eſſe putat.
Hudde ferit quos Judde terit, dum Tebbe juvatur
Jakke domos que viros vellit & enſe necat,
Hogge ſuam pompam vibrat, dum ſe putat omni
Majorem Rege nobilitatem fore.
Balle propheta docet quem ſpiritus ante malignus
Edocuitque ſua tunc fuit alta ſchola.
Talia, que plures furias per nomina novi,
Que fuerant alia pauca recordor ego.
Sepius exclamant monſtrorum vocibus altis,
Atque modis variis dant variare tonos.
Quidam ſternutant Aſynorum more ferino;
Mugitus quidam perſonuere boum.
Quidam porcorum grunnitus horridiores
Emittuntque, ſuo murmure terra tremit.
Frendet aper ſpumans magnos facit atque tumultus,
Et queritat verres auget & ipſe ſonos.
Latratuſque ferus urbis compreſſerat auras
Dum Canum diſcors vox furibunda volat.
Vulpis egens ululat, lupus & verſutus in altum
Conclamat, que ſuos convocat ipſe pares.
Nec minus in ſonitu concuſſit garrulus anſer
Aures, que ſubito foſſa dolore pavent.
Rombuant vaſpe ſonus eſt horrendus eorum,
Nullus et examen dinumerare poteſt.
Conclamant pariter hirſuti more leonis,
Omne que ſit peius quod fuit ante malum.

Reſponſumque ſoni vendicat Ecclo ſibi.
Inde fragore gravis ſtrepitus loca propria terret,
Quo timet eventum quiſquis adire malum.

King Richard, at whoſe requeſt he wrote the laſt of his principal works, this appears from the prologue, wherein he relates the occaſion, but in the firſt printed copies it was altered, and inſcribed to Henry of Lancaſter. One would imagine this was done by ſome other hand, and to accommodate things to the times, when the houſe of Lancaſter was in quiet poſſeſſion of the Throne; but however, it is at leaſt as probable, that he might alter his own book, after the coming in of Henry IV. to whom beyond queſtion he was very highly devoted. The author of the life of Chaucer (*k*), and the plain ſpoken Thomas Hearne (*l*), blame him exceedingly for his conduct in this reſpect, and for his attacking the character of his old maſter Richard, very ſeverely, on purpoſe to court the party of the houſe of Lancaſter, when they became triumphant [*D*]. But it may be, and indeed is, more

(*k*) Prefixed to the worthy Mr Urry's excellent edition of his Work.

(*l*) Hiſtoria vitæ & regni Ric. II. in Præfat. p. xiv, xv.

Terruerat magnas nimio pre turbine gentes
Graculus a cuius nomine terra tremit.
Rumor it, & proceres ſermonibus occupat omnes
Conſilium ſapiens nec ſapientis erat.
Caſus inauditus ſtupefactas ponderat aures
Et venit ad ſenſus dures ab aure pavor:
Attemptant medicare ſed immedicabile dampnum
Abſque manu medici curaque ceſſit ibi.

In the Cotton Library there is a very correct manuſcript of this work, with the title at large (16), viz. *Johannis Gouer Chronica, quæ Vox* Clamantis *dicitur, ſive Poema de* Inſurrectione Ruſticorum *contra ingenuos & nobiles, tempore Regis* Richardi II. *& de Cauſis ex quibus talia contingunt Enormia: libris ſeptem.* That is, 'The Chronicle of John Gower, commonly called '*Vox Clamantis*, the voice of one crying in the wil-'derneſs; or, a Poem on the inſurrection of the clowns 'againſt the gentry and nobility, in the time of King 'Richard II. and of the cauſes that gave riſe to thoſe 'enormous actions.' But there is yet a fairer and more beautiful manuſcript at Oxford, with an epiſtle in Latin verſe prefixed, which is thus addreſſed (17), 'Hanc 'epiſtolam ſubſcriptam corde devoto, miſit ſenex & cae-'cus *Johannes Gower*, reverendiſſimo in Chriſto patri 'ac domino ſuo principio *D. Thomæ Arundell* Cantuar. 'Archiepiſcopo, &c. Pr. *Succeſſor* Thomæ, Thomas '*humilem tibi do me.*' It clearly appears from hence, that this was no dedication of the original work, but of a kind of ſecond edition, when he joined to it ſome other hiſtorical pieces, and being written, as himſelf ſays, when he was old and blind, might very probably be one of the laſt things he ever penned, or rather dictated.

(16) Tiberius, A. iv. 1.

(17) MS. Oxon. in Coll. Omn. Animarum, 25.

III. Confessio Amantis, in eight books in Engliſh verſe. This was printed at Weſtminſter by Caxton, 1493 *. The ſecond edition bears the following title, *Jo. Gower de* Confeſſione Amantis. *Imprinted at* London *in Fleet Street, by* Thomas Barthelette, *Printer to the King's Grace*, Ann. 1532, *cum privilegio.* Again, Anno Domini 1544. and a third time, Anno Domini 1554. It is in the title page of the firſt edition printed by Barthelette, that Gower is ſaid to be a native of Wales. There is likewiſe a dedication prefixed to Henry VIII. in which are many things ſaid to the honour of Gower; but we have no room to repeat them here, though a paragraph or two will appear in another place (18). This performance is a kind of poetical ſyſtem of Morality, interſperſed with weighty ſentences, excellent maxims, and ſhrewd ſayings; but far the greateſt part compoſed of pleaſant ſtories happily introduced, as inſtances or examples in ſupport of the virtuous doctrine delivered. The ſeventh book contains an abridgment of Ariſtotle's Philoſophy, from whence he takes occaſion to give the King a great deal of good advice, and that upon very delicate ſubjects, with much dignity and freedom.

* See a curious account of this edition in the Article CAXTON [William] Note [O].

(18) See Note [K].

[*D*] *When they became triumphant.*] The firſt who fell upon our author was a reverend Prelate, whoſe inclination to a coarſe kind of raillery, might have been ſhewn almoſt any where with greater propriety than in the work (19) from which the following quotation is taken. 'Richard the ſecond's good ſucceſs in Ireland 'was ſo far outbalanced by the other (more unlucky) 'adventures of his reign, that I have not heard of any 'who have thought it worth their while to write his 'life, except only a poor Knight of John Pits crea-'tion. That author ſays, that one Sir John Gower, a 'Yorkſhire Knight, and contemporary with the famous 'Chaucer, died in the year 1402, leaving behind him 'a deal of monuments of his learning, and, amongſt 'the reſt, a Latin chronicle of King Richard II. 'There was indeed one Mr John Gower, a noted Po-'et, who lived about the time he mentions. This 'witty perſon took the liberty that has always been 'allowed to men of his profeſſion, to make free with 'his prince; and Mr Stowe, or his continuer Howes, 'has done him the honour to tranſlate the elegy he 'made on this king's untimely death.' It is not eaſy to diſcover what is this great critic's meaning, but aſſuredly no great fame will reſult to him from theſe remarks. He might have been informed, that, in the Cotton Library, there were two manuſcripts of another hiſtory of this reign, written by a monk of Eveſham; and, indeed, notwithſtanding what he aſſerts here, he mentions them tho' but very ſlightly in the ſame article. But, as this hiſtory is very ſhort, we ſhall have occaſion to ſpeak of it preſently, and it will then appear to be a conſiderable work. That our author was a *poor Knight* of Pits creation is not true, ſince Leland expreſsly affirms, and ſome other writers alſo, that he was a Knight; and his rebuilding part of the church of St Mary Overs, ſhews that he was not poor. His cenſure, as to the liberties taken by poets, might have been well enough applied, if Gower had been famous for ſatire and invective; but when it is known that he was a great and grave lawyer as well as a poet, and that in the latter character he had eſtabliſhed it as his ſurname, the *moral Gower*, it becomes abſurd and ridiculous. As to his verſes on the death of King Richard, the reader ſhall have them before we part, and judge for himſelf. The author of the life of Chaucer, ſpeaking of Gower, ſays, 'that he was a man of ſingular learning and great 'piety, but much given to change with the turns of 'ſtate.' This had been liable to no exception; but afterwards, commending Chaucer for not trampling upon his maſter's memory, and baſely flattering the new king, he adds (20), 'As moſt of his contemporaries did, and 'particularly Gower, who, notwithſtanding the obliga-'tions he had to Richard II. yet when old, blind, and 'paſt any hopes of honour or advantage, unleſs the view 'of keeping what he enjoyed, baſely inſulted the me-'mory of his murthered maſter, and as ignominiouſly 'flattered his murtherer.' He has a note to explain this, in which one would have thought theſe obligations had been brought to light; but they amount to no more than the King's calling him into his barge, and requeſting him to write a book, which he accordingly performed, and therein laid before him very honeſtly the luxury that prevailed in his court, the irreligious lives of his clergy, the danger of liſtening to flatterers, the wickedneſs of corrupt judges, and the uncertainty of human glory and happineſs, even in the moſt exalted ſtates. Mr Hearne, in his preface to the life of King Richard by the monk of Eveſham, acquaints the reader, that the reaſon why he did not annex what our author, Gower, had written concerning this king, was owing to the account he had received of his having treated this monarch's memory ill, and having ſpoke with equal freedom of the clergy*; and for theſe cauſes he is for leaving his writings in laſting obſcurity, as not deſerving a better fate. But, at the ſame time, he does all imaginable juſtice to his character as a polite writer, allows him to have been, after Chaucer, the beſt poet of his time, and applauds the noble ſentiments that diſtinguiſh his writings. But it may be, he would have altered his ſentiments with reſpect to ſtifling his writings, if he had either come to London to peruſe them, or had cauſed them to be tranſcribed

(19) Nicholſon's Engliſh Hiſtorical Library, p. 81.

(20) Life of Chaucer prefix'd to Urry's edition of that Poet's Works.

more like to be the truth, that our author was ever averſe to King Richard's adminiſtration, in conſequence of his ſteady attachment to Thomas of Woodſtock Duke of Glouceſter, whoſe cruel murder at Calais, he has lamented in a very affecting manner (*m*). It is undoubtedly a very atrocious breach of the laws of honour and charity, as well as of hiſtory, to inſult the memory of the vanquiſhed, or to give implicit credit to whatever has been charged upon them, to juſtify their ill-uſage. But, on the other hand, it is ridiculous to eſpouſe parties in ancient hiſtory, and to fancy we have a right to condemn to perpetual oblivion, the writings of ſuch hiſtorians, as have repreſented things in a light different from that, in which we would incline to place them. This humour is contrary to that zeal for truth, which is the characteriſtic of an honeſt hiſtorian, who thinks himſelf obliged to publiſh fairly what has come to his hands, on every ſide, without declaring for any. After the depoſition of Richard, and the acceſſion of Henry IV. our author added ſeveral hiſtorical peices to his Vox Clamantis, which are thoſe that have given offence, and drawn upon him heavy imputations, tho' it does not at all appear, he uſed the character of that unfortunate monarch, worſe than other writers have done (*n*) [*E*]. He compoſed alſo many other pieces, which are mentioned by Bale and Pits, and

(*m*) Vox Clamantis, & Chron. Tripartita, in Bibl. Cotton. Tiberius, A. 4.

(*n*) Vide Th. Walſingham, Th. Otterbourne, Johan. Roſs, &c.

tranſcribed for his uſe; he would then have ſeen that much perſonal hiſtory might be extracted from them, ſuch as of Simon Sudbury, Archbiſhop of Canterbury, who was murthered in the inſurrection of the clowns; Thomas Plantagenet, Duke of Glouceſter; Humfrey, Earl of Buckingham, and others. Yet in another place (21) we ſhall ſee he publiſhed pieces which juſtify what J. Gower has written.

(21) See the next Note.

[*E*] *Worſe than other writers have done.*] Theſe that are to be mentioned in this note are ſeveral ſmall hiſtorical pieces, of which copies are extant in ſeveral libraries (22). *Chronicon* Ricardi *ſecundi, lib* III. 'Opus humanum eſt inquirere.' This is in effect no more than marginal notes upon, or principal heads of, the enſuing piece (23). *Chronica tripartita de depoſitione R.* Richardi II. *& Coronatione R.* Henrici IV. *tribus partibus*; that is, a Chronicle of the depoſition of King Richard II. and the coronation of King Henry IV. in three parts. 'Ita tripartita ſequitur quæ 'mente petita.,' Pr. l. Tolle caput mundi C. ter & 'ſeq.' He aſſerts in this chronicle (24), that the king being informed that the noblemen who had taken up arms for his reſtoration had been ſubdued and put to death, took it ſo much to heart that he refuſed all nouriſhment, and died of voluntary famine in the caſtle of Pontefract, which is contrary to what is aſſerted by moſt of our hiſtorians, ſome of whom report that his table was ſerved in a royal manner, but that he was reſtrained from eating or drinking any part of what was ſet thereon. Others, that he was murthered by Sir Peter of Exeter, accompanied by eight ruffians, againſt whom he gallantly defended himſelf, and flew ſome of the aſſaſſins. We find our author's account of this unhappy monarch's death expreſsly confirmed by Thomas Otterbourne, a Franciſcan or grey friar (25), who flouriſhed in his time. 'Richard, the depoſed 'king of England, ſays he, being kept cloſe priſoner 'in the caſtle of Pontefract, when he heard of the 'misfortune of his brother John Holland, and the reſt 'of his friends, fell into ſo deep a melancholy that 'he reſolved to deſtroy himſelf by abſtinence; and 'in this he perſiſted ſo long, that the orifice of his ſto'mach cloſed in ſuch a manner, that when over'come by the intreaties of thoſe about him, he at 'length attempted to take nouriſhment, it proved too 'late; ſo that, being unable to eat, and nature gra'dually decaying, he breathed his laſt on St Valen'tine's day.' John Rous, the antiquary of Warwick, who flouriſhed in the next age, tells us (26), that the hapleſs King Richard was hurried about from one priſon to another, 'till at length, ſays he, it is reported, he died of hunger at Pontefract. Tunc rex Ricardus amotus eſt de carcere in carcerem. Tandem apud Pontem fractum in carcere pro fame obiit ut dicitur. This is a full juſtification of our author, and, at the ſame time, a proof that there is not ſuch a deficiency of materials for writing the ſtory of this reign, as ſome have repreſented. In this chronicle alſo thoſe verſes occur which Stowe has in part tranſlated. They are in truth but very poor ones, but this is principally owing to the vice of the age, which had ſtamped a credit upon theſe tinkling trifles, and our Gower was not the only ſenſible man, that for this reaſon was content to comply with the vulgar taſte.

(26) J. Roſſi, Hiſtoria Regum Angliæ, p. 206.

Cronica Richardi qui ſceptra tulit Leopardi
Ut patet eſt dicta, populo ſed non benedicta
Ut ſpeculum mundi quo lux nequit ulla refundi,
Sic vacuus tranſit, ſibi nil niſi culpa remanſit,
Unde ſuperbus erat, modo ſi preconia quærat.
Ejus honor ſordet, laus culpat, gloria mordet:
Hoc concernentes caveant que ſunt ſapientes;
Nam male viventes Deus odit in orbe regentes:
Eſt qui peccator non eſſe poteſt dominator,
Ricardo teſte finis probat hoc manifeſte:
Poſt ſua demerita periit ſua pompa ſapita
Qualis erat vita cronica ſtabit ita.

Which has been thus tranſlated.

The reign of Richard, who the ſceptre bore,
Of England's monarchs, not as heretofore
With ſpotleſs honour, for though crowds proclaim
His deeds, yet from thoſe deeds reſult no fame.
He's gone, and of his greatneſs all we find,
The mem'ry of his faults is left behind,
His honour ſoil'd, his praiſe to cenſure turn'd,
And all his claim to royal glory ſcorn'd.
Be this a warning unto thoſe who rule,
If wiſe, they 'll learn in Providence's ſchool,
Thoſe who live ill, Heav'n meant not to command,
Or ſpread their vile examples through the land.
The fate of Richard, hapleſs hopeleſs youth,
Proves, but too plainly, this important truth.
Like to his life a doom he juſtly ſhares,
And what that life this chronicle declares.

De Rege Henrico IV. *lib.* I. (27). 'Rex cœli Deus '& Dominus qui tempora ſolus.' *Ad eundem, lib.* I. 'O recolende bone pie rex Henrice patrone.' *Carmen de pacis commendatione in laudem Henr.* IV. (28). Nobilis ac digne rex Henrice. *In Engliſh*, O noble worthy King Henry the fearth. This is printed in Chaucer's works (29), and the three firſt ſtanza's are ſo clear in themſelves, the language with ſo little difficulty to be underſtood, the ſenſe ſo ſtrong and ſo ſignificative of his ſkill in both profeſſions of lawyer and of poet, that we may with reaſon intreat the reader's attention, in order to eſtabliſh from them the reputation of John Gower.

I.

O noble worthie King Henrie the ferth,
In whom the gladde fortune is befall
The peple to governe here upon yerth,
God hath The choſen in comfort of us all,
The worſhip of this land which was doun fal,
Now ſtant upright through grace of thy godeneſſe,
Which every man is hold for to bleſſe.

II.

and ſome likewiſe, that neither of thoſe inquiſitive writers have ſeen, and which are ſtill remaining, ſome in publick, and ſome in private libraries. Theſe ſhew him to have been a perſon of great integrity and true piety. One who placed religion in actions not in ceremonies, and who laboured to convince mankind, that virtuous deeds were not more ſuitable to honour than to intereſt. It muſt be acknowledged, that his thoughts are now more to be valued than his expreſſion; but, as Leland well obſerves, even his expreſſion is equal, if not ſuperior, to any of thoſe who attempted Latin poeſy in his time (*o*), and it in ſucceeding ages he and they have been far excelled, yet this could ſcarce have happened if theſe writers had not preſerved a taſte, tho' a bad one, for Latin poetry. Yet in point of learning he had few equals, ſince if we conſider the authors quoted or alluded to by him, and the ſcience, which tho' ſometimes with impropriety lies ſcattered thro' his treatiſe, we ſhall be obliged to confeſs, the harſh epithets beſtowed on this age are rather rude than juſt. True it is, that in point of faſhion they are now uſeleſs, but this abates nothing of their intrinſick value, and tho' they may not be fit to ſtand with modern compoſitions, thro' their want of elegance, yet they deſerve to be ſtill kept and viſited, ſometimes as monuments of the progreſs of good ſenſe thro' former ages, and evidence that in ſeaſons of the moſt diſſolute luxury (as thoſe in which he flouriſhed undoubtedly were) there wanted not a remnant of honeſt and ſtout men, who durſt oppoſe a debauched nobility, a voluptuous clergy, complying judges, and a corrupted people. In this point of view perhaps they were not uſeleſs examples to ſucceeding times (*p*) [*F*].

(*o*) Commentar. de Script. Britan. cap. 493. Bal. & Pits, ubi ſupra.

(*p*) De Confeſſione Amantis.

He

II.

The moſt high God of his Juſtice alone
The right whiche longith to thy regalie
Declarid hath to ſtande in thy perſone,
And more then God maie no man juſtifie,
Thy title is knowe upon thyne anceſtrie,
The land'is folk hath eke thy right affirmed,
So ſtant thy reigne, of God and man confirmed.

III.

There is no man maie ſaie in othirwiſe,
That God hymſelf ne hath the right declared,
Whereof the lande is bounde to thy ſervice,
Whiche for defaute of helpe hath long yeared,
But now there is no mann'is herte ſpared,
To love and ſerve, and worchin thy pleſaunce,
And all this is through God'is purveiaunce.

At the cloſe of this poem, according to the cuſtom of Gower, who ſeldom wrote in Engliſh without recapitulating his thoughts in Latin, we find the following remarkable lines, in which he ſeems to take his leave of the Muſes and of the world.

Explicit carmen, de Pacis Commendatione, quod, ad laudem & memoriam ſereniſſimi principis domini regis Henrici quarti, ſuus humilis orator Johannes Gower compoſuit.

Electus Chriſti pie Rex Henrici fuiſti,
Qui bene veniſti, cum propria regna petiſti,
Tu mala viciſtique bonis bona reſtituiſti,
Et populo triſti nova gaudia contribuiſti.
Et mihi ſpes lata, quod adhuc per te renovata
Succedunt fata priſca probitate beata,
Eſt tibi nam grata gratia ſponte data.
Henrici quarti primus regni fuit annus,
Quo mihi defecit viſus ad acta mea.
Omnia tempus habent, finem natura miniſtrat,
Quem virtute ſua frangere nemo poteſt.
Ultra poſſe nihil, quamvis mihi velle remanſit,
Amplius ut ſcribam non mihi poſſe manet.
Dum potui ſcripſi, ſed nunc quia curva ſenectus
Turbavit ſenſus, ſcripta relinquo ſcholis.
Scribat, qui veniet poſt me, diſcretior alter,
Ammodo namque manus & mea penna ſilent,
Hoc tamen in finem verborum quæſo meorum
Proſpera quod ſtatuat regna futura Deus.
Explicit.

In Engliſh thus.

Here ends the Poem of the Commendation of Peace, which his humble Orator John Gower, compoſed; in honor and to preſerve the fame of his ſerene Soveraign Lord King Henry IV.

Choſen of Chriſt, thou pious King wer't known,
And wellcome met, when claiming of thy own;
The Bad ſubdued, the Good to rights reſtor'd,
To the ſad realm, you ſpringing joys afford.
To me, great prince, thy hand benign and kind,
Return'd whate'er my better day aſſign'd;
Let me record this act with chearful lay,
And the great good, with grateful thanks repay.

Henry the fourth's firſt year, I loſt my ſight,
Condemn'd to ſuffer life, devoid of light.

All things in time ſubmit, and nature draws
What force attempts in vain, beneath her laws.
More I cannot, what tho' my will ſupplies,
My ebbing ſtrength all future pow'r denies.
While that remain'd I wrote, now old and weak,
What wiſdom dictates let young ſcholars ſpeak.
Let him who follows, be ſublimer ſtill,
My works are finiſh'd, here I drop my quil.
My parting words, may heavenly goodneſs laſt,
And times enſuing much excel the paſt.

[*F*] *They were not uſeleſs examples to ſucceeding times.*] The moſt effectual way to demonſtrate the truth of what is aſſerted in the text, is to give the reader one of his tales, and to render it more legible, at leaſt if not more entertaining, to throw it into modern language. In order however to comprehend its full force, we muſt conſider to whom it was directed, and for whoſe uſe it was written. Richard the ſecond was a young prince, not more amiable in his perſon, which was the moſt handſome ever graced the Engliſh throne, than in the qualities of his mind. He was in himſelf gentle, generous, and good, and yet a worſe reign than his does not deform the Engliſh ſtory. This was owing to the pliancy of his nature, if he had ruled himſelf he had ruled well; but being ruled by others, or rather ſuffering them to rule in his name, he paid the forfeit of their faults, and loſt his crown and life for want of having fortitude enough to reſiſt his favourites. To this prince, in this ſituation, John Gower, amongſt many others of the like nature, addreſſes this ſtory (30).

(30) Confeſſio Amantis, libr. VII. fol. CXC.

In

He wrote alſo many other little diſcourſes on religious and moral ſubjects, which poſſibly, if drawn out of the duſt and cobwebs, with which they are oppreſſed, might pay us with ſome

In a Cronike it telleth thus,
The Kynge of Rome Lucius,
Within his chambre upon a night,
The ſtewarde of his hous a Knight,
Forthwith his Chamberleine alſo,
To councelle had both two,
And ſtoden by thy chymnee,
To gather ſpekende all thre.
And hapneth that the Kynges foole
Sat by the fire upon a ſtole,
As he that with his bable plaide,
But yet he herde all that thei ſaide,
And thereof toke thei no hede.
The Kynge hem axeth what to rede,
Of ſuche matere as cam to mouth
And thei him tolde, as thei couth, &c.

In modern language thus.

In Rome when LUCIUS bore the ſway,
It happ'd, ſo ancient ſtories ſay,
One evening 'ere he went to bed,
To eaſe of all his cares his head,
He call'd his ſteward, a doughty Knight,
That he might counſel what was right.
With 's Chamberlain, a lord of parts,
Deep ſkill'd in all the courtly arts;
And by the chimney as they ſtood,
They freely talk'd as they thought good.
Before the fire upon a ſtool,
Cloſe by them ſat the monarch's fool.
And as he with his bauble play'd,
He heard right well what 'ere they ſaid.
The King his various doubts propos'd,
And they at will their thoughts diſclos'd.

When many queſtions thus had paſt,
The King demanded at the laſt,
What with his people was his fame,
And if rever'd or ſcorn'd his name?
Bid them the truth to him declare,
And tell him all things as they were.
On their allegiance—without awe
Or dread that they might anger draw.
Since 'twas his will as tongues will walk,
To know the common peoples talk.

The ſteward in anſwer told the King,
(As palace nightingales ſtill ſing)
That far and wide, as he could hear,
His majeſty to all was dear.
That all his actions were admired,
And his long reign by all deſired;
In this that high and low agreed,
Hoping that Heaven had ſo decreed.
Thus ſpoke the ſteward, and all he ſpoke
Was flat'ry dreſs'd in falſehood's cloak.

Next turning to his Chamberlain,
The King required in language plain;
That he would tell him all he knew,
Nor heed th' event ſo it was true.

His Chamberlain a ſubtile man,
Who could both truth and int'reſt ſcan.
Perceiving by the monarch's brow,
He really meant the truth to know.
Firſt bowing low——My liege, ſaid he,
Your ſubjects high and low agree,
That if your Council were but true,
And you things fairly from them knew;
In ev'ry point thus underſtood,
You would be gracious, great, and good.
For well they know your princely nature,
Heav'n never form'd a better creature!

A gleam of truth he thus reveal'd,
Behind a cloud of words conceal'd.
Hinted at what he would not name,
And on the Council laid the blame.

The fool who heard what both had told,
And in the cauſe of Truth more bold.
Or elſe, which ſurely was the caſe,
Prompted thereto by heav'nly grace,
Firſt ſigh'd as he his lungs had torn,
Then laugh'd the courtiers both to ſcorn.

Sir King, ſaid he, if ſo it was,
As this wiſe lord has put the caſe,
Be ſure your Council have done right,
To pleaſe is always their delight.
From them if ill advice be had,
It is becauſe the King is bad.
Take not on truſt——if you would find,
The truth——go look it in your mind.

The monarch paus'd, amaz'd to hear
Language ſo foreign to his ear;
Began to weigh the golden rule,
And took the counſel of his fool.
Conſcience ſtood ready at his call,
And as he aſk'd——It anſwered all.
He quickly felt the good of this,
Diſcern'd what 'ere h'd done amiſs.
He ſaw nor ſtarted at the ſight,
Reſolving ſoon to ſet things right.
And thus by Providence inſpired,
The FOOL wrought what the KING deſired.

The weak, the wanton, and the wild,
Were from the monarch's court exil'd.
The grave, the gen'rous, and the good,
Before the King in office ſtood.
By them advis'd he thought no ill,
He did no wrong, yet did his will.

Bad laws were preſently amended,
Wiſely the public wealth expended.
All injuries were clean redreſſed,
The people were no more oppreſſed.
For where a King is good and wiſe,
None dare to give him bad advice.
His meaſures too ſo deeply plann'd,
Are executed out of hand.
His people bleſs their prince's name,
And foreign realms repeat his fame.

But if the common people cry,
And their proud monarch aſk not why?
Or told refuſes to redreſs,
And make unnumber'd burthens leſs.

ſome diſcoveries of an hiſtorical nature, for he knew the force of example, and commonly illuſtrated his precepts by having recourſe to antient or modern hiſtory. At all events they would add to thoſe wiſe, and weighty inſtructions, that abound in his other treatiſes, and gained him ſuch high reverence in his own, and in the age ſucceeding his own, and which has ſecured them, tho' unprinted, againſt the teeth of time, and thoſe viciſſitudes, to which letters, as well as every other thing in this country has been liable. But 'till they are enſured againſt oblivion by the preſs, let us do our duty to his memory, and to poſterity, by ſecuring their titles, and indicating where the pieces themſelves remain [*G*]. He was much reſpected, and a very conſiderable man in his profeſſion, but whether a Judge or no, is not now to be determined. He lived to a great age, and in the firſt year of Henry IV. loſt his eye-ſight, which, as the reader has already ſeen, he lamented very pathetically, which induced Leland to quote thoſe verſes in the ſhort memoirs he has left us of his life (*q*). His circumſtances were eaſy, or rather affluent, which enabled him, as his pious charity induced him to undertake, and Providence allowed him to finiſh, the rebuilding at his own expence, and with contributions which his influence procured, the church of the convent of St Mary Overie, which had lain for many years in ruins, to which with a great part of Southwark, *it was reduced by a fire, in the beginning of the* XIIIth Century (*r*). On this account when *full of years, and covered with glory he* breathed his laſt, A. D. 1402 (*s*), his remains were *enterred here under a ſumptuous tomb,* inriched with various ornaments, as we have *mentioned at the bottom of the page* [*H*].

Married

Or careleſs ſeeks in ſports and play,
To paſs the jocund hours away.
Tho' hunger, penury, and toil,
Afflict his ſubjects all the while,
Their fate at length becomes his own,
As from examples may be ſhewn.

[*G*] *And indicating where the pieces themſelves remain.*] Theſe pieces of our author are of different ſizes, ſome very ſhort, none of any conſiderable length; ſo that if any votary to learning in that univerſity, where moſt of them are to be found, would cauſe them to be tranſcribed, collated, and printed, the lovers of Engliſh hiſtory, and Engliſh literature, would be under great obligations to him. In the mean time their titles are theſe.

De peſte vitiorum, lib. I. (31). 'Non excuſatur qui verum non fateatur.'

Tractatus de lucis ſcrutinio quam vitiorum tenebræ ſuffocarunt, lib. I. (32). 'Heu quia per crebras humus eſt vitiata tenebras.'

De Conjugii dignitate, lib. I. (33). 'Qualiter creator omnium rerum Deus.'

De Regimine principum, lib. I. (34). 'O Deus immenſe ſub quo dominatur.'

Epigrammata quædam, lib. I. (35). 'Alta petens aquila volat alitque.'

De amoris varietate, lib. I. (36). 'Eſt amor in gloria pax bellica his pretioſæ.'

Carmina diverſa, lib. I. (37).

De Remediis contra vitia ſui temporis (38). A. 20. Ric. II.

Contra dæmonis aſtutiam in cauſa Lollardiæ (39). 'Quod patet limen inſtanti tempore crimen.'

Contra mentis ſævitiam in cauſa ſuperbiæ (40). 'Deficit in verbo ſenſus.'

Contra carnis laſciviam in cauſa concupiſcentiæ (41). 'O ſexus fragilis ex quo.'

Contra mundi fallaciam in cauſa perjurii & avaritiæ (42). 'Sunt duo cognati.'

A balade morale of gode counſeyle (43). 'Paſſe forthe thou pilgryme, and bridel wele thy beeſte.'

Some ſhort poems of his are printed amongſt thoſe of Chaucer, and there were many more annexed to the firſt edition of his book De Confeſſione Amantis. Some have added to theſe treatiſes, one upon the philoſophers ſtone, which however, is not a diſtinct work, but is taken out of the fourth book of his printed volume, and transferred by Mr Aſhmole into his collection (44), under the title of 'John Gower '*concerning the philoſophers ſtone*,' and with great propriety, for of all the old poets, that have handled this ſingular ſubject, he has expreſſed *himſelf* with the greateſt perſpicuity. He diſcourſes largely and learnedly on the Hermetic Science, ſhews what its principles are, how much they have been miſtaken, to what vile abuſes they have given riſe; and in the end concludes, that, notwithſtanding all theſe frauds, the art is in itſelf true. In his fifth book he treats the expedition of the Argonauts, in ſearch of the golden fleece, in the ſtile of the Hermetic Philoſophy; and indeed it is wonderful, how he could reduce ſuch a multitude of various ſubjects into a work of that nature, and in ſo narrow a compaſs; we pretend not to juſtify the method he has uſed, and yet that method ſhews ſingular ingenuity; but we muſt take the liberty to aſſert, that after the famous Friar Bacon, Chaucer and Gower were men of the moſt extenſive learning of any, whoſe writings have eſcaped the wreck of time, and have come down ſafe to our hands.

[*H*] *At the bottom of the page*]. We have ſeveral accounts of this monument. Stowe (45) in deſcribing it ſays, that the image of ſtone lying upon it, repreſents him with long auborne hair, reaching to his ſhoulders, and curling up, a ſmall forked beard, and on his head a chaplet of roſes red, four in number, an habit of purple (Mr Speght an older writer ſays greeniſh) damaſk, reaching down to his feet, a collar of SS gold about his neck, under his head the likeneſs of three books which he compiled, *Speculum Meditantis* in French, *Vox Clamantis* in Latin; the third, *Confeſſio Amantis* in Engliſh. Stowe is perſwaded he was no Knight, from the circumſtance of the collar, which convinced Leland, that he was one. Fuller is very angry with thoſe who have conſidered him as the firſt of our crowned poets; 'Bale, ſays he, makes him '*equitem auratum, & poetam laureatum*, proving both 'from his ornaments, on his monumental ſtatue in 'St Mary Overies Southwark. Yet he appeareth 'there neither laureated, neither hederated poet; except 'the leaves of the Bayes and Ivey be withered to no-'thing, ſince the erection of the tomb; but only 'roſated, having a chaplet of four roſes about his 'head.' But it will appear that this is really the caſe, and that the bays have been withered. We will preſent the reader with two accounts of this monument when freſher than it is at preſent, the firſt from the preface to his printed book, 'John Gower prepared 'for his bones a reſting place in the monaſterie of 'St Marie Overes, where ſomewhat after the olde 'facion he lieth right ſumptuouſely buried, with a gar-'lande on his head, in token, that he in his life daies 'flouriſhed freſhely in literature and ſcience. And 'the ſame monumente in remembrance of hym erected, 'is on the north ſide of *the foreſaide churche*, in the 'chapell of St John, where he hath of his owne foun-'dacion a maſſe daily ſonge. And moreover he hath 'an obite yearly done for hym, within the ſame 'churche on fridaie, after the feaſte of the bleſſed Pope 'Saynte Gregorie. Beſide on the wall where he lieth, 'there be painted three virgins with crownes on their 'heades, one of the which is written Charitie, and 'ſhe holdeth this diviſe in hir honde.

(45) Annals. p. 326.

Married he certainly was, ſince his wife's body lies there *likewiſe*, under a monument much lower than his (*t*); but what poſterity he had, or whether he was, as a very ingenious and indefatigable writer reports, the grandfather of John Gower, Sword-Bearer to the unfortunate Edward Prince of Wales, ſon to the yet more unfortunate Henry VI. and who with his maſter loſt his life after the deciſive battle of Tewkſbury (*u*) cannot be clearly aſcertained. But if in a matter ſo doubtful as this, and about which the greateſt maſters in our Antiquities have differed, it be free to aim at obtaining ſome new light, we could alſo offer ſome conjectures [*I*]. His great merit was introducing the Muſes into this

(*t*) Lelandi Collectanea, Tom. I. p. 505.

(*u*) See the Authors cited in the Note [K.]

En toy qui es fitz de Dieu le pere
Saune ſoit que giſt ſouz ceſt piere.

Thro' thee, of God the only Son,
Be ſaved, who reſts beneath this ſtone.

The ſeconde is written Mercie, which holdeth in hir hande this diviſe.

O bone Jeſu fait ta mercie!
Al alme dont le corps giſt icy.

O Jeſus kind thy mercy ſhew!
To the ſoul of him, who reſts below.

The third of them is written Pitee, whiche holdeth in hir hande this diviſe followynge.

Pur ta pite Jeſu regarde!
Et met ceſt alme in ſaune garde.

For pities ſake ſweet Jeſus keep!
The ſoul of him, who here doth ſleep.

'And thereby hongeth a table, wherein appereth, 'that whoſoever praith for the ſoule of John Gower, 'he ſhall ſo oft, as he ſo doth, have a M. and D. 'daies of pardon.' The other authority is that of Leland, who expreſsly affirms, that his head was crowned with a wreath of ivy interſperſed with roſes, and with a chain about his neck, as a mark of the honour of Knighthood. But the reader will doubtleſs be pleaſed to ſee Leland's own words (46). 'Joannes 'Gower ſepultos eſt apud canonicos marianos in ripa 'Tameſis, in cujus effigiei capite corona eſt ex hedera 'roſis diſtincta, in collo cateno equeſtris ordinis inditium. 'Sub capite tres libri inſtar pulvinariorum cum his in'ſcriptionibus' 'Speculum meditantis. Vox cla'mantis: Confeſſio amantis,' 'Vixit tempore Ricardi 2, '& Henrici quarti, cui libros ſuos dedicavit. Tem'pore Joannis cœnobium S. Mariæ conflagravit, quod 'poſt multos annos cura & induſtria, partim etiam 'ſumptibus ſuis reſtauravit. Nam ante illius tempora 'quamvis canonici veteres ſedes retinebant, ſquallebat 'tamen ſemiruta eccleſia.

'Uxor Goueri ibidem ſepulta.'

His Epitaph (47).

Armigeri ſcutum nihil a modo fert ſibi tutum,
Reddidit immolutum morti generale tributum,
Spiritus exutum ſe gaudeat eſſe ſolutum,
Et ubi virtutum regnum ſine labe ſtatutum.

(47) Aſhmole's Theatrum Chemicum Britannicum, p. 486.

Which has been thus tranſlated.

His ſhield henceforth is uſeleſs grown,
To pay death's tribute ſlain;
His ſoul's with joyous freedom flown,
Where ſpotleſs ſpirits reign.

In the time of John Stowe the inſcriptions were waſhed out and illegible, the image alſo defaced by cutting off the noſe, and ſtriking off it's hands; but in later times it has been repaired, and a new inſcription placed, of which we take notice, that it may not miſlead poſterity, which is very often the caſe in ſuch monuments, that inſcription runs thus (48):

(48) Maitland's Hiſtory of London, &c. Edit. 1739. p. 797.

Hic jacet Joannes Gower armiger, Anglorum poeta celeberrimus ac
Huic ſacro Edificio Benefactor inſignis temporibus Ed. 3, & Rich. 2.

[*I*] *We could alſo offer ſome conjectures.*] We have already ſhewn, from the compariſon of the arms of the two families, that it is very improbable he ſhould be deſcended from the Gowers of Stitenham (49), and we have alſo mentioned an authority as old, and Caxton is yet older than that of Leland, that he was a native of Wales (50), we are inclined to think this is the truth. If proof be demanded we cannot pretend to alledge any, but we propoſe it only as a conjecture, and we can ſay ſomething to render it probable. There is a part of Glamorganſhire called Gower or Gowerland, of ſo great extent, that it is divided into eaſt Gowerland and weſt Gowerland; from whence the noble family of Herbert, when Earls of Huntingdon, derived the title of Barons Gower; and this title by the marriage of Elizabeth the ſole daughter of William Earl of Huntingdon, and Lord Herbert of Gower, came to Sir Charles Somerſet Knight of the Garter (51), and is borne at this day by his moſt noble deſcendant Noel Duke of Beaufort, who is Lord of Ragland, Chepſtow, and Gower (52). But the critics will ſay what is this to the purpoſe? how does this prove that there was a family of Gower in Wales, or that it flouriſhed there in the time of our poet? I will undertake the proof of both. Henry Gower Archdeacon of St David's, was advanced to that Biſhoprick in 1326 (53). He was in great credit with King Edward the third, Leland ſays that he was Chancellor of England, but that was a miſtake, it was his ſucceſſor Dr John Thoriſby (54). But however Biſhop Gower was a man of a great ſpirit and great family, he built the epiſcopal palace of St Davids, for his ſucceſſors (55), he beautified the caſtle of Swanzy, which is the chief town in eaſt Gowerland, for the ſake of his family, this being his paternal eſtate (56). This reverend prelate died in 1347, being the twenty-firſt of Edward the third, at which time our author muſt have been twenty-five years of age or more. We may from hence alſo gueſs, that our poet was bred at Oxford, and poſſibly at Merton-College, of which this prelate was a fellow; and ſo was the famous Ralph or Nicholas Strode, who was equally intimate with Chaucer and Gower. In regard to his rank and condition, it is moſt likely that he was in ſome ſignal manner attached to the ſervice of Thomas of Woodſtock, firſt Earl of Buckingham, and then Duke of Glouceſter (57), for the reaſon very judiciouſly aſſigned by the late learned Garter King at Arms, his wearing the badge of the Swan appendant to his collar (58). Gower himſelf affords the ſtrongeſt evidence, as to the modes of thoſe times, in diſtinguiſhing perſons of rank, and their followers, by theſe kind of cognizances; having in one part of his poem mentioned thoſe of moſt of the great Lords in his time (59). But either his rank muſt have been very conſiderable, to have juſtified his aſſuming ſuch a diſtinction; or he muſt have belonged to that great prince in the way of his profeſſion, which is the moſt probable. In reſpect to this it appears clearly, that not only the King and the Prince of Wales, when there was one, but alſo the princes of the blood, had their ſtanding counſel learned in the law, who were heard in parliament in caſe any bill was read there that might be detrimental to their intereſts (60). In the reign of Henry the ſixth, the Duke of York's counſel propoſed in parliament, his claim to the Crown, againſt the King then upon the Throne. We may therefore preſume that John Gower, who we know

was

this kingdom, for in order of time he was before Chaucer, though he alſo ſurvived him. It was from their joint endeavours, that there came to be ſuch a thing as Engliſh poetry; for notwithſtanding the diſtance of time, and the uncouthneſs of their language, the wit and genius of either ſufficiently vindicates his title as a poet (*w*). Indeed their ſucceſſors, Lidgate, Occleve, and the reſt, very fairly own it, and treat their memories with all due reſpect. Some have blamed them for introducing ſo many words from other languages, as if by this they had injured their own (*x*). But it may be this is not ſo certain as is commonly imagined. The long wars with France, in the days of Edward III. and the reſidence of ſome of the principal nobility in that kingdom, with their families for many years; the French King John's keeping his court here, with the number of Princes, and great Lords of his realm, who were either priſoners with, or reſorted hither to wait on him; the expedition of Edward the black Prince into Spain, the marriage of John of Gaunt Duke of Lancaſter, and his brother the Duke of York, to the daughters of Don Pedro King of Caſtile (*y*), muſt have had a great effect on the court language; ſo that it appears at leaſt as reaſonable to ſuppoſe they complied with what was already become common, (for poets always write to be underſtood) as to believe that they brought in an inundation of new words, which muſt have rendered their writings dark and unintelligible, of which none that lived near their own times ever complained (*z*). It would be no difficult taſk to bring a crowd of witneſſes to eſtabliſh, by their teſtimonies, his right to the high reputation he poſſeſſes, but a few ſhall ſuffice [*K*]. It was a point of duty to render ſo

was an eminent lawyer, and we alſo know was ſteadily attached to this prince, might be of his counſel; or, as we find that word ſometimes uſed, his chancellor, that is, the chief of his lawyers, and he who directed how juſtice was to be adminiſtred, and his prerogative maintained, in his honours lordſhips and manors. Weever (61) alſo has ſhewn us, that there was an ancient family of the Gowers in Kent, of which he thought our author to be; and whether that family ſprang from the Gowers of Wales, or from the Gowers of Yorkſhire, or from neither, is a queſtion we are not able to reſolve. All we pretend in this note is, to furniſh the inquiſitive and judicious reader with ſome hints for his farther reſearches, ſo that gradually theſe memoirs may be rendered compleat, which poſſibly they might have been before this time, if one writer had not been content to tranſcribe another, without looking into the author's own works, or the hiſtories of thoſe times. In reſpect to the gold collar of SS about his neck, John Stowe, though a very intelligent man (62), was too haſty in pronouncing him no knight; for though it be true, that men were raiſed to the rank of Eſquires, by the impoſition of collars of SS, yet theſe were of ſilver. The great Selden (63) is indeed of Stowe's opinion, but he gives a much better reaſon for it, alledging the two firſt words of his epitaph *armigeri ſcutum*. It may not be amiſs to obſerve here, that the true cauſe of this perplexity, is the want of proper diſtinctions, which did not become a faſhion 'till after the inſurrection of the clowns, when perſons of family and fortune began to add their titles to their ſirnames. By the way, the collar of SS, which became afterwards a mark of dignity, was originally the cognizance or badge of the houſe of Lancaſter; and was worn by ſuch as were deſirous of ſhewing their attachment to that houſe (64). Yet being in conjunction with a robe, it ſeems to imply that our author had ſome office under Henry the fourth, it may be in the nature of his attorney or ſollicitor, or it may be, as many have conjectured, that he was a Judge. As for John or James Gower, for he is called by both names, he was taken priſoner at the battle of Tewkſbury, which was fought May 4th 1471 (65). And there was this remarkable in his caſe, that with the Duke of Somerſet, and ſeveral other perſons of great diſtinction, he had taken ſhelter in a church, into which, when King Edward IV. would have entered with his ſword drawn, a prieſt met him with the ſacrament, who would not let him proceed, till he had promiſed them their lives, notwithſtanding which, after remaining there from Saturday to Monday, they were taken out and beheaded. This ſeems to have been done in revenge of what had paſſed about ten years before, ſince in the charge (66), upon which Henry VI. his Queen, Edward Prince of Wales, &c. were attainted, one article, viz. the eighteenth, is, that they cauſed William Lord Bonville, and Sir Thomas Kuriell, Knights of the Garter, and William Gower, ſtandard-bearer to Richard Duke of York, to be beheaded againſt law, and conſequently murthered. We ſee from hence that there were ſeveral families of the Gowers, and that they took different ſides in theſe miſerable times. It is however clear, that John or James Gower, ſlain at Tewkſbury, was of the Stitenham family, and from him there is a clear deſcent; but of what family William Gower was, does not appear.

[*K*] *But a few ſhall ſuffice.*] As we reſerved this note for the commendations beſtowed upon our author, by ſeveral perſons of ſkill in our language and learning, we have purpoſely omitted ſome points, which the reader will find cleared up here. We will begin with Thomas Barthelette, a man of parts and learning, who upon reprinting our author's works, and dedicating them to King Henry VIII. addreſſes him thus, 'Plutarch writeth, when Alexander had diſcomfite Darius the kynge of Perſe, amonge other jewels of the 'ſaide kynges, there was found a curious littel cheſte 'of great value, which the noble King Alexander be-'holding ſaide, this ſame ſhall ſerve for Homere, 'whiche is noted for the greate love and favour that 'Alexander had unto lernyng: but this I think verily 'that his love and favour thereto, was not ſo great as 'your gracis, whiche cauſed me, moſte victorious, and 'moſte redoubted ſoveraigne Lorde, after I had print-'ed this warke to deuiſe with myſelf, whether I might 'be ſo bolde to preſente your Highneſſe with one of 'them, and ſo in your graces name put them forth. 'Your moſte high and moſte princely majeſtee abaſh-'ed and cleane diſcouraged me ſo to do, both becauſe 'the preſent (as concernynge the value) was farr to 'ſimple (as me thought), and becauſe it was none 'otherwiſe my acte, but as I toke ſome payne to print 'it more correctly than it was before. And though 'I ſhulde ſaie it was not muche greatter peine to that 'excellent clerke, the moral Johan Gower, to compile 'the ſame noble warke, than it was to me to print it, 'no man will believe it without conferringe both the 'printes, the olde and myn together. I very well knowe that both the nobles and commons 'of this your noble royaſme, ſhall the ſooner accepte 'this boke, the gladlier rede it, and be the more dili-'gent to marke and beare away the morall doctrines 'of the ſame, when they ſhall ſee it come forthe un-'der your graces name, whom thei with all their very 'hertes ſo truly love and drede; whom they knowe 'ſo excellently well lerned, whom they ever ſynde ſo 'good, ſo juſte, and ſo gracious a prince. And who 'ſo ever in redynge of this warke doth conſider it well, 'ſhall fynde, that it is plentifully ſtuffed, and four-'niſhed with manifolde eloquent reaſons, ſharpe and 'quicke argumentes, and examples of great auctoritie, 'perſwadynge unto vertue, not only taken out of the 'poets, oratours, hiſtorie writers, and philoſophers, but 'alſo out of the holy ſcripture. There is to my dome 'no man, but that he maie by readinge of this warke 'get righte great knowledge, as well for the under-

'ſtandynge

ſo much juſtice to John Gower, whoſe memory has been too much neglected by ſome, and too haſtily injured by others, on whoſe credit more ſtreſs has been ſometimes laid, than upon a calm and cloſe review they will be found to deſerve. And it is from a conſciouſneſs of this, that we have not ſpared either induſtry or labour, to ſet, as we hope we have done, this article in a proper light.

Art of Engliſh Poeſie, p. 48.

' ſtandynge of many and divers auctours, whoſe reaſons, ſayenges, and hiſtories, are tranſlated in to this warke, as for the pleintie of Engliſhe words and vulgars, beſide the furtherance of the life to vertue.' The ingenious (67) Mr Puttenham writes thus of the parents of our Engliſh poetry. ' I will not reach above the time of King Edward the third and Richard the ſecond, for any that wrote in Engliſh metre, becauſe, before their times by reaſon of the late Norman Conqueſt, which had brought into this realm, much alteration, both of our langage and lawes, and therewithall a certain martial barbaroufnes, whereby the ſtudy of all good learning was ſo much decayed, as long time after, no man or very few intended to write in any laudable ſcience; ſo as beyond that time, there is little or nothing worth commendation to be founde written in this arte. And thoſe of the firſt age were Chaucer and Gower, both of them as I ſuppoſe, Knightes. After whom followed John Lidgate, the Monke of Bury, and that nameleſs, who wrote the Satyre, called Piers Plowman.' The learned and judicious Sir Philip Sydney (68) concurs alſo in theſe ſentiments. ' In the Italian language, ſays he, the firſt that made it to aſpire to be a Treaſure Houſe of Science, were the poets Dante, Boccace, and Petrarch. So in our Engliſh, were Gower and Chaucer, after whom, encouraged and delighted with their excellent foregoing, others have followed to beautifie our mother tongue, as well in the ſame kind, as other arts.' We ſhall next quote Mr Henry Peacham a very ingenious gentleman, and in whoſe works there are many things entertaining, and ſome inſtructive; but for what he ſays of our author the reader finds it here only to ſhew him how eaſily he might be miſled. ' Gower (69) being very gracious with King Henrie the fourth in his time, carried the name of the only poet; but his verſes to ſay truth were poor and plaine, yet full of good and grave moralitie, but while he affected altogether the French phraſe and words, made himſelf too obſcure to his reader, beſide his invention cometh far ſhort of the promiſe of his titles. He publiſhed only that I know of three books, which at St Mary Overies in Southwark, upon his monument lately repaired by ſome good benefactor, lie under his head; which are, Vox Clamantis, Speculum Meditantis, and Confeſſio Amantis. He was a Knight, as alſo was Chaucer.' There is ſtill preſerved in the Cotton Library, a catalogue of our ancient Hiſtorians, made by the inquiſitive and very judicious Mr John Joceſyn (70): whoſe critical ſkill and wonderful exactneſs in matters of that nature are generally known; he mentions his two hiſtories of King Richard, and calls him expreſsly a Knight; which ſhews that he was not biaſſed, either by the aſſertion of Caxton or the notions of others, who contend eagerly that he was but an Eſquire. In all the diſcourſes that regard our legal, our hiſtorical, and our literary antiquities, we are ſure to find ſome mention more or leſs of this eminent perſon; and therefore it would have been a diſcredit to an undertaking like this, to have given the reader a tranſcript only of thoſe meagre accounts, which Bale, Pits, and Fuller, have borrowed from Leland, who if he had been ſo happy as to have enjoyed his ſenſes, would undoubtedly have publiſhed his Commentaries in a much more ample and accurate manner than we have them at preſent; though even as they now ſtand, they are an invaluable treaſure, and with his other pieces eternal monuments of their author's fine genius, indefatigable labour, and true public ſpirit; ſo that any little ſlips in him, like ſpots in the ſun, are viſible only to the curious, and are no ſenſible diminution of his ſplendour. E

GRANT or GRAUNT, the ſurname of a very antient and potent family in Scotland. It is commonly believed, that the original name was Groot, and that they came from Denmark or Norway; and it is ſaid, that an old manuſcript hiſtory of that country, by Vanbaſſan, ſtill extant in the Advocates library, gives countenance to this opinion (*a*); which is farther ſupported from a point of fact, that this name has long flouriſhed in that kingdom; as a proof of which it is urged, that there are two antient churches, at a ſmall diſtance from Chriſtiana, bearing the name of Grant ſoyn, *i. e.* the pariſhes of Grant (*b*). If ſo, it is moſt probable that theſe were erected by ſuch of the family as remained in that kingdom, ſince the Grants are ſuppoſed to have come over into Scotland in the very beginning of the fifth century, upon the following occaſion. The Romans, under the command of Maximus, having defeated the Scots, and killed their King Eugenius, or Ewen, and compelled the princes of the blood and nobility to take ſhelter where they could, in the weſtern iſlands, Ireland, and in Denmark, began ſoon after to oppreſs the Picts, in whoſe behalf they engaged in this war, and by whoſe aſſiſtance they had almoſt extirpated the Scots (*c*). This ſo provoked the Picts, who now found they had been fighting to eſtabliſh a power capable of depriving them of liberty, that they reſolved to be reconciled to their old foes, to preſerve themſelves from being enſlaved by their falſe friends (*d*). With this view they encouraged the broken remains of the Scots to invite Fergus, the lineal deſcendant of their old monarchs, who had gained a great reputation by his military exploits abroad, to vindicate the rights of his native country againſt the Romans, in which they promiſed to aſſiſt him. On this invitation, Fergus having collected as many of the exiled Scots as he could, and ſome Iriſh, carried over with him alſo ſome Daniſh and Norweigian gentlemen, who, out of affection to his perſon, were content to follow his fortunes (*e*). He was ſeated on the throne anno Domini 404, and with him it is ſaid came over the anceſtor of the Grants, whoſe poſterity have ever ſince flouriſhed in the North of Scotland (*f*). It is a very difficult, or, to ſpeak the truth, an impracticable taſk, to trace things of this kind ſo high, with any tolerable degree of certainty; but it is a thing out of diſpute, that a very antient family they are, and have all the authentic marks of being old Chiefs. The head of this houſe bears in a field, Gules, three antique crowns, Or, alluding, as is ſuppoſed, to thoſe of the nation from whom they ſprung (*g*). His creſt a burning hill proper, with two ſavages for ſupporters, with this motto, STAND SURE. Another mark of their antiquity, is their having what the old

French writers call *Cri de guerre*, or Cry of war, which was *Graig ellachie*. Theſe cries, in this country at leaſt, were taken from the places at which the clan aſſembled in time of war; for which purpoſe, perſons were appointed by the Chief, who carried a wooden croſs burnt at the ends, called from thence *a fiery croſs*, through all the diſtrict, inhabited by their dependants, who immediately, upon ſeeing that croſs and hearing that cry, repaired to the poſt aſſigned. The antient record, ſo famous under the title of Ragman-roll, which contains the ſubmiſſions of the nobility and gentry of the beſt families in Scotland to King Edward the Firſt, in 1292 (*b*), as it was then and long after glorious to England, contributes now in ſome meaſure to the honour of Scotland, as it affords the cleareſt and moſt authentic proofs of the antiquity of their families; inſomuch, that it has been deſervedly explained by a long and learned commentary of one of their moſt able Antiquaries (*i*). Amongſt thoſe of whom the ſubſcriptions are preſerved in that roll, we find Robert de Grant, who was probably the chief of his clan at this time. When King Edward thought fit, in order to eſtabliſh his power more effectually in that kingdom, to impriſon a multitude of the moſt conſiderable men, whom in 1297 he ſet at liberty upon bail, we find one John Grant among theſe, which are evidences more than ſufficient to ſhew, that there was more than one conſiderable family of this name (*k*) in theſe early times, for ſo in reſpect to ours they may well be called; which at the ſame time adds to the probability of the foregoing accounts, ſince, in thoſe days, families did not ſtart up ſuddenly into wealth and power, but acquired both property and reſpect by very ſlow degrees. In one of our antient hiſtorians, we find two of this family, John Graunt and Alan Graunt, mentioned as knights, and leaders of renown in that army, which the Scots raiſed for the relief of Berwick, beſieged by King Edward the Third, and Edward Baliol, anno Domini 1333 (*l*). In much later times, we find ſuch confirmations of charters, as very clearly prove the rank and power of the family, to which it muſt have arrived gradually, and by a progreſſive accumulation of land, in a long courſe of years; ſince, though we find them often in the field, and intruſted with public offices, yet we meet with none of them mentioned as royal favourites, as great officers of State, or deriving large gifts from the Crown. Amongſt the Earl of Haddington's collections (*m*), there is a confirmation of his barony to John Grant of Freuchie, by King James the Fourth, the reddendum of which ſhews, that he was then a powerful chief, ſince he is required to furniſh a well-ſupported lance, which is explained to be three ſufficient horſemen for every diſtrict of a certain ſize, within his ſaid barony, when the King ſhould make war without his realm, and to aſſemble all the defenſible perſons inhabiting within the bounds of his barony, when ſo required to do, by the royal mandate of that prince, or his ſucceſſors, for the convocation of their lieges within the realm. Their marriages is another and perhaps a ſtronger proof, than any yet offered, both of their antiquity and rank; for, about the year 1095, Urſula Grant was married to Duncan the Second, king of Scotland (*n*). In 1165, Izabella Grant was married to Bancho Stuart of Lochabar. In 1335 (*o*), Patrick Grant, of Grant, married Bigla Cummine, ſole daughter of Lord Glencherruick, the only remaining nobleman of that great name, in which there had flouriſhed no fewer than fourteen diſtinct noble families but two generations before (*p*). In 1555, Sir John Grant married the lady Margery Stuart, daughter to the Earl of Athol (*q*). In 1587, Sir John Grant of Grant was married to the Lady Lilias Murray, daughter of the Earl of Tullibarden (*r*), from whom his Grace, the preſent Duke of Athol, now Lord Privy-Seal of the kingdom of Scotland, is deſcended. Theſe are at once the moſt concluſive evidences that can be had of the antiquity of any family, becauſe, in thoſe early times, unequal marriages were very uncommon, and taken in conjunction with other evidences, ſtrengthens them extremely; to which we may add the very ſituation of the country where this clan is ſeated, which correſponds ſo well with the facts before laid down, that one can ſee no juſt reaſon to ſuſpect them; and in all enquiries of this ſort, the beſt judges will allow, that evidences drawn from records and charters are infinitely preferable to private memoirs, ſubſiſting only in the hands of the families to which they belong, ſince ſuch, unleſs ſupported by teſtimonies of this kind, are frequently uncertain and always ſuſpected. But where poſſeſſions from time immemorial, honourable offices, charters of confirmation, marriage-ſettlements, and ſtate-records, concur, with an uninterrupted claim to a deſcent of a more antient date than moſt of our hiſtories, they add, if not certainty, at leaſt probability, to tradition. It is very certain, that a family of this ſurname, Grant or Graunt, was alſo ſeated very early in England; and therefore Sir George Mackenzie (*s*), who was an indefatigable enquirer into, and a very competent judge of, theſe matters, was inclined to think the family in Scotland came from them, which, however, we cannot hold probable, for reaſons that will appear hereafter. In 1229, we find Richard de Wetherſhed, the ſucceſſor of the famous Stephen Langton, in the archiepiſcopal ſee of Canterbury (*t*); but it is very certain that his true name was Grant, and, as there are ſome particulars very ſingular in his hiſtory, we ſhall take notice of them at the bottom of the page [*A*]. In all probability this Archbiſhop

[*A*] *At the bottom of the page.*] In the Lives of the Archbiſhops of Canterbury, publiſhed by the learned Henry Wharton, we find nothing more ſaid of this prelate than what follows(1): 'Richardus cognomento magnus;

(1) Stephani Birchingtoni Vitæ Archiepiſcoporum Cantuar. p. 10.

Archbiſhop was a North-country and it is likely a Yorkſhire man, if not a native of the city of York, of which one of his name was Bailiff or Sheriff the ſucceeding year; nor was he the firſt of that family who had born that office (u). We likewiſe find them benefactors to the abbey of St Mary (w), but how long this family continued, or when it extinguiſhed, in thoſe parts, we cannot determine. In the fifteenth century, there flouriſhed one Thomas Grant, an eminent divine, who was Rector of St Margaret Lothbury, in the city of London, and one of the Prebendaries of St Paul's (x). In the ſucceeding century, we find the learned Dr Edward Grant maſter of Weſtminſter-School (y), whom we have had occaſion to mention already, but of whom it is but juſt that we ſhould ſay ſomething more in this place. He was eſteemed one of the beſt claſſic ſcholars of his time,

'nus, qui prius fuit Cancellarius Lincolnienſis, ſucceſ-
'fit & ſedit annis II. Vacavit eccleſia annis II, paſto-
're deſolata.' Archbiſhop Parker (z) alſo has preſerved the ſame name, and ſtiles him *Richardus Magnus*, though he enters at large into the hiſtory of his primacy. Ralph Higden (3) calls him Richard de Wetherſhed, the great Dean of London, who from thence received the ſurname of *Richardus Magnus*; but, in our antient Chronicles, his name appears plainly to be *Richardus de Graunt* (4). Archbiſhop Langton died July 9, 1228, at his manor of Slindon in Suſſex (5). Within a few days after, the Monks of Canterbury, with the King's licence, proceeded to the election of a ſucceſſor, when they made choice of Walter de Hempſham (6), or rather de Eveſham (7), one of their own body, whom the King however, upon the ſuggeſtion of ſeveral prelates, did by no means approve. Walter, however, ſet out immediately for Rome, in hopes of obliging his maſter, by the papal authority, to admit him to the poſſeſſion of the temporalities of the ſee (8). King Henry the Third thereupon ſent the Biſhops of Coventry and Rocheſter (not of Cheſter, as in Godwin), to repreſent to Pope Gregory the Ninth, that this man was altogether unfit for the office, being a perſon of little learning, and ſcandalous in point of morals, having had ſeveral baſtards by a nun, being the ſon of a man hanged for theft, and who had deſerved that puniſhment himſelf for his adherence to the rebels. All this, however, had ſignified little, if the two prelates had not availed themſelves of an argument much more concluſive in the court of Rome. Pope Gregory was then embarked in an open war againſt the Emperor Frederick; and the Embaſſadors promiſed him a tenth, not on the benefices of the clergy only, but on the eſtates of the laity alſo, to be levied in all the King their maſter's dominions (9). This had it's effect; the election at Canterbury was examined by a congregation of Cardinals, declared to be upon full proof utterly null, and the right of naming to the ſtill vacant ſee devolved upon the Pope. In conſequence of this, at the ſuggeſtion of the King, his Holineſs appointed Richard de Graunt, Chancellor of Lincoln, who, as our hiſtorians tell us, was a perſon of great gravity, learning, prudence, eloquence, and probity, a ſtout maintainer of the rights of his ſee, and in his perſon tall, and of a very graceful preſence (10). He was conſecrated by Henry Biſhop of Rocheſter at Canterbury, in the preſence of the King and many of the nobility, June 10, 1229, being Trinity-Sunday (11). He did not govern the ſee long or in much quiet, for the raiſing the tenth beforementioned occaſioned great diſturbances. He held, however, a ſynod at Weſtminſter, in which ſome excellent canons were made; the wiſdom and equity of which, as his ſucceſſor, Archbiſhop Parker, tells us, ſhewed the mild diſpoſition of the man (12). Yet, upon ſome wrong done, as he conceived, to the ſee of Canterbury, by Hubert de Burgh, Earl of Kent, he complained to the King, and finding no redreſs at his hands, he had recourſe, according to the cuſtom of thoſe times, to eccleſiaſtical cenſures; and having excommunicated all who had any hand in this affair, the King excepted, he withdrew out of the kingdom and went to Rome. He was preſently followed thither by Roger de Cantelupe, or, as Matthew Paris writes, de Cantilu, the King's embaſſador. The complaints ſuggeſted by the prelate to his Holineſs were, that the whole buſineſs of his kingdom Henry tranſacted by the advice of Hubert Earl of Kent, and other noblemen of like inclinations. That this Earl Hubert had married a ſecond wife, who was very nearly related to his firſt, and had deſpoiled the ſee of Canterbury of it's lands, of which he was ſtill in poſſeſſion. That many of the Biſhops, his ſuffragans, neglecting their paſtoral duty, ſat in the King's Exchequer, hearing lay cauſes, and giving judgment in matters of blood; that many of the inferior clergy held more than one living, with a cure of ſouls annexed; and being miſled by the behaviour of their prelates, intermeddled, like them, with things foreign to their profeſſion, and applied a great part of their time to the management of ſecular affairs. He therefore deſired that the Pope would interpoſe his authority, in ſupport of the diſcipline of the Church, the general amendment of manners, and the removal of thoſe grievances. The King's embaſſador, according to his inſtructions, ſuggeſted much in mitigation, and ſome things in juſtification, of the King's meaſures, and of his miniſter, Earl Hubert, which he inforced in the beſt manner he was able. But the eloquence of the Archbiſhop, his ſagacity and prudent behaviour, made ſuch an impreſſion on the Pope and the Cardinals, that he obtained all he deſired; upon which he ſet out on his return home (13). But the joy of this victory was of very ſhort continuance; he fell ſick on the third day of his journey, at a place called St Gemma, and taking up his lodging in a houſe of Minor Canons, deceaſed there Auguſt 3, 1231, and was interred in the church belonging to the monaſtery (14). It is reported by a grave author, but the reader is not obliged on that account to believe it, that ſoon after he was interred, ſome thieves broke into the vault where his body was laid, and took it up, with an intent to deſpoil him of his ring, his mitre, and other pontifical ornaments; but they ſtuck ſo faſt to his body, that finding all their endeavours in vain, they in a great fright abandoned their ſacrilegious intent (15). We have an article of this prelate, under the name of *Richardus Magnus*, alſo in Pits, who tells us, that he was a very learned writer, and gives us the titles of his Canons in the Council of Weſtminſter (16): but we meet with nothing relating to him either in Leland or Bale; and when, in the poſthumous work of the learned and accurate Biſhop Tanner, we have a reference to the Canons made in his Council of Weſtminſter (17), there ſeems to be a miſtake; for thoſe Canons were not made by him, but by his predeceſſor Richard the Firſt, in the year 1131, and in the reign of Henry the Second (18). The books written by our author, and remembered by Pits, are theſe,

De Fide & Legibus, Lib. I. *Of Faith and Laws.* One book.

De Sacramentis, Lib. I. *Of Sacraments.* One book.

De Univerſo Corporali & Spirituali, Lib. I. *Of the Corporal and Spiritual World.* One book.

After having ſaid ſo much of this great prelate, it may not be amiſs to caution the reader, that this *Richardus Magnus*, or *de Wetherſhed*, is not to be confounded with *Richard Wetherſett*, alias *Grantebrigenſis*, who is mentioned by Leland, Bale, and Pits (19), and who flouriſhed about twenty years later than our Archbiſhop. We have taken this opportunity of reſtoring this prelate to his own name, and of giving a ſuccinct abridgment of his life from original writers, all of whom we have carefully conſulted and collated; and perhaps it would be no unacceptable preſent to the learned world, if any laborious and accurate writer would give us in Engliſh a compleat hiſtory of the lives and acts of the Archbiſhops of Canterbury, from thoſe antient and original authors already extant, which would throw new lights on ſeveral parts of our civil as well as eccleſiaſtical hiſtory, which ſeem at preſent very dark and deficient.

time, which, if we conſider how many great men flouriſhed in them, will appear no very ordinary character. He was a good Latin Poet, and excellently ſkilled in Greek; to facilitate the learning of which moſt uſeful language, he compoſed a very copious Grammar, which was afterwards contracted by his ſucceſſor, the famous Mr William Camden (z). This Dr Grant was not only diſtinguiſhed by his perfect knowledge of the learned languages, and by the happineſs of his method in teaching them, but alſo by his generous and diſintereſted diſpoſition, which diſcovered itſelf clearly, in his zeal for preſerving the fame, and providing for the orphan family, of the celebrated Roger Aſcham, whoſe letters he publiſhed; and, in his pathetic dedication to Queen Elizabeth, ſo effectually recommended his pupil, Giles Aſcham, to her protection, by letting the world know how much, though a Queen, ſhe ſtood obliged to his father, that he procured for him, if not a happy eſtabliſhment, at leaſt a comfortable ſubſiſtence, which, without this gentleman's help, neither his father's merits or his own would have obtained (a). The poems of Dr Grant, for ſo he wrote his own name, prefixed to ſeveral excellent pieces publiſhed in thoſe times, ſhew how much more ready he was to beſtow than to acquire praiſe, and, in truth, his modeſty in this particular was very commendable. He made way, by his reſignation in 1592, for Camden's ſucceſſion to his chair in Weſtminſter-School (b); and having been long a Canon, became at length Subdean of that collegiate church. He deceaſed Auguſt 4, 1601 (c), and not in September or October, as Anthony Wood has placed it (d), and was interred in that church: we find alſo another of the ſame name interred in the cloiſters of this abbey, in 1587, a child of five years old, and it is not improbable, the ſon of this Dr Edward Grant: the monumental inſcription being long ago worn out, the reader perhaps will not be diſpleaſed, as it is very elegant, to find it recovered and preſerved in the notes (e) [B]. We have not been able to diſcover in what part of England the family was ſettled from which theſe Grants deſcended; but we know that there was a family of this name in Hampſhire (f), from whom ſprung that famous citizen of London, John Grant, who, as we have ſhewn, has immortalized his memory by his excellent diſcourſe on the Bills of Mortality. But for all this, it ſeems to us more probable, that the Engliſh family derived it's origin from that in Scotland, unleſs we ſhould ſuppoſe, that the Engliſh as well as the Scots Grants came from Denmark or Norway, and with others of their countrymen ſettled in Cumberland, Northumberland, Yorkſhire, and other northern counties, and from thence ſpread into the heart of the kingdom. At all events, however, we cannot help rejecting Sir George Mackenzie's notion, that the Grants of Scotland derive themſelves from thoſe of England. If this had been ſo, we ſhould certainly have found them in the ſouthern or weſtern counties of Scotland, and not in the north. Beſides, they appear to have been a very potent clan before the time of the Conqueſt, when, according to ſome, the family of le Graunt came over to England (g), and moſt evidently before they flouriſhed at York. All circumſtances concur, in ſhewing, that from the time they came into that part of the iſland, they continued, like other great families, ſeated for the moſt part in the ſame country, and branching out into different houſes, bearing however all the ſame arms, with proper marks of diſtinction, and all acknowledging the Grants of Freuchie, or, as they are now ſtyled, the Grants of Grant, for their chief (h). On the other hand, we do not find any of the Engliſh Grants, though a very numerous name, who formed a permanent eſtabliſhment any where; nor are we able to trace them in ſuch a manner as to decide the queſtion, whether they deſcended from that old family, originally ſettled in the North of England, or from ſome branch of the Grants of Scotland, who removed occaſionally into the South after the Union of the two Crowns.

[B] *In the notes.*] We know not where this monument was placed, farther than that it was in the cloiſters; and the inſcription, as copied by Camden, ran thus:

Hic jacet Edwardus Grantus, belliſſimus infans,
Dulce decus matris, deliciæque patris.
Quem mors ætheream citiùs tranſcripſit in vrbem
Eſſet vt Angelicus, deliciæque Deo.
Ille quidem fælix: nam paucos vixit vt annos
Sollicitæ vitæ, ſic mala pauca tulit.

In *Engliſh* thus.

Here, reader, lies interr'd a lovely boy,
His mother's deareſt pride, his father's joy.
Whom early ſnatch'd to the æthereal quire,
With kindred Angels now he tunes his lyre.
Happy in this, as little life he knew;
Of life's inherent ills he felt but few.

Beneath were theſe lines.

Thy ſweet deſire to praiſe thy God,
Thy tender love to parents *dear;*
Thy nature mild to every one,
Remains alive, though corpſe lie here.

VIVIT POST FUNERA VIRTUS.

Virtue unhurt by Death ſurvives the grave.

Obiit Januarii 2, 1587, ætatis ſuæ 5.

He died January 2, 1587, *at* five *years of age.*

That we may not appear to have beſtowed this ſon upon Dr Edward Grant without any foundation, it may not be amiſs to cloſe this note, with obſerving, that he had a ſon, Gabriel Grant, who in the year 1602, was preſented by Peter Tuke, Eſq; to the rectory of Layer Marney, in the archdeaconry of Colcheſter, in the dioceſe of London and county of Eſſex (20). He became afterwards, by the preſentation of the Dean and Chapter of Weſtminſter, Rector of St Leonard's Foſter lane (21), in 1604; and January 20, 1612, was ſeated in the tenth ſtall, as Prebendary of the Collegiate Church of Weſtminſter (22). We might have mentioned many more of this name, of whom ſome memorials are preſerved, more eſpecially in the work (23) from which theſe are taken; but that we look upon what we have done already as ſufficient for our purpoſe.

GRANT [Sir FRANCIS], an eminent Lawyer and Judge in North-Britain, ſtiled, according to the cuſtom of that country, from the name of his eſtate, Lord Cullen. He was of a yõunger branch of the Grants, though a lineal deſcendant from Sir John Grant of Grant, by the Lady Margery, or Margaret Stuart, daughter to the Earl of Athol, which family of Grant have very conſpicuouſly diſtinguiſhed themſelves in ſupport of the Proteſtant Religion, and the principles of the Revolution [*A*]. This Francis, who is to be the ſubject of the preſent article, was born about the year 1660, and laid the foundation of his literary accompliſhments in the univerſity of Aberdeen; but being intended for the profeſſion of the Law, he was ſent to perfect his ſtudies at Leyden, under the celebrated Profeſſor Voet, who taught there with great reputation. Under him he made ſo great a proficiency, and diſtinguiſhed himſelf by ſo ſingular and ſteady an application, that many years after his return to his native country, the Profeſſor mentioned him to his pupils as one who had done honour to the univerſity, and whoſe example, in point of attention and diligence, it would become them to follow. On his coming back to Scotland, he paſſed through the tryals requiſite to his being admitted Advocate, with ſuch ſingular ſucceſs, as to attract the particular notice of Sir George Mackenzie, the then King's Advocate, one of the moſt knowing and ingenious men, as well as one of the ableſt and moſt eminent Lawyers of that age. This is the more remarkable, ſince Mr Grant's principles, which he never diſſembled, did not correſpond at all with the maxims and meaſures of the Court at that time; but as his merit was very conſpicuous, Sir George, who was a man of the greateſt candour, gave him upon all occaſions diſtinguiſhed marks of kindneſs and eſteem. At the time of the Revolution, being twenty-eight years of age, and having made the conſtitutional points of law his peculiar ſtudy, he made a very great figure when the Convention of Eſtates met, in order to canvaſs matters of the higheſt importance; ſuch as, whether the throne was full or vacant, and if vacant, how it was to be filled. Some of the old Lawyers, in purſuance of the principles they had long eſpouſed, argued warmly againſt thoſe upon which the Revolution had taken place in England, and particularly inſiſted on the inability of the Convention of Eſtates to make any diſpoſition of the Crown. Mr Francis Grant oppoſed theſe notions with great ſtrength and ſpirit, and publiſhed about that time a treatiſe, in which he undertook, from the principles of law, to prove, that a King might forfeit his Crown for himſelf and his deſcendants; and that in ſuch a caſe, the States had a power to diſpoſe of it, and to eſtabliſh and limit a legal ſucceſſion, concluding with the warmeſt recommendations of William Prince of Orange to the regal dignity. This work was generally read, and was believed to have had a conſiderable influence on the public reſolutions. It was certainly a very bold ſtep, and one that clearly manifeſted Mr Grant's integrity and zeal for the conſtitution, in ſupport of which, it was plain, he was determined to riſk every thing; for after ſuch an explicit declaration of his ſentiments, there was no poſſibility for him to retreat. It muſt appear not a little extraordinary, but ſo the fact really was, that this conduct recommended him to both parties in the way of his profeſſion. Thoſe who differed from him in opinion admired his courage, and were deſirous of making uſe of his abilities; as, on the other hand, thoſe who were friends to the Revolution were alſo ſo to him, which brought him into great buſineſs, and procured him, by ſpecial commiſſions, frequent employment from the Crown. His character was firmly

[*A*] *And the principles of the Revolution.*] At the the time of that great event, Lodovic Grant, of Grant, Eſq; was the chief of the family. He was entirely for that meaſure, he levied a regiment of foot, which was raiſed, cloathed, and maintained at his expence, 'till put upon the eſtabliſhment by King William in 1689, who by his commiſſion appointed Colonel Lodovic Grant to command it. According to the reſolutions of the Scotch Parliament, the great expences which this gentleman had been at, were to have been repaid him; but except the honour of this reſolution, which ſhewed the ſenſe the legiſlature had of his ſervice, he never received any indemnification. His ſon Alexander Grant, Eſq; who inherited his father's principles as well as his eſtate, commanded a regiment of foot at the time of the Union, and ſerved with great reputation in Flanders, under the command of the glorious Duke of Marlborough; and in conſequence of thoſe ſervices, was promoted to the rank of Brigadier-General and Governor of Sheerneſs. Upon the breaking out of the rebellion in 1715, he accompanied his Grace John Duke of Argyle as a volunteer, who, as a proof of his high regard for, and great confidence in the Brigadier, appointed him to command in the caſtle of Edinburgh, upon the the preſervation of which ſo much at that juncture depended. Brigadier Grant, while thus employed, diſpatched his brother, then Captain, now Major Grant, northward, with orders to raiſe his clan; which, though the attempt as things were then circumſtanced was equally difficult and dangerous, he very effectually performed; and having with eight hundred men inveſted the town of Inverneſs, he was quickly joined by the Earl of Sutherland, and the late worthy Lord Preſident, then Mr Duncan Forbes of Culloden; by which eminent ſervice at ſo critical a conjuncture, a great body of highlanders were hindered from continuing their march to Perth, and the counties of Bamff, Nairn, Murray, and part of the ſhire of Inverneſs protected from all levies of men and impoſitions of money. The Brigadier however did not long ſurvive, to reap the fruits of his ſingular zeal for the government, otherwiſe in all probability he might have riſen to the higheſt ranks in the Britiſh army. He was member in the Scots Parliament for the ſhire of Elgin, when the Union took place, and was one of the forty-five members deputed from them to ſit in the firſt Parliament of Great-Britain. In the ſecond Parliament in 1708, he was choſen for the Shire of Inverneſs; in the third, fourth and fifth Parliaments for the ſhire of Elgin; and at the time of his deceaſe, was Lord-Lieutenant of the counties of Bamff and Inverneſs He was ſucceeded by his brother Sir James Grant, who in the ſixth and ſeventh Parliaments of Great-Britain, ſerved for the ſhire of Inverneſs. He was ſucceeded by his ſon Sir Lodovic, who is the preſent head of the family, who eſpouſed the Lady Margaret Ogilvy, daughter to the right honourable the Earl of Finlater and Seafield, and was very active in ſuppreſſing the rebellion of 1745, and is at preſent member for the county of Elgin.

firmly eſtabliſhed on the pillars of application and integrity. He was indefatigable in the management of buſineſs; but at the ſame time that he ſpared no pains, he would uſe no craft. He had ſo high an idea of the dignity of his profeſſion, that he held it equally criminal to neglect any honeſt means of coming at juſtice, or to make uſe of any arts to elude it. It might have been expected, that circumſtances which brought him early into full buſineſs, ſhould either have promoted him quickly to the firſt offices in the law, or at leaſt have enabled him to make a large eſtate; but they did neither. His temper was naturally calm and ſedate; he hated buſtle and intrigue; and beſides, Sir James Stuart was Lord-Advocate all the time he was at the bar; and Sir Hugh Dalrymple, ſon to the famous Viſcount Stair, Lord Preſident, while he was on the bench; and their merit and ſervices too great for him to entertain ſo much as a thought of ſupplanting either. In reſpect to fortune, though he was modeſt and frugal, and had a large practice, yet he was far from being avaricious. His private charities were very conſiderable, and grew in the ſame proportion with his profits. He was beſides very ſcrupulous in many points; he would not ſuffer a juſt cauſe to be loſt through a client's want of money. He was ſuch an enemy to oppreſſion, that he never denied his aſſiſtance to ſuch as laboured under it; and with reſpect to clergymen of all profeſſions, his conſcience obliged him to ſerve them without a fee. He ſaw their wrongs required aſſiſtance, and he knew their circumſtances would not admit of expence. His additions therefore to his paternal eſtate were much inferior to what might have been expected, and a large acceſſion of character, was the principal produce of that activity and diligence, by which he was diſtinguiſhed at the bar. This was ſo clear and beyond exception, that her late Majeſty Queen Anne, unexpectedly, as well as without application, created him in 1705 a Baronet, her ſenſe of his ſervices being ſufficiently expreſſed in the preamble to his patent. About a year after, her Majeſty was pleaſed to appoint him one of the Judges, or, as they are ſtiled in Scotland, one of the Senators of the College of Juſtice [*B*]. His juſt title to this preferment was known to every body but himſelf, yet his high notions of the virtues and abilities requiſite in that ſtation made him

[*B*] *One of the ſenators of the College of Juſtice.*] Our intention in this note, is to give as clear and ſuccinct an account of this ſupreme Court of Juſtice in North-Britain, and the Judges who ſit therein, as the nature of this article requires, and the bounds preſcribed will allow. Anciently, cauſes were heard in the laſt reſort, by a committee of Parliament compoſed of an incertain number, who were ſtiled Lords of Seſſion; afterwards this power devolved to the council, but Anno Dom. 1537, King James the Fifth, inſtituted a College of Juſtice, after the model of the Parliament of Paris, which was compoſed of a preſident and fourteen ordinary members, but the Chancellor might preſide there if he pleaſed, and then the preſident ſat with the reſt. This ſupreme court has been ſince commonly called the Court of Seſſion, the members inſtead of Senators of the College of Juſtice, are ſtiled, after their predeceſſors, Lords of Council and Seſſion, and their Preſident, Lord Preſident; nine Lords make a quorum, but the King by the original erection might name three or four Peers of Parliament, who are ſtiled extraordinary Lords of Seſſion, but they make no part of the quorum, are not bound to attend, receive no ſalary; but when they are preſent, ſit and hear cauſes, and vote with the other Lords. By an act paſſed in the tenth of the late King, the crown departed from this prerogative, and after the demiſe of the extraordinary Lords then living, their places were not to be filled up. The juriſdiction and privileges of this court, were ſecured by the articles of Union, ſubject to an appeal from their deciſions to the Houſe of Peers. The Lords of Seſſion hold their office for life, or quamdiu ſe bene geſſerint. On a vacancy in the College of Juſtice, the King is to preſent a perſon duly qualified, that is one who has ſerved five years as Advocate or Clerk of Seſſion, or ten years as a writer to the Signet. Upon this, he is allowed to ſit with the Lord-ordinary while cauſes are heard before him, and he reports two or three points to the Lords in the Inner houſe; he muſt alſo report a cauſe upon a hearing in their preſence in the Inner-houſe, and give his opinion on every point. If the Lords are ſatisfied, they admit him to the office upon his taking the oaths. But if the Lords are of opinion that the perſon ſo named is not duly qualified, they are to tranſmit an account of the whole matter to his Majeſty; and if under his ſign manual, the King ſhall ſignify that it is his pleaſure the perſon ſhall notwithſtanding be received, they admit and receive him accordingly; but if the King nominates another perſon, they are to proceed to examine him as before. One of the Lords ſits in the outer Parliament-houſe, to hear all cauſes in the order they are ſet down in the books of inrollment. If the parties ſubmit to his deciſion, his decree is *final*, if not it is interlocutory, and either of the parties may appeal to the Lords who ſit together in the Inner-houſe, and who upon hearing the cauſe, affirm, reverſe, or alter the decree made in the Outer-houſe. Each Lord ſits in his turn a week at a time in the Outer-houſe, and is during that week ſtiled the Lord Ordinary; if the cauſes cannot be finiſhed in the week, the ſame Lord continues to ſit from nine to ten in the Outer-houſe every day, till the cauſes begun in his week are ended. The Lord Preſident and all the other Lords, ſit in the Inner houſe every day in the week, except Sunday and Monday, during the time of Seſſions, which for the winter begin the firſt of November, and end the laſt of February, with an intermiſſion not exceeding ten days in time of Chriſtmas; and begin the firſt of June, and end the laſt of July for the ſummer ſeſſions. As to the extent of the juriſdiction of the court, all cauſes *civil*, that are not peculiar to other courts, may be brought before them in the firſt inſtance, provided the ſum in queſtion be above twelve pounds ſterling, and cauſes commenced in other courts, may in certain caſes be removed to and reviewed in the court of ſeſſion; and in ſome caſes, the Lords may review upon freſh matter ariſing even their own decrees. This court is both of law and equity, and may, where the Lords ſee juſt cauſe, exerciſe the ſame powers in a great meaſure that are exerciſed in England by the court of Chancery. Beſides this mixt juriſdiction, which they ſtile Officium ordinarium, this court hath alſo an extraordinary coercive power, which they call Officium nobile, which is exerted occaſionally and diſcretionally. An inſtance will explain this to every reader's capacity. When it was reſolved to levy the malt tax effectually, all the brewers in Edinburgh took a ſudden reſolution in one day to deſiſt from the exerciſe of their trade; upon this the Court of Seſſion interpoſed, and made an order, that every brewer ſhould give ſecurity to continue his buſineſs, to prevent any inconvenience happening to the public, on pain of impriſonment. This had it's effect, and the Lords received the thanks of the government. This ſhews clearly how great a truſt is repoſed in a Lord of Seſſion; what extenſive abilities, and what great attention are requiſite to the due diſcharge of the office; and therefore we need not at all wonder, that men of exact probity are ſometimes ſcrupulous of taking ſo great a burthen upon their ſhoulders.

[*C*] *That*

him endeavour to decline it, and he accepted it at laſt with great reluctance. He was from this time ſtiled Sir Francis Grant, Lord Cullen, and the ſame good qualities that recommended him to this employment were very conſpicuous in the diſcharge of it. He thought himſelf accountable to God and man for his conduct in that high office; and his deep ſenſe of his duty, at the ſame time that it kept him ſtrictly to it, encouraged and ſupported him in the performance. The pleadings in Scotland are carried on chiefly in writing, which renders them ſometimes very prolix, ſo as to take up much of a Judge's time, and to exerciſe alike his parts and his patience in going through and making himſelf maſter of them. In this the diligence and the dexterity of Lord Cullen were equally conſpicuous, he went through every thing that came into his hands carefully, and ſifted it thoroughly, ſo that the Lawyers at the bar never found themſelves too ſtrong for the bench, but on the contrary, were told many things by his Lordſhip, which either had eſcaped their notice, or which the intereſt of their client had engaged them to conceal. As his attention to the pleadings guided him to the real merits of the cauſe, ſo when he was once maſter of theſe, his ſecond care was diſpatch. He knew that in judicature the next fault to denying was delaying juſtice, by which families are always injured, and too often ruined; whenever therefore he had provided againſt being miſtaken, he was deſirous of bringing the matter to a ſhort deciſion; and as he was very ſollicitous about the former, ſo the parties themſelves helped him not a little as to the latter. Whenever he ſat as Lord Ordinary, the paper of Cauſes was remarkably full; for his reputation being equally eſtabliſhed for knowledge and integrity, there were none who had a good opinion of their own pretenſions but were deſirous of bringing them before him, and not many who did not ſit down ſatisfied with his deciſion. This prevailed more eſpecially, after it was found that few of his ſentences were reverſed, and when they were, it was commonly owing to himſelf; for if upon mature reflection, or upon new reaſons offered at the rehearing, he ſaw any juſt ground for altering his judgment, he made no ſcruple of declaring it, being perſwaded that it was more manly as well as more juſt to follow truth than to ſupport opinion; and his conduct in this reſpect had a right effect, for inſtead of leſſening it raiſed his reputation. His experience, though it quickened his penetration, did not leſſen his diligence in the leaſt. How certain ſoever he might be of the truth of his own ſentiments, he took great care to have all the aſſiſtance that was to be received from books, and never failed to fortify his arguments and to ſupport his reaſonings by the beſt authorities. His collegues were ſo well aware and ſo much approved of this, that they very ſeldom decided any knotty caſe that came before them in his abſence, but rather choſe to adjourn it. We ſhall hear, ſaid they, not only our brother Cullen's own opinion, but that of all the great Lawyers upon this point. His labours in this reſpect, though he propoſed no other end in them than the promoting of juſtice, were attended with univerſal applauſe, and procured him a character, to which he had the faireſt title, of being one of the ableſt and deepeſt Lawyers of his time. He would not however, with all this great ſtock of knowledge, experience, and probity, truſt himſelf in matters of blood, or venture to decide in criminal caſes on the lives of his fellow-creatures, which was the reaſon, that, though often ſollicited, he could never be prevailed upon to accept of a ſeat in the Juſticiary Court; for though in this part of the iſland, the ſame Judges hear civil and criminal cauſes in virtue of different commiſſions, yet it is otherwiſe in North-Britain, where criminal cauſes are heard in a different court by a certain number of Lords, ſelected for that purpoſe out of the body of the Judges, and who have an additional ſalary for that purpoſe. He was ſo true a lover of learning, and was ſo much addicted to his ſtudies, that notwithſtanding the multiplicity of his buſineſs while at the bar, and his great attention to his charge when a Judge, he nevertheleſs found time to write various treatiſes on very different and important ſubjects. Some political, which were remarkably well timed, and highly ſerviceable to the government; others of a more extenſive nature, ſuch as his eſſays on Law, Religion, and Education, which were dedicated to his preſent Majeſty when Prince of Wales, by whoſe command his then Secretary, Mr Molyneux, wrote him a letter of thanks, in which were many gracious expreſſions, as well in relation to the piece as to it's author. He compoſed, beſides theſe, many diſcourſes on literary ſubjects, for the exerciſe of his own thoughts, and for the better diſcovery of truth, which went no farther than his own cloſet, and from a principle of modeſty were not communicated even to his moſt intimate friends. He had a very high opinion of Lord Viſcount Stair's Inſtitutionof the Law Scotland, and often importuned that noble perſon's ſon, the Lord Preſident Dalrymple, to publiſh a new edition of this valuable work, which that great man declined, and preſſed the ſame taſk upon him, towards which however he made no farther advances, than ſome notes in his own copy of the book, and a few occaſional collections. This deſign has been ſince executed by a gentleman who married one of Lord Cullen's daughters, in a manner that does honour to himſelf and to his country [C]. In his private character he was

[C] *That does honour to himſelf and to his country.*] The Viſcount of Stair's Inſtitute of the Law of Scotland was publiſhed in 1693, and was received as it deſerved with general approbation. But ſince that time, the law has undergone many alterations, and received great improvements, and therefore another ſyſtem of a like kind was very much wanted. This great work was undertaken by Andrew M'Douall, Eſq; a gentleman perfectly acquainted with the principles of the Scotch law, and who had practiſed many years at the

was as amiable as reſpectable in his public. There were certain circumſtances that determined him to part with an eſtate that was left him by his father; and it being foreſeen that he would employ the produce of it and the money he had acquired by his profeſſion in a new purchaſe, there were many decayed families who ſollicited him to take their lands upon his own terms, relying entirely on that equity which they conceived to be the rule of his actions. It appeared that their opinion of him was perfectly well grounded; for being at length prevailed upon to lay out his money on the eſtate of an unfortunate family, who had a debt upon it of more than it was worth, he firſt put their affairs into order, and by claſſing the different demands, and compromiſing a variety of claims, ſecured ſome thouſand pounds to the heirs without prejudice to any, and of which they had never been poſſeſſed but from his interpoſition and vigilance on their behalf; ſo far was he from making any advantage either of their neceſſities, or his own ſkill in his profeſſion. A circumſtance juſtly mentioned to his honour, and which is an equal proof of his candour, generoſity, and compaſſion. His piety was ſincere and unaffected, and his love for the Church of Scotland was ſhewn, in his recommending moderation and charity to the clergy as well as laity, and engaging the former to inſiſt upon moral duties as the cleareſt and moſt convincing proof of mens acting from religious principles, and his practice through his whole life was the ſtrongeſt argument of his being thoroughly perſwaded of thoſe truths, which from his love to mankind he laboured to inculcate. He was charitable without oſtentation, diſintereſted in his friendſhips, and beneficent to all who had any thing to do with him. He was not only ſtrictly juſt, but ſo free from any ſpecies of avarice, that his lady, who was a woman of great prudence and diſcretion, finding him more intent on the buſineſs committed to him by others than on his own, took the care of placing out his money upon herſelf; and to prevent his poſtponing, as he was apt to do, ſuch kind of affairs when ſecurities offered, ſhe cauſed the circumſtances of them to be ſtated in the form of caſes, and ſo procured his opinion upon his own concerns as if they had been thoſe of a client. Theſe little circumſtances are mentioned as more expreſſive of his temper, than actions of another kind could be; becauſe in matters of importance, men either act from habit, or from motives that the world cannot penetrate; but in things of a trivial nature are leſs upon their guard, ſhew their true diſpoſition, and ſtand confeſſed for what they are. He paſſed a long life in eaſe and honour. His ſincerity and ſteady attachment to his principles recommended him to all parties, even to thoſe who differed from him moſt; and his charity and moderation converted this reſpect into affection, ſo that not many of his rank had more friends, and perhaps none could boaſt of having fewer enemies. His death was as calm and placid as his life. His laſt illneſs continued but three days, without any violent or painful ſymptoms; notwithſtanding which, the learned Phyſicians who attended him clearly diſcerned and timely admoniſhed him that his diſſolution was at hand. He received this meſſage not only calmly but chearfully. He declared that he had followed the dictates of his conſcience, and that he was not afraid of death. He took a tender farewel of his children and friends, recommended to them earneſtly a ſteady and conſtant attachment to the faith and duty of Chriſtians, and aſſured them that true religion was the only thing that could bring a man peace at the laſt. He expired ſoon after, quietly and without any agony, March 16, 1726, in the ſixty-ſixth year of his age. He left behind him three ſons and five daughters; his eldeſt ſon, Archibald Grant, Eſq; ſerved in his father's life-time for the ſhire of Aberdeen, and becoming by his demiſe Sir Archibald Grant, Baronet, ſerved again for the ſame county in 1727; his ſecond ſon, William Grant, Eſq; followed his father's profeſſion, was for ſeveral years Lord-Advocate for Scotland, and is at preſent one of the Lords of Seſſion, by the title of Lord Preſton Grange; Mr Francis Grant, the third ſon, is a Merchant; three of the daughters are married to gentlemen of fortune, and the two youngeſt are ſtill unmarried. Mr Alexander Niſbet gives us the following account of the arms born by this honourable perſon, in his Syſtem of Heraldry. Sir Francis Grant of Cullen, Bart. one of the Senators of the College of Juſtice, carries Gules, three antique crowns, Or, as deſcended from Grant of That-Ilk, within a border, ermine, in quality of a Judge, ſupported with two Angels proper: creſt, a book expanded. Motto, on an eſcroll above, *Suum cuique*, and on a compartment below, *Jehovah-jireh*, as by a ſpecial warrant under his Majeſty's hand, the 17th day of May, 1720.

the bar as an advocate, with great reputation; when he undertook this neceſſary and laborious taſk, he had no intention of giving it to the public in his life-time, but was at length prevailed upon by William Grant, Eſq; then Lord Advocate of Scotland, to alter his intention, and accordingly the firſt volume was publiſhed in 1751, and is dedicated to his Grace the Duke of Argyle, Lord Keeper of the Great Seal, Lord Juſtice-General, and one of the extraordinary Lords of Seſſion, but without the author's name, which however could not be long concealed, and is therefore prefixed to the ſecond volume, which was publiſhed the year following, and dedicated to the Earl of Hardwicke, Lord High-Chancellor of Great-Britain; the third and laſt volume was publiſhed in 1753, and is dedicated to William Grant, Eſq; his Majeſty's Advocate for Scotland, to whoſe friendly advice, it is therein ſaid, if the public ſhall be profited by this work, they are indebted for the publication of it in the life-time of the author. The title of this work at large, runs thus:

An Inſtitute of the Laws of Scotland in Civil Rights; with Obſervations upon the Agreement or Diverſity between them and the Laws of England, in four books, after the general method of the Viſcount of Stair's Inſtitutions. With an Appendix, Table of Contents, and two Indexes.

This great performance, ſo much wanted in and ſo very uſeful to the whole united kingdom, has been ſo generally well received, and found to be ſo accurately and ſo judiciouſly performed, that the learned author has been very deſervedly promoted to be one of the Senators of the College of Juſtice.

From Memoirs ſupplied by the Family.

*

GRANVILLE (*a*), or GREENVIL [DENIS] Dean of Durham in the laſt century, was a younger ſon of the loyal and valiant Sir Bevil Granville, of Kilkhampton in Cornwall, Kt. [*A*] and brother to John the firſt Earl of Bath of that family. He was born in the year 1639 (*b*), and, after a ſuitable education, admitted, September 22, 1657. a Fellow-commoner of Exeter-college in Oxford (*c*). On the 28th of September 1660. he was created Maſter of Arts (*d*); and, ſoon after, marrying Anne youngeſt daughter of Dr John Coſin Biſhop of Durham (*e*), he was collated by his Lordſhip, September 16, 1662. to the Archdeaconry of Durham; and to the firſt Prebend in the cathedral church of Durham, which he exchanged for the ſecond, April 16, 1668 (*f*). He had alſo, of his gift, the Rectories of Eaſington (*g*), and Elwick, in the foreſaid dioceſe (*b*); and in the room of the latter, the great living of Sedgefield, one of the moſt conſiderable country-pariſhes in England (*i*). But he took a very regular and exemplary care of them, in the due diſcharge of all miniſterial functions, as appears by the directions he gave to his Curates, printed among his works (*k*). On the 20th of December 1670, he was created, at Oxford, Doctor in Divinity; being then Chaplain in ordinary to his Majeſty, as he had been for ſeveral years before (*l*). And, December the 14th 1684, was inſtalled Dean of Durham, in the room of Dr John Sudbury, deceaſed (*m*). Thus poſſeſſed of theſe great preferments, he might have long enjoy'd them with much profit and honour to himſelf and friends; and have continued to be an ornament to his function, and a general benefit to the world. But ſome abſurd notions he had entertained, of the unlimited extent of the Prerogative, together with his ſtrict adherence to the doctrines of Paſſive Obedience and Non-reſiſtance [*B*], involved him into inextricable difficulties (*n*). For, poſſeſſed with the indiſpenſableneſs of their obligation, upon the Prince of Orange's coming to reſcue this nation from the dangerous attempts made upon our Religion and Liberties, the Dean oppoſed the meaſures taken for our common ſafety, to the utmoſt of his power: by preaching, delivering charges to the clergy, ſending up an Addreſs to King James, and ſubſcribing a ſum of money for his ſervice (*o*). And, when all his endeavours proved ineffectual, he was ſo entangled with the abſurd doctrines juſt now mentioned, that, rather than ſubmit to King William, he choſe to loſe his great preferments, and go into a voluntary exile [*C*]. For, quitting Durham the

[*A*] *Was a younger ſon of the loyal and valiant Sir Bevil Granville, of Kilkhampton in Cornwall, Kt.*] See an account of this family, under the article *Granville* (Sir Richard).

[*B*] *But ſome abſurd notions he had entertained, of the unlimited extent of the Prerogative, together with his ſtrict adherence to the doctrines of Paſſive Obedience and Non-reſiſtance, involved him*, &c.] Theſe notions and doctrines he moſt ſtrenuouſly avowed, not only in his conduct and actions, but alſo in his ſeveral writings. Thus, in the Preface to his Farewel viſitation ſpeech (1), he declares, that he 'never wanted reſolution, all 'along to oppoſe the *Subjects incroaching on the Prero-* 'gative of their King, as heartily as he had withſtood 'the Dutch their invading of the Land.' And, in his Letter to his brother the Earl of Bath (2), he lays it down, as 'the Eſſential Duties of ſubjection and alle-'giance to the Soveraign, That Subjects are upon noe 'conſideration whatſoever, neither of religion, liberty, 'nor life, to *reſiſt*, or *deſert*, their lawfull Soveraigne, 'though hee were no better than ſuch an one as St Paul 'lived under, when he writ the Epiſtle to the Romans, 'not only a heathen, but a cruell perſecutour, a Ne-'ro, a Caligula, or a Diocleſian.—Moreover (3), that 'we ought not, upon any pretence whatſoever, to 'take up arms againſt a lawful King, nor aſſiſt, aid, 'or abet thoſe who doe, no not ſo much as to wiſh ill 'to the Lord's Anointed in the very bottome of our 'hearts.—And to be as faithfull to a Roman-Catho-'lick, as a Proteſtant, Prince, and as true to him in 'adverſity, as in proſperity (4).' According to theſe miſtaken principles was his practice. For he not only adhered to K James II. in every inſtance, 'even in 'the moſt *unintelligible* of all his acts of mercy, (to 'uſe his own words) namely, the including the Fana-'ticks in his Declaration for Liberty of Conſcience (5); But alſo, 'having done, as he ſays himſelf (6) all that 'lay in his power, in all his capacities, by his moſt 'vigorous endeavours, towards the ſupport of the 'Crowne and the Church of England; and ſeeing 'himſelfe abſolutely uncapable to act further for his 'Majeſtie as he had done, and to diſcharge his 'conſcience,—he reſolved to preſerve his Innocency 'by flight, ſince he could not doe it by ſitting ſtill and 'ſtaying in Durham (if he ſhould eſcape the jaole 'which he had little reaſon to hope) after an honeſt 'loyal activity:—And therefore bethought himſelfe 'of flying away ſecretly to the King [James II] to 'owne his cauſe, when he could not otherwiſe ſerve 'him.'

[*C*] *He choſe to loſe his great preferments, and go into a voluntary exile.*] As there does not appear in his conduct and actions, (as far as recorded) any ſufficient cauſe for this his *ſudden and private departure*, we muſt endeavour, if poſſible, to find out a ſatisfactory reaſon for it, in thoſe ſeveral pieces he publiſhed afterwards in France, during his exile. In one place (7), he calls it his '*Eſcape*:' and ſays, he was '*driven* from his 'ſtation by the impetuoſity of that dreadful ſtorm, 'which fell on and overthrew our Church and State.' —He 'maintained his poſte (as he goes on to relate) 'notwithſtanding mighty diſcouragements, 'till it was 'not poſſible for him any longer to ſtrive againſt that 'torrent, which had hurried all matters, in the Na-'tion, into great diſorder and confuſion. When I 'ſaw, adds he, there was no poſſible means left for 'me, but to ſink, by endeavouring to oppoſe what 'was irreſiſtable; or ſwimme down the ſtream (which 'no argument nor example of the age could, I thank 'God, prevaile with me to do) I was under a neceſſity 'to turne aſide, and withdraw my ſelfe, beholding mat-'ters a while at a diſtance, rather than in my own 'ſtation and place of acting; ſince I carried about 'with me an unalterable loyall heart, which would 'not ſuffer me to runn (as moſt did) with the multitude; 'and on the other ſide wanted both ſtrength of mine 'own, and the aſſiſtance of others, effectually to op-'poſe that unruly and many-headed monſter. But 'did not reſolve to leave the kingdome,——till I had 'a powerfull example, which a dutifull ſubject ought 'to be proud to follow, and a Precedent which may 'ſet me above the cenſures of any perſon in the three 'kingdomes. When my Soveraine was forc'd from 'his own pallace, nay driven out of the Realme, it 'was time for thoſe who were firmly reſolv'd to ad-'here to, and ſuffer with Him, to yeild to that force 'and neceſſity, which a mighty Potentate, by com-'plying with, proclaim'd to be invincible. Having 'then the honour to be one of that number (and glo-'rying that I am ſo) it would have been a prepoſterous 'courſe

(7) Letter to the Biſhop of Durham, p. 1.

the 11th of December 1688, he arrived, the 19th of March following, at Honfleur in France [*D*]. His reſidence for ſome time was at Rouen in Normandy (*p*), and then at Corbeil in the iſle of France, from whence the Granville-family originally ſprang (*q*). In February 1689-90, he took a hazardous journey into England, whereby he got a ſmall ſupply of money, to ſubſiſt a while abroad; though with much trouble and danger, occaſioned by an impertinent poſt-maſter, who diſcovered him at Canterbury (*r*). His brother the Earl of Bath endeavoured for ſome time to ſecure his revenues (*s*); but as no conſiderations whatever could induce him to ſwear allegiance to King William and Queen Mary, he was at length deprived of all his preferments February 1, 1690 91 (*t*). He not only refuſed to ſwear himſelf, but likewiſe did all that lay in his power to deter, or rather to terrify, others from taking the oaths to their Majeſties [*E*]. Having no proſpect,

' courſe for me (who never play'd my game ſo as to ' ſave my ſtake) to have ſtay'd at home, or in England, ' when I was no longer capable to ſerve Him, in thoſe ' offices wherein I was plac'd; and while I had no ' other proſpect, but that of a *priſon*, without doing ' what was impoſſible for me to do, I mean bow down ' to Baal, or in plain Engliſh, ſubmit to an Uſurper.'

(8) Ibid. p. 14. ——Elſewhere, he ſays (8), ' that he did not *runn* ' *away*, ——when he ſaw the Wolfe *coming*, but ' after he ſaw him *come*, and with open mouth ready ' to devoure, and had Himſelfe in ſome ſort *taſted his* ' *Fierceneſs* (9).'

(9) Letter to the Vice-Dean, &c. p. 14.

[*D*] *For quitting Durham*, &c.] The particular account of his adventures, in this eſcape, may not be unacceptable to the reader in his own words; which is thus. ' —On the 11th of Dec. at midnight, by ' the helpe of two faithfull ſervants, which I did dare ' truſt, I got my horſes prepared, and was conducted ' by one of them that night to Hexham, where I pro- ' cured an honeſt guide to Carliſle the neareſt of the ' King's garriſons, and the moſt conſiderable place ' which then held out for the King.——I had no ' ſooner got to Carliſle (where I was very kindly re- ' ceived by Mr Howard the governor, &c.) but the ' very day after, being Saturday, the poſt brought in ' the diſmall newes, of the defeat of ſome of his Ma- ' jeſties troopes at Reading, and others deſerting in ' ſuch ſort, that hee was forced to withdraw out of ' the Kingdome, together with ſome intimations to ' the Governour, that it was to no purpoſe for him to ' hold out the place, but that hee being a Roman Ca- ' tholick, it would be moſt prudent, and not diſ- ' pleaſing to his Majeſty, for *him* to retire, and leave ' the governmenr to the old governour, Sir Chriſtopher ' Muſgrave, — [which he immediately did]. This ' direfull cataſtrophe, which did both aſtoniſh and ' afflict mee, to ſee our Soveraigne,—treated with ſo ' much brutality, betrayed by thoſe hee thought his ' beſt freinds, deſerted by his neareſt relations, for- ' bidden his own palace, and forced out of his king- ' dome, did immediately, without much conſideration ' incline mee to leave it alſo, to maneſeſt my juſt in- ' dignation againſt rebellion and treachery:——and ' I did reſolve accordingly to haſten into France to ' ſhare with my Soveraigne in his misfertunes. In or- ' der whereunto (after I had viſited the Biſhop of Car- ' liſle at Roſe-caſtle,—and depoſited with his Lordſhip ' ſome ſolemn aſſurances of living and dying in the ' right Church-of-England-Religion) I departed from ' Carliſle Dec. the 19 towards Scotland, with a ſingle ' ſervant, a Scotch man, whom I had newly entertained, ' to conduct me to Edinburgh, hoping at Leith, or ' ſome other ſeaport on that coaſt to procure ſhipping ' for France. But reſting a day or two at Alliſon Banke, ' on the borders, to confer with an honeſt loyall Gen- ' tleman, who had ingaged there to meet mee, I fell ' into the hands of the rabble, who then with fury ra- ' ged up and downe. on the firing of the beacons ' thereabouts very raſhly and indiſcreetly, by ſome ' credulous and temporiſing Juſtices, who gave credit ' to the falſe and malitious reports, of the landing of ' Iriſh Papiſts, burning of towns, and maſſacring of ' people wherever they came Theſe villaines headed ' by one Palmer a notorious rogue and murderer, who ' had but lately eſcaped the gallowes, ſeized on mee ' for a Popiſh Preiſt and Jeſuite on Dec 21. about ' eleven at night, and pulled me out of my bed, rifling ' my pockets, and my chamber, carrying away my ' horſes, (two geldings worth 40 l.) and my portman- ' tue, and mounting mee on a little jade not worth 40 s. ' Thus diſgracefully conducting mee to a poor ale- ' houſe on the Engliſh ſide, three miles off, where they ' ſearch'd my portmantue, and plunder'd mee of a bag ' of money, and ſome ſmall pieces of plate, with other ' things; leaving mee afterwards in the hands of the ' watch, and a Conſtable to lead mee away on foot, ' in a ſevere cold frotty night, with a heavy riding ' coate, and great bootes (ill accoutrements for walking) ' to march to Carliſle, to bee examined before one ' Capt. Bub, and other officers then in the garriſon, ' and by whom they did hope to have been rewarded ' (as they afterwards declared) for their good ſervice ' to the country in ſecuring (as they ſtiled mee) a fu- ' gitive and dangerous perſon. But being well known ' in the city, and travelling with the Governour Sir ' Chriſtopher Muſgrave's paſſe, they miſſed of their ' expectation and received a rebuke, whiles I had my ' horſes, and the greateſt part of my money reſtored ' mee, and was ſet at liberty, either to ſtay, or depart ' the towne.——Tho' I was now, a ſecond time, ' at liberty to goe where I pleaſed, and promiſed a ' paſſe if I would goe home to Durham, I did thinke ' it moſt prudent, to continue a while in that city, to ' remove the ſuſpicion of my intended flight out of ' England, and accordingly lived unconcernedly there ' for 14 or 15 dayes, conſtantly attending God's publick ' ſervice, and preaching in the cathedrall on Chriſt- ' mas-day, whereby I convinced people, I hope, that ' I was no Popiſh preiſt nor Jeſuite. After this the ' countrey being more quiet, and no watches kept, ' ——I left Carliſle, and ventured back towards Dur- ' ham as far as Hexam, but with noe intention to goe ' home, deſigning, after I had ſhifted off a guide, and ' ſome ſervants who were ſent with letters to mee, to ' ſtrike out of the roade by Berwick towards Scotland; ' which I did, without any other conſiderable impedi- ' ment, and on the 26th of Jan. arrived ſafe at Edinburgh; ' endeavouring, as ſoon as I could, to get admittance ' into the caſtle, and wait on the Duke of Gordon; to ' whom I communicated my deſigne of going to the ' King, and by whom I was informed of a veſſel then ' in the roade ready to depart for France. Which op- ' portunity I made uſe of, and was, after many tem- ' peſts and a tedious voyage by reaſon of contrary ' winds, at laſt ſafely landed at Honfleur, on the 19th ' day of March N. S. the very day after his Majeſties ' (10) departure from Breſt for Ireland; which miſſing ' of the King was a great diſappointment and mortifi- ' cation to mee.'——He obſerves afterwards, that af- ter having reſted a whole week in that place, he de- parted on the 25th for Rouen; where he was very civilly entertained for ſome years by Mr Thomas Hacket, an Engliſh merchant (11).

(10) He meant K. James II.

(11) Letter to the Earl of Bath, p. 9—12.

[*E*] *But likewiſe did all that lay in his power to deter, or rather to terrify, others from taking the oaths to their Majeſties.*] Namely, by repreſenting the Revolution as a *Rebellion* and *Uſurpation*. ' Yea ſuch a ' Rebellion and Uſurpation (ſays he) that no good ' Chriſtian could (hee was ſatisfied in his conſcience) ' joyne in the firſt, or uphold the latter; and conſe- ' quently that no body could receive the communion, ' without injury to his ſoule, in the uſe of thoſe prayers, ' which pray'd for the maintaining of both; ſince hee ' that received the bleſſed Supper of the Lord, in the ' office of any Church, ſet his ſeale to all the corrup- ' tions that were crept into that Church, and did, in ' in a higher manner, profane God's ſacred name, by ' uſing that holy ordinance to ſo impious an end (as to

' beg

pect, after the late King James's defeat in Ireland, of recovering his benefices; he repaired to the abdicated monarch's Court at St Germain: where though he had reaſon to expect an uncommonly kind reception, yet, becauſe he was a Proteſtant, he was ſoon obliged to retire, not only from Court [F], but alſo from the town of St Germain (u). 'Tis ſaid, that upon the death of Dr Lamplugh, he had the empty title of Archbiſhop of York, conferred upon him by King James (w): though others deny it, for *many very ſtrong reaſons* which they do not mention (x). In 1695, he came *incognito* to England, where he found no encouragement to make any ſtay (y). Having, for ſome years, enjoyed but an indifferent ſtate of health (z), he died at his lodgings in Paris [G] April the 8th 1703, aged 64; and was buried at the lower end of the church-yard of the Holy Innocents, in that city (a). While he reſided in England, he publiſhed a few ſmall pieces [H], as he did a collection of Tracts, after his exile in France [I]. We ſhall reflect, in the note, upon ſome unreaſonable Doctrines [K], which he earneſtly inculcates in that collection. His nephew George Granville, Lord Lanſdown, draws his character to great advantage,

' beg of God, by virtue of his Saviour's body and ' blood, the deſtruction of his lawful Prince) than hee ' that barely ſwears allegiance to an Uſurper. Which ' yet, by the way, [adds he] whoever does, (let him ' underſtand) doth, in a manner, abjure his lawfull ' Sovereign.' And this he lays down as a caſe of conſcience, that he then ventured publickly to decide. ——A few lines after, ' hee makes no doubt, ' but that the *Churches* in England muſt become *empty*, ' and the Altars thin:——for people can never heartily ' pray for their lawfull Prince, ſo long as they can re' concile themſelves to the Devotions, which are ſo' lemnly in God's houſe, even at the very Communion' table, and in reception of the holy myſteries, offered ' up to heaven for the proſperity of his enemies, and ' depoſer. Whereto all ſay Amen, in the very act of ' communicating.——Which, to be done by peo' ple, that pretend to retaine in their hearts love for ' their baniſht King, he conceived no better than a ' mere gally-moffry of Religion. And that if this be ' not halting betwixt God and Baal, he knew not ' what was (12).'——In all which ſtrong expreſſions, his deſign was, to raiſe doubts and ſcruples in the conſciences of moſt perſons that had taken the oaths to King James, and deter them from ſwearing allegiance to King William; or, at leaſt, to keep them from Church, and the Communion.

(12) Obſervations on the Directions to his Curates, P. 55, 56.

[F] *Becauſe he was a Proteſtant, he was ſoon obliged to retire from Court.*] The author of *A View of the Court of St Germain*, informs us of this particular (13), in the following words. ' The firſt conſiderable ' ſtep they [the Proteſtant party at that court] made, ' was to deſire a Chappel from King James, for the ' exerciſe of their worſhip according to the Church of ' England, and propos'd Dr Granville, as a fit perſon ' to be their Chaplain; they urged the great incour' agement, ſuch a Toleration would give to his adhe' rents in England, and what ſatisfaction it would be ' to ſuch Proteſtants as followed him: but tho' com' mon policy, and his circumſtances, made every body ' believe that this requeſt would be eaſily granted, yet ' it was poſitively denied, and Dr *Granville* obliged ' not only to retire from Court, but alſo from the ' town of St Germain, to avoid the daily inſults of the ' Prieſts, *and* the dreaded conſequences of the jealouſies ' with which they poſſeſs't King James's Court againſt ' him.'

(13) P. 5. as above.

[G] *He died at his lodgings in Paris.*] He was taken ill of a fever at Corbeil the 2d of April 1703; came to his lodgings at Paris upon the *foſſes* St Victor, on the 4th; and died there the 8th at ſix in the morning (14).

(14) See General Dictionary, as above.

[H] *While he reſided in England, he publiſhed a few ſmall pieces.*] Namely, two Sermons, 1. ' The com' pleat Conformiſt: or, ſeaſonable Advice concerning ' ſtrict Conformity, and frequent celebration of the ' holy Communion.' Preached Jan. 7, 1682, in the Cathedral Church of Durham. Lond. 1684. 4to. 2. ' Sermon preached in the Cathedral Church of ' Durham, upon the revival of the ancient laudable ' practice of that and ſome other cathedrals, in having ' Sermons on Wedneſdays and Fridays during Advent ' and Lent' Preached Dec. 2, 1685. Lond. 1686. 4to. 3. He alſo publiſhed, ' Counſel and Directions ' divine and moral: In plain and familiar Letters of ' Advice to a young Gentleman his nephew, ſoon af' ter his admiſſion into a College in Oxon' Lond. 1685, 8vo. That nephew of his, was, Thomas a younger ſon of Sir Thomas Higgons Knt. by Bridget his ſecond wife, ſiſter of Dean Granville; and a Student in Magdalen-College, Oxon (15).

(15) Wood Ath. ut ſupra.

[I] *As he did a Collection of Tracts, after his exile in France.*] They were printed at Rouen, partly in 1689, and partly in 1691, 4to under this title, ' The ' reſigned, and reſolved Chriſtian; and faithfull, and ' undaunted Loyaliſt: In two plaine farewell ſermons, ' and a loyal farewell-viſitation-ſpeech. Both deliver' ed amidſt the lamentable confuſions occaſioned by the ' late Foreign Invaſion and Home-Defection of his ' Majeſties ſubjects in England. Whereunto are added ' certaine Letters to his Relations and Friends in Eng' land, ſhewing the reaſons and manner of his with' drawing out o. the kingdom. 1. A letter to his bro' ther the Earl of Bathe. 2. A letter to his Biſhop ' the Biſhop of Durham. 3. A letter to his brethren ' the Prebendaries. 4. A letter to the Clergy of his ' Archdeaconry. 5. A letter to his Curates at Eaſing' ton and Sedgefield.' With Directions to them, &c. This Book is very incorrect, as being compoſed by a Printer who did not underſtand Engliſh; and is now grown *very ſcarce*. At the beginning, there is a curious print of the Doctor, engraved by the famous Edelink.

[K] *We ſhall reflect——upon ſome unreaſonable Doctrines, which he earneſtly inculcates in that collection.*] Such is, in particular, his over-ſtrain'd notion of unlimited Obedience to Princes. For he lays it down as a plain and poſitive Duty, That ' ſubjects are ' bound to obey lawfull Princes whatever bee their ' Opinion or *Practices*,——and that no Power upon ' earth could abſolve him from his ſworn Obedience ' (16). In conſequence of which, he profeſſes an im' moveable adherence to the cauſe and intereſt of the ' Father of his country, [as he called the King] and ' an innate abhorrence of diſputing, conteſting, or ' rudely capitulating with his Prince, even then when ' he commanded things very contrary to his own ſenti' ments, which he did judge not only *inexpedient*, but ' *prejudiciall* to the flouriſhing condition of our Church ' (17).' Nay, he further declares, that ' no feares, ' or jealouſies of *Religion*, *Liberties*, or *Lawes*, did ' ever tempt him (he bleſſed God) to any undue courſes ' of Reſiſtance, Oppoſition, or ſo much as unſeemly ' capitulation, with God's Vicegerent to preſerve ' them. Tho' he loved them all ſoe well and dearely, ' that he could be contented to die for them in any ' place, or manner, unleſſe it were with a ſword in his ' hand lifted up againſt his Prince (18).'——In one place, he ſpeaks in the harſheſt terms of the Dutch. ' Our incens'd God, ſays he, may deſigne to teach us ' ſubmiſſion and ſubjection by ſo ſevere a method, as ' to make us, (who have been yet one of the freeſt ' and moſt happy Nations of Europe) *Truckle* to an ' upſtart Commonwealth, to an Antimonarchical ge' neration, who by their continual ſhelt'ring, en' couraging, and aſſiſting of Traytors, proclame their ' enmity to the very name of King; and that they ' would not leave (if they could have their will) one ' crown'd head in Chriſtendom (19).'

[L] *The*

advantage, in the following words (*b*); 'Sanctity ſate ſo eaſy, ſo unaffected, and ſo 'graceful upon him, that in him we beheld the very beauty of holineſs. He was as 'chearful, as familiar, as condeſcending in his converſation, as he was ſtrict, regular, 'and exemplary in his piety; as well-bred and accompliſhed as a courtier, and as reverend 'and venerable as an Apoſtle. He was indeed Apoſtolical in every thing, for he aban-'doned all to follow his Lord and Maſter.' This latter part of his conduct, *The loſing all*; which, in ſome mens opinion, was neither an argument of his wiſdom nor prudence, ſhall be conſidered in the Note [*L*]. And from this great Man's example, (to conclude his article), we may learn the great danger and miſchief of propagating abſurd and unreaſonable Doctrines. Since there will always be found ſome perſons or other, that will embrace and ſtiffly defend them, though never ſo much to their own, or others, prejudice: all not being equally endowed with the ſame penetrating genius, or not having a yielding conſcience alike.

(*b*) Letter to a nephew of his, who was going into holy orders.

[*L*] *The loſing all; which, in ſome mens opinion, was neither an argument of his wiſdom nor prudence, ſhall be conſidered in the Note.*] His conduct in this point, appears, of courſe, an act not only of deplorable Folly (to uſe his own words) (20) but alſo of extreme Madneſs; namely, to loſe 'ſome of the beſt 'preferments in their kind (21), even the beſt Deanery, 'the beſt Archdeaconry, and one of beſt livings in 'England (22). But what extenuates his fault or error, is his ſolemn declaration, That what he did, he perform'd in the integrity of his heart, and innocency of his hands (23). That he choſe to leave and ſacrifice all his revenues to the mercy of his cenſurers, rather than betray his Conſcience; and ſubmit to what he thought an Uſurpation (24); his Conſcience not permitting him to ſwallow any new diſpenſatory oaths, or diſtinctions (25). And that the doctrine of Non-reſiſtance, which many had always, till of late, been fond of, ſet forth at large in our Church Homilies, did juſtify his behaviour (26). Therefore he was fully ſatisfied, that the following of his maſter, to whom he had ſworn allegiance, even with the loſs of his whole revenues; was the moſt honeſt, the beſt, and wiſeſt action of his whole life. And he exulted in it, as a felicity, which did not only wonderfully ſupport, but ſometimes almoſt tranſported him (27).

C

GRAUNT [JOHN], a Citizen of London, a perſon of great ſagacity and penetration, and a very ſenſible and ingenious writer. He was the ſon of Mr Henry Graunt, who kept the Seven Stars in Birchin Lane, in the Pariſh of St Michael Cornhill, where he was born April 24, 1620 (*a*). He was bred up in all the ſtrictneſs of thoſe times, and when he arrived at a proper age was put apprentice to a Haberdaſher of ſmall wares, which trade he afterwards followed though he was free of the Drapers Company (*b*). He came early into buſineſs, and acquired by his candid behaviour, ſingular integrity, and uncommon moderation, ſo great a character and ſo extenſive an intereſt, that though he was but thirty years of age he was able to procure for his friend Dr Petty the chair of Muſick Profeſſor in Greſham College; which was then vacant by the reſignation of Dr Richard Knight (*c*). His remarkable abilities, and his no leſs remarkable probity, recommended him ſo much to the eſteem of his fellow-citizens, that after paſſing through the ward offices he came to be elected a Common-Council-Man, and as he was of a very mild and friendly diſpoſition, he was often choſen an arbitrator for compoſing differences amongſt neighbours and preventing law-ſuits; in which, by the ſtrength of his natural good ſenſe, and that diſtinguiſhing faculty, which enabled him to diſcern truth wherever he ſought it, and furniſhed him alſo with a facility of making it clear to others, he did great ſervice and acquired an univerſal reputation (*d*). It is not certain at what time he began to collect and conſider the bills of mortality, but it is very clear from his own account of the matter, that he employed ſeveral years, and was at great pains and ſome expence in drawing together his materials, before he had any thoughts of publiſhing the diſcoveries he made by the help of thoſe papers, which he very judiciouſly conceived were capable of giving great lights into many and thoſe very important ſubjects (*e*). What he chiefly aimed at in theſe ſpeculations, was to introduce not only a new manner, but new principles of reaſoning; which being eſtabliſhed upon matters of fact, might have a more certain baſis, and being ſubjected to the rules of calculation carry with them the light of evidence in reſpect to matters, as to which the opinion of mankind had hitherto been guided entirely by conjecture. This was a new as well as noble deſign, and executed with as much ſpirit as there appeared ſagacity in forming it. His obſervations were firſt publiſhed in the ſpring of the year 1662, and were preceded by a very modeſt dedication to John Lord Roberts of Truro then Lord Privy-Seal. They were received as they deſerved with equal admiration and applauſe, and went through five editions in leſs than fifteen years [*A*]. The points

(*b*) Wood's Athen. Oxon. Vol. I. col. 311.

(*c*) Ward's Lives of the Profeſſors of Greſham College, p. 219.

(*d*) Wood's Athen. Oxon. Vol. I. col. 311.

(*e*) See his Preface to his Obſervations on the Bills.

[*A*] *And went through five editions in leſs than fifteen years.*] We ſhould not have troubled the reader with the diſtinct detail of theſe five editions in this note, if we did not apprehend that the conſideration of their titles, and of ſome other circumſtances, would not a little contribute, to clear the hiſtory of this eminent and worthy perſon. The title therefore of this work, at it's original publication, was, *Natural and Political Obſervations made upon the Bills of Mortality*, &c. Lond. 1661, 4to. The Dedication to Lord Roberts is dated January 25. The title of the ſecond edition ran thus, *Natural and Political Obſervations mentioned in the following Index, and made upon the Bills of Mortality, by* John Graunt, *Citizen of London. With reference to the Government, Religion, Trade, Growth, Air, Diſeaſes, and the ſeveral Changes of the ſaid City.* The Second Edition. To which his Dedication to Sir Robert Moray was prefixed; this was alſo in quarto, and printed in 1662. The third edition was in 1665, in virtue of an order of the Council of the Royal Society,

points handled in this work were treated in ſo perſpicuous and ſatisfactory a manner, and had ſo viſible a tendency to eſtabliſh ſome of the great truths of Revealed Religion, upon the teſtimonies of ſenſe and reaſon, that thoſe who thought freely, and were deſirous that men might have their enquiries anſwered rather than checked, were extremely well pleaſed. His obſervations upon Polygamy were judged to be particularly ſtrong and concluſive, and indeed the more what he has advanced on that head is conſidered, the more the acuteneſs of his wit, and the ſolidity of his judgment, muſt be acknowledged by every ingenuous reader (f) [B]. In the concluſion of his work, he has very clearly and concifely pointed out

(f) Nieuwentyt's Religious Philoſopher, Vol. I. p. 317. Happy Future State of England, p. 249.

ciety, dated June 20 the ſame year. This was in octavo, and the author is ſtiled in the title page Captain John Graunt, and Fellow of the Royal Society. This was publiſhed in the plague year; and, in the Appendix, the author ſays, that unleſs the weekly bills roſe to above eight thouſand four hundred in one week, the mortality would not be greater than in the plague of 1625 (1); but the weekly bill did never riſe to that number, though it came very near it; for, September 19, it amounted to eight thouſand two hundred ninety ſeven, and continued to ſink gradually ever after (2). The fourth edition was likewiſe in octavo, and the author is therein ſtiled Major John Graunt. The fifth edition, in octavo likewiſe, was in 1676, after the author's death, and publiſhed by the care of Sir William Petty; and it is from his ſpeaking of this edition as his own (3), that ſome have raſhly concluded the book to be ſo; but as the reader will ſee, in a ſubſequent note, Sir William had no ſuch meaning.

(1) See Mr Oldenburg's letter to R. Boyle, Eſq; Boyle's Works, Vol. V. p. 613.

(2) See the Bill for the Plague year in our author's book.

(3) An Eſſay concerning the multiplication of mankind, by Sir W. P. p. 13.

[B] *Muſt be acknowledged by every ingenuous reader.*] After having eſtabliſhed the matter of fact, that there are actually more males born than females, in a certain proportion, he proceeds thus (4). It may be concluded from hence, that the Chriſtian Religion, prohibiting polygamy, is more agreeable to the law of nature, that is, the law of God, than the Mahometan, and others that allow it; for one man, his having many women, or wives by law, ſignifies nothing, unleſs there were many women to one man in nature alſo.

(4) Major Graunt's Obſervations, fifth edition, p. 65—71.

The obvious objection hereunto is, that one horſe, bull, or ram, having each of them many females, do promote increaſe. To which I anſwer, that although perhaps there be naturally, even of theſe ſpecies, more males than females, yet artificially, that is, by making geldings, oxen, and weathers, there are fewer. From whence it will follow, that when by experience it is found how many ewes (ſuppoſe twenty) one ram will ſerve, we may know what proportion of male lambs to caſtrate or geld, viz. nineteen, or thereabouts; for if you emaſculate fewer, viz. but ten, you ſhall, by promiſcuous copulation of each of theſe ten with two females, hinder the increaſe ſo far as the admittance of two males will do it; but if you caſtrate none at all, it is highly probable that every of the twenty males copulating with every of the twenty females, there will be little or no conception in any of them all.

And this I take to be the trueſt reaſon why foxes, wolves, and other vermin, animals that are not gelt, increaſe not faſter than ſheep; when as ſo many thouſand of theſe are daily butchered, and very few of the other die otherwiſe than of themſelves.

We have hitherto ſaid, That there are more males than females; we ſay next, that the one exceed the other by about a thirteenth part. So that, although more men die violent deaths than women, that is, more are ſlain in wars, killed by miſchance, drowned at ſea, and die by the hand of juſtice; moreover, more men go to colonies and travel into foreign parts than women; and laſtly, more remain unmarried than of women, as fellows of colleges and apprentices above eighteen; yet the ſaid thirteenth part difference bringeth the buſineſs but to ſuch a paſs, that every woman may have a huſband without the allowance of polygamy.

Moreover, although a man be prolific full forty years, and a woman but five and twenty, which makes the males to be as five hundred and ſixty, to three hundred twenty five females, yet the cauſes above named, and the later marriage of the men, reduce all to an equality.

It appearing that there were fourteen men to thirteen women, and that they die in the ſame proportion alſo, yet I have heard Phyſicians ſay that they have two women patients to one man; which aſſertion ſeems very likely, for that women are ſick of breedings, &c.

Now from this it ſhould follow, that more women ſhould die than men, if the number of burials anſwered in proportion to that of ſickneſſes; but this muſt be ſalved, either by alledging that the Phyſicians cure thoſe ſickneſſes, ſo as few more die than if none were ſick, or elſe that men being more intemperate than women, die as much by reaſon of their vices, as women do by the infirmity of their ſex, and conſequently more males being born than females, more alſo die.

In the year 1642 many males went out of London into the wars then beginning, inſomuch, as I expected in the ſucceeding year 1643 to have found the burials of females to have exceeded thoſe of males, but no alteration appeared; foraſmuch, as I ſuppoſe, trading continuing the ſame in London, all thoſe who loſt their apprentices had others out of the country; and if any left their trades and ſhops, that others forthwith ſucceeded them; for if employment for hands remained the ſame, no doubt but the number of them could not long continue in diſproportion.

Another pregnant argument to the ſame purpoſe, which hath already been touched on, is, That although in the very year of the plague, the chriſtenings decreaſed, by the dying and flying of teeming women; yet the very next year after they increaſed ſomewhat, but the ſecond after to as full a number as in the ſecond year before the ſaid plague; for I ſay again, if there be encouragement for an hundred in London, that is, a way how an hundred may live better than in the country, and if there be void houſing there to receive them, the evacuating a fourth or third part of them muſt ſoon be ſupplied out of the country; ſo as the great plague doth not leſſen the inhabitants of the city but of the country, who in a ſhort time remove themſelves from thence hither, ſo long, until the city, for want of receipt and encouragement, regurgitates and ſends them back.

From the difference between males and females, we ſee the reaſon of making eunuchs in thoſe places where polygamy is allowed, the latter being uſeleſs as to multiplication without the former, as was ſaid before in caſe of ſheep and other animals, uſually gelt in theſe countries.

By conſequence, this practice of caſtration ſerves as well to promote increaſe, as to meliorate the fleſh of thoſe beaſts that ſuffer it. For that operation is equally practiſed upon horſes, which are creatures not uſed for food, as upon thoſe that are.

In Popiſh countries, where polygamy is forbidden, if a greater number of males oblige themſelves to cælibacy than the natural overplus or difference between them and females amounts unto, then multiplication is hindred; for if there be eight men to ten women, all of which eight men are married to eight of the ten women, then the other two bear no children, as either admitting no man at all, or elſe admitting men, as whores, that is, more than one, which commonly procreates no more than if none at all had been uſed: or elſe ſuch unlawful copulations beget conceptions, but to fruſtrate them by procured abortions or ſecret murthers, all which returns to the ſame reckoning. Now if the ſame proportion of women oblige themſelves to a ſingle life likewiſe, then ſuch obligation makes no change in this matter of increaſe.

From what hath been ſaid, appears the reaſon why the law is, and ought to be, ſo ſtrict againſt fornications and adulteries; for if there were univerſal liberty, the increaſe of mankind would be but like that of foxes at beſt.

Now, foraſmuch as princes are not only powerful but rich, according to the number of their people (hands being

out the principal heads; which in the courſe of his obſervation are inveſtigated, and he farther ſhews to what great and weighty ſubjects they may be applied, ſo as to raiſe a new and accurate theory of policy, which in the hands of able and judicious ſtateſmen, that is, ſuch as are not only capable of making right deductions, but are alſo from a juſt and generous principle of public ſpirit, inclined to carry them into execution, may turn to very great account, and enable them to render the government they adminiſter powerful, and the people who live under it happy. But he modeſtly declined proſecuting ſuch enquiries in their full extent, as ſeeming to be above the reach and out of the road of a private man (g) [C]. It is very probable he might have another reaſon, which was leaving theſe things

(g) Obſervations on the Bills of Mortality, p. 96.

being the father, as lands are the mother and womb of wealth) it is no wonder why ſtates, by encouraging marriage, and hindering licentiouſneſs, advance their own intereſt, as well as preſerve the laws of God from contempt and violation.

It is a bleſſing to mankind, that by this overplus of males there is this natural bar to polygamy, for, in ſuch a ſtate, women could not live in that parity and equality of expence with their huſbands, as now and here they do.

The reaſon whereof is not that the huſband cannot maintain as ſplendidly three as one, for he might, having three wives, live himſelf upon a quarter of his income, that is, in a parity with all three, as well as having but one, live in the ſame parity at half with her alone: but rather, becauſe that to keep them all quiet with each other and himſelf, he muſt keep them all in greater awe and leſs ſplendour, which power he having, he will probably uſe it to keep them all as low as he pleaſes, and at no more coſt than makes for his own pleaſure, the pooreſt ſubjects (ſuch as this plurality of wives muſt be) being moſt eaſily governed.

We ſhould not have given the reader this long ſpecimen of our author's method of reaſoning, had it not been that we have ſome obſervations on what he has delivered, that having never been publiſhed, may perhaps afford him ſome inſtruction, or, at leaſt, entertainment. 'There never was any apprehenſion more 'groundleſs, than that Experimental Philoſophy ſhould 'prove detrimental to Revealed Religion. Experi-'ments are enquiries made by human reaſon into the 'works of God; and the knowledge collected from 'thence, is in reality a kind of Revelation. To ſup-'poſe therefore that any diſcoveries of this kind ſhould 'contradict what has been delivered by inſpired writers, 'is to ſuppoſe a repugnance between the words and 'works of God, which is impoſſible. Take Mr Graunt's 'demonſtration as to the proportion between males and 'females, and compare it with the following paſſage 'from the Goſpel.' *And the* Phariſees *came to* Jeſus *and aſked him, Is it lawful for a man to put away his wife? tempting him. And he anſwered and ſaid unto them, What did* Moſes *command you? And they ſaid,* Moſes *ſuffered to write a bill of divorcement, and put her away. And* Jeſus *anſwered and ſaid unto them, For the hardneſs of your heart he wrote you this precept. But from the* beginning *of the* creation God *made them* male *and* female. *For this cauſe ſhall a man leave his father and mother, and cleave to his wife; and they twain ſhall be one fleſh, ſo then they are no more twain but one fleſh. What therefore* God *hath joined together, let not man put aſunder* (5). The bleſſed author of this diſcourſe aſſumes a law of nature for the ground of his doctrine, Mr Graunt's obſervations have demonſtrated that this law ſubſiſts in nature. We may ſay the ſame thing with regard to Chriſt's doctrine of a particular Providence, becauſe, from the ſame obſervations it clearly appears, that thoſe events which are vulgarly conſidered as the moſt in the power of chance, are governed by certain rules, yet not ſtrictly and invariably, but within the limits properly aſſigned, ſo as to prove at once the infinite wiſdom and freedom of will in the Divine Being. The ingenious Dr Arbuthnot has puſhed this thought of Mr Graunt's to the utmoſt, and demonſtrated a particular Providence to every man who knows that two and two makes four. He has given an accurate table of the number of males and females chriſtened yearly in London from 1629 to 1710, that is, for eighty-two years (6). Upon this he makes theſe four obſervations. 1. That at London, in theſe eighty-two following years, the number of males has exceeded that of females every year. 2. That the difference thereof has always lain between two terms not far from one another. So that, 3. There were always more males born than one half of the children amounted to in one year. And 4. That the number of the males never exceeded that of the females ſo far, that almoſt all the children ſhould be males. He then computes what the chance is that ſuch a proportion ſhould be preſerved eighty-two times together, and that it makes a number of twenty-five figures following each other, the five firſt of which are 48357, to one, that it ſhould not happen, and conſequently this is the odds that this world is governed by Providence and not by chance. Now in caſe it is ſo many againſt one that this ſhould not happen in London eighty two years together, let any one experienced in calculations conſider how great a number there will be againſt one, that the ſame thing don't happen throughout the whole world, and ſo often in eighty-two years following, and then let him judge whether it can be believed that chance has any place here: for that this has really happened many ages together, and in all places of the world, may be maintained with great probability, becauſe that, in all times and in all places, the men are expoſed to more dangers than the women, and nevertheleſs there will be found in all countries men for women and women for men, of equal age and condition (7).

(7) Nieuwentyt's Religious Philoſopher, Vol. I. p. 317.

[C] *As ſeeming to be above the reach and out of the road of a private man.*] In this concluſion, our author draws together in a few lines the ſubſtance of his whole book, by which he ſhews what a prodigious ſtructure he has raiſed upon materials common to the obſervation of all men, but upon which none had ever attempted to build before; and, not content with this, he points out to his reader, to how many and how different great works theſe materials may ſtill be applied (8). 'It may be now aſked, ſays he, To what pur-'poſe tends all this laborious buſtling and groping? 'To know, 1. The number of people? 2. How ma-'ny males and females? 3. How many married and 'ſingle? 4. How many teeming women? 5. How ma-'ny of every ſeptenary or decad of years in age? '6. How many fighting men? 7. How much London 'is, and by what ſteps it hath, increaſed? 8. In what 'time the houſing is repleniſhed after a plague? '9. What proportion die of each general and particu-'lar caſualties? 10. What years are fruitful and mor-'tal, and in what ſpaces and intervals they follow each 'other? 11. In what proportion men neglect the or-'ders of the Church, and ſects have increaſed? 12. The 'diſproportion of pariſhes? 13. Why the burials in 'London exceed the chriſtenings, when the contrary 'is viſible in the country? To this I might anſwer in 'general, by ſaying, that thoſe who cannot apprehend 'the reaſon of theſe enquiries, are unfit to trouble 'themſelves to aſk them. I might anſwer, by aſking, 'Why ſo many have ſpent their times and eſtates about 'the art of making gold? which, if it were much 'known, would only exalt ſilver into the place which 'gold now poſſeſſeth; and if it were known but to 'ſome one perſon, the ſame ſingle adeptus could not, 'nay durſt not, enjoy it, but muſt be either a priſoner 'to ſome prince, and ſlave to ſome voluptuary, or elſe 'ſkulk obſcurely up and down for his privacy and con-'cealment. I might anſwer, That there is much plea-'ſure in deducing ſo many abſtruſe and unexpected in-'ferences out of theſe poor deſpiſed bills of mortality, 'and in building upon that ground which hath lain 'waſte theſe eighty years. And there is pleaſure in 'doing ſomething new, though never ſo little, with-'out peſtering the world with voluminous tranſcrip-'tions. But I anſwer more ſeriouſly, by complaining, 'that whereas the art of governing, and the true poli-'tics,

(8) Graunt's Obſervations, p. 95.

things to the care and induſtry of a friend, whom he thought every way equal to ſo great a taſk. In ſhort, there is nothing plainer, than that our author's obſervations on the bills of mortality were the elements of the famous Sir William Petty's Political Arithmetic (*b*). It is not unknown to us, that ſome writers have affirmed, he received ſome aſſiſtance from that ingenious perſon in compoſing thoſe obſervations, which poſſibly may be true (*i*). But, that he was ſo aſſiſted as not to have been able to proceed without his help, we hold to be a great miſtake, and a very unkind reflection upon his memory; which may be proved by many arguments [*D*]. At the time of publiſhing this work, he was

(*b*) See the paragraphs cited from that author's Diſcourſe on the Dublin Bills in the notes.

(*i*) Wood's Athen. Oxon. Vol. II. col. 810. Burnet's Hiſtory of his own times, Vol. I. p. 231.

'tics, is how to preſerve the ſubject in peace and plen-
'ty; that men ſtudy only that part of it which teach-
'eth how to ſupplant and over-reach one another, and
'how, not by fair out running, but by tripping up
'each other's heels, to win the prize. Now the foun-
'dation or elements of this honeſt harmleſs policy, is
'to underſtand the land, and the hands of the territory
'to be governed, according to all their intrinſic and
'accidental differences: as for example; It were good
'to know the true geometrical content, figure, and ſi-
'tuation, of all the lands of a kingdom, eſpecially ac-
'cording to it's moſt natural, permanent, and conſpi-
'cuous bounds. It were good to know how much hay
'an acre of every ſort of meadow will bear, how many
'cattle the ſame weight of each ſort of hay will feed
'and fatten, what quantity of grain and other commo-
'dities the ſame acre will bear, in one, three, or ſeven
'years, communibus annis, unto what uſe each ſoil is
'moſt proper. All which particulars I call the intrin-
'ſic value: for there is alſo another value merely ac-
'cidental, or extrinſic, conſiſting of the cauſes why a
'parcel of land lying near a good market may be
'worth double to another parcel, though both of the
'ſame intrinſic goodneſs, which anſwers the queries,
'why lands in the North of England are worth but
'ſixteen years purchaſe, and thoſe of the Weſt above
'eight and twenty. It is no leſs neceſſary to know
'how many people there be of each ſex, ſtate, age,
'religion, trade, rank, or degree, &c. by the know-
'ledge whereof, trade and government may be made
'more certain and regular, for if men knew the peo-
'ple as aforeſaid, they might know the conſumption
'they would make, ſo as trade might not be hoped
'for where it is impoſſible. As for inſtance, I have
'heard much complaint, that trade is not ſet in ſome
'of the ſouth weſtern and north weſtern parts of Ire
'land, there being ſo many excellent harbours for that
'purpoſe; whereas, in ſeveral of thoſe places, I have
'alſo heard, there are few other inhabitants but ſuch
'as live ex ſponte creatis, and are unfit ſubjects for
'trade, as neither employing others, nor working
'themſelves. Moreover, if all theſe things were
'clearly and truly known, which I have but gueſſed at,
'it would appear how ſmall a part of the people work
'upon neceſſary labours and callings: viz. how many
'women and children do juſt nothing, only learning
'to ſpend what others get; how many are mere volup-
'tuaries, and, as it were, mere gameſters by trade;
'how many live by puzzling poor people with unintel-
'ligible notions in Divinity and Philoſophy; how ma-
'ny, by perſwading credulous, delicate, and litigious
'perſons, that their bodies or eſtates are out of tune,
'and in danger; how many by fighting as ſoldiers,
'how many by miniſtries of vice and ſin, how many by
'trades of mere pleaſure or ornaments, and how many
'in ways of lazy attendance, &c. upon others: and,
'on the other ſide, how few are employed in raiſing
'and working neceſſary food and covering; and, of
'the ſpeculative men, how few do ſtudy nature and
'things! The more ingenious not advancing much
'further than to write and ſpeak wittily about theſe
'matters. I conclude, that a clear knowledge of all
'theſe particulars, and many more, whereat I have
'ſhot but at rovers, is neceſſary, in order to good,
'certain, and eaſy government, and even to balance
'parties and factions both in Church and State. But
'whether the knowledge thereof be neceſſary to many,
'or fit for others than the ſovereign and his miniſters,
'I leave to conſideration.'

[*D*] *Which may be proved by many arguments.*] In the attributing theſe obſervations on the bills of mortality to Sir William Petty, the authorities of two authors concur, which we have not been accuſtomed to cite together. The firſt is Mr Anthony Wood, who, ſpeaking of Mr Graunt's book, ſays (9), It was done upon certain hints and advice of Sir William Petty. Again, ſpeaking of Sir William Petty's Obſervations upon the Dublin bills, which were not publiſhed 'till 1683, adds, He had long before aſſiſted, or put into a way, John Graunt, in his writing of his Obſervations (10), &c Biſhop Burnet is more explicit; he ſays, there was one Graunt, a Papiſt, under whoſe name Sir William Petty publiſhed his obſervations on the bills of mortality (11) Neither of theſe writers tell us whence they had their informations, nor are they very conſiſtent. If we believe Wood, Sir William Petty aſſiſted Graunt, but if we yield any credit to the prelate, then Graunt did not ſo much as aſſiſt Sir William Petty, any farther than lending his name, and why Sir William ſhould borrow it does not appear. If we conſider this fact, there are various circumſtances that render it very improbable that Sir William Petty gave Mr Graunt any aſſiſtance, and much leſs that it was his book. In the firſt place, Mr Graunt was the elder man by about three years, which is of ſome weight, if we conſider that the collecting the materials for this work, reducing them into tables, and putting them together, required a great deal of time, and that all this was done when both were very young men. In the next place, Mr Graunt was a native and citizen of London, had lived there all his life, and therefore had reaſon, opportunity, and ſome kind of call, to undertake ſuch a kind of performance, which Dr Petty, for ſo he was called, being not knighted 'till after this book was publiſhed, never had. Thirdly, though the fame and credit of Sir William Petty came, in proceſs of time, greatly to ſurpaſs that of Graunt, yet this was not the caſe when the work in queſtion was compoſed, and therefore no ground for the ſuggeſtion, that Dr Petty ſhould take ſuch a liberty with Graunt. Fourthly, this is ſo much the more unlikely, as Sir William Petty owed his fame to his abilities, and his fortune to his fame; ſo that he could have no temptation to employ his great abilities, merely to transfer that fame to another man. Laſtly, whoever looks into the occurrences of Sir William Petty's life (12), will find, that at the juncture Mr Graunt compoſed this book, his friend was in the leaſt condition to help him, for he was employed in ſurveying Ireland, in raiſing a vaſt fortune, and in defending that fortune, when raiſed, againſt attacks of ſeveral kinds, as well in as out of the parliaments of both kingdoms. After ſhewing the inſinuation to be improbable, by argument, we will next ſhew that the fact is falſe, from authorities, and theſe authorities, ſuch as could ſcarce be expected, will not be denied, and cannot be refuted. In the firſt place we have Major Graunt's own teſtimony. In his dedication to Lord Roberts, he ſays, 'Having (I know not by what accident) engaged my 'thoughts upon the bills of mortality, and ſo far ſuc-
'ceeded therein, as to have reduced ſeveral great con-
'fuſed volumes into a few perſpicuous tables, and a-
'bridged ſuch obſervations as naturally flowed from
'them, into a few ſuccinct paragraphs; without any
'long ſeries of multiloquious deductions, I have pre-
'ſumed to ſacrifice theſe my ſmall, but firſt publiſhed,
'papers unto your Lordſhip, as unto whoſe benign ac-
'ceptance of ſome other of my papers, even the birth
'of theſe is due, hoping, if I may without vanity ſay
'it, they may be of as much uſe to perſons in your
'Lordſhip's place, as they are of little or none to me;
'which is no more than the faireſt diamonds are to
'the journeyman jeweller that works them, or the
'poor labourer that firſt digged them from the earth.'
In his dedication to Sir Robert Moray, there is much to the ſame purpoſe, in expreſſions as ſtrong as words could make them. In his preface, he tells us how he came

was a Captain of the Trained-Bands, which is the reaſon that we find them generally ſtiled Captain Graunt's Obſervations, and became afterwards a Major; which command it is probable he reſigned, when he quitted buſineſs. His book raiſed him ſo high in the eſteem of King Charles the ſecond, that he was pleaſed to recommend him particularly as a fit perſon to be choſen a member of the Royal Society at its firſt inſtitution; and the learned and eloquent author of the hiſtory of that Society informs us, that in his election it was ſo far from being a prejudice that he was a ſhopkeeper of London, that his Majeſty gave it in particular charge, if they found any more ſuch tradeſmen they ſhould be ſure to admit them all (*k*). After he left off buſineſs, he was admitted, as a truſtee for Sir William Backhouſe, into the management of the New River Company (*l*), which, with the unlucky circumſtance of his being perverted to Popery, gave occaſion to the groundleſs calumny, ſpread by more than one author, of his having ſome hand in the fire of London (*m*), which the reader will find fully refuted at the bottom of the page [*E*]. He continued his application

(*k*) Sprat's Hiſt. of the Royal Society, p. 67.

(*l*) Maitland's Hiſtory of London, p. 291.

(*m*) Echard's Hiſtory of England, p. 833. Burnet's Hiſtory of his own times, Vol. I. p. 231.

came to take up the deſign, the manner in which he proſecuted it, the difficulties he met with, the methods he uſed to overcome them, and the apprehenſions he had of ſubmitting to the view of the public what had been the buſineſs of his private meditations. After all this, to ſuppoſe he was not the author of his book, is to ſuppoſe him the greateſt liar, and the moſt diſingenuous man, upon earth, though his character was quite the contrary. The next authority is that of the King, who recommended him, as the author of this book, to be elected a member of the Royal Society. Then of the Society itſelf, who not only elected him, but ordered the treatiſe in queſtion to be printed as his book by their own printer (13). We may add that of the prelate, who reports theſe facts as the hiſtorian of the Society, and of their ſecretary, in a private letter to Mr Boyle (14). Laſtly, we have Sir William Petty's own teſtimony, in at leaſt forty places, that it was Graunt's book, and that it was not his. In 1681, Sir William Petty publiſhed his obſervations on the Dublin bills of mortality, and the very firſt words of this little piece are entirely ſufficient for our purpoſe (15). 'The 'obſervations upon the London bills of mortality have 'been a new light to the world, and the like obſerva-'tions upon thoſe of Dublin, may ſerve as ſnuffers, to 'make the ſame candle burn clearer. The London 'obſervations flowed from bills regularly kept for near 'one hundred years, but theſe are ſqueezed out of ſix 'ſtraggling London bills, out of fifteen Dublin bills, 'and from a note of the families and hearths in each 'pariſh in Dublin, which are all digeſted into the fol-'lowing tables, conſiſting of three parts, marked A. 'B. C. being indeed the A. B. C. of public œconomy, 'and even of that policy which tends to peace and 'plenty.' We may ſafely conclude, from what he ſays of both works, and the different circumſtances under which they were compoſed, that he who made the ſnuffers did not make the candle. In his five eſſays in political arithmetic, dedicated to the King, he uſes theſe expreſſions, *the London bills appear in* Graunt's *book to have been always ſince the year* 1636 *as they now are —As to the number of heads in each family I ſtick to* Graunt's *obſervations* —Graunt *affirmeth upon obſervation, that three died in eighty-eight per annum.*— Graunt *has ſhewn that but one in twenty die per annum of young children under ten years old.—It was proved by* Graunt *that one fifth part of the people died of the plague.* But becauſe he has ſometimes referred to the edition of Graunt's book in 1676 as his own, an opinion grew, that he was either the author of the book, or had much aſſiſted the author; and it is to prevent this opinion from being, upon very uncertain authorities, eſtabliſhed with poſterity as a fact, that we have moſt willingly taken ſo much pains, in juſtice to the memory of this worthy man, and to the public.

(15) Obſervations upon Dublin Bills, p. 1.

[*E*] *At the bottom of the page.*] The firſt time this ſtrange charge appeared, ſeems to have been in Mr Archdeacon Echard's Hiſtory (16), where it is thus related. 'As to the Papiſts contributing to this fire, I 'have been told by an eminent prelate, that Dr 'Graunt, one of that religion, was ſtrongly ſuſpected, 'who, having a ſhare in the water houſe by Iſlington, 'contrived, as is believed, to ſtop up the pipes the 'night before the fire broke out; ſo that it was many 'hours before that any water could be got after the 'uſual manner in the city. After all examinations, 'there was but one man tried for being the incendiary, 'who, confeſſing the fact, was executed for it. This 'was Robert Hubert a French Hugonot, of Rohan in 'Normandy, a perſon falſely ſaid to be a Papiſt, but 'really a ſort of a lunatic, who by mere accident was 'brought into England juſt before the breaking out of 'the fire, but not landed 'till two days after, as after-'wards appeared by the evidence of Laurence Peterſon, 'the maſter of the ſhip, who had him on board.' Biſhop Burnet explains and ſets this ſtory (17) in a much ſtronger light. 'The moſt extraordinary paſſage, ſays 'he, though it is but a preſumption, was told me by 'Dr Lloyd and the Counteſs of Clarendon. The lat-'ter had a great eſtate in the new river that is brought 'from Ware to London, which is brought together at 'Iſlington, where there is a great room full of pipes 'that convey it through all the ſtreets of London. 'The conſtant order of that matter was to ſet all the 'pipes a running on Saturday night, that ſo the ciſterns 'might be all full by Sunday morning, there being a 'more than ordinary conſumption of water on that 'day. There was one Graunt, a Papiſt, under whoſe 'name Sir William Petty publiſhed his obſervations on 'the bills of mortality. He had ſome time before ap-'plied himſelf to Lloyd, who had great credit with 'the Counteſs of Clarendon, and ſaid he could raiſe 'that eſtate conſiderably if ſhe would make him a tru-'ſtee for her. His ſchemes were probable: and he 'was made one of the board that governed that mat-'ter: and by that he had a right to come as oft as he 'pleaſed to view their works at Iſlington. He went 'thither the Saturday before the fire broke out, and 'called for the key of the place where the heads of the 'pipes were, and turned all the cocks that were then 'open, and ſtopt the water, and went away, and car-'ried the keys with him. So when the fire broke out 'next morning, they opened the pipes in the ſtreets to 'find water, but there was none. And ſome hours 'were loſt in ſending to Iſlington, where the door was 'to be broke open, and the cocks turned. And it 'was long before the water got to London. Graunt 'indeed denied that he had turned the cocks. But 'the officer of the works affirmed that he had, accord-'ing to order, ſet them all a running, and that no 'perſon had got the keys from him beſides Graunt, 'who confeſſed he had carried away the keys, but 'pretended he did it without deſign.' Almoſt as ſoon as this prelate's work appeared, it was aſſerted by a perſon who made ſome remarks upon it, that he was credibly informed, Graunt, at the time of the fire, was not in the management of the New River company (18). Bnt a very ingenious and inquiſitive writer, who to the indefatigable induſtry of Strype adds the honeſt impartiality of Stowe, has treated this matter largely and fairly, the reader, without doubt, will peruſe his account with pleaſure (19). 'In order to in-'form myſelf in reſpect to Biſhop Burnet's relation, 'regarding Dr Lloyd, the Counteſs of Clarendon, and 'Mr Graunt, I applied to the governor and compa-'ny of the New River, who generouſly ordered Mr Jaſ-'per Bull, their clerk, and Mr Henry Mill, their engi-'neer, to let me have ſuch accounts belonging to the 'company as were proper to be publiſhed. Whereupon I 'had recourſe to their minute book, wherein I found, 'that at a general court of the ſaid company, held at 'Mr Clifton's in Covent-Garden, (I ſuppoſe a tavern, be-'cauſe the company's courts were long before and after 'kept at ſuch houſes) on the 25th of September, anno '1666

cation to his ſtudies, and made ſome conſiderable additions to his obſervations but two years before his death, which happened on the 18th of April 1674 (*n*), when he was within a week of fifty-four years of age; on the 22d of the ſame month his body was interred in the pariſh church of St Dunſtan in Fleetſtreet, when ſome of the moſt eminent and ingenious perſons of that time, and amongſt them his old friend Sir William Petty, with tears paid their laſt devoirs to his memory (*o*). He is ſaid to have left behind him a diſcourſe upon the advance of exciſe, and ſome papers on religion, which have never been publiſhed (*p*). It is highly to his honour, and ought ever to be remembred, that immediately after the publication of his book, Lewis the Fourteenth, or his miniſters, provided by a law for the moſt exact regiſter of births and burials that is any where in Europe (*q*), and that not only Sir William Petty, but Sir Peter Pett, Mr Daniel King, Dr Davenant, and in a word all that tribe of writers, took his obſervations for their Accidence; and whatever their merit may be, derived it from him; to whom, as advocates for the dead, it is but juſt that we reſtore it.

(*n*) See his appendix to the fourth edition of his Obſervations.

(*o*) Wood's Athen. Oxon. Vol. I. p. 321.

(*p*) Idem, ibid.

(*q*) Happy Future State of England, p. 249.

'1666, at which court John Graunt, Eſq; was firſt admitted a member of the ſaid New River company, in the room of Alexander Broom, deceaſed, in truſt for one of the ſhares belonging to Sir William Backhouſe, Knight, who dying in the year 1669, Dame Flower Backhouſe (I ſuppoſe his relict) became poſſeſſed of nine of his ſhares; and, on the twelfth of November in the ſame year, ſhe appointed the ſaid Mr Graunt as one of her truſtees in the ſaid company: whereby it is manifeſt, that the above recited relation which the Biſhop had of Dr Lloyd and the Counteſs of Clarendon, has not the leaſt foundation. For by what has been ſaid, it is evident that Mr Graunt was not admitted into the government of the New River company, 'till twenty-three days after the breaking out of the fire of London, and then put in truſt by the abovenamed Sir William Backhouſe, whoſe relict, daughter, relation, or nameſake, the abovementioned Dame Flower Backhouſe, was ſome time after married to Henry Lord Cornbury, eldeſt ſon to the Earl of Clarendon, and who by right of his ſaid lady was firſt admitted a member of the ſaid company, on the tenth of November, in the year 1670, and afterward as Earl of Clarendon, on the ninth of November 1676, being the firſt of that family that ever was concerned in the New River company.' There are ſome few points farther, worth remarking; firſt, it is not very certain that at the time of the fire Mr Graunt was a Papiſt, ſince the additions to his book in 1665 ſpeak him otherwiſe. The Parliament met on the 18th of September 1666, and on the very day that Mr Graunt was admitted a member of the New River company, they appointed a committee to enquire into the cauſes of the fire (20). The report made by Sir Robert Brook, chairman of that committee, contains abundance of extraordinary relations, but not one word of the cocks being ſtopped, or any ſuſpicions of Mr Graunt. Beſides, if he had thruſt himſelf into this affair, as the two Biſhops ſuggeſt, and had been queſtioned about it, it would have been highly imprudent in him, and much more ſo in the company, to admit him to their board. It is very plain from hence, that the ſtory was not invented 'till ſome conſiderable time after the fire, when Mr Graunt was known to be a Papiſt; and this accounts for ſeveral other miſtakes, ſuch as the Counteſs's ſaying he was her truſtee, which did not happen 'till three years after the fire. For this Dame Flower Backhouſe was the daughter and ſole heir of William Backhouſe, of Swallowfield, in the county of Berks, Eſq; firſt married to Sir William Backhouſe, Bart. and after his deceaſe to Henry Lord Cornbury. Theſe ſhares in the New River company deſcended to this lady from Sir John Backhouſe, Alderman of London, who was concerned with Sir Hugh Middleton in the original undertaking (21).

(20) A true and faithful account of the ſeveral informations exhibited to the Honourable Committee, appointed by the Parliament to enquire into the late dreadful burning of the city of London, printed 1667 without the publiſher's name.

GREAVES [JOHN] an eminent Mathematician and Antiquary, was born in 1602, at Colemore near Alresford in Hampſhire; and educated there under his father John Greaves Rector of the place, and a celebrated ſchool-maſter (*a*). At the age of fifteen he removed to Baliol College (*b*) in Oxford, and applying cloſely to the academical ſtudies commenced A. B. July 6, 1621. Three years after which, ſtanding candidate for a fellowſhip of Merton College, he was the firſt of five who were elected. June 25 1628 proceeded A. M. (*c*). At which time the extraordinary proficiency he had made not only in the languages and critical learning but alſo in the Mathematicks, brought him into an intimate acquaintance with ſeveral of the moſt eminent ſcholars (*d*) in the univerſity, particularly with Mr Peter Turner then ſenior fellow of his college, and Geometry Profeſſor at Greſham, who reſigning this latter place was ſucceeded therein by our author [*A*] Feb. 22,

(*a*) Wood's Ath. Ox. Vol. II. col. 156.

(*b*) Baliſiofergus; or a commentary upon the foundation, &c. of Baliol College, Oxford 1660.

(*c*) Wood ubi ſupra & faſti, Vol. I. col. 218, 240. The reaſon of his deferring this degree ſo long is not certainly known, perhaps it might be occaſioned by ſome private ſtatute of that College.

(*d*) As Dr Henry Briges, Dr John Bainbridge, and others. Smith in vita Joh. Græveſii inter vitas illuſtrium virorum, p. 5. edit. 1707, 4to.

[*A*] *He ſucceeded Mr Turner at Greſham.*] Dr Ward, who (1) intimates his opinion that Mr *Turner*'s friendſhip was particularly ſerviceable to our author in this election, gives us the following teſtimonial, recommending him from Oxford.

(1) Under the Article of GREAVES [JOHN] in his lives of the Greſham Profeſſors, p. 36.

'*Whereas Mr John Greaves, Maſter of Arts, and Fellow of Merton College in Oxford, hath deſired letters teſtimonial concerning his ſufficiency in the Mathematics: We whoſe names are underwritten, having knowledge of him, ſome by daily converſation, others by conference with him, or by the report of credible perſons and competent judges of his ſufficiency in theſe arts, do teſtify, that he is a man very ſufficiently qualified for the reading of a lecture in that faculty. In witneſs whereof we have put our hands to theſe preſents.*

Nat. Brent, Warden.
Pet. Turner.
Will. Boſwell.

'*Being deſirous that a worthy ſcholar may ſucceed my late learned colleague* Mr Henry Briggs *in the profeſſion of Geometry, I do moſt ſincerely give this teſtimony unto Mr* John Greaves, *Maſter of Arts, and Fellow of Merton College, that he hath for ſome years been a frequent and diligent auditor at the public lecture of myſelf and colleague; and hath by many private conferences given me occaſion to take notice of his ſingular ſkill in the Mathematics, eſpecially in the Geometry of Euclid and other antient authors; and that he is well furniſhed with all theſe qualities, which our honourable and judicious founder, Sir* Henry Savill, *doth require in his Profeſſor of that art.*

'Ita ex animo teſtor *Johannes Bainbridge*,
'Med. *Doctor, & Aſtronomiæ Profeſſor Savilianus.*

There being no date to either of theſe papers, Dr Ward tells us, that *the profeſſion of Geometry*, mentioned in this laſt, muſt refer to Greſham College, and not to Oxford;

22, 1630, with this he ſtill held his fellowſhip at Merton. But his ambition prompting him to excel, it was not long before he reſolved to travel abroad for further improvement. Upon that plan we find him viſiting Leyden, Paris, and Rome in *1635* [*B*]. During this tour he was invited upon very advantageous terms to live with the Earl of Arundel (*e*) then in Italy, and to go with his lordſhip into Greece; but being diſappointed in ſome of his principal views in theſe travels [*C*], he formed other deſigns which determined his choice to return to England. He arrived the year following, and immediately ſet himſelf to make all poſſible preparations for a journey to Egypt [*D*]. And acquainting Archbiſhop Laud (to whom he had ſome time before been recommended by Mr Turner) with his deſign of viſiting the eaſt countries, he was generouſly encouraged in it by his Grace, from whom he received a general diſcretionary commiſſion to purchaſe for him Arabic and other manuſcripts, and likewiſe ſuch coins and medals as he could procure. The Archbiſhop gave him alſo a letter of recommendation to Sir Peter Wyche, the Engliſh embaſſador at Conſtantinople (*f*). And in his way to that city he embarked in the river Thames for Leghorn about the beginning of June *1637*, being accompanied by his particular friend Mr Pococke, whom he had earneſtly ſollicited to this voyage [*E*]. After a ſhort

(*e*) Mr Petty, in his lordſhip's name, profered him 200 l. per Ann. beſides ſuch fortunes as that lord could heap upon him. Life of Dr Pococke prefixed to his Theological Works, p. 4. Lond. 1740. fol.

(9) Ward's Life of our author, p. 137, 138.

(10) Smith, ubi ſupra, p. 7. Who intimates that the argument made uſe of, by our author to the magiſtrates of London, was, that he ſhould have a particular view to the honour and advantage of the city, in this undertaking. Among his inſtruments (of which what is obſerved in remark [K], ſhews he had a large ſtock) were a braſs quadrant of 7 foot radius, an azimuth compaſs to take the variation of the needle of one foot rad. and a croſs ſtaff of ten foot rad. accurately divided into 10,000 parts, which he made uſe of in meaſuring the pyramids. Pyramedogr. p. 96. and in the preface. Obſervations in his travels, p. 508, and 478. and letter to Mr Hardy, Miſcel. Works, p. 44, 45.

(2) He was alſo remarkably fond of this University, and had but little liking to the City, where the political principles were very different from his own.

(3) In Vita. J. Gravii inter vitas quorundum illuſtrium viror. &c. p. 5.

(4) The firſt fixes it in 1633. Ath. Ox. Vol. II. col. 157, and the other in 1636. Vita Grav. p. 7.

(5) It is printed in our author's Miſcellaneous Works, Vol. II. p. 446. Publiſhed by Dr Birch in two Vols 8vo. 1737. To this Dr Ward where laſt cited, p. 137. has added another and clearer proof from a Latin letter among the MSS. of Sir Rich. Ellis, Bart. which mentions our author's being at Venice in January 1635. And the words of a letter from himſelf to Dr Pococke, cited in remark [C], at the end, intimate his having been at Rome in this tour.

(6) This Profeſſor in the preface to his Arabic Lexicon, printed 1654. has theſe words relating to Mr Greaves, *Auditor quondam meus.*

(7) Our author in a letter wrote after his return from the Eaſt to Golius, calls it *vetus amicitia.*

(8) Mr Greaves begun his Elementa Linguæ Perſicæ, at Paris, at Mr Hardy's ſollicitation. See the preface to that book.

Oxford; where, ſays he, Mr Greaves never applied for the Geometry profeſſorſhip. In a matter of ſo little moment, this remark would have paſſed without any further examination, was not the whole tenor of Dr Bainbridge's teſtimonial ſo ſtrikingly incompatible, as it is, with any ſuppoſition of not referring to the Savilian profeſſorſhip. Indeed, as Mr Turner was then a candidate for this place, and eſpouſed by Archbiſhop Laud, it is not likely that he ſhould be oppoſed therein by Mr Greaves, who was not then known to the Archbiſhop; not friendſhip ſo much as common ſenſe muſt forbid an attempt which could promiſe no ſucceſs: but that he ſhould wiſh for the Oxford rather than the Greſham lecture, can hardly be doubted, when the difference in the value of each is conſidered (2). It is alſo as plain as words can make it, that Dr Bainbridge wiſhed the ſame thing, and gave him this teſtimonial to make the beſt uſe he could of it; and, as it contained a ſtrong atteſtation of Mr Greaves's merit, the reaſon of his applying it at Greſham is evident, without the help of Dr Ward's very forced conſtruction. With regard to his further merit in Mathematics, particularly in Aſtronomy, at this time, Dr Smith aſſures us (3), that he had then not only read over the writings of *Copernicus, Regiomontanus, Purbach, Tycho Brahe,* and *Kepler,* with other celebrated Aſtronomers of that and the preceding age, but that he had made the ancient Greek, Arabian, and Perſian authors in that ſcience familiar to him; having before, as he ſays, gained an accurate ſkill in the oriental languages, *accurata linguarum orientalium cognitione prius acquiſita.* How theſe words are to be underſtood will appear preſently.

[*B*] *We find him in Holland, &c. in* 1635.] Tho' it is not abſolutely certain what year he firſt went abroad, yet Mr Wood is probably, and Dr Smith is certainly, miſtaken in aſſigning the date of it (4). We have no traces of his being out of England 'till 1635, and that he was at Paris that year, appears from a letter of Monſieur Hardy to him, dated September 1, 1641 (5), where that gentleman mentions his acquaintance with Mr Greaves in that city ſix years before. Moreover, we find him at Leyden in Holland, attending the lectures of Golius the famous Arabic Profeſſor there (6), and contracting a friendſhip with him (7), which muſt have been in this tour, ſince his paſſage both to and from the Eaſt was performed by ſea, and he never went abroad afterwards.

[*C*] *Diſappointed in that tour.*] Notwithſtanding Dr Smith, as we have already obſerved, tells us, that our author *had before this time attained an accurate ſkill in the Perſian language*; yet it ſeems one of the views, wherein he failed in making this tour, was to get further inſtructions upon that article. Mr Hardy, in the letter already cited, writes thus to him, *Ante annos ſex cognovi te ſtudioſiſſimum linguæ Perſicæ. Eſt in hac civitate Perſa Spahani natus, egregie in ſua lingua eruditus: ſi tantiſper iſthuc proficiſci poſſes, facile expleres ardentem illam cupidinem diſcendæ linguæ Perſicæ, quam in te admirabar* (8). Another deſign, in which he met alſo with a diſappointment, was the procuring of certain books in ancient learning. Of this he complains in a letter to Dr Pococke, wrote upon the ſubject of their intended voyage into the Eaſt. 'I think, ſays 'he, this courſe ſhould be taken, to carry good ſtore 'of printed Greek and Arabic, &c. books to Con'ſtantinople and other places, which might be changed 'for other books. I had thought the Grecians had 'ſupplied themſelves out of Italy, but, ſince my being 'there, I have obſerved that they could find none to 'buy. So deſtitute is Italy of all good books. You 'can better inform me whether this courſe may be ad'vantageous or not, though the Maronites in Rome, 'when I mentioned it to them, did much approve of 'it (9).'

[*D*] *He made preparations for his journey to Egypt.*] His primary deſign in this journey being to meaſure the pyramids with all poſſible exactneſs, and withal to make ſuch other improvements in Aſtronomy and Geography, as opportunities offered, by taking the altitudes and diſtances of the ſtars, the latitudes of cities, obſerving eclipſes, &c. He furniſhed himſelf with inſtruments of all ſorts proper for thoſe purpoſes. This was done at his own expence, the city of London, to which he applied, refuſing to contribute towards the purchaſe (10). Afterwards, when his money fell ſhort, he was generouſly ſupplied by his brothers, *who,* as he obſerves (11), *had ſtrained their own occaſions, to enable him, in deſpite of the City, to go on with his deſigns.* Amongſt which, that of purchaſing curious books being, as is remarked in the text, a principal one, in this view he bought ſeveral books before his departure, in order to exchange them for others in the Eaſt, as he had intimated to Dr Pococke in the letter cited in the laſt remark. Beſides the aſſiſtance of his brothers, Dr Smith thought he had ſome help from Archbiſhop Laud (12), and Mr Wood ſeems to ſuggeſt the ſame thing, when he tells us, his Grace ſent our author to travel into the eaſtern parts of the world, to obtain books of the languages for him (13).

[*E*] *He had earneſtly ſollicited Mr Pococke's company.*] To this purpoſe he made the following kind and generous offer, in the letter cited in remark [*C*], where he writes thus to that friend. 'I ſhall deſire your favour 'in ſending up to me, by my brother Thomas, Ulug'beg's Aſtronomical Tables, of which I purpoſe to 'make this uſe. The next weeke I will ſhew them to 'my Lord's Grace, and highly commend your care in 'procuring of thoſe tables, being the moſt accurate that 'ever were extant; then will I diſcover my intention 'of having them printed, and dedicated to his Grace. 'But becauſe I preſume that there are many things 'which in theſe parts cannot perfectly be underſtood, 'I ſhall therefore acquaint my Lord with my deſires of 'taking a journey into thoſe countries, for the more 'emendate edition of them; afterwards by degrees 'fall downe upon the buſineſs of the conſulſhip (14); 'and how honourable a thing it would be, if you were 'ſent out a ſecond time, as Golius in the Low Countries 'was by the States, after he had beene once there be'fore. If my Lord ſhall be pleaſed to reſent and com'paſſe the buſineſſe, I ſhall like it well; if not, I ſhall 'procure three hundred pounds for you and myſelfe be'ſides getting a diſpenſation for the allowances of our 'places in our abſence; and, by God's bleſſing, in three 'years diſpatch the whole journey. It ſhall goe hard, 'but I will too get ſome citizen in as a benefactour to 'the

(11) In a letter from Conſtantinople dated Aug. 2, 1638. printed in Gen. Dict. under our author's article.

(12) In the place laſt cited.

(13) Ath. Ox. ubi ſupra.

(14) Mr Petty had adviſed our author to go, by the Archbiſhop's means, Conſul to Aleppo, and procure leave of the grand Signor, to have a conſular power at Alexandria, as often as he ſhould go thither. Life of Dr Pococke prefix'd to his Theolog. Works, by Dr Twells, p. 10. Lond. 1740. fol. where the whole letter is printed.

a ſhort ſtay in Italy [F], he arrived at Conſtantinople before Michaelmas. Here again the hopes our author had fed himſelf with, of learning the Arabic tongue more perfectly, were intirely fruſtrated for want of ſufficient maſters (g); but he ſucceeded much better in the buſineſs of procuring manuſcripts [G], which he purſued with indefatigable diligence, ſometimes even at the peril of his life [H]. In the farther ſearch after thoſe uſeful curioſities

(g) See his letter to Claud. Hardy, in the Miſcellaneous Works, of our author, by Dr Birch, Vol. II. p. 442. Lond. 1737, 8vo. 2 Vols.

' the deſigne; if not, three hundred pounds of mine, ' whereof I give you the halfe, together with the re- ' turne of our ſtipends, will in a plentyfull manner, if ' I be not deceived, in Turky manteine us.'

[F] *He made but a ſhort ſtay in Italy.*] Dr Smith, who fixes our author's arrival at Conſtantinople about April 1638, making him to ſtop in his way thither half a year in Italy; ſeeing upon that miſtake there was time enough for it, ſuppoſes him not only to have gone to Rome, but to have made a great part of his collections of the antiquities in and about that city at this time; and this miſtake is continued and confirmed, from the ſame authority, viz. that of our author's Note Book, by Dr Birch (15), ' which ſhews, ſays he, ' that Mr Greaves not only wrote down the inſcriptions, ' but likewiſe meaſured the pillars and other monuments ' there, and took a draught of them, particularly of ' Ceſtus's pyramid and the Pantheon.' It is likewiſe affirmed, that at this time he viewed the catacombs, and examined all the principal cabinets and muſæums in that city. That he now became acquainted with Lucas Holſtenius, keeper of the Vatican library, Athanaſius Kircher, and Gaſpar Bertius, a celebrated Aſtronomer, who informed him that he had found, by repeated obſervations, with a large inſtrument of Clavius, the altitude of the pole at Rome to be 41° 46'. That from Rome he went to Padua, where he was introduced to the acquaintance of Francis Urſati, John Rhodius, and Andrew Moretti, Profeſſors there. That going thence to Florence, he ſtaid there ſome weeks, after which he returned to Leghorn. So palpable an error did not eſcape the diligence of Dr Ward (16), who ſhews, that the time aſſigned by Dr Smith (17) for our author's ſtay at Conſtantinople, viz. from April to September, is contradicted by Mr Greaves himſelf (18) in a letter to Monſieur Hardy, after he came home, where he has this expreſſion, *primum annum Conſtantinopoli egi*. As to the viſits ſaid to be made by our author at this time to Rome, and the other cities of Italy, Dr Ward apprehends, that was done in his former travels; he even ſeems to doubt p. 142. our author's viſiting Rome at this time, but, in a letter to Dr Pococke, written before they ſet out, Mr Greaves mentions his deſign to ſtop in Italy and go to Rome, in order to diſcharge ſome employments left unperfected in his former tour. *Life of Pococke*, p. 15. He alſo very juſtly turns the evidence of the note book againſt the advocate who produces it; remarking, that all the obſervations in Italy, which are ſet down in that book with any dates to them, appear to be made after our author's return from the Eaſt. The firſt of theſe, as he remarks, being dated at Leghorn June 20. others at Florence and Siena in Auguſt; and others again at Rome in October following, where he likewiſe copied ſeveral ancient inſcriptions. To theſe proofs it may be added, that our author himſelf expreſsly affirms upon another occaſion, that he was at Conſtantinople in 1637 as well as in the ſubſequent year (19); and that in the year 1639, he went on purpoſe to Italy to view the other antiquities of the Romans, ſo eſpecially thoſe of weights and meaſures; and we find him accordingly meaſuring ſeveral of the moſt remarkable pillars and monuments at and about Rome, and particularly the Pantheon, at that time (20); ſuggeſting alſo, that he had not done thoſe things before, for want of proper inſtruments, of which he was now provided. Upon the whole, ſince there appears great confuſion in Dr Smith's account of the dates of the ſeveral removes in this eaſtern progreſs, which have not been hitherto well adjuſted; it will not be amiſs to take this opportunity of ſettling them as exactly as the data found in our author's writings will allow. Firſt then, in a letter to Monſieur Hardy, dated June 18, 1641, he ſays (21), it was then four years ſince he ſet out upon this journey that after a year's ſtay at Conſtantinople, he went thence to Alexandria, where he ſpent ſix months. He wrote a letter from Conſtantinople in December 1637; and in another of Auguſt 2, 1638, he writes, that he ſhould that month go for Egypt (22). In his way from Conſtantinople, he took the altitude of the pole at Rhodes, September 11. and ſtaying there ſix days, arrived in eight more at Alexandria (23). A remark made in his travels concerning the Jewiſh paſſover, ſhews he was at Alexandria April 9, 1639 (24). In a letter to Dr Pococke, dated June 14, he writes, that he had been two months in paſſing from Alexandria to Leghorn; and, in another letter, dated March 8. following, he acquaints that friend, that being then provided of a ſhip, he was ready to embark for England (25). Laſtly, He obſerved the variation of the needle at Leghorn, March 14. (26). By comparing theſe particulars, and what is mentioned in the preſent remark concerning his ſtay at Rome in his paſſage to the Eaſt, it may be collected, that he left England about the beginning of June, 1637. That he arrived at Conſtantinople the September following. That leaving that city in September the enſuing year, he came to Alexandria about the 22d of the ſame month 1638, and departing thence about the middle of April 1639, came to Leghorn about the middle of June. That after a ſtay of about nine months in Italy, he ſet ſail for England, where he landed in the end of May, or beginning of June 1640 (27). The diligence here ſhewn (which might otherwiſe be juſtly cenſured) will be found of uſe, not only in removing the perplexities of former accounts, but chiefly as our author's writings will, with the help of this clue, be read with leſſer heſitation.

[G] *He ſucceeded better in procuring manuſcripts.*] In the letter of Auguſt 2, 1638, cited above, he writes thus. ' I preſume, in Arabic books, my Lord hath ' received a remonſtrance of my care by thoſe which ' the companies have ſent. It is true, many more ve- ' ry choice ones might be procured, with inquiring and ' watching after opportunities, if they would give the ' price. Some few of thoſe which they thought to be ' overvalued, I have purchaſed at exceſſive rates. You ' may expect to ſee moſt of the Greek Mathematicians, ' tranſlated into Arabic, brought home. Amongſt ' others, I have procured *Ptolemy's Almageſt*, the fair- ' eſt book that I have ever ſeen, ſtolen by a Spahy (as ' I am informed) out of the King's library in the Se- ' raglio. Whereby you ſee there is a poſſibility of hav- ' ing alſo thoſe Greek and Latin authors, (which I ' mentioned in my former letters to be buried in the ' Seraglio) (28) if the ** were handſomly followed by ' an Embaſſador.' Mr Greaves alſo, after his return home, tells his friend Monſieur Hardy, that, upon his diſappointment in learning the Arabic at Conſtantinople, he applied himſelf diligently to ſearch for manuſcripts, in which he had ſucceeded very well. For, ſays he, beſides ſeveral Arabic, Perſian, and Turkiſh books, in almoſt all the ſciences, and Lexicons of good note in thoſe three tongues, I bought almoſt all the ancient Greek Mathematicians, tranſlated into Arabic ſome ages ago, together with the works chiefly of the moſt famous modern Aſtronomers of India and Arabia (29).

(28) He had been aſſured by ſome of the Greeks, that the library, which belonged formerly to the Chriſtian Emperors, was ſtill preſerved in the Sultan's palace. Smith, Vita J. Græv. p. 10. where he queſtions the truth of Mr Greaves's information, charges the Greeks with being much given to lying; and obſerves that during his ſtay there, after the utmoſt diligence and inquiries, he could never diſcover the leaſt grounds for ſuch a belief.

[H] *To the danger of his life.*] Upon the death of the Patriarch (30), mentioned in the text, his ſucceſſor (named Bereas) had cited the Dutch Embaſſador before the Divan, and charged him with having received from the Church 200,000 crowns, in the time of former diſſentions, beſides ſtore of manuſcripts belonging to the Patriarch; upon which our author obſerves, that he might have fallen into the ſame danger himſelf, if he had not prevented the ſtorm by the mediation of ſome Greeks of his acquaintance. For, having procured, out of a blind and ignorant monaſtery, which depended upon the Patriarch, fourteen good manuſcripts of the Fathers, he was forced privately to reſtore the books and loſe his money, to avoid a worſe inconvenience (31).

(29) See Miſcel. &c. p. 443.

(30) Of which ſee a particular account in Dr Pococke's Article.

[I] *The*

ties he purpoſed to go to mount Athos in Macedonia, having obtained the aſſurance of a particular recommendation to the monks there from Cyril Lucar then patriarch of Conſtantinople; but all the great expectations he had raiſed from this undertaking [I], being ſuddenly quaſhed by the untimely death of that prelate, he took the opportunity which offered ſoon after [K] of paſſing in company with the annual Turkiſh fleet to Alexandria in Egypt, where (having firſt touched (b) at Rhodes) he arrived before the end of September 1638. This was the boundary of his intended progreſs, and as the country afforded a large field for his curious and inquiſitive genius, ſo he omitted no opportunity (as has been well obſerved (i)) of remarking whatever the heavens, earth, or ſubterraneous parts, offered him, that ſeemed any ways uſeful and worthy of obſervation. But the grand purpoſe of coming hither being to take an exact and accurate ſurvey of the Pyramids, (of which ſo much had been ſaid and ſo little ſettled by ancient or modern authors at that time) he went twice from Alexandria to Grand Cairo, and thence to the deſerts (k) where they ſtand, ſo that he amply gratified his curioſity upon that much deſired ſubject [L]. After which having found himſelf greatly deceived in his expectations of purchaſing

(b) He ſtaid here ſix days, and made ſome aſtronomical obſervations with a ſmall aſtrolabe, not daring to uſe a larger inſtrument for fear of raiſing a ſuſpicion in the Turks; from hence he arrived in eight days at Alexandria, Dr Ward by miſtake ſays in ſix. See our author's letter to Monſ. Hardy, ubi ſupra, and Ward's Lives, p. 141.

(i) By Dr Ward, ubi ſupra.

(k) Viz. ſome ſoon after his arrival, and ſome juſt before his departure. See his Obſervations in Egypt, printed in his Miſcellanies, Vol. II. p. 507. & ſeq.

[I] *The death of the Patriarch quaſhed the expectations he had raiſed from a viſit to mount Athos.*] Upon this mountain there are ſeveral monaſteries *, ſettled there long before the deſtruction of the Grecian empire by the Turks; and, having eſcaped the general ravage at that time, it continued in the poſſeſſion of the monks, who call it ἅγιον ὄρος, the ſacred mountain. Notwithſtanding what had been ſaid of the extreme ignorance of the monks, by Father Belon (32), who affirmed that they had indeed ſome Divinity books; but none of Poetry, Hiſtory, or Philoſophy. Yet it was well known to Archbiſhop Uſher (33), that there were ſeveral valuable Greek manuſcripts preſerved there; and the place being under the juriſdiction of the Patriarch of Conſtantinople, that prelate had promiſed to give Mr Greaves liberty of entering into all the libraries of that place, in order to collect a catalogue of ſuch books, as either were not printed, or elſe, by the help of ſome there, might have been more correctly ſet out. Theſe, by diſpenſing with the anathema's which former Patriarchs had laid upon all Greek libraries to preſerve the books from the Latins, were deſigned to be preſented by the Patriarch to Archbiſhop Laud, for the better proſecution of his Grace's honourable deſigns in the edition of Greek authors *. Dr Smith had a deſign afterwards to viſit this mountain, but was alſo prevented (34). However, about the beginning of the preſent century, Dr John Comnenus, a Phyſician of Walachia, was there a conſiderable time, and publiſhed a particular deſcription of the monaſteries in the vulgar Greek. A Latin tranſlation of this piece by Father Montfaucon was printed at the end of his *Paleographia Græca*, wherein it appears, that the monks then were not ſo ignorant as Father Belon had repreſented them to be in his times. For he tells us, ſome of them were employed in copying books, and others in binding them; and of their libraries, he ſays, 'there were a great number of ancient manuſcripts, full of all wiſdom, divine knowledge, and ſublime thoughts, books of Divinity, and many in every other ſcience, never yet publiſhed, and to many unknown.' The truth of this laſt remark is atteſted by Mr Montfaucon, who ſays he had then [in 1708] (35) never ſeen one book that was written at Mount Athos. But he did not continue long in that ignorance; for, in 1715, he met with no leſs than two hundred in the *Bibliotheca Coiſliniana* brought from this mount, conſiſting of various kinds of literature, Divinity, Philoſophy, Mathematics, Hiſtory, and Philology; ſome of them of a conſiderable age. He found likewiſe that many of them had been written there (36). About 26 years ago a parcel of Greek manuſcripts were brought from thence into England, and purchaſed by the Archbiſhop of Canterbury [Dr Wake], the Univerſity of Oxford, Dr Bentley, and Dr Mead; and another parcel ſome time after was bought by the Archbiſhop and Dr Mead. A perſon was alſo abroad in 1740, upon the ſame deſign of purchaſing more. Since which, the very learned Phyſician Dr Aſkew, about four years ago, brought ſeveral curious manuſcripts from thence, and other parts of Greece.

[K] *He ſet out ſoon after.*] Before his departure, he gave an inſtance of his attention to aſtronomical improvements. Having found that there would be a large viſible eclipſe of the moon in December following, he furniſhed proper perſons, with convenient inſtruments for obſerving it at Conſtantinople, Bagdad, Smyrna, and Alexandria; and he gave them inſtructions alſo how they ſhould obſerve it *. 'I preſume, ſays he, it will be punctually and carefully done at Bagdad, ſince the Phyſician to the King's favourite, a Chriſtian, hath undertaken the buſineſs, who hopes to get reputation, by doing it in the ſight of the Grand Signior, and of his army. I doubt not, continues he, it will be as carefully obſerved in England, and could wiſh, (as by my letters I earneſtly deſired) that at the ſame time obſervations might be made at the Azores (37).

[L] *He amply gratified his curioſity upon the Pyramids.*] Our author always expreſſes himſelf upon this ſubject, in terms which teſtify the greateſt ſatisfaction, particularly with reſpect to the chamber in the inſide of the firſt pyramid *, where ſtands as he calls it the monument of Cheops. Theſe proportions of the chamber, and thoſe of the hollow part of the tomb, were taken by him with as much exactneſs as it was poſſible to do; 'which, ſays he (38), I did ſo much the more diligently, as judging this to be the fitteſt place for the fixing of meaſures for poſterity; a thing which hath been much deſired by learned men, but the manner how it might be exactly done has been thought of by none. I am of opinion, that, as this pyramid has ſtood three thouſand years almoſt, and is no whit decayed within, ſo it may continue many thouſand years longer: and therefore, that after-times, meaſuring theſe places by me aſſigned, may hereby not only find out the juſt dimenſions of the Engliſh foot, but alſo the feet of ſeveral nations in theſe times, which in my travels abroad I have taken from the originals, and have compared them at home with the Engliſh ſtandard. Had ſome of the antient Mathematicians thought of this way, theſe times would not have been ſo much perplexed, in diſcovering the meaſures of the Hebrews, Babylonians, Egyptians, Greeks, and other nations.' In the ſame vein he writes to his friend Monſieur Hardy, in Latin, taking notice, that he had taken a more curious ſurvey of the pyramids, than had been then done by any, either antient or modern, traveller. He proceeds thus, '*Interiorem cameram & nonnulla ſecretiora adyta temporis injuria nondum corrupta, nec unquam, ſi recte judico, corrumpenda, menſuris Anglicis diligenter menſus ſum, adeo exacte ut e viginti mille partibus in quas viginti pedes lineis tranſverſis ſive potius diagoniis diviſi, ne unam quidem vel deeſſe vel ſupereſſe exiſtimem. Quod ideo tanto accuratius præſtiti, ut ex iſta comparatione omnium gentium menſuræ, quæ hodie ſunt aut olim fuerunt, e duraturo aliquo monumento poſteris ſignari poſſint, quod quidem ſi à Mathematicis olim præſtitum fuiſſet, ſelectis aliquibus idoneis locis temporum injuriæ non obnoxiis, minus hodie incerti eſſemus in antiquorum menſuris inveſtigandis* (39).' Theſe extracts are taken at length for the ſake of the following remarks. Firſt, Mr Wood (40) tells us, that while our author was in the largeſt pyramid, he made a meaſure of the foot obſerved by *all* nations, in one of the rooms, with his name, John Gravius, under it, which, ſays he, hath been noted by ſeveral travellers. But he gives us none of their

* In the gallery over the ſchools at Oxford, there are two ſurveys of the monaſtery, τῦ παντοκράτορος in this mountain, taken in 1726, and preſented in perſon to that Univerſity by Doſitheus, Archimandrite of that monaſtery.

(32) In his treatiſe intitled Les Obſervations de pluſieurs ſingularités & choſes memorables, trouvées en Grece &c. Liv. 2. c. 35, en Anvers 1555, 8vo. he ſays they could neither write nor read.

purchaſing books [*M*], he determined to return home. In that deſign he embarked at Alexandria in the middle of April 1639 for Leghorn, where he arrived in two months; intending to make the tour of Italy a ſecond time [*N*], in order to examine more accurately

their names, and the turn of the whole period manifeſtly betrays a fondneſs for the marvellous, more than a juſt concern for the truth, which becomes ſtill much more doubtful, when we ſee no mention made of it any where by Mr Greaves, and eſpecially in the places here cited, where (if it was fact) the ſubject would naturally and almoſt unavoidably have led him to take ſome notice of it. But if there be ſome room to ſuſpect that more is aſcribed to our author than was really performed by him, in this particular, we have at leaſt equal reaſon to think his character has been more injured, by aſcribing leſs merit to his performance than it actually deſerves, in another particular, and that of much greater importance. Every body knows the exactneſs of his meaſurements have been called in queſtion more than once by ſubſequent travellers (41). Monſieur Thevenot ſtands at the head, and is followed by ſeveral others, in aſſigning 682 French feet for the baſe of each ſide of the largeſt pyramid, which, being equal to 728 feet Engliſh, exceeds the account given by Mr Greaves, who makes the length of each baſe to amount only to 693 ſuch feet. So conſiderable a difference as this, of 35 feet, has been endeavoured to be reconciled from an obſervation of Mr Vanſleb (42), that the north ſide, or the ſide from north to ſouth, is longer than that which ſtretches from eaſt to weſt. But all other authors agree with Mr Greaves, in aſſerting the baſe of the pyramid to be an exact ſquare; and the length of each ſide found by him, is greatly confirmed by a curious remark of Sir Iſaac Newton, who, from the pyramids of Egypt accurately meaſured (they are his words) by Mr John Greaves, collects the length of the ancient cubit of Memphis in this manner. 'The ſide of the firſt pyramid was 693 Engliſh feet. It is very probable, that 'at firſt, the meaſure of it was determined by ſome 'round number of Egyptian cubits. Ibn Abd Alhokm, 'quoted by Mr Greaves (43), tells us, that the meaſure of each ſide was 100 royal cubits of the ancient 'times: but it is probable, that the Egyptians learned 'from the orgyiæ of the Greeks, their meaſure of four 'cubits of Memphis, and gave it the name of the royal cubit. Thus the ſide of the pyramid will be 400 'ſimple cubits, or 4 auroræ; and the cubit of Memphis will be equal to $1\frac{733}{1000}$ of the Engliſh foot. 'That the pyramid was built by the cubit of this magnitude, appears from ſeveral dimenſions of it. The 'ſquare paſſage leading into it, of poliſhed marble, 'was in breadth and height $3\frac{40}{100}$ of the Engliſh foot, 'that is, two of the abovementioned cubits of Memphis; and of the ſame breadth and height were the 'four other galleries. In the middle of the pyramid 'was a chamber, moſt exquiſitely formed, of poliſhed 'marble, containing the monument of the king. The 'length of this chamber was $34\frac{3}{10}$ Engliſh feet, and 'the breadth, $17\frac{19}{20}$; that is, it was 20 cubits long, 'and 10 cubits broad, the cubit being ſuppoſed to be $1\frac{719}{1000}$ of the Engliſh foot. The difference between 'this meaſure and the former, is $\frac{1}{1000}$, or one eighth of a foot, that is, about one ſeventh of an inch; 'an error of no importance, if we conſider the much 'greater irregularities obſerved by Mr Greaves, in the 'beſt buildings of the Romans. The roof of this 'chamber conſiſted of nine oblong and parallel ſtones; 'the ſeven middle ones of which were of the ſame 'breadth, but the two outermoſt were leſs by half in 'breadth than the reſt, and the breadth of them all 'together was equal to the length of the chamber, or 'to 20 cubits; ſo that the length of the middle ſtones 'was two cubits and a half. The marble gallery, 'which led into this chamber, was 6 feet and 87 of '100 parts of a foot, that is, 4 cubits of the chamber 'in breadth. In the middle of this gallery was a way 'of poliſhed marble, $3\frac{433}{1000}$ feet, that is, two cubits 'broad; and on both ſides the way were two banks, 'like benches, of poliſhed marble likewiſe $1\frac{733}{1000}$ feet 'broad, and $1\frac{733}{1000}$ feet deep, that is, in breadth and 'depth one cubit. Who will therefore imagine, that 'ſo many dimenſions, not at all depending upon each 'other, ſhould correſpond by mere chance with the 'length of the cubit aſſigned by us.' He proceeds to ſhew from other meaſurements of Mr Greaves, that the diviſion of the cubit into ſix palms, correſponds in like manner with this length of the cubit, that is, of it's being equal to $1\frac{733}{1000}$ * Engliſh feet, 400 of which cubits will be eaſily found by multiplication to be equal to 693 ſuch feet, the ſide of the firſt pyramid (as has been ſaid) according to Mr Greaves. Sir Iſaac continues to give other ſpecimens of this cubit from other dimenſions of our author in ſeveral parts of the pyramid, and upon the whole concludes, that in his opinion, the pyramid was built throughout after the meaſure of the ſame cubit (44). Dr Shaw, in his Travels into Barbary, &c. p. 414, obſerving the differences among authors concerning the dimenſions of the baſe of this pyramid, thinks they might be occaſioned, partly becauſe none of it's ſides are exactly upon a level, and particularly becauſe the weſt and north ſides have been encroached upon by ſuch drifts of ſand, as the Eteſian winds from time to time have brought with them †, which makes it difficult to find a true horizontal baſe. This may perhaps furniſh us with the reaſon why our Profeſſor took the length of the baſe on the north ſide, by obſervation, with his croſs ſtaff, and not with a line; which is one of the objections made to the *Pyramidographia*, by the anonymous author of the Reflections inſerted in the ſecond Volume of Greaves's Miſcellanies, by Dr Birch. However, it cannot be denied, that his account of the menſuration would have been more ſatisfactory, if, as that ingenious objector obſerves, it had been more fully expreſſed.

[*M*] *Deceived in the buſineſs of buying books.*] He complains of this to Dr Pococke (45), aſſuring him there were very few to be purchaſed either at Alexandria or Cairo, and thoſe too old and worm eaten. In other reſpects he expreſſed much pleaſure and ſatisfaction from his journey; except that in his firſt return from Cairo, with ſome other Engliſh and French men, they were robbed by the Arabs, but his loſs was not great. He held a conſtant correſpondence with this learned friend (46), who it ſeems had the ſame hopes of his meeting with books in Egypt as he had himſelf, before he left Conſtantinople. And in another letter from Leghorn to him, having mentioned how agreeably he had ſpent his time in Italy on that account, he writes thus. 'You 'expected, I perceive, that I ſhould have found the 'ſame advantages in Egypt; but I can aſſure you, that 'for books I ſaw few, and for learned men, none.' After which, he proceeds in theſe terms. 'Where'fore I muſt deſire you to ſupply that defect, by pro'curing ſuch books as I formerly mentioned, or ſuch 'others as you ſhall think moſt fitting. Thoſe which 'you name I like well, and I ſhall deſire you to make 'a further inquiry after the choiceſt in Perſian, as well 'as in Arabic (47).' This is not the firſt time we find our author expreſſing his fondneſs for the Perſian language, to which perhaps he was more inclined, as he could not hope to rival Mr Pococke in the Arabic.

[*N*] *To make the tour of Italy a ſecond time.*] After he had paſſed nine months there, he ſent his laſt mentioned friend word, that he did not repent much of his ſtay, having had an opportunity of peruſing moſt of the beſt libraries in Italy, and of being acquainted with their moſt learned men, having ſpent moſt of his time in Florence, Rome, and Naples (48); and Dr Smith (49) tells us, that from Leghorn he proceeded to Florence, where he was received with particular marks of eſteem by the Great Duke (50). Here he contracted an intimacy with Robert Dudley (51), who was generally ſtiled in Italy, Duke of Northumberland. This title was conferred upon him by Ferdinand II. Emperor of Germany, after he had failed of proving the legitimacy of his birth in England (52). Mr Greaves had frequent converſations with him upon learning, and was informed by him, that, after a careful obſervation performed according to Tycho Brahe's method, he found the elevation of the pole at Florence, to be 43° 46'. *From Florence*, ſays Dr Smith, *Mr Greaves went to Rome, in order to repeat the obſervations he had made*

(50) Ferdinand II. He had inſcribed a Latin Poem to him written at Alexandria, and probably ſent from thence. It is printed in Miſcellan. Vol. II. p. 533. He had ſent it to Conſtantinople, to be reviſed by Dr Pococke, informing him that one of his views therein was to procure admiſſion into the Medicean library, which he had found, when he was at Florence before, to be denied to ſtrangers. Pococke's Life, ubi ſupra.

(51) There is ſome account of this perſon in Wood's Ath. Ox. Vol. II. col. 126, 127.

(52) In the time of K. James I. with whom on account of his ſon-in-law the Count Palatine, the Emperor was then at variance.

rately into the true ſtate of the ancient Roman weights and meaſures, now that he was furniſhed with proper inſtruments for that purpoſe made by the beſt hands *. And he happened to ſtay here much longer, than he firſt thought, in waiting for a ſhip to his mind, having put on a reſolution to make his paſſage to England by ſea. At length embarking in *the Golden Fleece* (*l*) about the end of March, he came to London before midſummer 1640 (*m*); with a rich cargo conſiſting of a curious collection of Arabic, Perſic, and Greek MSS, together with a great number of gems, coins, and other valuable antiquities (*n*). Upon his arrival he found ſuch a ſituation of public affairs as was very diſagreeable to him. His loyalty to the King, and his gratitude to Archbiſhop Laud, were duties which he eſteemed indiſpenſible, and in the enſuing troubles he choſe to ſuffer (as he did to the great detriment of his private affairs) rather than violate them. After a ſhort ſtay at Greſham College he went to Oxford, and immediately ſet about digeſting his papers, in order to make his travels uſeful to the world. In the purſuit of this deſign he was aſſiſted by Archbiſhop Uſher (*o*). He had received many favours of that learned prelate, and he now gladly embraced the opportunity of making ſome return by drawing a map of the leſſer Aſia (*p*), at the requeſt of his Grace, who was then writing his diſſertation of that country which was printed in 1641. Archbiſhop Laud having the ſame year preſented a ſecond collection * of medals to the Univerſity, Mr Greaves having the care of † the whole, undertook to place them in a proper order, and executed it intirely to the ſatisfaction of his patron [*O*]. Amidſt ſuch employments as theſe, he was much pleaſed with his ſituation, and being as much diſpleaſed with the City, he gave himſelf little or no concern about his Greſham lecture; and was removed from it November 15, 1643 [*P*], but he had the day before been choſen Savilian Profeſſor of Aſtronomy, in the room of Dr Bainbridge (*q*), having obtained a royal diſpenſation to continue his fellowſhip at Merton College. Theſe changes produced no alteration in his fixt purpoſe with regard to his papers, and we find he had made a conſiderable progreſs in it the following year [*Q*]. In

* See his Diſcourſe of the Roman foot, p. 207, edit. 1737, 8vo. He copied alſo ſeveral inſcriptions at Rome, which with the reſt are depoſited in the Savilian library.

(*l*) That was the ſhip's name. See his letter to Dr Pococke in Ward, p. 142.

(*m*) See Remark [F].

(*n*) Smith, ubi ſupra, p. 9, 10. Among his coins was one of gold of Alexander the Great, highly valued by him. See Obſerv. on his Travels.

(*o*) Several of his works were undertaken by the direction of his Grace, as appears by the dedications and other parts of them.

(*p*) Smith, ubi ſupra, p. 32.

* The firſt collection was preſented by him in 1636. See his letter to the Univerſity, in Fiſher. Cancellar. Gul. Laud. Arch. Cantuar. edit. 1700, fol.

† Doctiſſimo Johanni Gravio nummophylacii cuſtodiam permiſit [Laud] are the words of Mr Wiſe in the preface, p. 8, to his treatiſe, intituled *Nummorum Antiquorum in Scrinio Bodleiano Catalogus*, Oxon. 1750, fol.

(*q*) The Doctor died Nov. 3, before. Wood Ath. Ox. Vol. II. col. 34.

made there before, and to make new ones, and deſigned to have ſtaid there ſeveral months; but the deſire of returning to his own country induced him to ſhorten his ſtay there, upon which he went to Leghorn, and took ſhip for England. This laſt paſſage is a clear inſtance of the truth of what is before advanced, concerning the confuſion of the Doctor's [Smith] account of this Eaſtern journey.

[*O*] *Executed it to the ſatisfaction of his patron.*] This appears from the following letter ſent by the Archbiſhop in anſwer to one from our author, acquainting his Grace with the method he propoſed, if it ſhould be approved of. 'Sir, Your kind letter of November '15 came not to my hands 'till the beginning of this 'week, elſe you had certainly received my anſwer, 'and thanks for your kindneſs, ſooner.

'I ſee you have taken a great deal of care about the 'coins I ſent to the Univerſity. And I hope as you 'have ſeen the laſt I ſent, with others, placed in the 'ſeveral cells reſpectively; ſo you have alſo ſeen their 'names written into the book *, that both may be 'perfect and agree together.

'For the placing of them, I leave that wholly to 'the Univerſity, whoſe they now are; yet I muſt needs 'approve of the way of placing them which you have 'thought on, nor can there be any objection againſt 'it, but that which you have made about the manu'ſcript. Commend my love to Dr Turner and Mr Po'cocke, and when you have weighed all circumſtances, 'whatſoever you ſhall pitch upon ſhall ſerve and pleaſe 'me. So to God's bleſſing I leave you,

Your unfortunate poor friend
Tower, June 13. 1641.
W. Cant. (53).

* This book he had ſent with the firſt collection; it contains his Grace's method of placing them, and is now in the Bodleian Library inter MSS. Laud. K. 97.

(53) See Curious Diſcourſes by Tho. Hearne, p. 298. Oxon. 1720. 8vo.

[*P*] *He was ejected from his Greſham lecture,*] On account of his long abſence, and neglecting to read; and Mr Ralph Button was choſen in his place. This was the beginning of our author's ſufferings as a royaliſt. Notwithſtanding the above pretence alledged for ejecting him, he ſaw too plainly it was a party affair, and calling it a ſequeſtration, fed himſelf for ſome time with the hopes of being reſtored. 'I ſhould be glad to ſee you '(ſays he to his friend Dr Scarborough) (54) in my place 'at Greſham College, if I could once get off my ſe'queſtration. He that is in the place doth no way 'deſerve it.' The character here given of Mr Button ſeems to be very juſt, no evidences of his merit in Geometry are produced by Dr Ward (55), in a caſe where the honour of his foundation was concerned, which is the more obſervable, as he ſuppreſſes a material circumſtance in this affair, whereby the honour of the King, as well as of Mr Greaves, is injured. Mr Greaves, ſays he *, *being removed from his Greſham profeſſorſhip, on account of his long abſence, and the neglect of his lecture, Mr Ralph Button was choſen in his place. But he procured a royal diſpenſation for continuing his fellowſhip at Merton College, which otherwiſe he muſt have quitted in ſix months, after he was choſen Savilian Profeſſor according to the ſtatutes of thoſe profeſſorſhips.* By this repreſentation the unwary reader is led into a belief, that this diſpenſation was had purely in reſentment to the Greſham electors, for removing him thence. But a much worthier reaſon, and that grounded upon a fact undeniably true (56), is given by Mr Wood, viz. becauſe the ſtipend belonging to his Savilian profeſſorſhip was extremely leſſened during the civil wars. In ſuppreſſing Dr Smith's [in vit. Grav. p. 15.] as well as Mr Wood's authority for this circumſtance, Dr Ward has given no expreſs authority at all for the diſpenſation itſelf, unmindful of the hiſtorian's rule againſt all party or private views. *Ut ne quid falſi dicere audeat, ſic ne quid veri non audeat.* Much more excuſable is the ſlip which is made by that gentleman, as alſo by Dr Birch, in following Mr Wood, when he tells us (*Ath. Ox. Vol.* II. *col.* 157,) that our author ſucceeded Dr Bainbridge in Linacre's ſuperiour Phyſic Lecture, notwithſtanding we are twice told in the ſame work, (Vol. I. col. 21, and Vol. II. col. 669) that the Doctor's ſucceſſor in that lecture, was Dr Edward Greaves our author's brother. But the regiſter of Merton College is deciſive, of which the following is an extract. Ad. an. 1643. *In ſuperiorem Linacrianam lecturam vacantem ob mortem —D. Bainbridge, M. D. & Acad. Oxon. Aſtron. Prof. qui paulo ante e vivis exceſſerat, electus eſt Doctor Greaves e collegio Omnium Animarum.* The extract whence this is copied may be ſeen in Dr Bainbridge's Life, p. 6. note (*a*), in the ſame Volume with that of our author by Dr Tho. Smith. However ſuch an overſight in a matter of no great importance, is remarked with all due reſpect for two gentlemen, to whom we are ſo much obliged for materials in this memoir.

* In the life of J. Greaves, p. 143.

(56) See Remark [Y].

[*Q*] *The next year he had made a ſuitable progreſs in it.*] Something of what he had then done is ſeen in a letter to Archbiſhop Uſher (57), wherein he writes that he ſhould be glad to hear his Grace had received either from the Vatican Library, or that of the Eſcurial in Spain, a tranſcript of Ptolemy, or rather Hipparchus περὶ τῆς μεγίθες ἐνιαυσίε. 'So much the rather, 'ſays he, becauſe in peruſing ſome of my Arabian and 'Perſian MSS. I have found ſome obſervations which 'may conduce to the clearing of that argument,' he proceeds

(54) Afterwards Sir Charles Scarborough, an eminent Mathematician, as well as Phyſician to K. Ch. II. Miſcell. p. 395.

(55) In his Life of Mr Button, ubi ſupra, p. 153, & ſeq.

(57) Dated Sep. 19, 1644. in Archbiſhop Uſher's Life by Parr, p. 509, 510. Lond. 1686. fol.

In 1645, at the inſtance of ſome perſons of figure and fortune, he drew up a method * of introducing by degrees the New or Gregorian Stile [R]; and his propoſal would probably have been put into execution, being approved by the King and council, had the ſtate of the times permitted it*. In 1646 he publiſhed his *Pyramidographia* (r), or *A Deſcription of the pyramids in Egypt* [S], which was followed the next year by his *Diſcourſe of the Roman foot*

* Greaves's Miſcellanies, Vol. II.

(r) It was printed in French, in Thevenet's *Relations de diverſes voyages*, and Dr Smith had a deſign of turning it into Latin, and the Roman foot, with his life. Vit. Gravii, p. 22. This laſt was publiſhed, but neither of the two former.

proceeds to acquaint his Grace, that he had not then leiſure to ſend him thoſe, which were made by the Indians at Kôbah, and Kandahar, or thoſe others which were made by the Perſians before Yezdegerd's time, and by Yezdegerd, and long after him in Almamon's time, as he found them mentioned by Alhaſhamy an Arabian author. But thoſe of the Chateans, and of Naſſir Eddin, and of Aly Kôſgy, being, as later, ſo exacter, than the former, he ſent them, as follows. The true ſolary year according to the Chateans is $365\frac{2416}{10000}$ days, according to Naſſir Eddin 365 days $14^{I}\ 32^{II}\ 30^{III}$.* According to Haly Kôſgy, who obſerved in the 841ſt year of the Hegira, almoſt 200 years after Naſſir Eddin, 365 days $14^{I}\ 33^{II}\ 32^{III}$, whereas Ptolemy, ſays he, is much more, 365 days $14^{I}\ 48^{II}$. He goes on thus. 'I have finiſhed thoſe lemmata of Archimedes (58), which the Arabians call *nachawdân*. If I be not deceived ſuch as wiſh well to the Mathematics, will think my pains well beſtowed; as indeed it was no ſmall labour to correct the diagrams, and the letters (which were too often perverted in the manuſcript), and ſometimes to ſupply what was defective in the demonſtration itſelf.' He then informs his Grace, that according to his advice he had made a Perſian Lexicon, out of ſuch words as he could meet with in the Evangeliſts, and in the Pſalms, and in two or three Arabian and Perſian Nomenclators. So that he had a ſtock of above 600 words in that language, which he ſuppoſed to be as many as were in the Arabic dictionary of Raphelengius *. Upon that occaſion he expreſſes a greater deſire than ever to go to Leyden, and peruſe their oriental manuſcripts, procured by the expence of the States, to which long ago he had been prompted by his Grace. 'But yet, ſays he, conſidering my lecture in Oxford (though as yet it cannot be read (59)) it will not be fit for me to go without ſpecial leave from our honourable Chancellor, and two or three more of the lords of his Majeſty's privy council. I ſhall therefore deſire your Grace to procure this favour for me in writing, with this caution, that my abſence for a while may be no prejudice to me at home, eſpecially ſince my journey is for the improvement of learning, and *for the publiſhing of ſome of thoſe books, which I long ſince have finiſhed*.' He takes notice then, that he ſhould there have an opportunity of printing his Grace's Map, and of perfecting and publiſhing that diſcourſe of Dr Bainbrigg's concerning the Periodus Sothiaca *; 'And I hope, concludes he, your Grace will think of ſomething elſe, in which I may be ſerviceable to you, and uſeful to the commonwealth of letters. Your Grace cannot ſufficiently command him, whom by your many favours, you have ever made your Grace's moſt obliged ſervant (60).'

(58) They were publiſhed by Samuel Foſter in his Miſcellanies, or Mathematical Lucubrations, Lond. 1659. fol. See an account of the contents of theſe lemmata in Mr Maclaurin's Article.

* Recommended by Erpenius tho' very defective. Vid. *Conſilium Erpenii de Stud. Arab. feliciter inſtituendo*. Pariſ. 1620. 8vo, prope finem.

(59) By reaſon of the civil wars.

* This is a period of 1460 years, and took its beginning from the time that Sirius roſe heliacally, the firſt day of the Egyptian month Thoth. This Star being obſerved to riſe ſix hours later every year, or one day in 4 years, that is, one year in 1460.

(60) He never performed this deſign of going to Leyden, tho' he had it long in his mind, as appears by a letter to Dr Pococke, cited by Ward, p. 145. from the MS. letters of our author, 42 of which are in the Savilian library.

[R] *A method of introducing the New or Gregorian Stile of the year.*] His propoſal was to omit the intercalary day of the leap year for forty years. The ſame method had been propoſed to Pope Gregory, and rejected by him, out of ambition, as Mr Greaves obſerves, to have the honour of doing it at once, and thereby of calling that year 1582 *Annus Gregorianus*; which our author did not doubt might be juſtly ſtiled *Annus Confuſionis*; as the Ancients called that year in which Julius Cæſar corrected the kalendar by a ſubtraction of days after the ſame manner. But we have lately ſeen this method happily carried into execution without any ill conſequence at all; concerning which more will be ſeen in the article of Dr John Wallis.

[S] *Pyramidographia.*] Preſently after it came out ſome animadverſions were written upon it, as appears by a very good mathematician, who, among other overſights, takes notice of a very material one in the meaſure of the height of the firſt pyramid; which was given to be 481 feet. This was corrected afterwards by our author, and the true number $499\frac{262}{1000}$ feet aſſigned, in the letter above cited to Sir Charles Scarborough. But this animadverter, who took the pains to make the calculation juſtly and candidly, obſerves that the overſight in the book, was not in the calculation, (as the paper enough ſhewed) but in the tranſcription (61). However a late animadverter not being able (as appears) to make the calculation himſelf, and knowing nothing of what had paſſed upon it, proves very mathematically the number 481 to be juſt (62).

(61) Miſcellan. Works of our author, ubi ſupra, p. 402.

The ingenious gentleman firſt mentioned, likewiſe obſerves, that the aſpect of the ſides of this pyramid, with regard to the four cardinal points, had been paſſed over too haſtily by our author, and the ſame remark was afterwards made by Dr Hooke (63), who in regard to the inquiry, whether the axis of the earth varies its poſition, writes thus, that it had been very deſirable, if from ſome monuments or records in antiquity ſomewhat could have been diſcovered of certainty and exactneſs (concerning their poſition), that by comparing that or them, with accurate obſervations now made, or to be made, ſomewhat of certainty of information could have been procured. 'Upon this account, continues he, I peruſed Mr Greaves's deſcription of the great pyramid in Egypt, *that being fabled to have been built for* an aſtronomical obſervation, as Mr Greaves alſo takes notice. I peruſed his book, I ſay, hoping I ſhould have found, among many other curious obſervations he there gives us concerning them, ſome obſervations perfectly made, to find whether it ſtands eaſt, weſt, north, and ſouth, or whether it varies from that reſpect of its ſides, to any other part, or quarter of the world; as likewiſe how much and which way they now ſtand. But to my wonder, he being Aſtronomical Profeſſor, I do not find that he had any regard at all to the ſame, but ſeems to be wholly taken up with one inquiry, which was about the meaſure or bigneſs of the whole, and its parts; and the other matters mentioned are only by the bye and accidental. I find indeed that he mentions the ſouth and north ſides thereof, but not as if he had taken any notice, whether they were exactly facing the ſouth or north, which he might eaſily have done.' This being probably ſeen and conſidered by Mr de Chazelles he, to ſatisfy the inquiry, took accurate obſervations in 1694, and found that the four ſides were expoſed exactly to the four quarters of the world. Now ſays Mr Fontanelle (64), as this accurate ſituation was in all probability deſignedly choſen by thoſe, who raiſed that maſs of ſtones above three thouſand years ago, it follows that during this long ſpace of time, there has been no alteration in the heavens in that reſpect, or, what amounts to the ſame, in the poles of the earth, or in the meridians.

(62) See Miſcellaneous Obſervations upon authors, &c. Vol. i. p. 120. Lond. 1731. 8vo.

(63) In his Diſcourſe of Earthquakes, printed in his Poſthumous Works, p. 355. Lond. 1705. fol.

(64) In the Eloge of Mr de Chazelles in his Hiſtoire de renouvellement de l'Academie royale des Sciences, en 1699. &c. Tom. II. p. 57, 58. Amſterd. 1720.

After all, our author's words upon this ſubject clearly ſhew that he had obſerved this matter very accurately, for in deſcribing the external face of the pyramid, having as Mr Hooke remarks, mentioned the north ſide and its eaſt angle, as alſo the ſouth ſide, p. 92, and 102, in the groſs. He proceeds to the inſide, in the deſcription of which he was very accurate in every particular, and not leſs ſo in this. For inſtance, in deſcribing the monument of Cheops, his words are, the poſition of it is thus: *It ſtands exactly in the meridian north and ſouth*, and ſtands as it were equidiſtant from all ſides of the chamber except the eaſt, from whence it is doubly remoter than from the weſt, p. 132. Thus we ſee the words are very expreſs, with regard to the exact poſition of the tomb on the inſide, and the exactneſs expreſſed there, neceſſarily implies that the poſition of the outſide was obſerved with the like accuracy, whence the great aſtronomical queſtion might have been fully anſwered thereby. Inſomuch that it may be well aſked at this time of day, what could occaſion theſe complaints of our author's culpable negligence in this matter, when at leaſt to an attentive reader there ſeems to have been no ſufficient grounds for them. To account for this conduct, it muſt be obſerved that in 1632, Galileo publiſhing his *Dialogues of the ſyſtem of the world* relates, that one Signr Cæſar, an Italian, had lately

foot and Denarius [*T*]. By ſuch works as theſe was our author ſpreading his own fame, and with it that alſo of his country in the republic of letters, when ſeveral accuſations were brought againſt him [*U*] in order to deprive him of his preferments. And tho' he

• weathered

lately obſerved a conſtant though ſlow mutation in the meridians of the earth. This piece of Galilæo being ſeen by Mr Gellibrand, that gentleman took particular notice of the remark therein, concerning the change of the meridians, in a treatiſe intitled *A Diſcourſe mathematical on the variation of the magnetic needle*, publiſhed in 1635, when he was our author's colleague as Aſtronomy Profeſſor at Greſham. So extraordinary a phænomenon muſt needs raiſe the curioſity of the aſtronomers, and as Mr Greaves was particularly well ſkilled in that ſcience, and declares alſo that one deſign in this voyage to the Eaſt undertaken in 1637, was to make improvements in Aſtronomy, it muſt be owned, that his animadverters had ſome room for their cenſure. Indeed otherwiſe it might have been imputed to the known peeviſh temper of Mr Hooke, and to the reſentment of the anonymous author firſt mentioned, as with regard to him is done by Dr Smith, who informs us, in our author's life, p. 13, that Mr Greaves had refuſed him his intereſt for procuring a place, which he ſolli cited in vain. However his remarks in general ſhew him to be a perſon both of good learning and judgment in theſe matters. Which was alſo tacitly at leaſt acknowledged by our author, who upon ſight of his objections applied himſelf with the utmoſt care to the reviſal of his book. Yet we do not find him thereby convinced that there was ſufficient reaſon for making any alteration in the particular now under conſideration. Mr Hooke has remarked what he ſuppoſes another defect in the Pyramidographia, which is that the exact latitude of the pyramids is omitted. But he does not tell us what uſe might be made thereof, and probably Mr Greaves might upon that account not think of it, and the rather as he intirely condemns the opinion that theſe ſtructures were raiſed with any view to Aſtronomy. Indeed what was the firſt deſign of their founders is not yet agreed. Nay Dr Shaw juſtly obſerves, there is hardly any ſubject about which both ancient and modern authors have differed more in their accounts than in this of the pyramids. That gentleman, who is the laſt writer that has given us obſervations upon them, differs from the common opinion of their being deſigned for ſepulchres of the Egyptian kings, as Mr Greaves thought; and imagines they were rather ſacred edifices built for religious worſhip, and dedicated to the ſun, the form of them being emblematical of fire (65). As to which, Mr Greaves alſo from the ſame emblematical form infers, that they were intended by the builders to repreſent ſome of their gods, p. 86. and that they were uſed for religious purpoſes; and particularly ſuppoſes the cells, which are cut in the rock on the north and weſt ſide of the ſecond pyramid, to be deſigned for the lodgings of the prieſts, p. 141, 142. Indeed the Doctor imagines, the ſquare cheſt of granate marble in the center of the great pyramid, to be intended for keeping the images of their deites, or for the ſacred veſtments or utenſils, or for a ciſtern to hold holy water, and not for the tomb of Cheops, as our author maintains. However the Doctor allows, that Cheops and other kings might be buried in the precincts of the pyramids, this being no more than what was practiſed in other temples; and only contends that their principal uſe and deſign was to be objects of worſhip and devotion (66). So that upon the whole he agrees with our author as to their double uſe, differing only in the nicety, which of the two was principally in the founders intention.

(65) Travels and Obſervations, &c. p. 411.

(66) Ibid. p. 418, 419, 420.

[*T*] *His diſcourſe of the Roman foot and Denarius.*] The diſtinguiſhed merit of this performance has been felt by all ſubſequent writers upon the ſubject. Dr Edw. Bernard, treating *De menſuris & ponderibus Antiquorum*, highly extols it, and ſays in his MS. lectures (67) it is *Aureus, imo ſupra aurum omne & metallorum lucem pretioſus, luculentus.* Bp Cumberland in his *Eſſay towards the recovery of the Jewiſh meaſures and weights, comprehending their monies*, obſerves (68), that our author, in his book of the Roman foot, hath given us the Egyptian derah, or cubit, accurately adjuſted to the 1000th part of our Engliſh ſtandard, tho' he did not ſee indeed what uſe Mr Greaves intended to make of it. He proceeds to take notice that the Jewiſh cubit had not been ſtated by our author, only that in the dedication he intimates it to be inveſtigable by the help of the Roman foot, how he thence could have deduced it, ſays the Biſhop, I know not, but heartily wiſh that Mr Greaves had lived to finiſh the work he intended, about the meaſures and weights of the Ancients. Dr George Hooper, Biſhop of Bath and Wells, in his *Inquiry into the ſtate of the ancient meaſures*, &c. ſtiles him an accurate author, and ſpeaks of the known ſkill and accuracy of that obſerver, and taking notice of an intention of Mr Greaves to proſecute the ſubject of the Dirhems and Deinars of the Arabians, beſides what he had done in his diſcourſe of the Roman foot, he concludes thus, '*it is great pity, for many reaſons, that* '*the accurate judgment and exquiſite learning, with* '*which he was furniſhed, met with thoſe unhappy times,* '*in which an honeſt man was not only diſcouraged, but* '*diſabled from the proſecution of ſuch ſtudies* (69).' Dr John Arbuthnot (70) reckons Mr Greaves a claſſical author on the ſubject of the Roman weights and meaſures. And Dr Ward frequently mentioned in theſe notes, in a ſmall piece intitled *De Aſſe & partibus ejus commentarius* (71), ſpeaks very highly in praiſe of the Diſcourſe of our author. Laſtly, Sir Iſaac Newton having referred to Mr Greaves, as eſpecially to be conſulted on the Roman and Greek cubits (72), makes the following uſe of the Egyptian derah as ſettled by Mr Greaves, which deſerves the more attention, ſince Biſhop Cumberland could not ſee what uſe Mr Greaves intended to make of it. That incomparable author having found the ancient cubit of Memphis (as is already mentioned) to be 1 $\frac{7}{1000}$ of the Engliſh foot, and ſeeing the Egyptian cubit uſed in the time of Mr Greaves to be 1 $\frac{824}{1000}$, proceeds thus: 'This cubit approaches nearer to the ancient cubit of Memphis, than to the leſſer cubits of the Greeks, Romans, and Arabians, who reigned in Egypt, and therefore it ſeems to be derived from that of Memphis: but it is greater than that And what wonder is it, that a meaſure ſhould be ſomewhat increaſed in the ſpace of above 3000 years. The meaſures of feet and cubits now, far exceed the proportion of human members, and yet Mr Greaves ſhews, from the Egyptian monuments, that the human ſtature was the ſame above 3000 years ago, as it is now. The meaſures therefore are increaſed, the reaſons of which may be aſſigned. The inſtruments which uſed to be preſerved as ſtandards of meaſures, by contracting ruſt are increaſed. Iron beaten by the hammer may inſenſibly relax in a long ſpace of time. Artificers likewiſe, in making inſtruments chuſe to err in the exceſs of the materials, and when by filing they attain any meaſure, which they think ſufficient, they ſtop, knowing that they can ſoon correct that little exceſs by filing, if their maſters ſhould complain of it, but that they cannot remedy a defect. Let us ſuppoſe therefore, that all meaſures have increaſed by degrees, eſpecially in the firſt ages, when leſs care was taken of them; and the cubit of Memphis about the time of the Roman empire will be a mean between the ancient and the modern cubit, but will approach nearer to the modern. The ancient cubit was 1 $\frac{7}{1000}$ of the Engliſh foot, and the modern is 1 $\frac{824}{1000}$ of the Engliſh foot. The mean therefore between them will be about 1 $\frac{787}{1000}$ or 1 $\frac{79}{100}$ of a foot. Now 10000 of ſuch mean or middle cubits make, as they ought, about 30 Attic ſtadia (73).' To conclude; this peice of our author is dedicated to Mr Selden in the following addreſs, 'To his 'truly noble and learned friend John Selden, Eſq; Burgeſs of the Univerſity of Oxford, in the honourable 'Houſe of Commons.' This gentleman was very ſerviceable to Mr Greaves in the proſecution againſt him by that houſe, at whoſe bar his cauſe was heard this year, as is ſeen in the next remark.

[*U*] *Several accuſations were brought againſt him.*] We have already related the beginning of his troubles, occaſioned by the unhappy ſtate of the times, in being ejected from his lecture at Greſham, upon ſucceeding

weathered this firſt ſtorm, yet his reſpite was but ſhort; however he made uſe of that time in publiſhing the following peice, *Johannis Bainbrigii Canicularia* [*W*], to which he added *Demonſtratio ortus Syrii heliaci pro parallelo Inferioris Ægypti*, and alſo *Inſigniorum aliquot ſtellarum longitudines & latitudines ex aſtronomicis obſervationibus Ulug Beigi Tamerlanis magni nepotis. Oxoniæ* 1648, 8vo. A freſh charge was dreſſed up againſt him that year by the parliamentary viſitors [*X*], to which he thought proper to put in no anſwer, and thereby incurred the loſs of his profeſſorſhip, being ejected (*t*) the 9th of October; and he was obliged to quit both his fellowſhip in Merton College, and likewiſe the univerſity on the 9th of November following (*u*). The King's death was a great ſhock to him (*w*); but as he had the happineſs of being endued with an excellent firmneſs of mind, he bore up againſt his own injuries with admirable fortitude, and having provided a very worthy perſon to ſucceed him [*Y*] in the profeſſorſhip, he retired to London, where he married, and

(t) At this time his cheſt was broke open by the ſoldiers, and his papers and MSS. taken away, part of which were loſt, and the reſt recovered by the intereſt of Mr Selden. Smith, pp 33.

(u) Wood's Hiſt. and Antiq. of Oxford, lib. ii. p. 42.

(w) He laments it to Dr Pococke in the moſt mournful terms. O my good friend, ſays he, my good friend, never was there ſorrow like our ſorrow.—Excuſe me now, if I am not able to write to you, and to anſwer your queſtions. O Lord God, avert this great ſin, and thy judgments from this nation. See more of this letter in Pococke's Life, by Twells, who obſerves, that the many blots and blurs in it, plainly ſhew it to be written in tears.

ceeding Dr Bainbridge in the Savilian profeſſorſhip at Oxford. His executorſhip to that Doctor, or his widow, ſoon brought him into freſh troubles, and he was ſo much involved in law-ſuits on that account, as to be hindered thereby from going to Leyden a ſecond time as he deſigned (74); to this effect writing to Dr Pococke, October 28, 1646. 'My journey, ſays he, ſtill holds, tho' re-'tarded by my loſſes, and by Sir N. (75), who hath 'put me to play an after-game with the three brothers 'by giving them the adminiſtration. And why; be-'cauſe Mrs Bainbridge died inteſtate, ſo that I have 'ſaved the eſtate to very good purpoſe (76);' how much he ſuffered by this law-ſuit further appears in part, from the following atteſtation, though made on another occaſion *, of his brother Mr Thomas Greaves. 'I Thomas Greaves do likewiſe teſtify, and will be 'ready to depoſe, that the ſaid Mr John Greaves left 'Oxford, and lived privately in the country, of pur-'poſe to avoid the delivering up of ſuch bonds, and 'other things of Mrs Bainbridge, deceaſed, which 'were in his cuſtody as executor, unto the commiſſio-'ners at Oxford (77);' theſe commiſſioners of the parliament, it ſeems, ſent ſeveral charges againſt him to the committee of the Houſe of Commons, by whom our author however, probably by the intereſt of Mr Selden, who was one of that committee, was cleared. As appears from a letter to his friend, and fellow-ſufferer Mr Pococke, dated March the 25th 1647, 'I thank 'God I am thus far proceeded in my troubles, that 'by the committee of Lords and Commons, I am pro-'nounced innocent, to the ſhame of my accuſers if 'they had any. And now I am attending upon the 'court of Aldermen, and the committee at Cambden 'houſe for reſtitution;' and in another letter to the ſame gentleman, dated May 17, 1648, he expreſſes himſelf in theſe terms. 'I am now going into Kent 'to my good friend Mr Marſham, not far from Ro-'cheſter, who hath been very importunate, admitting 'of no excuſe, that I muſt make his houſe and library, 'who hath a fair one, mine own. It will be this 'fortnight e'er I return, and it may be ſhall after-'wards live with him, if I ſee at my coming to Ox-'ford the ſame confuſion which I hear, and which is 'likely in probability to continue (78).

(74) See Remark [Q].

(75) Sir Nathaniel Brent.

(76) See the MSS. letters of our author to Mr Pococke, *ubi ſupra*.

* Mentioned in remark [X].

(77) Ibid.

(78) Ibid.

[*W*] *Bainbridge's Canicularia*, &c.] The Canicularia is a treatiſe concerning the natural year of the Egyptians, ſo called becauſe it commenced from the heliacal riſing of Sirius, or the Dog-ſtar, firſt diſcovered according to Proclus, *(in his commentaries upon Timæus*, lib. i.) from the flat top of the great pyramid, or near that place; and from this year was alſo derived their *Periodus Sothiaca*, called therefore *annus magnus κυνικὸς*, conſiſting of 1460 ſidereal years; in which period their *Thoth vagum & fixum*, came to have the ſame beginning. Dr Bainbridge had began to make ſome collections from the Greek and Latin authors, with remarks upon the ſuppoſed unhealthineſs and unluckineſs of the Dog-days; to theſe many more were added by Mr Greaves, who alſo gave a demonſtration of the heliacal riſing of Sirius, for the parallel of Lower Egypt, which was left untouched by the author, notwithſtanding the whole piece was built upon that phænomenon; the work was firſt undertaken by Dr Bainbridge, at the requeſt of Archbiſhop Uſher, and completed alſo at his inſtance by Mr Greaves, and he dedicated it to Dr (afterwards Sir George) Ent, and Preſident alſo of the College of Phyſicians, with whom (as is here intimated) he commenced an acquaintance at Padua; and this Gentleman gave many proofs of his ſincere friendſhip both to our author and Dr Pococke in theſe times, when they ſtood moſt in need of it.

[*X*] *Ejected by the parliamentary viſitors.*] The articles exhibited againſt him were, 1. *That he betrayed the College, in diſcovering to the King's agents four hundred pounds in the treaſury, which thereupon was taken away for the King's uſe.* 2. *That contrary to his oath he conveyed away a conſiderable part of the College goods without the conſent of the company, and thereby gratified courtiers with them in other houſes.* 3. *That he feaſted the Queen's confeſſors, and ſent diverſe preſents to them, among which was a holy throne; and that he was more familiar with them than any true Proteſtants uſed to be.* 4. *That he was the occaſion of ejecting Sir Nathaniel Brent from his Wardenſhip, for adhering to the Parliament, and bringing in Dr Harvey* (79) *into his place.* 5. *That he was the occaſion why Mr Edward Corbet and Mr Ralph Button were turned out of their reſpective offices and chambers in the College, becauſe they abode in the Parliament's quarters.* 6. *That he gave leave to Father Phillips, the Queen's Confeſſor, and Wyat* (80), *one of her Chaplains, to come into the College library to ſtudy there; and that he put Mr John French, a Fellow, out of his chamber in Merton College, and put them into it*, &c. Our author refuſed to anſwer theſe articles, which occaſioned his ejectment (81). There is ſtill extant the following atteſtation of his brother, above-mentioned, relating to this affair. 'I Thomas 'Greaves do teſtify, and it will be depoſed, that Mr 'John Greaves, Fellow of Merton College, when the 'plate of the ſaid College was demanded by the 'King, kept himſelf private in his chamber for many 'days, that he might not be preſent, nor give his 'conſent; neither did hee go abroad, till hee had 'heard that the plate was already delivered.' Mr John Greaves, in a note upon this obſerves, that he had kept his chamber three weeks together at that time, under pretence of taking phyſic (82). However, it will be hardly doubted, that he tacitly gave his conſent thereto; and the article relating to Dr Harvey ſeems not to be groundleſs, for that he had a quarrel with Sir N. Brent, appears from what is ſaid in remark [*U*], and his friendſhip for Dr Harvey * is ſeen in the poſtſcript of a letter above cited to Archbiſhop Uſher, which is dated September 19, 1644; where he writes thus: 'If I may ſerve Dr Hervey, I 'ſhall be moſt ready, either here or at Leyden to do 'it.' Sir Nathaniel Brent was ejected in 1645, and Dr Hervey appointed to ſucceed him, but the former was reſtored the year following.

* This is dedicated to the Rep. of Venice, to whom he addreſſed a compliment in elegant Latin verſe.

(*y*) Birch's Life of our author, p. 34, was in concert with Mr Will. Seaman, author of a Turkiſh grammar; but this dictionary was never finiſhed. See more of it in Dr Pococke's Article.

Ward, though he had no acquaintance with him, readily agreed, and undertook to find out Mr Ward, and make him the profer. In that deſign he returned to Oxford, whither Mr Ward knowing nothing of what had been concerted in his behalf, happened to come ſoon after, either to conſult ſome books in the public library, or to viſit his friends and acquaintance, as he frequently uſed to do (83). Entring the Bear Inn, he luckily meets Mr Greaves coming out, who, finding this was the man he wanted, immediately ſaluted him expreſſing his great joy at this fortunate rencounter, after which, taking him aſide, he imparted his buſineſs in the deſign of having him for his ſucceſſor, urging him with great importunity thereto: 'I remember, continues this author, I heard the Biſhop ſay, that among other arguments Mr Greaves told him, if you refuſe it, they will give it to ſome cobler of their party, who never heard of the name of Euclid, or the mathematicks, and yet will greedily ſnap at it for the ſalary's ſake.' This unexpected addreſs threw Mr Ward's modeſty into ſome confuſion at firſt. But after a while, returning many thanks for ſo extraordinary a favour, he objected the difficulty of effecting it, alledging that he had no room to expect he ſhould be ſuffered to enjoy a public Profeſſor's place quietly in Oxford, when it was notoriouſly known, that he was turned out of Cambridge for refuſing the Covenant; Mr Greaves replied, that he and his friends had conſidered that obſtacle, and found out a way to remove it; and it was effectually removed a little while after by means of Sir John Trevor, who though of the Parliament party, was a great lover of learning, and very obliging to ſeveral ſcholars, who had been turned out of the two Univerſities; and by his intereſt Mr Ward obtained the Profeſſor's chair, and kept his ſeat therein without taking the Covenant or Engagement. Being thus ſettled in the Profeſſor's chair, *he procured for Mr Greaves the full arrears of his ſalary, amounting to five hundred pounds; for part, if not all the land allotted to pay the Savilian Profeſſors lies in Kent, which county was in the power of the Parliament, who withheld the money* (84).

(83) He reſided at Tame Park in that county, the Seat of Lord Wenman, who had invited him to his houſe. See his article.

(84) Dr Pope's Life of Seth Ward Biſhop of Saliſbury, p. 18, 19, 20, 21. Lond. 1697, 8vo.

[*Z*] *Elementa Linguæ Perſicæ*, &c.] The firſt of theſe pieces is dedicated to Mr Selden, being firſt drawn up at his requeſt, and approved by him; Dr Smith tells us, [p. 16.] it was written before our author's travels (into the Eaſt), and the ſame is intimated in the dedication, but could not then be printed for want of types. The tract ſubjoined is addreſſed to his friend Monſieur Hardy, to whom he gives his motive for publiſhing it, viz. that though many perſons had written of the Siglæ of the Jews, which occur every where among the Rabbins, yet no account had been publiſhed by any author of thoſe uſed by the Perſians and Arabians, eſpecially in their aſtronomical tables; that having met at Conſtantinople with this anonymous Perſian writer, who explains that ſubject with great clearneſs and accuracy, he thought it not unfit to be joined to his *Elementa Linguæ Perſicæ*, which he had begun at Paris at the inſtance of Monſieur Hardy.

* Having taken notice of the *embolifmus*, or Leap year, of the Arabians, and how it differs from the Chriſtian, both which he had marked with a *lineola*, he concludes thus: *De embolifmo Perſuo & Gelalæo vide ſis commentarios noſtros in Ulug Beigium.*

(85) Ubi ſupra, p. 30. Yet he thought it was probible they were written.

[*AA*] *Epochæ celebriores*, &c.] Theſe epochæ are of ſingular ſervice in correcting a vaſt number of errors in our books of chronology, and for the better underſtanding of them they are reduced by our author to the Julian period, and the vulgar Dionyſian æra of Chriſt; he has likewiſe added a praxis of the tables, with proper lemmata and examples. But the commentaries mentioned in the title were not printed with the book, though they are again referred to at the end of it *. Yet Dr Smith after a very diligent enquiry was never able to find them (85). With regard to the piece annexed *Choraſmiæ,—deſcriptio ex tabulis Abulfedæ*. In the preface having taken notice how much the tables of Abulfeda had been [illegible] by the learned, and mentioned Ramuſius as the firſt who cited them, and ſhewed the uſe of them; he proceeds in obſerving, that many paſſages in them relating to Aſia had been corrected by Caſtaldus an eminent Geographer, who had undertaken the deſcription of that part of the world, and upon whoſe authority the tables are frequently mentioned by Ortelius in his *Theſaurus Geographicus* Speaking of the method of theſe tables he writes, that the firſt meridian was drawn through the Fortunate Iſlands by Ptolomy and his followers, the Greeks and Latins, and that the ancient Arabians followed the Greeks in that point: But that Abulfeda, with ſome others, computed the longitude from the meridian paſſing the extreme promontory which runs out into the Atlantic Ocean. Hence, continues he, the reaſon is plain why in ſome of the aſtronomical tables, and geographical charts of the Arabians, Alexandria in Egypt is placed in 51° longitude, in others in 61°; the former computing from the ſhore of the Atlantic Ocean, the latter from the Fortunate Iſlands. But the Indian Geographers and Aſtronomers have a quite different method of computing the longitude, drawing the firſt meridian in the Eaſt through Concador, whereas the Greeks and Latins, as alſo the Perſians, Arabians, and others, fix it in the Weſt, which appears from an inſtitution of aſtronomy wrote by Ali Koſhgi, an eminent Perſian aſtronomer. In fixing the climates, Abulfeda takes a very different method from the common one; beſides the ſeven climates of the ancient Greeks, followed herein by the Arabians and Perſians as being real, and κατὰ θεσιν, depending on the length of the days, he aſſigns twenty eight others καθ' ὑποθεσιν, diſtinguiſhing in his tables between *clima verum* and *clima cognitum*; by this latter he means any country or kingdom, which contains ſeveral provinces or tracts of land, as Syria, al Erak, and other countries: ſometimes *clima cognitum* is part of one true climate, ſometimes of two; as Syria is partly in the third, and partly in the fourth climate; ſometimes *clima cognitum* contains part of ſeven climates, as it is reported of China, the longitude of which is ſaid to exceed the latitude. The reaſon why Abulfeda reckons Arabia, or as he calls it, the peninſula of Arabia, the firſt climate was, on account of the temple of God, and Mahomet's ſepulchre ſeated there. In proceeding, Mr Greaves explains Abulfeda's method in meaſuring the diſtances of places in theſe maps. He tells us, that he had collated theſe tables with five MSS. one of which belonged to Erpenius, and was tranſcribed from a MS. in the library of the Elector of Palatine; another, which was the very MS. from which Erpenius's copy was taken, and removed to the Vatican library; two others, in Mr Edward Pococke's library, and the fifth bought by himſelf at Conſtantinople; by the help of theſe a great number of errors in each of the tables are corrected, but not the leaſt alteration made without the authority of the major part of the MSS. except the caſe evidently required it. Mr Greaves calls this work *Majoris operis ſpecimen*, and then taking notice of the ſeveral attempts formerly made for preparing an intire edition of that author (86), he ſays, *Quod itaque à tantis viris ſuſceptum & à doctis hodie fere omnibus efflagitatum tandem, favente Deo optimo maximo, in hoc nunquam ſatis deploranda patriæ meæ calamitate, in maximo fortunarum naufragio, ſummaque animi inquietudine conſummatum eſt.* From this paſſage Dr Smith concludes, that our author had wrote and prepared for the preſs, what he calls *Verſio integra tabularum geographicarum Abulfedæ*, though he

(86) Viz. by Erpenius and Schickard. After Mr Greaves the ſame was attempted by S. Clerk, and W. Guiſe at Oxford, and as is ſaid by Mr Thevenot in France, and again at Oxford by Mr Gagnier in 1723; but they were all prevented by death or ſome other accident from executing their deſign. Smith. p. 31. Renaudot's Præf. to his Accounts of India and China, p. 12, 13, and Gagnier's Præf. ad Abulfed. de vit. &c. Mohammed, p. x.

year the following peice. *Chorasmiæ & Mawaralnahræ hoc est regionum extra fluvium Oxum descriptio ex tabulis Abulfædæ Ismaelis principis Hamah*, 4to. And another in English intituled *A description of the grand Seignior's Seraglio or Turkish Emperour's court*, 8vo*. In 1652 he published a piece with this title, *Astronomica quædam ex traditione Shah Cholgii Persæ, una cum hypothesibus Planetarum: item excerpta quædam ex Alfergani elementis astronomicis, & Ali Kushigii de terræ magnitudine & sphærarum cælestium a terra distantiis cum interpretatione Latina* [*B B*] 4to. To this he added the *Binæ Tabulæ geographicæ, &c.* [*C C*] above mentioned.

* Our author did not know that this piece of Mr R. Withers had been printed before in Purchas's Pilgrims, part ii. lib. 9. c. 15.

he had neither seen it nor knew where it was. But that Mr Greaves had some years before collated several copies of Abulfeda with that view, appears from a letter to Mr Pococke, dated October 28, 1646, which begins thus, 'I humbly thank you for these 'happy solutions, and conjectures of your's, concern- 'ing my doubts in Abulfeda, most of which I find to 'agree with Erpenius's copy, and therefore I have 'since taken so much pains as to compare your's and 'Erpenius's manuscripts, and have writ the variæ 'lectiones into your's, with black lead:' and having told the manner in which he had done it, so as not to hurt but improve the manuscript, he proceeds thus, 'I desire you, with your own, to take my Abulfeda, 'as a small gift, if these times should hinder me from 'perfecting what I have designed. Though to speak 'the truth, those maps which shall be made out of 'Abulfeda, will not be so exact as I did expect, as I 'have found by comparing some of them with our 'modern and best charts In his description of the 'Red Sea, which was not far from him, he is most 'grossly mistaken; What may we then think of 'places remoter? however, there may be good use of 'the book for the Arabian writers*. I have also 'compared Ptolemy's Geography, of Bertius's edi- 'tion, with a fair Greek manuscript of your friend's, 'whereby I speak it confidently, two thousand errors 'may be corrected in the Greek edition; and I now 'find that to be true, which Holstenius long since told 'me, that Bertius had done nothing worthy of com- 'mendations in that fair and costly edition of Pto- 'lemy; whereas I find Mercator's conjectures often 'very happily to agree with the manuscript.' In this preface Mr Greaves confounds Abulfeda, the author of the Geography, with another person of the same name, concerning which mistake see Dr Pococke's article.

* Mr Renaudot observes, that Abulfeda's geography is of little or no use, in settling the geography of the eastern countries, by reason of the uncertainty, he leaves position of places in a midst a great number of different accounts. But Mr Gagnier remarks, that, by comparing these various accounts with modern observations, the true situation of places would be better adjusted. See the last cited pieces of these two authors.

[*BB*] *Astronomica quædam ex traditione Shah Cholgii Persæ, &c.*] In the preface our author gives a short history of the rise and progress of Astronomy among the Arabians, by which we find, that very near 400 years before the publication of this book, Gerardus Cremonensis, a person excellently skilled in the Arabic language, though not so well versed in astronomy, published theories of the planets. His errors, which had been universally received and adopted by the ignorant professors of the Sciences, were refuted first by Regiomontanus (87); whose master, George Purback (88), an eminent Astronomer, having a little before wrote his book *de Theoriis Planetarum*, had therein facilitated the reading of Ptolemy, and the ancient Astronomers (*a*). And he is the first, after the restoration of learning in Europe, who wrote a short introduction into the more abstruse parts of the Science. After him there appeared several Elements of the Science, and Commentaries upon Ptolemy; of whom the most eminent are Erasmus Rheinbold, and Michael Mæstlin; this last being frequently recommended by Tycho Brahe. These authors having made use of a great number of barbarous terms, unknown to the Latin language, which had grown into the writings of Astronomers from the publication of the Castilian tables, Mr Greaves thought it would be no unacceptable present to the Republic of Letters to trace these exotic words to their original; in that design he fixed upon this short tract taken from the Commentaries of Mahmud Shah Cholgi. The words here explained are Juzahar, Zenith, Nadir, Buth, with a prodigious variety of others, either taken from the Arabians, or formed in imitation of them (89). And as all the books of Science, especially Physic and Mathematics, came to Europe out of the Arabian schools, from the time of Al Mammon, by whose direction the Greek writers were first translated into Arabic at Babylon; so by this piece of Shah Cholgi, the reader will find, that the celestial hypotheses of the Persians and Arabians are exactly conformable to those of Ptolemy, and have them succinctly and clearly explained and adapted to the motions of the planets, from the accurate observations of Nassir Eddin in the city of Maraga. Besides, the studious in the Oriental tongues must be pleased to see a book published in the genuine Persian language; since what had been before published in that tongue were full of barbarisms and improprieties (90). This Shah Cholgi flourished in the year 866 of the Hegira, and 1461 of the Christian æra, when he composed his Commentaries, (of which the present tract is a part) dedicated by Nassir Eddin to Ilechan Tatar: and though it is not known whether he wrote any thing else, yet Mr Greaves observes, that these alone are sufficient to correct a great many errors in astronomy; and to confute diverse assertions in chronology received upon the authority of Joseph Scaliger; and to explain a variety of things in the Arabian writers, especially the Mathematicians. In the dedication to John Marsham, Esq; (afterwards Sir John Marsham) Mr Greaves remarks, that it was at his sollicitations that Mr Marsham was prevailed with to publish his Diatriba Chronologica, printed at London, 1649, 4to.

(90) Particularly the Pentateuch by Tawush the Jew, and Xavier's Historia Christi & Petri, published by Ludovicus de Dieu, at Leyden in 1639.

[*CC*] *Binæ tabulæ, &c.*] Nassir Eddin, the author of the first of these tables, flourished about the 660 year of the Hegira, and was an eminent Persian Mathematician and Astronomer, greatly commended by Gregory Abu'l Faragius. Historians relate, that presenting a book he had wrote to Mostaasem, the last Kalif of Babylon, who treated it with contempt, he was so exasperated, that he went to Holac Chân, prince of the Tartars, and perswaded him to make war upon Mostaasem, whose army was defeated and himself with his four sons slain by Holac Chân after the taking of Babylon. By this event, the empire and name of the Abbassidæ, which had flourished about 500 years in Asia, were entirely extinguished. It is probable, that Nassir Eddin was advanced to great honours by Holac, and had a considerable share in his friendship; and under his patronage formed the Astronomical tables which he stiled the Ilechan Tables, from Ilechan king of the Tartars [or Tatars], by the assistance of the best mathematicians in the city of Maraga. Mahmud Shah Cholgi prefers these tables to all others, and Mr Greaves remarks, that if they had been known to the Europeans in the preceding ages, those monstrous hypotheses of an eighth heaven, long before introduced by Thebet Ebn Corah, would have been exploded. Mr Greaves therefore extracted this table out of his collection, which he thought would be of great use in illustrating the Geography of the remotest parts of Asia, most of which Nassir Eddin had seen, and travelled over, and given an accurate account of the rest from the writings of the Indians and Arabians*. Ulug Beig, king of Parthia and India, and grandson of Timurlan the Great, was the author of the other tables. Residing at Samarkand his metropolis, he exercised himself in the study of Mathematics and Astronomy; and having sent from all parts for Astronomers, (the principal of whom were Giyath Eddin Iamshud, and Ali Kushgi, author of a celebrated book in the elements of Arithmetic and Astronomy) and furnished them with instruments, he observed,

* Mr Greaves mentions several eminent Arabian Geographers besides Abulfeda, and the authors (which are about 30) cited by him. See the Article PRIDEAUX [HUMPHRY]

(87) He was born June 6, 1436, and died July 6, 1476, Gassend. in ejus vita, p. 67, 92. Paris. 1654, 4to.

(88) He was born May 30, 1423, and died April 7, 1461. Ibid. in ejus vita, p. 58, 74.

(89) This was afterwards made use of by Dr Wallis in his history of Algebra.

(*a*) This was done long before by Ptolemy himself in his old age (not to mention a great number of Arabian and Persian writers after him, as Albattani, Alfergan, Costa Ebn Luka, Nassir Eddin, and Kushgi). For Ptolemy having finished his Μεγάλη Σύνταξις, subjoined to it his treatise, περὶ ὑποθέσεων πλανωμένων, of the hypothesis of the planets, with a view either to refresh his own memory, or to assist youth. But this piece continued in obscurity, scarce known to the Greeks, much less to the Latins, till Dr John Bainbridge published it with *Proclus's Sphæra*, at London, 1620, 4to.

mentioned. He had prepared ſeveral other works for the preſs[*D D*], and was meditating more [*E E*] at this time. But theſe and many other valuable pieces, which might have been expected from him, the public has loſt by his death, which happened October 8, (*z*) 1652. His body was interred in the church of St Bennet Sherehog in London (*a a*). He had made his will the year before, wherein, bequeathing his eſtate to his wife for her life (*b b*), he left his cabinet of coins to Sir John Marſham (*c c*) author of the Canon Chronicus, and appointed the eldeſt of his three younger brothers Dr Nicolas Greaves [*F F*] his executor, who

(*z*) Smith's Obituary in Peck's Deſiderata Curioſa, Vol. II. lib. xiv. p. 25.

(*b b*) Smith Vita Grav. p. 34.

(*c c*) See our author's life prefixed to Miſcellanies, p. 58.

ſerved, in company with them, the phænomena of the heavens with the utmoſt accuracy, and from thence formed his tables (which are famed over the whole Eaſt) in the year 841 of the Hegira, and 1437 of the Chriſtian æra. Among theſe, according to the cuſtom of Aſtronomers, is ranked the Geographical Table here publiſhed by Mr Greaves; who tells us, that he was informed by ſome Turkiſh Aſtronomers of no mean parts and ſkill at Conſtantinople, upon remarking the agreement between the obſervations of Tycho Brahe and thoſe of Ulug Beig, that the latter, beſides his other moſt exact inſtruments, had procured a quadrant, the radius of which in length equalled the height of the dome of St Sophia: this account the Turks had from Perſians of credit. Mr Greaves leaves the reader to believe as much of this ſtory as he pleaſes; but obſerves, that very large inſtruments were abſolutely neceſſary to take the height of the Pole, ſo accurately as he had done at Samarkand, (where Ulug Beig reigned, according to Emir Cond, above forty years) for he makes it to be 39°. 37′. 23″. from whence we may conclude his great accuracy in the reſt of his obſervations. Notwithſtanding this, a manuſcript of our author, entitled Chorographical Maps, from the Tables of Naſſir Eddin, Abulfeda, and Ulug Beig, coming after his death into the hands of Dr Smith (91), that gentleman did not think proper to print it, by reaſon he found the maps not ſo correct as ſome which had been made in later times. The Commentaries mentioned in the title of Binæ Tabulæ, &c. were never printed, and Dr Ward thinks they were never written, from a paſſage in one of our author's letters to Mr Pococke, where he ſays, 'The book I ſend you ſhould 'have been with you long ſince, but by reaſon of my 'many diverſions and law-ſuits, I have not as yet di-'ſtributed the copies, nor added the Commentary I 'intended.' Though there is no date to this letter, yet, by the mention of his law-ſuits, Dr Ward ſuppoſes theſe two Geographical Tables muſt be meant, which were firſt printed at the time he was in theſe troubles (92).

(91) Vita John. Grav. p. 31.

(92) Lives of the Greſham Profeſſors, p. 147.

[*D D*] *Prepared ſeveral other works for the preſs.*] Several of theſe have been ſince printed. As (1) In the Philoſophical Tranſactions. *The manner of hatching chickens at Cairo.* No 137. *An Account of ſome experiments for trying the force of great guns made at Woolwich.* March 18, 1651. No 173. *An Account of the latitude of Conſtantinople and Rhodes.* No 178. Afterwards reprinted in Mr Ray's Collection of Travels, 1693. Fol. (2) *Binarum Tabularum Verſio à Georgio Chryſococca ex manuſcriptis Perſicis græce facta, quarum altera longitudines & latitudines ſtellarum inſignium 25, altera inſignium oppidorum, continebat.* Theſe tables were publiſhed by Iſmael Bullialdus, in an Appendix to his *Aſtronomia Philolaica*, which Mr Greaves had collated with his copy, and the latter of them has been reprinted in Dr Hudſon's third Volume of Collections, intitled *Geographiæ veteris Scriptores Græci minores.* Oxon. 1712. 8vo. (3) *Deſcriptio Peninſulæ Arabiæ ex Abulfeda* (93), *cum deſcriptione maris Perſici & Rubri; Arabice & Latine* (4) *Ptolemæi Arabia.* Theſe two laſt were likewiſe publiſhed by Dr Hudſon in the ſame Volume with the *Tabulæ Chryſococcæ* (94).

(93) Taken from Texeira the Spaniard, who borrowed many things from Emir Cond, the Perſian. From this edition Mr la Roque made his French tranſlation of the ſame deſcription of Arabia ſubjoined to D'Arvieux's Journey to Paleſtine, printed at Paris 1717, 8vo.

The following are not yet printed. (1) *Tabulæ integræ longitudinis & latitudinis ſtellarum fixarum juxta Ulug Beigi obſervationes.* Mr Greaves carefully collated five Perſian MSS. of theſe tables, after which he tranſlated them into Latin, and depoſited the copy with Archbiſhop Uſher. But this not being known to Mr Thomas Hyde, of Queen's College in Oxford, he made a new verſion, and publiſhed it with the original and a learned Commentary at Oxford, 1665, in 4to. (2) *A geographical account of the mountains in the country near the Arabians, from Abulfeda.* Engliſh. (3) Of the Tatars, or inhabitants of Mogol. (95), with a ſhort deſcription of the chief regions in Perſia. (4) *Elementa omnium ſcientiarum præſertim mathematicarum.* This book, written with his own hand, was given to Dr Dudley Loftus of Ireland, by Dr Nicholas Greaves, our author's brother, and afterwards came into the hands of Dr Thomas Smith (96), by whom it was left among his other manuſcripts to Mr Hearne, and is now in the Bodleian library at Oxford. It is a ſmall piece, about the ſize of an ordinary pamphlet, in 8vo. It was bound by order of Mr Hearne, being before a collection of looſe papers which our author carried about in his pocket, by way of Adverſaria. It conſiſts of 41 heads, which are as follow. *Obſervations relating to Chronology and Aſtronomy, particularly an account of the epochæ uſed by ſeveral nations. Ars gnomonica Ars militaris. Agriculture*, a blank page with only the title. *Ars navigationis. Juriſprudentia. Concerning law. Medicina. Chymica. Curious extracts out of oriental authors, relating chiefly to mathematical ſubjects, as particularly chronological tables out of Naſſir Eddin. An Account of ſome of the moſt eminent Philoſophers, from Ebn Chalicân and other Manuſcripts. Eclipſes of the ſun and moon at Oxford, Rome, Marana in the Weſt Indies, Conſtantinople, and many other places. Collections out of the Geographia Nubienſis; de magnitudine terræ, the opinion of ſeveral oriental writers on that ſubject; Tabulæ aſtronomicæ Perſicæ; de calculo aſtronomico. Algebra. De philoſophia, ſive de artibus & ſcientiis in genere. Grammatica. Rhetorica. Hiſtoria. Logica. Phyſica. Metaphyſica. Arithmetica. Geometria. Aſtronomia. Optica. Aſtrologia. Trigonometria. Chronological and Aſtronomical Obſervations, collected out of oriental and other authors. Tables of the longitude and latitude of places ex Ulug Bego & Keplero. Geographia*, a blank page with only the title. *Muſica*, a blank page. *Metrica. Geodæſia. Altimetrica. Mechanica*, a blank page. *Trigonometrical caſes. Tables of ſigns and tangents. De militia Romana. Architectura militaris. Architectura. Pictura*, a blank page. *Sculptura*, a blank page. *De Divinatione. Theologia. Philoſophia moralis. Chronological and Aſtronomical Collections.* (5) *Quæſtiones Abdallæ Ebn Salan Judæi cum Mohammedis reſponſis, à Johanne Gravio ex Arabica lingua in Latinam traductæ & notis illuſtratæ.* Dr Ward tells us (97) this is a curious manuſcript in Arabic and Latin, then [1740] in the poſſeſſion of Sir Richard Ellys, Bart. and that it contains certain queſtions taken out of the Jewiſh Law by Ebn Salan, and propoſed to Mohammed, which being anſwered by him, this Rabbi is there ſaid to have become one of his principal followers.

(96) Dr Smith calls this book Synopſis & Compendium ἐγκυκλοπαιδείας. Vita. J. G. p. 31.

(97) Ubi ſupra, p. 150.

[*E E*] *Was meditating others.*] Among theſe was an account of the magnitude of the earth according to the Arabians, as alſo their weights and meaſures; and a deſcription of the Egyptian ſepulchres, with an account of their hieroglyphics and other antiquities, of which he had a large quantity of various ſorts. There is likewiſe in the Savilian Muſæum a ſmall MS. book containing aſtronomical, geographical, and other miſcellaneous obſervations made at Conſtantinople, Rhodes, Alexandria, and other places in the Eaſt, chiefly in 1638, and a printed Almanack for 1637 filled with MS. obſervations in aſtronomy, and other remarks of various kinds made in Italy after his return from the Eaſt in 1639. Several extracts from theſe have been printed by Dr Ward, and more by Dr Birch in the Miſcellaneous Works, &c. In the 1ſt Vol. of which he has given us the Pyramidographia, with a great many additions and alterations from a copy corrected by the author, and the diſcourſe of the Roman foot and denarius.

(94) To theſe are to be added *Lemmata Archimedea* mentioned in remark [Q] which were firſt inſerted in an edition of Archimedes's Works in 1675, 4to. by Dr Barrow. In 1706 there came out a piece intituled, The Origin and Antiquity of our Engliſh weights and meaſures, &c. By Mr John Greaves, Aſtronomy Profeſſor at Oxford; and a ſecond edition was publiſhed in 1745, 12mo. But this tract was not wrote by our author, as preſently appears upon looking into it.

(95) He deſigned to have printed it, but was prevented by his death.

[*F F*] *His brother Dr Nicolas Greaves.*] This gentleman was firſt a Commoner at St Mary's Hall in Oxford, and being choſen Fellow of All Souls College in 1627, became Senior Proctor of the Univerſity in 1640.

He

who by will bequeathed our author's aſtronomical inſtruments to the Savilian library at Oxford, where they are repoſited (*d d*) together with ſeveral of his papers (*e e*). His loſs was much lamented by his friends [*G G*], he ſeems to be a man of great reſolution, and the whole tenor of his life ſhews him a zealous Royaliſt, and ſteady in his friendſhips, tho' as he declares of [*H H*] himſelf not at all inclined to contention; he was highly eſteemed by ſeveral learned men abroad, with whom he correſponded, as William Schickard, James Golius, Cladius Hardy, Francis Junius, Peter Scavenius, and Chriſtian Ravius; and at home, beſides Archbiſhop Laud, he had an intimate friendſhip with Archbiſhop Uſher, Mr Selden, Dr Gerard Langbaine, Dr William Harvey, Sir John Marſham, Dr Edward Pococke, Dr Charles Scarborough, Dr George Ent, and other great men (*f f*).

(*d d*) Catalogus librorum manuſcriptorum Angliæ & Hiberniæ in unum collect. part i. p. 302. Oxon. 1697, fol.

(*e e*) A great many of theſe papers were ſold by his executor's widow to a bookſeller, and loſt or diſperſed. Smith, p. 34.

(*f f*) See his letter, and other parts of his works, paſſim.

He proceeded, B. D. Nov. 1, 1642, and being created Doctor on the 6th of June the year following, was afterwards preferred to the Deanery of Dromore in Ireland (98). The two other brothers were men of conſiderable learning. Of theſe, Thomas the elder was born at Colmore, and having his firſt education at Charter-Houſe School, was admitted March 27, 1627, ſcholar of Corpus Chriſti College in Oxford, and taking his degrees in Arts, became fellow of the college in 1636. He proceeded, B D. in 1641, and had the rectory of Dunſby in Lincolnſhire, beſides a living near London before the Reſtoration: after which he was created D. D. in 1661, and became rector of Bennyfield, in Northamptonſhire, and in 1666 a Prebendary of Peterborough, but this laſt was the only preferment he was poſſeſſed of at his death, which happened in 1676, at an eſtate he had purchaſed at Weldon in Northamptonſhire, having retired thither upon his reſignation of Bennyfield ſome time before (99); upon his grave ſtone in the chancel of Weldon church (where he was interred) is the following inſcription: *Thomas Gravius, S. Th. D. Eccleſiæ Petroburg. Prebend. Vir ſummæ pietatis & eruditionis; In Philoſophicis paucis ſecundus; In Philologicis peritiſſimis par; In linguis orientalibus pleriſque major, quarum Perſicam notis in appendice ad Biblia Polyglotta doctiſſimè illuſtravit* (100). *Arabicam publice in Academia Oxon. profeſſus eſt* (101), *digniſſimus etiam qui & Theologiam in eodem loco profiteretur; Poeta inſuper & Orator inſignis; atque in Mathematicis profunde doctus. Reipublicæ Literariæ & Eccleſiæ Chriſtianæ flebilis obiit Maij 22, ann. 1676. æt. ſuæ 65.* Beſides the pieces mentioned in the margin, he had once ſome thoughts of publiſhing a treatiſe againſt Mahometiſm, as appears from a letter he wrote to his friend Mr Baxter (102), whoſe zeal and piety he therein greatly commends.

Edward the youngeſt of the four brothers was born at Croydon in Surrey. Elected Fellow of All Souls College in 1634, proceeded Doctor of Phyſic July 8, 1641, became ſuperiour reader (as obſerved in remark [P]) of Lynacre's lecture in that faculty at Merton College, Nov. 14, 1643, in the room of Dr Bainbridge; and together with Dr Walter Charleton, was appointed travelling phyſician to King Charles I. (103). Upon the decline of his Majeſty's affairs, he went to London and practiſed there, going occaſionally in the ſeaſons to Bath, to the library of which Abbey church he was a benefactor (104). Octob. 11, 1657, he was choſen Fellow of the College of Phyſicians (105), and after the Reſtoration became Phyſician in Ordinary to K. Charles II. who created him a Baronet (106). He ſpoke the Harveyan ſpeech on the 25th of July 1661 (107). He died at his houſe in Covent-Garden Nov. 11, 1680, and was buried in that pariſh church (108).

[*G G*] *He was much lamented by his friends.*] Dr Gerard Langbaine in a letter to Mr Selden, Oct. 22, 1652, writes thus: 'for Mr John Greaves, I was ſeized of the ſad news of his death. I have in him loſt a friend, and learning a great ſupport. What he had of his own as author, I hope his brothers or ſome knowing friend will be careful to preſerve. You know he was owner of ſome Arabic books, which I believe are not to be found in Europe again. Unleſs you think fit to buy them yourſelf, I would willingly put in for this Univerſity. We ſhall be able to compaſs ſome of them, and I hope in time, by means of Mr Pococke and ſuch of his ſcholars here as are ingenious and ſtudious, to make uſe of them. And methinks 'tis a diſgrace to our nation that ſuch commodities ſhould paſs from hence to France, or Sweden, or the Low Countries (109).'

[*H H*] *He declares of himſelf.*] In a letter to Mr Pococke dated March 6, 1650. 'There is no man, ſays he, deſires more to be quiet than myſelf, and to promote learning and honeſt purpoſes. But I know not how it is my fortune to find enemies where I have leaſt deſerved, and friends where I could no way have merited (110).'

GREENVIL, GRENVIL, GRENEVILL, GREINVIL, GROYNVILLE, GREENFIELD, GRENEFELDT, GRAINVILLE, GRAYNVILLE, GRANEVIL, or, as now commonly written, Granville or Greenville, in Latin Grandiſvilla, one of the moſt ancient and noble families in this iſland (*a*). It is a point ſettled on the higheſt authorities, that this is a branch of the ancient ducal houſe of Normandy, and enjoyed very high titles before they came over hither with the Conqueror, to whom Richard de Greenville, the founder of this illuſtrious line, was nearly related (*b*) [*A*]. This Richard de Greenvil attended his brother Robert Fitzhamon,

[*A*] *Was nearly related.*] There is nothing of this kind more certain, or more clearly ſupported by authorities of hiſtory and of record, than that this family came in with William, ſurnamed the Conqueror, and received from him large eſtates in the county of Devon (1). As to the deſcent of Richardus de Grana Villa, or Ricardus de Grenvile (2), for thus the name is written in the oldeſt pieces we have met with from the Norman houſe, it ſtands thus. Rollo, the Norman, was inveſted with the Duchy of Normandy by Charles the Simple, who then wore the Crown of France, from whom, at the ſame time, he received his daughter Giſela, or, as our hiſtorians commonly call her, Giletta, as his conſort (3). She was, however, properly ſpeaking, no more than a wife of honour; and whereas the current of hiſtorians ſay, that Rollo had no iſſue by her, but that after her deceaſe he married a ſecond wife; the true ſtate of the matter is this, that he never conſummated the marriage with the king of France's daughter, who ſurvived him, but by another lady, Popa, daughter to the count de Baieux, whom he had taken many years before in a predatory expedition, he had a ſon Guillaume Longue-epé, that is, William with the long ſword, his ſucceſſor, and a daughter Girlotta, who eſpouſed the duke of Guyenne, or Acquitaine (4). William ſucceeded his father, anno dom. 912. He was in all reſpects one of the moſt accompliſhed and virtuous princes of his time, which, however, did not hinder his being moſt infamouſly aſſaſſinated by the count of Flanders, anno dom. 943 (5). He eſpouſed the daughter of Herbert, count of Vermandois, and by her had Richard, ſurnamed the Hardy, who though he ſucceeded to the Duchy a child, yet he governed long, and with great

reputation. He married firſt Emma, daughter to Hugh le Grand, count of Paris, and father to Hugh Capet, by whom he had no iſſue; but by a Daniſh lady of great quality, whoſe name was Gunnora, whom he firſt kept as a concubine, and afterwards *married*, he had three ſons, Richard, who ſucceeded him; Robert Archbiſhop of Roan, and Maliger, or, as *it is* commonly pronounced, Mauger, count of Corboile (6). He had alſo three daughters, of whom the youngeſt was Emma, ſurnamed the Flower of Normandy, married to Ethelred, and Canute, both Kings of England, mother, by the latter, to Harold, ſurnamed Harefoot; and by the former, of Edward the Confeſſor, who were alſo both kings of England (7). This Mauger, earl of Corboile, had a ſon, whoſe name was Hamon, who was ſlain in battle in the reign of his couſin Robert II. duke of Normandy. His ſon was alſo called Hamon, ſurnamed le Dentu, in Latin Dentatus, who married the ſiſter of the emperor Otho, and by her had three ſons, Robert, Richard, and Hamon, who all attended the Conqueror in his expedition into England, were preſent with him at the battle of Haſtings (8); and marching with him afterwards into the Weſt, to the ſiege of Exeter, Richard had beſtowed upon him lands of conſiderable value, particularly the lordſhips of Biddeford in Devonſhire, and of Kilkhampton in Cornwall (9). Thus far all is as clear as in a matter of this antiquity can poſſibly be expected. But as to what is reported of Hamon Dentatus being lord of Granville, in Normandy, it is, with me at leaſt, of no ſuch eaſy digeſtion; that there is ſuch a town in Normandy is, indeed, very certain, but that it belonged to Hamon le Dentu, and that from thence his ſecond ſon was ſtiled Richard de Granville; I ſhall readily acknowledge, when it can be proved that there was ſuch a place in thoſe times, or for two or three hundred years after; but till that can be done, I ſhall look upon this French ſurname as a piece of affectation, that might have endangered the credit of this genealogy, if it had not been otherwiſe ſo well ſupported both by hiſtory and record. If he had really brought the ſurname of Granville out of Normandy, we ſhould without queſtion, have found his name in the old chronicles, where there is a very long liſt (10); or in the roll of Battle-Abbey (11), or in that other ancient roll, purporting the names of thoſe who came over with duke William (12); but as *we do* not find it there, it is much more reaſonable to believe, that he aſſumed that ſurname in England, *more eſpecially* if for this any probable account can be given. As to it's occurring in the liſt publiſhed by Holinſhed (13), it proves little, ſince it is plainly interpolated, and ſeveral names added that were not, or could be, in the roll of Battle-Abbey, and this amongſt the reſt.

[*B*] *Who were embarked in that enterprize*] The hiſtory of the conqueſt of Glamorgan is a *piece of* hiſtory extremely well preſerved by the care of Sir Edward Stradling, as *ſome* ſay, or as others affirm, Sir Edward Maunſel, who collected it from very authentic evidences; and therefore though the language be ſomewhat obſolete, we preſume to give it in the author's words (14). 'In the year of our Lord 1091, 'and in the 4th yeare of the reign of King William 'Rufus, one Jeſtyn, the ſon of Gungant, being lord 'of the ſaid lordſhip of Glamorgan, Rees ap Theodoc Prince of South Wales, that is, of Caermarthyneſhire and Caerdiganſhire, made war upon him. 'Whereupon the ſaid Jeſtyn underſtanding himſelf unable to withſtand the ſaid Rees, without ſome aid 'otherwiſe, ſent one Eneon, a gentleman of his to 'England, to one Robertus Fitzhamon, a worthy 'man, and Knight of the Privy Chamber with the 'ſaid King, to retain him for his ſuccour. The 'which Robert being deſirous to exerciſe himſelf in 'the feats of war, agreed ſoon with him thereto, for 'a ſalary to him granted for the ſame. Whereupon 'the ſaid Robert Fitzhamon retained to his ſervice, 'for the ſaid journey, twelve knights, and a competent number of ſoldiers, and went into Wales, and 'joining there with the power of the ſaid Jeſtyn, 'fought with the ſaid Rees ap Tewdor, and killed 'him, and one Conan his ſon. After which victory 'the ſaid Robert Fitzhamon minding to return home 'again with his company, demanded his ſalary to 'him due of the ſaid Jeſtyn, according to the covenants and promiſes agreed upon between him and the 'aforeſaid Eneon, on the behalf of the ſaid Jeſtyn 'his maſter. The which to perform in all points, 'the ſaid Jeſtyn denied, and thereupon they fell out, 'ſo that it came to be tried by battle. And for ſo 'much as the ſaid Eneon ſaw his maſter go from diverſ articles and promiſes, that he had willed him to 'conclude with the ſaid Robert Fitzhamon on his behalf, he forſook his maſter, and took part, he and 'his friends, with the ſaid Robert Fitzhamon. In 'the which conflict the ſaid Jeſtyn, with a great number of his men were ſlain, whereby the ſaid Robert 'Fitzhamon wan the peaceable poſſeſſion of the whole 'lordſhip of Glamorgan, with the members of the 'which he gave certain caſtles and manors in reward 'of ſervice to the ſaid twelve knights, and to other 'his gentlemen. (1) William de Londres, alias London. (2) Richardus de Grana Villa, alias Greenfeeld. (3) Paganus de Turbervile. (4) Robertus de S Quintino, alias S. Quintine. (5) Richardus de Syward. (6) Gilbertus de Humfrevile. (7) Rogerus de Berkrolles. (8) Reginaldus de Sully. (9) Peter le Soore. (10) Johannes le Fleming. (11) Oliverus de S. John, a younger brother of the Lord S. John of Baſing. (12) William le Eſterling, whoſe 'anceſtors came out of Dantzic to England with the 'Danes, and is now by ſhortneſs of ſpeech called 'Stradling.' Thus far the old hiſtory. In this diviſion the caſtle and lordſhip of Neth was given to this Sir Richard, ſtiled from this time Sir Richard de Greneville, and never, as I can from any good authority find, ſo ſtiled before. In order to account for this we muſt obſerve, that in the Britiſh times this town was called Nedh, as the river likewiſe was, upon which it ſtands, implying muddy, turbid, or diſturbed, which is a true deſcription of the water (15). Under the Romans it became ſo conſiderable a place, that it is mentioned by Antoninus, who calls it Nidum (16). It is now called Neath, approaching nearly to it's old Britiſh name. At the time of this conqueſt, though not what it had been, it was ſtill very conſiderable, and the village of Lantwit, or St Iltuts, which joins to it, ſhews foundations of many buildings, and the viſible remains of ſeveral ſtreets (17). Hence it was denominated in the Latin of thoſe times Grandiſvilla, as we gather from Leland, which is not Great Town, but Old Town, and what corroborates this is, that in the neighbourhood of it there is Nova Villa, or New Town (18). Neath, though it has not recovered it's ancient ſplendor, is, however a place of note at this day, has a good bridge, a flouriſhing trade, a good market, and is governed by a Portreve (19). Now that this is the true ſtate of the matter, and that we need not take a fruitleſs journey to Normandy to look for Granville, before the little town of that name, that is ſtill *ſtanding*, was *built*, which *the* beſt French writers ſay was in 1440 (20), will appear from hence, there was really ſuch a name as this, and at this time, but it belonged to another family, thus Leland, citing Henry Huntingdon, relates the death of the earl of Eſſex thus (21), 'Gaufredus de Magna 'Villa, Conſul Eſſexe, à quodam pedite veliſſus 'vulneratus eſt ſagitta, unde non longe poſt obiit.' In another place, ſpeaking of the very ſame perſon, he ſays (22), 'King Stephane's men toke Geffray Grauntville, that had many caſtelles in keping to the uſe of 'Mawde Emperes.' Yet the common name of this family was Mandeville; but before ſurnames were thoroughly

parts. On the contrary, it ſeems highly probable, that, by the advice of his wife Conſtance, he gave a great part of the lands which he had purchaſed with his ſword to the founding of a religious houſe, which remained one of the faireſt in Wales to the time of the diſſolution (*f*) [C]. He continued to reſide in the weſt of England, where he had large poſſeſſions in the counties of Cornwall and Devon, 'till, according to the turn of military devotion, which prevailed in thoſe times, he took the croſs when he was very old, but expired before he could carry into execution his deſign of going to Jeruſalem, in the year 1147 (*g*). It is not abſolutely certain, whether Conſtance, beforementioned, or Iſabel, the ſecond wife of Richard de Greenvil, was the daughter of Walter Gifford, earl of Longueville in Normandy, and of Buckingham in England; but by which ever of thoſe ladies was the daughter of that great peer, who, from a grant of the Conqueror, held no leſs then forty-eight manors: he had a younger ſon, Gerard de Greenvil (*b*), and perhaps another,

thoroughly ſettled, we find them often mentioned by the name of Grauntville, over which, in ſome of Leland's manuſcripts, we find Mandeville written (23); but from this circumſtance, perſons but indifferently acquainted with our antiquities might very eaſily confound both perſons and names. Indeed, Mr Camden in this inſtance may be ſuppoſed to have led others aſtray, for he mentions Greenfeld as a corruption of Grenevile, and alſo ſpeaks of it as derived from ſome place in Normandy (24); and yet when he reckons the places in that duchy which gave ſurnames, he takes no notice of Granville.

(23) Id. ibid. p. 766.

(24) Remains, Lond. 1605. 4to. p. 95, 96.

[C] *To the time of the diſſolution.*] The deſign of Sir Richard de Grenevile was to grant to the abbot and convent of Savigny, near Lyons in France, tho' I rather think in Normandy, the means of erecting an abbey here, of a certain order, which ſubſiſted before the Conqueſt, ſtiled Featres Giſei, who became not long after white Monks of the Ciſtercian Order (25). He began to build this abbey, which was on the weſt ſide of the river, a little below the town, and dedicated it to the Holy Trinity, in 1129, and the next year placed twelve monks therein, and then compleated his intended grant, as the original charter ſheweth. In the ancient manuſcript, which we have mentioned more than once, theſe particulars are very conciſely recorded, in terms very worthy of notice, as well for the matter they contain, as for the manner of ſpelling the proper names; which is a clear proof that they had no notion it was of French original (26). 'Sir Richard Greenefeeld before, and to whom the 'lordſhip of Neth was given in reward, was lord 'of the caſtel and manour of Bydyford in Devon'ſhire, at the time he came into Wales with the ſaid 'Robert Fitzhamon, and founded an abbaie of white 'monkes in Neth, and gave the whole lordſhip to 'the maintenance of the ſame, and then return'ed backe againe to Bydyford; whereas the iſſue 'male of his body doth yet remaine, and enjoyeth 'the ſame.' Robert Fitzhamon, after the conqueſt of Glamorganſhire, was advanced to the earldom of Glouceſter by William Rufus, and dying without iſſue male, Henry gave his daughter Mabel to Robert, his natural ſon, who had the earldom of Glouceſter in her right, and by her he had William, who ſucceeded him in the title (27). This counteſs Mabel, with William earl of Glouceſter her ſon, confirmed to the church of the Holy Trinity and Virgin Mary of Nethe, whatever Richard de Granville and Conſtance his wife had granted (28), in wood and ſoil, between the four waters of Nethe, Tawy, Clend and Pulcannan; and the land between Clend and the brook, which runs near the croſs of Conſtance, the wife of the ſaid Richard de Granville, to the head of the ſaid brook, caſtle and chapel of Nethe, with the tenths of procuration, and of all perſons belonging to the ſaid caſtle, viz. of French, Engliſh, and Welſhmen, and half of the fiſh of Nethe Caſtle. Likewiſe Clend Mill, with all the meadow from the mill to New Town ditch, and thence to Nethe water. Alſo whatever Richard the Conſtable, viz. Richard de Granvil had in Eiſe Town. Saving the cuſtoms of the Earl i. e. of Glouceſter out of the foreſt, and a knight's fee in Eiſe, which Richard the Conſtable held in Devonſhire, and Bideford, Killerton, and the town of Litcham. This charter of confirmation is a ſtrong preſumptive proof of the affinity between the families, and to this we may add further, that the arms borne by William earl of Glouceſter, in right of his mother, the daughter of Robert Fitzhamon, are the ſame with thoſe borne by Richard de Grenevile, the grandſon of Sir Richard, as we find them affixed to a very remarkable charter, with which we ſhall conclude this note (29). 'Know, &c. That I Richard, ſon of 'Richard de Grenevile, have granted to all thoſe who 'hold, or ſhall hold a burgage in the town of Byde'ford, to the eaſt and weſt of Torith water, all the 'liberties of Briſtol, ſo far as are in my power, to 'them, their heirs, and aſſigns for ever, viz That 'each perſon holding a meſſuage, garden, and ſix 'acres out of my demeſnes, ſhall pay for the ſame 'twelve pence. But whoſoever ſhall hold a meſſuage 'and garden only, ſhall pay ſix-pence on Michaelmas 'day to me, or my bailiff, at Bydeford Save only 'the tax on the land. And if any one fall under the 'cenſure of my court, he ſhall be acquitted for ſix'pence, if it be the third time. Moreover he grants 'to the ſaid burgeſſes common of paſture for their 'cattle, throughout his whole lordſhip, on the weſt 'ſide of Torith water, where they had commoning in 'the time of Richard his father. And whoſoever 'ſhall diſpoſe of, or ſell his burgeſs, ſhall pay as a re'lief, twelve pence and no more. Alſo further grants 'to the ſaid burgeſſes ſuit to his court, on Tueſday 'every month, where attachments and pleas ſhall be 'tried, as by cuſtom belonging to the Lord. And 'that every one be free of toll in all markets, and 'fairs, and all dues for ſtallage throughout all his 'lands, towns, and waters. And that every one of 'the ſaid burgeſſes ſhall be obliged to come to the 'court on Tueſday, unleſs truly proved, that he be 'beyond the ſeas, or on a pilgrimage, or employed 'in buying of goods out of the country. That the 'burgeſſes ſhall have liberty to chooſe a town Provoſt 'out of themſelves, who ſhall receive yearly the fines 'and tolls of the town, paying yearly to the Lord 'ten ſhillings, and the toll of the market on Mon'day. In conſideration of which grant, the bur'geſſes paid four marks, witneſſes Sir Richard Coffin, 'and Sir Richard Speckott, knights; Peter de Haleſ'hyri, Richard Sanſard, Walrand Dune, Orbert de 'Lucy, Richard de Rokemator, and others. To 'which is appendant a round ſeal, containing theſe 'arms, in an oblong ſhield, viz. three Organ Reſts.' The authority of this charter might be ſupported from one of our moſt reſpectable records (30); and it may not be amiſs to obſerve, that in proportion as this family grew in affluence and honour, this their lordſhip enjoyed the fruits of it. The old Saxon name, as they commonly do, points out the ſituation of the town, for anciently it was wrote By-the-Ford, becauſe there the river was fordable, though the tide riſes at leaſt two miles higher; but experience ſhewing this ford to be both precarious and dangerous, ſeveral attempts were made to build a bridge, which failed either for want of ſufficient ſkill, or a ſuitable ſupport (31): at length under the auſpice of Sir Theobald Grenevile it was undertaken and perfected, and a good land-eſtate ſettled to keep it in repair. This is in all reſpects one of the fineſt and moſt beautiful bridges in the kingdom, and of inexpreſſible benefit to the town (32); for which the influence of this family likewiſe procured a weekly market, and three annual fairs, circumſtances that ſufficiently account for that high and general reſpect paid them in all the old collections, relating either to the counties of Cornwall, or

another, Robert de Greenvil, who ſettled in that county, and enjoyed plentiful fortunes from the benevolence of their grandfather (*i*). It is a circumſtance very uncommon, that both families ſhould flouriſh, for upwards of ſix hundred years, in great affluence and honour, allying themſelves to the beſt houſes in the weſt, and in the middle of England; arriving at thoſe dignities which are the reward of conſpicuous merit rather than of favour, ſuch as being intruſted with the cuſtody of their reſpective counties in quality of Sheriff, or being returned to ſerve in parliament (*k*). In the beginning of the thirteenth century, indeed, William de Greenfield, who was of the Devonſhire family, was Archbiſhop of York, and High Chancellor of England, a man diſtinguiſhed for eloquence, probity, and learning, and in great credit with King Edward I. (*l*). He was plundered by Pope Clement V. of between nine and ten thouſand marks, before he could get his election confirmed (*m*); and, to his immortal honour, being preſent in the council of Vienne, he vigorouſly and ſteadily oppoſed the oppreſſion of the knights templars, which had been concerted between the Pope and the French King (*n*). This generous ſpirit, together with an indefatigable zeal for the ſervice of the public, without any mixture of ſelf intereſted views, appeared very conſpicuouſly in many excellent perſons of this diſtinguiſhed line, and at length, for as high an evidence as was ever given of loyalty or patriotiſm, advanced them to the peerage (*o*). It is true the elder line is ſince extinguiſhed, and yet without prejudice to the honour of this illuſtrious name, which for this reaſon his late majeſty was graciouſly pleaſed to raiſe into a title of honour, in favour of Grace lady Carteret, ſurviving daughter of John Earl of Bath, whom he created counteſs of Granville (*p*); which title derives additional luſtre from its preſent poſſeſſor, at this time Preſident of his Majeſty's moſt honourable privy-council (*q*). The other branch of the family has been likewiſe in the preſent reign, raiſed to the like degree of honour, in the perſon of the right honourable Heſter Greenville counteſs Temple (*r*).

or Devon; both, as Fuller (33) expreſſes it, contending for the honour of having produced a family ſo fruitful of worthy examples in private life, and which in the moſt critical ſeaſons, never wanted a member capable of rendering the public ſervice. E

GREENVILE, or GREENVILL [Sir RICHARD], a gallant officer a fortunate diſcoverer, and Vice-Admiral of the Engliſh fleet in the reign of Queen Elizabeth. He was the ſon of Sir Roger Greenvile, knight, one of the Eſquires of the body to King Henry the eighth; by Thomaſine, daughter of Thomas Cole, of Shute, Eſquire (*a*); and it is probable was born in the weſt of England about the year 1540, though according to ſome writers he was born four years later (*b*); which, for reaſons, we ſhall ſubmit to the reader's conſideration, ſeems to be a miſtake [*A*]. He had the misfortune to loſe his father by a ſudden and untimely death while a child (*c*) [*B*]. His mother being

(*c*) Stowe's Annals, p. 589.

[*A*] *Seems to be a miſtake.*] We are told that at the demiſe of old Sir Richard Greenvile, his grandſon Richard was but five years old; and the death of Sir Richard Greenvile is fixed to March the 18th, in the fourth year of Edward the VIth, that is, 1549 (1), which will place the birth of our Sir Richard Greenvile in 1544. We ſhall however ſee in the next note, that his father, Sir Roger Greenvile, died July the 20th, 1545 (2), when, according to this computation, his ſon might be ſomewhat more than a year old, ſo that no exception would ariſe if he had been his only ſon; but beſides Sir Richard Greenvile, Sir Roger had by Thomaſine his wife, two younger ſons, Sir Charles Greenvile, and John Greenvile, Eſquire; though we are told that both of them died without iſſue (3). But if the eldeſt ſon was only a year and ſome few months old when his father loſt his life, when were the other two ſons born? ſuch difficulties as theſe are common enough in tracing deſcents in ancient families, and cannot often be ſo eaſily removed as in the preſent caſe; when if we ſuppoſe that he was five years old, not at the time of his grand-father but of his father's death, it will bring all right, and make the whole of Sir Richard Greenvile's hiſtory very conſiſtent, which otherwiſe will ſcarce be found practicable.

[*B*] *And untimely death while a child.*] In the ſummer of 1545, which was the thirty-ſeventh of the reign of King Henry VIIIth, that monarch was in perſon at Portſmouth, in order to ſee his fleet put to ſea, which was immediately to engage that of France, then hovering upon the coaſt (4). On the twentieth of July he dined on board the Mary Roſe, which was one of the faireſt, and fineſt ſhips in the navy. In the afternoon, after the King was gone aſhore, the wind coming fair they weighed anchor, but through negligence their lower tier of heavy canon being left unbreached, and the ports open, the water entered ſo faſt as the ſhip heaved when they tacked about that ſhe ſunk at once, and though it was a fine clear ſummer's day, yet Sir George Carew, who commanded her, Sir Roger Greenvile, many other perſons of diſtinction, in all to the number of four hundred, were miſerably drowned in the port; and though all imaginable pains was taken to aſſiſt them, not above forty perſons of the whole crew eſcaped (5). On the eighth of March following, old Sir Richard Greenvile made his laſt will and teſtament, by which he bequeaths to Dame Maud his wife, who was the ſecond daughter of John Bevil, of Gwarnock in the county of Cornwall, Eſq; during the term of ſeventy years, if ſhe ſo long live, his manſion and lands called Bucklond, otherwiſe Bucklond Greynfield, in as ample manner as he had by letters-patents dated the 26th of May, in the thirty-third of Henry VIIIth, and after her deceaſe to Richard Greenvile, ſon of Roger Greenvile, his ſon and heir apparent, deceaſed, and his heirs male, remainder to Degory Greenvile, Eſq; his brother, remainder to John Greenvile his other brother (6). His other manors, &c. viz. his manſion place in the town of Bedyford, and all the reſidue of his town and borough of Bedyford, &c. in the county of Devon; his manſion place of Stow, together with all gardens, orchards, and ponds there, with Stow park in the county of Cornwall, his town and borough of Kylkhampton, and his manſion of Woodford in the ſame county, together with all his other lands, &c. in Devonſhire and Cornwall, he leaves to Richard his grandſon, and his heirs male; remainder to his brother John Greenfield, Eſq; and his heirs male; remainder

being a widow, married Thomas Arundel, of Leigh, Eſq; *(d)*; ſo that in all probability the education of him and his brothers, was under the inſpection of their grandfather Sir Richard Greenvile, Knight, an old gentleman of great honour and high reputation, but who ended his days likewiſe in an unfortunate manner March 15, 1549, leaving the greateſt part of his large eſtate to his grandſon Richard *(e)* [C]. We have no diſtinct account after this, of the place or manner of his breeding, which, however, we have not the leaſt cauſe to doubt, was in every reſpect ſuitable to his family and fortune, both being as fair as any gentleman could boaſt in the weſt of England *(f)*. He was naturally of an active, enterprizing, and martial genius, which induced him as ſoon as he was his own maſter to procure a licence from Queen Elizabeth, in the eighth year of her reign, to go with ſeveral other perſons of diſtinction into the ſervice of the Emperor againſt the Turks *(g)*. But that not contented with giving high proofs of his courage as a ſoldier in Hungary, he adventured his perſon likewiſe by ſea, and had the honour to ſhare the glory of that celebrated victory obtained over the Infidels at Lepanto, by the combined Chriſtian Fleet, under the command of Don John of Auſtria, as ſome have reported is improbable. He continued during the reſt of that war abroad, and with an high reputation juſtly ſpringing from his glorious actions he returned to England *(h)* [D]. His warmth was ſo

remainder to his other brother Degory Greenvile, Eſq; and his heirs male; remainder to his right heirs. He bequeaths to his daughter Mary, three hundred marks for her portion (ſhe was afterwards married to John Gifford, of Brightley, Eſq;); to his ſon-in-law Sir Richard Legh and Margaret his wife, one hundred marks; to his ſon-in-law Robert Whettal, Eſq; and Jane his wife, one hundred marks; to his brother-in-law John Drake, and Anne his wife, his ſiſter, the ſum of twenty marks. The reſt of his will ſhews him to be a perſon of ſound judgment, and a great maſter of oeconomy. His executors were Dame Maud, his wife; his brother-in-law, Edmund Speccot, Eſq; John Beauchamp his brother-in-law; John Kellygrew, and John Bevil, Eſquires (7). He made a codicil thereto, dated at Stow in Cornwall, the third of January, in the third of Edward VIth; alſo another the tenth of March, the fourth of Edward VIth; and another the fifteenth of March following, which was but three days before his death, on the eighteenth of March, and Maud his lady ſurvived him but a ſhort time, dying on the twenty-ſixth of April, the fourth of Edward VIth (8).

(8) Collins's Sopplement to the Peerage, Vol. I. p. 77.

[C] *To his grandſon Richard.*] We have in a former note given an account of the time of old Sir Richard Greenvile's death, here we will ſay ſomething of the cauſe of it, the rather becauſe it has eſcaped the notice of ſuch as have formerly undertaken to diſplay either the fortunes or misfortunes of this ancient family. Amongſt thoſe diſturbances which were raiſed by the Commons about incloſures, in the reign of Edward VIth, the county of Cornwall, where the better ſort of inhabitants are much inclined to that manner of improving, was not without it's ſhare (9); and this it was that proved fatal to Sir Richard, after having eſcaped the dangers of foreign wars, and done eminent ſervice to his country in the capacity of a civil magiſtrate. The worthy and well read Antiquary of Cornwall ſhall deliver the reader this tale (10); ſince for any thing we know, he is the only author that has preſerved it, ſpeaking of Trematon Caſtle, which was formerly a pleaſure houſe of the Dukes of Cornwall; he proceeds thus, 'At the laſt Corniſh commotion Sir 'Richard Greenvile the elder, did, with his lady and 'followers, put themſelves into this caſtle, and there 'for a while endured the rebels ſiege, encamped in 'three places againſt it, who wanting great ordnance 'could have wrought the beſieged ſmall ſcathe, had 'his friends or enemies kept faith and promiſe: but 'ſome of thoſe within ſlipping by night over the walls, 'with their bodies after their hearts, and thoſe without mingling humble intreatings with rude menaces, 'he was hereby won to iſſue forth at a poſtern gate 'for parley. The while a part of thoſe rake-hells, 'not knowing what honeſty and far leſs how much 'the word of a ſoldier imported, ſtepped between him 'and home, laid hold on his aged unweildy body, 'and threatened to leave it lifeleſſe, if the incloſed 'did not leave their reſiſtance. So proſecuting their 'firſt treachery againſt their Prince, with ſuitable actions towards his ſubjects, they ſeized on the caſtle, 'and exerciſed the uttermoſt of their barbarous cruelty, 'death excepted, on the ſurprized priſoners. The '* ſeely gentlewomen, without regard of ſex or 'ſhame, were ſtripped from their apparel, to their 'very ſmocks, and ſome of their fingers broken to 'pluck away their rings, and Sir Richard himſelf 'made an exchange from Trematon Caſtle to that of 'Launceſton, with the gayle to boot.' It was the vexation, hardſhips, and fatigue, which this aged couple went through from the madneſs of this inſolent rabble, that brought them both ſoon after to their end.

* i. e. Silly, for innocent and defenceleſs.

[D] *He returned to England.*] We are informed by Camden, that in the year 1566, ſeveral gallant ſpirits of the young Engliſh gentry deſired the Queen's leave to go into Hungary, in order to aſſiſt the Chriſtians againſt the Infidels, by whom they were at that time more grievouſly preſſed, and with greater danger and ruin than had ever threatened Chriſtendom before (11). Maximilian the Second was at that time Emperor of Germany; and Solyman the Magnificent, one of the braveſt and moſt fortunate princes of the line of Ottoman, then occupied the Turkiſh throne. The latter, out of pure ambition, though he was then much weakened by age and infirmities, entered into a war againſt the former, in which, preſuming on the great ſuperiority of his forces, he flattered himſelf with the hopes of reducing all Hungary, making himſelf maſter of Vienna, and ruining entirely the German branch of the Houſe of Auſtria. Theſe dangerous and deſtructive deſigns juſtly alarmed the European powers in general, and thoſe that were moſt likely to ſuffer from the effects of this irruption in particular (12). The Duke of Savoy therefore, and the Grand Duke of Tuſcany ſent conſiderable bodies of men at their own expence; Alphonſo, Duke of Ferrara, marched in perſon into Germany, at the head of a ſmall body of choſen troops, with ſome volunteers of great courage and quality, and many officers of great experience. From Mantua, Genoa, and Lucca, his Imperial Majeſty drew conſiderable ſums, in the nature of free gifts; and the Knights of Malta aſſiſted him with men and money too; and out of France, the Grand Prior of the Houſe of Guiſe went to teſtify his zeal for the Chriſtian Cauſe, attended by many young gentlemen of the firſt families in that kingdom. We need not wonder therefore that Queen Elizabeth ſhould be diſpoſed to permit ſome of her ſubjects alſo to make a campaign or two in the imperial ſervice, upon ſo extraordinary an occaſion. Amongſt theſe young heroes (13), was John Smith, Eſq; afterwards Sir John Smith, couſin-german to king Edward VIth, being the ſon of his mother's ſiſter; Henry Champernown, Philip Butſhid, Richard Greenvile, William Gorges, Thomas Cotton, Eſqrs, and others. Theſe went into Hungary in 1566, and remained there till the enſuing year; when upon the death of Solyman the Magnificent, a negotiation was ſet on foot between the Emperor Maximilian and Sultan Solyman the Second, which ended in a peace (14). As to our Richard Greenvile, it appears from a private family tranſaction that he actually returned to England in the year 1568 (15); and as he engaged the very ſame year

ſo far from being exhauſted by the fatigues he had undergone, or his appetite to fame ſatisfied by what he had acquired, that within a very little time after his reviſiting his native country, he reſolved to embark his perſon and fortune, in that part of the public ſervice, which demanded the attention of all the ſtirring ſpirits of that time, the reduction of Ireland (*i*). In this he behaved himſelf ſo much to the ſatisfaction of Sir Henry Sidney, who then adminiſtred the affairs of that iſland, that we find him conſtituted by the Queen, in the eleventh year of her reign, ſheriff of Cork, during her royal pleaſure (*k*) [*E*]. Upon his return to England he was, together with William Mohun, Eſq; elected to repreſent the county of Cornwall, in that parliament which was ſummoned to meet at Weſtminſter, April 2, 1571 (*l*); he was alſo High-Sheriff of the ſame county in the eighteenth of that reign, though his name is miſtaken by Fuller (*m*), or rather, in all probability, by his printer, and was again elected with Sir William Mohun, to ſerve as Knight for that ſhire in the parliament which was ſummoned to meet at Weſtminſter, November 23, 1584 (*n*), in which he was a very active member. At what time he received the honour of knighthood is not very clear, for according to a learned Antiquary, he was returned Knight of the Shire by the name of Richard Greenvile, Eſq; (*o*), and yet the firſt time we find him mentioned in the Journals, he is ſtiled Sir Richard Greenfield (*p*), for ſo it ſeems they wrote his name, and therefore it is probable he was knighted a little before the parliament ſat. At this juncture he was very deeply engaged with his friend and kinſman Sir Walter Ralegh, in his project for planting; and was one of the committee in the Houſe of Commons to whom the bill was referred for confirming the patent which Sir Walter had obtained from the Queen for making diſcoveries, which paſſed the houſe in a few days, and then Sir Richard applied himſelf to the buſineſs of the expedition, of which he was to have the command in chief, with the title of General, as was the cuſtom of thoſe times (*q*). The fleet, or rather ſquadron, which he commanded conſiſted but of ſeven ſmall ſhips, of which the Tyger was the ſtrongeſt, and the largeſt, and of the burthen of about one hundred and twenty ton; the Roebuck, a fly-boat of near the ſame ſize; the Lyon, of one hundred tons; the Elizabeth, of fifty tons; the Dorothy, a ſmall bark; and two little pinnaces; there went, however, with this ſmall force ſeveral gentlemen of good family and fortune, ſuch as Mr Ralph Lane, afterwards knighted, and a very conſiderable perſon; Mr Thomas Cavendiſh, who afterwards diſtinguiſhed himſelf by his voyage round the world; Mr John Arundel, Mr Raymund, Mr Stukley, Mr Bremige, Mr Vincent, and Mr John Clark, with ſeveral others (*r*): they ſailed from Plymouth, April 9, 1595, and on the twelfth of May came to an anchor in the bay of Moſquito, in the iſland of St John de Porto Rico, where they landed, built a fort, and ſet up a new pinnace which they launched on the twenty third, and this in ſpite of the Spaniards; and before the end of the month they took two ſhips that were tolerable good prizes. On the firſt of June they anchored before the town of Izabella, on the north ſide of Hiſpaniola, where the Spaniſh governor invited them on ſhore, promiſing them a fair and honourable reception, which invitation being accepted, the General landed on the fifth, and was very kindly received, and every thing was managed during the whole interview, with the greateſt decency, ſplendor, and honour imaginable, and mutual preſents being exchanged, and all kind of refreſhments freely furniſhed, they ſailed on the ſeventh for the coaſt of Florida (*s*) [*F*]. On the twentieth of June they

year in the reduction of the Iriſh rebels, it is evident from thence, and from the other facts mentioned in the text, that he could not be preſent in the battle of Lepanto, which was fought October 7, 1571 (16), and for which rejoicings were made over all Europe, and particularly in this kingdom, in virtue of the Queen's letter to the Biſhop of London, for a ſolemn thankſgiving, dated from Greenwich November 8, 1571, and another letter from the Privy Council, by the Queen's command, to the Lord-Mayor of London for the ſame purpoſe (17).

(16) Knolles's Hiſtory of the Turks, p. 885.

(17) Strype's Annals, Vol. II. p. 505, 506.

[*E*] *During her royal pleaſure.*] We have elſewhere given an account of the ſituation of affairs in Ireland at this juncture, when ſome of the old Iriſh nobility were framing the rude draught of that formidable rebellion, that afterwards broke out in this kingdom, for the ſupport of which they had already held a kind of council, or parliament, in which it was reſolved to demand aſſiſtance from the king of Spain, and two Popiſh prelates were ſent as their agents to ſollicit this countenance and protection of a foreign power againſt their natural ſovereign. At the ſame time no pains were ſpared to excite a ſpirit of ſedition and diſloyalty amongſt the native Iriſh of all ranks, which, as Sir Henry Sidney acknowledges, muſt have produced a general inſurrection, if it had not been for the vigilant and prudent behaviour of her Majeſty's Engliſh officers; amongſt whom he particularly mentions Sir Warham St Leger, and Captain Greenvile (18). It was, without doubt, to put it in his power to do more effectual ſervice in this reſpect, that the Queen honoured the latter with this patent; and it is at the ſame time no leſs apparent, that with great expence of money, and with no ſmall hazard of his perſon, our young hero laboured all he could to merit the notice and favour of his royal miſtreſs. In this glorious courſe he had not a few competitors, for it was then grown into a cuſtom for ſuch young gentlemen as had large eſtates to ſerve the Queen at their own coſt, and to entertain young gentlemen whoſe purſes were not ſo full, and who were either allied to them by blood, or attached by affection, till they had ſome opportunity of eſtabliſhing them; from which ſeveral families, more eſpecially in the Weſt, derived in proceſs of time both honours and eſtates, and the public innumerable benefits; amongſt which it was none of the leaſt, that thoſe ſtirring and enterprizing ſpirits which might otherwiſe have been diſpoſed to have raiſed diſturbances in the State, were diverted to ſuch undertakings as contributed to it's ſupport, and enabled the Government to perform great things without levying large ſums upon the people, at leaſt in the way of ordinary taxes (19). A policy peculiar to this reign, and which, though it has been admired, will ſcarce be imitated in any other.

(18) Sidney's State Papers, Vol. I. p. 39.

(19) Bohun's Character of Q. Elizabeth.

[*F*] *They ſailed on the ſeventh for the coaſt of Florida.*] The reader will perceive from the ſuccinct account of this expedition given in the text, that as yet, notwithſtanding

they fell in with the coaſt of Florida, where they were to leave a colony of one hundred men, under the direction of Mr Ralph Lane, who was the firſt Engliſhman that had the title of Governor in that country, and having taken all the neceſſary precautions for this purpoſe, and ſettled every thing to the ſatisfaction of thoſe who were to remain behind, Sir Richard Greenvile, on the twenty-fifth of Auguſt, weighed anchor in the Tyger, and ſet ſail for England (*t*), extremely well pleaſed with this new found country, and fully reſolved to return thither, as he promiſed the people, the enſuing year (*u*). In his paſſage home he chaced a Spaniſh ſhip of the burthen of three hundred tons, which he found it impoſſible to take any other way than by boarding, and this in the judgment of his own people impracticable, as by ſome untoward accident they had not at that time any boat (*w*). The General, however, carried away by his eager courage, cauſed ſomething like a boat to be clapped up with the boards of broken cheſts, in which he went in perſon, with as many men as it would hold, and boarded the Spaniſh ſhip, which he had no ſooner done, than the half wrought vehicle which carried them fell to pieces, and ſunk at the ſhip's ſide (*x*) In this veſſel thus taken, the General, on the tenth of September, found himſelf ſeparated from the Tyger, nor did he ſee her again during the whole voyage, that veſſel coming to an anchor at Falmouth on the ſixth of October (*y*); whereas Sir Richard Greenvile did not arrive in his prize, at Plymouth, till the eighteenth of the ſame month, where he was met and welcomed on ſhore by a great concourſe of people, who came to congratulate his good fortune, and by ſome of his friends and relations, who had a nearer concern in his welfare (*z*). It is ſaid in the journal of his voyage, that this Spaniſh prize was richly laden, but without any inſinuation of it's value, or other circumſtance that might be noted of ſuch prodigious worth, as was afterwards, it may be, without any juſt grounds or truth, not only privately ſuggeſted, but publickly affirmed (*a*) [*G*]. In a ſhort time after his return, Sir Richard, who had this new colony extremely at heart, engaged himſelf to make another voyage thither at the proper ſeaſon, and finding it impracticable to have all things ready ſo ſoon as he expected, prevailed upon his couſin Ralegh to ſend away a ſhip with proviſions, that the promiſe he had made might be at leaſt virtually performed, which might hinder the colony from being diſtreſſed or diſperſed (*b*). Such a veſſel was accordingly ſent, and within fourteen days after her arrival in Virginia, Sir Richard Greenvile himſelf came thither, with his ſmall ſquadron of three ſail, ſo punctual he was in the performance of his promiſe, and ſo zealous for the preſervation of thoſe whom he ſuppoſed depended upon it (*c*). All this care, however, was in vain, for neither the advice ſhip nor Sir Richard's ſquadron could ſee any ſigns, or hear any news of the colony left the year before; who, at their own requeſt, had been taken on board his ſquadron by Sir Francis Drake, who touched there in his return from the Weſt-Indies to England, and this but a few days before the advice ſhip arrived (*d*). Sir Richard Greenvile having no intelligence of this, travelled himſelf up into the country to make what enquiries he could; and being ſtill thoroughly perſuaded

notwithſtanding all their ſkill in Geography and Navigation, the very beſt Engliſh ſeamen, by a perverſe adherence to cuſtom, followed the old track, and went round by the Weſtward and Caribbee Iſlands, in order to reach the coaſt of Florida, by which they went clearly a thouſand leagues out of their due courſe, and expoſed themſelves beſides to many unneceſſary dangers, as well as their men to much more labour and fatigue than the voyage required (20). At firſt ſight this may ſeem a trivial, or at leaſt no very weighty obſervation, but whoever conſiders it cloſely will find, that it was chiefly owing to this prepoſterous conduct, that all the attempts made by Sir Walter Ralegh for ſettling a colony in North America met with no better ſucceſs. For if the proper track in ſailing had been known, theſe voyages would not have been either ſo tedious or ſo full of hazards; ſupplies might have been ſpeedily and ſecurely ſent, and returns much ſooner made, ſo that moſt of thoſe objections would have been thoroughly removed, which for a time rendered it very doubtful whether the ſcheme of fixing colonies on the North Coaſt of America, which has been, and ſtill is, of inexpreſſible benefit to this nation, ſhould proceed or not. At length Capt. Bartholomew Goſnold, in 1602, venturing to make uſe of his underſtanding and maritime ſkill, made a ſucceſsful voyage without running ſo far to the South (21); and this old error once corrected, the true, that is, the ſhorteſt and ſafeſt courſe was very quickly found, and has been ever ſince in conſtant uſe.

(20) Britiſh Empire in America, Vol. I. p. 352, 353.

(21) Purchas's Pilgrims, Vol. IV. p. 1647.

[*G*] *But publickly affirmed*] This paſſage occurs in that defence which Sir Lewis Stukeley publiſhed for himſelf, when he had incurred univerſal odium, by betraying Sir Walter Ralegh. He was under a neceſſity of picking up and printing all the pieces of ſecret hiſtory that he could poſſibly collect, to the prejudice of that famous man (22). Amongſt other charges one is, that notwithſtanding all the obligations he was under, not from duty only but gratitude, yet he had ſlandered and inſulted the memory of his deceaſed miſtreſs Queen Elizabeth. 'One day, ſays he, myſelf 'upbraiding him with the notorious, extreme injury 'he did my father, in deceiving him of a great adventure which my ſaid father had in the Tyger, 'when he went to the Weſt-Indies with my uncle Sir 'Richard Greenvile, which was, by his own confeſſion, worth fifty thouſand pounds, which came all 'to his hands; my father's portion, at the leaſt, being ten thouſand pounds, that he might lawfully 'claim. He anſwered, that the Queen, however 'ſhe ſeemed a great good miſtreſs unto him in the 'eyes of the world, yet was ſo unjuſt and tyrannous 'unto him, that ſhe laid the envy as well of this as of 'many other her oppreſſions upon him, and that ſhe 'took all the pearl in a cabinet unto herſelf, without 'ever giving him ſo much as one pearl.' This we find referred by the ingenious author of the life of Sir Walter Ralegh, to the prize taken by Sir Richard Greenvile in his return (23). But as he judiciouſly obſerves, it is very ſtrange that a prize of ſuch great value ſhould not be better known, or that Sir Richard Greenvile ſhould never make any complaint of the injuſtice done to him. After all, it is very likely that this prize might be very rich, and that ſome cabinet, or other curioſity, might be taken for or preſented to the Queen, upon which malice and covetouſneſs might afterwards ground this ſtory, which was never brought to the publick view 'till the death of Sir Walter Ralegh, as well as Sir Richard Greenvile.

[*H*] *Which*

ſuaded of the great advantages that muſt ariſe to this kingdom from the poſſeſſion of ſuch a country, left, after mature deliberation, and with their own conſent, fifteen of his men (*e*), in the iſland of Roanoak, that at leaſt the title of the Crown and the Proprietor might be preſerved (*f*). He furniſhed them plentifully with all ſorts of proviſions for two years; and having thus done all that it was poſſible for him in ſuch circumſtances to do, returned again to England (*g*). But, as in his outward-bound paſſage he made ſeveral prizes, ſo in his return home he landed on the Azores, plundered ſeveral villages, and picked up afterwards ſome prizes, ſo that though the end of this expedition was defeated, yet through his prudence it was ſo ordered as to bear, in a great meaſure, it's own expence (*h*). We have not ſo much as one date in the relation that is ſtill preſerved of this voyage, however, it appears clearly from thence, that he muſt have returned towards the cloſe of the year 1586 (*i*). The ſummer next enſuing he ſpent in providing, under the patent, and at the expence of Sir Walter Ralegh, another ſquadron for reinforcing the colony at Virginia; but from theſe occupations he was called by his Sovereign to cares of a higher nature, which regarded the preſervation of her perſon, the ſupport of her government, and the protection of her ſubjects (*k*). The Queen had received repeated intelligence of the deſign of the Spaniards to invade England, and that with the whole force of their monarchy, which obliged her to provide for her defence; and as this was a caſe of a very extraordinary nature, ſo ſhe thought it expedient to refer the conſideration of the matter and manner to a ſtanding council of war, compoſed of nine members, of which Sir Richard was one (*l*), and the other eight were the Lord Grey, who had been lord-lieutenant of Ireland, and was then lord-lieutenant of the county of Bucks; Sir Francis Knowles, treaſurer of the houſhold, and knight of the Garter (*m*); Sir Thomas Leighton, governor of the iſland of Guernſey (*n*); Sir Walter Ralegh, lieutenant-general in Cornwall; Sir John Norris, lord preſident of Munſter; Sir Richard Bingham, once preſident of Connaught; Sir Roger Williams, an excellent officer; and Ralph Lane, Eſq; late governor of Virginia (*o*). Theſe wiſe and experienced perſons came to a reſolution on the points referred to them, and pointed out what to them appeared the cleareſt method of providing againſt any danger from the enemy, whatever method they might take, wherever they might bend their force, or what attempts ſoever might be made to favour them by the malecontents in England, which diſpoſition of theirs has been generally approved (*p*) [*H*]. In order to the due execution of meaſures concerted in this council (*q*), moſt of it's members were, as the danger approached nearer, ſent where it was thought they might contribute moſt to Her Majeſty's ſervice (*r*); and upon the ſame principle Sir Richard Greenvile received the Queen's commands not to leave the county of Cornwall (*s*), which put it out of his power to make a third voyage to Virginia (*t*); and very poſſibly this might have an untoward influence upon the expedition, which it is certain proved unſucceſsful, the ſhips returning without ever viſiting the coaſt of Florida (*u*). This command was in all probability the reaſon that we find no particular account of his behaviour on that memorable occaſion, as otherwiſe, from the activity of his temper, and conſtant deſire to ſignalize his courage, more eſpecially againſt the enemies of his country, might have been expected. In the year 1591, the Queen's miniſtry being informed that the rich fleet, which had remained in the Indies all the year before, through the dread of falling into the hands of Sir John Hawkins and Sir Martin Frobiſher, muſt of neceſſity return home; it was reſolved that a ſtrong ſquadron ſhould be ſent to intercept them at the Weſtern Iſlands (*w*). This fleet conſiſted of ſeven ſail of Her Majeſty's ſhips, viz. the Defiance, of five hundred tons, and two hundred and fifty men, in which was the Admiral Lord Thomas Howard, ſon to the Duke of Norfolk; the Revenge, Sir Richard Greenvile, Vice-Admiral; the Nonpareil, of five hundred tons, and two hundred and fifty men, commanded by Sir Edward Denny; the Bonaventure, of ſix hundred tons, and two hundred and fifty men, under Captain Croſs;

[*H*] *Which diſpoſition of theirs has been generally approved*] The deciſion of this famous council of war is dated November 27, 1587, and has been publiſhed with Sir William Monſon's remarks thereupon, which are very pertinent and ſolid (24). The only reaſon for making this note, is to put the reader in mind of the great wiſdom of the adminiſtration in that reign, ſhewn in referring every thing to the conſideration of proper judges, and expecting from them a report of the meaſures fit to be taken, and the reaſons upon which they were grounded. This was the principal cauſe why almoſt every political ſtep during that long reign was attended, in whole or in part, with the conſequences that were expected from it; and ſuch was the virtue of thoſe times, that when an officer was appointed, as the caſe once was, with Sir Henry Palmer, for the command of an expedition, for which he conceived himſelf not the beſt qualified, he judged it no diſcredit to acknowledge this, and to deſire to be excuſed. It ſeems the gentleman beforementioned had an eſtabliſhed character for his courage and conduct as a ſea officer, and therefore was aſſigned to command a ſquadron in 1583, upon the coaſt of Spain (25). Upon this he humbly repreſented to the council, that he had ſerved chiefly in the narrow ſeas, and doubted of his own capacity for the charge to which he was appointed, and therefore was in duty bound to intreat their Honours to make choice of ſome other perſon, who was better acquainted, and had more experience in thoſe ſeas, that Her Majeſty might be the better ſerved, and their Lordſhips derive more honour from their recommendation. This was well accepted, and did not turn in the leaſt to Sir Henry's prejudice, who commanded Her Majeſty's ſhip the Antelope, in the memorable ſea-fight of 1588 (26), and did therein excellent ſervice, as well as in ſeveral ſubſequent expeditions.

Croſs; the Lyon, of five hundred tons, and two hundred and fifty men, commanded by Captain George Fenner; the Foreſight, of three hundred ton, and one hundred and ſixty men, Captain Thomas Vavaſor; the Crane, of two hundred tons, and one hundred men, Captain Duffield; the bark Ralegh, Captain Thynne; and ſome ſmall veſſels and tenders (*x*). His Catholic Majeſty, who never wanted intelligence, had ſo early an account of this ſquadron, and of their force, that he ſent orders into the Indies for the galleons to return very late in the year, and at the ſame time ordered a prodigious armament in his own ports. Theſe meaſures were the utmoſt efforts of that refined policy for which he was ſo famous; for he judged that the galleons ſtaying ſo long the Engliſh fleet would be obliged to return home for want of proviſions; ſhewing plainly thereby, that he had rather riſk his ſubjects ſhips and ſilver in that perilous ſeaſon, than run the hazard of a naval engagement if that could be prevented; but if this project failed, as it did through the care taken in ſending ſtore-ſhips from London, then his ſecond muſt take effect, for by this delay he had time enough to provide a fleet of ten times the force of the Engliſh, which was to meet and eſcort the galleons (*y*). On the laſt day of Auguſt, in the afternoon, Captain Middleton, who had kept the Spaniſh Armada company three days, the better to diſcover their force, gave intelligence of it to the Engliſh Admiral, who was riding at anchor under the iſland of Flores, and before his meſſage was well heard the fleet was in ſight. The Engliſh were in a very indifferent ſituation, having a great part of their reſpective crews on ſhore, ſome getting ballaſt, others filling water, and not a few employed in collecting freſh proviſions and fruits; the ſhips alſo were ſeveral of them light for want of ballaſt, all things in diſorder, and, which was the moſt afflicting circumſtance, near half their men diſabled by the ſcurvy and other diſeaſes. The Admiral, however, conſidering the danger and the diſproportion, weighed immediately and put to ſea, as the reſt of his ſquadron did following his example (*z*). The Revenge weighed laſt, Sir Richard Greenvile ſtaying to recover the men who were on ſhore, and would otherwiſe have been loſt, having no leſs than ninety ſick on board. The Admiral, and the reſt with difficulty, recovered the wind, which Sir Richard Greenvile not being able to do, his maſter and ſome others adviſed him to cut his main-ſail and caſt about, truſting to the ſailing of his ſhip, becauſe the Seville ſquadron was already on his weather bow. Sir Richard peremptorily refuſed to fly from the enemy, telling them, *That he would much rather die than leave ſuch a mark of diſhonour on himſelf, his country, and the Queen's ſhip*, putting them in hopes that he would pierce through the two ſquadrons, and force thoſe of Seville to give him way. But the Spaniſh Admiral, called the St Philip, being in the wind, and bearing down upon him, becalmed the Revenge in ſuch a manner that ſhe could neither make way nor feel her helm, and being in this ſituation the ſhips that were under his lee luffed up in order to lay him on board (*a*). The St Philip boarded firſt, and preſently after four other ſhips, two on the larboard, and two on the ſtarboard, however, the reception which the Spaniſh Admiral had from the lower tier of the guns of the Revenge, laden with croſs-bar ſhot, was ſo little liked that ſhe preſently fell off, and the reſt continuing longer were no better treated. Some time after the fight began, the George Noble, of London, a ſmall victualler, fell under the lee of the Revenge, and aſked Sir Richard Greenvile what he would command him, to which, with his uſual greatneſs of mind, he anſwered, *Save yourſelf, and leave me to my fate* (*b*). From the time the fight began, which was about three in the afternoon, to the break of day the next morning, Sir Richard Greenvile repulſed the enemy fifteen times, notwithſtanding that, they continually ſhifted their veſſels, and boarded with freſh men. He was himſelf wounded in the beginning of the action, but continued upon deck till about eleven at night, when receiving a ſhot in the body he was carried down to be dreſſed, which while his ſurgeon was doing Sir Richard received a dangerous wound in the head, and the poor man was killed by his ſide (*c*). By this time the Engliſh began to want powder, all their ſmall arms were broke, forty of their beſt men, which were but one hundred and three at the beginning, killed, and almoſt every one of the reſt wounded, their maſts beat overboard, tackle cut to pieces, and nothing but a hulk left, unable to move one way or other, but as the ſea directed, with the enemy in a ring round them (*d*). In this ſituation Sir Richard Greenvile invited the ſhip's crew to yield themſelves to the mercy of God, rather than of the Spaniards, and not to tarniſh the high reputation they had acquired by ſeeking to preſerve their lives for a few hours, or a few days at moſt, to which the Maſter-Gunner, and many of the ſeamen aſſented, and the former, who was a moſt reſolute man, ſhewed himſelf ready to execute the General's orders, which were to ſplit and ſink the ſhip (*e*). But the Captain and Maſter, who were of another opinion, interpoſed, they alledged that there were ſeveral gallant men whoſe wounds were not mortal, and whoſe lives were not to be thrown away; that they had already done enough to ſecure their honour; that it was now time to conſult their ſafety, and that as to the loſs of Her Majeſty's ſhip it ought not to enter into the queſtion, ſince ſhe had ſix foot water in the hold, three ſhot between wind and water, the leaks made by which were ſo poorly ſtopped that they would certainly open with the working of the ſea, and the ſhip ſink (*f*). While the Captain thus argued the caſe with Sir Richard, who was not at all moved

[Z] *Achilles was acted with applause.*] The profits of it were given to his sisters (55). It was very assiduously patroniz'd by the Duke of Queensberry, who, Mr Pope observes, acted more than the part of a brother to our author. His papers fell partly into Mr Pope's hands; who, for as much as did so, no doubt took care (as he promised Dr Swift) to suppress things unworthy of him; but he expresses his concern in regard to the rest, which were at the discretion of the administrators, whose partiality he was afraid of (56). Upon the whole, his account does by no means lessen the authenticity of those few pieces mentioned above, which have been published in Mr Gay's name, since his death. P

GELLIBRAND [HENRY] a very able Mathematician, a learned Writer, and Astronomy Professor in Gresham College in the XVIIth century. He was the grandson of John Gellibrand, who resided, and who died at St Paul's-Cray in Kent, Nov. 25. 1588. and the son of Mr Henry Gellibrand some time Fellow of All-Souls College in Oxford, who marrying and settling at the place before mentioned, died there August 15, 1615 (*a*). This Henry of whom we are treating, was the eldest of his five sons, and a native of the City of London, being born in the Parish of St Botolph Aldersgate, Nov. 17, 1597 (*b*). The same year that his father died, he was admitted a Commoner of Trinity College in Oxford, being then in his eighteenth year. He took his degree of Bachelor of Arts Nov. 25, 1619, at which time, as Wood tells us in his blunt manner, he was esteemed to have no great matter in him (*c*); but happening to hear one of Sir Henry Savile's Mathematical Lectures, either by pure accident, or to save the sconce of a groat if he had been absent, he was so much taken with it, that he applied himself immediately to that noble science (*d*). This tho' treated as a wonder by Anthony Wood, is no more than what fell out to Des Chales, Paschal, and other eminent mathematicians. Our author pursued this study with so much vigour, that before he took his degree of Master of Arts, which was May 26, 1623, he was distinguished, and esteemed for his great knowledge therein, both in the University, and at London. To the first perhaps his making a dial, which yet remains on the east side of the old quadrangle of Trinity College might contribute, and the latter in a great measure arose from his intimate acquaintance with the celebrated Mr Henry Briggs, and other able mathematicians, who flourished at that time (*e*). He was, while Bachelor of Arts, curate of Chidringstone in Kent, but it is probable resigned it that he might pursue his mathematical studies with the greater freedom. Upon the death of the ingenious Mr Edmund Gunter, December 10, 1620. Mr Briggs encouraged our young mathematician to become a candidate for his Professorship at Gresham College (*f*). Upon this occasion he had a certificate from the Rector of that parish, in which he had officiated as curate, and from others of the Clergy in Kent, in respect to his learning and piety; and another from the President, Vice-President, and Fellows of Trinity College in Oxford, which is conceived in very strong terms, and acknowledges not only his assiduity in his studies, but his great frankness in the communication of knowledge, as also his disinterestedness in contenting himself with his own little patrimony, that the pursuit of preferment might prove no detriment to his studies. In all probability these papers had great weight since within a few days after, viz. January 2, 1626, he was elected Astronomy Professor (*g*). He lived from that time as he had done before in a close intimacy with Mr Henry Briggs, who took great pleasure in communicating to him his mathematical notions and discoveries, and at the time of his decease he recommended to Mr Gellibrand the perfecting and publishing a large book, which he did not live to finish (*h*). Some time after this, one William Beale, who was Mr Gellibrand's servant, published, with his master's knowledge and consent, an Almanack for the year 1631, in which the saints names usually put were omitted, and the names of other saints and martyrs mentioned in Mr Fox's book were placed in their room, for which Mr Gellibrand was brought into some trouble (*i*) [*A*]. This might very probably retard the publication of the BRITISH TRIGONOMETRY, which as he had undertaken to perfect at the request of Mr Briggs, so there wanted not several other eminent persons who pressed him very much upon the same head to whom he gave full satisfaction, by causing that work when compleat to be printed in Holland in 1633, which was received with very great applause (*k*) [*B*]. The same year there came abroad at the end of Mr

[*A*] *Was brought into some trouble.* The person chiefly offended with this almanack, was Dr William Laud, then Bishop of London, afterwards Archbishop of Canterbury; and by his means, it is said, that Mr Gellibrand, and his servant Beale, were called into the High-Commission Court; where however they escaped censure, by shewing that this was no innovation of theirs, but had been done before, and pleading also, that they had no ill intention. After Mr Gellibrand's death, this was made part of the accusation against Archbishop Laud, and Major Thomas Gellibrand was produced before the House of Peers as a witness upon this Prelate's prosecution (1).

(1) Prynn's Canterbury's Doom, p. 515

[*B*] *Which was received with great applause.*] The title of this work at large runs thus: Trigonometria Britannica, *sive*, De doctrina triangulorum: Libri duo Quorum

Mr Thomas James's account of his voyage, for the diſcovery of a north-weſt paſſage, and wintering in Hudſon's Bay a ſhort diſcourſe of our author's concerning the longitude, which at that ſeaſon was very much admired, and which notwithſtanding the great improvements that have been ſince made, may be very juſtly ſtiled a curious and a uſeful piece, even now (*l*) [*C*]. It is commonly believed that our author made the diſcovery of the variation of the Magnetic Needle, and this upon the credit of a very great man, who has poſitively affirmed it, but in this, without doubt there is an error as will be ſhewn more largely in another place (*m*). In reſpect to this, however, thus much is true, that Mr Gellibrand was extreamly well acquainted with, and wrote a very learned book upon the ſubject, which has been and ever will be eſteemed by competent judges [*D*]. He wrote

(*l*) Appendix to Thomas James's Voyage for Diſcovery of the N. Weſt-Paſſage, &c. Lond. 1633. 4to.

(*m*) See the Article of GUNTER [EDMOND] in this Dictionary.

Quorum prior continet conſtructionem canonis ſinuum, tangentium, & ſecantium. una cum logarithmis ſinuum & tangentium ad gradus & graduum centeſimas, & ad minuta & ſecunda centeſimis reſpondentia: a clariſſimo doctiſſimo integerrimoque viro domino *Henrico Briggio*, Geometriæ in celeberrima academia Oxonienſi profeſſore Saviliano digniſſimo, paulo ante inopinatam ipſius è terris emigrationem compoſitus. Poſterior vero uſum ſive applicationem canonis in reſolutione triangulorum tam planorum, quam ſphæricorum, è geometricis fundamentis petita, calculo facillimo eximiiſque compendis exhibet ab *Henrico Gellibrand* Aſtronomiæ in collegio Greſhamenſi apud Londinenſes profeſſore conſtructus. Goudae 1633. fol. that is, 'Britiſh Trigonometry, or 'the Doctrine of Triangles, in two Books; the firſt of 'which contains the conſtruction of the canon of ſines, 'tangents, and ſecants, together with the logarithms 'of ſines and tangents, &c. by that famous, learned, 'and worthy man, Mr *Henry Briggs*, late Savilian 'Profeſſor of Geometry in the celebrated univerſity of 'Oxford, compoſed by him a little before his unexpected death. The latter ſhewing the uſe or application of the canon in the reſolution of plain and 'ſpherical triangles upon the principles of Geometry, 'and by a ſhort and eaſy method of calculation, by 'Henry Gellibrand, Profeſſor of Aſtronomy in Greſham 'College, London. Printed at Gouda, 1633. folio.' Mr John Newton, in the year 1658, publiſhed a work of the like import, and under the ſame title; the firſt part of which, analogous to that of Mr Briggs, was his own; but the ſecond a tranſlation of our author's work into Engliſh (2).

(2) Wood's Athen. Oxon. Vol. II. col. 632.

[*C*] *A curious and a uſeful piece, even now.*] The title of this little piece is, *An* Appendix *concerning* Longitude, Lond. 1633. 4to, in three leaves. The beginning of this treatiſe is at once ſo weighty, and ſo perſpicuous, and repreſents ſome points of uſeful knowledge in ſo clear, and at the ſame time in ſo conciſe a manner, that the reader cannot but be pleaſed to peruſe it.

'Latitude and longitude are two primary affections 'of the earth; by the help of theſe two doth the Geo'grapher ſtrive to repreſent the parts of the earth, that 'they may keep ſymmetry and harmony with the 'whole. Latitude then is an arch of the meridian 'comprehended between the equator and a parallel; 'but longitude is an arch of the equator, intercepted 'by the prime meridian, and the meridian of a place, 'the difference of longitude being the difference of 'two meridians. The meaſure of the former is the 'meridian, the equator of this latter. For the exact 'ſettling of latitudes, we have many and abſolute helps; 'ſo that the error, if there any happen, ought to be 'imputed to the imperfect handling of the artiſt. But 'the longitude of a meridian, is that which hath, and 'ſtill weareth the greateſt maſters of Geography. Nevertheleſs, hath not the wiſe Creator left man unfurniſhed of many excellent helps to attain his deſire: 'for beſides eclipſes, eſpecially of the moon (whoſe 'leiſure we muſt often wait, and perhaps go without, 'if the Heavens be not propitious to us) we have the 'concourſe of quick-paced inferior planets, with ſuperior ſlow ones, or their appulſes with ſome fixed ſtar 'of known place, or elſe ſome other artifice derived 'from their motions and poſitions. As for the magnetical needle, to argue a longitude from its variation, 'is altogether without ground; and though well-furniſhed ſeamen are able by their dead reckonings, as 'they term them, to determine the difference of meridians ſomewhat near, yet by reaſon of the unknown 'quantity of a degree in a given meaſure, which is the 'rule of the ſhip's way, varieties of adverſe winds, dif'ferent ſets of tides, and other involved incumbrances, 'they come often wide of the mark they aim at. The 'beſt way yet known to the world, is that which is de'duced from the celeſtial appearances, which being 'performed by judicious artiſts, may in a ſhort time 'rectify our geographical and hydrographical charts hi'therto in moſt places foully diſtorted. It is my intent 'here to give an inſtance from two ſeveral obſervations 'drawn from the celeſtial bodies, by the author of this 'diſcourſe, in his diſcovery for the north-weſt at the 'bottom of the Bay, being his wintering-place, and 'called by the name of Charlton, which for judgment, 'circumſpection, and exactneſs, may compare with 'moſt: the firſt, from the eclipſe of the moon; the 'ſecond, from the moon's meridian of Heaven, or her 'coming to the plane of his meridian of Charlton.' This eclipſe happened Oct. 9. 1631. and it ſo fell out, that Mr Gellibrand himſelf obſerved the eclipſe at the ſame time at Greſham College, from whence he determines the longitude of Charlton to be weſt from London 79 deg. 30 min. by the ſecond method he determined it to be one degree leſs, and to ſhew that this was no very conſiderable error, as things then ſtood, he gives an inſtance of much greater variations with reſpect to Rome and Nurembergh, and this from the obſervations of the beſt Aſtronomers Europe had produced. Regimontanus making this difference 36, Werner 32, Appian 34, Meſtlin and Origan 33, Stoſler 18, Maginus 26, Schoner 12, Mercator and Hondius as much, Stadius 13, Janſonius 10, Longomontanus 16, Lanſperg 10, Kepler by two obſervations on two lunar eclipſes, but 4 minutes of time. The reader muſt obſerve, that every four minutes of time makes a whole degree in longitude; ſo that the difference between the firſt and laſt of theſe computations, is no leſs than eight whole degrees, which will afford a competent judge of theſe things, matter of great ſpeculation. Some and even great errors, without doubt, there muſt be in ſeveral of theſe operations; but that they did not wholly proceed from ſuch inaccuracies, there is good ground to ſuſpect. At the end of ſome copies of Captain James's voyage, there is another diſcourſe after this of Mr Gellibrand's, with this ſingular addreſs, *To the venerable* artiſts, *and younger* ſtudents *in* Divinity *in the famous univerſity of* Cambridge; ſubſcribed X. Z. but ſaid to be written by Mr W. W. Whoever was the author, it is a very curious piece, and may be reckoned among the firſt apologies in our language, for the free exerciſe of thought in Philoſophy, and on this account has been very properly reprinted in a late Collection of Voyages and Travels, to which we ſhall refer the reader for its contents (3).

(3) Harris's Voyages, Lond. 1748. Vol. II. P. 435.

[*D*] *And ever will be eſteemed by competent judges.*] The title of this curious and moſt conſidered of all Mr Gellibrand's works, runs thus: *A Diſcourſe* mathematical *on the* Variation *of the* magnetic Needle. *Together with the admirable diminution lately diſcovered.* London, 1635. 4to

At the opening of his work, our author declares his chief intention to be the treating of the deflection of the needle from the terreſtrial meridian, together with that abſtruſe and admirable variation of the variation lately diſcovered to the world. The variation then, is the deflection of the magnetical meridian, from the terreſtrial, the horizon determining its quantity and quality. Theſe meridians ſometimes are coincident, and in ſuch caſes there can be no variation. Sometimes again, they are different; and then, that hemiſphere wherein either extremity of the needle lies, denominates its quality; for if it be the eaſtern hemiſphere, it

ſtion may be decided, or whether it be decided at all, certain it is, that by his contemporaries he was loudly applauded, and that the fame of this action did not a little contribute to that high reſpect with which the Engliſh were every where treated abroad, and which produced them real advantages at home (*q*). This great and gallant perſon eſpouſed Mary, eldeſt daughter and coheir, to Sir John St Leger, of Aumery in the county of Devon, Knight, by Katherine his wife, daughter to George Lord Abergavenny, and was ſon and heir of Sir George St Leger, Knight, ſon and heir of Sir James St Leger, by Anne his wife, eldeſt daughter and coheir to Thomas Earl of Ormond, lineally deſcended from James Earl of Ormond and Eleanor his wife, daughter of Humphry de Bohun, Earl of Hereford, by Elizabeth his wife, daughter of King Edward I. (*r*). Alſo the aforeſaid James St Leger, was the ſon and heir of Sir Thomas St Leger, by Anne his wife, ſiſter to King Edward IV. So that the deſcendants of this Sir Richard Greenvile by Mary his wife beforementioned, were very nobly allied, having iſſue by her three ſons, Bernard, John, and Roger, but the two laſt died without iſſue (*s*). Alſo five daughters, Mary married to Arthur Tremain, of Collacombe, Eſq; Catherine to Juſtinian Abbot, Eſq; Urſula, who died unmarried; Bridget, married to John Weeks, Prebendary of Briſtol; and Rebecca, who died unmarried (*t*).

taken for his opinion, this qualifying expreſſion, *Notwithſtanding, out of the greatneſs of his mind he could not be perſwaded.* Yet he frames a handſome apology for Lord Thomas Howard, every way worthy of him, and not unworthy of Sir Walter Ralegh. 'For the 'reſt of her Majeſty's ſhips, ſays he, that entered not 'ſo far into the fight as the Revenge, the reaſons and 'cauſes were theſe. There were of them but ſix in 'all, whereof two, but ſmall ſhips, the Revenge, en'gaged paſt recovery. The iſland of Flores was on 'the one ſide; fifty-three ſail of the Spaniſh, divided 'into ſquadrons, on the other; all as full filled with 'as many ſoldiers as they could contain. Almoſt the 'one half of our men ſick, and not able to ſerve, the 'ſhips grown foul, unromaged, and ſcarcely able to 'bear any ſail for want of ballaſt, having been ſix 'months at ſea before. If all the reſt had entered, all 'had been loſt, for the very hugeneſs of the Spaniſh 'fleet, if no other violence had been offered, would 'have cruſhed them before them into ſhivers. Of 'which the diſhonour and loſs to the Queen had been 'far greater than the ſpoil or harm that the enemy 'could any way have received. Notwithſtanding it 'is very true that the Lord Thomas would have entered 'between the ſquadrons, but the reſt would not con'deſcend, and the maſter of his own ſhip offered to 'leap into the ſea, rather than to conduct that her Ma'jeſty's ſhip and the reſt to be a prey to the enemy, 'where there was no hope nor poſſibility either of de'fence or victory. Which alſo in my opinion had 'ill ſorted or anſwered the diſcretion and truſt of a 'general, to commit himſelf and his charge to an aſ'ſured deſtruction, without hope or likelihood of pre'vailing, thereby to diminiſh the ſtrength of her Ma'jeſty's navy, and to enrich the pride and glory of 'the enemy. The Foreſight of the Queen's, com'manded by M. Thomas Vavaſor, performed a very 'great fight, and ſtayed two hours as near the Revenge 'as the weather would permit him, not forſaking the 'fight 'till he was like to be encompaſſed by the 'ſquadrons, and with great difficulty cleared himſelf. 'The reſt gave divers volleys of ſhot, and entered as 'far as the place permitted, and their own neceſſities, 'to keep the weather gage of the enemy until they 'were parted by night.' This, upon Sir Walter's authority, and indeed he could not have a better, Mr Camden has inſerted in his Annals (34), where it will remain a ſufficient juſtification for that noble perſon's not continuing the fight, without impeaching the character of Sir Richard Greenvile, who did. But let us hear the ſentiments of a worthy and experienced ſeaman, the ſon of an able and gallant Admiral, contemporary with all theſe great men, as well acquainted with facts, free from all connections, and who writ from a ſpirit of truth, and zeal for his country's good. Speaking of the obligation that all officers are under, of performing punctually their duty, with whatever peril the performance of it may be attended, he proceeds thus (35). 'In this point, at the Iſle of Flores, 'Sir Richard Greenvile got eternal honour and repu'tation, of great valour as well as of an experimented 'ſoldier, chooſing rather to ſacrifice his life, and to 'paſs all danger whatſoever, than to fail in his obli'gation, by gathering together thoſe which had re'mained aſhore in that place, though with the ha'zard of his ſhip and company. For we ought ra'ther to embrace an honourable death, than to live 'with infamy and diſhonour, by failing in duty; and 'I account that he and his country obtained much 'credit on that occaſion: for one ſhip, and of the 'ſecond ſort, (rate) of Her Majeſty's ſuſtained the 'force of all the fleet of Spain, and gave them to 'underſtand that they are impregnable; for having 'bought dearly the boarding of her divers and ſun'dry times, and with many jointly, and with a con'tinual fight of fourteen or ſixteen hours, at length 'leaving her without any maſt ſtanding, and like a 'log in the ſeas, ſhe made, notwithſtanding, a moſt 'honourable compoſition of life and liberty for above 'two hundred and ſixty men, as by the pay-book ap'peareth, which Her Majeſty of her free grace com'manded in recompence of their ſervice to be given 'to every one his ſix months wages. All which may 'worthily be written in our chronicles in letters of 'gold, in memory for all poſterities, ſome to beware, 'and others by their example, in the like occaſions, 'to imitate the true valour of our nation in theſe 'Ages.' To underſtand this paſſage, and to reconcile it with the other accounts, we muſt conſider that the capitulation was made for all borne upon the ſhip's books, though of theſe there remained not above one hundred and fifty, of which ninety were ſick in the hold, and the reſt wounded almoſt to a man, ſo that not many returned home to receive the Queen's bounty, which was chiefly valuable, as it was an apparent mark of her approbation. The ſame writer takes notice alſo of Captain Vavaſor, who ſhewed his love to Sir Richard beyond the meaſure of his duty; but let me not forget another gallant man, Capt Jacob Whiddon, in the Pilgrim, who got through the Spaniſh fleet in the night, bore with the Revenge in the morning, *and though hunted like a hare amongſt many ravenous hounds, yet was ſo fortunate as to eſcape* (36). Theſe were all tributes of affection to Sir Richard Greenvile, flowing from the true ſpirit of Engliſh ſeamen, and which ſufficiently indicate their ſenſe of his behaviour. But if the word of a ſcholar, a patriot, and a ſtranger, will add weight, let it be known that the judicious Grotius obſerves (37), 'That the Greeks and Romans who of old ſup'ported all their glorious actions by naval victories, 'were at this time equalled in fortitude and in cou'rage by the Engliſh.' Our learned countryman, John Evelyn (38), having related this action in few words, crys out, *Than this, What have we more? What can be greater?* indeed, I think nothing that is recorded in any hiſtory, in any language. Yet this man is without a monument, and very little pains have been taken to do juſtice to his memory. May every virtuous reader pay it the juſt tribute of a tear, and may the Britiſh Flag never want, what it lately had (39), an officer of the ſame name and ſpirit to ſupport it's glory!

E

GREENVILE [Sir BEVIL] the grandſon of the former, in whom united not only the names, and a great part of the fortunes, but the virtues alſo of two of the moſt ancient families in the Weſt of England [*A*]. He was born at the family ſeat of his father Bernard Greenvile, Eſq; in the year 1596, being the thirty-eighth of Queen Elizabeth (*a*). He diſcovered early marks of a pregnant genius, accompanied with a moſt ſweet and amiable temper, which rendered him univerſally beloved at Exeter College in Oxford, to which he was ſent while yet a boy, for the improvement of his ſtudies, where under the ſpecial inſpection of Dr John Prideaux, afterwards Biſhop of Worceſter, he laid the foundation of a ſolid and rational piety, and at the ſame time acquired a large ſtock of uſeful and general knowledge (*b*). February 17, 1613, he took the degree of Bachelor of Arts, and ſoon after left the univerſity, and returned to his own houſe (*c*). His principal care was to maintain his own credit, and the dignity of his family, not by an oſtentatious magnificence, but by a prudent management of his own eſtate, a kind of paternal tenderneſs for his tenants, and a moſt courteous and reſpectful behaviour to all the gentlemen round him. To theſe engaging qualities, he added a ſtrict attention to whatever regarded the public ſervice, and by a multitude of experiments ſhewed, that it was both practicable and profitable to make uſe of coal inſtead of wood in melting of tin; and contrived likewiſe ſeveral methods to hinder the waſting of that metal in the blaſt, which having brought to perfection at his own private expence, he, from a principle of public ſpirit, communicated to his countrymen for their common advantage (*d*). By theſe manly and laudable means he conciliated to himſelf the eſteem and affection of perſons of all ranks, in conſequence of which he was returned with John Arundel, of Trerice, Eſq; Knight of the Shire for the County of Cornwall, in that parliament which was called in the eighteenth of James I.; and in the firſt ſeſſions of which the Lord Chancellor Bacon was cenſured, and which, after a ſecond ſeſſions was diſſolved, February 18, 1621 (*e*). He was alſo returned with William Coryton, Eſq; Knight for Cornwall, in that parliament called in the twenty-firſt of the ſame reign, and which was prorogued May 29, 1624 (*f*). In the three firſt parliaments of the ſucceeding reign he was returned with Richard Scot, Eſq; Burgeſs for Launceſton; and with Ambroſe Manaton, Eſq; to that parliament which was ſummoned to meet at Weſtminſter on the 13th of April 1640, and diſſolved the 5th of May following (*g*). About this time he received the honour of knighthood; for in that unhappy aſſembly called the Long-Parliament, ſummoned to meet November the third, in the ſame year, we find Alexander Carew, Eſq; and Sir Bevil Greenvile, Knight, returned for Cornwall (*h*). He had in the year 1638, raiſed a troop at his own expence, with which he attended the King in his firſt northern expedition, by which he gave an early and convincing proof of his loyalty, in (*i*) which he was never backward upon any occaſion, though without making any pretences to court favour. He ſaw ſooner than moſt the bad deſigns that were forming, and apprehended very clearly the pernicious conſequences which muſt follow from them. In this ſituation he conducted himſelf with equal ſteadineſs and prudence. He adhered to what he took to be his duty to his King and Country, but he would not plunge himſelf into the depths of party. He did not take the famous Proteſtation, which many wiſe and worthy men did, being either awed by the fury of the populace, or deluded by the ſpecious pretences of falſe patriots; neither do we find his name in the liſt of Straffordians. His concealing his ſentiments was the pure effect of prudence, and not from any doubtfulneſs, or dread of offending the prevailing party; which manifeſtly appeared in the honeſt advice he gave his unfortunate fellow member Sir Alexander Carew, upon that memorable and melancholy occaſion of paſſing the Bill for the attainder of the earl of Strafford in the Houſe of Commons *. 'Pray, Sir, ſaid this good man, 'when it came to be put to the vote, let it never be ſaid that any member of our 'country ſhould have a hand in this fatal buſineſs; and therefore pray ye give your 'vote againſt the Bill.' To whom Sir Alexander inſtantly replied, 'If I were ſure to 'be the next man that ſhould ſuffer upon the ſame ſcaffold, with the ſame axe, I 'would give my conſent to the paſſing of it.' When this afterwards fell out, and Sir Alexander

[*A*] *In the Weſt of England.*] The Bovile's, or the Bevile's, were a very ancient family in Cornwall, who came in with the Conqueror (1). The chief of this family was ſeated at Gwarnock, and Richard Greenvile, Eſq; the great grand-father of Bernard Greenvile, Eſq; eſpouſed one of the daughters and coheireſſes of John Bevile, Eſq; the other being married to Mr Arundel of Trerice; and they had between them lands to the value of four hundred marks a year by theſe ladies, in the reign of Henry VIIIth, as we are more than once told by our learned Antiquary Leland (2). Bernard Greenvile, Eſq; married Elizabeth, daughter and coheireſs of Phillip Bevile, Eſq; of Brynne, third ſon to John Bevile, and niece and heireſs of Sir William Bevile of Killigarth (3), whoſe fortune, pretty well repaired by ſucceſſive marriages (4), paſſed moſt of it by this marriage into the family of the Greenvile's. The arms of this very ancient family are, argent, a bull paſſant, gules; armed and tripped, or (5). By this Lady Mr Greenvile had (6) Sir Bevil, of whom we are now ſpeaking; Sir Richard Greenvile, of whom in the next article; John Greenvile, who was afterwards of Lincoln's Inn; Roger, who was drowned in the ſervice of King Charles I. and one daughter, Gertrude, who became the wife of Chriſtopher Harris, Eſq; ſon and heir of Sir Chriſtopher Harris, Knight. Before we cloſe this note it may be proper to add, that if we may truſt ſome ancient writers, the father of this Gentleman was knighted as well as himſelf, and is often remembered by the name of Sir Bernard Greenvile (7).

Alexander actually loſt his head upon the ſame ſcaffold, and by the ſame axe, it made a great impreſſion upon the minds of men, and many inferences have been drawn from it. We will venture to mention one that has not been drawn, and it is this; Sir Alexander Carew, who ſeemed ſo determined, altered his opinion afterwards, and ſuffered by thoſe whom he now ſerved; whereas Sir Bevil Greenvile perſiſted ſteadily in his ſentiments, without expreſſing any unneceſſary vehemence, for he thought it to no purpoſe to make ſuch a diſplay of his principles as might poſſibly hinder his being able to act up to them (*k*). He therefore left London as ſoon as he could do it with ſafety, and retiring into his own country, employed himſelf in opening the eyes of other honeſt gentlemen, to ſee that their welfare and happineſs depended on the preſervation of the Conſtitution in Church and State; for the ſupport of which therefore, he adviſed them, whenever it ſhould become neceſſary, to venture their lives and fortunes, as they could have no ſecurity for either, if the Conſtitution was deſtroyed (*l*). The Parliament, at the breaking out of the war, were almoſt every where the ſtrongeſt; and by the help of their committees ſeemed to be in full poſſeſſion of the Weſt, where they had Devonſhire entirely, and the better part of Cornwall, through the induſtry of Sir Alexander Carew, and Sir Richard Buller (*m*). The marquis of Hertford, whom the King had appointed his General in the Weſt, was able to do little in thoſe parts, and what his friends did was in ſo calm and legal a way, that their enemies did not ſuſpect them of any military talents. Sir Nicholas Slanning, indeed, was poſſeſſed of Pendennis Caſtle, and he was known to be an inflexible royaliſt, yet their ſtrength was thought ſo deſpicable, that the Earl of Bedford would not give himſelf the trouble of purſuing Sir Ralph Hopton with an hundred and fifty horſe, when they retired into Cornwall (*n*). In this ſtate of things Sir Bevil Greenvile declared himſelf, and without heſitation joined Sir Ralph with his friends, and conducted them to Truro, where they began to form into a conſiderable body. The leaders of the parliament party, upon this, called in their friends from Devonſhire, and aſſembling at Launceſton, that they might the better deal with their opponents when they had them in their power, preferred an indictment at the quarter ſeſſions againſt certain perſons who had appeared in arms in breach of the king's peace, and againſt his crown and dignity (*o*). Here Sir Bevil's good ſenſe and wiſe management were clearly diſcovered. When it was leaſt expected he appeared with Sir Ralph Hopton, who taking notice of the preſentment, produced to the gentlemen of the grand-jury the king's commiſſion to the Marquis of Hertford, and his lordſhip's commiſſion to himſelf, aſſuring them that he came only to protect them from the impoſition of taxes, and other illegal oppreſſions. The grand-jury voted an addreſs of thanks to the King for his royal care of them, preſented Sir Alex. Carew, and Sir Richard Buller, for a riot or rout at Launceſton, and directed the ſheriff to raiſe the Poſſe Comitatus to diſperſe them, and their adherents (*p*). This was the foundation of all that was afterwards done in ſupport of the King in that part of his dominions. This happened in the ſummer of 1642, and gave for the preſent a new turn to affairs, but it quickly appeared, that in order to ſupport themſelves, ſome other kind of force was neceſſary than that which could be raiſed by the ſheriff. As this could only be done by the intereſt, and at the expence of men of rank and fortune, Sir Bevil Grenvile, who, as the noble hiſtorian ſays, was the moſt beloved man in that country (*q*), Sir Nicholas Slanning, John Arundel, and John Trevanion, Eſquires, raiſed each of them a regiment, and with theſe forces they not only maintained themſelves, and made themſelves maſters of Saltaſh, in which there was a garriſon of two hundred Scots, and forced the earl of Stamford to retired to Taviſtock, whether they were followed by part of the ſmall Corniſh army, in which Sir Bevil Greenvile was with his regiment, and ſo very cloſe puſhed that they were at length glad to conclude a ceſſation of arms between the counties of Devon and Cornwall, for a limitted time, and this upon very reaſonable terms, and without any prejudice to the principles of either party (*r*). The Parliament ſhewing a great diſlike to all treaties of this kind, major-general Chudleigh, who was one of the activeſt perſons in their ſervice, brought as conſiderable a body of troops as he could well collect into the neighbourhood of Launceſton, the night before the ceſſation was to determine, of which Sir Ralph Hopton and Sir Bevil Greenvile having intelligence, they came into the town to encourage their friends, though they had but a very ſmall force; the next day as ſoon as it was light the Parliamentarians attacked the place, or rather the avenues to it, which were long and gallantly defended 'till ſuch time as the King's forces, collected from different parts of the county, arrived, which was late in the evening, and then the enemy retired (*s*). The earl of Stamford, whom the Parliament relied upon for maintaining their quarrel in theſe parts, aſſembled in the month of May, an army of between ſix and ſeven thouſand horſe and foot, with which he marched into the Hundred of Stratton, which lies in the north corner of Cornwall, and the only part of the County well affected to the Parliament, and from thence detached Sir George Chudleigh with twelve hundred horſe to ſuprize Bodmin, where the ſheriff and ſome of the principal gentlemen in the county were aſſembled (*t*). Sir Ralph Hopton and Sir Bevil Greenvile being informed of this, though they were much inferior in ſtrength, and knew the enemy had ſuch a contempt for them, that one part of Sir George Chudleigh's in-

ſtructions was, to prevent their retreat to Pendennis, that they might have no more trouble with them; reſolved to leave Launceſton, and to march directly to fight the Earl, though they likewiſe knew that he was intrenched with his forces in a plain on the top of a hill, near Stratton, of very difficult acceſs, with ſome artillery, plenty of ammunition, and abundance of proviſions, which were ſo ſcanty with them, that officers and men, who both fared alike, had but a biſcuit a day, for two days that preceeded the action (u). This happened on the 16th of May 1643, when with two thouſand four hundred foot, in four brigades, they marched up the hill, and after twelve hours obſtinate reſiſtance, totally defeated them; which was in all reſpects one of the greateſt actions, and one of the cleareſt victories gained in the courſe of theſe unhappy wars (w) [B]. The King, to perpetuate the memory of this victory, in September following, created Sir Ralph Hopton, Baron Hopton of Stratton (x). The Parliament a little before this, had reſolved to ſend Sir William Waller, their moſt ſucceſsful General, to cruſh all oppoſers in the Weſt; and upon the news of this defeat he was haſtened with all neceſſary ſupplies, and directed his march to Bath. On the other hand, the King ſent the marquis of Hertford, with Prince Maurice, the earl of Carnarvon, and other perſons of diſtinction, with ſeventeen hundred horſe, and a thouſand foot, to join the Corniſh troops, who advancing likewiſe on their ſide, the junction was quickly made at Chard in Somerſetſhire, on the borders of Devon (y). The Corniſh forces amounted to three thouſand foot, and eight hundred

(y) Ruſhworth, May, Dugdale.

[B] *In the courſe of theſe unhappy wars.*] The whole of this action is very clearly and concisely related by the noble hiſtorian (8): 'About five in the morning, ſays he, they, that is, the royal army diſpoſed themſelves to make the attack, having ſtood under arms all night. The firſt brigade was commanded by the Lord Mohun and Sir Ralph Hopton, who undertook to aſſault the camp on the ſouth ſide: next them, on the left-hand, Sir John Berkeley and Sir Bevil Greenvile, were to force their way: Sir Nicholas Slanning and Colonel Trevanion, were to aſſault the north ſide, and on the left-hand, Colonel Thomas Boſſet, who was Major-General of their foot, and Colonel William Godolphin, were to advance with their party, each party having two pieces of cannon, to diſpoſe as they found neceſſary: Colonel John Digby commanding the horſe and dragoons being about five hundred, ſtood upon a ſandy common, which had a way to the camp, to take any advantage he could of the enemy if they charged, otherwiſe to be firm as a reſerve. In this manner the fight begun, the King's forces preſſing with their utmoſt vigour thoſe four ways up the hill, and the enemy's as obſtinately defending their ground. The fight continued with very doubtful ſucceſs 'till towards three of the clock in the afternoon, when word was brought to the chief officers of the Corniſh, that their ammunition was ſpent to leſs than four barrels of powder, which, concealing the defect from the ſoldiers, they reſolved could be only ſupplied with courage, and therefore by meſſengers to one another they agreed to advance, with their full bodies, without making any more ſhot 'till they reached the top of the hill, and ſo might be upon even ground with the enemy; wherein the officers courage and reſolution was ſo well ſeconded by the ſoldier, that they begun to get ground in all places, and the enemy in wonder of the men, who out faced their ſhot with their ſwords to quit their poſt. Major-General Chudleigh, who ordered the battle, failed in no part of a ſoldier, and when he ſaw his men recoil from leſs numbers, and the enemy in all places gaining the hill upon him, himſelf advanced with a good ſtand of pikes upon that party which was led by Sir John Berkeley and Sir Bevil Greenvile, and charged them ſo ſmartly, that he put them into diſorder, Sir Bevil Greenvile in the ſhock being borne to the ground, but quickly relieved by his companion, they ſo reinforced the charge, that having killed moſt of the aſſailants and diſperſed the reſt, they took the major-general priſoner, after he had behaved himſelf with as much courage as a man could do. Then the enemy gave ground apace, inſomuch as the four parties growing nearer and nearer as they aſcended the hill, between three and four of the clock they all met together upon plain ground, at the top of the hill, where they embraced with unſpeakable joy, each congratulating the other's ſucceſs, and all acknowleging the wonderful bleſſing of God; and being there poſſeſſed of ſome of the enemy's cannon, they turned them upon the camp, and advanced together to perfect the victory. But the enemy no ſooner underſtood the loſs of their major-general, but their hearts failed them, and being ſo reſolutely preſſed, and their ground loſt, upon the ſecurity and advantage whereof they wholly depended, ſome of them threw down their arms, and others fled, diſperſing themſelves, and every man ſhifting for himſelf: the conquerors, as ſoon as they had gained the camp and diſperſed the enemy, and after public prayers upon the place, and a ſolemn thankſgiving to Almighty God for their deliverance and victory, ſent a ſmall party of horſe to purſue the enemy for a mile or two, not thinking fit to purſue farther, or with their whole body of horſe, leſt Sir George ſhould return from Bodmin with his ſtrong body of horſe and dragoons, and find them in diſorder; but contenting themſelves with the victory they had obtained upon the place, which in ſubſtance as well as circumſtance, was as ſignal a one as hath happened to either party, ſince the unhappy diſtraction; for on the king's party were not loſt in all above fourſcore men, whereof few were officers, and none above the degree of a captain; and though many more were hurt, not above ten men died afterwards of their wounds. On the parliament ſide, notwithſtanding their advantage of ground, and that the other were the aſſailants, above three hundred were ſlain on the place, and ſeventeen hundred taken priſoners, with their major-general, and above thirty other officers. They took likewiſe all their baggage and tents, all their cannon, being thirteen pieces of excellent braſs ordnance and a braſs mortar-piece, all their ammunition, being ſeventy barrels of powder, and all other ſorts of ammunition proportionable, and a very great magazine of biſcuit, and other excellent proviſions of victuals, which was as ſeaſonable a bleſſing as the victory, to thoſe who for three or four days before had ſuffered great want of food as well as ſleep, and were equally tired with duty and hunger.' In the accounts publiſhed by the Parliament, the defeat is aſcribed to the treachery of their major-general, who is ſaid to have changed ſides in the action, and to have charged thoſe he quitted (9). But this ſeems to be clearly confuted by his remaining priſoner ſome time after the action, which is not reconcileable to his quitting the rebels, and even charging after he had quitted them. It is however true, that both himſelf and his father, ſtung by theſe imputations, quitted the Parliament's ſervice and reconciled themſelves to the King, which was conſidered as an unpardonable crime in them (10); notwithſtanding the Earl of Stamford, when he ſurrendered Exeter to Prince Maurice, ſtipulated amongſt other things, that his highneſs ſhould procure his Majeſty's free pardon to his lordſhip and all his adherents (11); which is a demonſtration, that even in his lordſhip's opinion, a pardon was a very good thing when it could be obtained.

[C] *And*

dred horſe and dragoons; but if they had not been commanded by men of admirable temper, and wonderful virtues, this coalition had been fatal; for though the troops of the Marquis were far inferior to them in number and in diſcipline, yet they were ſo furniſhed with Generals of every denomination, that theſe great men who had done ſo much and hazarded their all in the King's cauſe, found themſelves reduced to the rank of private colonels, which they bore, notwithſtanding, not only with patience, but without murmuring; which appeared ſo extraordinary in the eyes of the Marquis and Prince Maurice, that they took every opportunity of ſhewing them ſuch reſpect, as in ſome meaſure made amends for their loſs of command (z). Taunton, Bridgewater, and Dunſter-Caſtle were immediately reduced, and the army afterwards continued their march towards Wells, from whence they diſlodged the Parliament forces, who retired to Mendip-Hills. Even there they were attacked, and very roughly handled, by Prince Maurice, Sir John Berkeley, and Sir Ralph Hopton, who had conceived a very contemptible opinion of the Parliament horſe, and though they had the advantage of them here, found them much better troops than they expected (a). As for Sir William Waller, he continued at Bath amaſſing arms, ammunition, proviſion, and receiving continual ſupplies from London, and amongſt other troops, Sir Arthur Haſlerig's regiment of horſe with breaſt and back pieces. But for all this he kept his poſition, and though the Marquis and Prince advanced to Froome, and from thence to Brentford, yet he only ſuffered ſome horſe and dragoons to ſkirmiſh. At length the royaliſts advanced to Marſfield, five miles beyond Bath, that they might draw the enemy from the advantageous poſt in which they were, which they very probably might have done if they had acted with more temper (b). But the unreaſonable contempt they had of the enemy, and confidence they ſhould prevail in any ground, together with the ſtreights they endured for want of proviſions, and their want of ammunition, which was ſpent as much in the daily hedge ſkirmiſhes, and upon their guards being ſo near, as could have been in battle, would not admit of patience; for Sir William Waller, who was not to ſuffer that body to join with the King, no ſooner drew out his whole army to Lanſdowne, which looked towards Marſfield, but they ſuffered themſelves to be engaged upon great diſadvantage. It was upon the 5th of July 1643 (c), when Sir William Waller, as ſoon as it was light, poſſeſſed himſelf of that hill, and after he had, upon the brow of the hill over the high-way, raiſed breaſt-works with faggots and earth, and planted cannon there, he ſent a ſtrong party of horſe towards Marſfield, which quickly alarmed the other army, and was ſhortly driven back to their body. As great a mind as the King's forces had to cope with the enemy when they had drawn into battalia, and found the enemy fixed on the top of the hill, they reſolved not to attack them upon ſo great diſadvantage, and ſo retired again towards their old quarters; which Sir William Waller perceiving, ſent his whole body of horſe and dragoons down the hill to charge the rear and flank of the King's forces, which they did thoroughly; the regiment of cuiraſſiers ſo amazing the horſe they charged that they totally routed them, and ſtanding firm and unſhaken themſelves, gave ſo great terror to the King's horſe, who had never before turned from an enemy, that no example of their officers, who did their parts with invincible courage, could make them charge with the ſame confidence, and in the ſame manner they had uſually done. However, in the end, after Sir Nicholas Slanning with three hundred muſqueteers had fallen upon, and beaten their reſerve of dragoons, Prince Maurice and the earl of Carnarvon rallying their horſe, and winging them with the Corniſh muſqueteers, charged the enemies horſe again and totally routed them, and in the ſame manner received two bodies more, and routed and chaſed them to the hill, where they ſtood in a place almoſt inacceſſible. On the brow of the hill there were breaſt-works, on which were pretty bodies of ſmall ſhot, and ſome cannon. On either flank grew a pretty thick wood towards the declining of the hill, in which ſtrong parties of muſqueteers were placed. At the rear was a very fair plain, where the reſerves of horſe and foot ſtood ranged, yet the Corniſh foot were ſo far from being appalled at this diſadvantage, that they deſired to fall on, and cried out, that they might have leave to fetch thoſe cannon. In the end, order was given to attempt the hill with horſe and foot. Two ſtrong parties of muſqueteers were ſent into the woods, which flanked the enemy; and the horſe and other muſqueteers up the road-way, which were charged by the enemy's horſe and routed; then Sir Bevil Greenvile advanced with a party of horſe on his right-hand, that ground being beſt for them, and his muſqueteers on the left, himſelf leading up his pikes in the middle, and in the face of their cannon and ſmall ſhot from the breaſt-works, gained the brow of the hill, having ſuſtained two full charges of the enemy's horſe; but in the third charge his horſe failing, and giving ground, he received, after other wounds, a blow on the head with a pole-axe, with which he fell, and many of his officers about him [C]. Notwithſtanding, the muſqueteers fired ſo faſt

(z) Lord Clarendon's Hiſtory of the Rebellion, Vol. III. p. 270.

[C] *And many of his officers about him.*] It is ſaid, that when his body was found, his major and captain-lieutenant were lying at his feet, with eight officers more of his corps; there were ſlain beſide, the honourable Mr Leake, ſon to the Lord Deincourt, afterwards Earl of Scarſdale, with a pair of the enemy's colours twiſted about his arm; Mr Barker, lieutenant-colonel Wall, major Lower, captain James, captain Cholwell, and Mr Baſtard (12). But notwithſtanding this the victory was clear, and was in many reſpects of very

(12) Lloyd's Memoirs, p. 476. Heath's Chronicle, p. 46.

faſt upon the enemy's horſe that they quitted their ground; and the two wings who were ſent to clear the woods having done their work, and gained thoſe parts of the hill at the ſame time, beat off their enemy's foot and became poſſeſſed of the breaſt-works, and ſo made way for their whole body of horſe, foot, and cannon to aſcend the hill, which they quickly did, and planted themſelves on the ground they had won, the enemy retiring about demy culverin ſhot, behind a ſtone wall, upon the ſame level, and ſtanding in reaſonable good order. The King's horſe were ſo broken, that of two thouſand which were upon the field in the morning, there were not above ſix hundred on the top of the hill; the enemy were exceedingly ſcattered too, and had no mind to venture on plain ground with thoſe who had beaten them from the hill, ſo that exchanging only ſome ſhot from their ordnance, they looked one upon another 'till the night interpoſed. About twelve of the clock, it being very dark, the enemy made a ſhew of moving towards the ground they had loſt, but giving a ſmart volley of ſmall ſhot, and finding themſelves anſwered with the like, they made no more noiſe, which the Prince obſerving, he ſent a common ſoldier to hearken as near the place, where they were, as he could, who brought word that the enemy had left lighted matches in the wall behind which they had lain, and were drawn off the field, which was true; ſo that as ſoon as it was day the King's army found themſelves poſſeſſed entirely of the field, and the dead, and all other enſigns of victory. Sir William Waller being marched to Bath in ſo much diſorder and apprehenſion, that he left great ſtore of arms and ten barrels of powder behind him, which was a very ſeaſonable ſupply to the other ſide, who had ſpent in that day's ſervice no leſs than fourſcore barrels, and had not a ſafe proportion left. In this battle, on the King's part, there were more officers and gentlemen of quality ſlain than common men, and more hurt than ſlain. But, after all, the victory was clear, and no leſs clear, that it was purchaſed by the valour and conduct of the Corniſh troops, directed by the orders, and encouraged by the example of their gallant commander Sir Bevil Greenvile, who fell like a hero in the field of battle, after having put his enemy to flight *(d)*; and having already received the ſtrongeſt teſtimonies of his maſter's kind and grateful acceptance of his ſervices *(e)* [*D*]. His character, as a ſoldier, would be but ill underſtood if we ſhould be ſilent as to his care in rendering men better, as well as braver, from being under his command. Under him the Corniſh ſoldier was taught to pray as well as fight; and his forces were as much diſtinguiſhed by their piety as their valour. Fervent acts of devotion preceded every attack, ſolemn thankſgivings commemorated every advantage, even on the field of battle. Their conduct was exactly regular in every reſpect, for to Sir Bevil Greenvile it appeared equally abſurd and unjuſt, that troops raiſed to protect, ſhould injure property; and rather than avoid hardſhips by ſuch means, they choſe to bear them, as they frequently did, with moſt exemplary patience *(f)*. He likewiſe ſtood very high in the character of a patriot, and took ſo much pains to preſerve the communication and trade between the different parts of the county, even

very great conſequence; for it leſſened the credit of Waller, the beſt eſteemed officer in the Parliament's ſervice; it opened a paſſage for the King's forces, and it prevented the enemy from ſending any detachments weſtward (13). But all theſe advantages were cancelled by the loſs of Sir Bevil Greenvile, whoſe authority and example could not be replaced or repaired. His ſuperior title to command, and his willingneſs to be commanded by any man for the public ſervice, prevented ſewds, and kept every body from murmuring; his conſtant diſcourſes that they were not fighting either for fame or for fortune, but for the honour of the crown, the ſecurity of the ſubject, and to procure a happy and laſting peace, kept both officers and private men in a right temper of mind, and diſpoſed them to do or ſuffer any thing that was neceſſary for attaining thoſe valuable ends; whereas after his death, things gradually changed, narrower notions began to prevail, and this glorious ſpirit evaporated by degrees (14).

[*D*] *Acceptance of his ſervices.*] The following letter is at preſent in the hands of the right honourable Charles earl of Egremont, his lineal deſcendant; for lady Jane Greenvile, eldeſt daughter to the earl of Bath, and grandaughter to Sir Bevil, eſpouſed Sir William Leveſon Gower; and by him, amongſt other children, had Catherine, who eſpouſed Sir Edward Wyndham, and by him became the mother of Sir William Wyndham, father of the earl of Egremont.

CHARLES R.

Truſty and well beloved, wee greet you well. We have ſeen your letter to Endymion Porter our ſervant, but your whole conduct of our affairs in the Weſt doth ſpeake your zeale to our ſervice and the public good in ſo full a meaſure, as we reſt abundantly ſatisfied with the teſtimony thereof. Your labours and your expences we are graciouſly ſenſible of, and our royal care hath been to pleaſe you in all that wee could. What hath fallen ſhort of our princely purpoſes and your expectations, wee know you will attribute to the great maligaity of the rebellion wee had and have here to wreſtle withall. And wee know well, how effectual a diverſion of that miſchievous ſtrength you have made for us at your own great hazards. Wee aſſure you we have all tender ſence of the hazards you have endured, and the ſtate wherein you ſtand. Wee ſhall not faile to procure you what ſpeedy reliefe may be. In the mean ſpace wee ſend you our moſt hearty thanks for ſome encouragement and aſſurance on the word of a gracious prince, that God enabling us, wee ſhall ſo reflect on your faithful ſervices, as you and your's ſhall have cauſe to acknowledge our bounty and favour: and ſo wee bid you heartily farewell. Given at our court at Oxford, the 24th of March 1642-3.

On the cover in which this letter is incloſed, George Lord Lanſdowne has wrote,

'Original letter of King Charles the Iſt to Sir Bevil 'Greenvile, written upon ſarcenet, found in his pocket 'at the battle of Lanſdowne, July 5, 1643. Endorſed 'with his own hand (i. e. Sir Bevil Greenvile's) *Keep 'this ſafe.*'

In the hand-writing of Sir William Wyndham, Bart.

'Given me by George Lord Lanſdowne, this 26th 'day of April 1734, to be preſerved in honour of his 'and my grandfather.' W. W.

even after this unfortunate war began, that the miſeries of it were in ſome meaſure prevented, or, at leaſt, abated, as long as he lived. He was the better enabled to do this, becauſe no man of his rank, or, indeed, of any rank in the county, underſtood it's intereſts in all it's different branches better; and by his correſpondence in France, and with the loyal, now noble family of Carteret, in Guernſey, he found means to be well ſupplied with ammunition; and having prevailed upon the gentlemen of the country to ſubmit to an equal tax, it was ſo carefully collected, and ſo honeſtly expended, that the troops of the county were tolerably maintained, and regularly paid (g). Theſe might paſs for endeavours at panegyric, or at leaſt for heightenings of the truth, if we were not able to produce clear authorities from his contemporaries, and which can be ſaid for very few, from writers on both ſides, that not only ſupport, but go higher than we have done, for the ſake of giving a juſt idea of ſo excellent a character to poſterity [E]. Sir Bevil eſpouſed

(g) Lord Clarendon's Hiſtory of the Rebellion, Vol. III. p. 275, 284.

[E] *Of ſo excellent a character to poſterity*] In producing the atteſtations referred to in the text, we will begin with the noble hiſtorian's remark on the iſſue of the battle of Lanſdowne. 'That which would have 'clouded any victory, and made the loſs of others leſs 'ſpoken of, was the death of Sir Bevil Greenvile (15). 'He was indeed an excellent perſon, whoſe activity, 'intereſt, and reputation, was the foundation of what 'had been done in Cornwall, and his temper and affection ſo public, that no accident which happened 'could make any impreſſions in him; and his example 'kept others from taking any thing ill, or at leaſt ſeeming to do ſo. In a word, a brighter courage, and a 'gentler diſpoſition, were never married together, to 'make the moſt chearful and innocent converſation.' Whitlocke ſpeaks of him with great reſpect (16). 'Waller, and his whole army, ſays he, was fought with by 'Greenvile and Slanning, at Lanſdowne, in the weſt; 'Greenvile did very gallant ſervice, and was ſlain there.' Sir Philip Warwick, a man of ſound judgment, great integrity, and not at all profuſe of his praiſes, ſpeaking of the battle of Lanſdowne, ſays (17), 'In this fight 'fell that excellent perſon Sir Bevil Greenvile, a man 'of great integrity, courage, and intereſt in his country.' This is ſaying a great deal in few words; but towards the cloſe of his work, having occaſion to mention the great ſervices of Sir John Greenvile, afterwards earl of Bath, he adds (18), 'The father of this 'gentleman, though not bred a ſoldier, yet was ſo 'naturally adapted to it, and was ſo full of humanity, 'as well as clear courage, that having been well acquainted with him as a member in the Long Parliament, I was heartily ſorry when, though ſo honourably and victoriouſly, he fell at the rencounter of Lanſdowne.' Theſe paſſages taken together, fully confirm all that is ſaid by Lord Clarendon. We find, indeed, in the Memoirs attributed to a great officer in the parliament's ſervice, ſomething that looks like a contradiction to what is advanced in the text in reſpect to the victory of Lanſdowne (19). 'The two armies, 'ſays he, engaged about Lanſdowne, where the ſucceſs was doubtful a good while, but at laſt our's obtained the victory. The Corniſh men, commanded 'by Sir Bevil Greenvile, ſtood their ground till they 'came to puſh of pike, but were then routed, and Sir 'Bevil killed. The enemy retreated to the Devizes, 'and our's purſued them.' Another writer, though of very different ſentiments, gives nearly the ſame account (20): 'Again at Lanſdowne, ſays he, between 'Sir Ralph Hopton, and the Parliamentarians, under 'Sir William Waller, was fought a fierce battle, wherein the victory was not very clear on either ſide, ſaving 'that the Parliamentarians might ſeem to have the better, becauſe preſently after Sir William Waller followed Sir Ralph Hopton to Devizes in Wiltſhire, 'though to his coſt, for there he was overthrown.' But to clear up the point as to the victory, we will not quote the noble hiſtorian, who has related it largely, but Sir Philip Warwick, who in very few words inſerts that parentheſis which ought to ſtand in both theſe accounts, ſhewing ſufficiently the unſtable condition of ſublunary affairs, and how quickly and how ſtrangely a victory may be loſt and won, and loſt again (21). 'A 'ſmall accident, ſays he, did great miſchief that day 'to the lord Hopton's party; for the greateſt part of 'his ammunition took fire, and he himſelf was much 'ſinged and defaced by it: ſo as, for want of powder, 'he was forced to march into the town of the Devizes, 'which Waller coming to underſtand, he took courage 'again, and came to beſiege Hopton there; and had 'not the King ſoon ſent the lords Wilmot and Carnarvon 'to relieve him, he had not been in a poſture to defend 'himſelf. But here the King's forces, at Roundway-'down, bravely charging him, gave him an intire de-'feat' It is evident from hence, that the valour of Sir Bevil Greenvile, and his Corniſh foot, put the marquis of Hertford and Sir Ralph Hopton in poſſeſſion of the ground and of *the victory*; that the next morning the blowing up of the powder deprived them intirely of theſe advantages, and obliged them to retire to the Devizes, whither they were followed by Sir William Waller, and the face of affairs was changed again. Sir William Dugdale, one of the correcteſt writers of the hiſtory of theſe unhappy times (22), ſtates the matter truly in the feweſt words poſſible: 'At Lanſdowne, in Somerſetſhire, ſays he, 'the lord Hopton had the better of the rebels, though 'the valiant Sir Bevil Greenvile was there ſlain.' But in all theſe writers not a word occurs in the diminution of this great hero's character: mention him who will, friends or enemies, he is ever mentioned with applauſe. At Oxford, the members of the Univerſity, to ſhew their ſenſe of the kingdom's loſs, and their own, did him, and did themſelves, the higheſt honour in their power, by publiſhing a collection of poems, written to celebrate his memory. What intitled him to ſo ſingular a mark of reſpect, might well intitle him to a place in this work; and as theſe poems are now ſcarce to be met with, we will add two from this collection, which were then highly eſteemed, and which are very ſuitable to our purpoſe; the rather, becauſe though part of them be inſcribed on the monument erected on the ſpot where Sir Bevil Greenvile fell, by his illuſtrious deſcendant the late lord Lanſdowne, the letters are now ſo obliterated and decayed that they are ſcarce legible.

By Mr William Cartwright.

Not to be wrought by malice, gain, or pride,
To a compliance with the thriving ſide;
Not to take arms for love of change, or ſpite,
But only to maintain afflicted right;
Not to die vainly in purſuit of fame,
Perverſly ſeeking after voice and name:
Is to reſolve, fight, die, as martyrs do,
And thus did he, ſoldier and martyr too.
He might, like ſome reſerved men of ſtate,
Who look not to the cauſe, but to it's fate,
Have ſtood aloof, engaged on neither ſide,
Prepared at laſt to ſtrike in with the tide.
But well weighed reaſon told him, that when law
Either's renounced, or miſapplied, by th' awe
Of falſe-named patriots, that when the right
Of king and ſubject is ſuppreſſed by might;
When all religion either is refuſed,
As mere pretence, or merely as that uſed:
When thus the fury of ambition ſwells,
Who is not active, modeſtly rebels.
Whence, in a juſt eſteem to Church and Crown,
He offer'd all, and nothing thought his own.
This thruſt him into action whole and free,
Knowing no intereſt but loyalty;

Not

eſpouſed Grace, daughter to Sir George Smith of Exeter, knight (*b*), by whom he had four ſons and three daughters; Elizabeth, who became the wife of Peter Prideaux, Eſq; Bridget, who eſpouſed Sir Thomas Higgons, knight; and Jane, who married Colonel Richard Thornhill, and died ſo late as the year 1739. Of the ſons, Richard died young; John will be the ſubject of a future article; Bernard became the father of George Lord Lanſdowne, of whom hereafter; and of Dennis, who was Dean of Durham, and of whom we have already ſpoken.

(*b*) Viſit. de Com. Devon. in Colleg. Arm. Not. c. 1.

Not loving arms as arms, or ſtrife for ſtrife,
Nor waſteful, nor yet ſparing of his life;
A great exacter of himſelf, and then,
By fair commands, no leſs of other men.
Courage and judgment had their equal part,
Counſel was added to a generous heart;
Affairs were juſtly timed, nor did he catch
At an affected fame of quick diſpatch;
Things were prepar'd, debated, and then done,
Not raſhly broke, or vainly overſpun;
Falſe periods no where by deſign were made,
As are by thoſe that make the war their trade:
The building ſtill was ſuited to the ground,
Whence every action iſſued full and round.
We know who blind their men with ſpecious lies,
With revelation, and with prophecies,
Who promiſe two things to obtain a third,
And are themſelves by the like motives ſtirr'd.
By no ſuch engine he his ſoldiers draws,
He knew no arts but courage and the cauſe:
With theſe he brought them on as well-trained men,
And with theſe two he brought them off again.
When now th' incenſed legions proudly came
Down like a torrent, without bank or dam:
When underſtood ſucceſs urged on their force,
That thunder muſt come down to ſtop their courſe,
Or Greenvile muſt ſtep in; then Greenvile ſtood,
And with himſelf oppos'd and check'd the flood:
Conqueſt or death was all his thoughts, ſo fire,
Either o'ercomes, or doth itſelf expire;
His courage work'd like flames, caſt heat about,
Here, there, on this, on that ſide none gave out;
Not any pike in that renowned ſtand,
But took new force from his inſpiring hand:
Soldier encourag'd ſoldier, man urg'd man,
And he urg'd all, ſo much example can;
Hurt upon hurt, wound upon wound did call,
He was the butt, the mark, the aim of all:
His ſoul flies while retir'd from cell to cell,
At laſt flew up from all, and then he fell.
But the devoted ſtand, enraged more
From that his fate, plied hotter than before,
And proud to fall with him, ſworn not to yield,
Each fought an honoured grave, ſo gain'd the field.
Thus he being fallen, his action fought anew,
And the dead conquered, while the living flew.
This was not nature's courage, nor that thing
We valour call, which time and reaſon bring,
But a diviner fury, fierce and high,
Valour tranſported into extacy,
Which Angels, looking on us from above,
Uſe to convey into the ſouls they love.

By Dr Lluelin.

And with this conſtant principle poſſeſs'd,
He did alone expoſe his ſingle breaſt
Againſt an army's force, and bleeding lay,
The great reſtorer of th' declining day.
Thus ſlain, thy valiant anceſtor did lie,
When his one bark a navy did defy:
When now encompaſſed round, he victor ſtood,
And bath'd his pinnace in his conquering blood,
Till all his purple current dried and ſpent,
He fell, and left the waves his monument.
Where ſhall the next fam'd Greenvile's aſhes ſtand,
Thy grandſire fills the ſea, and thou the land.

E

GREENVILE [Sir RICHARD], Baronet, brother to Sir Bevil, and General of the Forces of King Charles I, in the Weſt. He was born in the year which commenced the XVIIth century; and after having received the firſt principles of education in his father's family, was ſent for a little time to Exeter College (*a*), where his brother then ſtudied. He derived from nature great faculties, for with lively parts and a quick penetration he had alſo a very ſolid judgment; which induced him not only to meditate attentively on all his undertakings, but to review them likewiſe with the ſame prudence and patience, and to commit to writing whatever he judged might be of ſervice to him, in the ſucceeding part of his life (*b*). His temper and genius led him to a military life, to qualify himſelf for which, he entered very early into the beſt ſchool in the world; paſſing in the eighteenth year of his age into the Low-Countries (*c*), where he carried arms amongſt the Engliſh forces, under the command of that accompliſhed hero, Horace Lord Vere, of Tilbury; and had the farther advantage of acting under the auſpice of the firſt Captain of that age, Maurice Prince of Orange. He went afterwards into Germany, where he ſerved in the war of the Palatinate (*d*), and having in a ſhort ſpace gained great knowledge in the profeſſion of arms, he returned into his native country, about the beginning of the reign of Charles I, upon a proſpect of being employed in that war, which was broke out with Spain. He commanded, accordingly, a company of foot in that body of land troops employed in the expedition againſt Cadiz, under the Lord Vicount Wimbledon (*e*). In this diſaſtrous enterprize he was a diligent obſerver, and was very far from having any ſhare in that remonſtrance made againſt the Commander in Chief. Captain Greenvile was, from the beginning, a lover of diſcipline, and could not endure to ſee men raiſed to command by their experience, run down by ſuch as having a prejudice

dice to their perſons, tortured their capacities to find objections to their conduct [*A*]. He loſt no reputation in this voyage, whatever his ſuperior officers might do, but returning home with the credit of having ſhewn both valour and ſkill in the diſcharge of his truſt, he had a company of foot given (*f*) him in the regiment of his old ſchool-fellow, in the Dutch wars, Sir John Burroughs, when the duke of Buckingham made his diſaſtrous expedition for the ſupport of Rochelle, and landed his forces in the iſland of Rhée. As it was a ſcheme of that favourite's, and he flattered himſelf would contribute to render him reſpected abroad, and popular at home, he was very careful in the choice of his officers, and took very great pains to give them all the marks of reſpect and encouragement in his power, to which we may attribute his conferring, as by his commiſſion he had authority to do, the honour of knighthood upon Captain Greenvile, Portſmouth, June 20, 1627, a week before they embarked for the iſle of Rhée. There too he maintained his credit unimpeached, and by ſucceſſive deaths came to the command of a regiment with general approbation, and as a ſoldier that well deſerved it (*g*).* He likewiſe wrote memorials of this expedition, which are ſtill extant, and clearly demonſtrate that he was not ſo very a courtier as not to ſee the failings of the great, or ſo much bent upon expoſing them as to aggravate every thing to the utmoſt. His account is more modeſt, and in no reſpect whatever inferior to any of the relations of that unlucky attempt that have come to our hands [*B*]. His prudent behaviour in the courſe of this

(*g*) Sir Richard Greenvile's Defence, &c. Clarendon's Hiſtory of the Rebellion, Vol. IV. Lord Lanſdowne's Works, Vol. II.

[*A*] *To find objections to their conduct.*] This war with Spain was chiefly of the Duke of Buckingham's procuring, and ſeems to have proceeded more from his perſonal diſtaſte to Count Olivarez, than any ſolid or honourable motive. However, after the war was begun, it ought certainly to have been proſecuted, becauſe, though he acted from private pique, and at a time when it viſibly ſerved his own particular purpoſes, yet, without queſtion, the nation had been grievouſly injured by the Spaniards; and there were, therefore, ſufficient grounds for taking all the advantages our naval power and our alliance with the Dutch gave us, as well as the weakneſs of the enemy, and their firm perſuaſion that, whatever we might pretend, we ſhould not actually commit hoſtilities (1). Sir Edward Cecil, grandſon to the great Lord Burleigh, was the perſon made choice of for this command; an old ſoldier, it is true, but no ſeamen, and therefore not at all qualified for the ſupreme direction of ſuch an undertaking. The Earls of Eſſex and Denbigh were appointed his vice and rear-admirals; and, that he might be the fitter to command men of ſuch quality, he was created Baron of Putney, and Viſcount Wimbledon, and had likewiſe the military rank given him of Lord Marſhal (2). It was thought ſtrange, that though there wanted not many able ſeamen, ſuch as Sir Robert Manſel, Sir William Monſon, and others, yet none of them were intruſted but merely ſuch as were in the Duke's favour, which was both an unreaſonable and an impolitic thing. The force employed was very conſiderable, viz. eighty ſhips, Engliſh and Dutch, and ten good regiments; neither was it improbable, that if matters had been well concerted, and properly executed, this expedition might have turned to the benefit of the nation, and the honour of the King and his miniſtry. The Spaniſh Plate fleet was then returning home, with above a million on board, and, if they had gone to Tercera, they muſt infallibly have been maſters of it, and, by the deſtruction of fifty or ſixty galleons, had diſabled the maritime power of Spain for at leaſt a century. But the fleet did not ſail till October, and then they went upon no ſettled ſcheme, but all was left to the diſcretion of men who in reality were no fit judges of ſuch matters, and beſides were, in point of opinion, divided amongſt themſelves (3). The General ſailed from Plymouth the 7th of October, 1625; but when the fleet was got ſome leagues to ſea, their ſhips were ſeparated by a ſtorm, ſo that they were many days before they got together at their appointed rendezvous off Cape Vincent. On the 19th of October a council was held, wherein it was reſolved to attack Cadiz, which accordingly they did, on the 22d of that month. My Lord Eſſex ſtood into the bay, where he found ſeventeen good ſhips, riding under the town, and eight or ten gallies; theſe he bravely attacked, but, for want of proper orders and due aſſiſtance, the Spaniſh ſhips were ſuffered to retire to Port Real, whither the Lord Marſhal did not think fit to follow them. Then ſome thouſands of ſoldiers were landed, and the fort of Puntall was taken, after which they proceeded to make ſome attempts upon the town. The ſoldiers unfortunately becoming maſters of too much wine, got exceſſively drunk, and became ſo careleſs, that if the enemy had known, or been vigilant enough to have taken this advantage, few of them had returned home. The fright into which this put their officers, engaged them to reimbark their forces; and then it was concluded to cruize off Cape St Vincent for the Flota. There the men grew ſickly; and by the ſtrangeſt management that ever was heard of, that is, diſtributing the ſick, under pretence of taking better care of them, two in each ſhip, the whole fleet was infected, and that to ſuch a degree, as ſcarce left them hands enough to bring it home. This, however, they performed in the month of December, having done little hurt to the enemy, and acquired leſs honour to themſelves: all which was foreſeen, nay, and foretold too, before the fleet left England. On their return, a charge (4) was exhibited againſt the General by the Earl of Eſſex, and nine other officers of diſtinction. Lord Wimbledon juſtified himſelf, in a long anſwer (5) to the charge. The reader who ſhall compare theſe with Sir William Monſon's reflections on this lord's conduct, will diſcern that he is hardly and unjuſtly treated. Sir William arraigns him for calling councils, when he ſhould have been acting; the officers accuſe him for not calling councils, but acting of his own head. The truth *ſeems to* be, he had no notion of a ſea-command, and his officers no inclination to obey him. In this vindication it is ſuppoſed that Captain Greenvile had a ſhare, at leaſt it correſponds with his manner of writing.

[*B*] *That have come to our hands.*] This, like the Spaniſh war, was chiefly the effects of Buckingham's reſentment, aſcribed to different cauſes, into which this is no proper place to enquire; we ſhall, therefore, juſtify what is ſaid in the text, by producing a few curious paſſages from Sir Richard's Journal. The Engliſh forces were landed on the iſland of Rhée on Wedneſday the 11th of July, the operations of the next day our author relates in theſe words: 'July (6) the 12th, 'Monſieur Soubize went to Rochelle, to procure ſome 'aid from them; and Sir William Beecher was like-'wiſe ſent by my Lord Duke to know their intentions, 'but they of the town would ſcarce admit them but by 'a poſtern-door, being jealous of the ſucceſs of our affairs. After four o'clock the ſame day, we began to 'unſhip our ſoldiers; but by that time we had landed 'ſome twelve hundred, or fifteen hundred of our men, 'with three or four drakes, the enemy, who lay un-'diſcovered of us by the advantage of a bottom, 'charged us with two hundred horſe, and one thou-'ſand foot. In their horſe-charge they ſhewed them-'ſelves true Frenchmen, deſperately valiant, and put 'our men, being unranked, and ſcarce ſtepped on 'ſhore, to route, and drowned many of the rear; but 'at length, by the brave example of the colonels and 'general, they reaſſumed their courage, and in grati-'tude laid above one hundred of their cavalry on the 'ground. The foot ſeeing the ill entertainment of 'their horſe, came on very unwillingly, their captains

(6) A true and exact Journal or Diary of the moſt material Paſſages happening at or after our landing at the iſle of Rhée, anno 1627.

'waving

this enterprize gained him the favour of that potent nobleman George Duke of Buckingham; and the good graces of ſo eminent a patron (*b*) recommended him to a lady, who was

(*b*) Clarendon's Hiſtory of the Rebellion, Vol. IV. p. 535.

' waving their hats to them, and were glad to quit us; ' for, after two or three vollies of ſhot and ſtones, finding our pikes too long before, they betook themſelves ' to flight, and left us maſters of the field; an honour ' dearly purchaſed, it being by the death of many of ' our braveſt commanders. That night we began to ' land our horſe, and make good the place by intrenchment, expecting another charge from the enemy that ' night; but they left us quietly to enjoy our victory, ' wherein, if they had been as provident as valiant, ' we had never prevailed; for if they had firſt charged ' us with their foot, to have received our firſt and hotteſt ' volley, and then flanked us with their horſe, they had ' ſcarce left us any for a ſecond defeat: but it happened ' otherwiſe, by a diſſention among themſelves, ariſing ' from this cauſe. Monſieur Thorax, governor of the ' iſland, had promiſed Baron St Andrew the honour of ' the firſt charge, which he after gave in command to ' his brother; whereat he being diſcontented, would ' not charge at all, nor ſuffer his troops to ſecond the ' vanguard. Yet we muſt not attribute our victory, ' or rather ſafety, wholly to this cauſe, but to the ſpecial favour of God, who, after our ſoldiers took themſelves for loſt, and ran away, gave them courage to ' reſiſt, and then beat the braveſt ſoldiers of all France, ' the regiment of Champagne, never before beaten, ' and to defeat their prime cavalry, conſiſting all of ' gentlemen of quality; a thing miraculous for infantry ' to do.' The following paſſage does not do much honour to the French commander, and is, at the ſame time, a proof that Buckingham was looked upon as the author of the war. ' July the 30th, there came one ' from the citadel, pretending he ran away, who profeſſed himſelf an engineer, and deſiring conference ' with my Lord Duke, he was ſuſpected, his unconfident countenance bewraying him, and being ſearched ' by Mr Aſhburnham's appointment, there was, as ſome ' ſay, a poiſoned dagger found about him, whereupon ' the torture being threatened to him, he confeſſed he ' was ſent by the governor to kill him, which he juſtified to the governor's brothers, and other gentlemen, ' which came to clear themſelves; for which cauſe my ' Lord Duke would not agree to have or give any quarter to them. All this while the battery played, but ' little harm on both ſides; and, notwithſtanding it ' was generally concluded by the colonels, and all the ' council of war, a thing impoſſible to take the fort but ' by famiſhing them, yet in all the time we had been ' in the town, we went not about to block them up ' by intrenchments, but took a more prepoſterous way, ' in raiſing batteries, before we made our approaches; ' a thing very chargeable and needleſs, for with the ' infinite company of ſhot that we made againſt the ' ſand-hill, we did nothing by the way of breach, but ' ſpent more powder and ſhot than half the revenues ' of the iſland was worth, and ſtill the paſſage was open for thoſe of the towns round about to carry what ' proviſion they would into the fort, and give intelligence of the affairs of our army, which the enemy's ' horſe continually did, foraging up and down the ' country.' He mentions frequently, with great concern, the Duke of Buckingham's indiſcreet behaviour, in holding conferences with the enemy, to which he would not either admit any of his principal officers, or report what paſſed in them, which naturally excited jealouſy and diſcontent. Sir Richard deplores the death of Sir John Burroughs, the loſs of whom, ſays he, was the loſs of all our hopes. He obſerves, that upon ſome ſlight hints given at one of thoſe fatal interviews the Duke had with the French officers, he diſpatched Mr Aſhburnham to Paris, on the 4th of September, who came back on the 17th, without having ſo much as ſeen the King, though in other reſpects treated with as much civility as his youth and rank could demand. This uſage had a ſtronger effect upon Buckingham than all the remonſtrances of his beſt friends, as appears from the latter part of our author's Journal, which is ſo full of curious and important facts, that the reader cannot but be well pleaſed to ſee them. ' September 26, there came a parley from the fort, but ' my Lord Duke would admit of none, in regard of ' the ill uſage his couſin Aſhburnham received at Paris, and ſent them an abſolute anſwer that he would ' hold no parley with them, unleſs it were touching ' the delivery of the fort. Preſently after the return ' of this meſſage, came the Lieutenant-Governor of ' the fort, Baron Monthault, with a trumpet, to treat ' of articles of yielding, and withal told my Lord ' Duke, if they received no ſuccours from the main ' that night, the morrow following they would render ' it up; which they were in a manner forced to do, by ' the mutiny of their ſoldiers. But our hopes were all ' defeated, by the coming of fifteen or ſixteen boats ' from the main, which brought them at the leaſt two ' months proviſion of victuals and munition, of which ' they ſtood in great need. For a fortnight's time before ' we had not a great ſhot from the fort, and our ſoldiers marched to their guards in open view of the ' fort, the trenches being full of water, without receiving any hurt by their ſmall ſhot for want of powder. And now, to add to our miſeries, our ſoldiers ' began to ſicken apace, having neither good lodgings ' but in the trenches, nor meat but which ſtunk, nor ' drink but water, all the proviſion of wine in the iſland ' being ſpent: yet the Rochellers would not be ſenſible of our wants, but for that ſmall proviſion they ' ſent they ſold it at a triple value of the worth. October 7, there landed ſeven boats at the little fort. For ' four or five days nothing was done, our ſoldiers died ' apace. On the 13th, there was great preparation for ' an aſſault, neither would my Lord Duke be diſſuaded but by foul weather, although all the Colonels ' ſubſcribed it under their hands to be a thing impoſſible, and alſo for our preſent departure, in as much ' as our army grew ſo weak, and we had certain intelligence of the landing of four thouſand foot, and two ' hundred horſe, the horſe being already embarked. ' Sir Henry Sprye uſed a ſoldier-like freedom of ſpeech, ' in ſhewing to my Lord the neceſſity of our departure, ' and that it would be honourable, having ſufficiently ' ſhewed our valour and reſolution, in remaining ſo long ' time in an enemy's country with ſuch an handful of ' men, and who never dared to meddle with us; and beſides, it would be no more diſhonourable for us, ' being ſo few in number, after four months ſiege to ' go away from a place unfeaſible, than it was for one ' of the greateſt ſoldiers in the world, Spinola, to riſe ' from Bergen-op-Zoom with thirty thouſand men. ' But he was anſwered with a court-like ſcorn, That ' he talked as if he had come from an alehouſe; and ' for the reſt of the Colonels, who were all of the ſame ' opinion, and durſt ſpeak their opinions, inſtead of ' hearkening unto them, by whom he ought to be governed, he abuſed them in words, inſomuch as many ' of them ſwore they would never come forth with a ' man who durſt not return. But my Lord Duke was ' ſwayed by ſome inſinuating ſycophants, and others, ' who told him it would be diſhonourable to go away, ' having two months victuals; but at length we were ' fain to leave our victuals and men behind us too, to ' run away far more diſhonourably. Then foul weather happening, that they could not fall upon the ' fort, Baron St Serin told my Lord Duke he was very ' glad of the weather, and told him freely a truth, the ' experience whereof we dearly bought, That we ' ſhould loſe our men to little purpoſe. On the 21ſt, ' by my Lord Duke's command, about ſix of the clock, ' we quitted our trenches, which the enemy preſently ' poſſeſſed, pulling down our courts of guard in our ' redoubts. The next day, contrary to the opinion of ' the Colonels, having ſo many men, we fell upon our ' own trenches, to beat the enemy out, who baſely ' ran away, faſter than we could follow. On the 23d ' there were twenty-five boats landed at the little fort, ' with a thouſand men. The day before my Lord ' Duke gave St Serin leave to depart for the main. ' Nothing done for four or five days, our Colonels ſtill importuning my Lord Duke to depart: notwithſtanding, on the 27th, my Lord Duke gave order for falling on the fort, which we did, our men being more deſperate for fear of ſtarving, and went on bravely, ' but we quickly found (contrary to the relation of ſome ' villains

was conſidered as one of the beſt matches in the Weſt. This put him in poſſeſſion of a good eſtate in the counties of Cornwall and Devon [C]. He loſt his patron ſoon after, but his credit was ſo well eſtabliſhed, and his character, as an officer, ſo well known, that he was raiſed to the degree of a Baronet, by the name of Sir Richard Greenvile of Kilkhampton in Cornwall, by letters patents dated April 9, 1630 (i). This flow of proſperity did not, however, continue long; in conſequence of his marriage he was unhappily engaged in a ſuit againſt Theophilus Earl of Suffolk, which being proſecuted with great earneſtneſs and acrimony on both ſides, ended in the compleat ruin of Sir Richard Greenvile for the preſent, by depriving him of his wife, ſtripping him both of her eſtate and his own, and confining him to the priſon of the Fleet, in the month of May 1632 (k). It is on all hands agreed, that there was ſomething ſo harſh and ſo ſevere in this uſage, that the fate of Sir Richard was univerſally regretted; perhaps, if it be more cloſely looked into, it will be found not to have been more cruel than it was unjuſt [D]. In this diſtreſs he laboured by every method that either himſelf, or thoſe concerned

(k) Sir Richard Greenvile's Defence, &c.

' villains who ran away from the fort, that they had ' not four hundred fighting men) a reſiſtance fit for forty ' thouſand men, and we were ſcarce four thouſand. ' They killed above a hundred of our men with ſtones, ' and they might have done the like by our army, if ' they had come on without ever ſhooting ſmall ſhot: ' they blew up three mines, but did little hurt with ' them: in all were loſt and ſlain, four hundred foot ' and horſe: they took ſome thirty priſoners in traps, ' which they had made in their trenches. On the ' 28th, and alſo the night before, there landed five ' boats at the Point, yet my Lord Duke would not be ' perſuaded to be gone, but would have returned Sir ' Henry Sprye, with Sir Henry Peregrine Bertie, to ' La Flot again, which they refuſed to do. About ' three of the clock in the morning, Sir Edward Hawley and Serjeant Major Brett came, in the name of ' the council of war, to intreat him to march away, ' but he would not, being perſuaded by a ſeditious ' miniſter, who told him it was diſhonourable and inhuman to leave our ſick men and proviſion behind ' us. About eight of the clock, Sir William Cunningham's horſe came to my Lord Duke, and told him ' they heard great ſhooting in the main, or rather at ' the point, and ſaw the enemy marching to the town. ' Then my Lord, having talked with Soubize, commanded to march away, which we did, leaving our ' ſick behind us, whoſe throats were after cut, and inhumanly ſent us in a barque, which they thruſt from ' the ſhoar two or three days after, with great ſtore of ' proviſion, as well arms as victuals. We had not ' marched a muſket-ſhot out of the town, but we ſaw the ' enemy at the heels of us, ſome two hundred horſe, ' and two thouſand foot, and we were about three ' thouſand foot, and a hundred horſe. We made a ' ſtand, to ſee if they would give us battle, but they ' would not. On we went to La Lamard, a village, ' where we made another ſtand, thinking they would ' have charged us. Then we marched to Loys bridge, ' where we were to embark; and before two regiments had paſſed the bridge, being very narrow, they ' fell upon our horſe in the rear, and put them to route, ' and they routed the rear inſomuch that none of our ' foot could charge, ſo every one ran away, and the ' enemy had the execution of five whole regiments, ' which they put all to the ſword, except twenty officers and a hundred common ſoldiers taken priſoners, ' and thoſe that were drowned, which were many. ' The enemy had paſſed the bridge, but Sir Pierce ' Croſby, with ſome pikes, and Sir Thomas Fryar, ' with muſkets, made them retreat, after they had ' beaten us out of the work, which was made ſo ill ' it was not tenable.' This Journal agrees very well with a relation publiſhed in Ruſhworth, and ſeems to juſtify the cenſure paſſed upon this expedition in four articles (7). In the firſt it was alledged, That the Duke was too ſlow in his march after his landing, by which the enemy had time to recover from their confuſion, and to ſupply themſelves with proviſions and neceſſaries. The ſecond objection was, That great want of ſkill, diligence, and care, was ſhewn in carrying on the ſiege, ſince otherwiſe, the ſuccours by which it was fruſtrated could never have been received The third fault found, Was neglecting to take the fort in the meadow, which unaccountable omiſſion was in effect the ruin of the whole deſign. Laſtly it was alledged, That the retreat was not well concerted, the proper precautions being neglected, and was very indifferently executed, by which the army ſuffered much, and the nation more. The Duke threw the blame upon the Earl of Holland, who was to have brought him a powerful reinforcement, which however he found in Plymouth road at his return. The Earl of Holland again, diſcharged it all on the commiſſioners of the navy, the agent-victuallers, and the winds; but the voice of the people, which in truth was no other than the eccho of the officers who ſerved, and who at their return ſpoke what they ſaw and knew, laid it upon the Duke himſelf, who, though he wanted experience, thought himſelf ſuperior to advice, and ſeldom took any, but what in ſubſtance, and in reſpect to the perſons from whom it came, was very acceptable.

(7) Collections, Vol. I. p. 463—465.

[C] *In the counties of Cornwall and Devon.*] It is of ſome conſequence to explain who this lady was, becauſe it ſerves to clear up ſeveral points in Sir Richard's perſonal hiſtory, which, as we ſhall ſee, is of no ſmall conſequence towards ſettling the credit of one of our beſt general hiſtories, with regard to ſuch as were unfortunate enough to ſtand but indifferently in the author's good graces. This is not ſaid with any view to leſſen the juſt reputation of Lord Clarendon's great work, which we have often ſupported, and always admired, but for the ſake of truth, which ought to be dearer to all who meddle with hiſtory, than the reputation of any writer whatever. But to return to the point: this lady was Mary, the ſole daughter and heireſs of Sir John Fitz, of Fitzford, a very worthy gentleman, and the laſt heir male of a very ancient family (8). She was firſt married to the honourable Alan Piercy, ſixth ſon to Henry Earl of Northumberland, by whom ſhe had no iſſue. After his deceaſe, ſhe eſpouſed the honourable Thomas D'Arcy, Eſq; ſon to the Lord Viſcount Colcheſter, who likewiſe died without iſſue By her third huſband, who was the honourable Thomas Howard, fourth ſon to the great Earl of Suffolk, ſome time Lord High-Treaſurer of England, and brother to Theophilus Earl of Suffolk, and to the Lady Frances Howard, Counteſs of Eſſex, and afterwards of Somerſet, ſhe had two daughters, Elizabeth and Mary (9).

(8) Riſdon's Survey of Devonſhire, Vol. II. p. 275.

(9) Pedigree of the family.

[D] *Than it was unjuſt.*] The Earl of Clarendon has entered more minutely into the perſonal and private hiſtory of this gentleman, than of almoſt any other of whom he ſpeaks, and it is neceſſary that the reader ſhould ſee the whole of it, as it ſtands in his own words (10). ' Major Greenvile, at the iſle of Rhée, ' inſinuated himſelf into the very good grace of the ' Duke of Buckingham, who was the General in that ' invaſion; and, after the unfortunate retreat from ' thence, was made colonel of a regiment, with gene' ral approbation, and as an officer that well deſerved ' it (11). His credit every day increaſed with the Duke, ' who out of the generoſity of his nature (as a moſt ' generous perſon he was) reſolved to raiſe his fortune; towards the beginning whereof, by his countenance and ſollicitation, he prevailed with a rich wi' dow to marry him, who had been a lady of extraor' dinary beauty, which ſhe had not yet outlived; and, ' though ſhe had no great dower by her huſband, a ' younger brother of the Earl of Suffolk, yet ſhe in' herited a fair fortune of her own near Plymouth, and ' was beſides very rich in a perſonal eſtate, and was ' looked

(10) Hiſtory of the Rebellion, Vol. IV. p. 535, 536.

(11) See before in note [B].

cerned for him, could deviſe, to obtain juſtice and redreſs; but finding all that he and they could do was ineffectual, and thinking it hard to paſs the remainder of his days in

'looked upon as the richeſt match of the Weſt. This 'lady, by the Duke's credit, Sir Richard Greenvile '(for he was now made a Knight and Baronet) ob-'tained, and was thereby poſſeſſed of a plentiful eſtate, 'upon the borders of his own country, where his own 'family had great credit and authority. The war be-'ing quickly at an end, and he deprived of his great 'patron, had nothing now to depend upon but the for-'tune of his wife, which, though ample enough to 'have ſupported the expence, a perſon of his quality 'ought to have made, was not large enough to ſatisfy 'his vanity and ambition, nor ſo great as he upon com-'mon reports had promiſed himſelf by her. By not 'being enough pleaſed with her fortune, he grew leſs 'pleaſed with his wife, who being a woman of a haugh-'ty and imperious nature, and of a wit ſuperior to his, 'quickly reſented the diſreſpect ſhe received from him, 'and in no degree ſtudied to make herſelf eaſy to him. 'After ſome years ſpent together in theſe domeſtic unſo-'ciable conteſtations, in which he poſſeſſed himſelf of all 'her eſtate, as the ſole maſter of it, without allowing her 'out of her own any competency for herſelf, and in-'dulged to himſelf all thoſe licences in her own houſe, 'which to women are moſt grievous: ſhe found means 'to withdraw herſelf from him, and was with all kind-'neſs received into that family in which ſhe had been 'before married, and was always very much reſpected 'Her abſence was not ingrateful to him, till the te-'nants refuſed to pay him any more rent, and he found 'himſelf on a ſudden deprived of her whole eſtate, 'which was all he had to live upon; for it appeared 'now, that ſhe had, before her marriage with him, 'ſettled her intire fortune ſo abſolutely upon the Earl 'of Suffolk, that the preſent right was in him, and he 'required the rents to be paid to him. This begot a 'ſuit in the Chancery, between Sir Richard Greenvile 'and the then Earl of Suffolk, before the Lord Co-'ventry, who found the conveyances in law to be ſo 'firm, that he could not only not relieve Sir Richard 'Greenvile in equity, but that in juſtice he muſt de-'cree the land to the Earl, which he did. This very 'ſenſible mortification tranſported him ſo much, that 'being a man who uſed to ſpeak very bitterly of thoſe 'he did not love, after all endeavours to have engaged 'the Earl in a perſonal conflict, he revenged himſelf 'upon him in ſuch opprobrious language, as the go-'vernment and juſtice of that time would not permit 'to paſs unpuniſhed, and the Earl appealed for repa-'ration to the court of Star-Chamber, where Sir Ri-'chard was decreed to pay three thouſand pounds for 'damages to him, and was likewiſe fined the ſum of 'three thouſand pounds to the King, who gave the 'fine likewiſe to the Earl; ſo that Sir Richard was com-'mitted to the priſon of the Fleet, in execution for the 'whole ſix thouſand pounds, which at that time was 'thought by all men to be a very ſevere and rigorous 'decree, and drew a general compaſſion towards the 'unhappy gentleman. After he had endured many 'years of ſtrict impriſonment, a little before the be-'ginning of the late troubles, he made his eſcape out 'of the priſon, and tranſporting himſelf beyond the 'ſeas, remained there till the parliament was called 'that produced ſo many miſeries to the kingdom, and 'when he heard that many decrees which had been 'made in that time by the court of Star-Chamber, 'were repealed, and the perſons grieved abſolved from 'thoſe penalties, he likewiſe returned, and petitioned 'to have his cauſe heard, for which a committee was 'appointed, but, before it could be brought to any 'concluſion, the rebellion broke out in Ireland.'

Let us now hear what Sir Richard Greenvile himſelf ſays of all this matter, in a Vindication printed and publiſhed in Holland, which the noble author might, and very probably muſt, have ſeen, before he penned his Hiſtory (12). 'In the year 1628, I married the 'ſiſter-in-law of the Earl of Suffolk, in whoſe right I 'obtained againſt the Earl a decree in the court of 'Chancery, for his payment of a great ſum of money. 'He ſtood out all proceſs of law, in contempt to that 'decree, whereupon a commiſſion of rebellion was iſ-'ſued forth againſt him. Then he, finding that his 'divers practices, by reaſon of greatneſs, could not 'free him from the law, he got advice and aſſiſtance 'to procure great troubles unto me as an enemy, name-'ly, by authority to command me to come from my 'houſe, two hundred miles from London, with a pour-'ſuivant, to appear and attend the Council-Board. Af-'ter many months diligent attendance, nothing was 'charged againſt me: but, in the mean time, ſome 'perſons were employed to urge me to accept of one 'thouſand pounds from the ſaid Earl, and to acquit 'him of many thouſands which he ſtood engaged to 'pay me. That not prevailing, then was his man 'Francis Taylor ſent as a purſuivant to my houſe in 'Devon, with a warrant of the court of High Com-'miſſion, to bring my wife unto London, as his pri-'ſoner, upon the opportunity of a difference betwixt 'her and myſelf, and, after her arrival in London, the 'ſaid Earl procured her to come and live with him, in 'his own houſe, as ſhe did for a long time. Then the 'Earl commenced a proceſs of law againſt me in the 'Star-Chamber, upon which there paſſed a ſentence 'againſt me of eight thouſand pounds, his ſaid man 'Francis Taylor having ſworn, That I had ſaid the 'Earl of Suffolk was a baſe lord, notwithſtanding the 'contrary was proved by four men preſent at the time 'when thoſe words were pretended to be ſpoken: ne-'vertheleſs his friends in that court would not ſuffer 'any depoſition to be taken againſt the Earl, becauſe 'alledged to be recriminal. By the ſame ſentence was 'I detained priſoner in the Fleet above ſixteen months 'time, during which I laboured by all means deviſe-'able, but in vain, to obtain juſtice only. Beſides, 'to add thereunto, in a vacation out of term, beyond 'precedent, it was contrived with Pye, attorney of 'the Court of Wards, that my wife's eſtate was wholly 'ordered away out of my power, by authority of a 'leaſe made unto the Earls of Pembroke and Dorſet, 'to the King's uſe for eight years, on pretence that 'ſhe was then a ward to the King, as not having ſued 'forth her livery: which being done, nothing was found 'prevalent to revoke or remedy that act. And then 'more to diſable their enemy, by many proceſſes at law 'was I compelled to pay many great debts of my wife's, 'which were owing by her before ever I ſaw her, and 'notwithſtanding I could not receive one penny of her 'eſtate for any occaſion whatſoever. By means of 'which injuſtices and preſſures was I neceſſitated to 'ſell away mine own eſtate, and to impawn my goods, 'which by it were quite loſt. Thus finding neither 'juſtice nor law in England for me, but, on the con-'trary, that all paſſed for juſtice againſt me, on the '17th of October, 1633, I gave myſelf liberty, and 'conveyed myſelf from England into the Swedes ſer-'vice in Germany.'

(12) Sir Richard Greenvile's Defence againſt all aſperſions of malignant perſons.

There is nothing clearer than that one of theſe two relations muſt be in a great meaſure miſtaken, ſince they are diametrically oppoſite; the great point is, to know which is the miſtaken caſe: and in order to ſatisfy the reader, and to decide a point of ſuch importance by proper authority, we find ourſelves obliged to cite the caſe as it is reported, which will do the buſineſs effectually, and ſtands thus (13).

'Inter Theophilum Dom. Suffolk, Quer. & Ri-'chardum Greenvile, Mil. & Bar. & Mariam 'Ux ejus Def. Lord-Keeper, Juſtice Hutton, 'Juſtice Whitlock, 26 Julii, 7 Car. I.

(13) Reports of ſpecial caſes argued and decreed in the court of Chancery, publiſhed by William Nelſon, Eſq; p. 15.

'The defendant, the Lady Greenvile, whilſt ſole, 'had a decree againſt the Earl of Suffolk, for ſix hun-'dred pounds per annum, againſt which decree the 'Earl prayed to be relieved, in regard there was a 'verbal agreement between Sir Richard Greenvile and 'the ſaid lady before marriage, that ſhe ſhould have 'the ſole diſpoſal of the ſaid ſix hundred pounds per 'annum; that accordingly before the ſaid marriage, 'ſhe by deed aſſigned the benefit of that decree to one 'Cutford, and that afterwards ſhe and Cutford releaſed 'the ſame to the ſaid Earl; but not having the ſaid 'deeds to produce, and alledging that Sir Richard 'Greenvile had got and cancelled the ſame, which he 'denied,

in a prison, he made his escape out of the Fleet, October 17, 1633 (*l*). At this time, and by this series of misfortunes, which might be truly stiled inevitable, Sir Richard Greenvile

(*l*) Nelson's Chancery Reports, p. 15. Star-Chamber Reports.

'denied, it was ordered that he and Cutford should be 'examined upon interrogatories to discover the said 'deeds, or copies thereof; and accordingly they were 'examined: but the matter being not cleared by such 'examination, or what were the contents of such deeds, 'the court were all of opinion, That there was no suf- 'ficient proof to bar Sir Richard Greenvile from the 'benefit of the said decree, for that the arrears of the 'said six hundred pounds per annum being in it's own 'nature a *thing in action*, and so to be merely reco 'vered by the process of this court, cannot in law be 'assigned over to another. So that if the assignment 'to Cutford had been proved, as it was not, it would 'have been a void assignment in law, and ought not 'to be supported in a court of equity, especially where 'no consideration appears to make it better in equity 'than it is at law.

'They were all of opinion, That the verbal agree- 'ment of Sir Richard Greenvile, in consideration of 'the said marriage, was to subvert both the grounds 'of law, and the right which was vested in him by 'the intermarriage; and, therefore, if such agreement 'is not settled by some legal assurances, to make it 'binding in law, it is not fit to be maintained in a 'court of equity, in order to give a feme covert such 'a power as is now pretended

''Tis true *things in action* are sometimes turned over 'by a letter of attorney; but if it had been so in this 'case, yet presently by the intermarriage, the letter 'of attorney had been revoked and determined, and 'all covenants, promises, and agreements, made by 'the *husband* to his *wife* before marriage, relating to 'the disposal of his estate, would be extinguished by 'the marriage; and, therefore, if Cutford had an ef- 'fectual letter of attorney executed to him, and the 'same could be produced, yet he could not in his own 'name seal such a *release* to the plaintiff as he had 'done; the contents whereof appearing only on his 'single testimony, he ought not to be admitted as a 'witness, for he was a party interested, and might 'justly be suspected of partiality, because of former and 'continued differences between him and Sir Richard 'Greenvile: and, therefore, the court held it dange- 'rous to admit the sufficiency of a deed to be proved 'by the single oath of such a witness, especially since 'the construction of deeds was the proper office of the 'court of Chancery. But the fact relating to the exe- 'cuting such deeds was proved by witnesses: so the 'bill was dismissed, and Sir Richard Greenvile had 'liberty to prosecute the said decree against the 'plaintiff'

There are visibly many escapes, some trifling, others very material, in the Earl of Clarendon's relation: he makes him a Baronet before the marriage, whereas the date of his patent shews the contrary (14). He makes the suit between the Earl of Suffolk and Sir Richard Greenvile arise from a settlement of Lady Greenvile's fortune upon the Earl, and the decree in the Earl's favour: whereas it evidently appears that Sir Richard, in right of his wife, had a claim upon the Earl, which, by collusion with that Lord, his Lady endeavoured to defeat; and it was for this purpose, after Sir Richard was in the Fleet, that the Earl brought his bill, when the Lord Keeper Coventry was so far from establishing any thing in favour of his Lordship, that, as the reader sees, he did strict justice to Sir Richard under his misfortunes, whose account of the whole affair stands from the report altogether unimpeached. As to the proceeding in the Star Chamber, Lord Clarendon makes the fine two thousand pounds less than it was, yet admits that the proceeding was very severe, and generally disliked.

(14) Dugdale's Authentic Catalogue of Baronets, p. 101.

But to put this point past dispute, as indeed every thing should be put, that relates to so great and so established an author as the Earl of Clarendon, we will also cite the very case as it stands recorded, that it may be seen we have not taken matters on trust, or on the credit of Sir Richard's own narrative, or become parties in an affair which concerns us no farther than it concerns truth, which ought to be defended at the expence of any history. Thus stands the case (15): 'Hill. 7 Car. 'Attornat. Gener. versus Greenvile, Bar. The defen- 'dant, upon conference with one Taylor, touching 'the Earl of Suffolk, did, in the presence of two or 'three others, maliciously and disgracefully say and af- 'firm, That the said Earl of Suffolk was a base lord, 'and had dealt basely with him, and that he would 'make him repent it, and shortly after wished Taylor to 'tell him so, and afterward told one Brabant what he 'said to Taylor of the said Earl. That he was a base 'ignoble lord, and had dealt basely with him, and 'that he had wished Taylor to tell him so; and for 'this he was committed to the Fleet, during his Ma- 'jesty's pleasure, fined four thousand pounds, to make 'an humble acknowlegment and submission to the said 'Earl in this court, as this court should direct, and pay 'him four thousand pounds damages.'

(15) Rushworth's Collections, part ii. Vol. II. in the Appendix, p. 43.

On this occasion the reader, perhaps, will not be displeased if we shew him a very singular and a very striking instance of the bad effects of these kind of judgments in general, and of this in particular, as it will clearly demonstrate the necessity of taking away a court, the power of which was so flagrantly abused. Sir David Foulis, and his eldest son Henry, had with some warmth opposed the commission for compelling men to take the honour of knighthood, and in the course of that opposition had dropped some expressions reflecting upon Thomas Lord Viscount Wentworth, then Lord President of the North, for which they were brought into the Star-Chamber, and when the cause drew to a hearing, that noble peer, then become Lord Deputy of Ireland, writes to Lord Cottington, who was to be one of the judges, in the following words (16):

'This term my cause comes to an hearing with Fou- 'lis, I send over this servant purposely to attend it; I 'must wholly recommend myself to your care of me in 'this, which I take to concern me as much, and to 'have therein as much the better, as I ever had in any 'other cause all the days of my life, so I trust a little 'help will serve the turn. The bearer hath a short 'brief of the cause, which on my word you will find 'truth, for I have examined it myself. You will find 'that I suffer merely in this for doing the King's ser- 'vice, and that in truth the arrow was shot at him, 'albeit they contented themselves to call upon me by 'the way. That the sentencing of this man settles the 'right of knighting business bravely for the crown, for 'in your sentence you will certainly declare the un- 'doubted right and prerogative the King hath therein 'by common-law, statute law, and the undeniable prac- 'tice of all times; and therefore I am a suitor by you 'to his Majesty, that he would be graciously pleased 'to recommend the cause to the lords, as well in his 'own right, as in the right of his absent poor servant, 'and to wish them all to be there. You are like to 'begin the sentence, and I will be bold to tell you my 'opinion thereon; you have been pleased sometimes 'as I sat by you, to ask me my conceit upon the cause 'then before us, admit me now to do it upon my own 'cause, for by my troth I will do it as clearly as if it 'concerned me not. First, I desire you to remember 'how Greenfield was fined, for calling my Lord of Suf- 'folk only base lord; how a jury gave three thousand 'pounds damage to my Lord Say for the same words, 'and then ballance the slander most ignominiously and 'maliciously put upon me by Sir David and his son, 'and let not me be less valued than other men, when 'I conceive that I merit to be regarded more than 'they: for first, I suffer merely for my zeal in his Ma- 'jesty's service, never having given him the least per- 'sonal offence in all my life. Secondly, I was then in 'the heat of his Majesty's business, which might (by 'this means taking away my credit) have been destroy- 'ed. I was (albeit unworthy) in that place chief go- 'vernor under his Majesty, his Lieutenant and Presi- 'dent of his Council there, which makes this a direct 'mutiny, and stirring up a sedition against the regal 'authority, as well as me. Thirdly, It is the most 'untrue, as well as the most malicious calumny that 'ever was set upon man, there not being so much as 'the least shadow for any thing they charge me with, 'so as the former benefits they have received from the 'crown,

(16) Lord Strafford's Letters, Vol. I. p. 145, 146. See also p. 189, 202.

Greenvile found himſelf a baniſhed man, and in a manner without hopes of returning again into his own country; for no greater crime, admitting all that is alledged againſt him, than, in the midſt of extreme provocation, letting fall an unguarded word (*n*). We have therefore no cauſe to wonder, that a judicature which paſſed ſuch heavy ſentences, on ſuch light offences, ſhould be thought ſuch a grievance as no free people could bear; and it was amongſt the very few advantages that the enſuing troubles procured to this nation that this intolerable court was taken away (*o*). In this exile Sir Richard proſecuted his endeavours to render himſelf a compleat maſter, in theory and practice, of the art of war; and according to his cuſtom, made large collections on the tranſactions in which he was embarked, and on the ſcenes of which he was a ſpectator; ſo that we need not wonder he attained, both at home and abroad, the character of a compleat officer, ſince parts, application, and experience, are the only means by which perfection is attained in any profeſſion (*p*). On the firſt news of the troubles in the North, and of the King's intention to march with an army againſt the Scots, Sir Richard Greenvile came over at all hazards, offered his ſervice to his Sovereign, which was well received; and at the head of a troop of horſe, compoſed of gentlemen of the beſt families in the two counties of Cornwall and Devon, and equipped in a manner ſuitable to their rank, he attended the King in 1639 (*q*). When the Long-Parliament was called, and enquiries began in reference to the heavy and ſevere cenſures paſſed by the Court of Star-Chamber, it is ſaid that Sir Richard Greenvile made his complaint, and to any indifferent perſon it will not ſeem ſtrange that he did. But while it was under conſideration the rebellion broke out in Ireland, and a reſolution was immediately taken to employ him there; and in January 1642, he had a commiſſion to raiſe a troop of horſe (*r*), and was appointed major of the earl of Leiceſter's own regiment, who was at that time appointed Lord-Lieutenant of Ireland; he ſerved in that country with great ſpirit and ſucceſs. But it is imputed to him, or, at leaſt, to the troops under his command, that they behaved towards the Iriſh with great cruelty (*s*): yet the truth ſeems to be, that the great provocations which had been received in the bloody maſſacres, previous to the war, and the faithleſs diſpoſition of thoſe people, induced the Engliſh officers, or at leaſt afforded a pretence to their ſoldiers, for acting with a ſeverity repugnant to their nature. This however is certain, that in the moſt authentic accounts of that bloody war, it appears that Sir Richard Greenvile behaved with equal courage and conduct; for not long after his arrival, he marched with two hundred horſe and one thouſand foot to raiſe the ſiege of Athlone (*t*), and to carry ſupplies to that garriſon; both which he effected, but in his return he was encountered by three thouſand four hundred foot and ſix troops of horſe, at Raconell, a place of great diſadvantage to him. Nevertheleſs he had the good fortune to defeat the rebels, with the ſlaughter of two hundred and fifty of their men, and to take General Preſton's eldeſt ſon, and ſome other priſoners. But that which rendered this victory the more valuable was an ancient prophecy, That whoever won the battle of Raconell, ſhould gain all Ireland; therefore this victory troubled and diſcouraged the ſuperſtitious Iriſh exceedingly: in conſequence of their fears they began to labour for a peace, or at leaſt for a ceſſation of arms, which at length they obtained. But before this was brought about, the very motion of it occaſioned diviſions in the Engliſh councils, which contributed very much, if they did not entirely occaſion the deſtruction of the King's affairs (*u*). The Queen's party, as they were called at Oxford, had a bias towards the rebels in Ireland, or as they affected to call them the Catholics,

' crown, and the continued courteſies I had upon all ' occaſions afforded them, make them to ſtand, I dare ' ſay, the moſt inexcuſable men you ever ſat upon in ' judgment. Remember how Sir Arthur Savage was ' ſentenced in that cauſe of the Lord Falkland, yet ' there was private grudgings between them, that was ' but only adviſing to petition his Majeſty in a very ' foul cauſe, thereby to bring it to juſtice, and ſuch a ' ground for it as ſurely there was a bloody oppoſition ' in the buſineſs, if they could have light of the right ' way. This much worſe in Sir David's caſe, no endeavours to bring any thing into a way of juſtice, but ' libelloufly to take away my good name by open ſlandering me in a way without all form or pretence of ' juſtice, no crime at all committed, the rights of the ' crown only called for, and taken of the ſubject with ' good contentment to all but himſelf, and for the perſon equally conſiderable, the Preſident there being ' in effect the ſame thing the Deputy is here. Much ' more I could ſay if I were in the Star-Chamber, to ' ſpeak in ſuch a cauſe for my Lord Cottington: but ' I will conclude with this, that I proteſt to God, if ' it were in the perſon of another, I ſhould in a cauſe ' ſo foul, the proof ſo clear, fine the father and ſon, ' Sir David and Henry Foulis, in two thouſand pounds ' a piece to his Majeſty, and in two thouſand pounds ' a piece damages to myſelf, for their ſcandal; and ' they both to be ſent down to York, and there publickly at York aſſizes next, to acknowledge, in the ' face of the whole country, the right his Majeſty hath ' to that duty of knightings, as alſo the wrong he hath ' done me; humbly craving pardon of his Majeſty, ' and expreſſing his ſorrow ſo to have miſrepreſented ' his Majeſty's moſt gracious proceedings even in that ' courſe of compounding, where the law would have ' given him much more, as alſo for ſo falſely ſlandering and belying me, without a cauſe. For Sir Thomas Layton, he is a fool, led on by the noſe by the ' the two former, nor was I willing to do him any hurt, ' and ſo let him go for a coxcomb as he is, and when ' he comes home, tell his neighbours it was well for ' him he had leſs wit than his fellows.' The judgment given in this cauſe (17), (for the reader will expect to know it) went even beyond his lordſhip's inſtructions, Sir David Foulis was declared incapable of all the offices and places which he enjoyed, committed to the Fleet during the King's pleaſure, fined five thouſand pounds to the King, and three thouſand pounds to the Lord Wentworth, for the payment of which fines he was obliged to ſell part of his eſtate; his ſon Henry was committed cloſe priſoner to the Fleet during the King's pleaſure, and fined five hundred pounds: Sir Thomas Layton was diſmiſſed.

(17) Ruſhworth's Collections, Part ii. Vol. II. in the Appendix, p. 65, 66.

tholics, from a notion that this would facilitate the ſending over a large body of regular well diſciplined troops, and thereby enable the King to put a ſhort end to the war (*w*). The Marquis of Ormond, Commander in chief of the forces in Ireland, was not averſe to this meaſure, on account of the many relations he had embarked in theſe troubles, and his paſſionate deſire to ſee that iſland reſtored to peace. On the other hand, there was a ſtrong party againſt a ceſſation, and that from different reaſons (*x*). Many of them without queſtion wiſh d well to the cauſe of the Parliament, and were very unwilling that any diverſion ſhould be created, by the ſending over troops to the King's aſſiſtance from Ireland (*y*). But there were others alſo very zealouſly affected to the royal intereſt, and who wiſhed for nothing more than an opportunity to ſupport it in England, that were notwithſtanding vehemently againſt any ceſſation in Ireland, becauſe they thought the Iriſh were not to be truſted; that it would ſerve only to prolong the war; that it would diſcredit his Majeſty's councils; that it would give freſh colour to the Parliament, to treat all who adhered to his Majeſty, as ſecretly inclined to the Papiſts; and that conſequently this ceſſation, inſtead of promoting, would render impracticable the ends for which it was made, and fruſtrate all hopes of peace, either in England or in Ireland (*z*). Such of the Royaliſts as were in theſe ſentiments, were thoſe who adhered to the Earl of Leiceſter, who though he never went in perſon to Ireland, had a great many friends there, and was believed to be an honeſt able man, and as well affected to the King as thoſe who made larger profeſſions of loyalty (*a*). Amongſt theſe was Sir Richard Greenvile, who made no ſcruple of profeſſing his diſlike to a ceſſation while it was in deliberation, or of proteſting againſt it when it was concluded; and as little ſcruple of coming over to ſerve the King in England when it was propoſed to him, fully perſuaded that he had done nothing in Ireland, but what was very conſiſtent with theſe principles (*b*). A conſiderable body of the forces that had ſerved in Ireland being embarked, part under the command of Sir Michael Ernley, landed in Wales; the reſt, among whom was Col. George Monk and Sir Richard Greenvile, came to Briſtol, where they met with a very unexpected reception; for Lord Hawley, who commanded there, produced an order ſigned by Lord Digby Secretary of State, to ſeize them as perſons of ſuſpected at leaſt, if not corrupt, principles; which was owing to the informations from Ireland, founded upon an averſion to all who had any attachment to the Earl of Leiceſter, though he was Lord Lieutenant of the King's appointing; till upon this extraordinary turn in affairs, that high office was conferred upon the Marquis of Ormond. Lord Hawley, who was related both to Col. Monk and Sir Richard Greenvile, behaved towards them as became a man of his quality; that is, he took their parole to go to Oxford, and ſo diſmiſſed them (*c*). Col. Monk went thither directly, but Sir Richard Greenvile thought it expedient to go a little about. He had conſiderable arrears due to him for his ſervice in Ireland, for which the Parliament were reſponſible; he did not care to make a bad figure at Oxford, and, whether well founded or not, his principle was, that he might lawfully deceive thoſe who endeavoured to corrupt him (*d*) [*E*]. His appplication at London

[*E*] *Who endeavoured to corrupt him.*] The late Lord Lanſdowne, grand-nephew to this gentleman, and who wrote a vindication of him and of his conduct, expreſſes himſelf thus upon this delicate tranſaction (18). 'I will not pretend wholly to juſtify this laſt action, 'not being a friend to any thing that looks like deceit; 'all that can be ſaid for it is, that it was putting the 'old ſoldier upon a pack of knaves, and biting the 'biter.' Mr Oldmixon, who wrote remarks upon his lordſhip's performance, was highly offended with this ludicrous expreſſion (19): 'I have, ſays he, taken all due 'care to avoid giving offence in ſentiment or expreſſion, 'farther than the ſubject may itſelf offend; yet, as 'cautious as I have and ought to have been, I muſt 'confeſs I have not been without provocation ſome-'times to ſpeak the whole of the truth, and in very 'intelligible terms, ſuch is the following paſſage, He 'put the old ſoldier on a pack of knaves I will give 'a liſt of twenty of thoſe knaves, and leave it to the 'reader to compare the ſtile and the characters.

'Denzil Holles, Eſq; afterwards Lord Holles.
'John Crew, Eſq; afterwards Lord Crew.
'Arthur Anneſley, Eſq; afterwards Earl of Angleſey.
'Sir Anthony Aſhley Cooper, afterwards Earl of Shaftſbury.
'John Selden, Eſq;
'John Pym, Eſq; &c.

'It is no flattery to ſay there were not greater men 'in the Roman ſenate, when Rome was at the height 'of her liberty and glory, but they were Preſbyterians, 'and might therefore be plundered not only with impunity, but applauſe. The fact is this: Sir Richard 'Greenvile had received a conſiderable ſum of money 'of the Parliament, to raiſe forces for them, and, as 'ſoon as they were raiſed, deſerted with them to the 'King. One cannot think that the calling that money 'arrears will excuſe a breach of truſt and deſertion. 'Suppoſing the money was arrears, if, after he had 'deſerted their ſervice in Ireland, and forfeited theſe 'arrears by ſuch deſertion, the Parliament forgiving 'it, and paying him the money on condition he raiſed 'forces with it for their ſervice, the treachery and 'breach of truſt are the ſame as if there had been no 'arrears coming to him. Beſides, it is very much 'queſtioned whether Sir Richard Greenvile was in ſuch 'circumſtances as to ſerve without pay, ſo long that 'there was an arrear ſufficient to levy a regiment of 'horſe due to him. The Parliament ſo highly reſented this treacherous act, that the knight was not only 'hanged in effigy, but was excepted out of their ge-'neral pardons.' To this the noble apologiſt thought fit to reply in the following terms (20): 'But what pro 'voked you, it ſeems, was the expreſſion of a pack of 'knaves—which, by an extraordinary ſtrain of ſophiſtry, you would draw me in to mean twenty honourable perſons, of whom you give a liſt, whoſe memories are to be reſpected, and the more becauſe they 'lived to ſeparate themſelves from the *pack* of *knaves*, 'to be aſhamed of their company, and to make ample 'reparation for having kept it ſo long. This very 'ſeparation proves that there was a *pack* of *knaves*, 'whom theſe men of honour and true patriots diſowned 'and abandoned, as ſoon as they found them out. The 'malice of this reflection turns upon yourſelf, you have 'applied it where I never meant it: it never entered 'into my thoughts.' It might have been urged in behalf of Sir Richard Greenvile, that having ſerved in the army of Ireland, and the King having committed the management

don was well received; his conduct in Ireland very fairly entitled him to his arrears; his proteſting againſt the ceſſation with the Iriſh was a ſtrong recommendation; his military ſkill having been bred in the ſame ſchool with Sir Thomas Fairfax and Sir William Waller, created a high opinion of him and his influence in Cornwall and Devonſhire, induced the Parliament to wiſh he might enter into their ſervice (*e*); he did not raiſe many difficulties, but having obtained a conſiderable ſum of money, the rank of a Major-General, and orders to raiſe a regiment (*f*), with power to name his own officers, he went about it with great alacrity, and compleated it in a very ſhort time. We find ſome ſtrictures in Clarendon (*g*), as to his affecting finery in his equipage, which we are told conſiſted of a coach and ſix, a waggon and ſix, and ſome led horſes; which, conſidering he was a general officer, and to command the horſe under Sir William Waller, was not ſo very extraordinary. He appointed the rendezvous of his horſe at Bagſhot, to which place he directed his march with all his new equipage; and having there acquainted his officers (*b*) and ſoldiers with his intentions, they fell immediately into them, and filed off directly towards Reading. He went from thence to Oxford, where he was extremely well received, and with very good reaſon; ſince he immediately acquainted the King with a conſummate piece of treachery, by which in a few days he muſt have loſt the important garriſon of Baſing-Houſe (*i*), which by this intelligence was prevented. Immediately upon his withdrawing, he wrote a very full and free letter to William Lenthall, Eſq; the Speaker, in which he ſet forth ſuch reaſons as he thought might juſtify his conduct. But this ſerved only to add fuel to the flame, for the Parliament cauſed him inſtantly to be proclaimed a traitor, with all poſſible marks of infamy [*F*]. This was not the effects of a ſudden and warm fit of reſentment, but

management of that war to the Parliament, he no way deſerted the King's ſervice in applying to them for his arrears, to which he had an undoubted title, and yet he could apply no where to obtain them but where he did. It might be ſuggeſted, that being in another iſland when the civil war broke out, and having beſides no great reaſon to be ſatisfied with the conduct of the King's miniſters towards him, upon his arrival in England, he might have inclined to know what were the Parliament's real intentions, and might poſſibly form his definitive judgment of things after he knew them. It might be ſurmiſed, that from his conferences with Sir William Waller, who was much more in their ſecrets than the Earl of Eſſex, he came to have ſuch an inſight into their views, as determined him to the part he acted; or it is not impoſſible that the communication of the treacherous deſign of ſurprizing Baſing-Houſe, might have a ſudden and violent effect upon his notions. At all events, they ſurely had but little reaſon to complain of Sir Richard's conduct, who in this very inſtance had inveigled the brother of a moſt noble perſon to break through all the ties of religion, loyalty, and honour, to make his court to them. In the next note we ſhall ſee what the noble apologiſt has omitted. Sir Richard's defence of himſelf, which is much ſuperior to any thing that can be offered by another hand, however able or willing to defend him

[*F*] *With all poſſible marks of infamy*] According to the indiſtinct relations which we have elſewhere, it ſhould ſeem that Sir Richard Greenvile had taken a very large ſum of money from the Parliament, and from thence a doubt might ariſe, whether the view of making ſuddenly a conſiderable fortune, might not have been as ſtrong a motive as any other to his manner of acting; but when it is known that the whole of this vaſt ſum was never more than ſix hundred pounds, it cannot ſure be taken in this light, more eſpecially when it is conſidered that out of this money he had raiſed a regiment of horſe, and, of conſequence, could have but very little left (*z1*). We have before obſerved that this gentleman had accuſtomed himſelf to write; and the following piece upon ſo very delicate a point, may perhaps induce the candid reader to allow, that, like Cæſar, he has left it a queſtion hard to be decided, which weapon he managed beſt, the pen or the ſword (*z2*).

(*z1*) Compare what is ſaid by the Earl of Clarendon, with Ruſhworth, and Sir Richard Greenvile's own Vindication.

(*z2*) Ruſhworth's Collections, Part iii. Vol. II. p. 385.

'To the honourable William Lenthall, Speaker of the Houſe of Commons at London, preſent theſe:

'SIR,

My employment in Ireland in his Majeſty's army, under the pay of the Parliament, and my faithful carriage in it againſt the rebels there, is ſufficiently known; and to ſay no more of it, ſince it concerns myſelf, I thank God I can look back upon thoſe actions with ſome comfort, and the more that I proſecuted with a ſincere affection, to the upholding the Proteſtant religion in that kingdom, ſo well as his Majeſty's juſt and undoubted right to that crown. The occaſion of my coming over is well known too; and truly it was with many ſad thoughts of the diſtractions and miſeries of my native country. And I aſſure you it was without the leaſt deſign of engaging myſelf; for I knew my allegiance to my ſovereign was a check to me to lift my hand againſt him; and the reverence I bare to the name of a Parliament, (which I find hath, and doth deceive many) thwarted any relation in offering my ſervice to his Majeſty, where I knew it was due. I contented myſelf to think I had ſerved both, without diſlike of either, and that therefore I might attend my own particular, and before I by any way engaged myſelf (if I ſhould do ſo in the future) do it upon knowledge, and not report. Landing at Liverpool in Auguſt laſt, I found both there and at Warrington that great ſuſpicions were had of me, and alſo of my Lord Liſle, that we had brought over great ſtore of treaſure; and the itch was ſo great to plunder us thereof, and of our horſes, &c that it was told me what we had was moſt uſeful for their good cauſe in hand; if we were friends it ſhould be but lent, if we were other, they muſt not let ſlip ſuch an advantage. And truly, though we had inſolencies offered us, yet Colonel John Booth by his diſcretion and good uſage of us, kept them from committing thoſe barbarous injuries I found they were inclined unto. This wakened me, and I ſoon perceived, that, if this were the juſtice of thoſe pretenders to religion and reformation, the many complaints I had heard from many honeſt men were not without cauſe. In ſhort, from thence with great difficulty I was permitted to come up, with a ſtrict guard, to London, whence the ſource and ſpring of all our miſeries flows. There Sir, to ſpeak plain Engliſh to you, I found religion was the cloak of rebellion; and it ſeemed not ſtrange to me, when I found there was ſo little left of the Proteſtant religion, as there were few of the learned and reverend divines that were wont to preach it. There I found the ſubject's liberty had a ſtrange guard for it, his conſcience being forced to ſubmit to many unlawful oaths (though it pleaſed God I eſcaped them all) his eſtate was liable, upon interpretation of a neceſſitous party, to be exacted from him; and the whole government there was but a neceſſity of oaths and money, for ſubjects to compound to keep part of their own. The privileges of Parliament I knew not many of them, and yet was it very viſible that the great privilege of this Parliament was to be none of the former. This ſome diſcreet and ſober friends, in divers particulars, made very clear to me. How the King's name was uſed againſt himſelf, was as odious to me as ridiculous. Sir, by this you will ſee I have lived ſome time amongſt you, in which, I muſt confeſs, I endeavoured to have diſpatched ſome of my own occaſions concerning

but a deliberate and decisive act, by which Sir Richard Greenvile was for ever precluded from any hopes of remission or pardon, whatever turn affairs might take; and as we shall see hereafter, this spirit of rancour subsisted on both sides without any abatement during the continuance of the war. After some short stay with the King, Sir Richard Greenvile went with a commission to raise two regiments into his own country, where he offered to assist Col. John Digby, who was employed in blocking up Plymouth (*k*), where Lord Robartes commanded for the Parliament; but it is not at all probable, that he had no command there, though this is asserted by the Noble Historian, since he brought with him a gallant regiment to Oxford, and we may very reasonably suppose that he carried them with him upon this service. At the time he went into the West, Col. Digby had orders to put him in possession of his wife's estate, which had been already sequestered on account of her adhering to the Parliament; and this, all circumstances considered, was but an act of justice, considering how long he had been deprived of it by an extraordinary stretch of power. In consequence of this, he fixed his residence at Greenvile-House, near Tavistock, where he put things into the best order he was able, and lived there with a magnificence suitable to his disposition (*l*). Col. Digby being wounded in the eye, Sir Richard Greenvile was charged with the blockade, where he continued to command till the middle of July 1644, when Prince Maurice found it requisite to re-call such of his forces as lay before Plymouth, by which that place would have been effectually relieved, if Sir Richard Greenvile by his personal influence and great reputation, had not assembled a new force sufficient to maintain that blockade. It was this that constrained the Earl of Essex to continue his march into the West (*m*), under a firm persuasion that Plymouth once relieved, and Sir Richard Greenvile and his forces beaten, the King's formidable power in those parts would be at an end. Accordingly he advanced towards Plymouth, and Sir Richard being in no condition to oppose him, drew off his small garrisons from Mount Stamford, Plympton, and Saltash, and retired into Cornwall (*n*). This gave the Earl an opportunity of taking Greenvile-House, which he did by storm, though being a place of no great defence, those within it had hung out a white flag; however, quarter was given to all, but some who were stiled Irish rebels, that is, some who had returned with Sir Richard out of Ireland. In the house were taken two small pieces of cannon, a considerable quantity of arms, and the value of three thousand pounds in money and plate, and one hundred (*o*) and fifty prisoners. A few days after he advanced to Newbridge, and after a very brisk dispute, not without considerable loss, forced Sir Richard Greenvile to retreat, and thereby opened a passage into Cornwall; which occasioned such a consternation, that part of Sir Richard's forces quitted Launceston, while he with such as remained retired in a very soldierly manner to Truro (*p*). But affairs quickly changed their face, for on the 1st of August the King having joined the army of Prince Maurice, entered Cornwall after Essex, and constrained him to retire (*q*) to Lestwithiel. His Majesty advancing to Lesskard, sent orders to Sir Richard

ing my private fortune, but without it were obliging me in some command, which I conceive had an eye to your own service, I found so little service as any other man. At last, I conceived that this might be a design to have a hold and engagement upon me in a service I was so ill satisfied in: therefore I withdrew myself to my becoming and lawful duty to his Majesty, at whose feet I have now laid myself, from whence no fortune, terror, or cruelty, shall make me swerve. This, Sir, in satisfaction to you and the world; so I rest, as I expect you should term me,

Your malignant Servant,

Oxford, March 8, 1643.

Richard Greenvile.'

The two Houses were so incensed at his going to Oxford, and at his writing and publishing this letter to the Speaker, that they caused two gibbets to be erected, one in the Palace-Yard, Westminster, and the other overagainst the Royal Exchange, where a proclamation was made by the *Provost*-Marshal and trumpeters of Essex's army, in the words following, which were also fixed on each of the said gibbets.

'Whereas Richard Greenvile hath of late presented 'his service unto the Parliament, and hath been entertained by the Parliament, as Colonel of a regiment 'of horse: and whereas the said Greenvile, contrary 'to his promise, engagement, and *honour* of a soldier, 'hath basely, unworthily, and faithlessly deserted the 'said service, and feloniously carried away the money 'paid unto him in regard of the said service, These are 'to proclaim the said Richard Greenvile traitor, rogue, 'villain, and skellum, not only uncapable of military 'employment, but of all acquaintance and conversation with men of honesty and honour: and this proclamation, in the mean time, to be nailed to the gallows, whilst it shall please God to deliver the said 'Greenvile into the hands of justice, that he himself 'may supply the room of this proclamation.

'Done this 15th of March, 1643.'

The threats of the Parliament in such cases, were not things to be lightly regarded; for, amongst other causes of their success in military affairs, the strictness with which they proceeded against all whom they considered in the light of offenders, and more especially for deserting them, may be justly affirmed to be none of the least. When Barnstaple was taken, there was in it one Captain Howard, who had been formerly a lieutenant in the Parliament's service, and who went to the King with nineteen horse, who, on falling thus into their hands, was hanged by judgment of a court martial; upon which Prince Maurice caused one Captain Turpin to be hanged, who had been tried and condemned before the Judges Heath, Forster, Bankes, and Serjeant Glanville, for high treason; upon which the Parliament ordered those Judges themselves to be impeached of high treason (23). This was before they published their famous ordinance for martial law, in virtue of which they condemned many, and, among the rest, Sir Alexander Carew, Sir John Hotham, and his son Captain Hotham, and several other persons. As Sir Richard had these instances before his eyes, so he felt likewise their severity in the tenderest part, for his son falling into their hands, was hanged in reality, as his father had been in effigy (24). We may from hence conceive, that, with respect to this gentleman, there were more reasons to excuse severity than in those who had less to fear, and will therefore serve to explain several subsequent passages both in the text and in the notes.

(24) Lord Lansdowne's Works.

Richard Greenvile to draw his forces to Grampound, which he did, and from thence took poſt at Lanhethorock (r), and ſoon after made himſelf maſter of Weſterman-Caſtle, with a very ſtrong paſs, within half a mile of Leſtwithiel, ſo that the Earl of Eſſex was totally ſurrounded. His horſe, indeed, did break through by the careleſſneſs and drunkenneſs of Goring, but all the foot were made priſoners, by a capitulation ſigned by Major-General Skippon, and approved by Eſſex, and dated on the 1ſt of September (s). It is very remarkable, that the account publiſhed by the King, and the letter written by the Earl of Eſſex to Sir Philip Stapleton, concur in aſcribing to Sir Richard Greenvile's conduct this great defeat, which was by much the moſt ſevere ſtroke the Parliament received during the whole war, and that which gave them both occaſion and opportunity to lay their unfortunate General aſide, and to introduce what was called the new model. It has been ſuggeſted, that the Royaliſts did not make the moſt of their great advantage, and that the conſequences were by no means ſuitable to the clearneſs of their victory [G]. Sir Richard Greenvile, on the 2d of September, marched in purſuit of the enemy, and to recover Saltaſh, which he effected, and found therein eleven pieces of cannon, and then continued his march towards Plymouth. On the 11th of September the King, with his whole force, came

[G] *And to the clearneſs of their victory.*] It is a matter of fact undeniable, that, except a very few, all about the King had an earneſt deſire to peace. To this the King himſelf was alſo inclined, as appears from his letter to the Earl of Eſſex; and yet for a meſſage which the Lord Wilmot, who had a great friendſhip for Eſſex, ſent him that he would be accountable for the ſincerity of that application, he was, though General of the horſe, arreſted, declared in effect a traitor, and his command immediately beſtowed upon Goring, which ſurprized and diſconcerted the whole army, who joined in an application in favour of Lord Wilmot, which ſoon afterward coſt his friend, the Lord Piercy, General of the Ordnance, his poſt (25). This proceeding had fatal effects at the time, and much more fatal conſequences; Lord Wilmot, though he was not the moſt regular man in his morals, yet he was a very cautious commander, which rendered him, generally ſpeaking, ſucceſsful in all his enterprizes, as his great care of the ſoldiers, and ſingular courteſy to every body, made him the moſt-reſpected and the beſt-beloved officer in the army. This did not hinder another addreſs being ſet on foot by the officers, to promote a peace, which in general they ſigned; and the King finding them unanimous, conſented that it ſhould be tranſmitted to the Earl of Eſſex. The ſecret of this buſineſs was, a deſire of rendering the Prince of Wales mediator between his father and the Parliament; in which it does not appear that Sir Richard Greenvile, at this time, at all concurred, though he entered into it in a few months after (26). This ſome warm writers have repreſented as a meaſure diſhonourable, if not diſaffected; but the truth ſeems to be, that theſe officers perceiving the King's nephews, Rupert and Maurice, intirely poſſeſſed of his confidence, and diſliking the violence of their meaſures, thought it the moſt effectual means to preſerve their country, the conſtitution, and the royal family, to introduce the Prince of Wales, to whom the Parliament could pretend no juſt cauſe of offence, in the high quality of a mediator, from whom they might receive ſuch aſſurances as might lead to a ſafe and ſolid peace. It may very well be doubted whether ſuch as attribute future miſcarriages to this diſpoſition in the army, have formed a right judgment, and there ſeems at leaſt an equal if not a greater probability, that theſe unfortunate events were occaſioned by the warm proceedings againſt Lord Wilmot, Lord Piercy, and their friends; for how peaceably ſoever the King's army was inclined, when they had found that all overtures were rejected, and that Eſſex would hearken to nothing, there is no doubt that they would have been as unanimous in the purſuit of their own ſafety, by taking vigorous meaſures; and if, inſtead of arreſting and removing Lord Wilmot, the King had openly expoſtulated with him and his friends, and ſhewn them that all farther applications of this ſort were not only uſeleſs, but dangerous and diſhonourable, there had been an end of them, and the army, under officers they eſteemed, would have acted with ſpirit and unanimity: whereas, by this high act of power at ſo critical a conjuncture, the minds of men were amazed and confounded, at the very inſtant when that alacrity which ſprings from union was moſt neceſſary (27). When the Parliament army under Eſſex was intirely ſurrounded, and might have been either totally defeated, or obliged to ſurrender priſoners of war, their horſe, under Sir William Balfour, was ſuffered to eſcape; and the Noble Hiſtorian ſays expreſsly, 'That if the meaſure had been well conducted, their foot might have eſcaped likewiſe, which was owing intirely to the diſſolute conduct of Goring, who had timely notice of their motion, but treated that notice with contempt, rather than interrupt his drunken debauch. This could never have been the caſe, if Wilmot had commanded the horſe, whoſe circumſpection upon ſuch occaſions the Noble Hiſtorian himſelf allows (28). This was the firſt, and a very great misfortune, not only as it leſſened the King's ſucceſs, and preſerved the Parliament's cavalry, but as it weakned his force: for the King's army, equally diſſatisfied with the bad conduct of the new General, with his looſe behaviour, and the ſcandalous licentiouſneſs of his troops, began to decreaſe daily; ſo that when the foot of Eſſex's army ſurrendered, they were very near as numerous as thoſe to whom they ſurrendered, and, in point of arms and cloathing, in much better condition. From this ſudden and ſtrange alteration in the King's circumſtances, as well as from his earneſt deſire to return to Oxford, nothing of conſequence was done in the Weſt: for the looking upon Plymouth, without reducing it, was doing, if poſſible, leſs than nothing; whereas if the King's army had been intire, as it might have been, both that garriſon and Portſmouth muſt have fallen, which, notwithſtanding the defeat of Marſton-Moor, which happened a little before, would have re-eſtabliſhed his affairs. But this was not all; when the King left the Weſt after his victory, he left it rather in a worſe condition than he found it: ſo that if Sir Richard Greenvile, by his complicated authority of Sheriff of Devon and General in Cornwall, had not aſſembled a force ſufficient to renew the blockade of Plymouth, both counties had been left open to the incurſions of that garriſon, and the relieving it, which was the principal point that Eſſex endeavoured, had been carried, notwithſtanding his defeat. For the preſent, therefore, the King plainly left the preſervation of the Weſt to the care of it's inhabitants, of which he gave the ſtrongeſt teſtimony, by a very warm and grateful declaration, in which he did equal juſtice to their conduct, their courage, and their loyalty (29); but then ſurely it had been prudent to have truſted the command with gentlemen of fortune and intereſt in thoſe parts, of whom there were many whoſe merit and capacity were equally out of diſpute. Inſtead of this, Goring, who had no intereſt, but, on the contrary, was dreaded and deteſted there, was ſpeedily ſent back, and put at the head of the troops, that he might be out of the way of Prince Rupert, who was willing to employ his all-powerful intereſt in doing for him all he could, provided it was at a diſtance. The reader may from hence eaſily form a judgment of Sir Richard Greenvile's ſituation, and of the reaſons which induced him not to be over ready in acting, either under or in conjunction with Lord Goring, but rather to take what precautions he could for the ſecurity of the country, for which he had, as became him, a very natural and a very laudable affection, and which was not only very conſiſtent with, but very eſſential to, the King's ſervice.

came before that town, which he ſummoned (*t*), but without effect; and as the then ſtate of his affairs required, or at leaſt was thought to require, his return to Oxford, the care of blocking up that troubleſome garriſon was again committed to Sir Richard Greenvile, with ſo ſmall a force as five hundred foot and three hundred horſe; which inconſiderable body, by his care, vigilance, and intereſt, grew very ſoon ſo numerous as to be eſteemed an army. While this was doing, a part of the garriſon of Plymouth made an excurſion, which it was not in his power to hinder, as they embarked in a dark night, and landing in Cornwall, they made themſelves maſters of Saltaſh, Millbrooke, and the fort between thoſe two places. This, however, was an advantage which they did not long enjoy; for Sir Richard marching in perſon, with a detachment of his beſt troops, amounting to about ſeven hundred men, took Saltaſh by ſtorm, on the eighth of October, with great ſlaughter, and made a regiment of foot, a troop of horſe, and the remains of ſome other corps, priſoners; who, as they were taken without quarter, he intended to have hanged, yet not without informing the King, who ſent him expreſs orders to deſiſt from (*u*) that reſolution. It was about this time that a relation of his, one Mr Greenvile, fell into the hands of the Governor of Plymouth, to whom, by a meſſage, he offered either ranſom or exchange, but he was ſo far from gratifying him in this reſpect, that, under colour of a plot, he cauſed him to be immediately hanged up (*w*). When the Parliament condeſcended, after much ſollicitation, to ſend propoſitions of peace to the King at Oxford, by Mr William Pierpoint, Mr Denzil Hollis, Mr Whitlocke, and Lord Wenman, which brought on the treaty of Uxbridge, the Parliament excepted Sir Richard Greenvile by name, amongſt ſuch as were never to expect pardon, and with him were joined Sir Alexander Carew, Sir John Hotham, and his ſon Colonel Hotham, then in their hands, and deſtined to the ſame uſage Sir Richard would have met with, had he been in the ſame ſituation. It was the knowledge of this diſpoſition of theirs, that induced Lord Roberts to behave in the manner he did, and to ſhew as little mercy as manners in every tranſaction of the war, more eſpecially where it had even a diſtant relation perſonally to Sir Richard, for then it was all rudeneſs and rigour. This, and other ſeverities of the ſame kind, induced Sir Richard to practiſe ſomething of the like nature; and though, perhaps, this may not be ſufficient to juſtify his conduct, yet aſſuredly it ought, in ſome meaſure, to excuſe it; and it cannot but ſeem ſtrange, to an impartial reader, that the Noble Hiſtorian ſhould relate very particularly whatever acts of violence came to his knowledge of this gentleman, without taking notice of the provocations that, in the opinion of Sir Richard Greenvile, made them abſolutely neceſſary. How far he might be right or wrong in his ſentiments, we pretend not to determine; but the whole truth ought certainly to be ſpoken, when ſuch actions are related as have an apparent tendency to ſet the character of a man of ſuch diſtinction in ſo diſadvantageous a point of light. He has, indeed, at a great diſtance of time, found as noble an apologiſt, who with great wit and ſpirit has vindicated his memory, but, at the ſame time, has omitted ſome matters of fact that perhaps might have anſwered the purpoſe much better than can be done by the moſt plauſible arguments [*H*]. The King having a great ſenſe

(*t*) Ruſhworth's Collections, Part iii. Vol. II. p. 712. Whitlocke's Memorials, p. 103.

(*u*) Ruſhworth's Collections, Part iii. Vol. II. p. 716. Walker's Hiſtorical Diſcourſes, p. 105.

(*w*) Whitlocke's Memorials, p. 106. Ruſhworth's Collections, Part iii. Vol. II. p. 713.

[*H*] *Than can be done by the moſt plauſible arguments.*] It is a point of great ſingularity that we are to examine in this note; a point to which we are directed, and in which we are to be governed intirely by the love of truth. This point is a candid enquiry, how far the Noble Hiſtorian has done juſtice to one of the King's generals, who made a great figure in his ſervice, expoſed his life freely, and carried the certificate of his courage in a body covered with wounds. The Earl of Clarendon (30), as we have before obſerved, enters minutely into this gentleman's perſonal hiſtory, in which he is copied, as in moſt other things, by another hiſtorian (31); and, which is not a little ſingular, there is a third writer, diffident enough of this great man's authority upon all other occaſions, who follows him implicitly upon this, and, without the leaſt ſcruple as to the juſtice of the character, treats Sir Richard Greenvile as a perfect monſter (32).

There muſt have been ſome reaſon why the Noble Author took ſuch peculiar pains about this gentleman and his concerns; and what that reaſon was, the reader ſhall learn from his own words (33). 'This ſo large 'excurſion upon a private perſon may ſeem very ex'travagant, and to carry in it too much animoſity a'gainſt the memory of a man who did ſome things well, 'and was not without ſome merit in the King's ſervice; 'but they who know the occurrences of the next year, 'which will be faithfully related, and conſider the ſe'verity that he compelled the Prince to uſe towards 'him, of which he made a great noiſe afterwards in 'the world, and prevailed with ſome good men to be'lieve that the proceeding againſt him was too rigo'rous, and that the council then about the Prince had 'ſome perſonal diſreſpect towards him, may reaſonably 'believe that this enlargement was in ſome degree ne'ceſſary, that ſuch a man's original nature, manners, 'and diſpoſition ſhould be manifeſt and clearly under'ſtood.'

For the very reaſons here aſſigned, the Noble Hiſtorian ought to have been remarkably circumſpect in what he delivered of this gentleman, ſince he ſeems to profeſs that the chief cauſe of entering into his character, was to ſhew that he could ſeparate his private reſentments, and ſpeak calmly and candidly even of a perſon whom he had reaſon to conſider as his enemy; for if this had not been his deſign, his lordſhip had much better have left Sir Richard Greenvile, and his private character at leaſt, to be celebrated by ſome other pen. We will now proceed to ſome matters of fact. Speaking of the blockade of Plymouth, he ſays (34), 'The 'Earl of Eſſex had left the Lord Roberts governor in 'that town, a man of a ſour and ſurly nature, a great 'opiniatre, and one who muſt be overcome before he 'would believe that he could be ſo. The King find'ing no good could be done with him, and that the 'reducing the town would require ſome time, purſued 'his former reſolution, and marched away, having 'committed the blocking up of Plymouth to Sir Ri'chard Greenvile, a man who had been bred a ſol'dier, and of great expectation, but of greater pro'miſes, having with all manner of aſſurance under'taken to take the town by Chriſtmas, if ſuch con'ditions might be performed to him; all which were 'punctually complied with, whilſt he made his quar'ters as far as ever they had been formerly from the 'town, beginning his war firſt upon his wife, who had 'been

ſenſe of Sir Richard's ſervices, and being alſo perſuaded of his abilities to render him ſtill greater, from his ſuperior knowledge of that country, his great capacity, and the credit of his

'been long in poſſeſſion of her own fortune, by virtue 'of a decree in Chancery, many years before the trou- 'bles, and ſeizing upon all ſhe had, and then making 'himſelf maſter of all their eſtates who were in the 'ſervice of the Parliament, without doing any thing 'of importance upon the town; only upon the firſt 'meſſage between the Lord Roberts and him, there 'aroſe ſo mortal a miſunderſtanding, that there was 'never civility or quarter obſerved between them, but 'ſuch as were taken on either ſide were put to the 'ſword, or, which was worſe, to the halter.'

We have in the text ſhewn how this matter happened; but it will be proper to give the words of the noble vindicator, who, in examining this charge againſt his relation, delivers himſelf thus (35): 'If the Chancellor 'had been ſo good as to have explained the nature and 'occaſion of that meſſage, with all it's circumſtances, 'Sir Richard would have been fully acquitted of the 'conſequences. The fact was as follows:

(35) Lord Lanſdowne's Works, Vol. II. p. 194, 195.

'Sir Richard commanded at that time the blockade 'at Plymouth; the Lord Roberts was Governor; a 'man, ſays the hiſtorian, of a ſour ſurly nature, &c. 'It happened in ſome ſkirmiſh where priſoners were 'taken on both ſides, a young gentleman of about ſix- 'teen years of age, near kinſman to Sir Richard, and of 'his own name, fell into the enemy's hand Sir Richard, 'by a civil meſſage, reclaimed him as his kinſman, of- 'fering any terms by ranſom or exchange: the gover- 'nor ordered him in the inſtant to be hanged up at the 'gates of the town, in ſight of the meſſenger, without 'other reply.

'After an execution ſo cruel, ſo inhuman, and of 'ſo exaſperating a nature, what could follow but the 'utmoſt returns of vengeance?

'Theſe are caſes not to be found in Coke upon Lit- 'tleton; the appeal muſt be to military judges.'

The author who wrote Reflections upon Lord Lanſdowne's Vindication, thinks it highly probable that this Mr Greenvile was above ſixteen years of age, that he was not taken priſoner in a ſally, or, if he was a priſoner, that he broke the law of arms, and acted like a ſpy, by which he loſt all title to ranſom; in virtue of which conjectures he pronounces, that all Sir Richard Greenvile's revenges were ſo many murthers. The noble vindicator, in his Reply, ſays, That he was told by them who knew him, that he was a young man: ſo that here is ſome degree of teſtimony againſt the reflector's notions.

Mr Whitlocke gives us this account of the matter (36): 'One Greenvile, a kinſman of Sir Richard 'Greenvile, was perſuaded into a plot to betray Ply- 'mouth to Sir Richard; but the plot was diſcovered, 'and Mr Greenvile executed.' His being a kinſman of Sir Richard, and the word perſuaded, are not favourable by any means to the conjecture. We are elſewhere told what this plot was, viz. Mr Greenvile was accuſed of offering Colonel Serle three thouſand pounds for delivering up the place (37).

(36) Memorials of Engliſh Affairs, p. 106.

(37) Rushworth's Collections, Part iii. Vol. II. p. 713.

The next charge againſt Sir Richard Greenvile, in the Noble Hiſtorian's words runs thus (38): 'One day 'he made a viſit from his houſe, which he called his 'own, to the Colonel (Digby) and dined with him, 'and the Colonel civilly ſent half a dozen troopers to 'wait on him home, leſt any of the garriſon, in their 'uſual excurſions, might meet with him. In his re- 'turn home, he ſaw four or five fellows coming out of 'a neighbour wood, with burthens of wood upon their 'back, which they had ſtolen. He bid the troopers 'fetch thoſe fellows to him; and finding that they 'were ſoldiers of the garriſon, he made one of them 'hang all the reſt, which, to ſave his own life, he was 'contented to do; ſo ſtrong his appetite was to thoſe 'executions he had been accuſtomed to in Ireland, 'without any kind of commiſſion, or pretence of au- 'thority.'

(38) Lord Clarendon's Hiſtory of the Rebellion, Vol. IV. p. 538.

Lord Lanſdowne recapitulates this ſtory thus (39): 'He himſelf (that is Sir Richard) ſurprizes ſome troopers 'in the very act of pillaging and plundering the coun- 'try, and orders them upon the ſpot to be hanged; 'nay, he makes them hang one another. How could 'rogues be better employed?' This may ſeem a little too ludricrous, and no ſuitable anſwer to the accuſation; but what follows from Ruſhworth may, perhaps, appear ſomewhat more to the purpoſe (40).

(39) Lord Lanſdowne's Works, Vol. II. p. 205.

'On the 11th of July, 1644, Colonel O Brian (bro- 'ther to the Lord Inchiquin, and in the King's ſervice) 'ſent out a party of two hundred and forty horſe and 'foot, from Wareham to Dorcheſter, who faced the 'town ſeveral hours; but the inhabitants ſtood upon 'their guard, and ſent to the Parliament garriſons at 'Adderbury and Weymouth for relief; whereupon 'Colonel Sydenham. Major Sydenham, and other for- 'ces, haſtened thither, put them to flight, and pur- 'ſued them almoſt to Wareham, ſlew twelve, and took 'ſixty horſes, and one hundred and ſixty priſoners; 'whereof eight being natural Iriſh, ſeven of them were 'immediately hanged, and the other ſpared for doing 'execution on his fellows.'

(40) Ruſhworth's Collections, Part iii. Vol. II. p. 686.

We will make no comments upon this but proceed to a third and laſt inſtance of the Noble Hiſtorian's inclination to point out this gentleman's enormities; and his own Preface will ſhew, that he really had ſuch an inclination (41) 'There hath been, ſays he, too 'much ſaid already to diſcover the nature and the 'temper of this gentleman, if the current of this diſ- 'courſe did not make it abſolutely neceſſary to men- 'tion many particulars with which the Prince was 'troubled almoſt in all places. and which exceedingly 'diſordered the whole buſineſs of Devon and Corn- 'wall, and indeed thereby, the whole Weſt. There 'was one particular that made a great noiſe in the 'country: ſhortly after he was deputed to that charge 'before Plymouth, upon the hurt of Mr Digby, one 'Brabant, an attorney at law, who had heretofore ſol- 'licited the great ſuit againſt Sir Richard in the Star- 'Chamber, on the behalf of his wife and the Earl of 'Suffolk, living in thoſe parts, and having always very 'honeſtly behaved himſelf towards the King's ſervice, 'knowing it ſeems the nature of the gentleman, re- 'ſolved not to venture himſelf within the precincts 'where he commanded, and, therefore, intended to 'go to ſome more ſecure quarter, but was taken in his 'journey, having a mountero on his head. Sir Ri- 'chard Greenvile had laid wait to apprehend him, 'and he likewiſe had concealed his name; but being 'now brought before Sir Richard, was immediately, 'by his own direction, without any council of war, 'becauſe he ſaid he was diſguiſed, hanged as a ſpy; 'which ſeemed ſo ſtrange and incredible, that one of 'the council aſked him whether it was true? and he 'anſwered, very unconcernedly, Yes, he had hanged 'him, for he was a traitor, and againſt the King; and 'that he had taken a brother of his, whom he might 'have hanged too, but he had ſuffered him to be ex- 'changed. He ſaid he knew the country talked that 'he hanged him for revenge, becauſe he had ſollicited 'a cauſe againſt him, but that was not the cauſe; 'though having played the knave with him, he ſaid 'ſmiling, he was well content to find a juſt occaſion to 'puniſh him.'

(41) Hiſtory of the Reb. lion, Vol. IV. p. 668.

Lord Lanſdowne's anſwer is again too ludicrous, upon ſo very ſerious a ſubject (42). 'A ſpy, ſays he, is 'diſcovered diſguiſed in his quarters: he commanded 'him to be hanged: from whence may be concluded 'his diſreſpect to the profeſſors of the Law, the fellow 'being a country attorney; an honeſt man to be ſure 'by his profeſſion.' All the evidence we have in this matter comes from one ſide, with this additional circumſtance, that it pretends to report at once all that was or could be ſaid on the other, and yet this is not very fairly done; for Brabant was not only concerned for the Earl of Suffolk and Lady Greenvile, againſt Sir Richard, in the great cauſe in the Star-Chamber, but he gave evidence likewiſe, and therefore it is probable that the grudge, if any, did not ariſe ſo much from ſolliciting, for that any man might have done, and ſome muſt have done, as from the ſwearing, which certainly was not neceſſary, and, if Sir Richard is to be believed, was not true. If we take his anſwer as the Noble Hiſtorian reports it, we muſt take it altogether, and then it will prove nothing, for Sir Richard clearly affirms, that he was hanged for being a ſpy; and if the ordinances of the Parliament

(42) Lord Lanſdowne's Works, Vol. II. p. 205.

his family, made him Sheriff of the county of Devon, and granted him the eſtates of ſeveral perſons of great diſtinction, who were in arms againſt him, in ſequeſtration; which employment and grants enabled him to keep up a great body of troops, to pay them regularly, and to maintain a very ſtrict diſcipline, as it is on all hands allowed he did (*x*). But, at the ſame time, it excited againſt him a very ſtrong ſpirit of envy, and, which is very ſingular, his affecting great order, taking care of the eſtates committed to his charge, and keeping up a form of government, both civil and military, with much exactneſs, while nothing of the like nature appeared elſewhere, ſubjected him to reproach, and gave a colour of objecting to him as crimes, actions which he thought himſelf intitled, and even obliged to do, in diſcharge of his duty [*I*]. It was a great misfortune to the King's affairs,

(*x*) Coffin's Liſt of the Sheriffs of the County of Devon, p. 1.

Parliament upon that head had been rules to Sir Richard, as they might be, though he did not acknowledge their authority, his conduct might be juſtified. Mr Brabant was taken returning out of the King's quarters, in an unuſual dreſs, and denied his name; it was from thence inferred that he was carrying intelligence. The caſe was hard, but there were many hard caſes in thoſe times. Mr Daniel Kniveton (43), one of the King's ſworn meſſengers, charged with a meſſage to the Lord Mayor and Sheriffs, from his Majeſty, was hanged at the Royal Exchange of London, for delivering it. The noble vindicator reaſons very juſtly, when he ſays (44), 'When an officer has to do with an enemy who ſcruples 'at no violence, who pillages and plunders, and hangs 'and draws and quarters, without quarter, what has 'he to do but to deal with him in his own way? If 'violence is practiſed on one ſide, and lenity allowed 'on the other, the multitude will deſert where they 'are ſureſt of ſafety.' All that we have cited, and all that we have ſaid, is ſubmitted to the reader's judgment; and we beg leave only to add, that it is ſomething very ſingular, all circumſtances conſidered, that ſo many charges of ſeverity, oppreſſion, and cruelty, ſhould be brought againſt this gentleman by the Noble Hiſtorian, and not one of them occur in Whitlocke or in Ruſhworth.

(43) Ruſhworth's Collections, Part iii. Vol. II. p. 369.

(44) Lord Lanſdowne's Works, Vol. II. p. 208.

[*I*] *And even obliged to do, in diſcharge of his duty.*] The great and heavy charges againſt this gentleman are ſolely brought by the Earl of Clarendon; for as to what is ſaid by others, they are only tranſcribed from him. Let us hear then what he ſays (45): 'Before 'the King left the country, he granted him the ſequeſ'tration of all the eſtate of the Earl of Bedford in De'vonſhire, all the eſtate of Sir Francis Drake, by which 'he had Buckland Monachorum, which was his quar'ter whilſt he blocked up Plymouth and Warrington 'by Launceſton in Devon, and the Lord Roberts his 'eſtate in Cornwall; all which, and his wife's eſtate, 'he enjoyed by the ſequeſtration granted from his Ma'jeſty, and of which he made a greater revenue than 'ever the owners did in time of peace. For beſides 'that he ſuffered no part of theſe eſtates to pay contri'bution, whereby the tenants very willingly paid their 'full rents; he kept very much ground about all the 'houſes in his own hands, which he ſtocked with ſuch 'cattle as he took from delinquents; for though he 'ſuffered not his ſoldiers to plunder, yet he was in 'truth himſelf the greateſt plunderer of this war; for 'whenever any perſon had diſobeyed or neglected any 'of his warrants, or when any man failed to appear 'at the Poſſe, which he ſummoned very frequently 'after he was Sheriff of Devon, and for no other end 'but the penalty of defaulters, he ſent preſently a party 'of horſe to apprehend their perſons, and to drive 'their grounds. If the perſons were taken, they were 'very well content to remit their ſtock, to redeem their 'perſons. For the better diſpoſing them thereto, he 'would now and then hang a conſtable, or ſome other 'fellow, for thoſe faults of which a hundred were as 'guilty; and if, out of the terror of this kind of juſ'tice, men hid themſelves from being apprehended, 'they durſt not ſend to require their ſtock, which was 'from thence quietly enjoyed: ſo that he had a greater 'ſtock of cattle of all ſorts upon his grounds, than any 'perſon whatſoever in the weſt of England. Beſides 'this, the ordering of delinquents eſtates in thoſe parts 'being before that time not well looked to, by virtue 'of theſe ſequeſtrations he ſeized upon all the ſtock 'upon the grounds, upon all the furniture in the ſeve'ral houſes, and compelled the tenants to pay to him 'all the rents due from the beginning of the rebellion. 'By theſe, and ſuch-like means, he had not only a 'vaſt ſtock, but received great ſums of money, and 'had as great ſtore of good houſhould-ſtuff as would 'furniſh well thoſe houſes he looked upon as his own. 'This was his own eſtate, upon which he ſaid he had 'maintained himſelf without any allowance from the 'King; which I am confident, beſides what he got by 'his contributions, which would always pay double the 'men he had, and were ſtrictly levied, and by his o'ther arts and extortions of ſeveral kinds, was more 'and more worth in money to him, than his Majeſty 'beſtowed upon all his general commanders of armies, 'and upon all his officers of ſtate, ſince the beginning 'of the rebellion to that time.'

(45) Hiſtory of the Rebellion, Vol. IV. p. 673, 674.

There are many points in this charge, as the noble vindicator truly obſerves, that, upon the very face of them, are no crimes; many others that will appear in the ſame light, when truly repreſented, and moſt of the reſt either founded in ſuſpicion, or roundly affirmed, becauſe it is impoſſible they ſhould be diſproved. If the King granted his wife's eſtate by way of ſequeſtration, he certainly did him no more than bare juſtice, conſidering the hardſhips he had ſuffered, and the manner in which it was taken from him. As to the eſtates of delinquents, while in his hands by the King's grant, he might well enough call them his own, to diſtinguiſh them from the contributions levied upon the country. Beſides, the King might very well do this, as the Parliament did it in reſpect to all ſuch as continued in their duty to his Majeſty. It is a ſhrewd remark of the noble vindicator, That thoſe in arms againſt the King are upon all other occaſions very roundly called Rebels; whereas, in the preſent caſe, the Noble Hiſtorian makes uſe of the Parliament's own word, Delinquents. Thus far as to the eſtates he held in his hands; now as to the money raiſed by other means.

If we allow Sir Richard Greenvile to be the greateſt oppreſſor and greateſt plunderer of the whole war, we muſt alſo allow him, upon the ſame evidence, to have been the moſt wonderful oppreſſor, the moſt public-ſpirited plunderer, that ever exiſted; for in his character of oppreſſor, we are told the people paid very willingly, for he qualified the matter ſo prudently, that they found their account in it. He ſummoned the force of the county very often, becauſe, as their occaſions required, he very often ſuffered his men to return home, which, if he had not done, their families muſt have ſtarved. It is confeſſed, that from other Generals they continually deſerted, and yet thoſe Generals were very indulgent: but this ſtrict, this ſevere Sir Richard Greenvile, could draw together even theſe deſerters at his pleaſure, and keep them together likewiſe as long as he wanted them; from whence they were intitled Greenvile's reformades. What could be the reaſon of all this? When they were under the command of Sir Richard Greenvile they were regularly paid. One charge againſt him is, the inſolence of his anſwer when they would have left him his command, and taken away his contributions: he ſaid, He neither could nor would be at the head of an army who were not punctually paid. In conſequence of this, his ſoldiers never plundered; this his enemies allow, and ſay that he was beloved and reſpected by the country for that reaſon. But then, ſay they, he plundered enough for himſelf and them too.

We have ſeen that his houſe was taken by ſtorm, by the troops of the Earl of Eſſex, and we know what the ſum was they found in it, which certainly did not amount to a month's pay of his army; ſo that this muſt be eſteemed an indifferent proof. After his exile abroad, and of his own motive, he ſupplied the King's garriſons

affairs, that he had withdrawn the Lord Hopton, to whom he had given the title of Field-Marſhal of the Weſt, and who was a perſon of calm courage, equally fit for the council and the field; and who, while he held the command there, had been always ſucceſsful: but it was a much greater overſight to make General Goring, now, by the creation of his father, Earl of Norwich, become Lord Goring, General of the horſe, at the expence of Lord Wilmot, who was not only deprived of his command, but obliged to leave the kingdom. All this, but more particularly the ſending back Lord Goring to command in the Weſt, was attributed to Prince Rupert, who, hating and fearing that Lord, reſolved to remove him from the King's perſon, and therefore ſent him into the Weſt, where, having no intereſt or alliances, he was from the beginning diſliked, and, for his diſſolute life, and the great licence he allowed his troops, in a very little time univerſally hated (*y*). This Lord was very deſirous of having Sir Richard Greenvile and his foot under his command, which Sir Richard, forſeeing they ſhould not agree, declined, at leaſt till Taunton ſhould be taken, which was a thing of conſequence, and in which he had embarked. The Noble Hiſtorian thinks he made no great haſte in the execution of that enterprize; and yet one would think he was pretty much in earneſt, ſince, in giving orders for the attack of Colonel Popham's houſe at Wellington, towards the middle of April, 1645, he expoſed himſelf ſo much, that he received a ſhot in the thigh, which at firſt was believed to be mortal, and by which he was for ſome time diſabled (*z*). Another circumſtance, very unfavourable to the King's affairs in the Weſt, was the ſending thither the Prince of Wales, who was too young to command himſelf, and aſſigning him a council who were far from being popular. Amongſt theſe, Sir Edward Hyde, then Chancellor of the Exchequer, had a great authority, which he exerted in controuling the advices of the King's Generals, who could never be brought to underſtand that the Chancellor of the Exchequer and the Maſter of the Rolls were fit perſons to direct an army: Lord Goring made very high demands; Sir Richard Greenvile was alſo diſſatisfied; the council ſometimes played them againſt each other, in order to which, a commiſſion of Field-Marſhal was ſent to Sir Richard, who acted under it for a ſhort ſpace, but finding great inconveniences ariſe reſigned it (*a*) For this, and for ſome other actions of a like nature, he was ſent for before the council, who upbraided him with the King's favours, reprimanded him, and ordered him to retire to his houſe as a private man. He ſubmitted with great humility, and remained in that ſituation a fortnight, 'till they were obliged to employ him again, the troops refuſing to ſerve if he did not command them (*b*). New diſputes quickly aroſe, Sir Richard came in perſon to wait upon the Prince at Truro, where, he freely repreſented to him the ſituation of his affairs, and the neceſſity there was of providing for the ſafety of the Weſt, Lord Goring having deſerted his army, his brother-in-law, Lieutenant-General Porter, gone over to the enemy, and Lord Wentworth, who now commanded the horſe, terrible to the King's ſubjects, and contemned by the Parliament forces. One of the things he propoſed was to draw a line from Barnſtaple to the ſea, forty miles in extent, by which he thought all Cornwall and part of Devonſhire might be defended againſt any force that could be brought to attack them (*c*). This the Noble Hiſtorian looks upon as a mark of his being out of his ſenſes, and is equally diſpleaſed with another piece of advice which Sir Richard likewiſe gave the Prince of Wales, that his Highneſs ſhould ſend to the Parliament for a treaty, and ſhould offer, if he might enjoy the revenue of the duchy of Cornwall, and they would not advance to diſturb him in that county, that then he would not attempt any thing upon them, but that they ſhould enjoy the freedom of all their ports in Cornwall for trade, without any diſturbance by his Majeſty's ſhips (*d*). This was alſo rejected as unworthy of the Prince, becauſe undutiful to the King; but it is plain enough from both theſe overtures, that Sir Richard Greenvile thought the King's affairs deſperate, conſidering the hands in which they were, and thoſe of the Prince in the high road of becoming ſo too, which he was willing to prevent, and at the ſame time to provide for the ſecurity of the county, as believing probably, that if the Prince of Wales was left quietly in his own duchy of Cornwall, more open than any part of the kingdom to foreign aſſiſtance, he might quickly gather ſo great a ſtrength as to run no riſk of being diſpoſſeſſed, and in time become ſuch a check upon the Parliament, as might hinder them from attempting any thing againſt the King's perſon, whatever

garriſons out of what he had left, made a handſome preſent to the Duke of York, lived privately, and died poor. Was there ever ſuch a plunderer as this? he lived handſomely, while in command kept all things in good order, and formed ſchemes for preſerving Cornwall, and Devon, when all the reſt of the King's dominions were loſt. His projects were rejected and contemned, in conſequence of which Cornwall was loſt too. He was a man auſtere in his behaviour, maintained a ſevere diſcipline, judged without law, and puniſhed without mercy. He was therefore hated by his ſoldiers, who thought his being removed and confined, a deliverance. Not ſo neither. He was ſo much reſpected and beloved by them, that they would ſerve under nobody elſe! The very country-people too, whom he had oppreſſed and plundered without mercy, loſt all patience upon his ill uſage, and addreſſes came from every quarter to demand that he ſhould be reſtored to liberty and power! Many of the Prince's Council were diſpleaſed with his treatment; and many who were neareſt his Royal Highneſs's perſon had ſuch a regard for the Knight, that they were wanting in duty to the Prince! Is this intelligible? Is this conſiſtent? Be this as it will, the evidence is preciſely the ſame; the Noble Hiſtorian who brings the charge, and who adviſed his commitment, acknowledges, that theſe were it's effects. But we ſhall ſee much more of this in the next note.

whatever they might do with regard to his authority (*e*). But notwithſtanding the ill reception this advice met with, and the indifferent opinion Sir Richard had of the Prince's counſellors and commanders, he continued to ſerve 'till all things fell into confuſion by the want of conduct in others, and the Prince found it unſafe for him to remain at Taviſtock, which Sir Richard had foreſeen, and upon his Royal Highneſs's retreat to Launceſton, the care of the retreat, and the removing all that could be ſaved from Taviſtock, was committed to Sir Richard Greenvile. The Noble Hiſtorian informs us, that he performed this but very indifferently, which is highly probable; for the very next day, he repreſented, by letter to his Royal Highneſs, the impoſſibility of keeping that army together, or fighting with it in the condition it was then in; told him, that he had the night before ſent directions to Major-General Harris to guard ſuch a bridge, but that he returned him word that he would receive orders from none but General Digby; that General Digby ſaid, that he would receive orders from none but his Highneſs; that a party of the Lord Wentworth's horſe had the ſame night come into his quarters, where his troop of guards and his firelocks were; that neither ſubmitting to the command of the other, they had fallen foul, and two or three men had been killed; that they continued ſtill in the ſame place, drawn up one againſt another; that it was abſolutely neceſſary his Highneſs ſhould conſtitute one ſuperior officer, from whom all thoſe independent officers might receive orders, without which it would not be poſſible for that army to be kept together, or do ſervice; that, for his own part, he knew his ſeverity and diſcipline had rendered him ſo odious to the Lord Goring's horſe, that they would ſooner chooſe to ſerve the enemy, than receive orders from him, therefore he deſired his Highneſs to conſtitute the Earl of Brentford or the Lord Hopton to command in chief, and then he hoped ſome good might be done againſt the enemy (*f*). The Prince received this letter kindly, wrote Sir Richard Greenvile a letter of thanks, and, in the beginning of the year 1645, declared Lord Hopton General of the army, and appointed Lord Wentworth to command the horſe in chief, and Sir Richard Greenvile the foot; but Sir Richard deſired to be excuſed, alledging that he was become infirm, and that he could do more ſervice by drawing together ſuch as had quitted the army, and providing for the interior ſafety of the county (*g*). This was ſo ill taken, that, by the advice of his council, the Prince ſent for Sir Richard, and after a ſharp expoſtulation committed him priſoner, firſt to Launceſton, and then ſent him to the Mount, where his confinement laſted as long as thoſe that committed him had power to confine him (*b*) [*K*]. They were equally diſappointed in Lord Wentworth, who being

[*K*] *Had power to confine him.*] What is ſaid in the text, we have taken entirely from the Noble Hiſtorian; we will here, in his own words, give the Noble Vindicator's explanation (46). 'He ſays, that 'the diſorders in the army daily increaſing, Sir Richard, 'at laſt fairly and honeſtly repreſents in a letter to 'the Prince, the impoſſibility of doing any thing with 'an army ſo diſtracted by different and contradictory 'orders: and recommends a more abſolute command 'to be given to ſome perſon whom all would obey, 'and names the Lord Hopton, who had formerly 'commanded with great glory and ſucceſs: he excepts 'againſt himſelf, upon the account of that ſeverity 'and diſcipline in which he always kept his men, 'which might make him diſagreeable to that part of 'the army which had been accuſtomed to ſuch licence 'as he never could overlook, &c.

'This advice was readily taken, and he received 'thanks for it; but it was purſued in ſuch a manner 'as gave a finiſhing ſtroke to all hope, where alone 'any hope was left.

'The Lord Hopton was immediately declared General; and Sir Richard, without adviſing with him 'how far it might be agreeable to his intentions, or 'hearing what in all probability he might have to 'offer in relation to himſelf, was at the ſame time 'declared one of the Lieutenant-Generals under 'him.

'It could not be reaſonably imagined, that by propoſing to quit the chief command, his deſign could 'be to obey in an inferior poſt in the ſame army. 'But, ſays the Chancellor, this command was ſuperior 'to what he had before. Strange logic, that part 'ſhould be more than the whole! the Lieutenant 'greater than the Captain! But it was plain he had 'ſome underhand drift. Well, what was that drift? 'Why, to ſtay behind and provide for the *ſecurity of* 'Cornwall: was Cornwall not worth preſerving? O! 'but there was a diſcontented party there, and he 'would *have* put *himſelf* at the head of it. Stranger, 'and ſtranger ſtill. A diſcontented party, where all 'were known to be profeſſed Royaliſts! There was, 'indeed a ſtrong party diſcontented with the meaſures of the Council; but let no man flatter himſelf, 'be his power never ſo great, that it can ever be a 'doctrine received among Engliſhmen, That to be diſſatisfied with the Miniſter, implies diſaffection to the 'Prince. In ſhort, the Chancellor's real apprehenſion appears to have been, That if once he had quitted Cornwall, and Sir Richard had remained behind, 'he would have ſhut the door againſt his return: 'this was a perſonal fear, and therefore Sir Richard 'was to be pinned down to this peremptory command, 'or nothing, He was not to be truſted out of ſight.

'Here it is, that the Lord Hopton is ſo highly 'magnified for a ſpeech he is ſaid to have made upon 'accepting this command.——That, whereas, it was become a cuſtom for others to excuſe their diſobedience, by pretences of honour; for his part, tho' 'he could not obey at this time without reſolving to 'loſe his honour, he was ready to obey, with the loſs 'of his honour.

'This ſpeech was ſurely meant rather as a reproach 'to every body elſe, than an encomium upon this 'gallant Lord, and ſeems to be a mere hiſtorical flouriſh. If he had been commanded, like Sir Richard, to deſcend from the chief poſt, to obey in an 'inferior one; ſubmiſſion in that caſe, might very 'properly have been called obedience, with loſs of 'honour.——But, on the contrary, he was appointed to the ſupreme command, which, ſure, was 'an honour: if any hazard appeared in the execution, the more difficult the taſk the greater the glory. 'By military ſkill, under extreme diſadvantages, as 'much honour is to be gained as in compleat victories. 'No General, ſure, ever excuſed accepting a command, upon pretence of danger in the execution. 'In what then conſiſted this indubitable loſs of honour, for which the Noble, and the Reverend, Hiſtorian, ſo highly extol this implicit obedience? neither was there at that time any occaſion for ſuch a 'ſpeech, the caſe was far from being deſperate: it 'was ſoon made ſo, indeed, by the violence uſed to 'Sir Richard.

(46) Lord Lanſdowne's Works, Vol. II. p. 217—222.

'In

ing a very haughty man, it was thought he would reſign; but he kept his command, and behaved as indifferently in it as ever; ſo that ſoon after Lord Hopton's forces were routed, and all power of reſiſtance in the Weſt failed (*i*). It is a ſtrange account that the Noble Hiſtorian gives of the conſequences attending Sir Richard's misfortune. He has repreſented him as a man of ſuch haughtineſs as rendered him diſtaſteful to his ſuperiors, and impracticable with regard to his equals, at the ſame time that his ſeverity made him terrible to his inferiors, and his oppreſſions odious to all people. Yet, ſays he, notwithſtanding all this, he was no ſooner committed by the Prince, than even thoſe who had complained of him as much as any, expreſſed great trouble; and many officers of thoſe forces which he had commanded, in a tumultuous manner petitioned for his releaſe; and others took great pains to have the indiſpoſition of the people, and the ill accidents that followed, imputed to that proceeding againſt Sir Richard Greenvile, in which none were more forward than ſome of the Prince's own houſhold-ſervants, who were ſo tender of him that they forgot their duty to their maſter (*k*) [*L*]. In leſs than two months time after the commitment of

(*i*) Clarendon's Hiſtory of the Rebellion, Vol. IV. p. 727, 730. The Civil Wars in England and Ireland, p. 178. Dugdale's Short View of the Troubles, p. 202.

(*k*) Clarendon's Hiſtory of the Rebellion, Vol. IV. p. 729. Lord Lanſdowne's Works, Vol. II. p. 221, 222.

'In ſhort, Sir Richard perſiſting to excuſe himſelf 'from being thus commanded, is put under arreſt as 'the Lord Wilmot had been the year before, and 'committed, with all the public marks of indignation 'and diſgrace that could poſſibly be imagined, a cloſe 'priſoner in the common county goal at Launceſton, 'among pick-pockets and highwaymen, and in that 'condition remained till the fate of the Weſt was to-'tally decided.

'I muſt not forget one circumſtance, when he was 'thus ignominiouſly put under arreſt.

'Colonel Roſcarrock, an officer of diſtinction, rode 'haſtily up to him, and whiſpered him not to ſubmit 'to ſo unjuſt a ſentence: he was ſure of the reſent-'ment of the troops, they would ſtand by him, and 'follow wherever he would lead. He ſeverely re-'proved him, enjoining a ſtrict obedience to the com-'mands of the Prince, to which, whatever might be 'his fate, he was reſolved to ſubmit in every thing 'that was conſiſtent with his honour: and in this he 'required all, who had any regard for him, to follow 'his example.

'This particular I had from Roſcarrock's own 'mouth, who lived to have a government conferred 'upon him in Ireland after the Reſtoration, and did 'not die till towards or after the Revolution.

'I think this ſpeech was full as good as that aſcrib-'ed to the Lord Hopton, and as far from any ſpirit of 'diſobedience: he not only obeyed with entire reſig-'nation, but ſacrificed, at the ſame time, the two 'ſtrongeſt paſſions of human nature, ſelf preſervation 'and revenge.

'It was neceſſary for the Chancellor to find ſome 'public juſtifiable reaſon for ſo extraordinary a ſtep: 'a *ſi quis*, therefore a proclamation was publiſhed, 'inviting and encouraging all manner of perſons to 'appear and give evidence of their grievances, du-'ring this arbitrary general's command. If there had 'been any in reality, well grounded or ſupportable, it 'is natural to believe, complainants would not have 'been wanting againſt a man ſo diſgraced, that to ac-'cuſe him was making their court: now, or never, 'was the time for all the murther and plunder to 'come out But, to the Chancellor's infinite ſurprize, 'not one mortal appeared.

'On the contrary, the whole country took offence, 'the very perſons who were ſaid to have clamoured ſo 'much againſt him, appeared to clamour as much for 'him; the ſoldiers murmured, the officers of the 'army went tumultuouſly in a body to demand his re-'leaſe, all the members of the council itſelf, except the 'Chancellor's particular adherents, diſowned the ad-'vice, and almoſt all the Prince's own houſhold-ſer-'vants, as the Chancellor ſtyles them, openly declared 'their diſlike'

'This diſappointment was too ſenſible for the Chan-'cellor to contain himſelf in the account he gives of it: '*They were more tender of Sir Richard*, ſays he, *than 'of their duty to their maſter*. A cruel and unnatural 'reflection upon ſo many perſons of honour, who had 'devoted their lives and fortunes to the King, and 'could have no other intereſt but their maſter's! Such 'general exclamations from every quarter, could be 'founded upon no other motive, but a foreſight of the 'evil conſequences of ſo unjuſt and violent a proceed-'ing: neither could there be a greater proof of the in-'nocence and merit of the perſon thus ill treated, nor 'a fuller anſwer to all that the Chancellor has muſtered 'up to alledge againſt him, than ſo public, ſo volun-'tary, and ſo unanimous an appearance in his defence.

'This is confeſſed by the Chancellor: but then he 'cries out—*Who would have thought it?*'

There is nothing need, there is nothing can, be added to this Lord's clear and very curious account of the manner of Sir Richard Greenvile's quitting the command, and the conſequences it produced; he writes indeed with the warmth of a relation, but then he reaſons very concluſively, and from facts that have not been, or indeed ever can be, controverted.

[*L*] *That they forgot their duty to their maſter.*] We have hinted already more than once, but in this note we will clearly declare, our motives for ſetting forth the memoirs of this gentleman's whole life, in ſo copious, and, at the ſame time, in ſo critical a manner. They are no other, than an earneſt deſire to throw light on a very important and very controverted point of the hiſtory of theſe times. We have, in the former article, ſhewn that the Weſt of England, and more eſpecially Cornwall, were the parts of the King's dominions beſt affected to him, and where his intereſt was moſt entire; which has been very juſtly and very judiciouſly attributed, to the attachment of the middle as well as the lower ſort of people to the gentry of old families and large eſtates; and theſe being unanimouſly loyal, gave the King the great weight he had in thoſe parts (47). It is no wonder therefore, that immediately after thoſe dreadful times, it became a queſtion ſo much agitated, How the Weſt came to be loſt? It ſo fell out, that the Noble Hiſtorian found himſelf obliged to treat this matter very particularly, as being a thing in which he had an immediate concern, the rather, becauſe at the time it happened, there were a great number, and amongſt them ſome very wiſe and worthy perſons, who ſuggeſted the true ſource of the ſudden and ſad turn of the King's affairs in the Weſt, to be the wrong meaſures taken by thoſe in whom he principally confided; to his preferring ſoldiers of fortune, and who had no intereſts in the country, to thoſe gentlemen of birth and eſtates, who had ſerved him ſo faithfully and ſo ſucceſsfully in the beginning of the war; to the licentiouſneſs of the forces which they commanded, who behaved as if they had been in an enemy's country, and who, imitating the diſſolute behaviour of their generals, became very ſoon equally dreadful to their friends, and contemptible to their enemies; and above all, to the departing from the original ſcheme of ſending the Prince of Wales thither, as to his own duchy, where he ought to have been aſſiſted by a council who were perfectly acquainted with the country, and had a great influence in it, or who at leaſt would have heard and taken the advice of ſuch as were. The council the Prince had about him was in a great meaſure compoſed of able and worthy men; but it is alledged, that it differed from all other councils, in having it's reſolutions governed by the minority, through their ſuperior intereſt with the King, whoſe letters converted opinions, that would otherwiſe have been rejected, into orders that were not to be diſobeyed. The Earl of Berkſhire, who was the Prince's governor, and ought naturally to have been at the head of the council, was ſhut out of all ſecrets; and all who were in his ſentiments had the like fate. Theſe ſentiments were no other,

(47) Sir Philip Warwick's Memoirs, p. 217.

of Sir Richard, the Prince of Wales finding his power gone, and his perſon in danger, thought it high time to retire, as he did on the ſecond of March, from Pendennis caſtle to the iſlands of Scilly; and the very next day Sir Richard Greenvile embarked on board a veſſel for France, from whence he made a tour to Italy, and then returned to Flanders (*l*). We have no where any diſtinct account of the motives of Sir Richard's journey, only it may be preſumed that they were not altogether for amuſement or pleaſure. As for the Parliament, even the moſt moderate and beſt inclined amongſt them, who conſented to a treaty with the King in the iſle of Wight, ſtill preſerved ſo ſtrong a reſentment againſt him, that, in their propoſition, dated October 13, 1648. they inſerted Sir Richard Greenvile's name in the firſt branch of delinquents, who were to *expect no* pardon (*m*). In all probability this did not much ſurprize him, though it might quicken his endeavours to procure ſome means of returning with a competent force into Cornwall. His having ſerved ſo long abroad made him known to ſome of the moſt eminent perſons in almoſt every court in Europe; and as the tranſactions in England were at that time the principal topic of diſcourſe in all places, Sir Richard Greenvile was particularly welcome, as a perſon of all others the moſt capable of giving a clear and credible account of the whole tranſactions of the war, and of the real and ſecret motives of the diſmal conſequences that had followed it. Sir Richard improved this kind of correſpondence as much as poſſible for the King's ſervice, both by writings and diſcourſes; laboured the probability of King Charles the ſecond's being replaced on the throne of his anceſtors, with a ſmall ſhare of aſſiſtance from foreign Princes and States (*n*). Theſe repreſentations of his had ſo good an effect, that the King, who was now more able to judge for himſelf, and who was free from thoſe counſellors who had conceived perſonal prejudices againſt Sir Richard, and the nature of his affairs requiring alſo the advices of a man of a military genius, his Majeſty, from Jerſey where he then was, wrote to Sir Richard to meet him in France, as he accordingly did at Beauvais, where his Majeſty conferred with him in his way to Breda, where he was then going to meet the commiſſioners from Scotland; from which expedition however he was diſſwaded by Sir Richard Greenvile; but, in obedience to the King's orders, he remained in Bretagne, and for the moſt part at St Maloes, that he might be ready upon any occaſion to do what ſervice he was able (*o*). As a clear and convincing proof of his invariable loyalty, he not only ſent cloaths, money, and proviſions, to the garriſon in the Sorlinges, but provided in the like manner for the garriſon in Guernſey-Caſtle, and ſent a very reaſonable and handſome preſent to the Duke of York, whoſe affairs were in very great diſorder, and to whom it was highly acceptable [*M*]. After the total defeat of the King's army at Worceſter,

(*o*) Sir Richard Greenvile's Vindication.

other, than that Lord Goring, who commanded in the Weſt, ſhould march with his troops into thoſe counties, where he had a real intereſt, and where, if his troops could have eſtabliſhed themſelves, they might have rendered the war burthenſome to the King's enemies, by living, as they ought to have done, at their expence; that Cornwall and the Weſt ſhould be defended by it's inhabitants, under generals choſen from amongſt themſelves; that all poſſible means ſhould have been taken to fortify the country, from it's ſituation very defenſible, and the entrance of the enemy diſputed at every paſs; that the ports ſhould be kept open for ſuch ſuccours as might be obtained from abroad, and that the Prince ſhould put his honour and his cauſe on maintaining his own duchy, to which he had a clear, hereditary, and indiſputable right. It is however alledged, that the Maſter of the Rolls, the Chancellor of the Exchequer, and their dependants, were in very different ſentiments; and that they compelled the Prince, againſt his own opinion, and by the authority of his father, to act ſolely under their directions; that they aſſumed the power of Dutch deputies, were for controuling the opinions, and reconſidering the reſolutions of councils of war; that they were for new modelling every thing according to their own notions, without reſpecting the King's grants, or the manner in which things had been ſettled, while the war had been carried on proſperouſly with little aſſiſtance from the King's armies elſewhere; that upon the firſt checks, occaſioned ſolely by ill management, inſtead of altering their meaſures, they fell into deſpair; that they propoſed early the Prince's flight into France, concealed it from the Earl of Berkſhire, and executed it at laſt againſt his conſent; that the true ſecret of impriſoning Sir Richard Greenvile, was to prevent his making an attempt to preſerve Cornwall, which, to the very laſt, he thought practicable, and, if he had been at liberty, would either have performed it or periſhed. It is to refute theſe aſſertions, and to juſtify the Prince's conduct under his own and his friends direction, that the Noble Hiſtorian has laboured this book ſo much more than any other part of his work. This gives the true key to the bad character of Sir Richard Greenvile, the weak one of Colonel Wyndham, and the ſuggeſting that the Earl of Berkſhire had no character or intereſt at all. But in thoſe times it was alledged, that events did not juſtify the wiſdom of theſe councils, that ſome ſtrong places in Cornwall, that the iſlands of Scilly, of Guernſey, and of Jerſey, held out long; that if the Prince had been in Cornwall, and that dutchy preſerved, when the fleet returned to their duty, the parliament garriſons revolted in Wales, the bold inſurrection made in Eſſex, and the Scots, reflecting on their own diſhonour in parting with, had declared again for the King, affairs might once more have taken a new turn; and that after all, we ſhall find Sir Richard Greenvile and his friends were unalterable in their affections to the King and his family; and that ſuch of them as ſurvived, were very inſtrumental, at the hazard of their lives, having loſt their fortunes before, in bringing about the Reſtoration.

[*M*] *And to whom it was highly acceptable*] This epiſtle will ſufficiently convince the reader, that notwithſtanding all the ill uſage he had met with, Sir Richard preſerved a ſincere affection for his country, a noble zeal for the cauſe in which he was embarked, and all poſſible reſpect for the Royal family, at the ſame time he made no difficulty of declaring whom he took for his capital enemy (48).

(48) Lord Lanſdowne's Works, Vol. II. p. 220, 227, 228, 229.

'May it pleaſe your Royal Highneſs,

'Hearing your Highneſs is under ſome fears at 'Jerſey, ſince his Majeſty left you there, I have pre'ſumed, out of my great zeal for your Highneſs's ſer'vice, by the aſſiſtance of an honeſt loyal merchant 'here in St Malo's, Mr John Richards, to make your 'Highneſs a preſent of ſix hundred pounds; which I 'humbly preſent by the bearer Major Madren, a Cor'niſh gentleman, who was Major to my regiment, 'when I had the honour to be his Majeſty's General 'in the Weſt.

'He

Worceſter, and his Majeſty's return into France, there were great intrigues at his court, tho' it was very far from being numerous; and thoſe who at that time were in the poſſeſſion of the Government in England, were likewiſe very deſirous of gaining at any price exact intelligence of what was doing there, and with whom the King held correſpondence in his own dominions (*p*). The deſire of knowing, and the power of rewarding, filled very naturally a neceſſitous court with falſe friends, who betrayed whatever they could learn; and the courtiers, eager and ambitious even of nominal places, endeavoured to ſerve their reſpective purpoſes, by imputing theſe perfidious practices, the conſequences of which were apparent, and therefore undeniable, one to another; ſo that if the King liſtened implicitly to any, he could not help hearing that all about his perſon were traytors (*q*). Amongſt the reſt, one Mr Robert Long, who had acted as Secretary of State, was removed from his office, and the ſeals given to Sir Edward Hyde; upon ſome ſuch ſuſpicions Colonel Wyndham, of whoſe integrity the King was ſure, and of whoſe capacity he had a good opinion, was diſappointed of the poſt of Secretary, which he expected; and many others of leſs quality were in the like ſituation, and being moved, partly by reſentment, partly by ambition, and not a little from envy, at ſeeing the King's confidence wholly engroſſed by the Chancellor of the Exchequer, they began to place all miſcarriages to his account, alledging, that he held a cloſe correſpondence with Cromwell, and riſing by degrees, as is common in ſuch caſes, at length ſuggeſted, that he had privately made a tour to England, and had been actually ſeen in conference with him (*r*). Theſe ſtories coming to the ears of Sir Richard Greenvile, who thought himſelf hated, and conceived himſelf injured, by Sir Edward Hyde, in neither of which perhaps he was miſtaken; he thought it his duty to inform the King, as he did by letter in the month of Auguſt 1653, but affirmed nothing of his own knowledge, and deſired only, that for the King's honour, and the ſafety of ſuch as were daily hazarding their lives in his ſervice, the matter might be enquired into. This application, though at ſome diſtance of time, had it's effect; an enquiry was accordingly made, which produced a declaration in council, entirely in favour of the Chancellor of the Exchequer, and as prejudicial as might be to his accuſers (*s*) [*N*]. The Chancellor of the Exchequer,

(*q*) See the Intelligence given by Bampfield, Manning, Willis, &c. in Thurloe's Correſpondence.

(*r*) Sir Richard Greenvile's Vindication.

(*s*) See the Order in the Note.

'He will farther acquaint your Highneſs, that I 'have likewiſe, out of my ſmall ſtock, ſent a relief of 'cloaths for the ſoldiers, and proviſions to Colonel 'Hodge Burges, at Guernſey caſtle, which will ena'ble him to defend that place the longer againſt the 'rebels in the iſland.

'Theſe voluntary ſervices, I hope, will preſerve 'me in your Highneſs's good opinion, notwithſtand'ing I have ſo powerful an enemy as Sir Edward 'Hyde, to miſrepreſent my actions and loyalty to the 'King, to whoſe ſervice, and to your Royal Highneſs's 'I ſhall be always devoted with great ſincerity.

'Preſuming therefore upon my duty to your High'neſs, I muſt beſeech you to admit me to make an 'humble petition on behalf of a nephew, my godſon, 'now with me, ſecond ſon to my brother Sir Bevil 'Greenvile, who was ſlain at Lanſdowne; That your 'Highneſs would be pleaſed to receive him into your 'family and ſervice, near your perſon: his education 'has been, ſince he left his brother in Scilly, at an 'academy in Angers; and, I find his inclinations lead 'him to venture his life, and run his fortune in the 'immediate ſervice of your Highneſs. Wherefore, I 'will be anſwerable for him, and ſupport him, if your 'Highneſs will pleaſe to accept of his ſervice; be'ſeeching your Highneſs to believe me, with the ut'moſt ſubmiſſion and duty,

'May it pleaſe your Royal Highneſs,

'Your Royal Highneſs's moſt obedient,

'and moſt dutiful ſervant,

'Richard Greenvile.'

The Duke's Anſwer.

'Sir Richard Greenvile,

'I have received from the hands of Major Madren, 'the ſix hundred pounds you have moſt ſeaſonably 'ſupplied me with in this place; the want of money 'having detained me here ever ſince the King went 'to Breda, but now, with this help, I will ſuddenly 'remove, and whereſoever I am, retain a memory of 'this, your particular ſervice to myſelf.

'What you have deſired of me concerning your 'nephew, now with you, when I am in a condition 'to increaſe my family, I will take into my ſervice 'upon your recommendation; but for the preſent, my 'condition will allow me no more near my perſon, 'but Harry Jermyn, and Charles Bercley. When I 'leave this place, you ſhall know where to addreſs 'to,

'Your affectionate friend,

'JAMES.

[*N*] *And as prejudicial as might be to his accuſers*] The circumſtances expreſſed in the text, might very eaſily kindle diſtruſt, more eſpecially amongſt men, who, on account of events long before paſſed, heartily hated each other. But, beſides all this, there might be, and indeed, there certainly were, ſome correſpondences of Sir Edward Hyde, which might afford Sir Richard Greenvile, and perſons of his way of thinking, very ſtrong grounds of jealouſy (49). He had an intercourſe with ſome of the moſt zealous officers in the old army, with perſons who had the ſtricteſt connection with Cromwell, and even with the children of ſome of the King's judges. To the old Royaliſts, ſuch an intercourſe as this muſt have appeared in a very ſtrange light, and have inclined them to believe any, even the moſt improbable, ſtories, becauſe, whatever they were, they muſt appear leſs abſurd, than that ſuch perſons could ever ſeriouſly meditate the reſtoration of the King; and yet this was really the fact, and the Chancellor not culpable in the leaſt, any more than Sir Richard Greenvile, whoſe vindication it is proper the reader ſhould ſee in his own words, that the conduct of the King, the Council, Sir Richard Greenvile, and thoſe upon whoſe credit he had ventured to ſet on foot his accuſation, may appear in a true light, and the laſt ſcene of this great man's life be as fully and fairly repreſented as any of his preceding tranſactions. Thus then, Sir Richard's vindication runs (50):

(49) Carte's Life of James Duke of Ormond, Vol. II. p. 177.

'In April and May 1653, when I was in Paris, it 'was there commonly ſpoken, by divers perſons, how 'that Sir Edward Hyde was ſuſpected to have betray'ed the King.

'Afterwards, elſewhere, having underſtood more 'probabilities of ſuch truths, I believed it my duty to 'advertiſe his Majeſty of what I had been informed 'thereof

'Auguſt 12, 1653, I writ of it to his Majeſty, for 'prevention of future miſchief, if to be doubted, as 'that

(50) Lord Lanſdowne's Works, Vol. II. p. 236—243.

Exchequer, who, though he might have faults, was undoubtedly a very able man, turned the edge of the King's declaration againſt Sir Richard Greenvile, by forbidding him his preſence,

'that it was reported Sir Edward Hyde had private 'conference with Cromwell in England, for intel- 'ligence.

'For anſwer thereto, the Marquis of Ormond, by 'letter of the 19th of September, 1653, did write 'to me——That his Majeſty required to know my 'grounds, for what I did alledge againſt Sir Edward 'Hyde; alſo, that I ſhould ſend him all writings 'concerning that affair, and likewiſe, the names of all 'my authors.

'In obedience, I wrote as followeth.

'That my duty was my only ground for what I 'writ concerning Sir Edward Hyde. As for my au- 'thors, Colonel Wyndham ſaid to myſelf at Boulogne, 'in June 1653, That Sir Edward Hyde had been in 'England, and that there he had private ſpeech with 'Cromwell; alſo, ſaid he, Mr Robert Long is now 'in Holland, he can, and will give more certain in- 'formation of it's particulars: and that thereupon I 'did by letter deſire Mr Long to certify the truth of 'that report.

'July 28, 1653, I received his anſwer, wherein he 'appeared to confirm what I writ, was ſaid of Sir Ed- 'ward Hyde, by Colonel Wyndham: which letter I 'ſent, becauſe commanded, but greatly againſt my 'will.

'Since which Letter, Mr Robert Long ſent me an- 'other, containing thus——

'I will aſſure you, it will be verified, that the per- 'ſon named did poſitively, and conſtantly, affirm be- 'fore two witneſſes; whereof one is on this ſide of 'the ſea, and the other in England, that that perſon 'brought Sir Edward Hyde to a conference with 'Cromwell, and deſcribed him ſo particularly, that 'it was evident he was known, and did as particular- 'ly deſcribe a perſon that was then with him.'

'And laſtly, concerning Sir Edward Hyde's pen- 'ſion for intelligence, that it was ſo ſaid by divers 'perſons, ſo commonly, and in divers places, that I 'did not charge them to my memory, therefore could 'not poſſibly, at certainty, name many authors for it, 'but I did well remember Mr Campbell ſaid it ſundry 'times, in my hearing, at Paris: ſo alſo did the 'Biſhop of Derry ſpeak it to me at Fluſhing, July '1653.

'Having thus performed my duty as required, at 'laſt, for the reward of my conſtant known loyalty, 'the Marquis of Ormond did ſignify to me, by let- 'ters dated November 29, 1653, that it was his Ma- 'jeſty's pleaſure to command, that I preſume not to 'come in his preſence, or court: that he finds my 'allegations againſt Mr Chancellor of the Exchequer, 'to be deficient to the ends they were offered, and 'are taken to be a defamatory libel.

'Since again, for farther vindication of Hyde, have 'been diſperſed many copies of a declaration, in 'writing, as authorized by his Majeſty, January 13, '1654, whereof divers copies have been diſperſed 'not only in France, but alſo in England, Holland, 'and elſewhere, and of the ſame here next enſuing is 'a copy.'

Tueſday the 13th of January, 1654.

Preſent,

The King's Majeſty,
The Queen's Majeſty,
The Duke of York,
The Duke of Glouceſter,
Prince Rupert,
Lord Keeper Sir Edward Herbert,
Lord Chamberlain Lord Piercy,
Lord Inchequin,
Marquis of Ormond, Lord-Lieutenant of Ireland,
Lord Jermin,
Mr Chancellor of the Exchequer.

'Whereas, upon complaint made the 22d day of 'December laſt, by Mr Chancellor of the Exchequer, 'of certain diſcourſes ſpread abroad to his prejudice, 'as if he was under an accuſation of high treaſon: and 'upon his humble deſire that his Majeſty would exa- 'mine the grounds of thoſe diſcourſes, his Majeſty, 'after other inquiries, cauſed a letter to be read, 'which had been written to himſelf, in Auguſt laſt 'paſt, by Sir Richard Greenvile; in which he inform- 'ed his Majeſty, That Mr Chancellor of the Exche- 'quer had made a ſtep into England before his laſt 'coming to Paris; and that he had there private con- 'ference with Cromwell, and that he had a penſion 'paid him a long time out of England for intelligence; 'for juſtifying which information, the ſaid Sir Richard 'being required by his Majeſty to ſend him the grounds 'thereof, had ſent a letter, written to him by Mr Ro- 'bert Long, which was then likewiſe read: Upon 'which matter, after his Majeſty had examined other 'allegations, made by Sir Richard, which he found to 'be untrue, and ſome whereof his Majeſty himſelf 'knew to be falſe, his Majeſty had formerly declared 'his judgment to the ſaid Sir Richard, forbidding him 'to come into his preſence.——And moreover, his 'Majeſty examined Mr Peter Maſſonet at the board, 'the 12th of this inſtant, in regard, he had been men- 'tioned as one of the authors of that report; and like- 'wiſe cauſed a paper, written by the ſaid Mr Robert 'Long, dated January 13, in juſtification of what he 'had formerly written to Sir Richard Greenvile, to be 'read; which paper his Majeſty looks upon as a libel, 'derogatory from his own honour and juſtice, as well 'as full of malice againſt Mr Chancellor, and will 'hereafter take farther conſideration thereof. And 'upon the whole matter declares, that the accuſation 'and information againſt Mr Chancellor, is a ground- 'leſs and a malicious calumny, and that he is well ſatiſ- 'fied of his conſtant integrity and fidelity in the ſervice 'of his father and himſelf: and moreover, that he will 'in due time farther examine this unworthy combina- 'tion againſt him, when it ſhall be more in his power 'to puniſh the perſons who ſhall appear to be guilty of 'it. And, in the mean time, his Majeſty farther de- 'clares his former judgment, That the ſaid Richard 'Greenvile ſhall not preſume to come into his preſence.

'To conclude this declaration I only ſubſcribe— '*O put not your truſt in princes, nor in any child of* '*man, for there is no help in them.*

'Though theſe experiences have grieved me, yet 'they have of late done me good, for they mind me 'of my greateſt duty; and accordingly I will purſue it, 'to ſeek my peace with God and man, and to find me 'a quiet dying place in my native country, never again 'to touch with any worldly affairs.

'The premiſes being ſo ordered to public view, it 'is free for the world to judge whether or not I am 'guilty of a crime worthy of baniſhment, becauſe, as 'my conceived duty, I advertized the King how Hyde 'was ſuſpected, and reported to betray his Majeſty, 'and I named my authors and my advices received 'thereof

'This being, why ſhould ſuch performance of duty 'be charged againſt me, as guilty of a combination 'againſt Hyde, whereof I proteſt myſelf not to be 'guilty in any particular; rather the contrary may be 'conceived, that Hyde is guilty of ſome combinations 'againſt me, in ſome relations not convenient here to 'be mentioned.

'If perſons, to perform their loyal duty, ſhall diſco- 'ver probabilities of treaſon, and be ruined for it, 'who then will trouble themſelves to do it, when as 'ſovereignty ſhall cenſure loyalty as a crime.

'I muſt confeſs truths. After ſight of his Majeſty's 'diſpleaſure, it gave me for ſome days a moſt hearty 'ſorrow and grief for myſelf, as having loſt that royal 'countenance which loyal duty made me love.

'Now alſo I'll confeſs, I am not leſs ſorry for the 'King's loſs of ſo faithful a ſervant, that has freely ſa- 'crificed both his eſtate and life for him.

'Such he wants, and ſuch he will want, but that's 'not valued Hyde muſt be conceived injured by 'common fame: he may not be taken guilty of any 'diſloyalty.

'But

preſence, and thereby ſecured himſelf for the future, againſt an opponent who had abilities and merit of every kind, and who, in this very tranſaction, was rather zealous and credulous than criminal; and there is reaſon to believe that the Chancellor himſelf thought ſo, ſince, in the account he has given us of this matter, in which it clearly appears, that except the Marquis of Ormond he had not a real friend in the council, he never ſo much as once mentions Sir Richard Greenvile, being either content with the revenge he had taken, or conſcious that the part he had acted had nothing in it baſe or unworthy (*t*). Sir Richard Greenvile himſelf was ſo ſecure of this, that he ſoon after publiſhed an apology for his own conduct, together with the order, in Holland; in which he expreſſes himſelf, as the reader has ſeen, with great ſpirit, and as if he had been wholly indifferent as to the event. But though great minds may conceal, that does nothing towards preventing their feeling ſtrokes of this nature; Sir Richard, who had ſupported ſo many and ſo great misfortunes, ſunk under the weight of this; and being deprived of that cordial which had hitherto ſuſtained his ſpirits, the hopes of rendering ſervice to his exiled ſovereign, fell the victim of his undeſerved diſpleaſure, and, as the laſt teſtimony of his unſhaken loyalty, died of GRIEF (*u*). This is not ſaid ſlightly or from conjecture, but is a very certain and melancholy fact. As ſoon as he had written and publiſhed his Vindication, he ſhut himſelf up in a cloſe retirement, ſuffered his beard to grow, in teſtimony of his ſorrow, and very ſoon quitted that life which his misfortunes had rendered hateful; but when or where is not in our power to ſay: all we know of him farther is, that his remains lie interred in a church at Ghent, with this inſcription only upon a plain ſtone:

(*t*) Clarendon's Hiſtory of the Rebellion, Vol. VI. p. 515—520.

(*u*) Lord Lanſdowne's Works, Vol. II. p. 247.

Sir Richard Greenvile,
The King's General in the Weſt.

His Wife ſurvived him for many years, and came again into the poſſeſſion of her eſtate, about which ſhe embroiled herſelf once more in Chancery (*w*). He had by this lady only one daughter, who out-lived him, named Elizabeth, who became the wife of William Lennard, Eſq; (*x*), and was never the better for her mother's eſtate (*y*), but might be truly ſaid to inherit the ill fortune of her Father (*z*).

(*w*) Cafes in Chancery, p. 19.

(*y*) Lord Lanſdowne's Works, ubi ſupra.

(*z*) Collins's Peerage, Vol. V. p. 89.

(51) Vindication of Sir Richard Greenvile.

'But Sir Richard Greenvile, for his preſuming loyalty, muſt be, by a public declaration, defamed as a Banditti, and his very loyalty underſtood a crime.

'However, ſeeing it muſt be ſo, let God be prayed to bleſs the King with faithful counſellors, and that none may be prevalent to be any way hurtful to him or to any of his relations.

'As for Sir Richard Greenvile, let him go with the reward of an old ſoldier of the King's; there is no preſent uſe for him, when there ſhall be, the council will think on't—if not too late, *Vale*.

'Sir Richard's part in this matter was unavoidable (51). No generoſity could have excuſed ſtifling informations of ſo dangerous a nature. Concealment was high-treaſon: he could do no leſs than communicate the advice; and he did it in the moſt private manner, in a letter to the King, which his Majeſty was at liberty either to ſtifle or examine, as in his own wiſdom he ſhould think fit: in this there could be no crime, in ſilence there would, eſpecially ſince thoſe informations, however improbable, were not taken from raſh and idle diſcourſes, but ſignified under the hands of perſons of note and character, who undertook for the proof. Neither was Sir Richard haſty or precipitate in producing his evidence, he ſecured his vouchers under hand and ſeal before he adventured to advertiſe his maſter. If there was any malicious combination, he poſitively denies any ſhare in it: yet ſuch was the Chancellor's grudge to him, and to him only that he was the ſole perſon fingled out to be puniſhed: the reſt were referred to another time, when his Majeſty might have more power of examining and puniſhing; and yet, when that time came, and theſe very original accuſers returned to the charge, reviving this very article in a parliamentary impeachment, Wyndham was liberally provided for, Mr Robert Long was made Sir Robert, and Auditor of the Exchequer, and Sir Richard, had he been alive, perhaps might have been a General again.'

E

GREENVILE, [Sir JOHN] afterwards Earl of Bath; he was born at the houſe of his father, Sir Bevil Greenvile (*a*), in the year 1628. And after receiving the firſt elements of a liberal education in his own county, was, about the beginning of the troubles, removed to Oxford, and there entered a Gentleman-Commoner of Glouceſter-Hall (*b*), over which, the famous Degory Wheare at that time preſided (*c*). His ſtudies there were interrupted by the news of his father's immature, though glorious, death, at the battle of Lanſdowne; upon which, as the chief of his family, and the hopes of Cornwall, this young gentleman, though ſcarce fifteen, left the ſeat of the Muſes, to put himſelf at the head of his father's regiment (*d*); in which he very gallantly ſerved, 'till it was thought neceſſary to ſend him, with the remains of that regiment, into his own county, to recruit it; where his extenſive influence, and wiſdom ſuperior to his years, placed him in the command of a brigade, inferior to none on either ſide, conſiſting of five regiments of Coniſh infantry (*e*). In this ſtation he was, when, with the reſt of the officers of his Majeſty's forces, he ſubſcribed that famous letter to the Earl of Eſſex, from which the calmer and more candid part of both armies, entertained the ſtrongeſt hopes of peace (*f*) [*A*]. After the defeat of

[*A*] *The ſtrongeſt hopes of peace.*] We have mentioned this letter in the former article, and, indeed, it is one of the papers of moſt conſequence, among the many that paſſed between both parties, in this lamentable war; the reader therefore will be pleaſed to peruſe, and conſider it, and weigh particularly the names of the officers, by whom it was ſubſcribed.

'My

of the Earl of Eſſex, he attended his Majeſty in his return to Oxford, and behaving very bravely in the ſecond battle of Newbury, fought on the 27th of October, 1644, we find his name amongſt the heroes who were wounded in that engagement, by the title of Sir John Greenvile (g). At the beginning of this action, Sir John was poſted on an eminence at Spine, with a body of infantry, a few pieces of cannon, and a ſmall retrenchment before him. The enemy advancing with a ſuperior force both of horſe and foot to charge him, General Goring attacked them with the King's cavalry to prevent it; but the Earl of Cleaveland being made priſoner in this charge, the Parliament's forces attacked thoſe under Sir John Greenvile with great ſpirit, and met with as obſtinate a reſiſtance; 'till Sir John, receiving a ſevere ſtroke with a ſword upon the head, his troops began to give way, when Sir

(g) Mercurius Aulicus. Sir Edward Walker's Hiſtorical Diſcourſes, p. 115. Ruſhworth's Collections, Part iii. Vol. II. p. 721.

' My Lord,

' We having obtained his Majeſty's leave to ſend ' this to your Lordſhip, ſhall not repeat the many ' gracious meſſages, endeavours, and declarations ' which his Majeſty hath made, and have been ſo ' ſolemnly proteſted in the preſence of God and men, ' that we wonder how the moſt ſcrupulous can make ' any doubt of the real, and royal performance of ' them. But we muſt, before this approaching occa- ' ſion, tell your Lordſhip, that we bear arms for this ' end, only to defend his Majeſty's known rights, the ' laws of the kingdom (1), the liberty of the ſubject, ' the privilege of the Parliament, and the true Prote- ' ſtant Religion, againſt Popery, or Popiſh innova- ' tions. And this being the profeſſed cauſe of your ' Lordſhip's taking arms, we are confident, that, con- ' curring in the ſame opinions and pretences, we ' ſhall not, by an unnatural war, weaken the main ' ſtrength of this kingdom, and advance the deſign of ' our common enemies, that long ſince have devour- ' ed us in their hopes. My Lord, the exigent of the ' time will not ſuffer us to make any laboured decla- ' rations of our intentions, but only this, That on the ' Faith of Subjects, the Honours and Reputation of ' Gentlemen and Soldiers, we will with our lives ' maintain that which his Majeſty ſhall publickly pro- ' miſe, in order to a bloodleſs peace. Nor ſhall it be ' in the power of any private perſon whatſoever to ' divert this reſolution of ours; and the ſame we ex- ' pect from you. And now we muſt take leave to pro- ' teſt, That if this our profer be neglected, which we ' make neither in fear of your power, nor diſtruſt of ' our own; but only touched with the approaching ' miſeries of our nation, that what calamities ſhall op- ' preſs poſterity, ſhall lie heavy upon the ſouls and ' conſciences of thoſe that ſhall decline this overture, ' which we cannot hope ſo ſeaſonably to make again, ' if this conjuncture be let go. And therefore it is ' deſired, that your Lordſhip and ſix other perſons, ' may meet our General to-morrow, at ſuch an indif- ' ferent place as you ſhall think fit, attended with as ' many, or, if you ſhall find it any way inconvenient to ' come in perſon, that then your Lordſhip will ap- ' point ſuch, or ſo many, to meet with the like num- ' ber from hence, that may conſider of all means poſ- ' ſible, to reconcile the unhappy differences and miſ- ' underſtandings that have ſo long afflicted the king- ' dom; and for the ſecurity of your Lordſhip, and ' thoſe that ſhall come with, and be employed by, ' your Lordſhip, we do engage our Faith and Ho- ' nour, and do expect the ſame from your Lordſhip; ' deſiring withal, your very ſpeedy anſwer, which ' muſt be a guide to our proceedings; concluding, ' that if this ſhall be refuſed, we ſhall hold ourſelves ' juſtified before God and man, whatſoever ſhall be ' the ſucceſs. So we reſt,

To ſo cool, and moderate a letter, the Earl of Eſſex returned the following ſhort and ſurly anſwer.

' My Lords,

' In the beginning of your letter, you expreſs by ' what authority you ſend it. I having no power by ' the Parliament (who have employed me) to treat, ' cannot give way to it without breach of truſt.

My Lords,

I am,

Your humble Servant,

Liſtithiel, Auguſt 10, 1644. Eſſex.

For his Highneſs Prince Maurice, and the Earl of Forth.

This letter is ſeverely cenſured by the Noble Hiſtorian (2), who ſeems to think the original deſign of the officers fell very little ſhort of treaſon; and in the ſame light it was conſidered by Sir Edward Walker (3), who wrote immediately under the King's eye. One would imagine theſe authors thought the King was at the head of an army fighting for pay, againſt a foreign enemy, and not of free-born Engliſhmen, contending for his Rights and their own Liberties, againſt their deluded countrymen. It was the lofty ſentiment of theſe gentlemen, as to the prerogative of the Crown, when guided by their councils, that gave the Parliament great encouragement, and ſunk the ſpirit of the King's true friends, who fought from principle, and had ſomething to loſe; and hence ſprung the notion of getting the Prince of Wales to act, which in the ſentiments of the ſame counſellors, approached nearer ſtill to treaſon.

(2) Hiſtory of the Rebellion, Vol. IV. p. 519.

(3) Hiſtorical Diſcourſes, p. 59.

Sir John Cansfield, with the Queen's regiment of horſe, happily interpoſed, checked the enemy's progreſs, and ſaved Sir John Greenvile from being taken; in which charge however, Sir John Cansfield had the misfortune to loſe his leg (*b*) by a cannon ſhot. In the ſpring of the following year, Prince Charles being then in his own duchy, and ſeeing how great an intereſt the family had, as well as admiring the prudence and ſpirit of this young ſoldier, declared him of his own accord one of his bed-chamber (*i*); which gave an occaſion, though the King confirmed his choice, to one of thoſe unfortunate letters to the Queen; which, being ſoon after taken at Naſeby, were, by the Parliament's order, decyphered and publiſhed, on purpoſe to ſhew to how great a degree the King was governed by her counſels (*k*) [*B*]. As for Sir John Greenvile, he continued to ſerve the young Prince with much zeal and fidelity, and with a diſintereſtedneſs that in all reſpects merited the favour ſhewn him, and wrought ſo ſtrong a confidence in him, that when his affairs in the Weſt began firſt to decline, which was not long after Sir John's being ſworn of his bed-chamber, he made choice of him, though ſo young a perſon, to go over to France, in order to know what aſſiſtance he might expect from thence, and whether, in caſe of neceſſity, it would be expedient for him to retire thither. At his return, he brought a letter from the Earl of Norwich, the King's Ambaſſador at that court, in which he very roundly declared, the Prince's coming thither would be his certain ruin, referring himſelf for his reaſons in ſupport of ſuch a declaration as this to the bearer, who, in vindication of this letter, communicated many paſſages of moment (*l*). We have theſe facts almoſt in theſe words in the work of the Noble Hiſtorian, but not a ſyllable of Sir John Greenvile; only we are told that this letter and meſſage was brought by one of the Prince's bed-chamber (*m*). In the beginning of the month of March following, the Prince, at the earneſt requeſt of thoſe who, in virtue, as they ſaid, of the King's authority, governed him, embarked for the iſles of Scilly, where he remained from the 4th of that month 'till the 16th of April, and then, by the ſame advice, retired to the iſland of Jerſey (*n*). Sir John Greenvile attended him all this time, and there happened a paſſage during the Prince's ſtay in Scilly, which, though very ſlightly touched by the Noble Writer, might, if it was in our power to give it, deſerve a clearer explanation. He ſays, that the Prince received by a trumpet a ſummons, rather than an invitation, from Sir Thomas Fairfax; adding immediately, 'It was well it came not to Pendennis, where it would have found a party among the Prince's ſervants (*o*).' It is very poſſible, this party amongſt the Prince's ſervants meant him as well as thoſe who were for hurrying him out of his father's dominions. Sir Thomas Fairfax is ſaid to have conceived ſome perſonal diſtaſte (*p*) to the King; but there is nothing more certain, than that he was no enemy to monarchy, and very freely hazarded his life and fortune afterwards for the ſervice of this Prince, when his affairs were in a much more deſperate condition (*q*): Who therefore can tell what his intentions might be now [*C*]? The Prince, after ſome ſtay at Jerſey, and freſh diſputes amongſt

[*B*] *The King was governed by her counſels.*] This letter is dated from Droitwich (4), Wedneſday, May the 14th; and ſo much of it as regards our purpoſe follows.

(4) See this Letter in the Appendix to Ludlow's Memoirs, Vol. III. p. 271.

'Now, I muſt make a complaint to thee of my ſon Charles, which troubles me the more, that thou mayſt ſuſpect, I ſeek, by equivocating, to hide the breach of my word, which I hate above all things, eſpecially to thee. It is this, he hath ſent to deſire me, that Sir John Greenfield may be ſworn Gentleman of his Bed-Chamber; but already ſo publickly engaged in it, that the refuſal would be a great diſgrace, both to my ſon, and the young gentleman, to whom it is not fit to give a juſt diſtaſte, eſpecially now, conſidering his father's merits, his own hopefulneſs, beſides the great power that family has in the Weſt: yet I have refuſed the admitting of him, until I ſhall hear from thee. Wherefore, I deſire thee, firſt, to chide my ſon for engaging himſelf without one of our conſents; then not to refuſe thy own conſent; and, laſtly, to believe, that directly, or indirectly, I never knew of this while yeſterday, at the delivery of my ſon's letter. So farewel ſweet-heart, and God ſend me good news from thee.'

It is but too apparent from this letter, that though the King had a judgment ſuperior to thoſe by whom he was ruled, yet in reality he had no will of his own, and was very little inclined his ſon ſhould have any either. When the reſolution was taken at Oxford to ſend the Prince into Cornwall, it was upon a ſuppoſition, that his preſence in a part of his father's dominions, which in ſome meaſure belonged to him, might be beneficial to both their concerns. It is very plain, that the Prince underſtood it ſo, and was very well inclined to have done what in him lay to that purpoſe. But the Juncto, in his council, all of them ſtrangers in that part of the world, and who had no natural intereſt in it, were extremely jealous of the native Corniſh (5), who, they ſaw, and, indeed, it was no wonder, as zealous to declare their love for their native country, as their loyalty for their natural Prince. If this had not been the caſe, the council would have prevented, by their interpoſition, the King's finding any thing amiſs, in his ſon's making a promotion, in his bed-chamber, founded as much in policy, and his true intereſt, as in affection and gratitude. In a time of perfect ſerenity, the King might, perhaps, have had reaſon for his complaint. But in this broken and diſtracted ſituation of things, when his ſubjects were every where in arms againſt him, and the Prince at a diſtance, to complain of the Prince, and to exculpate himſelf when, at the ſame time, he avers there was no fault, and to one, who could be no judge, though it ſeems ſhe always expected to decide, muſt appear very ſtrange, and leſſen the King's character extremely; with which view it was publiſhed by the Parliament, and the very publication of theſe letters ſufficiently ſhew, how little they meant to confide for the future in the King, whoſe forgiveneſs, if they had ever ſeriouſly deſired, they would not thus maliciouſly, needleſsly, and wantonly, have provoked.

(5) Lord Lanſdowne's Works, Vol. II. p. 224, 225.

[*C*] *What his intentions might be now.*] The war was now in a manner determined, at leaſt in the Weſt, where the King had the moſt friends, and, conſequently, the greateſt force; which was in a ſtrange manner divided, diſperſed, and deſtroyed by the diſputes between the Prince's council and the Generals, and their reciprocal miſunderſtandings amongſt themſelves; for they were as little united in their councils of State and of War, as with each other. It is a queſtion that has been

amongſt his little court, came at length, contrary to the advice of his council, to a ſettled reſolution of going to France, which he accordingly executed; but found ſuch a reception in all reſpects, as, in the name of the Earl of Norwich, Sir John Greenvile had foretold him, and with which he was ſo diſguſted that he did not remain there long (r). About this time it ſeems that Sir John Greenvile returned into the iſles of Scilly; for, though upon the Prince of Wales's quitting theſe iſlands, and taking with him the beſt part of the officers who ſhould have defended them, their inhabitants ſubmitted to the Parliament, and received ſome ſmall garriſons; yet, as ſoon as their fleet retired, and the people had recovered from the conſternation they were in, they reſolved to deliver themſelves from their new maſters; and, as ſoon as they had done ſo, they ſent to make their ſubmiſſion to the Prince of Wales, and to deſire he would ſend ſome officer of experience, and well acquainted with their iſlands, to defend them, which they thought might be done in ſuch a manner as to prevent their feeling that puniſhment with which they were threatened by the Parliament (s). Upon this, Sir John Greenvile, with many officers who had ſerved under him, were ſent thither immediately, and eſtabliſhing himſelf in St Mary's, fortified as well as he could, and made the beſt diſpoſitions poſſible for the ſecurity and improvement of this laſt remnant of his maſter's ſovereignty. The revolt of part of the fleet from the Parliament to the Prince made theſe iſlands of ſtill greater conſequence; for Sir John taking all the advantages that their commodious ſituation would allow, ſometimes alarmed the coaſts of Cornwall, ſometimes thoſe of Devon, and ſometimes his frigates cruized on thoſe of Ireland (t). In theſe expeditions they gave terrible alarms, and took ſeveral officers of rank in the Parliament's ſervice, whom they kept priſoners, but treated them gently (u). Beſides all this, Sir John was daily increaſing his forces by the reſort of many officers and ſoldiers

(u) The Civil Wars of Great Britain and Ireland, p. 326.

been more than once aſked, and perhaps, the curious reader will think it a queſtion worth anſwering. Whether in ſuch a ſtate of things, any method might have been ſtruck out for preſerving the Conſtitution, and uniting once more the Parliament with the Monarchy, in which, without doubt, the eſſence of our government conſiſts? The moderate men in the King's army, who diſliked the dictates of Digby, the pompous eloquence of the Chancellor of the Exchequer, and the peremptory orders of the princes Rupert and Maurice, had, as we have hinted before, and as we intend fully to explain here, caſt their eyes upon the Prince of Wales, and thought that under his auſpice a ſolid peace might be made (6). It has been inſinuated, that the worthieſt men on the ſide of the Parliament had likewiſe thought of the ſame expedient; and that Eſſex and Wilmot underſtood one another on this head; and that it was to prevent other people from being brought to underſtand it, that Wilmot was accuſed, and arreſted in the King's army by the intrigues of the miniſters, rather than any real umbrage taken by the King. As to the firſt point, that the calmer and more conſiderate officers on the King's ſide had this opinion, we have the fulleſt authority to prove (7). In reſpect to the Parliament, there are two things certain, the firſt, that the wiſe John Hampden, who meant to mend and not to murther the King, or the Monarchy, had ſet his heart on one poſt, which was, being governor to the Prince of Wales; a circumſtance, that fully proves he was no Republican, or inveterate enemy to the Royal family. The other is, that as darkly as the Noble Hiſtorian expreſſes it, the Parliament now, when he was in the iſles of Scilly, invited the Prince (8) to come to them. They ſaw what was working by the independent republican faction, and they foreſaw what would be the iſſue of it; and at the ſame time they could diſcern no method ſo likely to reſtore the reeling conſtitution, as placing at their head the undoubted heir of the Crown; and, as at this time they had the greater part of the army, their new, as well as their old General well diſpoſed to it, the thing might very probably have been done. But we muſt not expect to be credited on our own authority, or that of an anonymous author, but whoſe work contains ſome remarkable facts for all that (9). If the Noble Hiſtorian, who ſometimes records things of leſs moment, had preſerved, inſtead of ridiculing Sir Thomas Fairfax's meſſage, we might have been better able to judge of it; however, it is well it is not totally loſt. The celebrated Lord-Keeper Whitlocke, who probably had ſome concern in it, treats this buſineſs thus (10). 'March 17, 1645, The Houſe being informed that 'the Prince was in Scilly, and in ſome ſtraits for want 'of proviſions, they agreed that a letter ſhould be 'written to him, in a loving and tender way from 'both Houſes of Parliament, to invite him to come 'into the Parliament, and to reſide in ſuch place, and 'have ſuch attendants and counſellors about him as 'ſhould be approved by both Houſes.' We find in the ſame work, that this propoſition was puſhed as far as it would go, that the Lords (11) joined in it, that the ſtrongeſt aſſurances were given in reſpect to his liberty, and manner of living, and that at length Richmond was fixed upon for the place of his reſidence. To all this, the Prince, ſometimes by the advice, perhaps, of thoſe counſellors, the Noble Hiſtorian ſo much derided, gave very modeſt and moderate anſwers; which kept the negotiation alive, till the Prince was either perſuaded, or compelled to leave Jerſey, and go to France. Neither was the King inſenſible, or, perhaps, averſe to this, for when in his way to the Weſt, the whole county of Somerſet came to ſalute him near Ilcheſter, at the cloſe of a long and gracious ſpeech, in which he profeſſed, that he deſired nothing ſo much as peace, and to rule according to the laws of the land, he pointed to the Prince, and ſaid (12), If I live not to do it, I hope this young man, my ſon, your fellow ſoldier in this expedition will, to whom I ſhall particularly give it in charge. When he ſent his own meſſage to Eſſex for peace, he intended to have ſent a meſſenger alſo with inſtructions, and this meſſenger was Mr Harding, one of the Prince's bed-chamber, and his (13) inſtructions are yet extant. Add to all this, that in the laſt moſt diſmal ſcene of his life, when all other circumſtances of hope or comfort had forſook him, he had recourſe to this propoſition, to hear (14) which the High Court of Juſtice adjourned. It came, indeed, then too late, for the Parliament was purged, the army as much revolted from them as from the King, and Cromwell and his aſſociates maſters of all. But even then, Mr Downes, one of his judges, cried out, Have we (15) no bowels? and would have gone further, if he had been permitted. All theſe particulars taken together, moſt undoubtedly ſhew, that at this juncture, when the Prince was in the iſlands of Scilly, ſuch of his ſervants as thought he might have treated, were not to be looked upon as either wanting in their duty to the King, or deſtitute of common ſenſe. If after all another queſtion ſhould be aſked, Why, if affairs ſtood in this light, did not the Prince's council unanimouſly incline to treat? To this two things may be ſaid; Firſt, It is very extraordinary, the Noble Hiſtorian, who has recorded ſo many other things, has not thought proper to record theſe reaſons; the other, that the Parliament, though then deſirous of receiving the Prince, were determined never to have any thing to do with theſe miniſters, and had declared it.

soldiers who had served in the late King's army, and by such as had a mind to share in the riches which their daily captures produced (*w*). These circumstances taken together, but more especially the loud complaints of the city of London, in regard to the depredations to which their trade was exposed, alarmed the Parliament so much, that they sent a strong squadron with a good body of land troops on board, commanded by two of the best officers in their service, Sir George Ayscue and General Blake, to reduce those islands (*x*). This was in the beginning of May 1651, the King being then in Scotland, and the Dutch having a good fleet at sea, of whom the Parliament then began to be jealous (*y*). This was not without reason, for the States had actually made propositions to Sir John Greenvile, which might have tempted a man of less honour, for they offered him one hundred thousand pounds to put those islands into their hands, to which, if he had consented, Van Tromp was ready, with a squadron of twelve men of war, to have taken possession of them: but Sir John, after making all the preparations necessary for a desperate resistance, entered into a treaty with General Blake; and having made him sensible, that, if he was driven to extremities, the reduction of those islands would be very dearly purchased, he procured from him as good terms as he could reasonably expect, which were signed on the 23d of May (*z*). In pursuance of these articles, the Parliament officers, amongst whom were the Colonels, Axtel, Sadler, and Le Hunt, were set at liberty, the greatest part of Sir John's forces transported, pursuant to those articles, wherever they pleased to go (*a*), and Sir John himself, with his principal officers, returned with Blake into England, in order to make his submission, and, without any composition, to live quietly upon his own estate (*b*). The Parliament, amazed at the large concessions they contained, at first shewed some dissatisfaction with respect to these articles, and seemed little inclined to ratify them. But Blake on the one hand representing his reasons in a very strong light, and declaring on the other, that if they were not ratified he would lay down his commission, they resolved that they should be punctually executed, and so they were (*c*) [*D*]. As soon as he found himself in so easy a situation, Sir John thought it expedient to settle himself in the world, that he might make his interest in Cornwall and Devonshire still more considerable, and, at the same time, take off the apprehensions which those then in possession of the government entertained of his principles and activity. Accordingly, in 1652 he espoused Jane, the only surviving daughter of Sir Peter Wych, who, after residing twelve years as Ambassador at Constantinople, was made Comptroller of the Household to Charles I. upon whom he made a very considerable settlement, in which he durst not take the title of Knight, but stiles himself John Greenvile, son and heir of Sir Bevil Greenvile, late of Stowe in the county of Cornwall (*d*). The easiness of his circumstances, and this alteration in his family, did not in the least abate his zeal for the King's service. On the contrary, he was always one of the Commissioners appointed by King Charles for carrying on his affairs in England, and for concerting measures with his friends for the support of his Majesty and his brethren abroad, or for the bringing him home. He was not even discouraged when it became necessary for the King to grant a new commission (*e*), on account of the treachery of one of those, and him none of the least capable, who had been named in the former. But Sir John, though a young man, in possession of a good fortune, and entirely beloved in his country, conducted his correspondence so warily, behaved so decently to all persons in power, lived so unexceptionably in the country, that he met with little molestation, though he was sometimes restrained, and remained always suspected [*E*]. He had, besides

[*D*] *And so they were.*] It is very clear that Sir John Greenvile, while he remained possessed of these islands, gave the world a very different notion of them, from what had ever been entertained before. A very knowing and candid writer says, that he made it evident, that the post he had taken was a key (16) that opened a passage to several nations. He had a great garrison to subsist, and, as the islands afforded little for that purpose, he was forced to make use of his frigates; the captains of which, under various pretences, made free with the ships of all nations, and amongst others, took twenty sail of Dutch merchant-men, of which the States complained loudly to King Charles II. (17) who was then in Scotland; and, at the same time, sent Admiral Van Tromp, with a compleat squadron, to procure satisfaction by force, or, which they rather affected, to obtain possession of these islands for a sum of money (18). Sir John made no farther use of this latter proposal, than to draw from the Parliament better terms. Admiral Blake did not grant these 'till he had tried what could be done by force, for he debarked Captain Morris (19) with a considerable force, who attacked the two islands of Trisco and Briers with his best troops, which they carried indeed after a long dispute. But Colonel Wogan, who defended them, sold them so dear, that they did not care to purchase any thing more upon the same terms; and therefore, upon his retreat to St Mary's, where there were great magazines and tolerable fortifications, the Parliament Generals very wisely changed their batteries, and proposed honourable terms. Sir John Greenvile stipulated in the first place indemnity for all under his command, and next, a free passage for them wherever they had a mind to go. By these propositions he kept his people firm; and we shall be the less surprized, that even Blake was willing to be rid, almost at any rate, of such troublesome people, when we learn, that, at the time of Sir John's surrender, he had, under his command, three and twenty field-officers (20), sixty captains, a proportionable number of subalterns, and that all the private men were veterans, who, under such commanders, would not have been easily subdued, and who, if hard pressed, might have called in the Dutch if they had pleased. This great affair, which Sir John managed with so much firmness, prudence, and address, with two such great men as Ayscue and Blake at the head of a fleet of fifty sail, did him so much the more honour, as he was at this time but in the twenty-third year of his age, a season when conduct is not always shewn even where courage is not wanting.

[*E*] *Though he was sometimes restrained and always suspected.*] We have, in a former article, dwelt a little on the the natural sagacity and prudence of this family, and of the wonderful steadiness and calmness of this

beſides that general plan concerted among the King's friends, ſome particular views of his own. He knew the cloſe connection that had ſubſiſted between Sir Bevil Greenvile and Sir Thomas Monk, the obligations, that General Monk, who now commanded in Scotland, had to Sir Richard Greenvile; and he foreſaw that there might be a time when his relation to that family might be of uſe. When he came to reſide at Kilkhampton, he found the parſonage as well as his eſtate under ſequeſtration, on account of the delinquency, that is the loyalty, of Mr Rouſe, the incumbent, into whoſe church the ſequeſtrator had thruſt his ſon. But, upon the death of Mr Rouſe, the living being vacant, Sir John exerted his right, and beſtowed it upon Mr Nicholas Monk, the General's brother, who, having married a widow, lived ſilently and peaceably at a ſmall living, about twelve miles from it. This living of Kilkhampton was worth three hundred pounds a year (f); and, at the time Sir John beſtowed it, he gave Mr Monk to underſtand, that, if he ſhould afterwards have any occaſion for his ſervice with his brother, he ſhould depend upon him. Mr Monk thereupon made him, as a due teſtimony of gratitude, a clear promiſe, which, as ſoon as an

(f) See the Dedication prefixed to Dr Price's Myſtery and Method of the King's Reſtoration. Skinner's Life of General Monk, p. 90, 91. Gumble's Life of General Monk, p. 104.

this gentleman's father, Sir Bevil, in which Sir John reſembled him extremely; for, with great quickneſs of parts, and with much ſolidity of judgment, he had a degree of prudence, that, perhaps, did more in the management of thoſe dangerous and difficult things with which he was intruſted, than all his other great qualities together. He did not promote the King's intereſt, or rather endeavour to promote it, as ſome did, by feaſting, and having conſtantly about him a number of dependants, obſtreperouſly zealous for the cauſe; but, on the contrary, held a fair correſpondence with all his neighbours in general, and was particularly careful in cultivating an acquaintance and friendſhip with ſuch gentlemen of fortune and family, as, in the beginning of the troubles, had engaged on the ſide of the Parliament, and afterwards changed their ſentiments on ſeeing the unexpected and unnatural lengths to which things had been carried. But this modeſty and ſilence did not render him at all leſs ſteady or leſs uſeful in the King's ſervice, in promoting which, he was in the firſt commiſſion which his Majeſty granted for the management of his affairs in England, and which, for it's ſuppoſed impenetrable ſecrecy, was commonly ſtyled, *The Sealed Knot*. It was (21) compoſed of the Earl of Oxford, the Lord Bellaſis, Sir William Compton, Sir Richard Willis, Colonel John Ruſſel, and Sir John Greenvile. But, in October 1659, it was diſcovered, that Sir Richard Willis betrayed all to Secretary Thurloe (22). Upon this, Sir Edward Hyde wrote to all his correſpondents to give them notice of Sir Richard's behaviour; and the King, upon his return into the Low-Countries from the tour he had made to the frontiers of Spain, found it neceſſary to ſend over a new commiſſion (23), conceived in the following terms:

'Charles, by the Grace of God, King of England, 'Scotland, France, and Ireland, Defender of the 'Faith, &c. To our right truſty and well beloved, Arthur Anneſley, Eſq; (afterwards Earl of Angleſey) 'John Mordaunt, (afterwards Lord Viſcount Mordaunt) Sir Thomas Peyton, Bart. Sir John Greenvile, Knight, and William Legg, Eſq; and to every 'of them greeting. We do, by theſe preſents, conſtitute and appoint you our commiſſioners, giving you 'or any one or more of you power to treat with any 'our ſubjects of our kingdom of England, and dominion of Wales, that are or have been in arms againſt us 'or our father of bleſſed memory, or that have contributed to the preſent rebellion in England (excepting 'ſuch as actually ſat in judgment for the taking away 'the life of our ſaid father, or pleaded, as counſel 'learned, againſt his life, or attended as miniſters to 'that odious pretended court, or laid hands on his 'perſon in the execution of that horrid murther), and 'to aſſure them in our name, That, if they ſhall forſake the preſent rebellion, and join heartily and effectually for the ſuppreſſing of the ſame, and for our 'reſtoration to the rights due to us by the laws of God 'and that of our kingdom; That then we will not 'only freely pardon their former oppoſing us and our 'dear father, and all other their crimes and offences in 'acting in, adhering to, or complying with, the ſaid 'rebellion; but that we will recompenſe and reward 'ſuch of them, as ſhall, by any remarkable ſervice, 'merit of us, either by reducing or rendering any 'town, fort, or garriſon of the rebels into our hands, 'or into the poſſeſſion and power of you, or of any 'other truſtee employed by us or you for our ſervice. 'And what you or any one or more of you, ſhall, by 'virtue of this our commiſſion in writing, under your 'hands, or the hands of any one or more of you, promiſe in our name, in this kind we ſhall ratify and 'confirm and perform Given at our court at Bruſſels, 'this 11th day of March 1659, in the eleventh year 'of our reign'

In conſequence of this commiſſion, all who were named in it concurred in their endeavours, and left no path untried, no method uneſſayed, to reconcile to the King's cauſe ſuch as they thought any way capable of promoting it. In this they made a very great progreſs; for, as moſt of the ſenſible Lawyers were averſe to overturning every thing that reſembled the antient conſtitution in the State, ſo the learned and conſcientious Nonconformiſts were as little pleaſed with the deſtruction of the Church The nobility could not but ſee with regret, that they were confounded with the bulk of the people, and entitled to no farther reſpect than what reſulted from courteſy, and the remembrance of their former ſtation. Merchants and citizens, who had enriched themſelves by trade, were infinitely deſirous of ſeeing things ſettled, that they might be able to purchaſe lands with ſafety; and there wanted not ſome, even among thoſe who had been deepeſt in the worſt practices, who, forſeeing what afterwards happened, were deſirous, at any hazard, to make their peace in time, ſo as to enjoy quietly, and without queſtion, what they had acquired by ſo many former hazards. This confuſion of intereſts, the commiſſioners jointly and ſeparately managed with ſo much dexterity, that many of the moſt conſiderable perſons in the kingdom in point of intereſt and property, not a few of the officers in the army, and ſome even among the new courtiers, that is, thoſe who attached themſelves to the family of Cromwell, upon a ſuppoſition that the government might have continued in his family, overcoming all former prejudices, in a confidence that all paſt failings would be likewiſe forgotten, reconciled themſelves thoroughly, and engaged heartily to ſerve the King, and to reſtore him to his juſt rights. The remainder of the Long Parliament, who were at this time in poſſeſſion of the ſupreme authority, were far enough from being ignorant of what was paſſing; but, on the one hand, they conſidered the attachment of the army to them as an invincible ſecurity againſt all their enemies, and, on the other hand, they flattered themſelves, that they ſhould for ever fix this army, which however had turned them once out before, to their intereſts, aggrandize themſelves and their relations, and lay all their opponents in the dirt, by ſuffering theſe ſecret deſigns to ripen into act, then ſuppreſs them by the ſword, and laſtly, ſweep away the fortunes of all concerned, by an unrelenting act of forfeiture; and this, notwithſtanding the antient ties of blood or friendſhip, that might ſubſiſt between them and thoſe who were thus deſtined to deſtruction. Such were the perils to which Sir John Greenvile voluntarily expoſed himſelf, for otherwiſe, he might have ſat ſtill in the peaceable enjoyment of his paternal eſtate, and have been treated with all poſſible kindneſs by thoſe who would have indulged him in any thing, ſo he left them their authority.

an opportunity offered, he likewiſe very readily and punctually performed. There was nothing followed upon this immediately; but, when the general inſurrection was concerted, which was the laſt great plan for the King's reſtoration, upon which all his hopes depended, and in ſupport of which he determined to riſque his perſon, it was thought expedient to make ſome freſh overtures to General Monk, notwithſtanding he had obſerved a profound ſilence upon ſome former hints and invitations from the King; and in this deſign it was judged, that no one could ſo well ſerve his Majeſty as Sir John Greenvile, who was alſo very deeply embarked in the other affair [F]. Upon this, in the ſummer of 1659, the King

[F] *Who was alſo very deeply embarked in the other affair.*] We have, in the former note, ſhewn in what manner the King's affairs were managed at home by his commiſſioners, with whom he concurred to the utmoſt of his power, and very frankly offered to hazard his own perſon and the perſons of his brothers, at any time and in any manner that ſhould appear to them neceſſary, for their encouragement. We have before obſerved, that this deſign had a very broad bottom; for the Royaliſts, or thoſe who had been in arms for the late King, and the friends of the old Parliament, looking with abhorrence upon this remnant; began to perceive now they were cool, and had leiſure to reflect, that their intereſts were the ſame, and their principles not ſo remote from each other as they had formerly imagined. But as they were thoroughly ſenſible that prejudices ſtill prevailed amongſt the middle ſort of people, they very prudently agreed that the riſing ſhould be begun by ſuch as had been always avowed friends to liberty, and never in arms for the late King, of whom there was enough in all the counties of England and Wales to make a formidable appearance (24). Sir George Booth was to raiſe Lancaſhire and Cheſhire. Sir Thomas Middleton Shropſhire and Flintſhire. Sir John Carter Denbighſhire The Earl of Stamford Leiceſterſhire. The Lord Willoughby of Parham (who alſo advanced money to buy arms) Suffolk. Colonel Roſſiter Lincolnſhire. Colonel Popham Somerſetſhire and Wiltſhire, and to ſecure Briſtol and Taunton. Mr Edward Dunch and others Berkſhire. Major-General Maſſey, the Lord Herbert of Worceſter, and Mr How, Glouceſterſhire. Sir William Compton, Sir Thomas Leventhorp, and Mr Fanſhaw, Hartfordſhire. Mr Mordaunt, Sir Francis Vincent, and Sir Adam Brown, Surry. We might mention many more in almoſt every part of the kingdom; but that theſe are ſufficient to ſhew the nature of the deſign, and the manner in which it was managed, only one thing more is neceſſary, both in point of authority and for the ſake of perſpicuity, and that is the Declaration (25), which was to juſtify this riſing, and which was penned with great care and circumſpection, probably by the commiſſioners themſelves, ſo as to comprehend, and within a very narrow compaſs, the views of all the honeſt part of the nation; and therefore it follows.

(24) The Civil Wars of Great Britain and Ireland, p. 369.

(25) Baker's Chronicle, p. 649. Clarendon's Hiſtory of the Rebellion, Vol. VI. p. 672.

'Since it hath pleaſed Almighty God to ſuffer the 'ſpirit of diviſion to continue in this diſtracted nation, 'and to leave us without any ſettled foundation of re'ligion, liberty, and property, the legiſlative power 'uſurped at pleaſure and contemned, the army, raiſed 'at firſt for our defence, abuſed, and miſled into un'warrantable actions, by the cunning and ambition of 'ſome of the ſuperior officers, no face of government 'appearing, either in any ſingle perſon, or a body of 'men in council lawfully conſtituted, to whom the 'grievances of the people may with any probability of 'ſucceſs be properly addreſſed. Therefore we being 'conſcious of our duty, and ſenſible of our own and 'the nation's ruin if theſe diſtractions continue, or 'iſſue in a more fixed oppreſſion, by ſome ſettlement, 'inconſiſtent with the laws, peace, and intereſt of 'theſe nations, have taken arms in defence of ourſelves, 'and all others who will partake with us in the vindi'cation and maintenance of the freedom of Parliaments, 'againſt all violence whatſoever, of the known laws, 'liberty, and property, of the good people of this na'tion, who at preſent groan under illegal, arbitrary, 'and inſupportable taxes and payments, unknown to 'our anceſtors. This being our duty to God and to 'man, and our only deſign, we cannot deſpair of the 'bleſſing of him who gives victory, nor of the cheer'ful concurrence of all good people, nor of the unde'ceived part of the army, whoſe arrears and increaſe 'of future pay, and advancement of high command, 'we ſhall by all means procure, ſuffering no impoſi'tion of force on any man's conſcience; and to this 'we doubt not but all honeſt Engliſhmen will ſay, 'Amen, Amen.

The day firſt fixed for this riſing was the firſt of July, but, from the number of perſons engaged in it, and their diſtance from each other, it became abſolutely neceſſary to delay it for a month; of which the King, who was very punctual on his part, and was come to the coaſt of France in diſguiſe (26), had notice. In this ſhort interval, a diſcovery was made from the indiſcretion of Lady Mary Howard, upon which, herſelf, Mr Byron, and Mr Hatley, were committed to the Tower (27); but, as we obſerved in the former note, ſome of the principal perſons in the Committee of Safety, ſtood in no need of ſuch information. They had it earlier and from a much better hand, the King's diſcarded commiſſioner (28), in whom, though the King's friends no longer confided, yet they could not hinder his diſcloſing thoſe ſchemes with which he had been formerly truſted; ſo that his new friends were abundantly well acquainted with every thing that related to the general meaſure, though they might not know by name particular men. By the help of theſe informations, they took their precautions ſo well, that they diſſipated moſt of the intended riſings, which was very eaſy for them to do, excepting only that of Sir George Booth in Cheſhire, Sir Thomas Middleton in Denbighſhire, and Lord Byron at Nottingham, againſt whom marched Major-General Lambert, with three regiments of foot, three of horſe, and ſome troops of dragoons. Forces were likewiſe ſent for from Ireland, ſo that Sir George Booth was quickly overpowered (29). While Lambert was thus dealing with their opponents in the field, the Council of State having communicated their lights to the Parliament, they contrived how to deal with them as faſt as they fell into their hands. They ſummoned by proclamation the Earl of Litchfield, Mr Mordaunt, Major General Brown, Sir William Compton, Sir Thomas Leventhorpe, and Mr Fanſhaw, to ſurrender, which the three laſt did. The Earl of Stamford was taken in his own houſe in arms, and ſent to Leiceſter; the Lords Falkland and Delawar were committed to the Tower, as were alſo the Earl of Cheſterfield, the Lord Viſcount Falconbridge, the Lord Bellaſis, Lord Charles Howard, and Lord Caſtleton. The Earl of Oxford was committed to the cuſtody of a Serjeant at Arms (30). All this was with a view to fix their authority upon an immoveable baſis, and to deliver themſelves at once from all their enemies, by diſtributing, as near as poſſible, all the property in the kingdom amongſt their friends, or ſuch as by theſe gifts might be made ſo. They had no ſooner the news of Sir George Booth's being taken, than they voted Lambert one thouſand pounds to buy him a jewel (31), and reſolved to draw from Sir George Booth, if poſſible, the names of all who were embarked in his deſign, but his memory would not ſerve him for that (32). He acknowledged very frankly, that his deſign was to reſtore the King. It is much leſs wonderful that the remnant of a Parliament ſhould be ſo highly tranſported with their victory, than that their opponents in general ſhould concur in that ſentiment, and give up every thing for loſt. The Royaliſts retired into the moſt diſtant and leaſt frequented parts of the kingdom. Monk not only diſmiſſed his brother, but, as the reader will ſee in the text, began to think of laying down his command; or elſe thought it requiſite to make ſuch an offer, that he might from thence collect how far they ſuſpected or had proof of his being acquainted with Sir George Booth's deſign. The firmeſt men about the King began

King wrote Sir John Greenvile a letter, intimating his hopes, and at the ſame time incloſed another to General Monk; but though both theſe were couched in unlimited terms, as the reader will ſee in the notes [G]; yet Sir John was, by private inſtructions, confined to the ſum of one hundred thouſand pounds per annum, to be diſtributed among ſuch officers as the General ſhould find it requiſite to gain (g). There was at this time a very ſtrange concurrence of events; the great enterprize was on the point of breaking out, and indeed did break out under Sir George Booth (b). Colonel Jonathan Atkins, afterwards Sir Jonathan, and Governor of Barbadoes, had been ſent to Monk to acquaint him with the deſign, and to procure his concurrence (i). At this very juncture, Sir Hugh Pollard, Sir Thomas Stukely, and ſome other loyal gentlemen in the Weſt, had framed a deſign of ſending Mr Nicholas Monk to his brother, as the moſt likely perſon to gain him over to the King's intereſt; but in the firſt place it was held expedient that he ſhould go to London, where Sir John Greenvile then was, and receive his laſt inſtructions from him (k). Sir John had alſo the ſame views, and therefore inſtantly approved of the deſign, and communicated to him both the King's letters. He alſo deſired to embark Dr Clarges, whoſe ſiſter General Monk had married, and to whom Mr Nicholas Monk had communicated his intentions before he went to Sir John. He very honeſtly reported his commiſſion, which Dr Clarges very wiſely declined; he conſidered that Sir John Greenvile was a declared Cavalier, and that it would be very improper for him, who was the General's agent at London, to have any intercourſe with a gentleman of that character. He concurred however ſo far, as to preſs the Divine to execute the commiſſion he had undertaken; and becauſe all the ways to Scotland were obſtructed, he took care to provide a frigate for the tranſporting of Mr Nicholas Monk thither, and conveyed him ſafe on ſhipboard (l), fully inſtructed how to manage his negotiations with caution, and expreſsly directed to communicate with none but the General, except Dr Samuel Barrow, Phyſician to the army, a very diſcreet gentleman, and Mr John Price his Chaplain; the firſt of which was ejected out of Trinity-College in Cambridge for his affection to his Maj-ſty, and the latter the ſon of a ſequeſtred miniſter, always educated in principles of loyalty, a good ſcholar, and an honeſt man; both recommended by Clarges to the General, at his firſt going into Scotland, to be near his perſon. The General received his brother kindly, and having made choice of a few perſons about him whom he could truſt, and united them together by a ſolemn oath of ſecrecy, he directed an expoſtulatory letter to be drawn up, addreſſed to the Parliament, which he propoſed ſhould have been ſigned by moſt of his officers, and, as far as can be collected, intended this as a prologue to an action of much greater conſequence. He changed his mind, however, ſuddenly, and reſolved to do nothing

gan to deſpair; and Charles, ſeeing no hopes of his reſtitution, but from the reconciliation between France and Spain, ſet out for the Pyrenees (33) in order to promote it. In ſix or ſeven weeks however all things altered their face, the Parliament reſolved to abate the ſpirit of the army. The army ſhewed no diſpoſition to ſuffer it. On the 6th of October, the city, to promote a better underſtanding amongſt them, invited the Parliament, the council of ſtate, and the field officers, to dinner (34), at Grocer's-Hall. On the 12th of the ſame month the Parliament declared the commiſſions of Lambert and many other officers null, and the very next day the officers nulled that, by ſetting guards upon the Houſe of Commons (35). All this time Sir John Greenvile lived in his houſe in Covent-Garden, with more apparent tranquility than almoſt any man of his condition; and though he neglected nothing that was in his power to comfort and relieve the diſtreſſed, to furniſh ſafe retreats to thoſe whom their fears had driven to hide themſelves, and laboured to mollify the perſons in power with regard to thoſe who were in confinement; yet he found ſuch a variety of pretences for doing all this, independent of party, that he ſeemed to act rather like a generous good-natured man, and one who was above deſerting his friends in their diſtreſs, than as a warm Cavalier.

[G] *In the notes.*] The reader, on the peruſal of theſe letters, will very clearly diſcern how entirely the King truſted Sir John Greenvile, and how little hopes he had of General Monk, otherwiſe than through his influence (36).

(36) Baker's Chronicle, p. 651. Skinner's Life of General Monk, p. 93, 94.

To Sir John Greenvile.

S I R,

'I am confident that George Monk can have no 'malice in his heart againſt me, nor hath he done 'any thing againſt me, which I cannot eaſily pardon; 'and it is in his power to do me ſo great ſervice that 'I cannot eaſily reward, but I will do all I can. 'And I do authorize you to treat with him, and not 'only to aſſure him of my kindneſs, but that I will 'very liberally reward him with ſuch an eſtate in land, 'and ſuch a title of honour, as himſelf ſhall deſire, 'if he will declare for me, and adhere to my intereſt. 'And whatſoever you ſhall promiſe to him on my be'half, or whatever he, or you by his advice, ſhall 'promiſe to any of his officers, or the army under 'his command, (which command he ſhall ſtill keep) 'I will make good and perform, on the word of a 'King.

Your affectionate Friend,

July 21, 1659.

Charles R.

That to the General was.

S I R,

'I cannot think you wiſh me ill, for you have no 'reaſon ſo to do, and the good I expect from you 'will bring ſo great a benefit to your country, and to 'your ſelf, that I cannot think you will decline my 'intereſt. The perſon who gives, or ſends this to 'you hath authority to ſay ſo much from me; and if 'you once reſolve to take my intereſt to heart, I will 'leave the way and manner of declaring it entirely 'to your own judgment, and will comply with the 'advice which you ſhall give me. The reſt I refer 'to the perſon who conveys this to you, and it is in 'your power to make me as kind to you as you can 'deſire, and to have me always,

Your affectionate Friend,

July 21, 1659.

Charles R.

[H] *In*

thing 'till he ſaw what became of Sir George Booth's enterprize (*m*). 'As that gentleman was defeated on the firſt, and ſent priſoner to the Tower on the twenty-fourth, of Auguſt, Monk immediately cauſed his letter to be burnt unſigned, and finding the members, who were ſtiled the Parliament, began to diſplace ſeveral of his officers, and to new model his army, he grew ſo diſſatisfied, that he actually ſent a letter to this remnant (*n*) of a Parliament, to deſire he might have leave to lay down his command, and paſs the remainder of his days in quiet. He reprimanded his brother for having entered into a deſign of ſuch conſequence, adviſed him to mind the affairs of his profeſſion for the future, and went ſo far as to tell him, that if either he or his couſin Greenvile ſuffered this buſineſs to come to light, he would do his beſt to ruin them both (*o*). But before the Parliament could come to any reſolution upon his requeſt, they were turned out by Fleetwood and Lambert, ſo that the victory, which they believed would have fully eſtabliſhed their power, proved the ruin of it. The government, appointed by the army, was a kind of council compoſed of twenty-three perſons, with the Keeper Whitlocke at their head, to whom they gave the title of the Committee of Safety (*p*). This revolution was made on the 13th of October, and General Monk no ſooner received the news, than he declared immediately, notwithſtanding all that was paſt, for the remnant of the Parliament that had been turned out (*q*). In the mean time his brother returned into England by ſea, and giving no other anſwer to Sir John Greenvile than that he was under an oath of ſecrecy, he communicated this to the King, ſo that for the preſent all hopes from General Monk were laid aſide (*r*). General Fleetwood and Lieutenant-General Lambert both courted Monk, but the latter nevertheleſs marched againſt him with an army much ſuperior in force, and if he had proceeded with the ſame activity with which he began, in all probability he had carried his point. But if Lambert was ſtronger in men, Monk had the advantage in point of money, ſince he had about ſeventy thouſand pounds in bank; Lambert had very little, and no means to raiſe more, unleſs he would have done it by open force (*s*). While things were in this diſjointed ſtate, and Lambert with the beſt part of his forces at Newcaſtle, the remnant of the Long Parliament made a bold puſh, took advantage of the ſoft temper of General Fleetwood, brought over the beſt part of the troops that were left about London, and on Chriſtmas day took poſſeſſion of their old ſeats again at Weſtminſter, the army in Ireland and fleet having alſo declared for them (*t*). This did not hinder General Monk from proceeding in his own way, and marching into England in ſupport of Lord Fairfax, who had raiſed the North in his favour; however, he ſent Major-General Morgan back into Scotland with a reaſonable force, that he might have ſomething behind him to truſt to (*u*). On the third of February, General Monk, at the head of his forces, entered London, and, as through the courſe of a long winter march, he had behaved with ſo much darkneſs and reſerve, that, except Lord Fairfax and one or two who were about him, nobody ever knew or gueſſed at his meaning; ſo, after he came to the Parliament, he balanced with ſo great circumſpection, that he was believed to be firm to one ſide today, and appeared quite another man to-morrow. By theſe dexterous ſhiftings, with thoſe who were continually contriving to ſhift him out of his power, he did what Cromwell, Fleetwood, or Lambert, could never do before; that is, he engaged, or rather he obliged, the remnant of the Long Parliament, firſt to admit the ſecluded members, then to put an end to their own ſeſſion, and to iſſue writs for a new Parliament (*w*), returnable April 25, 1660. He was then, as maſter of all, courted by all; the great leaders of the Parliament offered him Hampton-Court, and a great revenue, at length the ſupreme authority in what form and with what title he thought fit (*x*). The French Ambaſſador ſeconded this propoſal (*y*); for Cardinal Mazarin, who had made ſo good uſe of the firſt, was willing to beſpeak the friendſhip of this ſecond Cromwell upon any terms. Sir John Greenvile, who was likewiſe amongſt thoſe who kept a ſtrict eye upon the General and all his motions, reſolved to take the firſt opportunity of executing the commiſſion he had ſo long ago received from his maſter, and at the hazard of his life to draw the King out of that perplexity in which he then ſtood [*H*]. But this opportunity was not to be found, the

[*H*] *In which he then ſtood.*] In order to have a juſt and preciſe idea how this important tranſaction of the King's Reſtoration was brought about, and by whom; the beſt method that can be deviſed, is to conſider the letters of Sir Edward Hyde to Dr Barwick, written at the time, and which are happily preſerved. Theſe are authentic and unexceptionable evidences, for, beyond all doubt, the Chancellor was maſter of moſt of the King's intelligence. From thoſe letters, in the earlier part of the year, it is moſt apparent that at Bruſſels they only fatigued themſelves with gueſſes and conjectures, as to Monk's temper and diſpoſition, and comforted themſelves with the hopes that Colonel Cloberry, Mr Otway, and Major Redman, whom Dr Barwick had reconciled to the King, and who had all of them ſome intereſt with Monk, might work upon him. However, the reſerves of the General frequently wore out the Chancellor's patience, who was very deſirous to be at the bottom of his deſign, and a little piqued that none of his friends could aſſiſt him. In a very long letter, dated February 20, 1660, N. S. he tells Dr Barwick, 'that 'he conceives Mr Otway muſt be with him, and 'then, ſays he, you cannot be long kept in ſuſpence 'as to what Monk reſolves to do, and if Clarges hath 'the courage to ſhew him the King's letter, it muſt 'work upon him as much as if it had been written to 'himſelf.' In the ſame letter there is another paragraph, that the reader will certainly peruſe with pleaſure, as it affords us a true picture of the Chancellor's mind in that important criſis (37). 'I did hope that 'our laſt letters would have brought us ſome news of 'the city's reſentment, but I believe they will avoid 'all ſharp expoſtulations till they can make a clearer 'judgment

(37) Barwick's Life, p. 499, 500.

the General was aware of his deſign, and kept at ſuch a diſtance, that Sir John knew not how to act. At length he bethought himſelf of Mr Morrice, his neighbour in the country,

' judgment of Monk's reſolutions, of which methinks, ' by your's of the third, you ſeem ſtill to retain ſome ' hopes; and it is evident enough from his carriage, ' that he is willing all parties ſhould retain a fair hope ' of him. There is no doubt it is in his power, if ' he be once well reſolved to make himſelf ſo ſtrong, ' by a conjunction with honeſt and worthy men, that ' he need fear no oppoſition, but may bring all to ' paſs that he can reaſonably deſire, or others deſire ' from him; and he takes very ill meaſures of his ' own intereſt, if he doth not believe that it can be ' more advanced by his adhering to the King, and ' eminently promoting his right, than by any other ' courſe he can take; and, in truth, that no other ' advancement can be pleaſant or laſting to him. But ' if he ſhould prove ſo falſe and ſo fooliſh, as to give ' himſelf up to the imagination of a Republic; I ' hope the good ſpirit that already appears throughout ' the whole kingdom will be heightened with indig- ' nation and obſtinacy, to proteſt againſt a ſubmiſſion, ' and ſubjection to ſuch an extravagant and abſurd go- ' vernment as is now over them, and conſequently, ' will refuſe all payments of taxes and impoſitions, ' and fill Weſtminſter-Hall with proceſs, and com- ' plaints to the Judges for the oppreſſions they ſuffer ' againſt law. So that they may not be only without ' hope of a ſolid ſettlement, but may receive ſuch vi- ' ſible oppoſition as may take away all their reputa- ' tion with their neighbours, of their being like to ' ſettle: and then will be the time for thoſe Preſby- ' terian Pulpits, which would be thought to have any ' principles of allegiance, to diſcharge themſelves ef- ' ficaciouſly.' In a letter dated, March 8, 1660, to the ſame perſon, the Chancellor expreſſes himſelf (38) thus. ' As Monk's proceeding hath been very my- ' ſterious throughout, ſo nothing is more wonderful ' than the ſecrecy of all that hath been tranſacted in ' Scotland; of all which intrigue the King knows no ' more than he does of his preſent intentions, nor hath ' any expreſs been diſpatched from Scotland to the ' King, to give him any account of what they de- ' manded, or the other promiſed; therefore the King ' deſires you would uſe the beſt means you can to in- ' form yourſelf of all the particulars. His Majeſty is ' abundantly pleaſed with the account you give him ' of your friend, upon whoſe affection he depends, as ' likewiſe upon his diſcretion, to proceed in that me- ' thod, and pace, he finds moſt convenient; who can ' beſt judge of his nature, and how he is to be ap- ' proached, and when it is ſeaſonable he will ſhew ' him the King's letter to him, and may aſſure him ' that he cannot be diſappointed in any expectation ' he ſhall entertain of the King's kindneſs.' At the cloſe of this letter, he adds. ' This hath been writ- ' ten theſe two days, and I meant not to have made ' any addition, but the expreſs is juſt now arrived ' with the great news, who likewiſe brings your letter ' of the 21ſt, which gives the King great hope that ' Monk is better diſpoſed and reſolved than he yet ' avows: however, the buſineſs is in a good way, and ' he will by degrees be brought to it, if he had not ' rather others ſhould have the glory of ſuch an ac- ' tion than himſelf: but, methinks, this calling an- ' other Parliament is the fartheſt way about, and, I ' believe, not eaſy to be practiſed.' On the twenty- ſeventh of the ſame month, he wrote another letter, though perhaps not to Dr Barwick, which was inter- cepted, and therein ſpeaks very favourably of Monk, adding, ' I hope he will quickily diſcern that it is ' time for him to declare his inclinations towards the ' King, in compliance with the ſenſe of the king- ' dom, which would have a great impreſſion upon ' many, and ſo would be of the greater merit in him.' This, if thoſe then in the Government, had been in any condition to have acted with vigour, might have been very fatal to the General, and it is not eaſy to ſee of what uſe it could have been of to the King; for if Monk was ſo well inclined, and yet found it neceſſary to conceal his inclinations, why ſhould Sir Edward Hyde, purely to expreſs his ſentiments, run the riſk of revealing them to thoſe, whoſe intereſt it was, not only to fruſtrate, but to puniſh the General for having ſuch inclinations? In another letter, dated April 2, N. S. Sir Edward writes to Dr Barwick (39) thus. ' The King is abundantly ſatisfied with the ac- ' count you give of your friend *, and hath heard no- ' thing that ſhould perſuade him that Monk hath ' withdrawn any of his confidence from him. But it ' is very true, one letter from a reaſonable good hand ' (which doth not ſuſpect that we know any thing of ' him) mentions him as a great ſtickler with the of- ' ficers to promote that remonſtrance which the Ge- ' neral quaſhed; and I find many others, eſpecially ' about Cheſter, who believe Redman to be an Ana- ' baptiſt, and that brigade to be even ready to proteſt ' and engage againſt the preſent government. But ' nothing of thoſe diſcourſes make any impreſſions ' here, but his Majeſty promiſes himſelf great ef- ' fects of both their ſervices. And truly, if we ' may believe what ſome ſober men of the city ' ſay of Monk himſelf, and ſome expreſſions of ' his to them, we may reaſonably believe, that he ' is not only without any malice or ſharpneſs towards ' the King, but even with very good purpoſes for his ' ſervice, of which I hope we ſhall ſhortly ſee the ef- ' fects.' We will add to all this, a ſhort paſſage from the ſame Noble Writer's hiſtory, which will effectually convince the reader, that before Sir John Greenvile went over to the King, the Chancellor was a total ſtranger to General Monk's intention (40). ' This ' ſpeaking of the temper of thoſe who commanded ' the fleet, together with the many good ſymptoms in ' the ſtate, raiſed his Majeſty's hopes and expectation ' higher than ever, if it had not been an unpleaſant ' allay, that in ſo great an alteration and application ' of many, who had been eminently averſe from his ' Majeſty, of the General, who only could put an end ' all to his doubts, there was, *altum ſilentium*, no per- ' ſons truſted by his Majeſty could approach him, nor ' was any word known to fall from him that could en- ' courage them to go to him, though they ſtill pre- ' ſumed that he meant well. The General was weary, ' and perplexed with his unweildy burthen, yet knew ' not how to make it lighter by communication. He ' ſpent much time in conſultation with perſons of ' every intereſt, the King's party only excepted, with ' whom he held no conference, though he found in ' his every day's diſcourſes in the city, with thoſe ' who were thought to be *Preſbyterians, and with* ' other perſons of quality and conſideration, that the ' people did generally wiſh for the King, and that ' they did believe there could be no firm and ſettled ' peace in the nation that did not comprehend his in- ' tereſt, and compoſe the prejudice that was againſt ' his party. But then there muſt be ſtrict conditions ' to which he muſt be bound, which it ſhould not be ' in his Majeſty's power to break, and which might ' not only ſecure all who had borne arms againſt him, ' but ſuch who had purchaſed the lands of the Crown, ' or of Biſhops, or of delinquents; and nobody ' ſpoke more favourably than for the confirming all ' that had been offered by his father in the iſle of ' Wight. Whether by invitation, or upon his own ' deſire, he was preſent at Northumberland-Houſe, ' in a conference with that Earl, the Earl of Man- ' cheſter, and other Lords, and likewiſe with Hollis, ' Sir William Waller, Lewis, and other eminent per- ' ſons, who had a truſt and confidence in each other, ' and who were looked upon as the heads and gover- ' nors of the moderate Preſbyterian party; who moſt ' of them would have been contented, their own ſe- ' curity being provided for, that the King ſhould be ' reſtored to his full rights, and the Church to it's ' poſſeſſions. In this conference the King's reſtora- ' tion was propoſed in direct terms, as abſolutely ne ' ceſſary to the peace of the kingdom, and for the ſa- ' tisfaction of the people; and the queſtion ſeemed ' only to be, upon what terms they ſhould admit him: ' ſome propoſing more moderate, others more ſevere ' conditions. In this whole debate the General in- ' ſiſted upon the moſt rigid propoſitions, which he ' preſſed in ſuch a manner that the Lords grew ' jealous,

* Col. Cloberry.

(40) Lord Clarendon's Hiſtory of the Rebellion, Vol. VI. p. 732, 733.

country, his intimate friend, and one of the truſtees in his father's will. This gentleman was one of the ſecluded members, and, upon his coming up to town to take his ſeat in Parliament, he had been kindly received by the General as an old friend, and admitted as far as any man into his confidence. To Mr Morrice therefore Sir John Greenvile addreſſed himſelf, and earneſtly deſired him to procure him a private audience from the General, that he might impart to him an affair of the utmoſt importance. Mr Morice having informed the General of this addreſs, he received it with much ſtrangeneſs, for they had little acquaintance with each other, though related, Sir John entering early into the world when the General was under confinement, and afterwards had been long abſent from his country. Therefore the General told Mr Morrice, except Sir John would ſend information by him of the nature of his buſineſs, he would not allow of any interview with him. Mr Morrice thereupon told him, He had already deſired to know that, but Sir John Greenvile refuſed it. The General, who was himſelf the cloſeſt man alive, liked very well of this reſervedneſs, and bid Mr Morrice acquaint him, That if he came the next day at nine at night to St James's, he would ſpeak with him. Accordingly, Sir John waited on him at the appointed time, which was on March the ſixteenth, the next night after the diſſolution of the Rump Parliament; and after he had requeſted pardon for the importunity of his viſit, he deſired his permiſſion to deliver a meſſage to him from the King. The General ſeemed ſurprized; but ſeeing there was only Mr Morrice in the room, and he at a good diſtance from them, he bid him ſay what he pleaſed. He then preſented a letter from the King, and told him, That his Majeſty had great confidence in his affections to him, and ſince he had ſo far complied with the deſires of all the ſober part of the kingdom, for the admiſſion of the ſecluded members, in order to a free Parliament, the conſequences thereof could not but give ſufficient evidence of his inclinations to his Majeſty's ſervice and reſtoration, which would naturally flow from his endeavours, in conjunction with their counſels. The General replied (z), 'That he had long lamented the miſerable diſtraction 'of his native country, and waited for a fit opportunity to contribute his aſſiſtance towards 'the redemption of it. And when Lambert and thoſe of his party had interrupted the 'Parliament, conſidering that the army had been in a great meaſure, by that Parliament, 'modelled, he ſuppoſed, by a declaration for their reſtitution, he might gain power into 'his hands for better purpoſes, and as the better to bring theſe purpoſes about, he had re-'ſolved, if by his arms the Parliament ſhould be reſtored, together with thoſe few mem-'bers who ſat at their interruption, to admit thoſe alſo who had been ſecluded, intending 'to that end, by degrees, to put his army into ſuch hands as would favour his intentions. 'That it was well known to all, how he was diſappointed in that deſign, and through what 'difficulties he had arrived to the ſtation he was then in; nor was he even at that time 'ſecure from great danger of diſappointment, if he ſhould not manage his affairs with 'more than ordinary ſecrecy. As to the King's Majeſty, he ſaid, nobody wiſhed him 'greater

(z) Skinner's Life of General Monk, p. 266, 267, 268—272. Price's Hiſtory and Method of the King's Reſtoration, p. 133—137. Baker's Chronicle, p. 695, 696. Gumble's Life of General Monk, p. 275, 276, 277. Life of Dr Barwick, p. 262.

'jealous, that he had ſuch an averſion from reſtoring 'the King, that it would not be ſafe for them then to 'proſecute that advice, and therefore it were beſt to 'acquieſce till the Parliament met, and that they 'could make ſome judgment of the temper of it. 'And the General, though he conſulted with thoſe 'of every faction with much freedom, yet was by 'many then thought to have moſt familiarity, and to 'converſe moſt freely, with Sir Arthur Haſlerig, who 'was irreconcileable to Monarchy, and looked upon 'as the chief of that Republican party, which de-'ſired not to preſerve any face of government in the 'Church, or uniformity in the public exerciſe of Religion. This made the Lords, and all others who 'were of different affections, very wary in their diſ-'courſes with the General, and jealous of his incli-'nations.' This conference with the Earl of Northumberland, reſts upon the credit of the Noble Hiſtorian entirel, for Dr Clarges, who kept an exact journal of all that paſſed in thoſe times, in which none was a deeper actor than himſelf, has not a word of it*. He does, indeed, ſay, that he went on the behalf of the General to a certain great Peer, whoſe name is not in the printed hiſtory, upon ſome propoſitions about admitting the Houſe of Lords to ſit before the diſſolution of the old Parliament; and it is not impoſſible this might be the very conference mentioned by the Earl of Clarendon. But, perhaps, the reader may be better ſatisfied with what the Earl of Northumberland himſelf ſays, who writing to his brother-in law, the Earl of Leiceſter, the man in the world he loved beſt, and truſted moſt, has theſe words †. 'The meeting my Lord of Southampton, 'in purſuance of ſome overtures that have been made 'for a marriage between his daughter and my ſon, 'was the principal occaſion that brought me now to 'this town, where I find moſt people very buſy, or 'at leaſt ſeeming ſo, and the public affairs in a poſture 'that needs the advice of better heads than mine. 'All perſons here ſhew ſtrong inclinations to bring in 'the King, and re eſtabliſh the government upon the 'old foundation. Some there are that would have 'him reſtored to all without any condition, only an 'act of oblivion, and general pardon to be granted; 'but the ſoberer people will, I believe, expect terms 'of more ſecurity for themſelves, and advantage for 'the nation; and unleſs a full ſatisfaction be given in 'ſuch points as ſhall be judged neceſſary to thoſe 'ends, it is thought the army will not be pleaſed. 'We are told that the force will be removed from 'the Lords houſe, and that the next repreſentative 'will not act without us; but until the way be clear 'for your Lordſhip to come amongſt us, and that we 'may be aſſiſted by your counſels, I ſhall have no 'good opinion of our buſineſs; nor, indeed, do I 'yet well underſtand by what warrant, or upon what 'account, we ſhould meet Lambert's eſcape out of 'the Tower doth a little ſtartle our governors. Co-'lonel Salmon, Creede, and ſome other chief officers 'of that party it is ſaid, are lately gone privately 'from their uſual dwellings, and cannot be heard of, 'which increaſes the ſuſpicion of a deſign.' From this letter, dated April 13, 1660, we may judge of the Earl of Northumberland's ſentiments from his own words, and compare them with thoſe which are aſcribed to him by the Noble Hiſtorian. As to General Monk's conferences with Sir Arthur Haſlerig, the true deſign of them was, to keep him quiet, a matter of very great conſequence at that time, and which the General very happily effected, and which was of no ſmall conſequence to the King's peaceable reſtoration.

* Baker's Chronicle, p. 692.

† Sidney's Papers, Vol. II. p. 685, 686.

'greater felicity than himſelf, nor deſired his reſtoration with more paſſion; but if it were 'not cautiouſly attempted, it would be out of his power to ſerve him in it, ſince, in 'counſels of ſo nice concernment, there would not be room for two errors. The people, 'he ſaid, had been long ſeduced by ſeditious informations, and the army had been in the 'hands of ſuch as had always been againſt his royal father, and many of them even againſt 'monarchy itſelf; but that, nevertheleſs, he hoped, if they might find the ſame ſecurity 'under his Majeſty's government, as they had under the uſurpers of it, he ſhould not de-'ſpair of their reduction to obedience. And to effect this, it was his humble advice, that 'his Majeſty ſhould prevent their fears, by declaring a free and general pardon to all 'his ſubjects, and engage himſelf to give it under the great ſeal to all that ſhould ſubmit 'to his authority, except ſuch as ſhould be exempted by the Parliament. And that he 'would conſent to any act or acts of parliament that ſhould be preſented to him for the 'ſettlement of public ſales, and diſpoſitions of lands, to officers, ſoldiers, and others, and 'the payment of the ſoldiers arrears. As alſo for toleration of liberty of conſcience to all 'his ſubjects, and that none ſhould be puniſhed for differences in matters of religion, who 'ſhould not diſturb the public peace.' Sir John Greenvile aſked him what he would give in command for himſelf, and if he would write to his Majeſty, which he excuſed, ſaying, 'If his letter ſhould be intercepted before he had compleated the reforming of the army, 'it would be impoſſible for him to keep them in temper, or hinder the ſubverſion of all 'he had hitherto done, adding, that he fought not his own advantage in his endeavours 'for the public benefit of his country, and that having with much hazard brought mat-'ters near to a fair iſſue, in purſuance of the general ſuffrage of the nation, he was unwil-'ling by indiſcretion to venture a relapſe, but would chuſe to involve himſelf in the ſame 'condition with the generality of people, in expectation of what the next Parliament 'ſhould bring forth, to the happineſs of his Majeſty and all his dominions.' Sir John Greenvile wrote the ſubſtance of this diſcourſe, and repeated it to the General, to be the better able to retain it in his memory, who, as ſoon as he had read the paper, tore it in pieces, and conjured him to acquaint no perſon whatſoever with their conference except the King himſelf, and to requeſt him alſo to conceal it. But above all, he intreated him to deſire his Majeſty from him to leave the King of Spain's dominions, and go to Breda, or ſome other place under the government of the United Provinces, for that he had certain advice he would be detained by the King of Spain's miniſter's, if he ſtayed in his dominions, and enjoined him not to return 'till he had ſeen his Majeſty out of Flanders. When Sir John took his leave the General ſaid, 'He was glad that this occaſion of preſenting his duty to 'the King was an effect of his diligence, whom he was glad to find ſo induſtrious in his 'maſter's ſervice, of which he had before ſome experience, when his brother Nicholas 'came from him into Scotland.' Sir John promiſed to obſerve his inſtructions, and ſet out immediately for Dover, in order to take the firſt opportunity of paſſing over to Flanders; and there it was that he met with the Lord Viſcount Mordaunt, who had prepared a veſſel with the ſame view of going to wait on his Majeſty, though diſpatched to the King by his other friends, and with notices of quite another nature; neither did Sir John Greenvile (*a*) confer with his Lordſhip at all as to the nature of his buſineſs, though the contrary would ſeem more than probable from another account of this matter [*I*]. They landed at Oſtend

(*a*) Skinner's Life of General Monk, p. 276. Price's Hiſtory and Method of the King's Reſtoration, p. 143. Baker's Chronicle, p. 696.

[*I*] *From another account of this matter.*] The account we have of the tranſactions mentioned in the text, from the pen of the Noble Hiſtorian, is by much the moſt extraordinary in his whole book; he begins his account thus (41). 'There was at this 'time, in much converſation and truſt with the Gene-'ral, a gentleman of Devonſhire, of a fair eſtate and 'reputation, one Mr William Morrice, a perſon of a 'retired life, which he ſpent in ſtudy, being learned 'and of good parts, and he had been always looked 'upon as a man far from any malice towards the King, 'if he had not good affections for him, which they 'who knew him beſt believed him to have in a good 'meaſure. This gentleman was allyed to the General, 'and entirely truſted by him in the management of his 'eſtate in that county, where, by the death of his el-'der brother without heirs male, he inherited a fair 'fortune. And Morrice being choſen to ſerve in the 'next enſuing parliament, had made haſte to London, 'the better to obſerve how things were like to go.'

(41) Clarendon's Hiſtory of the Rebellion, Vol. VI. p. 733.

The perſonal character of Mr William Morrice is extremely juſt, and the great fault in this paragraph lies in the chronology, which is in this hiſtory ſo looſely expreſſed, that it can only be collected from circumſtances. In the preſent caſe, it is plain that *at this time* refers to ſome ſpace after the election of members to the Convention Parliament, which is made the cauſe of Mr Morrice's going up to London; but the truth is quite otherwiſe. This gentleman had been elected knight of the ſhire for Devon in 1645 (42), and though he never had ſat, was conſidered as one of the ſecluded members of the Long Parliament. The way he came up to town was this; the Reverend Mr Nicholas Monk wrote to Dr Clarges to put his brother the General in mind of ſending for Mr Morrice, as a prudent perſon, and well diſpoſed for his Prince's ſervice and the good of his country, who might therefore be a proper aſſiſtant in his councils. Dr Clarges took this hint, prevailed upon his brother to follow it, and, in the anſwer he wrote to Mr Nicholas Monk, incloſed a letter from the General to Mr Morrice, deſiring him to come and take his ſeat in parliament, which he did (43); and this account we have from Dr, afterwards Sir Thomas Clarges himſelf, who either wrote or cauſed to be wrote the continuation of Baker's Chronicle for the firſt thirteen years of this reign, which is the moſt authentic account we have. The General ſoon found him ſo uſeful in the cabinet as well as the ſenate, that he reſolved to have the benefit of his abilities in the place where he was moſt pinched, and therefore made him a Colonel and Governor of Plymouth, which at once ſecured an important poſt, and gave him a ſeat in the council of officers.

(42) Wood's Athen. Oxon. Vol. II. col. 571.

(43) Baker's Chronicle, p. 690.

Let us now return to the Noble Hiſtorian (44). 'With him the General conſulted freely, touching 'all his perplexities and obſervations, how he found 'moſt men of quality and intereſt inclined to call in 'the King, but upon ſuch conditions as muſt be very ungrateful,

(44) Clarendon's Hiſtory of the Rebellion, Vol. VI. p. 734.

Oſtend on the 23d of March, and proceeded from thence to Bruſſels, where the King then was. Sir John, according to his inſtructions, remained there very private, contenting himſelf

' ungrateful, if poſſible to be received; and the Lon-
' don miniſters talked already ſo loudly of them, that
' the Covenant being new printed, and by order fixed
' up in all churches, they, in their ſermons, diſcourſed
' of the ſeveral obligations in it, that, without expoſing
' themſelves to the danger of naming the King, which
' yet they did not long forbear, every body underſtood
' they thought it neceſſary the people ſhould return to
' their allegiance.

' That which wrought moſt upon the General, was
' the choice which was begun to be made in all coun-
' ties for members to ſerve in parliament, very many of
' them being known to be of ſingular affection to the
' King, and very few who did not heartily abhor the
' murther of his father, and deteſt the government that
' ſucceeded; ſo that it was reaſonably apprehended,
' that, when they ſhould once meet, there would be
' warmth among them that could not be reſtrained or
' controuled, and they might take the buſineſs ſo much
' into their own hands, as to leave no part to him to
' merit of the King, from whom he had yet deſerved
' nothing

' Mr Morrice was not wanting to cultivate thoſe
' conceptions with his information of the affections of
' the Weſt, where the King's reſtoration was, he ſaid,
' ſo impatiently longed for, that they had made choice
' of few or no members to ſerve for Cornwall or De-
' vonſhire, but ſuch who they were confident would
' contribute all they could to invite the King to return.
' And when that ſubject was once upon the ſtage, they
' who concurred with moſt frankneſs would find moſt
' credit, and they who oppoſed it would be overborne
' with laſting reproach. When the General had re-
' flected upon the whole matter, he reſolved to advance
' that deſign, and ſo conſulted with his friend how he
' might manage it in that manner before the parliament
' ſhould aſſemble, that what followed might be im-
' puted to his counſels and contrivance.'

It is very evident, that the main deſign of this account is to *tranſfer*, in a great meaſure if not wholly, the merit of the Reſtoration from Monk to Morrice; but here again the want of chronology ſpoils all, as we ſhall preſently ſee. The arguments here advanced are very pretty and plauſible, but could never have fallen from the mouth of Mr Morrice, unleſs he had been a prophet. Thoſe who were upon the ſpot, very ſcrupulous and ſtrict obſervers of every thing that paſſed, and who at this time held a conſtant correſpondence with Sir Edward Hyde, were ſo far from believing the General was influenced (at leaſt in the Noble Hiſtorian's ſenſe) by the elections, that they aſcribe theſe elections going as they did to the General's influence ſolely. They affirm, he firſt prompted the Royaliſts to ſtand, notwithſtanding their being diſqualified, upon this principle, that a free parliament could be choſen only by leaving the people's affections without reſtrictions. He is alſo ſaid to have given private encouragement to many of the Royaliſts to ſtand at different places, and it is carried ſo far, as to affirm, that no Cavalier preſumed to ſtand any where, 'till he had firſt obtained the General's tacit approbation (45). Theſe circumſtances (if well founded, and this too may be proved) ſeem to ſhew a regular gradation in the General's conduct, which was grounded in a juſt apprehenſion of men and things, and calculated for what is the perfection of true policy, creating that opportunity, and preparing thoſe inſtruments he meant to uſe. Sir Philip Warwick, who not only lived in theſe times, but had ſome ſhare in theſe meaſures, and who had ſeen the account given of them by Dr Clarges, profeſſes that too little is aſcribed to Monk, and too much to his aſſiſtants, Clarges and Morrice, for that in reality, Monk was ſo far from being managed by any, that he managed them all (46), ſo that thoſe who were generally eſteemed his inſtructors were in fact but his inſtruments. Honeſt Anthony à Wood (47) tells us, in his rough way, which however is pretty near the truth, that the General employed Morrice as a kind of a ſtate blind to cajole the Preſbyterians.

Once more let us hear the Noble Hiſtorian (48).

' There was then in the town a gentleman well
' known to be a ſervant of eminent truſt to the King,
' Sir John Greenvile, who, from the time of the ſur-
' render of Scilly, had enjoyed his eſtate, and ſome-
' times his liberty, though, under the jealouſy of a
' diſaffected perſon, often reſtrained. He had been
' privy to the ſending to the General into Scotland the
' clergyman his brother, and was converſant with thoſe
' who were moſt truſted by his Majeſty, and at this
' time were taken notice of to have all intimacy with
' Mr Mordaunt, who moſt immediately correſponded
' with Bruſſels. This gentleman was of a family to
' which the General was allied, and he had been obli-
' ged to his father, Sir Bevil Greenvile, who loſt his
' life at the battle of Lanſdowne for the King, and
' by his will had recommended his much impaired for-
' tune, and his wife and children, to the care and
' counſels of his neighbour and friend Mr Morrice,
' who had executed the truſt with the utmoſt fidelity
' and friendſhip.'

There is nothing in this paragraph which is not exactly true; but notwithſtanding this, the whole meaning conveyed, for it is not expreſſed, is as remote from truth as can be imagined. This is a great ſingularity, and deſerves extraordinary attention. Upon peruſing the paragraph, one immediately apprehends, that Mr Morrice, an old grave gentleman, intruſted with the care of Sir John Greenvile's perſon and fortune by his father, and knowing how well he had behaved in the King's ſervice, and that he was extremely intimate with Mr Mordaunt, to whoſe care the King's concerns were principally intruſted, believed he might be a very proper agent for the General as things now ſtood, and recommended him accordingly. Yet, whoever ſhould advance this might be confuted, by producing the Noble Hiſtorian's own words, which certainly do not ſay this, and yet as certainly mean it or mean nothing.

But to go on (49). (49) Ibid.

' The General was content that Sir John Greenvile
' ſhould be truſted in this great affair, and that Mr
' Morrice ſhould bring him ſecretly to him, in a pri-
' vate lodging he had in St James's. When he came
' to him, after he had ſolemnly conjured him to ſecre-
' cy, upon the peril of his life, he told him, he meant
' to ſend him to the King, with whom *he preſumed* he
' had credit enough to be believed without any teſti-
' mony, for he was reſolved not to write to the King,
' nor to give him any thing in writing, but wiſhed
' him to confer with Mr Morrice, and to take ſhort
' memorials in his own hand of thoſe particulars he
' ſhould offer to him in diſcourſe, which when he had
' done, he would himſelf confer with him again at an
' hour he ſhould appoint. And ſo he retired haſtily
' out of the room, as if he were jealous that other men
' would wonder at his abſence.

' That which Mr Morrice communicated to Green-
' vile was, after he had enlarged upon the perplexity
' the General was in, by the ſeveral humours and fac-
' tions which prevailed, and that he durſt not truſt any
' officer of his own army, or any friend but himſelf
' with his own ſecret purpoſes; he adviſed that the
' King ſhould write a letter to the General, in which,
' after kind and gracious expreſſions, he ſhould deſire
' him to deliver the incloſed letter and declaration to
' the Parliament, the particular heads and materials
' for which letter and declaration Morrice diſcourſed
' to him, the end of which was, to ſatisfy all intereſts,
' and to comply with every man's humour, and indeed
' to ſuffer every man to enjoy what he would.'

Theſe two paragraphs ſpeak things out plain, and entirely ſtrip Sir John Greenvile of the merit of firſt inviting the General to an immediate correſpondence with the King, which is transferred to Mr Morrice; but the great buſineſs of the commiſſion too is taken from the General and tranſlated to the ſame gentleman, as having abilities more equal to the taſk. He ſeems here too to be endowed with the ſpirit of prophecy, for, not content with inſtructing the young man who was to carry the meſſage, he likewiſe takes upon him to direct what the King ſhould do, which, as his Majeſty really did it, it looks as if the prophecy had been fulfilled.

But

himself with giving notice to the King, by Lord Mordaunt, where he was, and in the mean time he digested again in writing what he had received from the General. The King went to

But let us now go on to the last paragraph of this narrative (50).

(50) Ibid.

'After Sir John Greenvile had enough discoursed 'all particulars with him, and taken such short me- 'morials for his memory as he thought necessary, 'within a day or two he was brought with the same 'wariness, and in another place, to the General, to 'whom he read the short notes he had taken, to which 'little was added; and the General said, that if the 'King writ to that purpose, when he brought the let- 'ter to him, he would keep it in his hands 'till he found 'a fit time to deliver it, or should think of another 'way to serve his Majesty. Only he added another 'particular, as an advice absolutely necessary for the 'King to consent to, which was his Majesty's present 'remove out of Flanders. He undertook to know 'that the Spaniards had no purpose to do any thing 'for him, and that all his friends were jealous that 'it would not be in his power to remove from thence, 'if he deferred it 'till they discovered that he was like 'to have no need of them. And therefore he desired 'that his Majesty would make haste to Breda, and 'that for the public satisfaction, and that it might be 'evident he had left Flanders, whatsoever he should 'send in writing should bear date as from Breda, and 'he enjoined Sir John Greenvile not to return, 'till he 'had himself seen the King out of the dominions of 'Flanders. Thus instructed he left him, who taking 'Mr Mordaunt with him for the companion of his 'journey, set out for Flanders about the beginning of 'April 1660, and in a few days arrived safely at Brus- 'sels.'

At the time of all these transactions, the Noble Writer was abroad, and therefore could not have any personal knowledge of what he wrote. After his return, he might be deceived by those who undertook to give him the best informations, and certainly was so. He had the weight of public affairs upon his shoulders, while at home, and after he was abroad in his second exile, it may be, he had no opportunity of correcting his mistakes, or it is possible he did not suspect them. Be this as it will; there is nothing more evident, than that the whole of this narrative, in which no one authority is cited, is inconsistent with the best and the best informed contemporary writers; irreconcilable to facts and dates; incompatible with the King's declarations, under the broad seal, affixed by this Noble Writer himself; and incoherent in it's several parts. We are not the first who have asserted this (51), nor shall we find it any difficulty to prove it.

(51) See Dr Webster's Preface to the Life of General Monk.

With regard to contemporary writers, we may insist upon Dr Clarges (52) than whom no man could be better informed, and who committed the history of these things to writing, to prevent posterity from being misinformed. We may mention Dr Thomas Gumble (53), who was chaplain to General Monk, who, immediately upon the death of that great man, published the history of his actions, and addressed it to the King. We may add Dr John Price (54), another of the General's chaplains, who wrote the history of this interesting period very circumstantially, from his own knowledge, and from the relations of the Duke of Albemarle and the Earl of Bath, which, the former being dead, he dedicated to the latter. We may also add to these authorities the judicious work of Dr Thomas Skinner (55), who was Physician to the Duke of Albemarle, conversed much with him during the latter part of his life, and had very extraordinary helps in the writing of his history. To these we may subjoin two other unexceptionable historians, wherher we consider them in the light of knowledge or of probity, Sir Philip Warwick (56), and Dr Peter Barwick (57). They all agree that Sir John Greenvile addressed himself to Mr Morrice; that it was with some difficulty, and not 'till after he had refused to treat with Morrice, Sir John obtained a private audience of the General; that at this audience he produced the King's letters to himself and to the General; that the reason the General sent him back without a letter, was because the King could not refuse credit to his own minister; and that this negotiation rested entirely upon Sir John Greenvile.

(57) Vita Johann. Barwick, p. 181.

It is inconsistent with facts and dates, which are very carefully marked in the text. Mr Morrice came up to town, in consequence of the General's letter of invitation, in the latter end of February; he was made governor of Plymouth in the beginning of March; he introduced Sir John Greenvile to the General on the sixteenth of the same month; he set out two or three days after; all which facts happened previous to the date the Noble Historian has fixed, by the words *at this time*, in the beginning of his relation, and before those facts, which, according to him, were the motives of this whole transaction. He landed at Ostend on the 23d of March, and had finished his negotiation by the time the Noble Historian assigns for his departure out of England.

The narrative, as it is given in the text, is clearly supported by the King's warrant, which the reader will find in the next note, and by the preamble of the patent by which Sir John Greenvile was created Earl of Bath. The relation of the Noble Historian is inconsistent with itself; for if Mr Morrice had not come to London 'till after his election to the Convention-Parliament, he could scarce have arrived there before Sir John Greenvile's departure for Brussels; and if the General had been really wrought upon by the motives assigned in that narrative, all these momentous affairs must have been transacted in fewer hours than they took up days.

But there is something more to be done before we close this note.

It seems very strange that Sir John Greenvile, who was in a joint-commission to manage the King's affairs with Mr Mordaunt, now Lord Viscount Mordaunt, than whom no man had more freely hazarded himself for the King's service, should go with him, without saying one word to him of his commission. But this will be very easily accounted for, if we consider two circumstances; the first is, that their going together was not by design but by accident. Take the very words of an accurate historian *. 'Sir John Greenvile, in his journey 'towards Dover, very seasonably found the Lord Mor- 'daunt, who was then going over to the King, and had 'hired a vessel to himself, in which he was very joyful 'to accommodate his old acquaintance Sir John Green- 'vile, and engage together in the King's service; but in 'all their voyage to Ostend they knew nothing of one 'another's business. When they came to Brussels, 'the Lord Mordaunt resolved to go directly to the 'court, and Sir John Greenvile to his lodgings, desi- 'ring his Lordship to acquaint the King that he was 'come to town, and where he lodged.'

* Skinner's Life of General Monk, p. 276.

The next circumstance is, that as they met by chance, so Lord Mordaunt had his secret as well as Sir John Greenvile. If the reader considers the following passage, perhaps he may suspect that both their secrets regarded the same person †.

† Memoirs of Affairs after the King's Murcher, p. 428, 429.

'After some time, says Sir Philip Warwick, the 'great Lords, Warwick, Manchester, and Say, and 'some chief members, had private conferences with 'some persons of the King's party, as Sir Orlando 'Bridgeman, Sir Geoffry Palmer, and myself, the un- 'worthiest. Not many weeks after, without the 'knowledge of the Lords, Mr Annesley, (*now* Lord 'Privy-Seal) Sir Anthony-Ashley Cooper, and Sir 'William Morrice, met with the same persons 'from the General, to the end that the King might 'see their good intentions, through a medium which 'was not likely to deceive him. And *though* they 'did the same thing afterwards themselves, by particu- 'lar messengers whom they sent over to the King; 'yet they thought this a good means early to be right- 'ly understood: and the General was so well satisfied, 'that he confessed that there was not a meeting in 'town, but he had some intelligence of it, save of 'this, which offered him of their secrecy; and yet he 'knew not the same persons met at the same time 'with the Lords.' This passage will also serve to confirm and illustrate what is said of the reception these propos'd met with from the King, in the text. In plain terms, those who met Sir Philip Warwick in the name, and with the concurrence, of the General, procured

him alone in his coach with the like privacy, and having received from him all that he had to say, his Majesty then told him, it was necessary to acquaint the Marquis of Ormond, the Lord Chancellor Hyde, and Sir Edward Nicholas, with this important affair, as their advice and assistance was absolutely and indispensibly necessary, in framing the dispatches and commissions which were fit for him to carry back (*b*). But the point chiefly pressed by Sir John Greenvile, as that which General Monk had most at heart, was the King's immediate departure out of the Spanish territories; and, in the whole of these momentous transactions, there is no one circumstance which shews the sagacity of that great man so much as this; since, through the dilatoriness of his ministers, who would needs prepare their dispatches there, though they might have drawn them in a safer place, when it came to be executed it was done with great precipitation, and the King had only a few hours to make his escape (*c*), the Spaniards having determined to imprison him, 'till he had engaged to restore Dunkirk and the island of Jamaica. At this time his Majesty only directed a commission to be drawn up for General Monk, to command as Captain-General over all the forces of England, Scotland, and Ireland, which was signed by him, and put up with a private letter to him from his Majesty, written with his own hand (*d*). There was also another letter directed 'To our trusty and well-beloved General Monk, to be by him 'communicated to the President of the Council of State, and to the officers of the armies 'under his command,' with a copy of the King's Declaration inclosed; and because the new and auspicious Parliament (upon whose counsels the hopes both of the King and people did so much depend) were suddenly to meet, letters were drawn up, to be delivered at their assembly, by Sir John Greenvile, directed by the King, 'To our trusty and right 'well-beloved the Speaker of the House of Lords;' and another 'To our trusty and 'well-beloved the Speaker of the House of Commons;' in both which were also copies of his Majesty's Declaration inclosed. There was also a letter directed 'To our trusty and 'well-beloved, the Lord Mayor, Aldermen, and Common-Council, of our city of Lon-'don;' in the contents whereof the Lord Mordaunt (*e*), who was also to return with Sir John Greenvile, was mentioned; and another to General Monk and General Montague, to be by them communicated to the fleet. All these papers were dated as from Breda, on the 4th of April old style, and on the 14th according to the new; and this latter date being commonly mentioned, has occasioned great perplexity and confusion. In his conference with the King, Sir John peremptorily refused, as being expressly so commanded by the General, to mention any thing, or to permit any thing to be mentioned, of a reward for his service; only he told his Majesty, that in treating with the General he had made him an offer of one hundred thousand pounds a year, and the post of Lord High Constable of England (*f*), of which he would not hear, and charged him to make no demands, and to receive nothing for him, with which, knowing the General's punctuality, he was resolved to comply. The King however put into Sir John's packet an authentic testimony of his service, and of his own sense of it, which the reader will find in the notes [*K*]. While

procured him and the rest of the King's friends, to send a person whom they could trust; and this was the Lord Mordaunt, with this general message as the result of their conferences; but, at the same juncture, Mr Annesley and Sir Anthony dealt secretly and separately with the King, in the same manner the General did by Sir John Greenvile.

[*K*] *Will find in the notes.*] As at this time the Chancellor was upon the spot, and consequently better qualified than any other writer, to relate what passed during Sir John Greenvile's stay at Brussels, it is less wonderful that he should disagree with those who speak but at at second hand; and yet even that is such authority, as we can but rarely meet with in history. Dr Price says (58), from the mouth of the Earl of Bath, who was then Sir John Greenvile, that the King, upon intimation of his being come to Brussels, went privately to his lodgings, and was alone with him, to whom he discovered his instructions from the General, and by whom he was believed, though he had no letter. The Noble Historian says (59), that Greenvile's and Mordaunt's being in Brussels was unknown, they attending his Majesty only in the night at the Chancellor's lodging, concealing themselves from being taken notice by any, and all along treats Mordaunt as if joined in commission with Sir John Greenvile. Dr Skinner says, that on their arrival Lord Mordaunt went directly to court, and, as we have said in the text, informed the King of Sir John Greenvile's arrival, and where he was, which produced a visit to him from the King alone. At this interview, the same writer tells us, he entered into the relation of those private instructions that he had received from the General; which, when his Majesty had further considered and debated with Sir John Greenvile (60), 'they found it impossible to comply with General Monk's desire, in managing this secret affair by themselves alone, without admitting some others to a share in their councils. And therefore his Majesty resolved, that the next day the Marquis of Ormond, the Lord Chancellor Hyde, and Sir Edward Nicholas, should be acquainted with it, who accordingly attended his Majesty privately, together with Sir John Greenvile, and received this news from General Monk with a kind of joyful astonishment.'

This was a very right resolution in the King, and reconciles us to the Noble Historian's account, to whom very probably his Majesty said nothing of what he thought the General's too great caution. The Chancellor assumes to himself the advising the letters to the two houses of parliament, which was a very prudent well-timed step, and proved of infinite consequence. The Noble Historian affirms, that Sir John Greenvile recommended Morrice to the seals; but he says nothing of the offers that had been made to Monk, and rejected by him, of the King's shewing an inclination to reward Sir John Greenvile, or of the following warrant (61), which was put up in Sir John's packet.

'In consideration of the many services done us, by our right trusty and well-beloved servant, Sir John Greenvile (one of the gentlemen of our bed chamber), and his father, Sir Bevil Greenvile, who most honourably lost his life at the battle of Lansdowne, in the defence and service of the crown against the rebels, after he had performed many other great and signal services. But more especially, in consideration of

While Sir John was with the King, he received profeſſions of duty from ſome perſons of great weight in England, who informed him that they had been with General Monk, and took great merit to themſelves, from their having prevailed upon him to conſent to his Majeſty's return, on the terms that the King his father had conſented to in the iſle of Wight, to which they intreated him alſo to conſent, as it was impoſſible for them, notwithſtanding their great importunities, to obtain from the General, terms that were in any degree

' the late moſt extraordinary ſervices, never to be for-
' gotten by us or our poſterity, which the ſaid Sir John
' Greenvile hath lately rendered us in his perſon, in
' his ſecret, prudent, and moſt faithful tranſactions and
' negotiations, in concluding that moſt happy treaty
' which he had lately, by our ſpecial command and
' commiſſion, with our famous and renowned General
' Monk, and wherein HE ALONE, AND NO OTHER,
' was intruſted by us concerning the ſaid treaty, about
' thoſe moſt important affairs for our reſtoration, which
' he has moſt faithfully performed, with great pru-
' dence, care, ſecrecy, and advantage, for our ſervice,
' without any conditions impoſed upon us, beyond our
' expectation, and the commiſſion we gave him, where-
' of we doubt not, but by God's bleſſing, we ſhall ſee
' the effects of our ſaid happy reſtoration: we are gra-
' ciouſly pleaſed to promiſe, upon the word of a King,
' that, as ſoon as we are arrived in England, and it
' ſhall pleaſe God to reſtore us to our crown of that
' kingdom, we will confer upon him, our ſaid truſty
' and well-beloved ſervant, Sir John Greenvile, the
' place and office of Groom of our Stole, and firſt Gen-
' tleman of our Bed-chamber (with all fees, penſions,
' and perquiſites, thereunto belonging) together with
' the title and dignity of an Earl of our kingdom of
' England: and the better to ſupport the ſaid title of
' honour, and to reward as we ought thoſe many great
' ſervices, and to recompence the loſſes and ſufferings
' of him and his family, we are further graciouſly
' pleaſed to promiſe, upon our ſaid royal word, to pay
' all the debts that he the ſaid Sir John Greenvile, or
' his father, have contracted in the late wars in our
' ſervice, or in our Royal father's, of bleſſed memory;
' and alſo to beſtow and ſettle, in good land in Eng-
' land, an eſtate of inheritance, to the value of at leaſt
' three thouſand pounds per annum, upon him the ſaid
' Sir John Greenvile and his heirs for ever, to remain
' as a perpetual acknowledgment for his ſaid ſervices,
' and as a teſtimony of our grace and favour towards
' him, and that antient and loyal family of the Green-
' viles, unto all poſterity. Given at our court at Bruſ-
' ſels the 2d of April, in the twelfth year of our reign,
' 1660.

By His Majeſty's command,

Edw. Nicholas.'

It is impoſſible to doubt, after peruſing this paper, what the King's ſentiments were, or what he intended the world ſhould think of this negotiation, or the gentleman who managed it. One would imagine, that, at this juncture, Sir Edward Hyde thought preciſely as the King did, and believed that their direct intercourſe with General Monk was to be through Sir John Greenvile alone, and no other, ſince, before he knew whether Sir John was in England or not, he wrote him the following very remarkable letter (62), which is ſtill preſerved, and which, though of ſome length, the reader cannot but peruſe with pleaſure.

(62) In the poſſeſſion of Hugh Gregor, Eſq;

Sir EDWARD HYDE to Sir JOHN GREENVILE.

April the 23d, Breda 1660. N. S.

' Sir,

' The King hath received your's of the 18th from
' Oſtend, and you will eaſily believe he wiſhed you a
' quick and a ſafe paſſage, and is impatient to hear
' from you after you have ſpoken with the Gentleman.
' Since we came to Breda, every day hath brought us
' more expreſſes than you imagine from England, and tru-
' ly ſome from conſiderable perſons of all parties, and all
' pretend to have great power and credit with the Gen-
' tleman, and great hope of diſpoſing him to ſerve the
' King; in order to which, many propoſitions are
' made, and from ſome, the very advices which are
' already followed, you will eaſily think the King re-
' turns thanks to all, and deſires them to uſe all their
' power to ſo good an end. Now, as the King re-
' ſolves to conceal nothing of moment from the Gen-
' tleman, upon whoſe affection he relies entirely, and
' that whatſoever he ſhall be informed of by his Ma-
' jeſty, ſhall not be turned to the prejudice of any man;
' ſo I am directed to let you know of one particular
' embaſſy he hath received, which puts him into ſome
' wonder, and the Gentleman will better know what
' uſe to make of it than the King doth. There is a
' gentleman come from my Lady Carliſle, who went
' firſt to the Queen at Paris, and ſo from thence hither,
' with inſtructions in writing, which the lady profeſſeth
' are the Gentleman's poſitive advice, conſented to her by
' the Secretary Thompſon, who is the ſole confident
' between them. They contain the Gentleman's poſi-
' tive exceptions againſt the King's being in Flanders
' or in Holland, as unfit places for them to treat in,
' the firſt as an enemy's and a catholic country, the
' other as too much intereſted in trade, and ſo like to
' take advantage of the King's preſence; and thereup-
' on his advice is preſumed to be as poſitive that his
' Majeſty ſhould immediately go into France, as a
' place without all exception, and if it were for the exerciſe of
' religion, and a country not at all addicted to its in-
' tereſt. You will [illegible] believe that
' to be the Gentleman's opinion, yet we think it neceſ-
' ſary he ſhould have it, to the end the better judge
' what deſign there may be in this, and whether, in
' truth, Mr Thompſon be like to have any hand in it.
' There is another thing in which the King doth as
' much deſire the Gentleman's advice. We have, ſince
' I ſaw you, received very frank overtures from Secre-
' tary Thurloe, with many great profeſſions of reſolving
' to ſerve the King, and not only in his own endea-
' vours, but by the ſervice of his friends, who are eaſi-
' ly enough gueſſed at. This comes through the hands
' of a perſon who will not deceive us, nor is eaſily to
' be deceived himſelf, except by ſuch bold diſſimulation
' of the other, which cannot at firſt be diſcovered.
' Yet it is enough ſuſpected by the King, there is ſome-
' what of curioſity accompanies Thurloe's profeſſions,
' for he is very inquiſitive to know whether the King
' hath any confidence in the Gentleman, or hath ap-
' proached him the right way, which he deſires to
' know, only that he may finiſh what is left undone,
' or be able the better to adviſe his Majeſty what he is
' to do therein.

' The King returned ſuch anſwers as are fit, and de-
' ſires to ſee ſome effects of his good affection, and
' then he will find his ſervice more acceptable. Both
' theſe particulars the King thinks fit the Gentleman
' ſhould know, that his Majeſty may receive his advice,
' and to know what his opinion is of Thurloe, and
' and whether he be able, if he were willing, to con-
' tribute much to his Majeſty's ſervice; but this being
' of ſuch a nature, as being communicated, may be
' turned to the prejudice of perſons, to whom his Ma-
' jeſty wiſheth no hurt, and may draw reproach upon
' himſelf and his councils; the King would not have
' you impart either of them to any perſon whatſoever,
' except the Gentleman himſelf and Mr Morrice, be-
' cauſe poſſibly you may not ſo conveniently at preſent
' be admitted to the Gentleman, and then no inconve-
' nience can ariſe from it.

I am,

Sir,

Your moſt affectionate humble ſervant.'

Indorſed by William Morrice, Eſq; afterwards Sir William Morrice, and Secretary of State.
Lord Chancellor to Sir Jo. Greenville *from* Breda.

[L] To

degree better. The fact was ſo far true, that they had applied to the General, and propoſed bringing the King home in that manner, to which he was forced in appearance to aſſent, that they might not penetrate his real intentions. The King underſtood this very well, and therefore, when he communicated this affair to Sir John, he could not help ſaying, 'Theſe people little know on how good terms I ſtand with General Monk through 'your interpoſition (g).' Sir John left the court on the firſt of April, went to Antwerp, where Lord Mordaunt (h) waited for him, and from thence to Oſtend, carrying with him the King's privy ſeal and ſignet, which the General was to deliver (i) to whom he thought fit. On his arrival, he privately attended the General at St James's, and delivered to him his Majeſty's letter, written with his own hand, together with his commiſſion of General over all the armies of England, Scotland, and Ireland. The General refuſed the letter, and kept it with him, but for the preſent he would not truſt his own cabinet with the commiſſion, which was therefore delivered back to Sir John Greenvile, who ſecured it in a private place in the floor of his bed-chamber, where he had been long uſed to lay up letters and commiſſions from the King, where alſo this lay 'till after the King's return, and was then delivered to the General (k). And for thoſe other letters, it was now reſolved, that Sir John Greenvile ſhould keep them privately 'till the opening of the Parliament, and then deliver them according to his inſtructions. The General at this time alſo deliberated with Sir John Greenvile about the diſpoſal of his Majeſty's ſeal and ſignet, where it was agreed, that in regard Mr Morrice was the only perſon that had been privy to this ſecret affair, and had ſo faithfully aſſiſted therein, they would recommend him to the truſt; which, ſo ſoon as the King returned, was accordingly done by the General, though at the ſame time he was offered ten thouſand pounds to procure the place for another. Whatever it might be afterwards, his promotion was at this juncture highly acceptable to the Chancellor, whoſe complaiſance and regard for Sir John Greenvile and Mr Morrice ran as high as they could wiſh, or at leaſt he expreſſed himſelf in ſuch terms as manifeſted his deſire to perſwade them of his reſpect and affection [L]. At this very time an incident fell out

[L] *To perſwade them of his reſpect and affection.*] It is not impoſſible but both the following letters might in effect come from the ſame hand, that is to ſay, the Chancellor might dictate the King's, as well as write his own letter; for moſt of King Charles's letters are remarkably ſhort, and are conceived in a quicker and more pointed ſtile; but be that as it will, theſe letters are inconteſtible proofs, that the King and the Chancellor were at this time thoroughly convinced of the capacity of the new Secretary, of the ſtrict fidelity of Sir John Greenvile, and of the abilities and affections of them both towards the King's ſervice (63).

(63) In the poſſeſſion of Hugh Gregor, Eſq;

King CHARLES II. to William Morrice, Eſq;

'Mr Morrice, Breda, 20 May 1660, N. S.

'The laſt week Bernard Greenvile was even departing from me with my anſwer to your's of the 20th of 'the laſt month, when ſome meſſengers arrived with 'the news of the reception of my letters and declaration, found in the two Houſes, which made moſt that 'I had writ to you unneceſſary, and ſo I ſtopped his 'journey. I have ſince received your's of the 5th, and 'I muſt tell you, I find cauſe enough to rejoice in the 'very good opinion I have of you, and in the choice I 'have made of you for ſo near a truſt, which I am ſure 'you will diſcharge with full abilities, as well as fidelity to me. I ſhall hereafter write to you with that 'freedom as is due to ſuch a ſervant, and impart thoſe 'apprehenſions to you, which it may be you may find, 'upon further enquiry, to be very reaſonably grounded. That both Houſes are very well conſtituted of 'men, who deſire to reſtore the nation to a full peace 'and ſecurity, upon the right and ſafe foundation of 'the laws, I do not in the leaſt degree doubt; yet 'there is a little queſtion, that there are ſome perſons 'both within and without both Houſes, who deſire to 'keep up the memory of old jealouſies and animoſities, 'and to prevent ſuch an entire union as can only make 'us all happy. Next the bleſſing of God, nothing can 'ſo abſolutely diſappoint thoſe diſguiſes, as my preſence with you, which thoſe men will as much endeavour to haſten, being moſt aſſured (as I doubt not 'you are) that I have offered nothing in my Declaration or letters that I will not moſt punctually and exactly perform; but without doubt, for the ſpeedy 'and ſecure way of doing it, my preſence is moſt 'neceſſary, which would eaſily adjuſt all thoſe things 'both in matter and form which are liable to moſt objections. And therefore, I pray look upon thoſe 'who would delay my ſpeedy coming to you, as perſons who have other deſigns than they yet own. I 'know the General cannot but obſerve, that my 'friends in the Houſe have complied with his deſires in 'all things, according to the command I gave them, 'and have thereupon departed from their own ſenſe, 'and reſtrained themſelves from purſuing that which 'they thought moſt for my ſervice. You muſt take 'care that I do not ſuffer for that temper and condeſcenſion in them, and that advantage be not taken 'from thence, either to delay the diſpatch of what is 'neceſſary, or to ſet on foot any unneceſſary and inconvenient demands, which muſt be inconvenient to 'me, and would leſſen that joy with which we ſhould 'meet each other, to receive thoſe great bleſſings 'which God Almighty is ready to pour upon us, if 'any indiſpoſition in the army makes it leſs fit for the 'General to appear; in paſſing that which is moſt 'deſirable, you may eaſily get it to be promoted by 'the Houſes, to which he and the army are obliged to 'ſubmit. Do all I pray that is neceſſary to be done, 'in order to the bringing me quickly to you; 'till 'when, truſt me, there are as many deſigns abroad as 'at home, to prevent and diſturb that good intelligence 'and agreement which can only make us happy, and 'diſappoint the many deſigns which are againſt the 'peace and honour of the nation. I know not what 'to ſay more 'till the committee arrive, who I hope 'will invite me ſpeedily to repair to you. Sir John 'Greenvile will, I am ſure, be abſent from you, and 'ſo I cannot communicate ſome things which are not 'ſo fit to write, and therefore I have intruſted Sir William Compton to impart ſome particulars of my 'doubts and apprehenſions to you. He is a perſon in 'whoſe diſcretion you may repoſe great confidence, as 'well as in his affection and fidelity to me, and can 'convey any thing you think neceſſary, and ſhall adviſe him to many of my friends, who will be very 'uſeful upon all occaſions. I will ſay no more, but 'that I long to ſee you, which I hope is at hand, and 'you will then find you have a full credit with

Your affectionate friend,

CHARLES R.

Sir

out which had like to have thrown all things back again into confuſion. This was Lambert's eſcape out of the Tower, to whom many diſcontented officers ſoon repaired; and, if he could have gained time, there is no doubt he might have aſſembled a conſiderable army. But the General ſent Ingoldſby and Streater in purſuit of him, and was extremely well ſeconded by the council of State in his endeavours to reduce them, of which however he was ſo far from being confident, that he ſent for Sir John Greenvile, and told him, that if this inſurrection grew to any height, he was determined to publiſh the King's commiſſion, and put the Royaliſts in arms in all the three kingdoms (*l*). At the ſame time he wrote an anſwer to the King's private letter, the firſt he ever wrote his Majeſty, and ſent it by Bernard Greenvile, Sir John's younger brother, with the ſtrongeſt profeſſions of duty and fidelity. However, Lambert was defeated, and brought back priſoner to the Tower (*m*), before the meeting of the Parliament. At their meeting, the Houſe of Lords choſe the Earl of Mancheſter for their Speaker, as the Commons did Sir Harbottle Grimſton; appointed their uſual committees, and ordered thanks to the General, with the moſt entire approbation of his ſervices (*n*); and then the Houſe of Lords adjourned to the firſt of May. In the time of this ſhort receſs, that is, on the 27th of April, Sir John Greenvile attending at the door of the council-chamber in Whitehall, deſired Colonel John Birch, who was one of the members, to let the General know he was there, and upon his coming to the door, he preſented to him the King's letter, which he was to communicate to the council of ſtate and officers of the army (*o*). His Excellency received it with great ſurprize, and ordered his guards to take care of the perſon who brought it, broke the ſeal, and then preſented it to the Preſident; notwithſtanding which, they had not the courage to read it, ordering that to be poſtponed 'till the Parliament met; yet they called in Sir John Greenvile, and aſked him from whom he had it. He anſwered, *The* King *my maſter delivered it with his own hand to me at* Breda. Upon this they reſolved to commit him, that he might be forth coming when the two Houſes met; on which the General told them, that though not much of his acquaintance, he was his relation, and he would be anſwerable for him. On the 1ſt of May Sir John attended the Houſe of Commons, and ſeeing the Lord Commiſſioner Tyrrel going in, he deſired him to acquaint the Speaker that he was entruſted with a letter to the Houſe from his moſt ſacred Majeſty. When the Commiſſioner came in, he found Arthur Anneſley, Eſq; the Preſident of the council of ſtate, relating what had paſſed there. As ſoon as he had ended, the Commiſſioner acquainted the Speaker with Sir John's meſſage, upon which a debate enſued. In the mean time, Sir John went to the Houſe of Lords, and having ſent for the Earl of Oxford out of the Houſe, deſired he would acquaint the Speaker that he attended with a letter from his Majeſty. The Lords, after a ſhort debate, reſolved to attend their Speaker to the door, where Sir John met and preſented him the King's letter, for which he had immediately the thanks of the Houſe (*p*). On his return to the Houſe of Commons, he was as well received there, and ſoon after they returned him their moſt ſolemn thanks; and, as a farther memorial of their ſenſe of his ſervice, ordered him five hundred pounds to buy a jewel (*q*), which ſum was carried to his lodgings the next day [*M*]. On the 10th of May, Sir John Greenvile, by direction from the General, went

Sir EDWARD HYDE to William Morrice, Eſq;

* In the poſſeſſion of Hugh Gregor, Eſq;

* 'SIR,

'I have enough underſtood from Sir John Greenvile 'how much I am beholden to you, and I beſeech you 'do not impute it to vanity in me, that I was always 'confident, that at ſome time or other, either by the 'repreſentation of ſome friend, or when I ſhould be 'fully known to you, I ſhould have a part in your 'friendſhip. I am afraid I may be now upon ſome 'diſadvantage, by the ſo good character the partiality 'of Sir J. Greenvile may have given me to you, which 'I may appear far ſhort of; and I ſhall be very well 'content that you think me not ſo good a man as he 'hath pleaſed to deliver me, ſo you think me not ſo 'ill a man as others have given me out to be. I hope 'ſhortly to wait on you, for the King expects and de'ſires you to come with my Lord General to meet 'him, for 'till then he will take no reſolution of im'portance, and I ſhall make myſelf as worthy of your 'friendſhip as I can. I have preſumed to write to his 'Excellency, which, if you think fit, I ſhould deſire 'you to preſent to him, as likewiſe the other letter to 'Mr Palmer, if the contents be agreeable to your 'opinion, which will always find a great ſubmiſſion 'from

Sir,

Hague, 27 May, S. N. 1660. Your moſt obedient ſervant,

Edw. Hyde.'

For my worthy friend Mr Morrice.

It would be eaſy to prove, from other authentic evidence, that, at this the moſt critical juncture of all, the reliance of the King was upon the General, Morrice, and Greenvile, and extended no farther; but that what has been already ſaid may ſeem ſufficient; only let it be obſerved, that the Lord Viſcount Mordaunt, who had been ſo much truſted, and hazarded his life ſo freely, had ſo clear a ſenſe of Sir John Greenvile's merit, that he could not help writing to the Marquis of Ormond, *on the 7th of May, that they* ſhould have a care of truſting Dr Clarges on that ſide of the water (64), but that they ſhould *rather let things* reſt 'till his worthy comrade came.

[*M*] *The next day.*] The thanks of the Houſe of Commons (65) appear in almoſt all our hiſtories, but curtailed and abridged; for which reaſon we have thought it requiſite to give them a place here, as belonging ſtrictly to the perſonal hiſtory of Sir John Greenvile. Sir Harbottle Grimſtone delivered them thus.

'Sir John Greenvile,

'I need not tell you with what grateful and thank'ful hearts the Commons, now aſſembled in Parlia'ment, have received his Majeſty's gracious letter; '*res ipſa loquitur:* you yourſelf have been *auricularis* '*& oculatus teſtis de rei veritate*; our bells and our 'bonfires have already begun the proclamation of his 'Majeſty's goodneſs and our joys: we have told the 'people, that our King, the glory of England, is 'coming home again, and they have reſounded it back 'again in our ears, that they are ready, and their 'hearts

went on board Admiral Montague's ſhip (*r*), to deſire that he would proceed with the fleet to the coaſt of Holland, which he promiſed; and the next day Sir John proceeded thither on board the Speaker (*s*), now called the Mary Frigate, of which he brought the King advice on the 14th, and at the ſame time acquainted him with the earneſt deſires of his ſubjects of all ranks to enjoy his preſence. He accompanied his Majeſty, and was preſent at Canterbury when the General received the Order of the Garter, and Mr Morrice that of Knighthood, being at the ſame time declared one of his Majeſty's Principal Secretaries of State (*t*). The ſatisfaction he enjoyed in contemplating the proſperity of his prince and country, which he might very juſtly attribute to the bleſſing of Divine Providence upon his own dutiful endeavours, ſtood for ſome time in the place of a recompence for his many ſignal ſervices, which however he did not aſcribe to any defect either of kindneſs or of gratitude in his Royal Maſter, but to the ſlowneſs, or perhaps coldneſs, of the Earl of Clarendon, who had in a manner the ſole and ſupreme direction of affairs. At length, at the diſtance almoſt of a year, on the approach of his Majeſty's coronation when ſeveral Earls were to be created, he had the title of Earl of Bath conferred upon him, but with circumſtances that were not over pleaſing, ſince, notwithſtanding it was well known that General Monk, now become Duke of Albemarle, intereſted himſelf only as to him and Colonel Charles Howard, who had been highly ſerviceable in keeping the army ſteady in the moſt critical conjuncture, the Earl of Bath was the laſt but one in the liſt, and the Earl of Carliſle the laſt of all (*u*). However, this was in ſome meaſure qualified by other marks of royal favour, which did not ſo immediately depend upon the Miniſter [*N*]. He was one of the Lords who accompanied his Majeſty and the Duke of York to that grand entertainment, which was given them by the ſociety of the Inner Temple (*w*), Auguſt 15, 1661.

' hearts are open to receive him; both parliament and ' people have cried aloud to the King of Kings, Long ' live King Charles the Second. I am likewiſe to tell ' you, that the Houſe doth not think fit that you ſhould ' return to our Royal Sovereign, without ſome teſtimony ' of their reſpects to yourſelf; they have therefore or- ' dered and appointed, that five hundred pounds ſhall ' be delivered unto you to buy a jewel, as a badge of ' that honour which is due to a perſon whom the King ' hath honoured to be the meſſenger of ſo gracious a ' meſſage; and I am commanded in the name of the ' houſe to return you their hearty thanks.'

Upon which the Noble Hiſtorian very juſtly exclaims in theſe words (66).

' So great and ſudden a change was this, that a ſer- ' vant of the King's, who for near ten years together ' had been in priſons, and under confinement, only for ' being the King's ſervant, and would but three months ' before have been put to have undergone a ſhameful ' death, if he had been known to have ſeen the King, ' ſhould be now rewarded for bringing a meſſage from ' him. From this time there was ſuch an emulation ' and impatience in lords, and commons, and city, and ' generally over the kingdom, who ſhould make the ' moſt lively expreſſions of their duty and of their joy, ' that a man could not but wonder where thoſe people ' dwelt who had done all the miſchief, and kept the ' King ſo many years from enjoying the comfort and ' ſupport of ſuch excellent ſubjects.'

As a proof of this we need only obſerve, that the city (67) received the King's letter with as high demonſtrations of joy, and beſtowed upon the Lord Viſcount Mordaunt and Sir John Greenvile, three hundred pounds to buy each of them a ring

(67) Whitlocke's Memorials, p. 700.

[*N*] *Upon the Miniſter*] Sir John Greenvile, by letters patents (68), bearing date at Weſtminſter, April 20, in the 13th of King Charles the Second, was created Lord Greenvile of Kilkhampton and Byddeford, Viſcount Lanſdowne, and Earl of Bath, being at that time Firſt Lord of the Bed-Chamber, and Lord Warden of the Stannaries. At this juncture it being ſuggeſted (69), that he had by inheritance a real right to the titles of Earl of Carboil, and Lord of Thorigny and Granville in Normandy, he was ſix days after, by his ſaid Majeſty's declaration under his royal ſignet, allowed and permitted to enjoy, the name, ſtile, and dignity, of Earl of Carboil, Lord of Thorigny and Granville, in as full and ample manner as his anceſtors formerly uſed, before that dukedom was loſt to the crown of England. In the preamble of which warrant, his Majeſty uſes theſe words (70): ' Whereas it appears to us, that our ' right truſty, &c. John Earl of Bath, &c. is derived ' in a direct line as heir male to Robert Fitz-Hamon, ' Lord of Glouceſter and Glamorgan, in the reigns of ' King William the Conqueror, King William Rufus, ' and King Henry I. and who was the ſon and heir of ' Hamon Dentatus, Earl of Carboil, and Lord of Tho- ' rigny and Granville in Normandy, which titles they ' held before Normandy was loſt to the crown of Eng- ' land, whereby he juſtly claims his deſcent from the ' younger ſon of the Duke of Normandy, as we our- ' ſelves do from the eldeſt, &c.' Alſo in the ſame year (1661) (71), the King paſſed a warrant under the privy-ſeal, whereby he obliged himſelf, and recommended it to his ſucceſſors, that, in caſe of the failure of male iſſue to General Monk, the title of Duke of Albemarle ſhould deſcend to the ſaid Earl of Bath, and be continued in his family. And likewiſe, by another warrant (72), promiſed the earldom of Glamorgan, formerly enjoyed by Robert Fitz-Hamon, in caſe of failure of iſſue male of the Marquis of Worceſter by his lady then living, to be enjoyed by him and his heirs male, and in default of iſſue, to the heirs male of Sir Bevil Greenvile his father.

(68) Bill. Sign. 12 Car. II.

(69) MS. Addit. to Baron. by Sir W. Dugdale.

(70) Ex Inform. præhon. Geo. Dom. Lanſdowne.

(71) Ibid.

(72) Ibid.

It is from hence we are to date the humour of changing the manner of ſpelling this name, of which the late Lord Lanſdowne was ſo remarkably fond, that he cenſures the Noble Hiſtorian on this head very unjuſtly (73), ' The Chancellor, ſays he, ſpells the family name ' *Greenvil*, wherein he has been followed by others. ' as an oracle in Heraldry as well as Hiſtory. If Cam- ' den had been conſulted, or any antient authentic re- ' cord, it would have been found, that *A* and *E* ſingle ' have often varied in different ages, but never with a ' double *E*. All antient names have ſuffered the ſame ' change, eſpecially of the letter *A* into an *E* ſingle.' To ſhew how little ſtrength there is in this criticiſm, we need only produce Dr Gumble (74), who was the Duke of Albemarle's chaplain, and perfectly well acquainted with this gentleman's family. He ſpeaks of him thus, ' Sir John Greenvile, couſin-german to the ' General, a moſt loyal and active inſtrument in his ' Majeſty's reſtoration, to whoſe conduct and prudence ' we are obliged by juſtice to attribute very much next ' the General.' But perhaps Dr Price, another of the Duke of Albemarle's chaplains, may appear of ſtill greater weight; he dedicates his book to this noble perſon in 1680, and the title of his Dedication runs thus (75): ' To the Right Honourable John Earl of Bath, ' Viſcount Greenvile of Lanſdowne, Baron Greenvile ' of Byddeford and Kilkhampton, Knight; Groom of ' the Stole, Firſt Gentleman of the Bed-Chamber, ' Lord-Lieutenant of the counties of Devon and Corn- ' wall, and one of the Lords of His Majeſty's moſt ho- ' nourable Privy-Council.' To this we may add, that Dr Peter Barwick, in his Latin life of his brother, calls him always *Johannes Greenvillus*. It would be impertinent to multiply authorities upon a point of ſo little conſequence, and which thoſe already produced are ſufficient to determine.

(74) Life of General Monk, p. 104.

(75) The Myſtery and Method of his Majeſty's happy Reſtoration, laid open to public view.

1661. He likewiſe attended the King and Queen to Oxford, when they went to pay a viſit to that univerſity, and had the degree of Maſter of Arts conferred upon him (x) September 28, 1663. His Lordſhip was preſent at a meeting of the Privy-Council at Whitehall, February 22, 1664 (y); in which the King's declaration of his motives for granting letters of marque and reprizal againſt the Dutch, which was the prelude to the firſt war in that reign was made. At this juncture it was a very popular meaſure, countenanced by the approbation of both houſes of Parliament, and had ſo far the concurrence of the city of London, that they not only readily lent the King one hundred thouſand pounds for the neceſſary preparations for that war, but came with equal alacrity into a ſecond loan of the ſame ſort (z). However, the Lord High-Chancellor Clarendon was neither preſent at the council beforementioned, or took any ſhare in adviſing (a) or managing the war, which ending leſs proſperouſly than it began, and having been ever oppoſed by that great man, the King took the ſeals from him (b), and gave them to Sir Orlando Bridgeman. In the next ſeſſion of Parliament, which began October 10, 1667, the Commons impeached the Earl of Clarendon of treaſon, and deſired that he might be committed, which their Lordſhips refuſed, unleſs ſome particular treaſon was aſſigned (c). Upon this a conference followed, in which the Commons offered their reaſons; and upon the report, the queſtion being put to comply with the deſires of the Houſe of Commons, it was carried in the negative; upon which, twenty-ſeven peers entered their proteſts (d), amongſt whom was the Earl of Bath, in which it may well be doubted whether he liſtened ſo much to his reaſon as his reſentment. He was one of the Lords of the Committee for Trade, who ſigned, Auguſt 4, 1676, a very explicite report to the King, of the depredations committed upon his Majeſty's ſubjects by the French Privateers, conceived in very ſtrong terms, to which the King gave a ſatisfactory anſwer, and ordered the Lord Berkeley, then his Ambaſſador at the court of France (e), to demand immediate ſatisfaction. In 1678, his Lordſhip was one of the few peers who proteſted againſt the diſpoſſeſſing the Lord Viſcount Purbeck of his peerage, in which his Lordſhip ſhewed himſelf to be a true lover of juſtice, being perſwaded in himſelf, that the intereſt of the Duke of Buckingham had at leaſt as much weight in that buſineſs, as the arguments offered (f) in favour of the bill. In 1679, when the King, to calm the heats that had been created by the diſcovery of the Popiſh Plot, reſolved to conſtitute a new Privy-Council, conſiſting of thirty perſons, who, in point of quality and of character, might be as acceptable to his ſubjects as grateful to himſelf, we find the Earl of Bath of this number (g). There was no meaſure of the King's reign that gained him more reputation than this; and of the number of new members, none more unexceptionable than his Lordſhip, who, without incurring envy, enjoyed the King's favour; had been all his life a courtier without loſing character, and, except in the caſe of the Earl of Clarendon's proſecution, his patriotiſm appeared the pure reſult of principle. A very ſtrong inſtance of this was ſhewn in his being one of the thirty-one Lords *, who acquitted William Lord Viſcount Stafford of high-treaſon, December 7, 1680, notwithſtanding which he was convicted and ſuffered death. He was alſo one of the ſixteen Privy-Counſellors who ſubſcribed the King's ſolemn Declaration, entered in the council books, and dated March the third the ſame year, importing, that to prevent any diſputes relating to the ſucceſſion, his Majeſty affirmed, that he was never married, or gave any contract of marriage, to Mrs Walters, otherwiſe Barlow, or to any other woman whatever, except Queen Katharine his conſort, then living, which was a point at that time of the utmoſt conſequence to the public peace †. His Lordſhip maintained this character of being a ſteady friend to the crown and to his country, and in all the variety of changes that happened in that reign, retained his credit with the King, whom he always ſtyled his moſt gracious Maſter to the laſt. In a little time after King James II. was ſeated upon the throne, viz. April 19, 1685: his Lordſhip was removed from his office of Groom of the Stole (h), which was beſtowed upon the Earl of Peterborough. It is clear enough from hence, that his Lordſhip had not that degree of perſonal favour with this monarch that he had with his brother; and it is poſſible alſo, the King might be deſirous, in point of conveniency, of having in that office a Lord of his own religion. But however this might happen, or on whatever motive this alteration was made, the Earl of Bath, as it was very natural for him to do, thought himſelf ſlighted; and it may be conceived, that as King James reaped the benefit of the Reſtoration, and had ſucceeded to that throne in which he had ſo great a hand in ſeating his brother, he was bound to conſider that warrant which had been ſigned at Breda, and which gave him ſuch a title to that poſt, as could not be honourably ſuperſeded during his life-time. However, upon the Duke of Monmouth's landing at Lyme in Dorſetſhire, in the month of June 1685, the Earl of Bath raiſed a regiment (i) of foot for the King's ſervice, with the behaviour and diſcipline of which regiment, his Majeſty, on reviewing them at Hounſlow, was ſo well pleaſed, that as a public mark of his approbation, he conferred the honour of knighthood upon Captain Bevil Greenvile, at the head of the regiment. His Lordſhip had however very little to do with this monarch or his miniſters, he was very little conſulted, and leſs employed, having ſhewn upon all occaſions equal zeal for the Proteſtant religion, and the liberties of his country, though without any biaſs either to rebellious or republican principles. He had a very

a very great hand in that amazing turn of affairs which happened in 1688, and was very little leſs concerned in the Revolution than in the Reſtoration, though ſome writers (*k*) have taken pains to leſſen his merit in reſpect to both. With a view to this it is ſaid, that when the Prince of Orange, with his fleet and forces aboard, by ſome accident or other paſſed Dartmouth and Torbay, the Earl of Bath would not undertake to admit him into the port of Plymouth, under pretence that he was managing the garriſon, and that as yet the point was not abſolutely in his power, which he did to gain time, and 'till he ſaw how things would go. The fact truly ſtated however is very different. His Lordſhip was at that time Lord-Lieutenant of the counties of Devon and Cornwall, and governor of the important port and royal citadel of Plymouth, built by King Charles II. and one of the beſt (if not the very beſt) fortifications in England, having upwards of two hundred and fifty pieces of cannon mounted (*l*). There was in the place thirteen companies of foot, moſt of them belonging to the Earl of Huntingdon's regiment, many of the officers, and moſt of the ſoldiers, being Papiſts (*m*). It was ſuppoſed that the Prince of Orange intended to ſteer for the North, ſo that the Earl of Bath could have no notice of his having any deſign upon Plymouth, 'till apprized of it by the approach of the Dutch fleet; and if he did make any ſuch anſwer as is before mentioned (though it is not eaſy to conceive how the queſtion could be propoſed or the anſwer made) it was certainly very proper, and moſt likely to be the truth. For on the night between the 10th and the 11th of November, he ſurprized the citadel of Plymouth, ſeizing the Earl of Huntingdon, and the officers upon whom he moſt depended; turned all, in whom he could not confide, out of the garriſon; and having declared for the Prince of Orange, and cauſed his Declarations to be proclaimed, and immediately admitted part of the Dutch fleet into the harbour, which the writers of thoſe times acknowledge to have been a point deciſive in favour of the Revolution (*n*). He alſo ſent his own regiment, under the command of his nephew Sir Bevil Greenvile, to ſecure the important iſland of Jerſey, where the King had a Popiſh governor, and a garriſon wholly devoted to him; ſo that the Earl, not without reaſon, ſuſpected a place of ſuch conſequence to the crown of England, might have been delivered to France, from which danger it was thus happily preſerved (*o*). His Lordſhip, in the diſputes that followed, was againſt the ſettling a regency, and voted for declaring the Prince and Princeſs of Orange King and Queen. He was ſoon after ſworn of the Privy-Council, and continued in his former offices (*p*). He was however as little and as ill received a courtier in this as in the former reign, but, in reſpect to national concerns, he ſupported and oppoſed according to his own notions of the public good. His regard for the conſtitution, abhorrence of thoſe ſevere and ſanguinary ſentences, which ſeemed calculated to render the law itſelf odious, and his earneſt deſire to take away arbitrary and abuſed power, wherever placed, induced his Lordſhip to contend earneſtly for the reverſing thoſe exorbitant judgments, believing, that what ought never to have paſſed at all, ſhould not laſt and remain on record for ever (*q*). His Lordſhip heard grievances inſiſted upon as the principal ground of the Revolution, and from thence concluded, that the redreſs of grievances, and a thorough amendment of the whole ſtructure of government, was the great end of the Revolution, which with great zeal and inflexible conſtancy he ſet about accompliſhing, without inquiring where it would render him acceptable, or whom it might diſoblige or offend. He was very aſſiduous, in 1689, in promoting a clauſe to be added to the bill of Rights, declaring all pardons, upon an impeachment of the Houſe of Commons, to be null and void, except with the conſent of both houſes of parliament, and though it was loſt in the Houſe of Peers by a great majority, he entered his proteſt (*r*). In 1690 he took the ſame ſtep in reſpect to a law which he thought might bear hard on the Earl of Torrington, who was then expoſed to a proſecution on the part of the crown, and at the ſame time to the general outcry, not of this only, but of a neigbouring nation, which the Earl of Bath conſidered as ſo many additional reaſons that ought to intitle his Lordſhip, in point of form as well as matter, to the ſtricteſt juſtice (*s*). In the year 1692, he found himſelf expoſed to the reſentment of King James, who, when he was ready with a potent army to invade the ſouthern part of his iſland, by his declaration, dated at St Germains (*t*) the 10th of April, excepted from his promiſe of general pardon, the Duke of Ormond, the Marquis of Wincheſter, the Earls of Sunderland, Bath, Denbigh, and Nottingham, the Lords, Newport, Delamere, Wiltſhire, Colcheſter, Cornbury, Dumblain, and Churchill, together with the Biſhops of London and St Aſaph, and many other perſons of diſtinction who were commoners. This did not hinder his Lordſhip from perſiſting in his former meaſures, and labouring, as much as in his power lay, in parliament, to examine ſeriouſly into the ſtate of the nation (*u*), and not to treat as ſenſeleſs and ſeditious what the courtiers ſtyled public clamour, 'till they were thoroughly ſatisfied they were not grievances brought to their ears by the cries of the people. In 1694, came on, before the Lord Keeper Somers, in the high court of Chancery, his great ſuit in regard to the ſucceſſion of Chriſtopher, late Duke of Albemarle, in which ſuit his Lordſhip prevailed, as he likewiſe did when it was brought by appeal before the Houſe of Lords (*w*) [O]. cular and intereſting circumſtances attending it, and received three determinations with as great ſolemnity as any thing of this kind ever did (76). We ſhall endeavour to ſtate the matter clearly and conciſely here. We have before mentioned how great regard and reſpect General George Monk, afterwards Duke of Albemarle, expreſſed for his relation and friend Sir John Greenvile, then become Earl of Bath; and we have likewiſe obſerved as a teſtimony of it, that he engaged King Charles II. to promiſe by a ſign manual, that in caſe his iſſue male ſhould extinguiſh, he would confer the dukedom upon the Earl of Bath or his poſterity, and likewiſe beſtow upon them the honour of Theobalds, which would then revert to the crown (77). This great teſtimony of affection and reſpect, induced the Earl of Bath to ſhew the utmoſt tenderneſs and concern for Chriſtopher, the only ſon and heir of Duke George, who in 1675, being then of full age, and capable of diſpoſing of his real eſtate, made a will, and ſettled a great part of it, on failure of his own iſſue, on the Earl of Bath. In the month of July, 1681, the ſame Duke made a deed, relative to this will in ſome reſpect, whereby the main of his eſtate, after the Duke and Ducheſs's death without iſſue, was ſettled upon the Earl of Bath, and ſome other parts on Sir Walter Clarges and Mr Bernard Greenvile (78). The reaſons aſſigned by his Grace for making this deed being, that his next heirs at law were deſcended from a regicide, and his great conſideration and regard for the perſons to whom he bequeathed it. In this deed there was a proviſo, that the Duke ſhould have power to revoke any uſes in the deed, and limit new ones; but this was to be done by a writing under his hand and ſeal, in the preſence of ſix witneſſes, of whom three were to be peers of the realm, and the tender of ſixpence to each truſtee mentioned in the deed (79). After all this, in the year 1687 the Duke made another will, and thereby gave ſome parcels of his lands to Mr Bernard Greenvile, Sir Walter Clarges, and others; made ſome larger proviſions for the Ducheſs during her life, but gave the bulk and reſidue of all his eſtate to Colonel Thomas Monk, and likewiſe made a petition in that will to the King, that he would be pleaſed to confer a title of honour upon him, and that he would create him Baron Monk of Potheridge (80), the antient ſeat of the family; whereas, in the former will of 1675, he had deſired the King to grant to the Earl of Bath, and the iſſue male of his body, the title of Duke of Albemarle, and that his eldeſt ſon might bear the title of Lord Monk.

But notwithſtanding all this, a little before his going Governor to Jamaica, he delivered to the Lord Bath the will of 1675, and the deed of 1681, incloſed in a paper under his ſeal; and directed Mr Crofts, though one of the witneſſes to the laſt will in 1687, to deliver the keys of all his evidences to the Earl, whom he likewiſe mentioned as the perſon to be applied to during his abſence, and as the perſon who was to be the heir of the beſt part of his eſtate, in caſe any thing (81) happened to him; and parted with his Lordſhip, not only without any ſigns of diſlike or quarrel, but with all teſtimonies of ſincere and cordial friendſhip, which were confirmed afterwards by letters from Jamaica; and during the Duke's ſtay there, all applications to court on his behalf were made by and through the Earl of Bath (82), in conſequence of expreſs directions from his Grace.

After the Duke's demiſe in Jamaica, in January 1688, ſeveral ſuits were commenced in Chancery. The Ducheſs of Albemarle, and after her intermarriage with Ralph Lord Montagu, that Lord in her right became plaintiffs againſt the Earl of Bath and others defendants; and in their bill, ſet forth the Duke of Albemarle's marriage-ſettlement, and his Will of 1687, made with great circumſpection by the Lord Chief Juſtice Pollexfen, executed in the preſence of three witneſſes; three copies engroſſed, one delivered into the hands of the Ducheſs of Newcaſtle, another to Colonel Thomas Monk, and a third carried by the Duke himſelf to Jamaica, where, without ſhewing or explaining the contents, he told Sir Hans Sloane, his Phyſician, that was his Will (83). In this bill the plaintiffs complain, that the Earl of Bath ſets up another will, and a deed, which, if ever executed by the Duke, they believed was obtained by ſurprize, and ought to be ſet aſide in equity; and, if it ſhould not be ſet aſide, they pray that the Ducheſs may have the lands limited to her by that deed, and the rent-charge of two thouſand pounds a year over the jointure ſettled upon the marriage, and confirmed by the will of 1675; and they farther pray, that the will of 1687 ſhould ſtand good as to the perſonal eſtate and legacies, and to be protected in the enjoyment of the perſonal eſtate and ſpecific legacies, diſcharged from the Duke's debts.

Another bill was brought by Chriſtopher Monk and Henry Monk, ſons of Colonel Thomas Monk, complaining of the Earl of Bath and others, ſetting up the will of 1675, and the deed of 1681, and praying that both will and deed may be ſet aſide, and that the plaintiffs might enjoy the benefits and eſtates given them by the will of 1687.

There was a third bill brought by the Earl of Bath, Mr Bernard Greenvile, and Sir Walter Clarges, in which they ſet forth the will of 1675, and the deed of 1681, and the continuance and conſtancy of the Duke's friendſhip and truſt to the time of his death, complaining of the Ducheſs and others, defendants, for ſetting up the will of 1687, praying that the perſonal eſtate might be applied to the payment of the Duke's debts, and that the real eſtate might be confirmed to the plaintiffs. Theſe cauſes were firſt heard before the Lords-Commiſſioners of the great Seal, the 8th of July 1691, when a decree was made, that the perſonal eſtate ſhould be accounted for, and applied to the payment of the late Duke's debts; and directed an iſſue at law to try the validity of the deed of 1681. According to this order, in Michaelmas term following, there was an ejectment tried at the King's-Bench bar, wherein the Ducheſs of Albemarle and Mr Chriſtopher Monk were the leſſors of the plaintiffs, and a verdict was then found for the defendants, which eſtabliſhed the deed at law; this was the firſt deciſion (84).

The parties then reſorting back to the court of Chancery for the deciſion of the points reſerved, the cauſes came to be finally heard on Thurſday December 12, 1693, before the Lord Keeper Somers, aſſiſted by the two Chief-Juſtices, Holt and Treby, and Mr Baron Powell. That day Baron Powell and the Lord Chief Juſtice Treby gave their opinions, and on the next day the Lord Chief Juſtice Holt and the Lord Keeper delivered theirs, all four concurring in their ſentiments, that the bills of the Earl of Montagu, the Ducheſs of Albemarle, and the Monks, ſo far as they reſpected the deed of 1681, ought to be diſmiſſed (85). There was an appeal from this decree to the Houſe of Lords, which came on to be heard the 27th of February following; where, after a full hearing, the decree was affirmed; and this was the final deciſion (86). But after all, the manor of Potheridge did not paſs by this deed, but in virtue of prior ſettlements deſcended to Thomas Pride and Elizabeth Pride, the ſon and daughter of Colonel Pride by Elizabeth Monk the daughter of Thomas Monk, elder brother to the Duke of Albemarle, from whom, all diſputes being amicably compromiſed, the Earl of Bath purchaſed it (87).

prevent the maritime powers from being embarked in another war, before they had in some tolerable degree recovered their ſtrength after the former. His conduct, in regard to public affairs in general, was vigorous, from the natural warmth of his temper, and uniform to the very laſt hour of his life, being animated by a firm and ſteady attachment to the cauſe of liberty, in all caſes and againſt all opponents. This ſteadineſs and uniformity ſeemed to afford the ſtrongeſt evidence of his having acted conſtantly from principle, which however has not entirely ſecured his memory from cenſure [*P*]. His Lordſhip died

[*P*] *From cenſure.*] We have, in the courſe of this article, made it ſufficiently evident, that any diminution of this noble perſon's merit, in the conduct of the great tranſactions in which he was embarked, muſt proceed either from miſinformation or injuſtice; and we have alſo made it as clear, from facts, as any thing can be made, that he was ſcarce ever a boy; but from the age of fifteen conſidered as a man, knighted when about ſeventeen, and very early eſteemed for that which is commonly of the ſloweſt growth, though one of the higheſt of all human qualities, prudence. His family, his reputation, and his polite behaviour, recommended him to Prince Charles, but the King his father valued him for his diſcretion. It was this that determined the Earl of Norwich to truſt things with him, on which the fate of the royal family depended, before he was of age. At twenty-three he made that glorious defence in Scilly, and, in conſequence of it, that very advantageous treaty with the Admirals, Aſcue and Blake, which reſtored to him his eſtate and freedom, and ſecurity to all who followed him. He was but thirty-three, when, after having run through numberleſs perils, with much ſuſpicion and little hurt, he with great dexterity brought about the Reſtoration, which, if we will believe one who knew it beſt, King Charles the Second, was the work of him and none other. When the reader conſiders this character, drawn from facts, let him caſt his eye on the manner in which we find him introduced upon the ſtage, in the hiſtory of a right reverend author (88). 'He (that is 'General Monk) took care to raiſe his kinſman Greenvile, who was made Earl of Bath, a man who thought 'of nothing but of getting and ſpending money.' His nephew and apologiſt was a little warm upon this, and with reaſon (89). 'Would one not naturally 'think, ſays he, this ſame Greenvile, as he calls him, 'was ſome pitiful ſcoundrel, raiſed from the dirt upon 'no other merit but being the General's couſin? A 'man or a wretch, 'tis the ſame thing, who thought 'of nothing but getting and ſpending money. Now 'this happens likewiſe to be directly the reverſe both 'in character and fact: but it was a random ſtroke, 'ſome laſh he deſerved for the hand he had in the Reſtoration, ſomething was to be ſaid, hit or miſs, true 'or falſe, it was to take it's chance, and poſterity was 'to believe it upon his word. Dr Burnet ſays it.' We will treat this matter more calmly. The prelate muſt have written this part of his hiſtory from information, he might be miſinformed, and he really was ſo. This ſame Greenvile was not raiſed by his kinſman Monk. He had the warrant for his earldom before the King ſaw the General's face; but as for reaſons mentioned in the text, he was not actually created Earl of Bath 'till many months after the Reſtoration, Biſhop Burnet might be eaſily deceived in that particular; yet if he had conſulted Dr Price's book, he might have ſeen that warrant, and have learned from thence, that he did not riſe at his kinſman's requeſt, or at his own; but derived his title purely from his proper merit, and his maſter's gratitude. But ſtill this is not all. So far was Sir John Greenvile from being raiſed by his kinſman, that his kinſman was really raiſed by him. It was at firſt propoſed to create General Monk Earl of Eſſex, with a penſion of three thouſand pounds a year; of which the King being aſhamed, and the General refuſing to make any propoſal, it was left to Sir John Greenvile to ſettle the matter, who fixed the title of Albemarle, on account of the General's direct deſcent from Margaret, the eldeſt daughter of Richard Beauchamp, Earl of Warwick and Albemarle, with a very moderate grant to ſupport the dignity (90). That the Earl of Bath was not very rapacious, we may likewiſe collect from ſome inconteſtable facts. If he had been ſo, he would have taken the hundred thouſand pounds offered him for the iſles of Scilly by the Dutch. He accepted, for the greateſt ſervice a ſubject could render a prince, what the King was pleaſed to give or rather promiſe him; and it is highly probable he had only part of that, ſince, from his laſt will (91), it appears the King his maſter died much in his debt. If he did ſpend money, it was certainly his own, for we ſhall give ſuch inſtances of his juſtice, as will leave the reader under a moral certainty that he did not ſpend other people's. Let us now return to the Right Reverend Hiſtorian; ſpeaking of King Charles the Second's being reconciled to the Church of Rome at the time of his death, he ſays (92), 'As ſoon as Huddleſton had prepared every 'thing that was neceſſary, the Duke whiſpered the 'King in the ear. Upon that the King ordered that 'all who were in the bed-chamber ſhould withdraw, 'except the Earls of Bath and Feverſham, and the door 'was double locked. The company was kept out half 'an hour, only Lord Feverſham opened the door once, 'and called for a glaſs of water' The Reverend Father's own account differs ſomewhat from this (93). 'The King, ſays he, having private notice that Mr 'Huddleſton waited at the door, deſired to be in pri'vate; the Biſhops and Nobles withdrew, the Duke 'latching faſt the door; the Lords P. B. and F. were 'going out alſo, but the D told them they might ſtay.' It has been ſuppoſed, that the three initial letters ſhould be read, Peterborough, Bath, and Feverſham. It appears from Huddleſton's account, that the Earl of Bath would willingly have retired, and his ſtaying ought to be aſcribed to the Duke's command, and his office as Groom of the Stole. Some have applied to this noble perſon the following paſſage, which clearly contradicts the foregoing relations both of the Prieſt and Biſhop (94). 'I heard a great peer relate, that 'King Charles was in a manner paſt his ſenſes when 'the Duke ſaid, *Brother, will you have the* Prieſt *come in*; and without any ſenſible anſwer given by the 'King, Father Huddleſton, who was ſet to wait at the 'chamber door, was called in, and did what he pleaſed 'in his way without the King's choice, or any open 'ſign of aſſent to it.' If any thing of this ſort eſcaped him early, it might be a very good reaſon why King James would not have the Earl about his perſon. Yet the ſame Right Reverend Author tells us, his Lordſhip was very deep in the worſt meaſures of that reign (95). 'At the ſame time, ſays he, a Parliament was ſummoned, and all arts were uſed to manage elections, 'ſo that the King ſhould have a Parliament to his mind. 'Complaints came up from all the parts of England, 'of the injuſtice and violence uſed in elections beyond 'what had ever been practiſed in former times. And 'this was ſo univerſal over the whole nation, that no 'corner of it was neglected. In the new charters that 'had been granted, the election of the members was 'taken out of the hands of the inhabitants, and reſtrained to the corporation men, all thoſe being left 'out who were not acceptable at Court. In ſome boroughs they could not find a number of men to be 'depended on, ſo the neighbouring gentlemen were 'made the corporation men; and in ſome of theſe, 'perſons of other counties, not ſo much as known in the 'borough, were named. This was practiſed in the 'moſt avowed manner in Cornwall by the Earl of Bath, 'who, to ſecure himſelf the Groom of the Stole's 'place, which he held all King Charles's time, put 'the officers of the guards names, in almoſt all the charters of that county, which ſending up forty-four 'members, they were for the moſt part ſo choſen, that 'the King was ſure of their votes on all occaſions.' In the firſt place, it may not be amiſs to inform the reader, that the King, as ſoon as he came to the throne, deſigned to exclude the Earl of Bath from being Groom of the Stole; in which poſt he did not ſeek to maintain himſelf

died at his houſe in St James's (a), Auguſt 22, 1701, and was buried at Kilkhampton in Cornwall. He had iſſue, by his ſole conſort beforementioned, and who dying Feb. 17, 1692, was buried in the Church of St Clement Danes, five ſons and eleven daughters. Of the latter, ſeven died while they were young: Lady Jane married William Gower, Eſq; and by him became the mother of Sir John Leveſon Gower, who was the firſt Lord Gower; Lady Katharine, married to Craven Peyton of the county of Lancaſter, Eſq; Warden of the Mint, who died without iſſue before him; Lady Grace, who married Sir George Carteret, raiſed to the degree of a Baron of this realm, by King Charles II. and Lady Henrietta Maria, for whom he had provided a fortune of ten thouſand pounds, but who died before him unmarried. Two of the ſons alſo died when they were young, and three ſurvived him, viz. Charles, who ſucceeded him in his honours, and yet did not live to ſee his funeral (b) [Q]. His youngeſt ſon, Bevil, died of the ſmall-pox (c), September 15,

himſelf by favour, but claimed it as his right. His claim was conſidered more than once by the Privy-Council, and was at laſt referred to Sir Robert Sawyer, the King's Attorney-General, who reported that the King might beſtow the office, but that the ſalary and perquiſites belonged to the Earl of Bath. Upon this King James ſaid, that was giving Peterborough, who was his own Groom of the Stole when Duke of York, the ſhell, and Bath the kernel (96). After theſe altercations, which certainly were not like to make the King love him better, the Earl of Bath was turned out on Sunday the 19th of April (97), the Parliament was not opened 'till the nineteenth of May. So that in this time the elections were made, and the reader will judge, whether, under ſuch circumſtances, the Earl of Bath was like to go violent lengths for the Court; and if he caſts his eyes upon the liſts of the county and boroughs of Cornwall in this Parliament, he muſt be ſatisfied that they were never better repreſented. We have before obſerved, that his Lordſhip has been miſrepreſented in the affair of Plymouth at the Revolution. The Biſhop admits that he ſent his promiſe to the Prince of Orange by Admiral Ruſſel (though probably he meant Herbert); and though he diſputes the complying with it in the place before cited in the text, yet he afterwards clearly admits the fact (98). Another writer, who was alſo a lover of ſecret hiſtory, has been ſo kind to inform us, that ſoon after the Revolution, his Lordſhip applied himſelf to one who was in the higheſt favour with the new King, and deſired him to repreſent the claim he had to the royal ſeat of Theobalds; but it is ſaid (99) that favourite took this opportunity of begging it for himſelf; and from thence ariſes an inſinuation, that the Earl of Bath, by this diſappointment, was diſobliged. In reſpect to this fact we cannot affirm or deny any thing. But this we have a right to ſay, that if we take this noble peer's character from facts, we muſt conclude him a man of a very ſteady temper, and of very amiable and eſtimable qualities. He was the dutiful and zealous ſervant of Charles the Second, and yet durſt oppoſe his favourites and his miniſters. His loyalty to King James appeared on the Duke of Monmouth's invaſion. As to what followed, when the King purſued his own notions at the expence of the laws, he ſet an example fatal to himſelf. But that his Lordſhip really followed his ſentiments in that great turn, appears from the whole ſtrain of his conduct afterwards, by which he was expoſed to the reſentment of one King, at the ſame time he was not much in favour with the other. That he was a firm and faithful friend, appears from his behaviour towards the Duke of Albemarle's family. On the death of the old Duke, the King offered him his Garter, but he modeſtly declined accepting it, and deſired it might be given the young Duke (100), which was accordingly done. As Duke Chriſtopher left him a great part of his eſtates in 1681, ſo in 1684, the Earl, by his Will made with much caution, after the heirs male of his own family, ſubſtitutes the Duke and his, but without making the thing public, ſo that there is not the leaſt hint of it in the caſe. As a proof of his juſtice we may remark, that in a little time after the Reſtoration, he preſented the Reverend Mr Nicholas Monk and the Reverend Mr Price to the King, and made their ſervices known (101). We may add another inſtance in his family. His circumſtances once made it neceſſary for him to demand his lady's conſent to depart from her right to certain lands which were in her jointure, but things changing, ſo that he was not under the neceſſity of ſelling them, he voluntarily replaced them (102). He was an excellent father, a kind relation, and a generous maſter. He lived with a ſplendour ſuitable to his quality in town; he built a fine houſe (103), and ſhewed great hoſpitality in the country, where, through all the changes in his own fortune, and notwithſtanding all the alterations in the ſtate of public affairs, his influence was very extenſive through the whole courſe of his life, and his death generally and deſervedly regretted.

[Q] *And yet did not live to ſee his funeral.*] If this Noble Peer had deſcended from a line leſs fertile in heroes, his actions might well have entitled him to a ſeparate article, whereas here, from the nature of our work, we are obliged to confine the particulars that regard him to a note. His title during his father's lifetime was Viſcount Lanſdowne, and his turn to a military life being conſpicuous very early, his father conſented in 1683 to his making a campaign in Hungary againſt the Infidels; he was preſent in the month of September at the raiſing of the ſiege of Vienna, and attended the Duke of Lorrain when he gained the famous victory at Barkan, on the firſt of October, and alſo aſſiſted in the ſiege of Gran (104). On his return to England, King James appointed him Envoy Extraordinary (105) to the court of Spain, where he actually reſided when the Revolution happened. He returned through France, where he delivered back his letters credential to King James at St Germains. He was no ſooner at home, than he was called up by writ to the Houſe of Lords, by the title and with the precedency of his father's barony (106). In 1690 he did very remarkable ſervice, in defending the coaſts againſt the French, after the Earl of Torrington's misfortune at ſea, with which Queen Mary, who was then left in the adminiſtration, was highly ſatisfied. In an addreſs which he preſented to her upon that occaſion, he takes the title of Charles Lord Viſcount Lanſdowne, Count of the Sacred Roman Empire (107), &c. This honour was conferred upon him by the Emperor Leopold, for his ſignal ſervices in the war of Hungary, by his charter bearing date at Lintz, Jan. 27, 1684, and was to deſcend to all his poſterity of both ſexes (108): his Lordſhip however voted in the Houſe of Lords as his father did, which gave credit to a report, that he ſtood upon indifferent terms with King William, occaſioned by a warm expreſſion of his Lordſhip's upon the following occaſion. He had applied for the arrears due to him as miniſter in Spain, and meeting with delays at the Treaſury board, he addreſſed himſelf to King William in perſon, and receiving an anſwer he did not expect, he replied with ſome warmth, *What, does it ſhock your Majeſty to do juſtice* (109)! We have obſerved in the text that he did not long ſurvive his father, and indeed the accident that brought him to his end was equally ſingular and unfortunate. He had a cuſtom of cleaning his piſtols himſelf before he went a journey, and deſigning to attend his father's remains into Cornwall, he was thus employed on the 4th of September, when the piſtol, the charge of which he was drawing, going ſuddenly off, ſhot him through the head, ſo that his corpſe, with that of his father, was carried down to Kilkhampton (110). On the 22d of May 1678, this Noble Lord was married at St Martin's in the Fields, to the Lady Martha Oſborne (111), fifth daughter of Thomas Earl of Danby, afterwards Duke of Leeds, by whom he had iſſue a daughter, who died an infant, which lady was buried in Weſtminſter Abbey, on the 26th of September 1689.

5, 1706. His ſecond ſon, John Greenvile, after having ſignalized himſelf by his great courage, both by land and ſea, particularly at the ſiege of Cork, in which he led on the Grenadiers, roſe by his diſtinguiſhed merit to be a Colonel in the guards, Captain of a third rate man of war, and Governor of Deal, from all which he was removed, for vindicating the conduct of the Earl of Torrington. He was no leſs conſpicuous in his character as a ſenator, having the honour to ſit conſtantly in Parliament, from the firſt year of the reign of King James II. to the firſt of Queen Anne, and was a very able and eloquent ſpeaker, inſomuch, that on March 9, 1703, being then Knight of the Shire for the county of Cornwall, he was created Baron Greenvile of Potheridge *(e)*, and conſtituted Lord Lieutenant of Cornwall, Lord Warden of the Stannaries, during the minority of his nephew, and Lieutenant-General of the Ordnance. But about two years afterwards was removed, to make way for the Lord Rialton, and his father the Earl of Godolphin *(f)*, from the two former employments. He eſpouſed Rebecca, daughter of Sir Joſiah Child, and widow of Charles Marquis of Worceſter, by whom he had no iſſue; ſo that deceaſing December 3, 1707, the title of Lord Granville of Potheridge became extinct *(g)*, but his eſtate, which was very conſiderable, fell to his nephew William-Henry, Earl of Bath, who was alſo the laſt that bore that title, as the reader will ſee in the notes [*R*].

1689. He married ſecondly the Lady Iſabella, daughter to Henry de Naſſau Lord of Auverquerque, Veldt Marſhal of the force of the States-General, and ſiſter to Henry Earl of Grantham, by whom he had iſſue (112), his only ſon William-Henry Earl of Bath, of whom his mother died in childbed.

(112) Hiſtory of Illuſtrious Men, P. 347.

[*R*] *In the notes.*] This hopeful youth was born the thirteth of January (113) 1691-2, and loſing both his father and grandfather in the tenth year of his age, the ſuperintendence of his education devolved on his grandmother, the old Lady Auverquerque (114), who ſo well executed that charge, that his Lordſhip even in his youth ſurpaſſed the hopes of his friends; and being excited by the martial ardour natural to his family, made two campaigns in the army of the high allies before he was twenty years of age. While he was thus employed, his couſin, the honourable George Granville, Eſq; then Secretary at War, wrote him the following letter, which, as it contains abundance of hiſtorical circumſtances relating to the family, may with great propriety be inſerted here.

(113) Collins's Syſtem of Nobility, Vol. V. p. 24.

(114) Hiſtory of Europe for 1712, P. 539.

To WILLIAM-HENRY, Earl of BATH, &c. at the camp in Flanders, September 4, 1710.

'My dear Lord,

'Whilſt you are purſuing honour in the Field in the earlieſt time of your life, after the example of your anceſtors, I am commanded by the Queen to let you know ſhe has declared you her Lord-Lieutenant of the county of Cornwall, the Earl of Rocheſter to act for you 'till you are of age (115).

(115) Pointer's Chronological Hiſtorian, Vol. Vol. II. p. 657.

'You will do well to write your moſt humble thanks to her Majeſty, for ſo graciouſly remembering you, unſollicited, in your abſence: you ſhall likewiſe do the ſame to my Lord Rocheſter for accepting the trouble.

'This, my dear Lord, is a *preparative to bring you* upon the ſtage, with ſome luſtre at your firſt appearance in the world. You are placed at the head of a body of gentry, entirely diſpoſed in affection to you and your family: you are born, poſſeſſed of all thoſe amiable qualities which cannot fail of fixing their hearts: you have no other example to follow, but to tread in the ſteps of your anceſtors: it is all that is hoped or deſired from you.

'You are upon an uncommon foundation in that part of the world: your anceſtors, for at leaſt five hundred years, never made any alliance, male or female, out of the weſtern counties: thus there is hardly a gentleman either in Cornwall or Devon but has ſome of your blood, or you ſome of theirs. I remember the firſt time I accompanied your grandfather into the Weſt, upon holding his Parliament of Tinners, as Warden of the Stannaries, when there was the moſt numerous appearance of gentry of both counties that had ever been remembered together: I obſerved there was hardly any one but whom he called couſin, and I could not but obſerve at the ſame time how well they were pleaſed with it. Let this be a leſſon for you when it comes to your turn to appear amongſt them. Nothing is more obliging that to ſeem to retain the memory of kindred and alliance, though never ſo remote: and, by conſequence, nothing more diſobliging than a forgetfulneſs of them: which is always imputed to an affected diſdainful ſuperiority and pride.

'There is another particular, in my opinion, of no ſmall conſequence to the ſupport of your intereſt, which I would recommend to your imitation; and that is, to make Stowe your principal reſidence. I have heard your grandfather ſay, if ever he lived to be poſſeſſed of New-Hall he would pull it down, that your father might have no temptation to withdraw from the antient ſeat of his family. From the Conqueſt to the Reſtoration, your anceſtors conſtantly reſided amongſt their countrymen, except when the public ſervice called upon them to ſacrifice their lives for it.

'Stowe, in my grandfather's time, 'till the civil wars broke out, was a kind of academy for all the young men of family in the country: he provided himſelf with the beſt maſters of all kinds for education, and the children of his neighbours and friends ſhared the advantage with his own. Thus he in a manner became the father of his country, and not only engaged the affection of the preſent generation, but laid a foundation of friendſhip for poſterity, which is not worn out at this day.

'Upon this foundation, my Lord, you inherit friends without the trouble of making them, and have only to preſerve them: an eaſy talk for you, to whom nature has been ſo liberal of every quality neceſſary to attract affection, and gain the heart.

'I muſt tell you, the generality of our countrymen have been always Royaliſts: you inherit too much loyal blood to like them the worſe. There is an old ſaying amongſt them, that a Godolphin was never known to want wit, a Trelawney courage, or a Greenvile loyalty: wit and courage are not to be miſtaken, and to give thoſe families their due, they ſtill keep up to their character: but it is the misfortune of loyalty not to be ſo clearly underſtood or defined. In a country ſubject to revolutions, what paſſes for loyalty to-day may be treaſon to morrow; but I make great difference between real and nominal treaſon. In the quarrel of the houſes of York and Lancaſter, both ſides were proclaimed traytors as the other prevailed. Even under Cromwell's uſurpation, all who adhered to the King were proclaimed traytors, and ſuffered as ſuch: but this makes no alteration in the thing itſelf: it may be treaſon to call black black or white white: but black will be black and white will be white, in ſpite of all the legiſlators in the world.

'There can be no doubt about allegiance unleſs princes become tyrants, and then they ceaſe to be Kings: they will no longer be reſpected as God's vicegerents, who violate the laws they were ſworn to protect. The preacher may tell us of paſſive obedience; that tyrants are to be patiently ſuffered as ſcourges, in the hands of a righteous God, to chaſtiſe a ſinful nation, and to be ſubmitted to like plagues, famines, and ſuch like judgments from above. Such doctrine, were it true, could only ſerve to miſlead

'lead ill-judging princes into a falſe ſecurity: men are 'not to be reaſoned out of their ſenſes: human nature 'and ſelf-preſervation will eternally arm againſt ſlave-'ry and oppreſſion.

'It is therefore not to be ſuppoſed that even the 'weakeſt prince would run that hazard, unleſs ſeduced 'by advice, wickedly palliated by evil counſellors. 'Nero himſelf, under the influence of a good miniſtry, 'was the mildeſt, the moſt gracious, and beſt beloved 'of the Emperors. The moſt ſanguinary, the moſt 'profligate, and the moſt abhorred, under a bad 'one. A prince may be deceived or miſtaken in the 'choice of his favourites: but he has this advantage, 'he is ſure to hear of it from the voice of the public. 'If then he is deaf, he ſeems to take upon himſelf the 'blame and odium of thoſe actions which were chargea-'ble before but upon his adviſers.

'Idle murmurs, groundleſs diſcontents, and pretend-'ed jealouſies and fears, the effect of private prejudice 'and reſentments, have been, and will ever be, under 'the wiſeſt adminiſtrations: we are peſtered with them 'even now, when we have a Queen, who is known to 'have nothing ſo much at heart as the contentment of 'her people: Theſe are tranſitory vapours, which 'ſcatter at the firſt appearance of light: the infection 'ſpreads no farther than a particular ſett of ſour ſple-'netic enthuſiaſts in politics, not worth minding or 'correcting; univerſal diſcontent can never happen 'but from ſolid provocations.

'Many well meaning perſons, however abounding 'in zeal, have been often unwarily caught by popular 'pretences, and not undeceived 'till it was too [illegible] 'Have a care, my dear couſin, of ſplitting upon a 'rock: there have been falſe patriots as well as falſe 'prophets.

'To fear God and honour the King, were injunctions 'ſo cloſely tacked together, that they ſeem to admit 'but one and the ſame command: a man may as well 'pretend to be a good Chriſtian without fearing God, 'as a good ſubject without honouring the King.

'*Deo, patriæ, amicis*, was your great-grandfather 'Sir Bevil's motto: in three words he has added to his 'example a rule, which in following you can never err 'in any duty of life. The brighteſt courage and the 'gentleſt diſpoſition is part of the Lord Clarendon's 'character of him: ſo much of him you have begun to 'ſhew us already, and the beſt wiſh I can make for you, 'is to reſemble him as much in all—but his untimely 'fate.

My Dear Lord,

I am for ever, &c.

GEORGE GRANVILLE.'

This excellent young nobleman, of whom ſuch extraordinary hopes were conceived both at home and abroad, was ſeized by the ſmall-pox in the ſucceeding year, and died May 17, 1711, in the twenty-firſt year of his age, unmarried. His remains were interred the twenty-third of the ſame month in Weſtminſter-Abbey (116). E

(116) Hiſtory of Illuſtrious Men, p. 347. Hiſtory of Europe for 1711, p. 539. Monumenta Anglicana, p. 228.

GREENVILE, or, as he wrote it himſelf, being the great patron of that orthography, GRANVILLE, [GEORGE] created by Queen Anne, Baron Lanſdowne of Biddeford in the county of Devon; an eloquent ſpeaker, an elegant writer, an admirable poet, and, in a word, one of the moſt accompliſhed noblemen this nation has produced (*a*). It is a misfortune that a perſon ſo able has not left us any memoirs of his own, who with ſo much candour and ſpirit has reſcued from calumny the characters of other great men. The materials for this article are for this reaſon, in proportion to the worth of it, very ſcanty; and all that we are able to do towards rendering juſtice to his memory, and gratifying in ſome meaſure the expectation of the reader, is to range them in the beſt manner we are able, and to borrow from his own excellent writings all the lights we can (*b*). He was the ſon of the honourable Mr Bernard Greenvile, or Granville, who, in regard to the merit of his illuſtrious father Sir Bevil, had, by a ſpecial warrant from King Charles the Second, the rank given him of an Earl's younger ſon (*c*), and who added to the luſtre of his antient and noble family freſh ſplendour by his perſonal merit [*A*]. His ſon George was born about the year 1667, and is ſaid to have received a great

(*a*) Collins's Supplement to the Peerage, Vol. V. p. 98.

(*b*) See the article of GRANVILLE [GEORGE], in Jacob's Lives of the Poets; and the article LANSDOWNE in the General Dictionary.

(*c*) Lives of Illuſtrious Men, p. 349.

[*A*] *By his perſonal merit.*] This gentleman, Bernard Granville, Eſq; the father of our author, was, as we have already ſhewn, the ſon of Sir Bevil Granville, and brother to the Earl [illegible] (1). He was born in the year 1631, and conſequently was not above twelve years old when his father was killed at Lanſdowne (2). He received his education in the country, and remained under the care of ſome of his father's friends in Cornwall and Devon 'till he was about twenty years of age, and then ſecretly withdrew himſelf, that he might join his brother Sir John Greenvile in the iſlands of Scilly (3). He had there the benefit of the capitulation, and returning with his brother into the Weſt, was very active in the King's ſervice, and eſcaped very narrowly with his life upon ſeveral occaſions (4). In the great tranſaction of the King's Reſtoration, he was introduced by his brother to General Monk; and that great man gave a ſingular inſtance of his confidence in him, by intruſting him with his anſwer to the King's letter at a very critical conjuncture (5). Our author ſays upon this ſubject (6), 'My father, Mr Bernard Granville, 'was the perſon entruſted by the General with his laſt 'diſpatches to the King to invite him home, and to 'acquaint him that every thing was ready for his re-'ception.' In point of time his Lordſhip is clearly miſtaken; for, as Dr Skinner truly obſerves, this was the boldeſt ſtroke in the General's whole conduct (7). He wrote an anſwer to the King's letter before Lambert was retaken, and conſequently, long before things were ſettled, and all matters in readineſs for the King's reception. Indeed it appears by the King's own letter to the General, that this with which Mr Bernard Granville was intruſted, bore date the 20th of April (8); whereas the King's letters were not preſented to the two Houſes 'till the firſt of May But this does not at all affect the credit of what his Lord ſhip ſays farther (9), 'That when the General gave his 'father his final inſtructions, he acquainted him, that 'there were other meſſengers going over at the ſame 'time in the ſame ſhip, from Sir Anthony-Aſhly Coo-'per and others, directed to the Chancellor: that he 'ſhould take care not to be ſuſpected of any thing 'more than a common paſſenger, nor charged with 'any buſineſs: and above all, to uſe ſuch diligence 'as to get firſt to the King, that his Majeſty might 'not be ſurprized or perplexed by any uneaſy impor-'tunities or diſagreeable demands, but be prepared in 'what manner to receive and content them with ge-'neral anſwers. My father accordingly arrived the firſt 'by two or three hours to the King, who was at ſup-'per. Upon ſending in his name, his Majeſty imme-'diately aroſe from the table, and came to him in 'another room: the King had no ſooner read the 'General's letter, but he embraced the bearer, and 'told him, that never man was more welcome to him. 'He could now ſay *he was a* KING *and not a* DOGE.' He was Gentleman of the Bed-Chamber to the Duke of Glouceſter during the time of his exile; and after the Reſtoration, Gentleman of the Horſe, and one of the Grooms of the Bed-Chamber to King Charles the Second (10). He was choſe for Leſkard in Cornwall in the firſt Parliament after the King's Reſtoration, called the Long Parliament (11), and ſerved for Launceſton and Saltaſh in all the Parliaments of that reign

(11) Willis's Notitia Parliamentaria, Vol. II. p. 34.

A great part of his education in his infancy under the eye of Sir William Ellis, who was himſelf a man of letters, and of very quick parts (*d*). Mr Granville quickly diſcovered the genius of his family, and being with his elder brother entered of Trinity-College in Cambridge, at a time when others have made very little progreſs in a grammar-ſchool, he was, before he reached the age of twelve, diſtinguiſhed, by addreſſing a very fine copy of verſes, of his own compoſition, to her Royal Highneſs Maria Beatrix d'Eſte, Ducheſs of York, who in 1679 viſited this univerſity (*e*). He took his degree of Maſter of Arts there at thirteen, and left Cambridge ſoon after. On the acceſſion of King James the Second, he addreſſed three poems to that monarch in the firſt year of his reign, and in the eighteenth of his own age, all of them very finely written, particularly the laſt, which was looked upon as incomparable. Panegyric in proſe and in verſe was in faſhion in thoſe days; Lewis the Fourteenth had introduced and rewarded it in France, and from thence, with the other modes of that court, it ſpread over all Europe, and very early into England, where Waller, Dryden, and Otway, diſtinguiſhed themſelves in this way; and therefore it was the more excuſable for ſo young an author as Mr Granville, prompted alike by inclination and ambition, to tread in the ſame path. His obedient genius enabled him to gratify his paſſion, and to reach, even in his firſt heat, thoſe who were ſo much practiſed to the race. He was from this time conſidered as a maſter of numbers; and we may truly ſay of him, what can ſcarce be ſaid of any other, that before he was a man he was a poet. There was, and there ſtill is, a degree of complaiſance that waits on the productions of young men of faſhion; but Mr Granville did not at all avail himſelf of this, his very firſt poems are among the number of his beſt, and he did not ſtand indebted for his reputation, to favour, faction, or common fame, but had it conferred upon him by the firſt and faireſt judges of the times, than whom perhaps few ages have produced better (*f*) [*B*]. The great eſteem in

(*d*) Jacob's Lives and Characters of the Engliſh Dramatic Poets, Vol. II. p. 121.

(*e*) Lord Lansdowne's Works, Vol. I. p. 5. Jacob, ibid.

(*f*) See the note [*B*].

reign (12), for Plymouth in the firſt of James the ſecond (13), and for Saltaſh, in the reign of King William, to the time of his death (14), in the 70th year of his age, on the 14th of June, 1701, and was buried at Lambeth in Surry, as was alſo his lady, who died on the 20th of September following (15); ſhe was ſole daughter and heir of Cuthbert Morley, of Normanby in Cleveland, in Yorkſhire, Eſq; by his wife, the Lady Katherine Leke, daughter to Francis Earl of Scarſdale, by whom he had iſſue three ſons, Bevil, George, and Bernard; and two daughters, Anne, married to Sir John Stanley, Bart. and Elizabeth (16).

[*B*] *Than whom perhaps few ages have produced better.*] If teſtimony were of any weight in proving an author to be a genius, we ſhould find no great difficulty to ſucceed in this particular; for if the names of the immortal Dryden (17), who was his friend; the celebrated Joſeph Addiſon, Eſq; (18) who was his intimate acquaintance; the famous Henry St John (19), afterwards Lord Viſcount Bolingbroke who lived with him in the greateſt intimacy; and the ingenious Mr Bevil Higgons (20), who was his relation, would ſuffice; it is ſecure; more eſpecially as they have all given it under their hands, and ſtaked their own credit with poſterity in ſupport of his. But where a man's writings are extant, it is to them we ought to appeal, and this will juſtify our producing his third poem to King James (21), Mr Waller's complement to him, and his own reply. They are all very ſhort, and full to the point, but perhaps it may not be amiſs to remark, that our author wrote in the dawn of that monarch's reign, and before it was overcaſt by any of thoſe offenſive acts in favour of Popery, which gave occaſion to it's being tranſmitted in ſo very different a light to ſucceeding times.

To the KING.

Heroes of old, by rapine, and by ſpoil,
In ſearch of fame, did all the world embroil;
Thus to their Gods each then ally'd his name,
This ſprang from Jove, and that from Titan came:
With equal valour, and the ſame ſucceſs,
Dread King, might'ſt thou the univerſe oppreſs;
But Chriſtian laws conſtrain thy martial pride,
Peace is thy choice, and piety thy guide;
By thy example Kings are taught to ſway,
Heroes to fight, and Saints may learn to pray.
From Gods deſcended, and of race divine,
Neſtor in council, and Ulyſſes ſhine;
But in a day of battle, all would yield
To the fierce maſter of the ſeven-fold ſhield:
Their very Deities were grac'd no more,
Mars had the courage, Jove the thunder bore.
But all perfections meet in James alone,
And Britain's King is all the Gods in one.

To the author, on his foregoing verſes to the KING.
By Mr EDMUND WALLER.

An early plant, which ſuch a bloſſom bears,
And ſhows a genius, ſo beyond his years,
A judgment that could make ſo fair a choice,
So high a ſubject to employ his voice;
Still as it grows, how ſweetly will he ſing
The growing greatneſs of our matchleſs King.

Anſwer. To Mr WALLER.

When into Libya the young Grecian came,
To talk with Hammon, and conſult for fame;
When from the ſacred tripod where he ſtood,
The Prieſt inſpir'd, ſaluted him a God;
Scarce ſuch a joy that haughty victor knew,
Thus own'd by Heaven, as I, thus prais'd by you.
Who e'er their names can in thy numbers ſhow,
Have more than empire, and immortal grow;
Ages to come ſhall ſcorn the powers of old,
When in thy verſe of greater Gods they're told;
Our beauteous Queen, and Royal James's name,
For Jove and Juno ſhall be plac'd by Fame;
Thy Charles for Neptune, ſhall the Seas command,
And Sachariſſa ſhall for Venus ſtand:
Greece ſhall no longer boaſt, nor haughty Rome,
But think from Britain, all the Gods did come.

We cannot conclude this note, without confirming what has been ſaid in the text, by the authority of a profeſſed critic (22), who thought like a ſcholar, and wrote like a gentleman; his work was addreſſed to the Marquis of Granby, in 1709. 'Waller, ſays he, for 'the muſic of his numbers, the courtlineſs of his verſe, 'the eaſineſs and happineſs of his thoughts on a thou-'ſand ſubjects, deſerves your Lordſhip's conſideration, 'more perhaps than any other, becauſe his manner and 'his ſubjects are more common to perſons of quality, 'and

in which he ſtood at this court, and the many perſonal marks of favour he received from their Majeſties, added to the turn of his education, and the natural generosity of his temper, made Mr Granville paſſionately loyal in that ſeaſon of his life, when few, and he the leaſt of any, had learned to diſſemble (g). At the time of the Duke of Monmouth's rebellion, he was with great difficulty reſtrained from taking arms; and at the Revolution he had a return of the ſame kind of political fever, in the firſt tranſports of which he wrote his father a letter, which without doubt the reader will be pleaſed to ſee. [illegible] After [illegible] Vol. II. p. 105.

(g) Collins's Supplement to the Peerage, Vol. V. p. 97, 98.

'and the affairs of a court. Mr Granville, my Lord, 'hath rivalled him in his fineſt addreſs, and is as 'happy as he ever was in raiſing modern compliments 'upon ancient ſtory, and ſetting off the Britiſh valour, 'and the Engliſh beauty, with the old gods and god-'deſſes.'—— In the preface to a ſubſequent edition, he ſays on the ſame ſubject.——'If I had ſeen my Lord 'Lanſdowne's poems in one view, I might have formed 'a juſter idea of the greatneſs of his genius, and the 'delicacy of his wit. For when I wrote theſe ſheets, 'they lay diſperſed up and down in the Miſcellanies; 'but ſome kind hand hath aſſembled the ſcattered ſtars, 'and added another lyre to the conſtellations.'

[C] *The reader will be pleaſed to ſee.*] This ſingular and zealous letter has been often printed, but perhaps the following quotation from the impartial memoirs of a very worthy gentleman (23), wrote in the country, and at the very time preciſely, when this letter was written, will render it better underſtood: 'At this time, 'ſays he, Lord Thomas Howard was Lieutenant of the 'Weſt Riding, a rigid Papiſt, and now gone ambaſſador 'to Rome. He had left but three deputies behind him, 'two of which alſo were Papiſts, and but two of the 'three were now in the country, while moſt of the 'gentry of Yorkſhire were come to the city, expecting 'to meet with writs for the choice of members. I 'therefore preſſed the High-Sheriff to give notice to 'ſome gentlemen, while I convened others for the 'next day, when Sir Henry Gooderick began a diſ-'courſe, which I ſeconded, to ſhew how little we were 'able to ſerve the King with the Militia, without a-'nother Lord Lieutenant, under whom we might law-'fully ſerve, meaning a Proteſtant, and at the ſame 'time we ſubſcribed a repreſentation of our caſe to his 'Majeſty. I was well aware, how very ungrateful 'this would be to him; but to obviate his diſpleaſure, 'I gave him private intelligence of the intention to 'prepare it, and begged of him to excuſe the concern 'I had therein, aſſuring him it was now abſolutely for 'his ſervice. In the midſt of this, comes down a ſpe-'cial meſſenger to purge the corporation, to put out 'the former Lord Mayor and Aldermen, and to ap-'point others, almoſt all Papiſts; but the commiſſion 'was ſo defective, and there were ſuch miſtakes in the 'execution of it, as fruſtrated the deſign. The next 'day I prevailed with the Lord Mayor to call a hall, 'upon which occaſion, I ſpoke to them a full half 'hour, and ſo convinced them of the evil arts which 'had been put in practice againſt me, and the great 'injuſtice done me, that they all ſeemed to be converts 'in my favour; and to add to what I had ſaid, I gave 'them up the keys, but made them own it as a cour-'teſy, and promiſe to reſtore them to me again, when-'ever I deſired it, for his Majeſty's ſervice. And now 'Lord Fairfax, a Roman Catholic, and Lord Lieute-'tenant of the North-Riding, being at York, obſerved 'to me, it could be for no good end that the Lords 'Devonſhire and Danby, were come down to the 'country, though the former pretended he was only 'come to view his eſtate, and the latter to drink the 'waters at Knareſborough. They were both of them 'frequently engaged in converſation at Sir Henry 'Gooderick's; and the firſt of them came to York, 'where I paid all imaginable civilities to him, and re-'ceived the ſame from him; the other I waited on at 'Sir Henry's, not once ſuſpecting that men of their 'high quality and great eſtate, could intend any thing 'prejudicial to the government, or dangerous to them-'ſelves, and indeed their outward behaviour was very 'decent and innocent. Two days afterwards I had an 'expreſs from Lord Preſton, the new Secretary of 'State, Sunderland, who was turned Papiſt, and had 'been the author of great miſchief ſince he had been 'near the King, being laid aſide, to acquaint me, that 'his Majeſty had given a very kind reception to our 'repreſentation on the part of the country; and that 'in compliance therewith, he had named the Duke of 'Newcaſtle to be Lord Lieutenant of all Yorkſhire, 'and his Grace coming to town ſoon after, appointed 'his deputies and militia officers, both horſe and foot. 'The King began now, tho' fatally too late, to be 'ſenſible of his error, in carrying matters to ſo enor-'mous a length, at the inſtigation of Popiſh counſels, 'and now reſtored ſeveral juſtices of the Peace in 'moſt counties, as alſo the old charters all England 'over; he now quits his hold of the Biſhop of Lon-'don, does juſtice to Magdalen college, and begins 'again to court the Church of England.' We may now proceed to the letter, which from the peruſal of this paſſage, may be underſtood in the moſt minute particulars, and perhaps, taken together, they will afford the juſteſt picture of the ſtate of the North of England at that great criſis, a thing not to be met with in any of our hiſtories, and yet very capable of inſtructing us in points of very great importance, and in particular ſhewing us how that great turn came to be ſo eaſily made; for King James had really ſubverted his own government, before he was attacked from abroad, and by a ſtrange mutability of counſels, diſabled his friends from acting when he was attacked. Theſe are the moſt curious and moſt intereſting parts of hiſtory; and yet, not to be written with any tolerable degree of certainty, but from ſuch memoirs, and ſuch letters as theſe, where affection filled the heart, and truth guided the pen.

Mar, near Doncaſter, Oct. 6, 1688.

(24) To the Honourable Mr BERNARD GRANVILLE, at the Earl of Bathe's, St. James's.

(24) Lord Lanſdowne's Works, Vol. II. p. 105.

'Sir,

'Your having no proſpect of obtaining a commiſſion 'for me, can no way alter or cool my deſire at this 'important juncture, to venture my life in ſome man-'ner or other, for my King and my country.

'I cannot bear living under the reproach of lying 'obſcure and idle in a country retirement, when every 'man who has the leaſt ſenſe of honour, ſhould be 'preparing for the field.

'You may remember, Sir, with what reluctance I 'ſubmitted to your commands upon Monmouth's re-'bellion, when no importunity could prevail with you 'to permit me to leave the academy. I was too young 'to be hazarded, but give me leave to ſay, it is glo-'rious at any age to die for one's country, and the 'ſooner the nobler the ſacrifice.

'I am now older by three years. My uncle Bathe 'was not ſo old, when he was left among the ſlain at 'the battle of Newbury; nor you yourſelf, Sir, when 'you made your eſcape from your tutors, to join your 'brother at the defence of Scilly.

'The ſame cauſe is now come round about again: 'the King has been miſled. Let thoſe who have miſ-'led him, be anſwerable for it: no body can deny but 'he is ſacred in his own perſon, and it is every honeſt 'man's duty to defend it.

'You are pleaſed to ſay, it is yet doubtful if the 'Hollanders are raſh enough to make ſuch an attempt: 'but be that as it will, I beg leave to inſiſt upon it, 'that I may be preſented to his Majeſty as one whoſe 'utmoſt ambition it is to devote his life to his ſervice, 'and my country's, after the example of all my an-'ceſtors.

'The gentry aſſembled at York, to agree upon the 'choice of repreſentatives for the county, have prepared 'an addreſs to aſſure his Majeſty they are ready to ſacri-'fice their lives and fortunes for him, upon this and all 'other occaſions; but at the ſame time they humbly 'beſeech him to give them ſuch magiſtrates, as may be agreeable

After things were ſettled, Mr Granville purſued his ſtudies, and gratified his taſte for poetry in the enjoyments of a private life. He was the younger ſon of a younger brother, and of courſe much reſtrained in point of fortune; and as matters were then ſituated with his family, had no reaſon to expect any favours from the adminiſtration (*i*). However, the hereditary prudence of his family, though it ſupplied not all deficiencies, yet covered all defects from public appearance; and his exact behaviour and correct œconomy prevented the world from diſcerning, that Providence, though indulgent in all other reſpects, had, to render that indulgence more beneficial, denied him riches ſuitable to the rank in which his birth had placed him. This was the more remarkable, becauſe, when he afterwards enjoyed an affluent income, that commendable œconomy was no more diſcerned, which had been the ornament of his youth; whereas, in moſt men, it is either an infirmity attending old age, or at leaſt a habit produced by experience. Being thus excluded from that circle of pleaſures in which young men are commonly immerſed, and, at the ſame time, debarred thoſe paſſages to fame, in which the martial diſpoſition of his family would have inclined him to tread, he ſtruck out amuſements of another kind, and though by a different road, reached the temple of Honour ſooner than moſt of his contemporaries (*k*). His dramatic pieces were of very different kinds, and written in very different manners; but they were all well received, and owed that reception to their intrinſic merit, as much as to the general eſteem and reſpect that all the polite world profeſſed for their author (*l*). They are, to ſay no more than truth, pieces that have often paſſed the preſs, without any diminution of that praiſe which they received upon the ſtage [*D*]. He was as true a judge of the powers

(*i*) Lives of Illuſtrious Men.

(*k*) See the Poem addreſſed to him by Mrs Elizabeth Higgons, in his own Works.

(*l*) Gildon's Supplement to La Grange's Account of the Dramatic Poets.

' agreeable to the laws of the land, for at preſent there ' is no authority to which they can legally ſubmit.

' They have been beating for volunteers at York, ' and the towns adjacent, to ſupply the regiments at ' Hull, but no body will liſt.

' By what I can hear, every body wiſhes well to the ' King, but they would be glad his miniſters were ' hang'd.

' The winds continue ſo contrary, that no landing ' can be ſo ſoon as was apprehended, therefore I may ' hope, with your leave and aſſiſtance, to be in readi- ' neſs before any action can begin. I beſeech you, ' Sir, moſt humbly and moſt earneſtly to add this one ' act of indulgence more, to ſo many other teſtimonies ' which I have conſtantly received of your goodneſs, ' and be pleaſed to believe me always, with the utmoſt ' duty and ſubmiſſion,

' Sir,

' Your moſt dutiful ſon,

' and moſt obedient ſervant,

' GEO. GRANVILLE.'

[*D*] *Which they received upon the ſtage.*] We have three plays of his, of which it is neceſſary to ſpeak ſeparately, and very diſtinctly, becauſe there are ſeveral circumſtances that are fit to be known in relation to them, which yet are not mentioned in his works.

1. The SHE GALLANTS, a *Comedy*, acted at the *Theatre Royal* in *Little Lincoln's Inn Fields*, 1696.

In the advertiſement originally prefixed to this Play, it is ſaid to be the *Child* of a *Child*, and it is urged in the way of apology for it, *that it was written at an age, when ſome perſons are but beginning to ſpell.* At firſt it met with applauſe, but a rumour being induſtriouſly propagated, that it was calculated to turn ſome great characters into ridicule (25), a formidable party was raiſed againſt it; notwithſtanding which, it was ſeveral times played with ſucceſs. The author always aſſerted, that the alluſions beforementioned were downright miſrepreſentations, and indeed, ſuppoſing the Play to be wrote in 1682 or 1683, or even two or three years later, the author muſt have been a *Prophet*, as well as a *Poet*, to have aimed his ſatire as it was ſuppoſed to be directed. Beſides, its original intention was private amuſement, and it was an unforeſeen accident that brought it upon the ſtage: ſo that in this, as it often happens, the piece was guiltleſs, it was the innuendo that made the libel; and the apprehenſions of falſe friends, which brought certain characters upon the carpet, for which the Play and it's author ſuffered, though in reality neither was to blame. Many years after, he corrected and gave it a new title, and then it was called,

(25) Jacob's Lives of the Poets, Vol. II. p. 123.

ONCE a LOVER, and ALWAYS a LOVER, a *Comedy*.

In the preface he obſerves, this is a *new building* upon an *old foundation*; and that taking it under examination ſo many years after it was written, he flatters himſelf to have made a *correct Comedy* of it. To juſtify this pains, he ſays, that he found it regular, the ſcene conſtant to one place, the time not exceeding the bounds preſcribed, and the action entire. He proceeds to point out the principal alterations that have been made, and concludes with the following remark (26). ' Whether this infant deſerved a *new coat*, or whether ' now he is provided with *one*, it may ſet him off *bet-* ' *ter*, is with all deference ſubmitted. An author flat- ' ters himſelf very ridiculouſly, if he can ſuppoſe it in ' his power to argue and reaſon the world into judging ' as he himſelf perhaps may do, of his own work.' In praiſe of this performance we find it ſaid (27), that it ' has a great deal more wit than the ſtage ' is generally uſed to; dialogue equalled by few, and ' more juſt ſatirical obſervations than moſt of our ' modern comedies.' Theſe, together with the commendations before given by the author, may be all true, but at the ſame time, it is as true, that there is ſcarce a ſingle ſcene, in which there are not expreſſions found, unworthy of him and of the Britiſh Stage; and for which, all the wit, humour, and vivacity with which they are mingled, cannot atone. Whatever is immodeſt is inexcuſable; we can never preſume that he has correction in his view, by whoſe writings the corruption of his audience is in any danger of being brought about; and if the true end of the ſtage be to expoſe and ridicule vice, it looks like defeating it, to introduce language and characters of the worſt ſort, in ſuch a manner as to make the moſt pleaſing impreſſions.

(26) See the Preface prefixed to this play, in Lord Lansdowne's Works, Vol. III. p. 1, 2.

(27) Jacob's Lives of the Poets, Vol. II. p. 123.

2. HEROIC LOVE, a *Tragedy*, acted at the Theatre Royal with great applauſe, 1696.

This was very juſtly eſteemed a capital performance, and as Mr Gildon (28) very truly ſays, it was an attempt to reſtore the antient manner of writing Tragedy at the expence of the modern. In it, Mr Granville obſerved the ſtricteſt rules of the antient drama; the action is ſingle, the ſcene is never varied, the time is the ſame with the repreſentation. All extravagance, all unneceſſary incidents are cut off; nothing can be more correct, or more free from what is called ſuſtian, than the diction of this piece. It is founded upon the Iliad, and is wrote according to the laws of Ariſtotle: It has been very juſtly commended, and moſt certainly ſhews an accurate judgment, very capable of curbing even the moſt exalted genius. It is however, to ſpeak the truth, as is our duty, rather free from faults, than abounding with beauties, and entertains one at leaſt, as much in the cloſet, as it could do on the theatre. But notwithſtanding this, we muſt allow it great merit, as it ſhewed what might be done, without having recourſe to improbabilities or to rant. It is in this light

(28) Supplement to Langbaine's Account of Dramatic Poets, p. 66.

powers of muſic as the harmony of numbers, and amongſt the ſmall number of poets, acquainted with the happy ſecret of combining both without injury to either. What he has written in proſe would have done him honour upon the ſubject as a critic; but what he has done in verſe does him ſtill more honour, as it ſhewed he was able to execute with ſpirit and vivacity, what his judgment taught him with the utmoſt correctneſs. The ſound, in reſpect to theſe compoſitions, was truly a comment upon the ſenſe, and one might have expected, that what he wrote in this ſtile, ſhould have carried the opera higher in Britain than even in Italy; but perhaps it has had contrary effect (m). His theory has been always acknowledged perſpicuous, noble, and juſt, but, like other great maſters, his practice upon trial has been found inimitable [E]. He was not one of thoſe fine eaſy writers

(m) See his Preface to the Britiſh Enchanters.

light that it muſt be conſidered, in order to juſtify the high praiſes given the author; and when conſidered in this light, it will effectually juſtify him, wrote as it is, with dignity and ſpirit, great beauty of ſentiment, and without any one of thoſe improprieties which have been objected to the Engliſh Tragedy; no diſtortion of hiſtory, no incredible fictions, no ſhedding of blood upon the ſtage, but all that decorum preſerved, which the ſtrict rules of criticiſm demand. It was introduced with all poſſible advantages (29); the Prologue was written by the Right Honourable Henry St John, Eſq; the Epilogue by Mr Bevil Higgons, and both are very fine pieces; but what did him the greateſt honour, were the numerous complements beſtowed upon his play after it appeared in print; and as great politicians ſometimes unite the moſt oppoſite intereſts, ſo our author drew the praiſes of parties, ſeldom heard in the commendation of the ſame thing, the ladies and the critics. But what muſt have given him the higheſt pleaſure, as it was the ſureſt proof of his ſucceſs, was the following incomparable poem of Mr John Dryden, which alone is ſufficient to fix his character with poſterity, and to ſecure his reputation as a poet, againſt all the attacks of ignorance or envy: a poem that does equal honour to him and to the author, and abounds with ſound ſenſe and concluſive argument, delivered with all the force of poetry, accompanied with all the harmony of numbers, and glowing with that diſintereſted friendſhip which great minds only feel, and which a great genius only could expreſs.

(29) Jacob's Lives of the Poets, Vol. II. p. 123, 124.

(30) To Mr. GRANVILLE,

On his excellent Tragedy, called, Heroic Love.

Auſpicious Poet, wert thou not my friend,
How could I envy, what I muſt commend!
But ſince 'tis nature's law, in love and wit,
That youth ſhould reign, and with'ring age ſubmit,
With leſs regret, thoſe lawrels I reſign,
Which dying on my brows, revive on thine.
With better grace an antient chief may yield
The long contended honours of the field,
Than venture all his fortune at a caſt,
And fight like Hanibal, to loſe at laſt.
Young Princes obſtinate to win the prize,
Tho' yearly beaten, yearly yet they riſe:
Old monarchs tho' ſucceſsful, ſtill in doubt,
Catch at a peace; and wiſely turn devout.
Thine be the lawrel then; thy blooming age
Can beſt, if any can, ſupport the ſtage,
Which ſo declines, that ſhortly we may ſee
Players and plays reduc'd to ſecond infancy.
Sharp to the world, but thoughtleſs of renown,
They plot not on the ſtage, but on the town,
And in deſpair, their empty pit to fill,
Set up ſome foreign monſter in a bill;
Thus they jog on; ſtill tricking, never thriving;
And murd'ring plays, which they miſcall reviving.
Our ſenſe is nonſenſe, thro' their pipes convey'd;
Scarce can a Poet know the play he made;
'Tis ſo diſguiſed in death: nor thinks 'tis he
That ſuffers in the mangled Tragedy.
Thus *Itys* firſt was kill'd, and after dreſs'd
For his own Sire, the chief invited gueſt.

(36) Original Poems and Tranſlations, by John Dryden, Eſq; Vol. II. p. 224.

I ſay not this of thy ſucceſsful ſcenes;
Where thine was all the glory, theirs the gains:
With length of time, much judgment, and more toil,
Not ill they acted, what they could not ſpoil:
Their ſetting Sun * ſtill ſhoots a glimm'ring ray,
Like ancient *Rome*, majeſtic in decay:
And better gleanings their worn ſoil can boaſt,
Than the crab vintage of the neighb'ring coaſt †.
This difference; yet the judging world will ſee,
Thou copieſt *Homer*, and they copy thee.

* Mr Betterton's company in Lincoln's-Inn-fields.

† Drury-lane Playhouſe.

3. The JEW of VENICE, altered from the MERCHANT of VENICE, written by *Shakeſpear*, 1701.

The profits of this Play were deſigned for Mr Dryden, but upon his death given to his ſon (31). The Prologue was ſpoken by the ghoſts of Shakeſpear and Dryden, and was written by Mr Bevil Higgons. It was well received then, and much eſteemed ſince. The chief merit of it is, that much of the original author is retained, and the alterations chiefly conſiſt in ſhortening the ſcenes, and diſpatching the buſineſs of the play with more veracity. To comply with the humour of the time, the Maſque of Peleus and Thetis was introduced, of which ſomething will be ſaid in the next note. If the Jew of Venice be more fit for the ſtage, the Merchant of Venice will be moſt eſteemed in the cloſet. The ſcene is Italy, and we ſee the grave and the comic manners of the Italians finely preſerved. The ſentiments are truly noble and nervouſly expreſſed; the morality is equally ſtriking and pleaſing; the characters ſtrongly marked, and yet extremely natural; the whole piece abounding with ſenſible reflections, and thoſe very capable of being applied in the common conduct of life. On the whole, we may affirm of this Play, that ſuch as underſtand it beſt will admire it moſt; and that though it may be rendered more faſhionable, yet it can never be ſo altered as to be improved. This was our author's ſenſe of the thing, as well as ours, and therefore it is not cenſure, but complement, when we ſubmit to it.

(31) Lord Lanſdowne's Works, Vol. III. p. 2, 11.

[E] *Has been found inimitable.*] We have in the text hinted the difficulty of ſettling the Chronology of our author's writings. He compoſed moſt of his poetical pieces when he was a perfect child; he reviewed, heightened, and improved them, in the middle part of of his life; he reviſed, corrected, and gave them the laſt touches, when his judgment was moſt mature. His poetic compoſitions of this kind, are but two.

I. Peleus and Thetis, a Maſque, originally introduced in the Jew of Venice.

The whole of this exquiſite performance is ſet to muſic The argument is, that Peleus being in love with Thetis, by the aſſiſtance of Proteus, obtains her favour; but Jupiter, being alſo in love with the ſame immortal beauty, takes her from him, and condemns Peleus to ſuffer endleſs pains on mount Caucaſus. There he has an opportunity of conſulting Prometheus, ſkilled in Aſtrology; upon whoſe prophecy, that the ſon born of Thetis, ſhould prove greater than his father, Jupiter deſiſts from his pretenſions, and Peleus with his conſent eſpouſes Thetis. The reader will allow us to juſtify what has been advanced in the text, by a ſhort quotation towards the cloſe of the Maſque.

(32) Prometheus to Jupiter.

Son of Saturn, take advice,
From one whom thy ſevere decree
Has furniſh'd leiſure to grow wiſe:
Thou rul'ſt the Gods, but Fate rules thee.

(32) Ibid. Vol. I. p. 151, 152.

[The

writers that compoſe a poem in a morning, but remarkably careful and curious about every thing he wrote; ſo that his verſes never appeared 'till they had undergone a ſevere examination; and even after they had received the ſanction of public applauſe, they were not free from his caſtigation; he thought he had a right to trim and prune the products of his imagination as long and as often as he thought fit, and it is certain that he exerciſed this right through his whole life (n). Like Ovid and Tibullus, his muſe was employed in tranſmitting the charms of beauty, as far as they can be tranſmitted by thoſe of poetry, to ſucceeding times. He began where Waller ended; and as he had conferred immortality on

(n) Jacob's Lives of the Poets, Vol. II. p. 125.

[The Prophecy]

Whoe'er th' immortal maid compreſſing,
Shall taſte joy, and reap the bleſſing;
Thus th' unerring ſtars adviſe:
From that auſpicious night, an heir ſhall riſe,
Paternal glories to efface,
The moſt illuſtrious of his race,
Tho' ſprang from him, who rules the ſkies.

Jupiter. [Apart]

Shall then the ſon of Saturn be undone,
Like Saturn by an impious ſon?
Juſtly th' impartial fates conſpire,
Dooming that ſon to be the ſire,
Of ſuch another ſon.
Conſcious of ills that I have done,
My fears to prudence ſhall adviſe,
And guilt, that made me great, ſhall make me wiſe.
The fatal bleſſing I reſign;
Peleus, take the maid divine *;
Jove conſenting, ſhe is thine;
The fatal bleſſing I reſign †.

* Giving her to Peleus.

† Joins their hands.

II. The BRITISH ENCHANTERS, or no MAGIC like LOVE: A *Dramatic Poem*, with Scenes, Machines, Muſic, and Decorations, &c.

Our author in a ſhort preface prefixed to this work, tells us (33), that, 'of all public ſpectacles, that which 'ſhould be called an Opera is calculated to give the 'higheſt delight. There is hardly any art but what 'is required to furniſh towards the entertainment, and 'there is ſomething or other to be provided, that may 'touch every ſenſe, and pleaſe every palate.' He obſerves, that the French Opera is perfect in the decorations, the dancing, and magnificence; the Italian excels in the muſic and voices, but the drama falls ſhort in both. An Engliſh ſtomach, he ſays, requires ſomething ſolid and ſubſtantial, and will never riſe ſatisfied from a regale of ſweetmeats. We have, ſays he, ſeveral poems under the name of Dramatic Operas, by the beſt hands; but the ſubjects, for the moſt part, have been improperly choſen: Mr Addiſon's Roſamond, and Mr Congreve's Semele, are rather Maſques than Operas. At the cloſe of his preface, he gives the following account of his own performance, which may be alſo ſtiled the hiſtory of it. 'The unities are reli-'gioufly obſerved: the place is the ſame, varied only 'into different proſpects, by the power of enchant-'ment: all the incidents fall naturally within the very 'time of repreſentation: The plot is one principal 'action, and of that kind, which introduces variety of 'turns and changes, all tending to the ſame point: 'the ornaments and decorations are of a piece with it, 'ſo that one could not well ſubſiſt without the other: 'every act concludes with ſome unexpected revolution, 'and in the end, vice is puniſhed, virtue rewarded, 'and the moral is inſtructive. Rhyme, which I would 'by no means admit into the dialogue of graver Tra-'gedy, ſeems to me the moſt proper ſtyle for repreſen-'tations of this heroic romantic kind, and beſt adap-'ted to accompany muſic. The ſolemn language of a 'haughty tyrant, will by no means become a paſ-'ſionate lover, and tender ſentiments require the ſofteſt 'colouring. The theme muſt govern the ſtyle, every 'thought, every character, every ſubject, of a diffe-'rent nature, muſt ſpeak a different language. An 'humble lover's gentle addreſs to his miſtreſs, would 'rumble ſtrangely in the Miltonic dialect; and the ſoft 'harmony of Mr. Waller's numbers, would ill become 'the mouths of Lucifer and Belzebub. The terrible 'and the tender, muſt be ſet to different notes of muſic. 'To conclude; this dramatic attempt, was the firſt 'eſſay of a very infant muſe, rather as a taſk at ſuch 'hours as were free from other exerciſes, than any way 'meant for public entertainment: but Mr Betterton, 'having had a caſual ſight of it many years after it was 'written, begged it for the ſtage, where it found ſo fa-'vourable a reception, as to have an uninterrupted 'run, of at leaſt forty days. The ſeparation of the 'principal actors, which ſoon followed, and the in-'troduction of the Italian Opera, put a ſtop to it's far-'ther appearance. Had it been compoſed at a riper 'time of life, the faults might have been fewer: How-'ever, upon reviſing it now at ſo great a diſtance of 'time, with a cooler judgment than the firſt concep-'tions of youth will allow, I cannot abſolutely ſay, '*ſcripſiſſe pudet*.' It remains, that we give a ſpecimen of his power in reſpect to numbers, which is the prerogative of our language, of the moſt extenſive influence, and which, notwithſtanding, is the leaſt underſtood. For this reaſon therefore, we will produce ſuch an inſtance; and if, for the ſhort time he is reading it, the reader will forget Mr Dryden's Ode upon St Cecilia's day, he will not be able to recollect a finer piece of Lyric Poetry in the Britiſh tongue.

(33) Lord Lanſdowne's Works, Vol. III. p. 155.

(34) Ode to DISCORD. (34) Ibid. p. 197, 198.

A ſingle voice,

When Love's away, then Diſcord reigns,
The Furies he unchains,
Bids Æolus unbind
The northern wind
That fetter'd lays in caves:
And root up trees, and plow the plains,
Old Ocean frets and raves;
From their deep roots the rocks he tears,
Whole deluges lets fly,
That daſh againſt the ſky,
And ſeem to drown the ſtars.
Th' aſſaulted clouds return the ſhock,
Blue light'ning ſinge the waves,
And thunder rends the rock.

Then Jove uſurps his father's crown,
Inſtructing mortals to aſpire;
The father would deſtroy the ſon,
The ſon dethrones the ſire.
The Titans to regain their right,
Prepare to try a ſecond fight;
Briareus arms his hundred hands,
And marches forth the bold gigantic bands.

Pelion upon Oſſa thrown,
Steep Olympius they invade;
Gods and giants tumble down,
And Mars is foil'd by Encelade.

Horror, confuſion, dreadful ire,
Daggers, poiſon, ſword and fire,
To execute the deſtin'd wrath conſpire:
The Furies looſe their ſnaky rods,
And laſh both men and Gods.
The chorus, repeat the laſt ſtanza.

on Lady Dorothea Sidney, under the name of Sachariſſa, ſo the Counteſs of Newbourg, who was Granville's Mira, will live as long as the Engliſh language (o). But as much he excelled in the amorous, he excelled alſo in other kinds of poetry, and had the genius and learning as well as the ſpirit and the turn of Ovid, as appears clearly from one of the moſt beautiful pieces of poetical criticiſm that is any where extant (p) [F]. At the acceſſion

(o) Lord Lanſdowne's Works, Vol. I. p. 63, 64.

(p) Ibid. p. 88.

[F] *That is any where extant.*] This performance is his Eſſay on Unnatural Flights in Poetry (35). The Earl of Mulgrave, afterwards ſucceſſively diſtinguiſhed by the titles of Normanby and Buckinghamſhire, had wrote an admirable piece, intitled, An Eſſay (36) on Poetry; the Earl of Roſcommon (37), had likewiſe written with the ſame title upon tranſlated verſe. Our author, to compleat the ſubject, wrote this third Eſſay, to ſhew that notwithſtanding all the notions of poetic liberty, whatever is abſurd, extravagant, or unnatural, can never be either ſublime or beautiful. He wrote likewiſe annotations to explain, to eſtabliſh, and to confirm his rules by examples. The following inſtances will give the reader an idea of his Poem (38).

(35) Ibid. p. 88.

(36) The Works of John Sheffield, Earl of Mulgrave, Marquis of Normanby, and Duke of Buckingham, Vol. I. p. 127.

(37) Eſſay on tranſlated Verſe, by the Right Hon. the Earl of Roſcommon, Lond. 1680, 4to.

(38) Lord Lanſdowne's Works, Vol. I. p. 90, 91, 96, 97.

Thus poetry has ample ſpace to ſoar,
Nor needs forbidden regions to explore,
Such vaunts as his, who can with patience read,
Who thus deſcribes his hero ſlain and dead.
* ‘ Kill'd as he was, inſenſible of death,
‘ He ſtill fights on, and ſcorns to yield his breath.
The noiſy culverin, o'ercharg'd, lets fly,
And burſt unaiming in the rended ſky:
Such frantic flights are like a madman's dream,
And nature ſuffers in the wild extreme.
The captive canibal, weigh'd down with chains,
Yet braves his foes, reviles, provokes, diſdains,
Of nature fierce, untameable and proud,
He grins defiance, at the gaping crowd;
And ſpent at laſt, and ſpeechleſs as he lies,
With looks ſtill threat'ning, mocks their rage and dies:
This is the utmoſt ſtretch that nature can,
And all beyond is fulſom, falſe, and vain.

* Arioſto.

I needed not to have travelled ſo far for an extravagant flight, I remember one of Britiſh growth of the like nature.

See thoſe dead bodies, hence convey'd with care,
Life may perhaps return——with change of air.

But I chooſe rather to correct gently by foreign examples, hoping that ſuch as are conſcious of the like exceſſes, will take the hint, and ſecretly reprove themſelves: it may be poſſible for ſome tempers to maintain rage and indignation to the laſt gaſp, but the ſoul and body once parted, there muſt neceſſarily be a determination of action.

Quodcunque oſtendis mihi ſic incredulus odi.

I cannot forbear quoting on this occaſion, as an example for the preſent purpoſe, two noble lines of Jaſper Main's, in the collection of the Oxford verſes, printed in the year 1643, upon the death of my grandfather, Sir Bevil Granville, ſlain in the heat of action, at the battle of Lanſdowne. The Poet, after having deſcribed the fight, the ſoldiers animated by the example of their leader, and enraged at his death, thus concludes:

Thus he being ſlain, his *action* fought anew,
And the dead conquer'd, whilſt the living flew.

This is agreeable to truth, and within the compaſs of nature: it is thus only, that the dead can act.

(39) Ibid. p. 97, 98, 99, 100.

(39) Beauty's the theme, ſome nymph divinely fair
Excites the muſe, let truth be even there.
As Painters flatter, ſo may Poets too,
But to reſemblance muſt be ever true:
† ‘ The day that ſhe was born, the Cyprian Queen, † Corneille.
‘ Had like t'have dy'd, thro' envy and thro' ‘ ſpleen;
‘ The Graces in a hurry left the ſkies,
‘ To have the honour to attend her eyes;
‘ And love deſpairing in her heart a place,
‘ Would needs take up his lodging in her face.’
Tho' wrote by great Corneille, ſuch lines as theſe
Such civil nonſenſe ſure could never pleaſe;
Waller, the beſt of all th' inſpir'd train,
To melt the fair inſtructs the dying ſwain.

* Le jour qu'elle naquit, Venus bien qu' immortelle,
Penſa mourir de honte, en la voyant ſi belle,
Les Graces a l'envi deſcendirent des cieux
Pour avoir l'honeur d'acompagner ſes yeux,
Et l'amour qui ne pût entre dans ſon courage,
Voulut obſtinément loger ſur ſon viſage.

This is a lover's deſcription of his miſtreſs, by the great Corneille, civil to be ſure, and polite as any thing can be. Let any body turn over Waller, and he will ſee how much more naturally and delicately the Engliſh author treats the article of love, than the celebrated Frenchman. I would not, however, be thought by any derogatory quotation, to take from the merit of a writer, whoſe reputation is ſo univerſally and ſo juſtly eſtabliſhed in all nations; but I ſaid before, I rather chooſe, where any failings are to be found, to correct my own countrymen by foreign examples, than to provoke them by inſtances drawn from their own writings. Humanum eſt errare. I cannot forbear one quotation more from another celebrated French author. It is an epigram upon a monument for Francis the Firſt, king of France, by way of queſtion and anſwer, which in Engliſh is verbatim thus:

Under this marble, who lies buried here?
Francis the Great, a King beyond compare.
Why has ſo great a King *ſo ſmall a ſtone?*
Of that great King, here's but the heart alone:
Then of this conqueror, here lies but part,
No—here he lies all—for he was all heart.

The author was a Gaſcon, to whom I can properly oppoſe no body ſo well as a Welſhman: for which purpoſe, I am farther furniſhed from the forementioned collection of Oxford verſes, with an epigram, by Martin Lluellin, upon the ſame ſubject, which I remember to have heard often repeated to me, when I was a boy. Beſides, from whence can we draw better examples, than from the very ſeat and nurſery of the Muſes?

Thus ſlain, thy valiant anceſtor did lie,
When his one bark a navy did defy;
When now encompaſs'd round he victor ſtood,
And bath'd his pinnace in his conquering blood,
Till all the purple current dry'd and ſpent,
He fell and made the waves his monument:
Where ſhall the next fam'd Granville's aſhes ſtand?
Thy grandſire fills the ſea, and thine the land.

I cannot ſay the two laſt lines, in which conſiſts the ſting or point of the epigram, are ſtrictly conformable to the rule herein ſet down: the word aſhes, metaphorically, can ſignify nothing but fame, which is mere ſound,

accession of Queen Anne, he ſtood as fair in the general eſteem as any man of his age, which was about five and twenty. His father, who was juſt dead, had made ſome proviſion for him; and his uncle the Earl of Bath, who did not ſurvive him long, had alſo left Mr Granville a ſmall annuity, which, with the credit of his couſin, ſoon after created Lord Granville of Potheridge, engaged him to come into Parliament; and he was accordingly choſen for Fowey in the firſt Parliament of the Queen with John Hicks, Eſq; (q). Soon after he publiſhed, in conjunction with ſeveral other patriots, one of the orations of Demoſthenes, in order to excite a proper ſpirit in the nation againſt France; for, as an eminent writer obſerves, the Tories were at this time looked upon as ſincerely inclined to vigorous meaſures (r). This new ſpecimen of literature gained him many friends, at the ſame time that it added highly to his reputation, and is ſtill in very great eſteem [G]. His fortune received ſome improvement from an accident, in all other reſpects big with irreparable loſs, the death of his gallant brother Sir Bevil Granville, looked upon at that time as the riſing hopes of the family, who had given ſuch early proofs of magnanimity, as had diſarmed the rage of party, and, at the time of his deceaſe, was univerſally acknowledged to be a moſt deſerving officer, and a gentleman equally diſtinguiſhed by amiable and eſtimable qualities [H]. Mr Granville bore this blow of fortune with great ſteadineſs, and

(r) Lord Lanſdowne's Works, Vol. II. p. 114—134. Burnet's Hiſtory of his own Times, Vol. II. p. 314.

found, and can fill no ſpace either of land or ſea: the Welſhman, however, muſt be allowed to have outdone the Gaſcon. The fallacy of the French epigram appears at firſt ſight; but the Engliſh ſtrikes the fancy, ſuſpends and dazles the judgment, and may perhaps be allowed to paſs under the ſhelter of thoſe daring hyperboles, which, by preſenting an obvious meaning, make their way, according to Seneca, through incredible to true.

[G] *And is ſtill in very great eſteem.*] As few countries were ever bleſſed with more great men at one ſeaſon than this iſland at that time, we may obſerve, that in no period that can be aſſigned, there ever appeared a truer or a warmer ſpirit of liberty; it was to keep up this ſpirit, that ſome of our ableſt patriots thought it might be expedient to tranſlate ſome of the beſt orations of Demoſthenes, as containing the moſt perſwaſive arguments to animate the ſubjects of a free ſtate, to exert their utmoſt ſtrength in oppoſing the pernicious deſigns of an ambitious and overbearing neighbour; they thought it very fortunate, that as without any manifeſt abſurdity they might compare their own government to that of Athens; there was at the ſame time, ſo great and ſo apparent a likeneſs between the characters of Philip of Macedon, and Lewis the Fourteenth We know not whether it was choice or accident, that determined our author to the ſecond Olynthian; but whatever determined him, we may very boldly ſay, that he has tranſlated it with equal fidelity and beauty, and, without either forcing the ſenſe, or ſtraining the ſpirit, has rendered it as applicable to the ſubject, which was the common object of all the tranſlators, as could be expected or even deſired. It has been ſaid, that ſome of them made too free with a French tranſlator, conſidering the author's eloquence was to be turned againſt a French prince; this certainly was not Mr Granville's caſe, and to ſhew how admirably he did his part, and at the ſame time to ſhew how the good ſenſe, and ſound reaſoning of one age, may ſquare with the circumſtances of another, though at a great diſtance, we will preſume to give a few paragraphs, and appeal to the reader's own judgment, whether the advice given in them, may not be read with edification even in our age (40).

(40) Ibid. Vol. II. p. 121, 122, 123.

'What time ſo proper for action? what occaſion ſo 'happy? and when can you hope for ſuch another, if 'this be neglected? has not Philip, contrary to all 'treaties, inſulted you in Thrace? does he not at this 'inſtant ſtraiten and invade your confederates, whom 'you have ſolemnly ſworn to protect? is he not an implacable enemy? a faithleſs ally? the uſurper of provinces, to which he has no title or pretence? a 'ſtranger, a barbarian, a tyrant, and indeed what is 'he not? and yet, O ye mortal gods! when we ſhall 'have abandoned all things to this Philip; when by 'the indifference of ſome, by the treachery of others, 'we have as it were, added force and wings to his ambition, we ſhall yet make ourſelves a greater ſcorn to 'our enemies, by upbraiding and loading each other 'with the reproach. Each party, though equally 'guilty by their diviſions of the common calamity, 'will be imputing the miſcarriage to his neighbour; 'and though never ſo conſcious, every one will be excuſing himſelf, by laying the blame on another: as 'after the loſs of a battle, not a man that fled, but accuſes his companion, condemns his general, and ſeparately examined, no one takes ſhame to himſelf, 'each ſhifting the common diſgrace from one to 'another; but yet it is certain, that every individual 'man who gave ground, was equally acceſſary to the 'general defeat. The man who accuſes his companion, might have ſtood firm himſelf, had he pleaſed, 'and that which was a route, had then been a victory. 'Such is the pride and folly of parties overborn and 'ſway'd by perſonal prejudice; ſacrificing the public 'to private reſentment, and charging each other with 'miſcarriages, for which they are every one equally accountable. A manager for one ſide propoſes, he is ſure 'to be oppoſed by a manager for the other, not gently 'and amicably, but with heat, malice, and unbecoming reflection; let a third more moderate ariſe, his 'opinion is not to be received, but as he is known to 'be engaged in a party. What good can be hoped 'from ſuch a confuſion of councils, directed only by prejudice or partiality, in defiance to ſenſe and right 'reaſon? if no advice that is given is to be received, 'but as it ſuits the humours of a party, or flatters the 'diſtempers of the times, it is not his fault who ſpeaks 'honeſtly, but yours who reſolve to be deaf to all 'arguments that diſpleaſe you. In debates for the 'public, we are not to ſeek what will pleaſe, but what 'will profit. If our wiſhes exceed what we have 'means to accompliſh, we muſt contract our wiſhes, 'and confine them to what is in our power. Let the 'Gods have your prayers, to grant what is out of your 'reach, nothing is impoſſible to them: but we, who 'have only human means to act by, muſt be governed 'by circumſtances, doing as well as we can, and truſting the reſt to Providence.' The reader upon the peruſal will certainly concur with us, in opinion, that he could not have choſen a fitter oration than this; one more applicable to the end propoſed, or which alluded more clearly to the ſtate of the times; ſo that the advice of Demoſthenes, though he lived ſo many ages before, and at ſuch a diſtance from us, is brought directly home; and from the ſimiliarity of the conjunctures, his exhortations as properly adapted to the people of Britain then, as they were to the citizens of Athens when delivered.

[H] *Equally diſtinguiſhed by amiable and eſtimable qualities.*] We have before, mentioned Sir Bevil Greenville's receiving the honour of Knighthood from King James the Second, in the camp at Hounſlow, May 22, 1686, and his being afterwards ſent by his uncle the Earl of Bath, to the iſland of Jerſey. He was Lieutenant-Colonel of the Earl of Bath's regiment at the Revolution, became afterwards Colonel (41), and was at length promoted to the rank of Major-General, behaving upon all occaſions with equal ſteadineſs and courage; in the battle of Steenkirk, particularly, he ſignalized himſelf more than any officer in the army. This battle was fought on Sunday Auguſt 3d, 1692 (42), the army of the allies being commanded by King William, and that of the French, by the Marſhal Duke de Luxemburgh. The vanguard being oppreſſed by numbers,

(41) Lives of Illuſtrious Men, p. 350.

(42) Kennet's Hiſtory of England, Vol. III. p. 644.

and continued to dedicate his more ſerious hours to the ſervice of his country, and to ſpend his moments of leiſure with the Muſes, whom he courted with dignity and freedom, and not with that eagerneſs and fondneſs which render men pedants even in poetry. He continued to ſerve in the Parliaments called in the fourth and ſeventh year of the ſame Queen's reign. In the enſuing Parliament, choſen in the ninth year of the Queen, he was elected for the borough of Helſton, and alſo Knight of the Shire for the county of Cornwall, for which he ſerved (s). On the great change which happened in the autumn of 1710, he came into employment with his friends; and on Michaelmas-day was declared Secretary at War in the room of the late Earl of Orford, then Robert Walpole, Eſq; (t). He continued in this office for ſome time, and diſcharged it with great capacity. Towards the cloſe of the next year, he eſpouſed the Lady Mary, daughter of Edward Villiers, Earl of Jerſey, at that time the widow of Thomas Thynne, Eſq; from whom ſhe enjoyed a conſiderable jointure, and by whom ſhe was the mother of the late Lord Viſcount Weymouth (u). On the thirty-firſt of December, 1711, he was, in conſideration of the great and eminent ſervices of his anceſtors, and his own conſpicuous merit, created a peer of Great-Britain, by the title of Lord Lanſdowne, Baron of Biddeford in the county of Devon (w). Amongſt the numerous creations at that time, there was none that gave greater ſatisfaction to one ſide, or leſs offence to the other, than this. His Lordſhip was apparently the next male in that noble family, in which two peerages had extinguiſhed almoſt together. His perſonal merit was univerſally allowed, and, with regard to his political ſentiments, even thoſe who thought him moſt miſtaken, allowed him to be open, candid, and uniform, expreſſing himſelf frankly upon all occaſions, and ſhewing rather more warmth when in oppoſition to power, than when his notions ſeemed to receive a favourable colour from faſhion. He ſtood always high in the favour of Queen Anne, and with great reaſon, having upon every occaſion teſtified the greateſt zeal for her government, and the moſt profound reſpect for her perſon. We need not wonder therefore, that, in the ſucceeding year, he was advanced to the poſt of Comptroller of the Houſhold, and, on the 18th of Auguſt, ſworn of her Majeſty's moſt honourable Privy-Council (x). About that time twelve-month he became Treaſurer of the Houſhold (y), being ſucceeded in his former employment by Sir John Stonehouſe. His Lordſhip continued in this poſt during the remaining part of the Queen's reign, and 'till his Majeſty King George was pleaſed, on the 11th of October, 1714, to beſtow it upon the Earl of Cholmondeley (z). His connections with the tory miniſtry, and the generoſity of his diſpoſition, which would not allow him to deſert his friends in their diſtreſs, induced him to act with them at the beginning of the late reign, when we find his name amongſt thoſe Lords, who proteſted againſt the bill for attainting Henry Lord Viſcount Bolingbroke, and alſo againſt that for attainting James Duke of Ormond (a), unleſs they ſurrendered by a day certain. This ſteadineſs of his Lordſhip in the ſupport of his old friends, expoſed him, as he muſt foreſee it would, to many inconveniencies; for upon the inſurrections in Scotland and England, his Lordſhip, though he was one of thoſe who ſigned the proclamation (b) of the late King, upon the demiſe of her late Majeſty Queen Anne,

numbers, and Count Solmes neglecting to ſupport them, out of envy to the Engliſh, and diſtaſte to the Prince of Wirtembergh, who commanded, and having at laſt ſent horſe inſtead of foot, expreſsly contrary to the royal orders, to their relief, his Majeſty, who foreſaw the conſequences of this ill conduct, exerted himſelf with the utmoſt vigour to repair it, though by this time the foot were a mile diſtant from the troops that were engaged, and had already ſuffered ſeverely. However, the King made all poſſible diligence to get the infantry up, ordering a brigade to march to the wood, and forming a line of battle in the plain, with ſuch foot as could come up. The eagerneſs of the ſoldiers to follow and engage the enemy was ſuch, that they put themſelves into ſome diſorder, and took more time to form their battallions, than could now be ſpared; ſo that before they could reach the wood, the vanguard and infantry of the left wing being overpowered by thirty battallions of the enemy, who charged them continually one after another, and by a freſh body of dragoons, brought up by Boufflers, they were forced to retreat in great confuſion, and to leave the wood to the enemies poſſeſſion. The Engliſh Life-guards owed their preſervation to the Daniſh Foot-guards; and a regiment of Lunenburgh, commanded by the Baron of Pibreck, being in diſorder upon the ſkirt of the wood, and the Colonel himſelf dangerouſly wounded upon the place, Sir Bevil Granville, who commanded the Earl of Bath's regiment, marched up to his relief, receiving the enemies fire, before he ſuffered his battalion to diſcharge. By this method he lodged himſelf in the narrow way near the wood, ordered his ſerjeants to carry off Baron Pibreck, and maintained his poſt till he was commanded to leave it by the Prince of Naſſau. The King enraged at the diſappointment of the vanguard for want of timely relief, expreſſed his concern, by often repeating theſe words, Oh my poor Engliſh! how they are abandoned! nor would he admit Count Solmes to his royal preſence for many months after. But conſidering the attack was not to be renewed without endangering the loſs of the army, Luxemburgh being conſiderably reinforced by Boufflers, and beſides the night drawing on, his Majeſty commanded a retreat, which was performed with admirable order, and without any great diſturbance from the enemy, who never durſt engage the Engliſh in the rear. After the death of King William, in the year 1703, we find Sir Bevil Granville advanced to be governor of Barbadoes, with a fixed ſalary of two thouſand pounds a year (43). He was extremely welcome to the inhabitants at his firſt arrival, though he had not long been there before diſputes aroſe, which were gradually carried to a very great height, and in conjunction with the warmth of the climate, had ſuch an operation on his health, that he ſollicited his re-call; and having obtained it, went on board an infected ſhip, and died in his paſſage home, September 15th, 1706 (44), in the flower of his age, unmarried, and univerſally lamented. He ſerved in Parliament for the Borough of Fowey, in the County of Cornwall (45), in the reign of King James; under that of King William, he was elected for Leſtwithiel (46).

[illegible] yet was ſeized as a ſuſpected perſon, September 26, 1715 (*c*), and committed priſoner to the Tower of London, where he continued a long time. At this unfortunate juncture, the well intended officiouſneſs of one of his ſervants, deprived the world of ſeveral [illegible] pieces that had fallen from his pen, by haſtily committing to the flames (*d*) ſome papers, of which he had obſerved his Lord to be particularly careful. The loſs was irreparable, for his Lordſhip being tender of the productions of his youth, ſuffered no copies to be taken, 'till, by repeated corrections and improvements, he had reconciled them to his maturer judgment. He was at length diſcharged from his tedious impriſonment (*e*), February 8, 1717, when all dangers were over. His Lordſhip's being ſet at liberty was highly ſatisfactory to the polite part of the world, as he was a diſtinguiſhed patron of letters, and even cheriſhed in others, thoſe arts by which he had riſen himſelf into univerſal eſteem. We find him, in 1719, as vigorous as ever in the Houſe of Lords, as appears by his ſpeech (*f*) againſt repealing the act to prevent occaſional conformity, to which, in point of eloquence and ſpirit, there are very few harangues in our language that ought to be preferred. About three years afterwards, his Lordſhip, for the ſake of his health and for other reaſons, thought fit to go abroad, and continued out of the kingdom for ſeveral years (*g*). It was during this ſpace that the firſt volume of the Biſhop of Sarum's Hiſtory of his own Times was made public; and, as that work made a very great noiſe, it is no wonder that his Lordſhip peruſed it with attention; and finding the characters of the Duke of Albemarle and the Earl of Bath treated in a manner he thought they did not deſerve, his Lordſhip formed the deſign of doing them juſtice. This led him to look into the works of other Hiſtorians, more eſpecially thoſe of the Earl of Clarendon and Mr Archdeacon Echard; where, finding his great-uncle Sir Richard Greenvile more roughly treated, and his Lordſhip having in his hands memoirs capable of ſetting his conduct in a fairer point of light, he reſolved to follow the dictates of his duty and his inclination, by publiſhing his ſentiments upon theſe heads, and giving the world thoſe lights, which in reſpect to them they had long wanted (*b*). At his return to England in 1732, he made this work of his public, which was generally well received, as being written with great ſpirit, wonderful beauty of expreſſion, and, being full of new diſcoveries, gave the lovers of perſonal hiſtory infinite ſatisfaction. However, there wanted not ſome who thought themſelves obliged in honour to oppoſe his Lordſhip, for very particular reaſons: amongſt theſe, Mr Oldmixon (*i*) was the firſt; and though he was naturally of a very warm temper, embarked early in an oppoſite cauſe, and in ſome things had copied the authors his Lordſhip condemned; yet, upon this occaſion, he wrote with temper, made his Lordſhip great conceſſions, and contented himſelf with defending only a few points, and thoſe too not the moſt material in his Lordſhip's performance. The neareſt relation (*k*) of the deceaſed prelate looked upon himſelf as obliged to enter the liſts alſo with his Lordſhip; and though more might have been urged in his excuſe than for any other man in a caſe of this nature, if he had tranſgreſſed a little the rules of moderation, yet he really wants it not; his diſcourſe is written with great coolneſs and calmneſs, and, while he ſays every thing that it was in his power to ſay, and in the ſtrongeſt terms poſſible, there is nothing that has ſo much as an air of vehemence, much leſs of ill manners. Nay, this writer forbore making any attack, 'till his Lordſhip had anſwered his former antagoniſt, Mr Oldmixon, in a letter dated from Old-Windſor, Auguſt 22, 1732 (*l*), in which his Lordſhip made a full return of candour and civility. But in the ſpring of the ſucceeding year, his Lordſhip met with an opponent of a very different caſt, in Dr Colbatch (*m*), of Trinity-College Cambridge, who undertook to vindicate the memory of Mr Archdeacon Echard, in reference to his account of the marriage-treaty between Charles the Second and the Infanta of Portugal; and this he has done with great vigour and judgment, but at the ſame time with too much aſperity. He was a perſon perfectly well acquainted with the ſubject, as having reſided long in Portugal, and made the political affairs of that country his ſtudy. He was alſo a great maſter of argument, and thought himſelf at liberty to retort where it was in his power, any obſervation; to cenſure every eſcape in expreſſion; and to criticize his Lordſhip as an author, without paying too much regard to his quality. He had better fortune than either of his predeceſſors; he attacked the weakeſt part of his Lordſhip's book, and knowing the advantage he had, kept ſteadily to that ſingle point, without wandering into the other parts of the diſpute. His Lordſhip prudently declined an anſwer, and contented himſelf with having afforded the republic of letters an opportunity of ſeeing ſeveral points of Engliſh hiſtory thoroughly ſifted, and ſome new facts brought to light, which otherwiſe, in all probability, had been buried in oblivion [*I*]. His Lordſhip ſoon after took an opportunity of reviſing all his works,

(*l*) A Letter to the author of Reflections Hiſtorical and Political, occaſioned by a Treatiſe in Vindication of General Monk and Sir Richard Granville, &c. by the Right Honourable George Granville, Lord Lanſdowne, 1732, 4to.

(*m*) An Examination of the late Archdeacon Echard's account of the Marriage-Treaty between King Charles II. and Queen Katharine, Infanta of Portugal, addreſſed to the Right Honourable George Granville, Lord Lanſdowne; by Dr Colbatch of Trinity-College in Cambridge, 1733, 4to.

[*I*] *Which otherwiſe, in all probability, had been buried in oblivion*] We have in the two foregoing articles, made ſuch abundant uſe of his lordſhip's writings, as clearly proves the aſſertion in the text, to which, for the ſatisfaction of the reader, we will ſubjoin ſome farther inſtances in this note. In reference to the loyalty of the county of Cornwall, our author has produced a very remarkable letter from King Charles the Firſt, dated from his camp at Sudley-Caſtle (47), September 10th, 1643, of which he informs us, that there is a copy hung up in almoſt every church and chapel in the county. In reference to Sir Bevil Greenvile, he has furniſhed us with much; in regard to Sir Richard Greenvile, with a great deal more; but ſtill there

(47) Lord Lanſdowne's Works, Vol. II. p. 276, 277, 278.

works, in order to a new edition, which might be worthy of them and of his Lordſhip, a circumſtance that does him great honour, and which has contributed not a little to preſerve

there are ſome things wanting that would give us much farther lights upon this ſubject. Whitlocke has preſerved a circumſtance we meet with no where elſe, and though but a rumour, and a falſe rumour too, is of ſome conſequence to that gentleman's character. After the defeat of Eſſex in Cornwall, it was reported and believed, that the King had created that gentleman (48) Baron of Leſtwithiel, an undeniable evidence, that common fame attributed to him the honour of that action. We know not what is become of that relation which Sir Richard is ſaid not only to have written, but to have (49) printed and publiſhed, of his own conduct in the Weſt; and we are alſo in the dark as to the death of his only ſon; all that his lordſhip knew was, that he ſuffered for his father's principle (50); all we have been able to diſcover farther, is the time of his death, which was (51) March 8th, 1657-8. Many things relating to the Reſtoration we have already had occaſion to mention, and ſeveral more belong to other articles, which therefore it would be improper to mention here. But there is a fact with regard to King Charles's Queen Katherine, and her capacity of bearing children, which through his lordſhip's means has been ſtated in a pretty ſtrong light, and which for that reaſon ought not to be overlooked. In reference to this, his lordſhip ſays (52), 'as to the incapacity in the Infanta of bearing children, it was never proved nor acknowledged: on the contrary, I have heard many ladies of equal quality to the Ducheſs of Guadaloupa, ſome of them my near relations, who had the honour to attend upon her Majeſty's perſon from her firſt coming into England to her dying day, affirm it to have been a falſe imputation, and that ſhe was twice declared to be with child, is an undeniable proof of it.' This point is very fully explained by the following commentary of Dr Colebatch (53). 'Whether matters of this ſort be capable of proof, is more than I know; it is not likely they'll be acknowledged by the perſons concerned. It was cauſe ſufficient for the Chancellor to take the alarm; and to warn his maſter of the danger, in caſe the thing was believed upon any probable preſumption. Mr Echard I'm ſure hath dealt fairly with his reader, by acquainting him with what hath been alledged on one ſide and t'other, which he had for the moſt part from myſelf. He ſays very truly, that this ſuppoſed incapacity could not be imputed to the Infanta's age or country. I have ſeen a woman near Liſbon, with a child of her own in her arms, who ſeemed to be near fifty years; and upon my taking notice of it, was told, that women there, if they marry ſooner than thoſe of other countries, which is commonly the caſe, ſooner ceaſe to bear children, and not otherwiſe. So that if there was any truth in the report concerning the incapacity of this princeſs, it muſt, as the Archdeacon obſerves, be upon account of ſome peculiar infirmities of body. But ſuch a report there certainly was, and that before the marriage was compleated. Mr John Pollexſen, a countryman of your Lordſhip's, was a perſon ſo eminent in divers reſpects, that in all likelihood he was well known to your Lordſhip, and if ſo, he may have acquainted you with what I have heard from him myſelf; namely, that when the Earl of Sandwich came with a fleet to conduct the Queen to England, this matter was the common ſubject of diſcourſe among our merchants at Liſbon, and that they, he, Mr Pollexſen, being one of the number, remonſtrated to his Lordſhip, that the King was not like to have iſſue by his marriage. Poſſibly the report may have been confirmed if not raiſed by the Ducheſs of Guadaloupa, whoſe brother, the Duke of Aveiro, went over from Portugal to Caſtile (and ſhe with him as I ſuppoſe), about the time when the marriage was agreed upon. I am ſure Sir Robert told me, that being at Madrid when the news came thither of our Queen's miſcarriage, he waited on that lady to acquaint her with it, which having done, he added, that there being now cauſe to expect a future pregnancy, he hoped it would be attended with a more happy ſucceſs. But the Ducheſs, who had been acquainted with the Queen *from her infancy and in the nurſery*, (they are Sir Robert Southwell's own words) ſhaking her head, gave him to underſtand, that ſhe looked upon ſuch hopes to be altogether groundleſs——I have, as I told Mr Echard, ſeveral times heard the ſame thing affirmed by one lady, who had the honour of being allied to your lordſhip's family, and was the only Proteſtant of her rank and ſex that attended the Queen at Liſbon; I mean the Lady Wyche, who declared, that to her knowledge, her Majeſty was in a childbearing condition 'till after King Charles's death. I doubt not but that each of theſe ladies, had ſome particular reaſon on which to ground their opinion, ſo that great deference is due to the teſtimony both of the one and of the other. But I do not ſee how any difference in their quality, ſhould affect the credibility of their evidence on either ſide.' In proof however of ſo much of the fact, as that this matter, which ought always to have been kept ſecret, was very early the topic of diſcourſe, and occaſioned ſome very ſtrange reports in Portugal, as well as in England; we ſhall cite a paſſage of Sir Robert Southwell's letters, the rather becauſe it will give us a hint of thoſe, by whom ſuch ſtories were propagated, no doubt, with the pious intention of deſtroying gradually the Engliſh intereſt in every court in Europe. This letter of Sir Robert's is directed to Lord Arlington, and is dated December 2d, 1667. 'I would not omit to tell your Lordſhip of one queſtion which the Queen aſked me, which was, whether the Queen of England was not divorced from his Majeſty, which ſhe ſaid ſhe had heard; as alſo that the Ducheſs was in like manner from his Royal Highneſs, and all the children declared illegitimate. Your Lordſhip may imagine in what confuſion I was, to hear her diſcourſe on this ſubject, and the induſtry I uſed to efface theſe impreſſions; adding, for one conviction, the ſtrictneſs of the commands I had now newly received, to ſollicit the reſidue of the portion. Unto which her Majeſty preſently applied the diſcourſe, pleading the poverty of the kingdom more ſenſibly than one who had talked of her departure from it. But as to the report aforeſaid, concerning the Queen our miſtreſs, it is hardly credible how hotly it was diſcourſed in this town about ten days ago; and even that her Majeſty was already embarked, and it is now in like manner flown all over the kingdom; and though I do believe that ſome wild letters have, from the Portugueſe in England, been writ hither to this effect, yet I am ſure the French have fomented it with all the vigour they could (54).' An eminent prelate, having (55) reported in his hiſtory, that the Ducheſs of Portſmouth had told Mr Henley of Hampſhire, that ſhe believed King Charles the Second was poiſoned; Lord Lanſdowne, who was at Paris, where the Ducheſs of Portſmouth was living, procured the queſtion to be aſked her, whether ſhe had ever ſaid ſo to Mr Henley or not; to which the Ducheſs anſwered, that ſhe did not remember her being ſo much as acquainted with Mr Henley, which his Lordſhip looks upon as a clear confutation; whereas others look upon it as a mere evaſion, and that if there had been no truth in it, her Grace would peremptorily have denied the fact, inſtead of reflecting upon the memory of the prelate, which ſhe did in very coarſe terms. However, in reſpect to the fact of the King's death, his Lordſhip gives us his own ſentiments in the following words (56). 'As to the poiſoning part of the ſtory, it was always my opinion, and not ill grounded neither, that the King haſtened his death by his own quackery. The laſt year of his life, he had been much troubled with a ſore leg, which he endeavoured to conceal, and truſted too much to his own drugs and medicines. On a ſudden the running ſtopt, and it was then he was ſeized with his apoplexy: a common caſe, fatal the moment thoſe ſort of ſores dry up. There being ſo natural a way of accounting for his death, to what purpoſe then all theſe forced ſpeculations from ſtrained circumſtances? no one but the next heir could have any intereſt in it, and he never was ſo much as accuſed or ſuſpected. The Biſhop himſelf generouſly acquits him.' This was his Lordſhip's ſentiment, and carries in it great probability.

ſerve a due deference and reſpect to his memory, which his many great talents and amiable qualities always ſecured, while living, to his perſon. He choſe to increaſe the value of his writings, by examining and correcting, rather than by multiplying them; he was his own Critic, and performed that office with the ſteadineſs of a judge, and without being at all biaſſed by the natural tenderneſs of an author for his own productions. He choſe to be known to poſterity in his literary character, and very juſtly; having diſtinguiſhed himſelf in ſo many different kinds of writing, both in verſe and proſe. His Lordſhip had the misfortune to ſurvive his younger as well as his elder brother; and perhaps there is nothing more affecting in his Lordſhip's character, than that veneration which he had for ſome, and that tenderneſs which he had for all his family. Of the former, the reader has already ſeen many inſtances, and ſome alſo of the latter. But there are two letters, one to his couſin, the laſt Earl of Bath, in reſpect to his conduct in private life, the other to his nephew, Mr Bevil Greenvile, on his entering into Holy Orders (*n*), which it would have been an injury to his memory not to place in the notes, and therefore there the reader ſhall find them [*K*]. The

(*n*) Lord Lanſdowne's Works, Vol. III. p. 184—187. Vol. II. p. 283—285.

lity. Yet his Grace of Buckinghamſhire, an older man, and who had better opportunities of knowing, ſeems to think otherwiſe. His words are theſe (57). 'I would not ſay any thing on ſo ſad a ſubject, if I 'did not think ſilence itſelf would in ſuch a caſe ſig- 'ſy too much; and therefore, as an impartial writer, 'I am obliged to obſerve, that the moſt knowing and 'moſt deſerving of all his phyſicians, did not only believe 'him poiſoned, but thought himſelf ſo too not long af- 'ter, for having declared his opinion a little too boldly.' His Grace likewiſe does the ſame juſtice to his ſucceſſor. The Phyſician he mentions was Dr Short, a Papiſt, and the expreſſion he made uſe of was, that the King had not fair play for his life. A very honourable and judicious writer, has explained this in another ſenſe than that in which it has been commonly taken (58). 'It ſo fell out, that the very acceſs of the King's di- 'ſtemper was ſuch, as no poiſon or medicament in the 'world could produce or counterfeit, that is, an apo- 'plectic or epileptic fit, chooſe you whether, for in 'one of theſe the King was certainly at firſt taken. 'He cried out, and then falling back in his chair lay 'as one dead. The phyſician in waiting immediate- 'ly blooded him, and the following regimen was as in 'apoplectic caſes, his Majeſty's being preſumed to 'be that, to get him to wake, and then to keep him 'from ſleeping. One Dr Stokeham, an eminent phy- 'ſician in Covent-Garden, declared to me, that the 'phyſician that blooded the King, utterly miſtook his 'caſe; for his fit was not an apoplexy, but epileptic, 'and then all they did was ex diametro wrong For 'in that caſe, bleeding is little leſs than mortal, and 'the way is to let them doſe out the fit without diſtur- 'bance, and they will come to themſelves and be well; 'but the other courſe will ſooner make them mad than 'recover them' Hence he infers, that the natural conſtruction of Dr Short's words was, that the methods uſed, did him more hurt than good; and if he had been alone, and nothing at all done to him, nature had had it's courſe, which the Doctor might probably mean by fair play. We will venture to add, that theſe are the beſt accounts that are to be had of this matter, and taking them together we may be pretty certain of the truth. It was not the firſt or the ſecond fit of the kind the King had had, and recovered from by being let alone; but the circumſtance of drying up his leg (59) might probably make it more violent, which the accident of his being improperly treated rendered mortal. The reader will excuſe this ſhort digreſſion to which we were induced, that we might the better explain the great uſe of ſuch hiſtorical memoirs as thoſe are, which Lord Lanſdowne has publiſhed.

(58) Examen, or an enquiry into the credit and veracity of a pretended Compleat Hiſtory, by the Hon. Roger North, Eſq; p. 648.

(59) Welwood's Memoirs, p. 142.

[*K*] *And therefore there the reader ſhall find them.*] The firſt of theſe letters is the ſequel of that which the reader has already ſeen in the former article; it is addreſſed to the young Earl of Bath, and it contains our author's ſentiments of the conduct fit for a nobleman diſtinguiſhed by birth, bleſſed with a large fortune, and honoured with a ſingular mark of the royal favour, to purſue in his own country, upon a ſuppoſition, that with theſe advantages there can be but one thing left for him to render himſelf truly popular, not by meanly courting vulgar applauſe, but by conſulting the true intereſt of his country, and thereby joining the people's love to the ſovereign's choice. There is a freedom, there is an honeſty, in this letter which renders it invaluable; and there are ſo many occaſions continually occurring, to which it may be applied, and it will be peruſed here by ſo many to whom it as properly belongs, as to the noble perſon to whom it was addreſſed, that it cannot fail of doing continual ſervice.

(60) To WILLIAM-HENRY, Earl of BATHE, &c. at the camp in Flanders, September 22d, 1710. (60) Lord Lanſdowne's Works, Vol. III. p. 184—187.

'Every living creature, my dear lord, is entitled to 'offices of humanity: the diſtreſs even of an enemy 'ſhould reconcile us to him: if he thirſts give him 'drink; if he hungers give him food; overcome evil 'with good. It is with this diſpoſition I would have 'you enter into the exerciſe of that authority with 'which her Majeſty has honoured you over your coun- 'trymen. Let no body inſpire you with party preju- 'dices and reſentments. Let it be your buſineſs to re- 'concile differences and heal diviſions, and to reſtore, 'if poſſible, harmony and good neighbourhood amongſt 'them. If then there ſhould be any left to wiſh you 'ill, make them aſhamed and confounded with your 'goodneſs and moderation: Not that I would ever 'adviſe you to ſacrifice one hair of the head of an old 'friend to your family, to gain fifty new ones; but 'if you can increaſe the number by courteſy and 'moderation, it may be worth the trial.

'Believe me, my dear lord, humanity and genero- 'ſity make the beſt foundation to build a character 'upon: a man may have birth, and riches, and power, 'wit, learning, courage, but without generoſity, it is 'impoſſible to be a great man: whatever the rich and 'powerful may think of themſelves; whatever value 'they may ſet upon their abundance and grandeur, 'they will find themſelves but the more hated, and 'deſpiſed for the ill uſe they make of it. You ſhould 'look upon yourſelves but as ſtewards and truſtees for 'the diſtreſſed: your over-abundance, is but a depoſit 'for the uſe and relief of the unhappy: you are an- 'ſwerable for all ſuperfluities miſ-ſpent: It is not to be 'ſuppoſed, that Providence would have made ſuch di- 'ſtinctions among men; ſuch unequal diſtributions, but 'that they might endear themſelves one to another by 'mutual helps and obligations. Gratitude is the ſureſt 'cement of love, friendſhip, and ſociety.

'There are indeed rules to be obſerved, and mea- 'ſures to be kept, in the diſtribution of favours: we 'know who have both the power and inclination to do, 'but for want of judgment in the direction they paſs 'only for good-natured fools, inſtead of generous be- 'nefactors.

'My Lord —— will grudge a guinea to an honeſt 'gentleman in diſtreſs, but readily give twenty to a 'common ſtrumpet; another ſhall refuſe to lend fifty 'pounds to his beſt friend, without ſufficient ſecurity, 'and the next moment ſet his whole fortune upon a 'card or a die: a chance, for which he can have no ſe- 'curity. My Lord —— is to be ſeen every day at a 'toy-ſhop, ſquandering away his money in trinkets and 'baubles, and at the ſame time leaves his brothers and 'ſiſters without common neceſſaries.

'Generoſity does not conſiſt in a contempt of mo- 'ney, in throwing it away at random, without judg- 'ment or diſtinction, though that indeed is better than 'locking it up, for multitudes have the benefit of it: 'but in a right diſpoſition to proper objects in propor-

'tion

The gentleneſs of his nature, in liſtening to every application that was made to him in every ſtation of life; his willingneſs to oblige to the utmoſt of his power, and his condeſcenſion on ſome occaſions, which added luſtre to his good-nature, might be ſupported by various inſtances, if either neceſſity required, or the bounds of this article would permit (o). His candour in judging of the works of others (p), was the more extraordinary, conſidering the care he took of his own, for to them the ſeverity of his criticiſm was confined. But his generoſity in ſupporting, encouraging, and recommending men of genius, are qualities that muſt not be ſo ſlightly paſſed over. His friendſhip to Betterton and Dryden was always conſtant, and his expreſſions of it governed by their diſtreſs; for to them he gave the profits of his plays, which had never appeared upon the ſtage if their neceſſities had not required them (q). His affection and reſpect for Mr Wycherly, expreſſed in a letter, as is ſuppoſed, to Lord Viſcount Bolingbroke, ſhew his true ſenſe of merit in the ſtrongeſt and in the moſt agreeable light. His zeal in bringing the laſt great poet this country has produced with that credit on the public theatre, which is ſo neceſſary to give ſpirit and courage to a riſing genius, ought ever to be remembered with due praiſe [L]. The laſt years of his Lordſhip's life were ſpent in privacy and retirement. He

'tion to the merit, the circumſtances, the rank and 'condition of thoſe who ſtand in need of our ſervice

'Princes are more expoſed than any others to the 'miſplacing their favours: merit is ever modeſt, and 'keeps it's diſtance. The forward and importunate, 'ſtand always neareſt in ſight, and are not to be put 'out of countenance, nor thruſt out of the way. I 'remember to have heard a ſaying of the late King 'James, that he never knew a modeſt man make his 'way in a court. David Floyd, whom you know, being then in waiting at his majeſty's elbow, reply'd 'bluntly, pray, Sir, whoſe fault's that? the king ſtood 'corrected and was ſilent.

'If princes could ſee with their own eyes, and hear 'with their own ears, what a happy ſituation it would 'be both for themſelves and their ſubjects: to reward 'merit, to redreſs the injured, to relieve the oppreſſed, 'to raiſe the modeſt, to humble the inſolent: what a 'godlike prerogative! were a right uſe made of it.

'How happy are you, my dear lord, who are born 'with ſuch generous inclinations, with judgment to di'rect them, and the means to indulge them: of all men 'moſt miſerable is he, who has the inclination without 'the means. To meet with a deſerving object of com'paſſion, without having the power to give relief; of 'all the circumſtances in life, is the moſt diſagreeable: 'to have the power, is the greateſt pleaſure

'Methinks I ſee you ready to cry out——Good 'couſin, why this diſcourſe to me? what occaſion have 'I for theſe lectures? none at all, my dear lord, I 'am only making my court to you, by letting you ſee 'I think as you do.

'But one word more, and I have done.

'In truſt, intimacy, and confidence, be as particu'lar as you pleaſe: in humanity, charity, and bene'volence, univerſal.

'Be always ſincere, but at the ſame time always polite: 'be humble, without deſcending from your character; 'reprove and correct, without offending good man'ners: to be a cynic, is as bad as to be a ſycophant; 'you are not to lay aſide the gentleman with your 'ſword, nor to put on the gown to hide your birth and 'good breeding, but to adorn it.

'Such has been the malice of the world from the 'beginning, that pride, avarice, and ambition, have 'been charged upon the prieſthood in all ages, in all 'countries, and in all religions: what they are moſt 'obliged to combat againſt in their pulpits, they are 'moſt accuſed of encouraging in their conduct. It be'hoves you therefore to be more upon your guard in 'this, than in any other profeſſion. Let your exam'ple confirm your doctrine, and let no man ever have 'it in his power to reproach you with practiſing con'trary to what you preach.

'You had an uncle, Dr Dennis Granville, Dean of 'Durham, whoſe memory I ſhall ever revere; make 'him your example. Sanctity ſat ſo eaſy, ſo unaffect'ed, and ſo graceful upon him, that in him, we be'held the very beauty of holineſs: He was as chearful 'as familiar, and condeſcending in his converſation, as 'he was ſtrict, regular, and exemplary in his piety: 'as well bred and accompliſhed as a courtier; as re'verend and venerable as an apoſtle: he was indeed, 'in every thing apoſtolical, for he abandoned all, to 'follow his Lord and Maſter.

'May you reſemble him! may he revive in you! 'may his ſpirit deſcend upon you, as Elijah's upon 'Eliſha! and may the great God of Heaven, in guid'ing, directing, and ſtrengthening your pious reſolu'tions, pour down his beſt and choiceſt bleſſings upon 'you.

'You ſhall ever find me, dear nephew, your moſt 'affectionate uncle, and ſincere friend, &c.'

LANSDOWNE.

To my Nephew Mr Bevill Granville, *upon his entering into Holy Orders* (61).

(61) Ibid. Vol. II. p. 283, 284, 285.

'When I look upon the date of your laſt letter, 'I muſt own myſelf blameable for not having ſooner 'returned you my thanks for it.

'I approve very well of your reſolution of dedicating 'yourſelf to the ſervice of God: you could not chooſe 'a better maſter, provided you have ſo ſufficiently 'ſearched your heart, as to be perſuaded you can ſerve 'him well: in ſo doing, you may ſecure to yourſelf 'many bleſſings in this world, as well as a ſure expec'tation in the next.

'There is one thing which I perceive you have not 'yet thoroughly purged yourſelf from, which is flat'tery: you have beſtowed ſo much of that upon me 'in your letter, that I hope you have no more left, 'and that you meant it only to take your leave of ſuch 'flights of fancy, which, however well meant, often'er put a man out of countenance than oblige him.

'You are now become a ſearcher after truth: I ſhall 'hereafter take it more kindly, to be juſtly reproved by 'you, than to be undeſervedly complimented.

'I would not have you underſtand me, as if I re'commended to you a ſour Preſbyterian ſeverity; that 'is yet more to be avoided. Advice, like phyſic, 'ſhould be ſo ſweetned and prepared, as to be made 'palatable, or nature may be apt to revolt againſt it.

Beſides the Reverend Mr Bevil Granville, to whom this Letter is addreſſed, Colonel Bernard Granville, his lordſhip's younger brother, who was alſo Lieutenant governor of Hull, had by his wife Mary, daughter of Sir Martin Weſtcomb, conſul at Cadiz, Bernard his ſon and heir, and two daughters, *Mary* and *Anne* (62).

(62) Collins's Supplement to the Peerage, Vol. V. p. 100

[L] *Ought ever to be remembred with due praiſe.*] The length of this letter, prevents our tranſcribing it, but the latter part of it which reſpects Mr Pope, and which ſhews that this noble perſon was among the number of his firſt patrons, and who, together with Mr Wycherley, introduced him to this other Mæcenas, runs in the following terms (63). 'He ſhall bring with 'him, if you will, a young poet, newly inſpired in the 'neighbourhood of Cooper's Hill, whom he and Walſh 'have taken under their wing, his name is Pope, he is 'not above ſeventeen or eighteen years of age, and 'promiſes miracles: if he goes on as he has begun in 'the paſtoral way, as Virgil firſt tried his ſtrength, we 'may hope to ſee Engliſh poetry vie with the Roman, 'and this Swan of Windſor, ſing as ſweetly as the 'Mantuan.'

(63) Lord Lanſdowne's Works, Vol. II. p. 113.

All the world knows in what terms Mr Pope addreſſed this great man in the opening of his Windſor Foreſt, and therefore it is unneceſſary to repeat them; but with

had certainly talents enough to have raiſed him to the higheſt offices, and friends enough to have reconciled him to any party; but the mortifications he had met with in the middle part of his life, checked his ambition, and he had ſeen enough of the world to deſpiſe it. Yet he was not ſoured to a degree of becoming ſplenetic or cynical enough, either to refuſe or to be ungrateful for royal favours. The late Queen having honoured him with her protection, the laſt verſes he wrote were to inſcribe two copies of his poems, one of which was preſented to her Majeſty, and the other to the Princeſs Royal, Anne, now Princeſs Dowager of Orange (*r*). His Lordſhip deceaſed at his houſe near Hanover-Square, January 30, 1735, in the ſixty-eighth year of his age (*s*). By his only wife, Lady Mary Villiers, who died a few days before him (*t*), he had no iſſue male, ſo that in him the title of Lanſdowne became extinct. He had, however, by her Ladyſhip, four daughters, viz. Anne; Mary married on the 14th of March, 1729-30, to William Graham of Platten, near Drogheda in the kingdom of Ireland, who deceaſed (*u*) in the month of November, the ſame year with his Lordſhip; Grace married the 29th of March, 1740, to Thomas Foley, jun. Eſq; ſon and heir of Thomas Foley, Eſq; Member of Parliament for Hereford; and Elizabeth (*w*).

(*t*) Hiſtorical Regiſter, Vol. XX. p. 10.

(*u*) Gentleman's Magazine, Vol. V. p. 681.

(*w*) Collins's Supplement, Vol. V. p. 100.

At length we have finiſhed our memoirs of this antient and noble family, upon whom, having dwelt more copiouſly than upon almoſt any other, it may not be improper to acquaint the public with the reaſons. In the firſt place, there are few families that have produced perſons more illuſtrious than this, and thoſe in very different kinds, ſeamen, ſoldiers, ſenators, ſtateſmen, and poets. In the next place, in treating their perſonal hiſtory, we have been obliged to ſtate and examine ſome very curious and intereſting facts in our civil hiſtory, which, to ſpeak the truth, is the greateſt ſervice that performances of this nature can render to the republic of letters. We may add to theſe two reaſons, that we were in poſſeſſion of many materials; and though we will not pretend to ſay by any means, that we have erected a monument worthy of ſo many great men, yet ſure we have ſpent our time very ill, if we have not done ſomewhat towards contenting the reader. We ſaw that moſt of theſe materials had lain too long unuſed, and that, certain circumſtances conſidered, it might not be impoſſible they might continue in the ſame broken and diſtracted ſtate, at leaſt during our times, upon which we could not help reflecting with regret. Laſtly, the males of the eldeſt line being extinct, we thought it more immediately our duty, as in the caſe of the Dudley's, to interpoſe in time, and to uſe our utmoſt endeavours to ſave from oblivion all the circumſtances we could draw together, relative to this race of heroes: theſe which are our true and only motives, cannot but be thought ſufficient to prove, that what we have done in this reſpect, is perfectly conſiſtent with the nature and plan of our work; and it would give us great pleaſure, if we could render the ſame juſtice to other noble families under the like circumſtances.

with the private letter that accompanied that public inſcription, the world may not be ſo well acquainted; and therefore, from its pertinence to our purpoſe, we muſt beg leave to bring it to their notice (64).

(64) The Works of Alexander Pope, Eſq; edit. 1737, Vol. VI. p. 57, 58.

To my Lord LANSDOWN.

Binfield, Jan. 10, 1712.

'I thank you for having given my Poem of Windſor 'Foreſt, it's greateſt ornament, that of bearing your 'name in the front of it. 'Tis one thing, when a 'perſon of true merit permits us to have the honour of 'drawing him as like as we can; and another, when 'we make a fine thing at random, and perſuade the 'next vain creature we can find, that 'tis his own like-'neſs, which is the caſe every day of my fellow-ſcrib-'lers. Yet, my Lord, this honour has given me no 'more pride than your honours have given you, but it 'affords me a great deal of pleaſure, which is much 'better than a great deal of pride; and it indeed 'would give me ſome pain, if I was not ſure of one 'advantage, that, whereas others are offended, if they 'had not more than juſtice done 'em; you would be 'diſpleaſed if you had ſo much, therefore I may ſafely 'do you as much injury in my words, as you do your-'ſelf in your own thoughts. I am ſo vain as to think 'I have ſhewn you a favour in ſparing your modeſty, 'and you cannot but make me ſome return for preju-'dicing the truth to gratify you: this I beg may be 'the free correction of theſe verſes, which will have 'few beauties, but what may be made by your blots. 'I am in the circumſtance of an ordinary painter; 'drawing Sir Godfrey Kneller, who by a few touches 'of his own, could make the piece very valuable. I 'might then hope, that many years hence, the world 'might read in conjunction with your name, that of,

'Your Lordſhip's, &c.'

We will cloſe this note with a juſt ſtroke of cenſure on his Lordſhip and his writings, by his Grace the Duke of Buckinghamſhire and Normanby (65).

(65) Duke of Buckinghamſhire's Works, Vol. I. p. 191.

When Buckingham came, he ſcarce car'd to be ſeen,
Till Phœbus deſir'd his old friend to walk in;
But a laureat Peer had never been known,
The Commoners claim'd that place as their own.

Yet if the kind God had been ne'er ſo inclin'd,
To break an old rule, yet he well knew his mind:
Who of ſuch preferment, would only make ſport;
And laugh'd at all ſuitors, for places at Court.

Notwithſtanding this law, yet Lanſdown was nam'd,
But Apollo with kindneſs, his indolence blam'd;
And ſaid he would chuſe him, but that he ſhould fear
An employment of trouble he never could bear.

E

GREGORY [JAMES] an eminent Mathematician, was born in 1639 (*a*), at Aberdeen in Scotland (*b*), where he likewiſe received his education. He made a good proficiency in the Latin tongue at ſchool, but being chiefly inclined to the mathematics, it was not long before the ſucceſs of his application to theſe ſciences diſcovered a genius ſuperior to moſt, and not much, if at all, unequal to the beſt of his time. This happened

(*a*) He died in 1675, at the age of 36. See note (*w*).

(*b*) In the title page of his *Optica Promota*, and of his *Geometriæ pars univerſalis*, he ſtileshimſelf *Abredonenſis Scot.*

pened to be in the interval between Des Cartes and Sir Isaac Newton; when having the advantage of those improvements that had been made by the former, he struck a considerable part of that dawning light into the sublimer geometry, or geometry of curves, which preceded the rising of the latter. At the age of twenty-four years he acquired the distinguishing title of a first inventor, by his reflecting Telescope [*A*]; the construction of which was published in 1663, in his treatise intituled, *Optica Promota* (c), *seu abdita radiorum reflexorum & refractorum mysteria geometrice enucleata; cui subnectitur Appendix subtilissimorum Astronomiæ problematôn resolutionem exhibens* (d). Leaving Scotland in a year or two after this, he came to London, in order to get his instrument executed by some able hand; and the work was performed according to the description given in the book, by the most skilful artist of that time (e). Notwithstanding this it did not succeed [*B*]; and though our author imputed the miscarriage chiefly to his own want of skill in the technical part (f), yet he declined the trouble of improving himself therein. Intent upon the study of speculative Geometry, he had taken up a resolution to make a tour to Italy, where mathematical learning chiefly flourished at that time (g), and hastening thither he seems to have fixed his residence at Padua, which University was then in high repute. Here pursuing a hint suggested by his own thoughts, he pushed the method of exhaustions into several new discoveries. The first of these was the invention of an infinitely converging (b) series, for the areas of the circle and hyperbola [*C*], which he printed at Padua in 1667,

(c) At the 59th Prop.

(d) This piece is ranked with Dr Barrow's Optical Lectures, and the two authors quoted together, as the best writers upon the subject, by Dr Smith, in the 2d Vol. of his Optics, Remarks, p. 44. Lond. 1738, 4to.

(e) His name was Reive, he made better refractors than either Durni or Campani. Derham's Phil. Experim. p. 390.

(f) Phil. Transf. No. 83.

(g) Dominic, Cassini, Riccioli, Ricci, Renaldini, Stephano de Angelis, Manfredi, Ballaldi, Borelli, to name no more, were all alive at this time.

(b) He was the first who gave such series that denomination. Vid. Epist. Wallisii ad Leibnitium, Apr. 6, 1697, in Commercio Epistol. Jo. Collins, &c. No. LXXV.

[*A*] *He acquired the distinguishing title of a first inventor by the reflecting telescope.*] His only competitor in this invention, Sir Isaac Newton, tells us himself (1), That the first thought of such a telescope was indeed suggested to him by his discovery of the different refrangibility of the rays of light, but not till 1666; and that when he resumed this subject in 1668, he had Mr Gregory's book before him (2). In this book we find the particular remark which first put our author upon contriving his invention, was an inconvenience he foresaw from an hyperbolic (3) object-glass, which if sufficiently broad to receive light enough into a telescope that shall magnify very much, must, he observes, of consequence be very thick, and that then the clearest glass would hinder too much of the light from being transmitted (4). As this telescope is made at present with several alterations and improvements, we shall have but a very imperfect idea of the original invention, without seeing a description, which therefore it will be proper to insert in the author's words. Having described two other sorts, together with their defects, he proceeds thus: 'Tertium autem genus nulla habet incommoda & omnes priorum generum proprietates habere potest (5), &c. The third sort (which, from it's value, we may very well call a golden one) has no inconveniences, and may have all the properties of the other sorts, provided the lenses and specula be rightly disposed, that is, if the last images, and the last but one, be produced by specula, and the rest by lenses: we shall therefore here, for example, describe a telescope of this most perfect kind. Let there be a parabolical concave speculum most exquisitely polished, near (6) whose focus is placed a small elliptic concave speculum, having a common focus and common axis with the concave parabolic speculum, and let it be fixed in that situation: now the said focus of that elliptic speculum must be very near to it's vertex, and the other focus of it must be very far from that in the common axis, produced beyond the parabolic speculum; and through the vertex of the parabolic speculum must be made a round hole, in which hole must be placed a tube, having the same axis with the specula, and big enough to receive the rays of a visible reflected from the elliptic concave speculum, and let it be continued a very small matter beyond the farther focus of that speculum, and there let a lens of chrystal convex, towards the specula, with the convexity of a conoid, and the density of the chrystalline (7) [of the eye] be fixed, whose exterior focus must be the same with (that just mentioned) the further focus of the elliptic concave speculum, and must be plane towards the eye, and likewise have the same common axis as the specula and the tube.' After the description he concludes thus: 'This will be the way to make an excellent telescope for *presbytæ*; for distant objects seen through the tube, will appear very distinctly magnified, very near in the ratio of the distances of the vertices from the common foci, and enlightened in the same manner as a visible would be, when seen under such an angle, provided the diameter of what produces the last image be big enough to suffer the uvea of the eye to be filled with the rays: and how that may be done, we have taught in the scholium of the 51st of this book.' By this description it appears, that the rays from the object pass on the outside, or without the margin, of the lesser speculum to the concave face of the larger speculum, which reflecting them to the lesser, that returns them through a hole in the middle of the larger, to the eye-glass, placed behind the larger speculum. But here the construction is general, being built only upon theory, which was carried no farther than to the figures of the specula and lens. The particular magnitudes and distances of each are left to be determined by trial, or experience; and what was done in that way will be seen in the following remark.

(6) His words are *in cujus foco*.

(7) In the original it is *densitatis chrystallinæ*.

[*B*] *Being attempted by Mr Reive, it did not succeed.*] Our author, speaking in his Optics of these instruments says, *De mechanica horum speculorum & lentium ab aliis frustra tentata, ego in mechanicis minus versatus nihil dico:* whence Sir Isaac Newton inferred, that there had been trials made of these telescopes, but in vain; 'And, continues he, I am informed that about seven or eight years since (8), Mr Gregory himself, at London, caused one of six foot to be made by Mr Reive, which I take to have been according to the aforesaid design described in his book, because, though made by a skilful artist, yet it was without success (9).' To this Mr Gregory answered (10), That as to the words cited (by Mr Newton) he spoke there only of the hyperbolic and elliptic glasses and speculum, which were attempted in vain. 'As for my experiment, continues he, with Mr Rives (11), he could not polish the large concave [or object speculum] upon the tool; and I not knowing any advantage of the catoptric telescope above the dioptric, save only the shortnes, and similitude betwixt the circle and parabola (which is greater than that betwixt the circle and hyperbola), imagined that this great defect in the figure [being spherical] wold easilie counterbalance these two pettie advantages. Upon this account, and being about to go abroad, I thought it not worth the pains to truble myself anie farther with it, so that the tube was never made; yet I made some trials, both with a little concave and convex speculum, which wer but rude, seing I had but transient views of the object, being so possessed with the fancy of the defective figure, that I wold not be at the pains to fix everie thing in it's due distance.' Had not our author here given us his reasons, it would have appeared a little surprizing, that for the sake of his own invention, he did not make some trials himself to bring his metals to their desired form, especially when we consider that some of the greatest mathematicians at this time were employed in grinding glasses with their own hands *, in order to reduce them to true conoidical forms.

[*C*] *He found an infinitely converging series, &c.*] This series is thus constituted: he proposes the terms of it to proceed by pairs, as A and B, C and D, E and F, &c. so that the difference betwixt A and B exceeds the

* Mr Reives, the Optician abovementioned, was instructed in the *manual* operation by Sir Paul Niel, Sir Christopher Wren, and Dr Goddard. Phil. Experim. by Derham, ubi supra.

[illegible] 4to, with the following title, *Vera circuli & hyperbolæ quadratura in propria sua por-[illegible] specie inventa & demonstrata à Jacobo Gregorio, Scoto*; but he took off only a few [illegible] for the use of himself and his friends (*i*), apparently with a view of having their [illegible] in a matter intirely new, before he should put it into the hands of the Public. [illegible] others, he sent one copy to Mr John Collins, who communicated it to the [illegible] Society (*k*), and having received the commendations of Lord Brounker and Dr [illegible] *D*], it came abroad in 1668 (*l*), with an answer to such objections as either had [illegible] such as he could conceive might be, made against it. This answer was inserted [illegible] preface to another piece annexed to the former, intituled, *Geometriæ pars univer-[illegible] [illegible]rviens quantitatum curvarum transmutationi & mensuræ*. Wherein he first of any [illegible], exhibited a method for *the transformation of Curves* (*m*). Mr Collins read like-wise [illegible] account of this treatise to the Royal Society [*E*] before it was published, and our

(*i*) [illegible] Phil. Trans. No. 33. [illegible] GORY [illegible]

[illegible] design to be dropt. Phil. Trans. No. 35.

(*l*) The impression contained 500 copies, printed (not at Venice as he had before signified, but) at Padua, with the privilege of the States of Venice. See the title-page of the book, and Gen. Dict. ubi supra.

(*m*) In the xith Prop. of the book. Cardinal Cusa, in the XVth century, published a treatise with this title, *De transmutationibus geometricis*, where he frequently speaks *de transformatione curvarum*, but proceeds no farther than from the consideration of polygons, to give some right-lined figures nearly equal to the circle. Inter Opera ejus, p. 951, & seq. Basil, 1565, fol.

the difference between C and D; and after the same manner that C and D are formed by an analytical operation from A and B, so E and F are formed from C and D, and so on continually; by which means the difference continually lessening, becomes less than any given quantity, and if the series be continued in infinitum, quite vanishes, and the two terms become equal, either of which is the quantity sought. He mentions also another form of converging series, consisting of simple terms, to which the foregoing may be reduced. Thus: let A, B, C, D, E, &c. be such a series, and of such a nature, that the third term C is compounded in the same manner from A and B, as D is from B and C, and so on. And let the difference of the antecedent A and B, be always greater than that of the immediately subsequent B and C, &c. This series continually approximates as the former, and therefore if continued in infinit. *the last term is the quantity required*. To explain this a little more particularly, he shews, for instance, that any sector of the circle, hyperbola, or ellipse, is the termination of a converging series, whose two first terms are A and B, whereof A is a triangle which as to the circle or ellipse is inscribed but as to the hyperbola is circumscribed to the said sector, and B a trapezium, which contrariwise as to the circle or ellipse is circumscribed, but as to the hyperbola is inscribed to the said sector; the two second terms are $\sqrt{AB}$ and $\frac{AB}{A+\sqrt{AB}}$; the two third terms are in like manner derived from the two second, as these are from the first, and so on infinitely. Hence it is evident, that Mr Gregory grounded his method upon that of Archimedes, wherein curves are considered as their inscribed and circumscribed polygons, whose difference decreases as their number of sides is increased. The use of this remark will be seen in the sequel, where something more shall be said concerning the nature of these series and their approximations. It is sufficient in this place to take notice of what the present occasion particularly suggests, viz. the manifest incongruity of our author's expression, in talking of the last or final term of an endless and infinite series, and declaring the circle to be equal to the last inscribed or circumscribed polygon in such a series. However, it may be said in his defence, that it is a negligence that seems not altogether unpardonable, in a point which no ways affects the truth or legality of his series, wherein he pretends expresly to nothing beyond an approximation as near as you please. We shall see in remark [*G*], that Sir Isaac Newton, in speaking of our author's method, did not scruple to use his words. In short, it was a manner of expression, which in his time had obtained a kind of establishment by custom, and which seems to have crept into the acceptance and even favour of the first modern improvers of the sublime Geometry, by representing them as having in some measure penetrated into infinity. But we have lately seen the bad consequence of this foible, concerning which consult the article of [MACLAURIN].

[*D*] *Having the commendations of Lord Brounker and Dr Wallis.*] In their account of it to the Royal Society (12), they observe that it was ingeniously and mathematically written, that it contained a new method analytical for giving the aggregate of an infinite or indefinite converging series, from which ground a method was taught of squaring the circle, ellipse, and hyperbola, by an infinite series; and lastly, that by the same method, from the hyperbola, the author had calculated both the logarithms of natural numbers, and the numbers from the logarithms; that he found the logarithms of all primitive numbers under 1000 by one multiplication, two divisions, and one extraction of the square root; but for greater prime numbers much more easily. Dr Halley long afterwards shewing a method of deducing the logarithms (without the help of the hyperbola) from Sir Isaac Newton's binomial theorem (13), thought it requisite to advertise the reader (they are his words) that there is a small mistake in this last part of our author's work, at prop. 48, where in giving the computation of Lord Neper's Log of 10 to 25 places, he errs in the 18th figure, 'As I was assured, says the Doctor, upon my own examination of the number, for being desirous to be satisfied how this difference arose, I took the no small trouble of examining Mr Gregory's work, and at length found, that in the inscribed polygon of 512 sides, in the 18th figure, there was a 0 instead of a 9, which being rectified, and the subsequent work corrected therefrom, the result did agree to a unit with our number. And this, concludes he, I propose, not to cavil at an easy mistake in managing of so vast numbers, especially by a hand that has so well deserved of the mathematical sciences, but to shew the exact coincidence of two so very different methods of making logarithms, which might otherwise have been questioned.' The whole tenor of this remark by Dr Halley, shews the high esteem which he had of the latter part of our author's piece now under consideration, whence no one will doubt of it's real worth; and as to the former part, we are assured by Mr Collins (14), that the area of the hyperbola had not been given before by any man; and that gentleman therefore thought it of such importance as to deserve a particular explanation, which he accordingly gave of it, concluding with a remark of it's use in the business of gauging.

[*E*] *Mr Collins read an account of this treatise to the Royal Society.*] Besides what is mentioned above, this account relates from the preface, that our author, observing the defects of algebra to be most manifest in the mensuration of curved quantities, proposes in some measure to supply them, by the transmutation of curves, that is from some essential property of one figure, thereby to give a method of changing it into another figure equal thereto that hath known properties, and of that into another, and so forward, until at last you change it into some known quantity. And he modestly saith, That his own treatise hath so far pursued this method, that it refuseth no particular figure yet considered by geometers.—That to divide an angle in any given ratio, or square the circle organically, there is no way easier than by the common *linea quadratix*, the properties whereof are elegantly handled by *Leotand*, in *Cyclomathia*, Lugd. 1663, 4to.—That all things concerning logarithms, and the composition of ratio's, may be performed by help of a curve line, drawn through the tops of a rank of lines in continual proportion, standing as perpendiculars, on a right line and at equal distances *, which, says he, ought not to be accounted *ageometrical*, because not performed by the sole aid of ruler and compass; as he suggests to be well observed by *Car. Renaldini*, in *Geometria sua nova, dum tractat de novis illis lineis quæ Medicæas appellat*: and for the confirmation

(12) Phil. Trans. No. 33. dated March 16, 1668.

(13) Ibid. No. 216.

(14) In the same paper with the account of Brounker and Wallis just cited.

* That is, by the logarithmic curve.

our author, probably at his motion, being about the ſame time choſen a member of that body (*n*), communicated ſoon after, an account of the diſpute that had then lately happened between Riccioli, ſupported by Manfredi, and Stephano de Angelis, about the motion of the earth [*F*]. Informing the Society, that notwithſtanding the great name and aſtronomical merit of Riccioli, yet his arguments againſt that motion were as little eſteemed in Italy as elſewhere. In the mean time a copy of the *vera circuli-quadratura* having fallen into the hands of Mr Huygens, that (*o*) gentleman, who had wrote upon this

(*n*) In the title to the account of the diſpute between Manfredi and Stephano de Angelis, he is ſtiled F. R. S.

(*o*) See his *Theoremata de Quadratura Hyperbolæ Ellipſis & Circuli, &c.* Leyden 1651. Alſo *De Circuli magnitudine inventa, &c.* Ibid. 1654, 4to.

confirmation of this, our author demonſtrates, that no cubic equation that is irreducible to a quadratic, can be reſolved by the ſole aid of ruler and compaſs, or the interſection of a circle and a right line.—From the preface this account proceeds to the argument of the book itſelf, obſerving that it contains theſe ſeveral heads, (1.) The menſuration of ſundry ſolids, with general methods to that purpoſe, concerning which the author ſaith, p. 123, *Totus namque Archimedis tractatus de ſphera & cylindro facile demonſtratur ex hujus 3, ad modum hujus 46, & aliquot ſequentium; liber de conoidibus & ſphæroidibus, & tota Lucæ Valerii doctrina ex hujus 21. Tota Guldini, Johan. de la Faille & Andr. Tacquetti doctrina ex hujus 35, & aliquot ſequentium.* And as a corollary to prop. 62, he cubeth or meaſures either of the ſegments of a parabolic conoid cut with a plain parallel to the axis, which may be applied to the gauging of a caſk part out (15). (2.) The menſuration or plaining of the ſurfaces of divers ſolids and ſpiral ſpaces, unknown to antiquity, and not treated of by any modern authors till of very late years, from whom the author differs in his method; particularly he finds a circle equal to the ſurface of a parabolical or hyperbolical conoid [ſpindle], reſembling a cup or bowl when the revolution is about either axis, prop. 46, 49, and to that of a parabolical hour-glaſs, or ſolid, when the revolution is about a touch-line paſſing through the vertex, p. 52. To that of a long and broad [oblong and oblate] ſpheroid, p. 47, 48, and in prop. 67, he finds the ſurface of any ſegment of a cone. Laſtly, he ſhews in general, prop. 36, the ſurface of every round ſolid to be equal to a rectangle whoſe baſe is the circumference of the figure, by the rotation whereof the ſolid is begot; and the height to be equal to the circumference which the center of gravity of the perimeter of the figure deſcribes. (3.) He gives a method for ſtraitning of curved lines in the firſt ſix propoſitions, and in particular he finds a right line equal to a parabolic curve, p. 51. (4.) There are divers optic propoſitions towards the end of the book, concerning the imperfection of the eye and the confuſion of the ſight; the apparent magnitude of the ſun low and high; the tails of comets; what proportion the earth's illumination, by the moon at the full, bears to it's illumination by the ſun; and a like compariſon between the ſun and ſirius; that viſion by aid of a teleſcope or microſcope is not deceitful; and an obſervation of the likeneſs between the earth and the moon (16).

(15) Which is called in practice the gauging of a caſk.

(16) Phil. Tranſ. No. 35. dated May 18, 1668. The titles of his ſeveral heads are, (1.) *De ſiderum ſcintillatione & magnitudine apparente.* (2.) *Quod ſol ſit realiter & formaliter calidus.* (3.) *De ſolis humilis & ſublimis magnitudine apparente.* (4.) *De viſibilium pictura ſub tecto obſcuro.* (5.) *De cometarum caudis.* (6.) *De ſtellarum fixarum diſtantia.* (7.) *Quod viſio ope teleſcopii vel microſcopii non ſit fallax.* 8.) *Quod omne diviſibile ſit in infinitum diviſibile.* (9.) *De obſervatione ſimilitudinis inter terram & lunam.*

In the propoſition concerning the tails of comets, Mr Gregory maintains a comet to be a kind of humid body, emitting it's proper vapours, always wandering about the æther, and retaining almoſt the ſame ſituation in reſpect to the ſun; which is alſo the opinion of Hevelius (17), who thinks the tail produced much after the ſame manner, namely, that the thinneſt parts of the atmoſphere of a comet are rarefied by the force of the heat, and from the fore part and each ſide of the comet are driven towards the parts turned from the ſun. And then, according to our author's opinion, the half of the comet which is turned from the ſun, and never warmed or inlightened by it, has very groſs and very opaque vapours, which being continually ſupplied or fed with the vapour-like matter of the comet, and no way diſſolved, by reaſon of the weak and oblique light of the ſun, grow to an immenſe height, and every way reflect the ſun's rays, which are not ſtrong enough to expel the exhalations. This opinion of Mr Gregory agrees ſo far with that of Sir Iſaac Newton, that he believed the tail of a comet to be nothing elſe but a very thin vapour, which the heat or nucleus of the comet ſends out by reaſon of it's heat.

(17) See his Cometograph. p. 430.

In the next propoſition concerning the diſtance of the fixed ſtars, Mr Gregory having rightly obſerved, That this diſtance could not be determined by obſervations made in different places of the earth's orbit, ſince the diameter of this orbit could not be found to bear any ſenſible proportion to that diſtance, he propoſes to meaſure it by an optical method, wherein he firſt ſhews how to find the ratio which the earth's illumination by the ſun bears to it's illumination by the moon or any of the planets, and likewiſe to it's illumination by any fixed ſtar of the firſt magnitude. Then chuſes a fixed ſtar of nearly the ſame brightneſs with ſome planet, when it is at the full, in which caſe the earth is equally illuminated by theſe two ſtars. Whence the mutual diſtances of the ſun, earth, and planet, at the time of the abovementioned obſervation, together with their magnitudes being known, the ratio of the illumination of the earth by the ſun and by the fixed ſtar becomes known. But the illumination of the earth by the ſun, to the illumination of the ſame by a fixed ſtar equal to the ſun and equally lucid, is well known, by the manner in which light is diffuſed, to be in the duplicate ratio of the fixed ſtar from the earth to the diſtance of the ſun from the ſame: wherefore the ratio between the diſtances of the fixed ſtar and the ſun from the earth is known, and conſequently the diſtance itſelf of a fixed ſtar from the earth is known. By this rule Mr Gregory propoſes, for inſtance, to find the diſtance of the fixed ſtar Sirius. But the ſuppoſition of the ſun's diſtance being known, and that likewiſe of it's being equal in magnitude to Sirius, upon which poſtulata the rule is founded, are both ſo uncertain, that this method was never in any eſteem by the learned in Aſtronomy, notwithſtanding it was, after our author, further improved in ſome meaſure by the celebrated Mr Huygens, in his *Coſmotheoros*.

[*F*] *An account of the diſpute—about the motion of the earth.*] This account was taken from the books printed on each ſide, and is in ſum as follows: Riccioli, in his *Almageſtum Novum*, pretended to have found out ſeveral new demonſtrative arguments againſt the motion of the earth; but theſe being all grounded upon ſome of the phænomena of gravity in falling bodies not rightly underſtood, were fully anſwered by his antagoniſt. To go over the particulars in a matter ſo well known at this time of day, might juſtly be thought tedious; we ſhall therefore only obſerve, that a great part of the debate was about the nature of the line deſcribed by a falling body [viz. from the tower of Bononia], a point not well underſtood by any of the diſputants. Mr Hooke, many years afterwards, endeavoured to ſhew (18) ſuch a line would not be a ſpiral, but an eccentrical elliptoid in caſe of no reſiſtance, and ſuppoſing reſiſtance an eccentric ellipti-ſpiral, which, after many revolutions, would reſt in the center at laſt. He likewiſe obſerved, that the fall of the body would not be directly eaſt (as was then generally thought) but to the ſouth-eaſt, and more to the ſouth than the eaſt. Upon this laſt particular it may not be amiſs to take notice of an experiment mentioned by Stephano de Angelis, in his Reply to Manfredi, which, he tells us, (as related to him by a Swede) had been made with all due circumſpection by Des Cartes, to prove the motion of the earth. The experiment was: he cauſed to be erected a cannon perpendicular to the horizon, which being 24 times diſcharged in that poſture, the ball fell 22 times towards the weſt, and only twice towards the eaſt.—It is intimated that Riccioius called his arguments, againſt the earth's motion from the effects of gravity, *new* ones. In that appellation he alludes to another and a much better argument, which he had brought before, being grounded upon the obſervation that the fixed ſtars had no [ſenſible] parallax (19). This was thought ſo formidable an objection, that to ſatisfy it was one motive of Mr Flamſtead's undertaking to find whether theſe ſtars had any parallax or no. But the reader will ſee more of this matter elſewhere (20).

(20) In the article MOLYNEUX [SAMUEL]

[*G*] *A*

[illegible] though in a different way, with distinguished perspicuity, observing the perplexed and intricate nature of our author's invention, took notice of some imperfections in his book, whereby the legitimacy of his method in some things was called in question, and at the whole censured as useless and unfit for practice. This occasioned a dispute between them. Gregory, thinking his reputation injured, did not spare warmly to resent it, and at the same time explained and supplied what had been objected to as obscure or defective in his work (p) [G]. I do not find that his doctrine of the transmutation of curves

(p) Our author's book, together with the papers on both sides in this controversy, were printed *inter Hugenii Opera varia*. Leyden 1724, 4to.

[G] [illegible]] In this dispute Mr Huygens conveyed his animadversions, which were written in [illegible] of the Journal des Sçavans (21), our author made use of the Philosophical Transactions (22) to carry his two defences drawn up in the same language. In the first of these he acknowledges the justice of his antagonist's remark, in asserting the example in his 10th proposition to be no converging series; excusing himself by alledging, that he had tried it only in the first and second terms, without considering that the third coincided with the first; and having explained and defended the other things objected to, he concludes in these terms, *Gratias ago nobilissimo Hugenio quod meas examinare dignatus est hinc enim mihi data est occasio illas fusius explicandi & confirmandi Hugeniana methodus quadrandi circulum sitne præstantior mea, experientiæ relinquo judicandum: quod enim nostra hyperbolæ quadrandi illi etiam innotuerat, de hoc nihil habeo quod dicam, nisi quod mihi gratuler inventa mea ipso Hugenio non æstimari indigna.* This was civil, and he seems to have entertained hopes of putting an end thereby to the controversy. But Mr Huygens printing a Vindication of his Examen, occasioned our author to send a Reply, wherein he further explains some things; and having complained of the severity of Mr Huygens as unreasonable, he concludes thus, *Ad reliqua ab Hugenio publicata cum a nostro instituto sint aliena nihil dico, nisi quod ipsi Hugenii dicta, non obstante exactissima sua, ut ait, materiæ hujus examinatione, a meæ appendiculæ (23) factis, ni fallor, longe superentur.* Mr Oldenburg, then publisher of the Philosophical Transactions, introduced this Reply of our author with the following preamble. 'The first occasion of the letters on this 'subject was given in the Journal des Sçavans of 'July the 2d, to which a civil return was made in 'No 37 of these tracts, which have been judiciously 'animadverted on in another Journal des Sçavans of 'November 12, 1668. It was thought agreeable here 'to make public what Mr Gregory hath since imparted 'therein, out of a desire expressed by him farther to 'elucidate that controversy; which how satisfactory it 'is we leave the intelligent to judge, professing that 'we are no farther concerned in this contest, than to 'let the sagacious reader know the proceedings there 'of, by referring him on one side to the French Jour-'nals, and to these papers on the other: which as it 'is intended to be done without any animosity or of-'fence, so we desire the candid reader will pardon us 'for directing him thus much by this dispute, from 'what else he might justly expect in these philosophi-'cal occurrences.' A representation so much in favour of his antagonist as is here given, did not fail to kindle Mr Gregory's resentment, who having also been disturbed farther on this head by Mr Oldenburg and others, unburthened himself to his friend Mr Collins, in a letter dated Jan. 6, 1670, where he writes thus: 'In April last I had an answer to Mr Oldenburg's que-'ries from Mr Bruce, but being accidentally at Edin-'burgh at that time, and seeing the Philosophical 'Transactions [No. 44.] of February last, I was alto-'gether discouraged, by the lines prefixed to my an-'swer to Mr Huygens, from entertaining any such cor-'respondence. I have since received an answer to the 'same queries from one Mr Gordon, but am not so 'much a Christian as to help those who hurt me. I 'don't know, neither do I desire to know, who calleth 'in that preface Huygenius's animadversions of No-'vember the 12th, 1668, *judicious*; but I would ear-'nestly desire that he would particularize (if he ben't 'an ignorant) in what my answer which is contradic-'tory to Huygenius's animadversions is faulty: for in 'geometrical matters, if any thing be judicious, it's 'contradictory must be nonsense. I don't know what 'need there was of any apology for inserting my an-'swer, but to compliment Huygenius, and violently, 'if it be possible, to bear down the truth. I imagine 'such actions below the meanest member of the Royal 'Society: *however, I may have permission to call to 'an account in print the penners of that preface.* I 'hope you will excuse my freedom in this particular, 'which concerneth me so near —I intreat you to ad-'vertise me upon what account my books are suppressed 'in Italy.' I don't find that Mr Gregory ever put this threat into execution; it is not impossible that the warmth of his zeal for his own series might be much abated, by the letters he received at this time from Mr Collins (24), with an account and some specimens also of those of Sir Isaac Newton, who therein it was seen had actually effected that which our author was with irreconcileable stiffness contending against Mr Huygens to be utterly impossible, that is, the ratio of the diameter of a circle to the circumference expressed in a series of simple terms independent of each other, and intirely freed from the magic vinculum of surds, in which they had till then been indissolubly held (25). Upon the whole, it must not be dissembled that Mr Gregory had not the better in this controversy; his method indeed was true, but so involved and tedious, as not to be easily understood, and absolutely irreducible to ordinary practice. Mr Leibnitz, who was far from being an enemy to his fame, having passed a handsome compliment to his memory in 1676, the year after his death, observes that the treatise now under consideration was very deficient. *Vellem, inquit ille, Gregoriana omnia conservari, fuit enim his certe studiis promovendis aptissimus, cæterum ejus demonstrationi editæ de impossibilitate quadraturæ absolutæ circuli multa haud dubie desunt* (26). Sir Isaac Newton also, in his celebrated letter of the same year, hints the tediousness of this method in respect of the calculus. His words are, *Quinetiam beneficio ejusdem methodi [mei] possunt series ad omnes figuras efformari Gregorianis ad circulum & hyperbolam editis affines, hoc est quarum ultimus terminus exhibebit quæsitam aream. Sed calculum hic onerosiorem nolim lubens subire* (27). The truth is, complication, tediousness, and intricacy, were faults complained of in all his series. Dr Halley having asserted his just merit as the first inventor of a certain remarkable demonstration observes, however, that it was performed not without a long train of consequences and complications of proportions, whereby the evidence of the demonstration is in a great measure lost, and the reader wearied before he attains it (28). 'Tis true, he made several improvements in his method during this controversy with Mr Huygens. In his first essay, the approximations, as is seen in remark [C], were made by a series of right-lined to the quadrature of curve line planes: he now proceeded to the invention of some linear ones, for the rectification of curve lines, among which the following specimen, extracted from his Second Answer to his antagonist, was sent, as a proof how far he had then advanced his method, to Mr Leibnitz by Mr Collins, who takes notice that Mercator's Logarithmo-technia had been published before *. Put r for the radius of a circle, d for half the side of the inscribed square, and e for the difference between them. Then the semiperipehery will be equal to

$$2d - \frac{e}{3} - \frac{e^2}{90d} - \frac{e^3}{756d^2} - \frac{4rr}{23e^4} - \frac{}{113400d^3} - \frac{}{260e^5} - \frac{}{748400d^4}$$

&c. in infinit. Notwithstanding the advantage hinted as above by Mr Collins, the intelligent reader, upon sight hereof, will perceive that our author's series, as he declares himself, still deserved the name of surds, that is, quantities held within a vinculum, from which he

(21) For July and November 1668.

(22) No. 37 and 44, for July 1668, and Feb. 1669, reckoning the year to commence on the 1st of January, as is done by Mr Gregory below, in citing this last number.

(25) The chief part of this dispute turned upon several mistakes asserted by Huygens to be made by our author in his Demonstration (as he called it) of the absolute impossibility of the analytical quadrature of the circle; but at the same time his expressions shew that he thought it could not be reduced to an equation by infinite series without surds. (28) The Analogy of the Meridian Line to a Scale of Logarithmic Tangents, &c.

* Com. Epist. No XXXVI. *In the Treatise here mentioned was inserted Lord Brouncker's series and a demonstration of it.*

curves met with any antagoniſt in his life-time; yet after his death, his right to this invention was twice invidiouſly attacked, but as often defended by Dr David Gregory, who has put the juſtice of his claim beyond all diſpute [*H*]. In this treatiſe he gave a general rule for the direct and inverſe method of Tangents, which ſtands upon the ſame principles with that of Fluxions, and differs not much from it in the manner of application (*q*) [*I*]. In April, this year, Lord Brounker having produced his *Series for ſquaring the hyperbola* (*r*), a demonſtration of it was ſoon after given by Mr Mercator in the *Logarithmo-techia*, whereupon our author, before the end of the year, publiſhing his *Exercitationes Geometricæ* [*K*], did therein improve and enlarge Mercator's diſcovery, and gave a geometrical demonſtration of it by means of ſumming up the ſecants of a circular arch. In this piece he likewiſe firſt of any one demonſtrated the meridian line to be analogous to a ſcale of logarithmick Tangents of the half complements of latitude [*L*], and

(*q*) *Ab iiſdem initiæ principiis* (Fluxionum methodo non multum abludebat, &c) are Dr John Keil's words. Com. Epiſtol. No. LXXXI.

was not then able to extricate them. Inſomuch that there was no advancing a ſingle ſtep forward in the approximation without recurring back to the firſt term, and taking in the whole ſeries from the beginning. This, together with their ſlow convergency, chiefly occaſioned that tedioufneſs which we have ſeen objected to them, and which rendered them unfit for practice.

[*H*] *Dr David Gregory put the juſtice of his claim beyond all diſpute.*] In the Memoirs of the Royal Academy at Paris for the year 1693, the Abbot Gallois aſſerted, That Mr James Gregory (as well as Dr Barrow) ſtole this propoſition from Monſ. Roberval (29). Dr David Gregory thought this aſſertion ſufficiently refuted by obſerving, That his uncle had publiſhed his book at Padua in the year 1668, (and Dr Barrow his geometrical lectures in 1674) which though Mr Roberval muſt needs get a ſight of before he died in 1675, yet he never complained of any injury done him. This anſwer was publiſhed in the Philoſophical Tranſactions, No. 214. Ten years afterwards, the ſame calumny was revived by the abbot, in the ſaid Memoirs for the year 1703, wherein he maintained that the transformation of curves was invented by Roberval, and was known in Italy before the year 1668: for that Torricelli, who died in 1647, had teſtified in his letters, that it was communicated to Roberval; and, therefore, as it is intirely the ſame with his, it is very probable, ſays he, that Mr Gregory, when upon his travels in Italy, might learn it from the Italians; that, for the reſt, Mr Roberval lived a retired life, and loved his eaſe, and conſequently might either not know, or, if he did know it, not be diſpoſed to give himſelf the trouble of engaging in a controverſy. To this Dr Gregory replied (30), That there was no literary proof that Torricelli communicated this invention to the Italians; that it was not at all likely, that the letter pretended to be wrote by him to Roberval 60 years before, ſhould lie hid in Mr Roberval's treaſures all that time; that Mr Roberval was ſo far from living retiredly, and being unactive, that it was well known he conſtantly attended the aſſemblies of the Paris Academicians at the time when Mr Gregory's book was publiſhed, and was a very active member in thoſe meetings; conſequently it was not likely either that he ſhould have heard nothing of Mr Gregory's inventions, which were then celebrated in France, and particularly known to Mr Huygens, another member of the Royal Academy, who was this very year eagerly diſputing againſt (31) him; and if he did know it, his buſy temper would not have ſuffered him to conceal the injury. Upon the whole, from theſe circumſtances, added to the identity of the method aſcribed to Roberval, with that of Mr Gregory, this defender lets the world ſee where the charge of plagiariſm ought fairly to be laid. And it is obſervable, that this invention, and it's uſe for reducing the conic ſections to infinite ſeries by diviſion, ſeems evidently to be firſt hinted to Mr Leibnitz by a ſight of our author's performances (32); and the method being communicated to Sir Iſaac Newton, he declared that it was new to him, and more than he expected, after three ways of attaining his ſeries, which he had himſelf diſcovered *.

* Ibid. No. LV.

[*I*] *Stands upon the ſame principles with that of fluxions*, &c.] We do not mean that Mr Gregory conſidered geometrical lines as generated by continual motion, after the manner of fluxions, nor that he deduced his ſeries as Sir Iſaac did, from the extraction of roots, for it is certain he did not; on the contrary, his method is founded on the continual biſection of an arc, and his equations here are reduced into infinite ſeries, by the tranſformation of curves, but both methods are built, as to their demonſtrative force, upon the ſame principle with that of exhauſtions (33). And in the application it is evident, that Sir Iſaac in his analyſis, while he is inveſtigating any truth, makes uſe of the ſuppoſition of an infinitely little quantity, as is done by Mr Gregory (and the ſame liberty is likewiſe aſſumed by Dr Barrow); but Mr Gregory, in expreſſing this infinitely little quantity by the letter *o*, (34) came nearer than Dr Barrow did (who repreſented it by the letters *a* or *e*) to the way of notation in the method of fluxions, where the ſame letter *o* in the buſineſs of inveſtigation is uſed in the ſame ſenſe, and in the application too of this letter there is little difference between the two methods; for if inſtead of Mr Gregory's *o*, we put Sir Iſaac's $\dot{x}$, we ſhall fall into the forms of the method of fluxions: and indeed as far as Mr Gregory's (and alſo of his rival Dr Barrow's) rule extends, his inverſe method of tangents is the ſame thing with Sir Iſaac's. The great difference lies in the different extent of the two methods in their application: for neither did Mr Gregory nor Dr Barrow ever know how to extend their methods beyond the bounds of firſt fluxions, nor were they able to apply it to ſuch algebraical expreſſions as were involved either in ſurds or fractions; whereas Sir Iſaac was far from being ſtopt within theſe limits.

(33) Viz. That thoſe quantities are to be deemed equal, which differ leſs than by any quantity that can be aſſigned.

(34) Probably borrowed from Mr Fermat, who had uſed it before. See his treatiſe De Maxim. & Minim. printed in a collection of Mathematical pieces at Paris, 1693. fol.

[*K*] *Exercitationes Geometricæ.*] This book contains the following articles: (1.) *Appendicula ad veram circuli & hyperbolæ quadraturam.* (2.) *N. Mercatoris quadratura hyperbolæ geometrice demonſtrata.* (3.) *Analogia inter lineam meridianam planiſpherii nautici & tangentes artificiales geometrice demonſtrata, ſeu quod ſecantium naturalium additio efficiat tangentes artificiales.* (4.) *Item quod tangentium naturalium additio efficiat ſecantes artificiales.* (5.) *Quadratura conchoidis.* (6.) *Quadratura ciſſoidis.* (7.) *Methodus facilis & accurata componendi tangentes & ſecantes artificiales.*

[*L*] *Demonſtrated the analogy of the meridian line to a logarithmic ſcale*, &c.] Dr Halley obſerves (35), That 'the meridian line conſiſting of the ſum of the ſecants of latitude, though called Mercator's, was undoubtedly Wright's invention, as he has made it appear in his preface to his Diſcovery of certain errors in Navigation, &c. that it was diſcovered by chance, and appears to be firſt publiſhed by Henry Bond, as an addition to Norwood's Epitome of Navigation, about 100 years ſince; that *the meridian line was analagous to a ſcale of logarithmic tangents of the half compliments of the latitude*; that the difficulty of proving the truth of that propoſition ſeemed ſuch to Mercator, that he propoſed to wager a good ſum of money againſt whoſo ſhould fairly undertake it, that he ſhould not demonſtrate either that it was true or falſe; and that Mr Collins holding a correſpondence with the moſt eminent mathematicians of the age, did excite them to this enquiry: whereupon the firſt that demonſtrated it was the excellent Mr James Gregory, in his Exercitationes Geometricæ.' The Doctor likewiſe in another place (36), having by a method of his own found this ſeries,

$$\frac{2x}{z} + \frac{2x^3}{3z^3} + \frac{2x^5}{5z^5}, \text{ \&c.}$$

and recommended it as converging very faſt, and therefore very proper for the practice of making the logarithms, obſerves that it was invented and demonſtrated in the hyperbolic ſpaces, analogous to the logarithms, by the excellent Mr James Gregory, in his Exercitationes Geometricæ

[*M*] *Profeſſor*

and he extended his method of infinite series to the menſuration of ſome mechanical curves, as the Conchoid and Ciſſoid of the Ancients. In 1670 he was appointed Profeſſor of Mathematicks in the Univerſity of St Andrews in Scotland [*M*]. It was then cuſtomary in that country, for people of all ranks to apply to theſe Profeſſors for the ſolution of any difficulties they met with in the Sciences; ſo that the buſineſs which this occaſioned, beſides the reading of public lectures twice a week, left our author but little time after this promotion, to purſue ſuch hints as were contained in his papers, towards further improvements. Yet that little time was not loſt, for Dr Barrow's Geometrical Lectures being publiſhed this year, Mr Gregory, on peruſing it, found out a general method of drawing Tangents to Curves geometrically, without any previous calculation, and drew it up in twelve propoſitions (*s*). The ſame year alſo having received ſeveral of Sir Iſaac Newton's Series from Mr Collins, he repaid the favour with ſeveral of the like kind diſcovered by himſelf (*t*). One of theſe being ſent among others, ſeveral years afterwards, to Mr Leibnitz, that eminent genius was ſo greatly pleaſed with it's elegancy, that he put it into an arithmetical dreſs, and then adopted it as an invention of his own [*N*]. But Mr Gregory was ſo fully convinced of the ſuperior excellency of Sir Iſaac Newton's method, by the ſpecimens he had received from Mr Collins, that in a great meaſure he dropt the purſuit, and never could be prevailed with afterwards to publiſh any thing in the way of infinite ſeries [*O*]. In 1672, he was involved

(*s*) Com. Epiſt. No. XVI.

(*t*) Ib. No. XX.

[*M*] *Profeſſor at St Andrews in* 1670.] This is collected from the following extract of a letter he wrote to Mr Collins, May 17, 1671, wherein he expreſſes himſelf thus: 'I am now much taken up, and have 'been ſo all this winter paſt, both with my public lectures, which I have twice a week, and in reſolving 'doubts, which ſome gentlemen and ſcholars propoſe 'to me. This I muſt comply with, nevertheleſs that 'I am often troubled with great impertinencies, all 'perſons here being ignorant of theſe things to admiration; ſo that I have but little time to ſpare in 'thoſe ſtudies my genius leads me to (37).'

(37) General Dictionary, ubi ſupra.

[*N*] *Mr Leibnitz gave it out for his own invention.*] Mr Gregory's is a general ſeries, exhibiting the length of the arc of a circle from the given tangent. Thus $a = t - \frac{t^3}{3r^2} + \frac{t^5}{5r^4} - \frac{t^7}{7r^6} + \frac{t^9}{9r^8}$, &c. where a = the arc, r the radius, and t the tangent. This Mr Leibnitz applies to one particular caſe, where a being put for an arc of 45°, the tangent becomes equal to the radius, or $t = r$, whence ſuppoſing (as uſual) $r = 1$, Mr Gregory's general form goes into this, $a = 1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9}$, &c. and ſince 4 times the arc of 45° = the ſemicircumference, the area of the circle (= to the ſemicircumference × into the radius) will be equal to this laſt-found ſeries taken four times. Now as the ſquare of the diameter (putting unity for the radices as here) is = 4, if both terms be divided by 4, their proportion will be as unity is to the laſt-found ſeries. *Unde*, to uſe Mr Leibnitz's own words, *poſito quadrato circumſcripto* 1, *erit circulus* $\frac{1}{1} - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9}$, &c. *quæ expreſſio haud dubie omnium poſſibilium ſimpliciſſima eſt, maximeque efficiens mentem* (38). It is true this was an eaſy ſtep to take from the ground of Mr Gregory's theorem, yet it muſt be allowed that Mr Leibnitz was the firſt that took it; and it is obſervable, that almoſt all the improvements that were made in the analyſis by infinite ſeries before Sir Iſaac Newton, grew by ſuch ſmall advances as this of Mr Leibnitz, where in viewing any particular invention, if we conſider what had been already done for the inventor's uſe, one is not ſo much ſurprized that it was made at the time, as that it was not made before. Nor would Mr Leibnitz have loſt the merit of this little improvement, had he not induſtriouſly concealed his prior knowledge of the improvement of his precurſor Mr Gregory, which was much greater; but this he diſſembled till the year 1716, when not long before his death he made a confeſſion of it to the counteſs of Kilmanſegg *. After all the rapturous extaſy into which Mr Leibnitz was tranſported at the firſt ſight of this ſeries, ſo beautiful in it's ſimplicity, yet Sir Iſaac Newton, whoſe ſuperior good ſenſe was never deluded by the mere ſhew of an outſide form, where there was very little or no real uſe, treats this ſame elegant ſeries, by reaſon of the ſlowneſs of it's convergency, with ſome degree even of contempt (39). Having ſhewn that it is no more than one particular inſtance of a general theorem found by him before Mr Gregory's invention of it, he proceeds to give other ſeries as examples of the ſame theorem, which, ſays he, perhaps you will not diſlike, becauſe they are not inferior to your's in the point of ſimplicity, and at the ſame time converge quicker, as $1 + \frac{1}{3} - \frac{1}{5} - \frac{1}{7} + \frac{1}{9} + \frac{1}{11} - \frac{1}{13} - \frac{1}{15}$, &c. *Sed ego, inquit, rem aliter æſtimo. Illud enim melius quod utilius eſt, & problema minore labore ſolvit. Sic quamvis hæc æquatio* $x^3 - x = 1$ *appareat ſimplicior hacce* $44 - 24\sqrt{\frac{21}{25}} - \sqrt{20} = \sqrt{20}$; *tamen in confeſſo eſt poſteriorem revera ſimpliciorem eſſe, propterea quod radicem ejus y geometra facilius eruit, & ob hanc rationem ſeries pro obtinendis arcubus circuli, vel (quod eodem recidit) pro obtinendis ſectoribus conicarum ſectionum, pro optimis habeo, quæ componuntur ex poteſtatibus ſinuum. Nam ſi quis vellet per ſimplex computam* (40) *hujus ſeriei* $1 + \frac{1}{3} - \frac{1}{5} - \frac{1}{7} + \frac{1}{9}$, &c. *colligeri longitudinem quadrantis ad viginti figurarum loca decimalia, opus eſſet* 5,000,000,000 *terminis ſeriei circiter, ad quorum calculum milleni anni requirerentur & res tardius obtineretur per tangentem* 45 *graduum* (41), *ſed adhibito ſinu recto* 45 *graduum quinquaginta quinque vel ſexaginta termini hujus ſeriei* $\sqrt{\frac{1}{2}} \times 1 + \frac{1}{12} + \frac{3}{160} + \frac{5}{896}$, &c. *ſufficerent, quorum computatio tribus, ut opinor, vel quatuor diebus abſolvi poſſet.* Upon the whole, ſo particular a regard for our author's performances, as is conſtantly ſhewn by Mr Leibnitz, is apt to ſuggeſt an apprehenſion that there was ſome particular cauſe for it. This is certain, that Mr Gregory, as we have already obſerved, in his firſt method ſuppoſes the chord of a curve to be biſected to infinity, ſo that after an infinite biſection the inſcribed polygon might be ſaid to coincide with it. And it is no injury I conceive to Mr Leibnitz, to ſuppoſe him particulary inclined to this method (which indeed is raiſed out of that of Archimedes) and fond of every notable production from it at this time, ſince he afterwards grounded his own differential method upon the ſame *poſtulatum*, viz. that the infinitely ſmall elements are right lines, or that a curve is a polygon of an infinite number of ſides.

(39) Commerc. Epiſt. No. LX.

(40) That is, without any compendia made uſe of to ſhorten the work.

(41) Sir Iſaac reduces it to a ſeries which converges very ſwiftly, by ſome improvements of his own.

* Recenſio libri qui inſcriptus eſt Commerc. Epiſt. p. 15. edit. 1722.

[*O*] *Could not be perſuaded to publiſh any thing in the way of infinite ſeries.*] In a letter to Mr Collins, Feb. 15, 167$\frac{2}{3}$ (42), our author writes thus: 'As to Mr 'Newton's general method, I am in ſome meaſure poſſeſſed of it, I think, as well with regard to mechani'cal as geometrical curves; however, I thank you for 'the ſeriſes you ſent, pleaſe to accept theſe in return.' He then proceeds to give ſeveral ſeries for the circle, ellipſe,

(42) Com. Epiſt. No. XX.

volved in the univerſal aſtoniſhment that ſtruck the learned world upon the firſt news of Sir Iſaac Newton's diſcoveries in the nature of light; and though he was very ſenſible of the change made thereby in every branch of Optics, yet he readily yielded to the experiment

ellipſe, and hyperbola, and concludes thus: 'Your 'kindneſs in moving me to publiſh my things is very 'obliging, as is alſo the promiſe of your aſſiſtance on 'that occaſion. But I ſhould be loth give ſo much 'trouble, neither have I any thoughts of publiſhing 'any thing, except my quadrature of the circle re-'viſed, with ſome trifling additions.' Again, to the ſame purpoſe, Mr Collins, in a letter to Mr Strode, dated July 26, 1672 (43), having informed *that* gentleman that both Mr Newton and Mr Gregory had a deſign to publiſh ſome improvements in the method of infinite ſeries, ſays that Mr Gregory did not anticipate Mr Newton, the firſt inventor; and the ſame thing is repeated by Mr Collins, in another letter to Mr Oldenburg, dated April 15, 1675 (44), to be communicated to Mr Leibnitz. The ſame friend, in a letter alſo to Mr Oldenburg, dated June 14, 1676, after our author's deceaſe (45), intimates that the reaſon of his backwardneſs in this matter was his opinion of the ſuperior excellency of Sir Iſaac Newton's method in theſe terms: *Hujus [Newtoni] methodi ea eſt præſtantia ut cum tam late pateat, ad nullam hæreat difficultatem. Gregorium autem alioſque in ea fuiſſe opinione arbitror, ut quicquid uſpiam antea de hac re innotuit, quaſi dubia diluculi lux fuit ſi cum meridiana ſua claritate conferatur.* The ſame year Mr Collins, at the requeſt of ſeveral gentlemen of the French Academy, drew up an account, which he alſo ſent to Mr David Gregory, brother to Mr Gregory, of his inventions, extracted from the letters he had received from him (46). Among theſe there is one very extraordinary improvement mentioned in the method of ſeries, which though it had been much deſired by Mr Collins, and was promiſed by Mr Gregory, yet never ſaw the light. This was a way of finding the roots of affected equations by infinite ſeries. Upon that ſubject we have the following obſervations, in a letter of our author already cited, of February 15, 167⅞: 'As to my method of finding the 'roots of all equations, one ſeries produces only one 'root, but there are an infinite number of ſeries for 'every root. Indeed there is ſome difficulty in be-'ginning the ſeries right, and in diſtinguiſhing to what 'root it belongs; but of this matter you may perhaps 'hear further from me hereafter. You need not ſcruple 'to communicate any thing I ſend you, for I am little 'concerned whether they come out in mine or ano-'ther's name.' Again, in 1671, he writes thus: 'As 'to the matter of equations, either in taking away 'what terms may be taken away, or reducing all equa-'tions, when it is poſſible, to pure equations, or find-'ing their limits, or reducing all of them to infinite 'ſeries, I may entertain you [Mr Collins] with theſe 'things more at length afterwards. For your intelli-'gence ſhewing me that ſo many perſons of vaſt learn-'ing were upon that ſubject, hath engaged me to look 'over my notes to theſe purpoſes, where I find great 'improvements can be made.—I reſolve, when the 'college riſeth, to apply myſelf ſeriouſly to the doc-'trine of equations.' And that in ſome meaſure he executed this reſolution, appears from what he wrote the year after to the ſame correſpondent; for having ſent him a ſolution of the famous Keplerian problem by an infinite converging ſeries (47), which he obſerves might be much exacter for the uſes of Aſtronomy than any table of ſines, he goes on to acquaint him, that thoſe infinite ſeries have the ſame ſucceſs in equations which they have in other problems, only that becauſe in equations there are many indetermined quantities, the ſeries become exceedingly tedious, but abundantly ſimple, when theſe are determined. In 1675 Mr Collins informs Mr Leibnitz (48), that our author had with great pains prepared an infinite ſeries, to be applied in general to the reſpective powers of any affected equation whatſoever that ſhould be propoſed, ſo that the meaneſt algebraiſt, being furniſhed with this treaſure, may be able preſently to prepare any ſeries for the finding of any root of a propoſed equation, as ſoon as he knows on which ſide of the known limit the root will fall; but, ſays he, Mr Gregory has not communicated this method to us. Mr Collins alſo obſerves, that by this method, without the help of logarithms, you may raiſe any number to any power, even *per ſaltum*; and, on the other hand, from any given power, how much ſoever affected, you may find the root, or any medium aſſigned between it and unity. Not long after this letter to Mr Leibnitz, Sir Iſaac Newton likewiſe received one from Mr Collins upon the ſame point, intimating withal, that the publication of this method was deferred in reſpect to Sir Iſaac, as appears by his anſwer, wherein he aſſures Mr Collins, That for his part he had never applied the doctrine of infinite ſeries to extract the roots of affected equations in numbers, and therefore that Mr Gregory's method, though he knew nothing of it, yet could not interfere with his, or if it did, he could wiſh the public might not be hindered from enjoying a thing of ſo much value. We find alſo by Sir Iſaac's letter, that Dr Pell had intereſted himſelf in this affair (49). Is it not now a little ſurprizing, that after all this buſtle not the leaſt ſpecimen of any ſuch thing by Mr Gregory ſhould ever appear in public? Indeed Sir Iſaac Newton obſerves, in the letter abovementioned, That as far as he knew any thing of infinite ſeries, he accounted it of no great advantage for reſolving affected equations in numbers; and Mr Leibnitz mentions ſeveral difficulties which to him at leaſt appeared inſuperable in this project. Is it not then moſt probable, that either our author *did* not live long enough to compleat his deſign, or elſe left his papers ſo confuſed, and his thoughts ſo obſcurely expreſſed, that neither Mr Collins nor Dr Pell, nor any other of the guardians of his fame, were able to unravel them?

Since the writing of this remark, we have met with a paſſage in a treatiſe wrote by a perſon (50), as appears, very well affected to Mr Gregory's reputation, which confirms our conjecture. Sir Iſaac Newton, in his celebrated letter to Mr Oldenburg, of Oct. 4, 1676 (51), has the following paſſage. *Sub eo tempore* [1671] *Jacobus Gregorius ex unica quadam ſerie e meis quam D. Collinius ad eum tranſmiſerat, poſt multum conſiderationem (ut ad Collinium reſcripſit) pervenit ad eundem methodum, & tractatum de ea reliquit, quem ſperamus ab amicis ejus editum iri, ſiquidem pro ingenio, quo pollebat, non potuit non adjicere de ſuo nova multa, quæ rei mathematicæ intereſt, ut non pereant.* Here we have Sir Iſaac giving a very candid teſtimony (grounded upon a letter of Mr Collins) that our author had diſcovered a method of quadratures of the ſame ſort with his own, and had likewiſe wrote a treatiſe of it. But notwithſtanding this, as well as the other appearances already mentioned, yet it is more than probable that Mr Gregory left no ſuch treatiſe behind him. And, indeed, had there been any ſuch, no doubt it would have been publiſhed by his nephew Dr David Gregory, who ſucceeded to the poſſeſſion of his uncle's papers. But he declared that no ſuch method could be found in them (52). In the year 1736, theſe papers being then in the cuſtody of Dr David Gregory, Canon of Chriſt Church in Oxford, were peruſed by Mr Stewart and another Gentleman, with the hopes (as Mr Stewart ſays) of finding ſome ſuch treatiſe as that mentioned by Sir Iſaac Newton, but they could diſcover no ſuch thing among theſe papers, though they ſaw ſeveral curious *ones* upon particular ſubjects which are not in print. On the contrary, ſome letters they ſaw made it evident, that our author had not compiled any treatiſe containing the foundations of this general method a very ſhort time before his death. So that all that can be known about his *method*, can only be collected from his letters publiſhed in the Commerc. Epiſtolic. and the Short Hiſtory of his Mathematical Diſcoveries, compiled by Mr Collins above taken notice of. And hence Mr Stewart conjectures, that the principles of his method were few and ſimple, which he could eaſily retain in his mind, and apply as occaſion offered; and I am much miſtaken, continues he, if they have not been [were not] the ſame, or nearly the ſame, with thoſe of Sir Iſaac Newton's method. This he collects too from the letters already mentioned, and having cited ſeveral extracts from

experimental evidence on which the truth of that theory is founded [P]. But at the same time, with respect to the reflecting Telescope, he disputed with Sir Isaac the force of his reasons for constructing it in a different way from that of his own [Q]. In the course of this dispute, our author described a reflecting glass-mirrour for burning, which was then approved by Sir Isaac, and such I am informed are at this time very commonly made [R]; and had he lived to Sir Isaac's age, he might have seen his own telescope,

from him concludes upon the whole, that the method used by Mr Gregory after the year 1670, was in effect the same with that of Sir Isaac Newton (53). In this conclusion Mr Stuart must be understood to mean nothing more, than that after Mr Gregory had seen some of Sir Isaac's series, he improved his own method thereby, so as to produce several of the same kind, that is, such as consisted of simple rational terms separated from each other; and it is only in this sense that he is said by Mr Collins * to have used Sir Isaac's method after 1671.

* Com. Epist. No. XXXVI.

[P] *He readily yielded to Sir Isaac's theory of Light and Colours.*] In a letter to Mr Collins, dated Apr. 9, 1672, he writes thus: 'I am much obliged to you for 'those excellent improvements of learning you advertise me of. I was exceedingly surprized with those 'experiments of Mr Newton, they will cause great 'changes throughout all the body of Natural Philoso-'phy by all appearance if the matter of fact be true, 'which I have no ground to question. I would gladly 'see what Mr Hooke says against the doctrine raised 'upon them (54).' No doubt Mr Gregory embraced Sir Isaac's theory the more readily, as by those *discoveries* (they are our author's own words) [55] *he had made the catoptric telescopes preferable to the dioptric*; whereas before he was aware of no other advantage in the former, but that of their being shorter than the latter, and consequently more handy and manageable (56).

(54) General Dictionary, Vol. V. p. 525.

(55) See No. IV, in the Appendix to Gregory's Optics, ubi supra, p. 203.

(56) See remark [B].

[Q] *He disputed the preference of his telescope against Sir Isaac.*] Not long after Sir Isaac had sent his new telescope to the Royal Society, Mr Gregory having an account of it wrote his thoughts thereof in a letter (57) to Mr John Collins from Aberdeen, in these terms. 'It is like indeed that Mr Newton his telescope may 'have an advantage above that which I mention'd in 'my *Optica Promota*, because the eye glasse is so near 'the plain mirroir, yet the obliquity of the mirroir 'hindreth someqt; nevertheless my telescope hath one 'advantage also verie considerable; for the same con-'cave mirroir, togither with the same plane convex 'eye glasse, may give the same object mirroir any de-'fired charge, &c. Your humble and obliged servant, 'J. Gregory.' At the same time Mr Cassegrain published a description of a catadioptric telescope as his own invention (58), which he pretended had three advantages above Sir Isaac's; alledging, (1) That the mouth or aperture of the tube may be of any bigness, and consequently you may have many more rays upon the concave speculum than upon that of Mr Newton's. (2.) The reflection of the rays will be very natural, since it will be made upon the axis itself, and therefore more vivid. (3.) The vision of it will be so much the more pleasing, in that you shall not be incommoded by the great light, by reason of the bottom's hiding the whole face. In answer to this, Sir Isaac shewed the disadvantages of Mr Cassegrain's construction (which he observed was not unlike that (59) of Mr Gregory's) in these particulars: (1.) That there would be more light lost by reflection from the convex speculum than from the oval plane [in his own telescope], since light is most copiously and most obliquely reflected. (2.) That the convex would not reflect the rays so truly as the oval plane, unless it were of an hyperbolical figure, which is incomparably more difficult to form than a plane, and if truly formed, yet would only reflect those rays truly which respect the axis. (3.) The errors of the said convex would be much augmented by the too great distance, through which the rays reflected from it must pass, before their arrival at the eye-glass; for which reason he had placed his eye-glass as near as possible to the oval plane, without obstructing any useful light in it's passage to the object metal. (4.) The errors of the object metal would be more augmented by reflection from the convex than from the plane, because of the inclination or deflexion of the convex on all sides from the points, on which every ray ought to be incident. (5.) For these reasons, an extraordinary exactness is requisite in the figure of the little convex, which was much more difficult to give than in greater pieces of metal. (6.) Because the errors at the perimeter of the concave object metal, caused by the sphericalness of it's figure, are much augmented by the convex, it will not with distinctness bear so large an aperture, as in the other constructions. (7.) By reason that the little convex conduces very much to the magnifying virtue of the instrument, which the oval plane doth not, it will magnify much more in proportion to the sphere, on which the great concave is ground, than in the other design, and so magnifying objects much more than it ought to do in proportion to it's aperture, it must represent them very obscure and dark, and also confused, by reason of it's being overcharged; nor is there any convenient remedy for this, for if the little convex be made of a larger sphere, that will cause a greater inconvenience by intercepting too many of the best rays; or if the charge of the eye-glass be made so much shallower as is necessary, the angle of vision will thereby become so little, that it will be very difficult and troublesome to find an object; and of that object, when found, there will be but a very small part seen at once (60). After this Mr Gregory in a letter (61) to Mr Collins from St Andrews, Sept. 23, 1672, replied to Sir Isaac's animadversions upon Mr Cassegrain's telescope, looking upon it as his own disguised; and proposes to use a plane speculum, instead of his concave or Cassegrain's convex, '*and then says almost the whol* '*disadvantages evanishe, except onlie the third, and for* '*that there is an advantage as considerable if not more,* '*in that the distance between the two specula groweth* '*almost the one half les* (by which means his telescope 'would be still shorter than Sir Isaac's by almost a half) '*and therefore the errors of the larger concave ar also* '*diminished upon the plane speculum by one halfe*' Nevertheless he thinks a little concave or convex worth trying, because different charges may be then given to the telescope with the same eye-glass, which he thinks impracticable in Sir Isaac's. Sir Isaac's answer to these objections was sent to Mr Collins, which he communicated to Mr Gregory, who seems thereby convinced, that an oblique reflection is preferable to a direct one (62), but does not conceive how Sir Isaac can alter the charge of his telescope without changing the eye-glass. Sir Isaac in his next letter (63) gives an account of his manner of varying the charge in his telescope, by making use of a glass prism with two convex surfaces and a flat one, instead of his small plane mirrour. He also shews how the aperture of the eye-glass ought to be limited in Mr Gregory's telescope, and for his own he lays all the stress of magnifying upon the eye-glass. Mr Gregory in his last letter (64) to Mr Collins on this subject, commends Sir Isaac's way of the varying the charge of his telescope, but thinks it liable to some errors, owing to the refraction of the rays at their entrance into and emersion out of the convex surfaces of the little prism. He thinks it not worth while to look on terrestrial bodies with excellent telescopes, because they magnify the particles of the atmosphere as well as the object. But for celestial bodies he proposes a thin plate with a small hole in it to be placed in the focus of his eye-glass next to the eye, to intercept all the spurious rays (65); and concludes with asserting, that if it appears by trials that common microscopes (that is, microscopes with two or three glasses) can be brought to exceed all improvements of a single lens, then it will follow from thence, that his telescope will exceed Sir Isaac Newton's.

(65) Without which, as it has appeared since in practice, this telescope would be of no use.

[R] *He invented a burning glass.*] See his letter above-cited, of March 7, 1673, No. 6, where he writes thus: 'Mr Newton's discourse of reflection puts me in 'mind of a notion I had of burning-glasses several years 'ago, which appears to me more usefull than subtile. 'If there be a concave speculum of glasse, the leaded 'convex furface having the same center with the con-'cave (or, to speak preciselie, albeit perchance to lit-'tle more purpose) let the radius of the convexitie be 'c, the thickness of the glasse *in axis tranſitu f*, the 'radius of the convexitie equal to $\frac{9c^2+18cf+5f^2}{9c+5f}$, 'this speculum sal have the foci of both the furfaces in 'the

teleſcope, by the help of ſome improvements in regard to the workmanſhip taken from his competitor, brought to great perfection; inſomuch that it is at preſent generally preferred, and chiefly in uſe (*u*) [*S*]. But his life was cut ſhort in December 1675, at the age of thirty-ſix years (*w*). He died in his profeſſorſhip at St Andrews, which was all the preferment he ever obtained. For notwithſtanding the great talk of a deſign that was once taken up by the French Academicians to recommend him for a penſion to the Grand Monarch; yet the whole affair ended in a meer compliment, as it was underſtood by Mr Gregory himſelf, when the news reached his ears [*T*]. He ſeems, indeed, not

(*u*) Particularly the ſmaller ſort for viewing land-objects.

(*w*) Communicated by Mr Short the celebrated Optician, who had it from Sir Robert Stewart, ſome time Profeſſor of Natural Philoſophy at Edinburgh.

' the ſame point, and not onlie that, but all the rays ' which are reflected betwixt the two ſurfaces ſal in ' their egreſſe come *quam proxime* to the common fo- ' cus. The making of ſuch an ſpeculum requireth not ' much more airt than an ordinar plane glaſſe, ſeing ' great ſubtilitie is not neceſſar here: ſo that I believe ' they who make the plane miroir glaſſes, wold mak ' one of theſe three foot in diameter, for four or five ' L. ſt. or little more: for I have ſeen plane glaſſes al- ' moſt of that bignes ſold even here for leſs money. ' Now ſeing (as Mr Newton obſerveth) that all reflect- ' ing metalls loſe more than $\frac{1}{4}$ of their rayes, this con- ' cave glaſs, even *cæteris paribus*, wold have an great ' advantage of a metall one; for certainlie an exactlie ' poliſhed thin miroir glaſſe of good tranſparent mater, ' after a few reflexions, doeth not loſe $\frac{1}{4}$ of the rayes, ' and upon other accounts this hath incomparable ad- ' vantages, ſeing it is more portable, free from tar- ' niſhing, and, above all, hardlie $\frac{1}{20}$ of the value. ' The great uſefulneſs of burning concaves, this being ' ſo obvious, and as yet (for ot I know) untouched ' by anie, makes me jealous, that there may be in the ' practiſe ſome fallacie. Ye may communicate this to ' intelligent perſons, and eſpecially to Mr Newton, aſ- ' ſuring him that none hath a greater veneration for ' him, admiring more his great and ſubtile inventions ' than his and

Your Humble Servant,

J. Gregorie.

' If you pleaſe to let me hear with the firſt convenience ' what may be judged the reſult of this burning con- ' cave: for I am as much concerned to be undeceived, ' if ther be any inſuperable difficultie, as to be informed ' of an moſt ſurprizing ſucceſs. I have ſpoke of it to ' ſeverals here, but al wer as ignorant of it as my- ' ſelf, &c.

To this Mr [Sir Iſaac] Newton returned the following anſwer (66).

(66) Ibid. No VII.

' The deſign of the burning ſpeculum appears to me ' very plauſible, and worthy of being put in practice. ' What artiſts may think of it I know not; but the ' greateſt difficulty in the practice that occurs to me is, ' to proportion the two ſurfaces ſo, that the force of ' both may be in the ſame point, according to the ' theory. But perhaps it is not neceſſary to be ſo cu- ' rious; for it ſeems to me that the effect would ſcarce ' be ſenſibly leſs, if both ſides ſhould be ground to the ' concave and gage of the ſame tool.'

[*S*] *The Gregorian teleſcope is now chiefly in uſe.*] Notwithſtanding Mr Gregory (as we have ſaid) publiſhed his invention ſo long ago as 1663, and was followed by Sir Iſaac in leſs than ten years, yet both lay almoſt uſeleſs till the year 1719, when theſe Reflecting Teleſcopes were firſt brought to a uſeful degree of perfection by Mr Hadley, Vice-Preſident of the Royal Society, Sir Iſaac Newton's firſt, and Mr Gregory's ſoon after. The inſtruments he then made were about 5 feet 3 inches long. He preſented one of the firſt ſort to the Royal Society, with a deſcription both of the inſtrument and the apparatus for managing it, in 1723, (67) and of the other in 1726 (68). The great difficulty in Mr Gregory's form was the conoidical figures of his ſpecula and eye-glaſs, in every attempt to form and poliſh which there was found inſuperable difficulties. Wherefore, inſtead of theſe, Mr Hadley made uſe of ſpherical ſurfaces (as Sir Iſaac Newton had done) which by ſeveral experiments were found to anſwer the purpoſe in practice as well, he ſays, as the other; and, to prevent the object being coloured at the edge of the aperture, he introduced a double eye-glaſs (69), inſtead of the ſingle one propoſed by Mr Gregory; whoſe remark, concerning the advantage of his inſtrument for long-ſighted perſons, called *preſbytæ*, was improved alſo by Mr Hadley, who, by means of a ſkrew fixed to the arm of the little concave, to remove or bring it forward upon occaſion, fitted this Teleſcope not only for common eyes, but made the rays which enter the eye to converge a little for the *preſbytæ*, or diverge for the *myopes*, or ſhort-ſighted perſons. And he obſerves that theſe teleſcopes were eaſier to manage than thoſe of Sir Iſaac's form. After Mr Hadley, theſe teleſcopes were further improved by Mr Short, a very ingenious Optician then at Edinburgh, who about 20 years ago, inſtead of metal ſpecula, applied ſpherical glaſſes quickſilvered over on the convex ſide (70). His ſpeculums of this kind were made ſo true, as to give the image perfectly diſtinct (71). However, finding the light in theſe glaſs ſpeculums fainter than he expected, he applied himſelf to improve thoſe of metal, which he made of ſeveral focal diſtances, as of 2, 3, 4, 6, 9, and 15 inches. This laſt, by experiment, was found to magnify 60 times in diameter, and, by the time of the tranſits of the ſtars over the viſible area, to take in an angle of 19 min. at the naked *eye*; therefore the magnified angle of viſion was $60 \times 19' = 19°$. But in this conſtruction of Mr Gregory's form, the angle of aberrition being two or three times greater than thoſe of Sir Iſaac Newton, would cauſe an intolerable degree of indiſtinctneſs, were it not diminiſhed by correcting the ſpherical figure of the larger ſpeculum, and inclining it towards a *parabola* (72); which Mr Short (now at London) takes conſtant care to do. Some uſeful tables for conſtructing Mr Gregory's teleſcope, are given both by Mr Hadley (73), and by Dr Smith (74), and theſe teleſcopes are now made in ſuch perfection, that one of five feet is equivalent to the beſt refracting ones of 123, ſo that nothing ſeems to be wanting, only the contrivance of ſuch a micrometer as can be uſefully applied to them. This we are told by Dr Deſaguliers ſome artiſts were endeavouring to do in 1735 (75). But no ſuch micrometer has been hitherto compleated, and the advantage of the preſent micrometer is ſo much greater in the Dioptric Teleſcope than in the reflecting ſort, that the former is ſtill uſed for aſtronomical obſervations. However, a micrometer applicable to the reflectors was invented by the late ingenious Mr G. Graham, ſome time before his death; and ſince that, another of a better contrivance has been very lately ſo well adapted to them by Mr Dollond of London, as even to give them the advantage of the refractors in this reſpect *. Several obſervations for a trial were made with both the mentioned inſtruments, by Mr Short and Dr Bevis, in 1753; an account of which may be ſeen in the Philoſophical Tranſactions for that year. And while I am writing this, Mr Dollond informs me, that this year 1755, he ſent one of his to Mr Bradley at Oxford, with inſtructions how to manage it, at the Profeſſor's requeſt, from whom he has lately received an account, that he found it to anſwer much better than Mr Dollond had out of modeſty promiſed; and that for inſtance, he had taken the diameter of the Sun's diſk with it to a ſecond. So that there ſeems to be ſome grounds to expect, that as to all the purpoſes of the micrometer, aſtronomical obſervations will be made more accurately with this improvent by the reflecting, than can now be done by the refracting teleſcope

* Beſides being eaſier managed, they are made upon a larger ſcale, and may be uſed in all directions of the Teleſcope.

[*T*] *When the news reached his ears.*] The ſtory ſeems to be this, Mr Vernon, an Engliſh gentleman ſtudious in the mathematics, being at Paris in 1671, fell frequently into the company of the French Academicians. Among whom the converſation ſometimes turned upon the improvements lately made by Mr J. Gregory. In one of theſe interviews, ſome of the French gentlemen, knowing that their Monarch had then formed a deſign of granting honorary penſions to learned foreigners, propoſed to recommend our author to his Majeſty on that occaſion; and Mr Huygens being in company did not think proper directly to oppoſe it, though, he ſaid, he had reaſon to think himſelf diſobliged by Mr Gregory, on account of the controverſy then between them (76). Soon after ſeveral of thoſe members wrote about this affair to Mr Oldenburg, Secretary of the Royal Society at London, deſiring him to acquaint that Society with it, as alſo that their Monarch was diſpoſed to allow penſions to one or

(76) See remark [*H*].

two

not to be endued with an ambitious turn of mind, his temper being ſuch as diſpoſed him to enter with high delight into the little amuſing occurrences of a college life [*U*]. After his deceaſe his papers came into the hands of Dr David Gregory, who publiſhed the moſt material of them in a treatiſe mentioned in the following article.

two learned Engliſhmen whom they ſhould recommend. But as no anſwer was ever made to that propoſal, the Royal Society declining, for many reaſons (too obvious to mention) to concern themſelves about it, here that deſign dropped, and our Profeſſor's projected penſion dropped with it. In the mean time Mr Collins (as his manner was) with great pleaſure acquainted our author with what he had heard from Mr Vernon at Paris. But Mr Gregory (who had been abroad) ſaw more clearly into the full and true meaning of the French compliment, as appears by his very ſenſible and modeſt anſwer in theſe terms. 'I have not ſo much vanity, 'ſays he, as to perſuade myſelf that you are ſerious, 'having never heard any thing relating to that before. 'I have ſufficient experience of the uncertainty of things 'of that nature before now, which maketh me, ſince 'I came to Scotland, however mean and deſpicable my 'condition may be, to reſt contented; and ſatisfy my-'ſelf with this, that I am at home in a ſettled condi-'tion by which I can live. I have known many learn-'ed men, far above me upon every account, with 'whom I would not change my condition (77).'

[*U*] *Highly delighted with the little occurrences of a college life.*] In 1672, our author wrote a ſmall tract in octavo, entitled; *The great and new Art of weighing Vanity; or a Diſcovery of the Ignorance and Arrogance of the new Artiſt, in his Pſeudo-philoſophical writings. To which are annexed, ſome Tentamina de motu penduli & projectorum.* The book is publiſhed under the name of Patrick Mathers, Arch-Beadle of the Univerſity of St Andrews. In a letter to his friend Mr Collins, our Profeſſor gives an account of the particular occurrence which furniſhed his profeſſorial dignity with an occaſion of writing this arch piece of drollery. 'There is, ſays he, one Maſter Sinclair, that writ 'the *ars magna & nova*, a pitiful ignorant fellow, who 'has lately written horrid nonſenſe in hydroſtatics, and 'againſt Mr Boyle, for weighing water in water; and 'has in print abuſed Mr Sanders, a maſter in the Uni-'verſity here, a perſon very knowing in the Mathema-'tics, and who is reſolved to get the beadle of the Uni-'verſity to write againſt him; and upon this account hath 'deſired me to write to you for *Stevinus*'s mathematics, 'which I intreat you to ſend. We reſolve to make ex-'cellent ſport with him (78).'

(77) General Dictionary, ubi ſupra.

(78) Idem ibid.

GREGORY [DAVID], nephew of the preceding, had his birth June 24, 1661 * at the ſame place where he received the firſt rudiments of his learning, and was afterwards put to the college there, whence, in order to compleat his education, he was removed to Edinburgh, and applying cloſely to his ſtudies, was in a few years admitted to the degree of Maſter of Arts, or Doctor in Philoſophy (*a*). Being well fitted for mathematical ſtudies by the natural ſubtility of his genius (*b*), he ſoon became *ſenſible of the advantage* given him that way in his uncle's papers (*c*), and early made *himſelf maſter of the improvements* he found therein, in the method of infinite ſeries. Theſe he publiſhed with ſome additions of his own under the title of *Exercitatio Geometrica de dimenſione figurarum, ſive ſpecimen* methodi *generalis dimetiendi quaſvis figuras* [*A*], in 1684 at Edinburgh in 4to. not

[*A*] *Exercitatio geometrica de dimenſione curvarum &c.*] It would be but little ſatisfaction to the reader to be ſent for an account of this treatiſe to the Philoſophical Tranſactions, No. 163, ſince that paper, no leſs than the book itſelf, is ſo ſcarce as very rarely to be met with, and is omitted in all the abridgements, as not falling within the compaſs of their deſign. We ſhall therefore inſert the ſubſtance of that account: and the rather, becauſe it will be found of uſe towards clearing up a point controverted in the preceding article, of ſome importance to the character of Mr James Gregory. For having taken notice of his piece, printed at Padua in 1667, *de vera circuli et hyperbole quadratura*, and exhibited the particular conſtruction of the infinitely converging ſeries invented by him for thoſe quadratures, and having diſcourſed of ſome other things relating to the ſame, and to other ſuch like approximations. It proceeds in obſerving, 'that another method '(different from the former) had been publiſhed the 'year following, (viz 1668) by Nic. Mercator in his '*Logarithmotechnia* for ſquaring the hyperbola by an 'infinite ſeries, proved alſo and demonſtrated by James 'Gregory apogogically, or by a *deductio ad abſurdum* '[the only kind of demonſtration of which ſuch qua-'dratures are capable]: but that a general me-'thod for ſuch caſes was yet wanting. That about the 'beginning of the year 1670, he [James Gregory] 'underſtood from Mr Collins, that Mr Newton of 'Cambridge had before that time a general method 'of quadratures; whereof, as an inſtance, Collins ſent 'him an example of ſuch a ſeries, accommodated to a 'circular zone, *That* James Gregory *was in purſuit* '*of a like method of infinite ſeries, but was prevented* '*by death; and except ſome particular examples left* '*nothing in his papers yet come into his* [David Gre-'gory's] *hands, that might declare his method and way* '*of finding ſuch examples.* That himſelf therefore, '[David Gregory] doth in his treatiſe make it his bu-'ſineſs to explain a method, which may ſuit ſuch ex-'amples of his uncle aſſuming the *doctrine of indiviſi-'bles, and the arithmetic of infinites*, as already known 'and received by Geometers as ſufficiently demon-'ſtrated; and applies it to particular caſes in this man-'ner. Suppoſe a ſtraight line, or the axis (called *X*) 'of a curve cut into parts infinitely ſmall, and the re-'ſpects of each part *L*, (which he calls elementum) or 'ſmall part of the curve, which is to be meaſured, an-'ſwer to each of theſe particles of *X*, or at leaſt ſome-'what ſo near the values of *L* that the difference may 'be neglected, as when a ſhort ſubteuſe or tangent is 'taken as coincident with a curve, he doth according 'to the doctrine of infinites collect the aggregate of all 'ſuch *L*'s, which aggregate is the magnitude ſought. 'Of this he gives divers examples in the parabola, hy-'perbola, ellipſe, ſpiral, cycloid, conchoid, ciſſoid, and 'ſome other curves, as to their areas or curve lines, or 'ſolids and curve ſurfaces made by the rotation of them, 'or otherwiſe derived from them, and propoſing diverſe 'expedients or preparative obſervations, by diviſion 'and extraction of roots in ſpecies, for reducing of im-'plicated quantities when need requires into infinite 'ſeries, thereby rendering them capable of having the 'method of infinites applied to them; he concludes, 'with expreſſing his hopes and expectations, that Mr 'Newton's method to this purpoſe long ſince invented, 'but they not yet publiſhed, ſhortly may be made 'public.' From this account, the intelligent reader will eaſily perceive, that our author's method in this treatiſe is nothing elſe but that of Dr Wallis and Dr Barrow, extended to ſome more caſes than had been done before, by the help of his uncle's papers; and ſo much of Sir Iſaac Newton's method as was to be found among them. However, it is apparently on account of ſuch an improvement, that ſeveral years afterwards in a letter to Dr Wallis (1), he ſpeaks of the method in this tract as his own, in the following terms. *Methodus mea cujus ope ſeries deteguntur, quibus infinite numero curvæ et ſpatia iis contenta et rectis, nullius methodi hactenus cognite legibus ſubjecta menſurantur.* And hence an obſervation occurs, which ſeems not unſeaſonable in this place; that it was uſual among the Mathematicians in thoſe times, to give any method the title of general, for finding the dimenſions of all curves whatſoever, when there was laid down a rule in general terms for that purpoſe, comprehending all curves in an algebraical expreſſion, notwithſtanding any number of caſes whatſoever

(1) Dated July 21, 1692, inter Wallifii Opera, Vol. II. p. 351.

not long after he had been promoted to the mathematical chair in that univerſity (*d*). In the execution of this office he was the firſt who introduced the Newtonian Philoſophy into the ſchools (*e*) [*B*], and he read lectures with great applauſe 'till 1691; but after the breaking up of the college for the long vacation that year, he left Scotland and went to London (*f*); where he was introduced to Sir Iſaac Newton, then intent upon bringing his theory of the moon to a greater perfection (*g*). That great man according to his native modeſty and candour preſently conceived a good opinion of our author's ſkill in his profeſſion, and admitted him afterwards to ſome ſhare of his friendſhip. He likewiſe recommended him to Mr Flamſtead [*C*], who gave him all the aſſiſtance that lay in his power in the affair that had brought him to England. This was a view of the Savilian Profeſſorſhip of Aſtronomy at Oxford, in which preferment he ſucceeded Dr Edward Bernard, who reſigned it this year (*h*). Upon that occaſion he was firſt admitted of Baliol-College, and incorporated Maſter of Arts of that univerſity on the eighth of February, and was created Doctor of Phyſic the eighteenth of the ſame month (*i*), He had been choſen into the Royal Society ſoon after his arrival at London, and to ſhew that he was no unworthy member of that body, he ſent them *a ſolution of the geometrical enigma* [*D*] which they had

(*d*) We have no account of the exact time when he obtained this place, but none of his lectures yet publiſhed were read before 1684, and he was then only 23 years of age.

(*e*) See Whiſton's Life by himſelf, Vol. I. p. 32. Lond. 1753.

(*f*) The college does not riſe 'till Midſummer, and he was at London in the latter end of July. See Remark [*B*].

(*g*) This appears from ſeveral letters wrote by Sir Iſaac about that time, for which ſee his article.

(*h*) See more of this matter in the article of Dr HALLEY.

(*i*) Wood's Faſti ubi ſupra, whoſe account being miſtaken by Dr Deſguliers, he tells us our author was admitted to the rectory of Brightwell near Wallingford in Berkſhire this year. Preface to Dr Gregory's Elements of Catoptrics, &c. p. 3. Lond. 1735. 8vo.

whatſoever might be produced, to which no practicable method of applying the rule for uſe was either taught or known. Laſtly, after a declaration ſo full and expreſs, as we ſee here of David Gregory, that his uncle did not live to diſcover Sir Iſaac Newton's method of infinite ſeries, nor any general method like it, and left nothing in his papers intimating what way he found ſome particular examples therein, it is a little ſurpriſing that Mr Stuart, if he had ſeen this declaration, ſhould entertain any hopes of finding ſuch a method among theſe papers; was it not rather a handſome pretence made uſe of, in order to procure a ſight of thoſe papers, in hopes of meeting, as he tells us he actually did meet, with ſome things which would be acceptable to the public (2). We find Dr David Gregory mentioning Sir Iſaac Newton's ſeries for ſquaring the circular zone, which was ſent to his uncle about the beginning of the year 1670; and it is remarkable, that it was then ſo much above every thing he comprehended in this way, that after having in vain endeavoured by comparing it with ſeveral of his own, and combining them together to diſcover the method of it, he concluded it to be no legitimate ſeries; till being aſſured of his miſtake by his friend Mr Collins, after almoſt a whole year's indefatigable pains ſpent therein, he diſcovered at laſt, that it might be deduced from one of his own upon the ſubject of the logarithms, wherein he had given a method of finding the number to a given logarithm, or of turning the root of any pure power into an infinite ſeries; and in the ſame manner, viz. by comparing and combining his own ſeries together, or elſe by deduction therefrom he diſcovered ſeveral more of Sir Iſaac's, as well as others like them (3), in which he daily became more ready by continual practice; and this ſeems to have been the utmoſt he ever actually attained in the progreſs towards diſcovering any univerſal method for thoſe ſeries. For to ſpeak ingenuouſly, he was not of a temper to conceal ſuch a diſcovery, as is evident from the haſte he was in to print his book, *De vera circuli & hyperbolæ quadratura*.

(2) See remark [*O*] in the preceding article.

(3) See Com. Epiſt. No. XV, XVII, XVIII, XIX, and XX. Mr Leibnitz alſo about the ſame time ſeems to have copied this method of James Gregory's. Ibid. No. XXX, & Recenſio lib. &c. p. 13. edit. 1722.

[*B*] *He firſt of any one introduced the Newtonian Philoſophy into the ſchools.*] This is aſſerted upon the authority of Mr William Whiſton, which in ſuch a point will not be controverted. That gentleman informs us (4), that after he had taken holy orders in 1693, returning to the college, he went on with his own ſtudies there, particularly the Mathematics and the Carteſian Philoſophy, which was alone in vogue at that time. 'But, continues he, it was not long before I with immenſe pains, but no aſſiſtance, ſet myſelf with the utmoſt zeal to the ſtudy of *Sir Iſaac Newton*'s wonderful diſcoveries in his *Philoſophiæ Naturalis Principia Mathematica*, one or two of which lectures I had heard him read in the public ſchools, though I underſtood them not at all at that time. Being indeed greatly excited thereto by a paper of Dr Gregory's, when he was Profeſſor in Scotland, wherein he had given the moſt prodigious commendations to that work, as not only right in all things, but in a manner the effect of a plainly divine *genius*, and *had already cauſed ſeveral of his ſcholars to keep acts, as we call them, upon ſeveral branches of the Newtonian Philoſophy*; while we at Cambridge, poor wretches, were ignominiouſly ſtudying the fictitious hypotheſes of the Carteſian.'

(4) Memoirs of his life, p. 32. Vol. I. edit. 1753.

[*C*] *Sir Iſaac conceived a good opinion of our author's ſkill, and recommended him to Mr Flamſtead.*] Among Mr Flamſtead's papers, there is a letter of Sir Iſaac to him, dated Auguſt 10, 1691, wherein having obſerved, that he had intended, together with ſome other friends, to have given Mr Flamſtead a viſit at Greenwich about a fortnight before, but upon enquiry found he was not there. He proceeds thus, '*The bearer 'hereof Mr Gregory, Mathematical Profeſſor of Edinburgh-college in Scotland, intended to have given you a 'viſit with us; you will find him a very ingenious 'perſon, a good mathematician worthy your acquaintance:*' and afterwards expreſſing his deſire to have the obſervations which Mr Flamſtead ſhould make of Jupiter and Saturn, for four or five at leaſt of the enſuing years: he continues, '*but I had rather have 'them for the next twelve or fifteen years; if you and 'I live not long enough, Mr Gregory and Mr Halley 'are young men* (5).'

(5) This whole letter is inſerted under remark [*D*] of our author's article in the General Dictionary.

[*D*] *A ſolution of the geometrical enigma.*] This enigma was ſent from Italy by way of challenge, in the following terms: 'Among the venerable monuments 'of ancient learned Greece, there is ſtill in being, and 'for ever will endure, a moſt auguſt temple dedicated 'to divine geometry of a circular ichnography, which 'is covered by a cupola perfectly hemiſpherical within; but in this, there are the equal areas of four 'windows diſpoſed about and above the baſe of the 'hemiſphere, of ſuch a configuration and of ſo much 'ingenuity, that theſe being taken away, the remaining curve ſuperficies of the cupola adorned with curious moſaic work, is capable of a true geometrical 'quadrature: now it is required, which is that quadrable part of the curved hemiſpherical ſuperficies, 'which is like a diſtended nautical ſail: and by what 'art or method the geometrical architect found it; 'and laſtly, what quadrable geometrical plane it is 'equal to?' the problem was ſent from Florence, by a perſon who ſtiled himſelf *D. Pio Lifci puſtillo Geometra*, to *Mr Bridgman* at London, and by him to Dr *Wallis*, in a letter dated Auguſt 30, 1692. The doctor preſently found it to be nothing more than the quadrature of Hippocrates's Lunula, and ſent his ſolution to the Royal Society, who publiſhed the whole in their Tranſactions No. 196. But ſoon after there appeared an Italian treatiſe written by the propoſer of the enigma, on the formation and menſuration of all vaults and cupola's, dedicated to the Grand Duke of Tuſcany, wherein having converted his former problem into this, *upon the ſuperficies of a hemiſphere, to aſſign a portion equal to a given ſquare*, he gave an ingenious and ready conſtruction of it. This piece coming to the hands of our author, he conſidered the whole, and not only found that the Florentine ſail was equal to four figures of right ſines of the quadrantal arch, and that the periphery of the ſuperficies was equal alſo to the ſame, and that the parabolical Roman boat like cupola, was equal to the Florentine veli form one; but in general, that the conſideration of the figures of right ſines (the parts of which are eaſily turned into ſquares) was ſufficient to the demonſtration of all thoſe things, which were delivered concerning other ſolids wrought by the turning lathe, or perforated by a cylinder, and their ſuperficies mentioned in that treatiſe by the author, who now giving the two initial letters of his name V. V. Dr Gregory interprets theſe to ſignify Vincentio Viviani

had received from Florence, and published in the Transactions for the year 1693 (k). Two years after that he printed his *Elements of Optics* at Oxford [E], and in 1697 he gave

vianj *, the last disciple of Galilæo and Mathematician to the Grand Duke of Tuscany.

* [illegible] *De Maximis & Minimis*, [illegible] several times referred to by our author in his Elements of Optics.

[E] *His Elements of Optics.*] The title is *Catoptricæ & Dioptricæ sphæricæ Elementa*, Oxon. 1695, 8vo. In the preface he informs us, that these elements are the substance of some of his public lectures at Edinburgh eleven years before. In the book he considers these branches of optics, chiefly with a view to the construction of telescopes, and particularly the two reflecting ones, that of his uncle James Gregory and Sir Isaac Newton, giving the preference to the latter. He has brought his design into a small compass, and the demonstrations being very neat and easy, the book was in so much esteem, that several geometrical demonstrations as well as analytical calculations purposely omitted for the sake of brevity, were supplied after his death in a second edition published in 1705, 8vo, by Dr William Brown, Physician at Lynn-Regis in Norfolk (6), with the recommendation of William Jones, Esq; and Dr Desaguliers; and this last gentleman published a third edition in 1735, 8vo, with an appendix, containing an account of the Newtonian and Gregorian Telescopes, together with Mr Hadley's tables for constructing each of them; and likewise, several letters which passed between Sir Isaac Newton and Mr Gregory, in defence of their respective constructions: upon reviewing a piece finished with so much geometrical elegance, one cannot help being a little chagrined to find any of the rubbish of the old vanity of philosophizing mingled in the foundation. Surely the dignity of the science of Optics is sufficiently preserved in resting the proof of a few simple properties of light wholly upon experiments, without suggesting any further demonstration of the cause of such properties, from a supposed fitness in the nature of things, made apparent as is pretended by certain ill established physical rules, and ill applied geometrical reasoning. Thus for instance, *that from every lucid point in a medium, that is homogeneal, rays are diffused in right lines*, is assumed as a property of light, not only on account of it's being simple enough, and confirmed by experiments, but also because such lines are the *shortest*. The doctor expressly declares, that in laying down his *postulata* he followed *Kepler*. Let us see then how that remarkable optical writer introduces the same property in his celebrated treatise, intitled *Paralipomena ad Vitellionem*, which is particularly quoted more than once in the piece now under consideration. The fourth proposition of the first chap. is drawn up in the following terms. '*Lineæ ejaculationum lucis rectæ sunt, dicuntur* '*radii*,' which he expounds or demonstrates thus, '*Nam diximus attelari a luce figuram sphærici. Ejus* '*vero genesis vera geometrica consistit in æqualitate in*-'*tervallorum, per quæ punctum medium in superficiem di*-'*ditur. Ille vero sunt rectæ lineæ, quod si curvis lex* '*uteretur nulla esset indidendo æqualitas, nihil igitur* '*simile sphærico. Idem etiam hoc modo probatur, seu* '*potius declaratur: motus diversi sunt fines. Aut enim* '*natura affectat unitatem partium, aut separationem*, '*utrumque sit per motum rectum compendiosissime. Namque* '*quia quo brevius quæque distant hoc magis unita intelli*-'*guntur, & rectæ sunt omnium linearum inter eadem* '*puncta brevissimæ, motum ergo qui unit res ut motum* '*ponderum ad terram chalybis ad magnetem in linea* '*recta fieri necesse est, alias non omnes partes ad eundem* '*finem tenderent, sed in medio itinere alicubi, quod erat* '*uniendum alteri deflectet ab hac unionis affectatione.* '*Eadem de contrario motu separationis, qui in rebus na*-'*turalibus violentus dicitur, intelligenda sunt. Nam ei* '*etiam contrarius motus unitionis motui competit, rectus* '*igitur, quia recto non nisi rectus contrarius.*' In English thus, 'Prop. *The lines in which light is eja*-'*culated are right ones, called rays.* Demonst. '*We have shewn that the spherical figure is attract*-'*ed by light. But the true geometrical genesis of* '*that, consists in the equality of the intervals through* '*which the middle point is propagated to the superficies.* '*And these intervals are right lines. For if the law ob*-'*served curves, there would be no equality in the pro*-'*pagation. Therefore no figure is comparable to the sphe*-'*rical. The proposition is also proved or rather ex*-'*pounded in this manner The ends of motion are diffe*-'*rent For nature affects either a conjunction or a sepa*-'*ration of parts, each of which is effected most com*-'*pendiously by a streight forward or rectilinear motion.* '*For as things are observed to be so much more united* [i. '*e. to be so much nearer together*] *as the distance between* '*them is lesser, and right lines are the shortest of all be*-'*tween the same points; hence it becomes necessary, that* '*the uniting motion, as that of weights to the earth, of* '*steel to the magnet, &c.* (7) *should be made in a right* '*line, otherwise all the parts would not tend to the* '*same end; but that which was to be united to another*, '*would somewhere in the mid-way deflect from this* [*in*-'*stinctive*] *affectation of unity. The same reasoning* '*likewise holds in the contrary separating motion, which* '*in natural things is called violent. For to this there* '*is adapted a suitable contrary motion to the uniting* '*one, and consequently a streight forward motion, be*-'*cause* [*by a known rule in logic*] *only streight to streight* '*is contrary.*' This will be allowed, I suppose, to be perfectly in the sublime way, but even this dwindles infinitely, when we read the passage here referred to concerning the proof of the spherical figure of light. 'Tis in the beginning of chap. I. intitled, *Lucis Origo*, and runs in the following terms. '*Primum omnium* '*rerum natura Deum Conditorem, quantum quæque* '*suæ essentiæ conditione potuit, representare debuit.* '*Nam cum conditor sapientissimus omnia studuerat quam* '*optima ornatissima præstantissimaque efficere, nihil se* '*ipso melius ornatiusque nihil præstantius reperit. Prop*-'*terea cum corporeum mundum, agitaret animo formam* '*ei destinavit sibi ipsi quam simillimam. Hinc ortum* '*totum quantitatum genus, & in eo curvi rectique discri*-'*mina, præstantissimaque omnium figura, sphærica su*-'*perficies. Nam in ea formanda lusit sapientissimus* '*Conditor adorandæ suæ Trinitatis imaginem. Hinc cen*-'*tri punctum est sphærici quædam quasi origo, superficies* '*puncti intimi imago & via ad id inveniendum, quæque* '*infinito puncti egressu ex seipso usque ad quandam om*-'*nium egressuum æqualitatem gigni intelligitur, puncto* '*se in hanc amplitudinem communicante, sic ut punctum* '*& superficies densitatis cum amplitudine commutata pro*-'*portione, sint æqualia: hinc est undique punctum inter* '*& superficiem absolutissima æqualitas, arctissima unio*, '*pulcherrima conspiratio, connexus, relatio, proportio*, '*commensus. Cumque tria sunt plane centrum superficies* '*& intervallum, ita tamen unum sunt, ut nullum ne* '*cogitatu quidem abesse possit quin totum destruatur.*— '*First of all, the nature of things ought to represent* '*God their Maker, as much as every one is capable, by* '*the condition of it's essence; for when the omniscient* '*architect had studied to frame all things upon the very* '*best, the most beautiful, and most excellent model, he* '*found nothing better, nothing more beautiful, nothing* '*more excellent than himself. Whereupon meditating* '*the corporeal world in his mind, he decreed it a form* '*most like to himself. Hence sprung the origin of all kinds* '*of quantity, and in them the discriminations of curve* '*and right-lined forms, and particularly that which is* '*the most excellent figure of all, the spherical superficies.* '*For in forming this figure, the all-wise builder alluded* '*to the image of his own most adorable Trinity. Hence* '*the central point is the fountain head as it were of the* '*spherical form, the superficies being the image of that* '*inmost point, and the way to find it, is conceived to be* '*generated by the infinite egression of that point out of* '*itself, even to a certain equality of all the egressions*, '*that* [*central*] *point communicating* [*diffusing*] *itself* '*into this amplitude; in so much, that the centre and* '*superficies, by a commuted proportion of the density with* '*the amplitude are equal. Where it comes to pass*, '*that between this point and the superficies, there is* '*every way the most absolute equality, the closest union*, '*the most beautiful conspiration, connexion, relation*, '*proportion, commensuration. And as the center, su*-'*perficies, and interval between, are evidently three*, '*yet are they so perfectly one, that none of them can be* '*wanting separated, or even in thought, without de*-'*stroying the whole.*' Having thus profoundly demonstrated that the world was made round after the image of the Triune-God; he slides with great ease and dexterity into the inference, that light must necessarily be cast in the same mould; these are his words in English: '*This then being the image of the corporeal world*, '*what wonder is it, that light, the most excellent thing* '*in the world, is made after the same image? Where*-'*fore the Sun is in the center of the world, and diffusing* '*this*

(6) The Doctor has also added an introduction, shewing the discoveries made by catoptrics and dioptrics, and an account of microscopes and telescopes from Mr Huygens; together with some observations made in the former by himself, where among other things he tells us, he once saw one of the eels which swim in vinegar big with four young ones, which being put into a tub of water, it was in some hours delivered, and every one afterwards swam by itself. p. 77, 78.

(7) This rule is proved by Kircher (who also follows Kepler), because the spider in forming his web which is circular makes it up of streight threads. *Anacampticæ artis, pars secunda, Theorem* I. in a piece intitled *Ars Magna lucis & umbræ*, Vol. II. Rome 1646, fol.

gave the firſt demonſtration of that curve, which is well known ſince by the name of the *catenaria*

'*this principle called light every where* in orbem '*equally, all things conſequently which participate light* '*imitate the Sun.*' This he calls *the geometrical nature of light*, and from hence he demonſtrates ſeveral propoſitions from *Euclid*, *Alhazen*, and *Vitellio*, juſt in the ſame metaphyſical way as thoſe authors had done before him. Thus philoſophized that eminent mathematician. And though Dr Gregory ſeems * to have been very ſenſible both of the vanity and prophane inſolence of ſuch reſearches into the *nature* of light; yet beſides the inſtance already mentioned, we find him proceeding after the example of this maſter, in the idle attempt to eſtabliſh *it's properties* upon geometrical reaſoning as antecedent to experiments. In this ſpirit he concludes his introduction with the two following propoſitions which are aſſumed for axioms becauſe they agree both with geometrical reaſoning and experiments. 'Axiom 1. *A ray of light* falling perpendi 'cularly upon a reflecting ſurface, either proceeds di- 'rectly forward, or is reflected back upon itſelf For 'ſince the direction of the ray to the inflecting ſurface, 'is of all that can be drawn from the radiant point 'either the *leaſt*, if the inflecting ſurface be a plane, 'or perhaps where this circumſtance is wanting the '*greateſt*, and in both caſes a determinate and *only one* 'of it's kind, the ray will ſtill perſiſt in the ſame di- 'rection, either proceeding forward or returning 'backward. For there are innumerable right lines in- 'clined to this *only one* in any given angle, no one of 'which can conſequently claim to itſelf the direction 'of the ray with greater juſtice than the reſt. Axiom '2d is, that every inflexion is made in a ſurface that is 'perpendicular to the inflecting ſurface For ſince 'this ſurface (called the plain of inflection) is either the '*leaſt* or *greateſt* of all that can be produced through 'the radiant point to the inflecting ſurface, and con- 'ſequently an *only one*; the propoſition is demon- 'ſtrated in the ſame manner as the former.' To refute this pretended demonſtration by a juſt one, would be to run trifling after our author, and in this point making him a greater compliment than he deſerves, ſince nothing can be more evident than that theſe abſtract geometrical conſiderations a *determinate* line, and *only one* of it's kind, either the *leaſt*, or the *greateſt*, that can be drawn, &c have no manner of phyſical efficiency at all; and notwithſtanding theſe, a perpendicular ray might be either reflected or refracted in any other direction, or even be intirely abſorped and loſt in the ſeveral inflecting bodies. In ſhort, this viſionary art of demonſtrating the properties of light, is learned in the ſame ſchool with the juſt mentioned demonſtration of Kepler concerning it's nature; and as that repreſents the Almighty creating light in the geometrical form of a ſphere after his own image diſplayed in the Trinity, whence it is inferred to be geometrical in it's nature; ſo this ſuppoſes the ſame all-wiſe artiſt in giving to light ſome of it's properties, to have been determined by geometrical conſiderations, whence it is concluded to be likewiſe geometrical in it's properties; and thus the ſcholar's preſumption is a copy of the maſter's arrogance, though indeed but a faint one. For to ſpeak ingenuouſly, this argument à priori to prove the properties, beſides that it riſes not to ſuch a daring height, is rather inſinuated by our author, than openly avowed, as Kepler had done in demonſtrating the *figure* of light; and in the application, we find the Doctor ſometimes declaring no more in expreſs terms, than that the action of light, as diſcovered by experiments, is frequently reducible to the rules and reaſonings of geometry, or that ſome geometrical conſiderations are applicable thereto. A ſound and ſober ſenſe enough, and which comprehends all that is neceſſary to the plan of a mathematical treatiſe of optics. But he was plainly too much devoted to his maſter's manner, to confine himſelf always within theſe limits. For inſtance, under his firſt propoſition, that *from a plane ſurface, the angles of incidence and reflection are equal*, having in compliance to that manner demonſtrated (as he calls it) or rather expounded it geometrically, he could not forbear ſuperadding another ſpecimen of the argument *à priori*, as a farther proof of the propoſition. It is introduced in the form of a *ſcholium*, where he obſerves, that in laying down this law of reflexion, great reſpect is had to the *maximum* and *minimum*. For that by making the mentioned angles equal, the ſum of the incident and reflected rays becomes a *minimum*, that is leſs than the ſum of any others drawn from the ſame points, to any other point of the reflecting plane, and *vice verſa*, or this is the ſhorteſt paſſage from the radiating to the radiated point For, ſays he, it is requiſite that it's courſe ſhould be the ſhorteſt of all, becauſe *nature ever acts by the moſt eaſy and expeditious methods* But, as he goes on, if the reflexion be from a curve ſurface, the aforementioned ſum of the rays (or perhaps their difference) is ſometimes a *maximum*. For mathematicians know how near the relation is between a *maximum* and a *minimum*, between the ſum and the difference, and how eaſy the tranſition is from one to the other. That is, whether the ray is found to take the ſhorteſt or the longeſt, or any middle courſe between them, ſtill nature therein ever acts by the moſt eaſy and expeditious method. What egregious trifling! but there was no other poſſible way of keeping up the ſemblance of an argument, *à priori*, to ſuit with the fact, ſince in reflexions from curve ſurfaces, the ray is frequently obſerved to paſs through ſeveral intermediate diſtances between the leaſt and the greateſt. Yet ſo fond is he of the argument from this unmeaning law of nature, that in paſſing to dioptrics, he triſles with it at the entrance (8) exactly in the ſame manner, demonſtrating with the like waſte of geometry, that *nature acts in the eaſieſt and quickeſt way*, whether the rays paſs in proportion ſlower as the refracting media are denſer, which he then, after *Barrow* and *Fermat*, imagined they did contrary to Des Cartes's opinion; or faſter, as Sir Iſaac Newton diſcovered by experiments to be really the caſe. But ſuch a ridicule was the unavoidable conſequence of carrying geometry beyond it's proper ſubject Our author however is countenanced in taking up this maxim, chiefly upon the authority of Mr Leibnitz, who maintained the ſame in print a few years before theſe lectures were read at Edinburgh in 1684 (9), aſſerting that both the direct reflected and refracted motion of light, might thereby be accounted for to a degree of mathematical exactneſs. This is propoſed by him, firſt to be determined in plain ſurfaces, and then to be accommodated to concave and convex ones, by conſidering the planes that are tangents to thoſe ſurfaces. Hence in plain or ſimple optics, the direct ray proceeds from the point illuminating to the point illuminated, in the ſhorteſt direct way, (the ſame medium continuing all along) that is, in a ſtreight line. In catoptrics, the angle of incidence and reflection are equal. In dioptrics, the ſines of the angles of incidence and refraction are to each other reſpectively, as the reſiſtance of the mediums Here to find the radiated point the courſe muſt be taken ſuch, *that the way which the ray takes may be of all ways the eaſieſt*; but now in different mediums, the difficulties of the way or progreſs are in a ratio compounded of the length of the way, and of the reſiſtance of the medium. Whence by arguing mathematically, he finds the ſine of incidence in air, will be to the ſine of refraction in glaſs, as the aſſumed ratio of the reſiſtance in glaſs, to the reſiſtance in air. This is Mr Leibnitz's theory, who tells us further, that the catoptrical demonſtration, which he gives, was inſiſted on by *Ptolemy* and other Ancients, and is extant in *Heliodorus Lareſſæus*, and elſewhere. But had he proceeded the leaſt ſtep further than he did, to accommodate this principle to concave and convex ſurfaces, as he talked of doing at firſt, he might ſoon have perceived the inſufficiency of it, and that a ray takes ſeveral other courſes from one point to another beſides the ſhorteſt. As to the dioptrical demonſtration, where Leibnitz ſays the difficulty of the way which the ray makes, will as be the rectangle under the length of that way and an aſſumed ratio, his notions of difficulty and reſiſtance are not eaſy to be underſtood. In all known caſes, the motion of a body and the reſiſtance it ſuffers, do conſtantly decreaſe together, action and re-action being always equal, and therefore the difficulty of the way can ſcarce be rightly expreſſed by the rectangle under that way, and a conſtant reſiſtance; but be the difficulty and reſiſtance what you pleaſe, no doubt they muſt be nothing at all in vacuo, and therefore the eaſieſt way for a ray to paſs from a given point in any reſiſting medium into a vacuum, is to go in a perpendicular to the refracting ſurface, as being the ſhorteſt way through any difficulty or reſiſtance whatſoever; which being quite over at the reflecting ſurface, it may then take any

* See the beginning of his Introduction.

(8) Prop. XI. and Prob. annexed.

(9) In a tract publiſhed in the Lipſic Acts for 1682, p. 185, which is quoted with approbation by Mr Molineux in his Dioptrics, p. 192. Lond. 1692, 4to.

catenaria [*F*], or the curve that is formed by a chain faſtened at each end. In conſidering that property of this curve whereby all the parts ſupport each other, he fell firſt of any one

any other courſe in vacuo, without any further difficulty; and, on the contrary, in returning back from the vacuum into the denſe medium, it muſt take the ſhorteſt courſe through the ſame perpendicular as before. And thus, when the ſun ſhines on the atmoſphere, all his rays would be refracted into lines tending to the earth's center, as being the ſhorteſt and eaſieſt way through the atmoſphere; and then we ſhould ſee the ſun exactly over our heads in all places and at all times. But what wonder is it, that ſtrange conſequences ſhould follow from an arbitrary hypotheſis. I ſhall only obſerve further (10), that all theſe theories for reſolving reflection and refraction of light before Sir Iſaac Newton's, do alſo ſuppoſe that it ſtrikes upon bodies, and is reſiſted by them, which yet has never been proved by any deductions from experience. On the contrary, it appears by Mr Molyneux's and Mr Bradley's obſervations upon the parallax of the fixed ſtars (11), that their rays are not at all impelled by the rapid motion of the earth's atmoſphere, nor by the object glaſs of the teleſcope through which they paſs; and by Sir Iſaac Newton's theory of refraction, which is grounded upon experience only, it appears, that light is ſo far from being reſiſted and retarded by refraction into any denſe medium, that it is ſwifter here than in vacuo, in the ratio of the ſine of incidence in vacuo to the ſine of refraction into the denſe medium, and vice verſa (12). We ſee Sir Iſaac was careful to take the rule obſerved by nature from experience, and from that alone, as the only method of diſcovering it; and we have been the more ſtudious to expoſe this idle way of attempting to reduce the properties of light from metaphyſical rules, *à priori*, (which we ſee retained by our author after Sir Iſaac Newton had ſhewn him a better, even upon this very ſubject *) becauſe it was indeed a long time the bane of all improvements in the ſcience that depended upon experimental inquiries. And of this there is a remarkable inſtance in the treatiſe now under conſideration, where Dr Gregory ſpeaking of the fundamental theorem of dioptrics, that *the ſine of the angle of incidence is in a given proportion to the ſine of the refracted angle*, having obſerved that the invention of it by *Des Cartes*, was only a ſmall ſtep from that of *Snellius*, that *the ſecants of thoſe angles were in a given proportion*, ſubjoins the following remark. 'Since we have happened to ſpeak of *ſecants*, it is 'worth the taking notice how near the inquiſitive 'Kepler was towards finding out this theorem, who at 'Prop. V. and VI. Chap. IV. *Paralipom. ad Vitellionem*, lays down thoſe ſecants for the reſpective 'meaſure of refractions.' Thus the ſcholar always ſtudious to promote the honour of his maſter. But it is at leaſt equally worth notice, that Kepler was apparently averted from the diſcovery, by employing his eyes too much in looking after the cauſes, inſtead of conſidering and examining the facts and phænomena of refractions. In his fourth chapter here referred to, which is intitled, *De menſura refractionum*, notwithſtanding he ſets out with obſerving, that all our knowledge upon this ſubject proceeds from experience. Sect. I. yet he immediately applies himſelf to the cauſes of refractions, as the only proper method to ſettle their juſt meaſure. Sect II his words are, *Cauſa refractionum eſt denſitas & obliquitas incidentiæ junctim*. The denſity of the medium, and obliquity of the incidence, are jointly the cauſe of refractions. For, continues he, that denſity is one cauſe I have proved *à priori* in Prop. the 14th, Chap I *Et quod incidentia concurret ad cauſam ſupra quoque, Prop.* 20. *Chap I à priori deducere ſum conatus*, and in Prop 20. Chap I. I have likewiſe endeavoured to prove à priori, that incidence concurs to that cauſe. This *lemma* being compleated, *that there are two, and only two, cauſes of refractions*: the buſineſs of apportioning to each cauſe it's due ſhare in producing the effect, becomes the ſubject of ſeveral propoſitions, of which the 6th is as follows: *Angulorum incidentiæ ſecantes concurrere ad menſuram refractionum qui conſtituuntur ad ſuperficiem in medio denſiori.—The ſecants of the angles of incidence concur to the meaſure of refractions made at the ſurface of a denſer medium*; that is, theſe ſecants are (not as our author repreſents the whole and adequate meaſure but) the meaſure, as he explains himſelf, of that part only which is owing to the ſuppoſed increaſe of the reſiſtance from the denſity in proportion to the increaſe of the obliquity of incidence; the other part, ariſing ſimply from the denſity being in proportion to the angles of refraction. Theſe are his words, *Si medium ipſum cauſa ſuæ denſitatis conſideraretur ſolitarie, anguli refractionum proportionales fierent angulis incidentiæ, ſed cum lux obliquius incidit major ſit reſiſtentia ab eoſem medio quam in rectiori incidentiâ reſpectu ipſius etiam medii Duæ cauſæ refractionum ſolæ concurrunt, ergo altera cauſa eſt inclinationibus proportionalis, altera creſcit cum ſecantibus inclinationum*, Prop 2, 3, & corol. In ſhort, it was a meer miſtake that led Kepler to apply the ſecants for any part of the meaſure of refractions For having obſerved, after his maſter Tycho, that the angles of refraction increaſed faſter than they ſhould do, by the meer obliquity of incidence, eſpecially near the horizon in the atmoſphere *, if that was uniformly denſe, as he by miſtake ſuppoſed it to be, and his geometry teaching him that the ſecants of theſe angles increaſed in the like manner, he applied theſe ſecants to that part only of the increaſed refraction, which for want of conſide ing and examining the ſtate of the atmoſphere he imagined to ariſe from the meer obliquity of incidence.—But if Dr Gregory has exceeded the bounds of ſtrict juſtice in favour of Kepler, he has fallen as much ſhort of thoſe bounds in the caſe of Des Cartes; whom he repreſents upon this occaſion in his dioptrics, aſſerting a flat contradiction to ſome other parts of his works Cartes, ſays he, taking up the ſame theorem, that the ſine of the angle of incidence is in a given proportion to the ſine of the refracted, and (though in other caſes he affirms the propagation of light to be inſtantaneous) would have it in his dioptrics, that a ray of light is carried with a greater celerity, &c But in juſtice he ſhould have informed his readers, that this eminent philoſopher had provided a general ſalvo for any ſuch ſeeming inconſiſtency in the following remark. *Haud difficulter credi poteſt actionem aut propenſionem ad motum, quam jam dixi pro lumine habendam iiſdem legibus cum ipſo motu obnoxiam eſſe* † It is not hard to conceive that the action or propenſion to motion, which I have ſaid is to be taken for light, ſhould be ſubjected to the ſame laws with motion itſelf.

[*F*] *He gave the firſt demonſtration of the* catenaria.] In order to a right notion of our author's merit in this point, it will be neceſſary to run over the following ſhort hiſtory concerning the firſt invention of the *catenaria*. This curve was ſought after in Galileo's time, but nothing done in it till Mr James Bernoulli, of Baſil, had diſcovered the method of Mr Leibnitz's *analyſis, or calculus differentialis*. Soon after which, he applied by the mediation of his brother John Bernoulli (who had already entered pretty far into theſe matters) to Mr Leibnitz, requeſting him to conſider, whether by the ſame analyſis it was not poſſible to arrive at the ſolution of ſome problems which were difficult, and had been attempted by others without ſucceſs; and in particular the curve which a chain will form, ſuppoſing it flexible every where. [*This Galileo imagined to be the parabola, though they did not know that he had engaged in the enquiry.*] Mr Leibnitz accordingly, as he ſays himſelf, conſidered this point and executed it; but inſtead of publiſhing his ſolution, he encouraged Mr Bernoulli likewiſe to undertake it. His ſucceſs was undoubtedly the occaſion that the two brothers [Bernoullies] applied themſelves with great vigour to it, and that the younger John Bernoulli, (who was afterwards profeſſor of mathematics at Groninghen) had the honour of ſucceeding intirely in the diſcovery. In the mean time Mr Leibnitz obſerving to them, that to be able to gain this by means of what he had communicated of his analyſis, ſhewed an extraordinary ſagacity and application. The two brothers were very ambitious to diſtinguiſh themſelves upon the method of Mr Leibnitz, ſo that it was from this beginning upon the catenaria, that they found how to make a proper uſe of the *calculus differentialis*; after which they were capable of proceeding much farther. Thus far Mr Leibnitz (13). Two years after the publication of Dr Gregory's performance, ſome animadverſions were made upon it by Mr Bernoulli, who among other things aſſerted the firſt diſcovery of the catenaria to Mr Leibnitz and himſelf (14). Theſe were immediately anſwered by our author, who acknowledges the claim

one upon the diſcovery, that this figure inverted is the form of a true and legitimate arch or *fornix*; whence he obſerves, that when arches of other forms are ſupported, it is becauſe in their thickneſs ſome *catenaria* is included (*l*). But his moſt celebrated performance appeared in 1702, intituled, *Aſtronomiæ Phyſicæ & Geometricæ Elementa* [G]. As this piece was

(*l*) Ibid. No 231. prop. ii. cor. 6. This property is tranſferred from our author into the Builder's Dictionary, and taken notice of likewiſe by other writers upon Architecture, but I do not find that any regard is had to it in practice.

claim of thoſe gentlemen to the firſt ſolution of the problem; but ſince it was communicated by them without any demonſtration, he aſſerts his right of precedence in that part, which he declares is all the merit that he pretended to (15). Our author addreſſed this tract to Dr Aldrich, Dean of Chriſt Church in Oxford, and it was inſerted in the *Miſcellanea Curioſa* (16), as one of the nobleſt diſcoveries, that had been at that time preſented to the Royal Society.

(15) Phil. Tranſ. No. 259, for Dec. 1699.

(16) Vol. II. Lond. 1706. in 3 vols 8vo.

[G] *Aſtronomiæ Phyſicæ & Geometricæ Elementa.*] The chief and the moſt uſeful part of his deſign in this treatiſe, is to explain Sir Iſaac Newton's geometry of the centripetal forces, as far as his diſcoveries in aſtronomy were built upon it, and to throw the aſtronomical part of the *Principia* into a new form, wherein the dryneſs of the geometrical part ſhould be relieved with hiſtorical accounts properly interſperſed concerning the ſtate of this ſcience before Sir Iſaac's time, both in that and the phyſical part (17). The uncouth abſurdity that is ſeen in the philoſophical opinions, not only of *Kepler* and *Carteſius*, who preceded that æra, but even of *Leibnitz*, *Bernoulli*, and others, the moſt celebrated for their knowledge in theſe matters, who were contemporary with Sir Iſaac, is very entertaining, at the ſame time that it ſerves to diſplay to great advantage, the ſuperior abilities of that firſt founder of the true ſyſtem of the heavens. It is by means likewiſe of theſe hiſtories which inform us of the actual advances that were made in this ſubject, previous to his diſcoveries, that we come to a juſt knowledge of his real merit. But our author ſeems to ſtretch the point a little too far, when in this view he attempts to trace the phyſical part of Sir Iſaac's aſtronomy up to the original of that ſcience, and thinks he has diſcovered, that the moſt ancient philoſophers knew that the celeſtial bodies gravitate towards each other, and are retained in their orbits by the force of gravity, nay that they were alſo apprized of the particular law or rule of that force. Thus, becauſe *Anaxagoras*, and his ſcholars *Archelaus* and *Euripides*, called the *ſun and ſtars fiery or red hot ſtones, or iron, or gold*, and ſuppoſed *the moon to be of an earthy ſubſtance*, while his maſter Anaximenes maintained *the ſtars to be of a fiery nature*, and that there are *certain terreſtrial bodies that are inviſible carried together about them* (18). Hence the Doctor would ſeem to infer, that they underſtood theſe to be ſo many ſyſtems like that of the ſolar, and each ſupported by gravity. And ſince *Anaximenes* received his notions from *Anaximander*, as this laſt did his from *Thales*, the founder of the Ionic philoſophy, he will have it that *Thales* himſelf ſpread this opinion of gravity among his ſect; whence, ſays he, it ſpread itſelf through the *Italic* philoſophy. And indeed the argument in favour of the Pythagoreans, brought to evince that they had ſome conception of the celeſtial bodies gravitating to each other, ſtands upon the ſame ground as the former, viz. That it was affirmed by thoſe philoſophers, that *every ſtar is a world in the infinite ætherial ſpace, wherein are contained earth, air, and æther* (19), and that *the moon was not only of a like nature with the earth, but inhabited as our earth is, though by animals of a larger ſize, and furniſhed with the ſame kind of plants, though much more beautiful than ours* (20). Now an impartial enquirer will be apt to aſk, where lies the hint in all theſe expreſſions of any mutual gravitation among theſe bodies. On the contrary, the wiſdom of theſe Ancients has not the leaſt appearance of being grounded upon any juſt reaſoning from analogy, as the Doctor's argument requires, but was the genuine growth of a narrow knowledge, which with regard to celeſtial matters ſuggeſted nothing better than a meer jumble of conceits, and theſe taken from what they found immediately before them on this earth where they were fixed, and where they ſaw no appearances of any ſuch mutual gravitation; notwithſtanding it be true enough what our author obſerves, that it is from this principle of gravity, that all bodies do actually gravitate mutually to each other, a conſequence which was not diſcovered till long after the original of aſtronomy. However the argument from *Lucretius*, it muſt be owned, carries a more promiſing countenance, and therefore deſerves to be particularly conſidered. The philoſopher's words cited by the Doctor, are:

(17) There is an account of it in Phil. Tranſ. No. 283. It was publiſhed likewiſe in 4to. and tranſlated into Engliſh by Edmund Stone, F. R. S. The ſecond edition of which was printed in 1726 in 2 vols 8vo. with the addition of Dr Halley's Synopſis of the Aſtronomy of comets.

(18) Laërtius in Anax. & Democritus. Plato in Apolog. Socratis. Stobæus Ecl. Phyſ. c. 25. Plutarch. de placitis philoſoph. lib. ii. c. 13 & 20.

(19) Plutarch, c. 13.

(20) Ibid. c. 30.

> Suppoſe they all had bounds, ſuppoſe an end,
> Then bodies which by nature muſt deſcend,
> And from eternity purſu'd the race,
> Had long e'er this time reach'd the loweſt place (21).

(21) Creech's Lucretius, lib. I. ver 986, & ſeq.

This is one of his arguments to prove his doctrine, that nature is infinite and the only Deity, viz. from the abſurdity of a contrary ſuppoſition, that it ſhould be finite, ſince in that caſe as bodies naturally deſcend, the place or center to which their deſcent is directed, would be at ſome finite diſtance from them, and therefore by eternally deſcending, they muſt have reached that center long ago, and ſo the world, i. e. the ſyſtem of the world, would have been deſtroyed, which we ſee it is not. But now as nature is infinite, there can be no ſuch point or center for them to deſcend to, by which means they remain in their proper places. The force of this reaſoning is, that in finite ſyſtems, where there is a center, bodies naturally deſcend; but nature being infinite and without a center, they do not naturally deſcend, that is, they have naturally no tendency to a center, or no principle of gravity from nature. Thus notwithſtanding Lucretius talks very well concerning the action of gravity upon earth (22), yet with regard to the mundane ſyſtem he denies both the action and the principle. And indeed to ſuppoſe him, as the Doctor does, aſſigning an adequate cauſe in the mutual gravitation of theſe bodies, for ſupporting his infinite worlds or ſyſtems, is making him a better reaſoner than his words imply. Having after this manner proved that the Ancients had a notion of the heavenly bodies gravitating to each other, he proceeds to ſhew with equal ſucceſs, that theſe ſame Ancients did not only think this was performed by the power of the whole matter in the terreſtrial globe attracting all things to itſelf, and not by virtue of any point, as a center in the earth to which heavy bodies tended; but likewiſe underſtood, that the gravity towards the whole earth, reſulted from the gravity toward each ſingle part of it. But here he has left the Ancients firſt mentioned, and deſcends as low as Plutarch, who undoubtedly was well acquainted with the Ptolemaic ſyſtem, and clearly intimates his opinion, that the other planets and the ſun alſo gravitate toward the earth (23); but ſtill has ſaid nothing in the places cited by our author, whence it can be fairly inferred that he had any ſuch thought as this of the mutual gravitation of the celeſtial bodies to each other, unleſs he meant by it no more than a tendency of all the reſt to the earth, as the center of the ſyſtem, whereby indeed they do conſequentially tend to each other, or to meet together by a tendency of all the reſt to one. But our author goes yet a great way farther, and aſſerts that even the exact rule of this mutual gravitation, or the duplicate proportion in which the force of gravity decreaſes in receding from the ſun, was not unknown to Pythagoras. This he finds in the old ſtory told by Macrobius (24), who relates the manner in which that philoſopher found out the harmonic proportion of muſical ſtrings, viz. by obſerving the variety of ſounds acute and grave, made by a ſmith's hammers in proportion to their weights; whence having found, that the weights which generate tones in ſtrings of an equal thickneſs, are reciprocally as the ſquares of the lengths of thoſe of an equal tenſion, producing the ſame ſound in a muſical inſtrument; he afterwards applied this proportion to the heavens, and from thence learned the harmony of the ſpheres. And by comparing theſe weights with the weights of the planets, and the intervals of the tones produced by the weights with the intervals of the ſpheres; and laſtly, the lengths of the ſtrings with the diſtances of the planets from the center of their orbs; he underſtood, *as it were* (theſe are the Doctor's words) by the harmony of the heavens, that the gravity of the planets toward the ſun (according to whoſe meaſures the planets move) was reciprocally

was wrote to explain and defend that part of Sir Iſaac Newton's Philoſophy, ſo our author's merit in the performance received it's moſt diſtinguiſhed luſtre from the particular atteſtation given to it by that incomparable perſon, who communicated to him his Theory of the moon (*m*), after he had improved it into ſo great an exactneſs, as thereby to correct Mr Flamſtead's beſt obſervations (*n*). The following year our Savilian Profeſſor publiſhed at Oxford an edition in folio of Euclid's works in Greek and Latin [*H*]. The undertaking had been begun by his predeceſſor Dr Bernard (*o*), as the beſt ſpecimen that could be given of that noble deſign he had formed of printing the works of all the antient Mathematicians. And in purſuit of the ſame deſign our author engaged not long after with his colleague Dr Halley to publiſh Apollonius's Conics, but was prevented from compleating his ſhare of the work (*p*) by his death, which happened on the tenth of October 1710, being then retired to Maidenhead in Berkſhire in the pariſh of Bray, where his body was probably interred, being not carried to Oxford. But a handſome marble monument with an inſcription (*q*) [*I*] is erected to his memory in St Mary's church there. He was ſucceeded in

(*m*) He has likewiſe interſperſed ſeveral ingenious inventions by Dr Halley, who in his turn commends our author's explication of Sir Iſaac's method to conſtruct the orbit of a comet by three accurate obſervations. *Synopſis of the Aſtronomy of comets, verſus finem.*

(*n*) Schol. to prop. xxix. lib. iv.

(*o*) See his article in this work, Vol. II. p. 754.

(*p*) Our author's ſhare was to prepare the four firſt books for the preſs, the materials of which were among his predeceſſor's manuſcripts. Ibid. rem. [*F*], coll. 2 No XV. See alſo more of this undertaking in Dr Halley's article.

(*q*) In this monument, if I miſtake not, the ſculptor has executed Shakeſpeare's hint in two figures, repreſenting Patience ſmiling at Grief.

cally as the ſquares of their diſtance from the ſun. Thus argues our Profeſſor, whereas the utmoſt that can fairly be inferred from this application by Pythagoras, of the muſical to the ſolar ſyſtem is, that he fancied the reſpective weights of the planets independently, to be proportional to the weights which produce harmonic ſounds, but without once thinking of any gravitation of the planets towards the ſun. 'Tis true indeed, that if *Pythagoras* really held what is ſince called the Copernican ſyſtem (25), he muſt believe that the planets in their motion *reſpected* the ſun; but there is no good reaſon to think he ever went ſo far as to imagine that this *reſpect* was cauſed by gravity. Our author himſelf has ſhewn in the firſt book of his treatiſe (26), that a different cauſe from that of gravity was aſſigned for the production of the harmonical meaſures by *Des Cartes*. It avails nothing to ſay, that Des Cartes's vortices are by no means a cauſe adequate to the effect, ſince neither is it pretended that Pythagoras demonſtrated gravity to be ſuch a cauſe: any aſſertion of that kind muſt needs be very far from our author's thoughts, whoſe chief view in theſe hiſtories (and in that of Pythagoras among the reſt) is to ſhew, that no-body was able to effect that before Sir Iſaac Newton. 'Tis true the decreaſe of the force of gravity in proportion to the increaſe of the diſtance, is a neceſſary conſequence of the harmonic meaſures in the planets, and ſeems, at this time of day at leaſt, not very difficult to conjecture, nay was actually ſuppoſed long before Sir Iſaac Newton's time. But yet as Pythagoras never, that we know, expreſsly made the conjecture, ſo neither is there any likelihood, that he ever thought of the conſequence. Even *Kepler* (who firſt founded the harmonic meaſures of Pythagoras upon aſtronomical obſervations) explains the ſeſquialterate proportions from other principles than that of the duplicate ratio of gravity (27). Nay, if we may believe our author, he was ſo far from attributing this to the action of gravity, by which the planets tend towards the ſun, that he ſuppoſes there is a natural *ſluggiſhneſs* in the planets to *all* motion, which inclines them by reaſon of their matter to continue where they are (28). In reality, all this which makes up the main of our author's preface muſt not be looked on as a philoſophical eſſay, but as a popular diſcourſe, and in that light it would appear well enough, had it not been prefixed to a treatiſe ſtrictly mathematical. However, ſo much muſt be ſaid in his favour, that in aſcribing ſuch a degree of knowledge in the law and direction of that force, which ſupports the Philolaic ſyſtem to the firſt founders of it, he is preceded by Galileo (29), who aſſerts ſomething like it of *Plato* from ſome paſſages in his *Timeus*, and another in *Diogenes Laërtius* (30) in Platone, which are to this effect. *Theſe* [the celeſtial bodies] *at firſt were moved in a confuſed and irregular manner, but when they were duly adjuſted and rightly ſettled, then the world was eſtabliſhed by God in juſt order and proportion.* Again, *he gave it a motion altogether agreeable to it's nature as a body (that is a direct one).* And a little farther, *therefore he afterwards made it continue it's courſe in a circle.* Here indeed we find the divine philoſopher aſſerting that the mundane ſyſtem was eſtabliſhed at firſt upon ſuch motions direct and circular, as were agreeable to the nature of the great bodies which compoſe it. But to what particular principles in that nature theſe motions are agreeable, there is not I apprehend the leaſt intimation; nor can Plato, I am perſuaded, be diſcerned herein to point at gravity, for inſtance, as the immediate cauſe of the circular courſe by any other light, than that which ſprings intirely from the diſcerner's fond prepoſſeſſions.

(25) A late writer obſerves, that it is more than probable that Pythagoras was not the inventor of the ſyſtem which goes under his name, but that it grew up by degrees after wards among his followers. Coſtard's Letters to M. Folkes, Eſq; concerning the riſe and progreſs of Aſtronomy, p. 120, & ſeq. Lond. 1746, 8vo.

(29) In his Coſmical Syſtem.

(30) Theſe are inferred into our author's preface.

[*H*] *He publiſhed an edition of Euclid's works.*] This edition contains the following pieces. (1.) *Elementorum libri* XV. (2.) *Data cum præfatione Marini.* (3.) *Introductio Harmonica.* (4.) *Sectio Canonis.* (5.) *Phænomena.* (6.) *Optica.* (7.) *Catoptrica.* (8.) *De divisionibus Liber.* (9.) *De levi et ponderoſo, fragmentum.* In the preface, after a ſhort ſummary of Euclid's life, ſuch as could be extracted from the Ancients, who as he obſerves ſeem by the little they have ſaid of him, to have thought it needleſs, if not ridiculous, to give a particular account of a man whom every body knew. The Doctor proceeds to inform his reader, that, agreeable to his plan of the life, he has inſerted into this collection every thing that had been aſcribed by any conſiderable mathematician to that author. He has here alſo given a particular deſcription of each, notwithſtanding he was very ſenſible that ſome of the pieces are ſpurious; concerning which he has given us his opinion, among others condemning the Catoptrics eſpecially as a mean performance, not at all ſuitable to Euclid's character (31). He had in another place before (32), taken notice of one egregious miſtake therein (33). Kepler had alſo animadverted (34) upon part of the ſame miſtake contained in theor. 16. as well as the 17th and 18th, which is alſo inſerted from him by our author, though without naming him in cor. 2. prop. 2. as follows: In a plain ſpeculum, the image of any radiant point is ſeen in that place where the reflected ray, which paſſes through the center of the eye, meets with the perpendicular let fall from the radiant point upon the ſpeculum; whence, though every part of the ſpeculum, except that which reflects the ray be covered or taken away, the image would nevertheleſs be viſible; and if that point of the ſpeculum be covered, though all the reſt be open, the image will not be ſeen. Kepler obſerves farther, that the axiom, upon which Euclid builds the contrary doctrine, that the image is ſeen in the perpendicular from it to the ſpeculum is true enough, but falſely applied, through a perſuaſion of the real aſcent of the image along that perpendicular, which, ſays he, differs not much from the *ſpecies intentionales* of Ariſtotle. And Dr Smith remarking another miſtake in the ſame piece, makes the following animadverſions upon the whole, 'conſidering, ſays he, 'that catoptrics were known and cultivated by the Ancients long before dioptrics; 'tis ſurprizing they could 'not account for burning by reflexion from a concave 'metal. Euclid in catoptric. prop. ult. ſays, the center of a catoptric concave metal is the burning point, 'becauſe all the rays which paſs through that point 'are returned directly back (and the ſame is ſaid by 'Vitellio, lib. 9. prop. 37). But as the ſun's diameter 'is ſo ſmall, theſe rays are but very few, and the conſequence would be, that a very broad ſpeculum would 'burn no better than a very narrow one, which is contrary to experience. It is found, continues he, from 'this and many other blunders in that book, that 'Euclid the geometer was not the author of it, and alſo that the Ancients made very groſs experiments (35).'

We choſe to inſert the whole (which is ſhort) as a pattern worthy of imitation, where full juſtice is done to all the diſtinguiſhed merit of the deceaſed, without any of that fulſome flattery which ſo often diſgraces theſe monumental inſcriptions.

[*K*] *An account of the reſt.*] Theſe are, (1.) *A ſcheme of the phaſes with his obſervations on the ſun's eclipſe, Sept.* 13, 1699. No. 256. (2.) *Some improvements relating to the quadrature of the parts of Hippocrates's Chius's Lunula, in a letter to Dr Wallis,* No. 259. *for December* 1699. (3.) *A paper de* ORBITA CASSINIANA, No. 293, *for Sept. and Oct.* 1704. This was a very eccentric elliptical curve that had been aſſigned by that celebrated aſtronomer, in his treatiſe on *the origin and progreſs of aſtronomy*, for the orbit which a planet deſcribes about the ſun placed in one focus, ſo that the angles at the other focus are proportional to the times. The invention was ingenious, and thereby Caſſini intended to ſupport the common opinion at that time after Copernicus againſt Kepler, that there was a point within the orbits of the planets, round which they deſcribed equal angles in equal times. Our author had conſidered this Caſſinian curve in his *Elements of Aſtronomy* (36), and ſhewn after Mercator (37) ſeveral reaſons why it could not be retained in that ſcience, as it neither agrees to the obſervations of the heavens, becauſe of the brevity of it's ſhorter axis, nor do phyſical reaſons correſpond, ſince for the deſcription of this, a centripetal force toward the ſun is required, greatly deviating from that which nature makes uſe of. But now having conſidered the ſubject ſtill farther, he found that this curve muſt neceſſarily be thrown out of aſtronomy for another moſt irrefragable reaſon, viz. it's abſolute impoſſibility. 'It being impoſſible, ſays he, 'that any ſpecies of this figure can be deſcribed by a 'planet, ſo that the angles at the other focus where 'the ſun is not, may be proportional to the times. 'For thus the area deſcribed by the radius that carries 'the planet, would not be proportional to the time. 'For it is not true, that increaſing the angle of one 'focus by equal increments, the increments of the area 'made at the other, at the ſame time, will alſo be 'equal, as I thought not long ago;' and to demonſtrate the truth of this diſcovery, is the buſineſs of the paper here mentioned.

(36) Lib. iii. prop. 8.

(37) Phil. Tranſ. No. 59.

[*L*] *A Treatiſe of Practical Geometry,* &c.] In the preface, dated at the College of Edinburgh May 1, 1745, Mr Colin Maclaurin tells us, that this treatiſe was compoſed in Latin about ſixty years before by our author, then profeſſor of mathematics at Edinburgh, where it has been conſtantly taught ſince that time, immediately after Euclid's elements and the plain trigonometry, as proper for exerciſing the ſtudents in the application of geometry to practice. He obſerves alſo, that ſeveral additions had been made to the treatiſe to render it more uſeful at this time. Some of theſe additions are expreſsly ſaid to be taken from a manuſcript of Sir Robert Stewart, Profeſſor of Natural Philoſophy in the ſame college (38); the reſt are probably made by Mr Maclaurin. One of theſe laſt is inſerted at Prop. 7. Part II. where our author having proved the proportion of the ſquare of the circle, to that of the diameter, to be nearly as 14 to 11, adds the following words: *If greater exactneſs be required, you may proceed to any degree of accuracy, for the ſquare of the diameter is to the inſcribed circle, as* 1 *to* $1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9} - \frac{1}{11} + \frac{1}{13}$, *&c. in infinitum.* Now this ſeries was firſt diſcovered by his uncle James, as is mentioned in his article (39), where we have particularly ſhewn from Sir Iſaac Newton, the exceeding ſlowneſs of it's convergency, which rendering it of *no* uſe in practice, we have alſo inſerted another ſeries produced from it, by ſome improvements of Sir Iſaac, which converges very quick. To the ſame purpoſe is the following remark to this paragraph of our author, which then had not fallen under our obſervation. 'This *ſeries*, ſays the re-'marker, *will be of no ſervice for computing the circle* 'accurately *without ſome further artifice, becauſe it* 'converges *at too ſlow a rate.*' Upon the whole it is ſomewhat ſurprizing, that our author's knowledge in the nature of infinite ſeries ſhould be ſo very imperfect, as this inſtance gives room to ſuſpect it was, at the time of his reading theſe lectures in the college at at Edinburgh, and after he had publiſhed his *Exercitatio Geometrica*. But his knowledge in this branch of analytics, it ſeems, was never thought to be very great by ſome good judges. Mr Cotes, for inſtance, about the time of his writing the preface to the ſecond edition of Sir Iſaac Newton's *Principia*, ſpeaks ſlightly of our author's abilities upon this point in a letter to Mr Collins, where mentioning his own differential method of interpolation (40), he writes thus, Dr Gregory, in Lib. V. Prop. XXV. of his Aſtronomy, refers his reader to a book of Gabriel Mouton, De obſervationibus diametrorum ſolis & lunæ apparentium (41). Though I do not much rely upon the Doctor's recommendation, yet, &c. To conclude, we learn from Mr Flamſtead, that our author's countrymen gave out, that he had found a great many errors in Sir Iſaac's *Principia* (42). If ſo, it may help us to gueſs what kind of a commentary that is, which was found among the Doctor's papers after his death.

P

GRESHAM, the ſurname of an antient, worthy, and opulent family, derived, as that moſt learned Antiquary Sir Henry Spelman tells us, from a town ſo called in the hundred of North-Erpingham, or Orpingham, in the county of Norfolk (*a*), from whence many eminent and honourable perſons have deſcended (*b*) [*A*]. John Greſham of Greſham flouriſhed under

(*a*) Poſthumous Works, p. 152.

(*b*) Engliſh Baronetage, Vol. III. p. 113.

[*A*] *From whence many eminent and honourable perſons have deſcended*] In the introduction to a very curious and accurate pedigree of the Greſhams, in the poſſeſſion of the late Sir Marmaduke, and now in that of

under the reigns of Edward the Third and Richard the Second (c). His ſon James Greſham ſettled at Holt in the ſame county, about four miles from Greſham, and was Lord of the Manor of Eaſt-Beckham (d). He married Margaret, the daughter of William Billingford, of Blackford, Eſq; by whom he had a ſon named John, who reſided at Holt (e), and married Alice, the daughter of Alexander Blyth of Stratton, Eſq; with whom he had a large fortune, by the demiſe of her three brothers, who all died without iſſue (f). By this lady he had four ſons; William, who ſucceeded to the family eſtate at Holt, and who was the laſt of the Greſhams who made it the place of his reſidence (g) [B]; Thomas, who entered into Holy Orders, and became Rector of South-Reppes in Norfolk, Prebendary in the Church of Winton, and Chancellor of Lichfield (h), to whom, if to any of this family, a certain very extraordinary ſtory is thought to refer (i) [C]. Of the younger ſons, Richard and John, we ſhall ſpeak more particularly in the following articles.

of Sir Charles Greſham, the preſent Baronet; we are told that this family was at once ſeized in Norfolk of thirty-five manors; in Suffolk of five; in Cambridgeſhire of one; in Kent of three; in Suſſex of two; in Surry of nine; in Middleſex of two; in Somerſet of two, in Derbyſhire of three; in Yorkſhire of nine; and of twelve granges, and ſeveral other *willatæ*, and conſiderable poſſeſſions in the ſame county, and of three manors in the Biſhopric of Durham, as appears by ſeveral letters-patents, fines, deeds enrolled, inquiſitions *poſt mortem*, wills and private evidences now in the hands of ſome of that family. And out of which family, within the compaſs of an hundred and fifty years laſt paſt, there has been one Baronet, nine Knight Bachelors, whereof one knighted in the field; one Baronet's wife, and nine Knight's wives of the name and family of Greſham, and have iſſued from them in that time, two Viſcounts, ſeven Baronets, twenty-four Knights, two Counteſſes, five Baroneſs's wives, and twenty-two Knight's wives (1). Particulars honourable in themſelves, and uſeful alſo in the circumſtance of preſerving the memory of them.

(1) From the pedigree of the family.

[B] *Who made it the place of his reſidence.*] This gentleman, who was ſtiled William Greſham of Holt, in the county of Norfolk, Eſq; married Ellen, the widow of one Mr Copeland, and the daughter of Richard Bodley, by whom he had iſſue two daughters, both named Alice, one of whom married Mr March, and the other Mr Middleton (2). Their father ſold this eſtate to his younger brother Sir John Greſham, founder of the family at Titſey, as we ſhall ſee hereafter; and the year after he had parted with his eſtate, viz. 1547, William Greſham departed this life (3). But notwithſtanding this, ſome branches of the Greſham family ſtill remain in Norfolk.

(2) Viſitation of Norfolk, M.S. in Caius-College, Cambridge.

(3) From the Pedigree of the family.

[C] *Is thought to refer.*] This very ſtrange ſtory we have from that famous traveller George Sandys, Eſq; and therefore it is juſt the reader ſhould ſee it in that light in which he thought proper to place it, ſpeaking of Strombolo and other iſlands in the Mediterranean, in which there are burning mountains, he proceeds thus: 'Theſe places (ſays he) and ſuch like, are commonly affirmed by the Roman Catholics to be the jaws of Hell, and that within, the damned ſouls are tormented. It was told me at Naples by a countryman of ours, and an old penſioner of the Pope's, who was a youth in the days of King Henry, that it was then generally bruited throughout England, that Mr Greſham, a merchant, ſetting ſail from Palermo (where there then dwelt one Anthonio called the Rich, who at one time had two kingdoms mortgaged unto him by the King of Spain) being croſſed by contrary winds, was conſtrained to anchor under the lee of this iſland. Now about mid-day, when for certain hours it accuſtomedly forbeareth to flame, he aſcended the mountain with eight of the ſailors, and approaching as near the vent as they durſt, amongſt other noiſes they heard a voice cry aloud, *Diſpatch, Diſpatch, the rich Anthonio is a coming.* Terrified herewith they deſcended, and anon the mountain again evaporated fire. But from ſo diſmal a place they made all the haſte that they could, when the winds ſtill thwarting their courſe, and deſiring much to know more of this matter, they returned to Palermo, and forthwith enquiring of Anthonio, it was told them that he was dead; and computing the time, did find it to agree with the very inſtant that the voice was heard by them. Greſham reported this at his return to the King, and the mariners being called before him, confirmed by oath the narration. In Greſham himſelf, as this gentleman ſaid (for I no otherwiſe report it) it wrought ſo deep an impreſſion, that he gave over traffic, diſtributing his goods a part to his kinſfolks, and the reſt to good uſes, retaining only a competency for himſelf, and ſo ſpent the reſt of his life in a ſolitary devotion (4).' The learned hiſtorian of this family, who has likewiſe copied this relation, aſſigns his reaſon in theſe words. 'It is not ſaid that this Mr Greſham went into Orders, but only that he retired from ſecular affairs. However as the ſtory ſuits with the time of Thomas Greſham, who died in the year 1558, for that reaſon I have placed it here (5).' We have ſaid in the text, that if this ſtory related to any of this family, it muſt be to him. But it is more probable that the tale, ſuch as it is, was rather fathered upon John Greſham, merchant of London (6), who reſided long in thoſe parts, and in whoſe favour King Henry wrote a letter to John, King of Portugal, dated from his court at Waltham, October the 15th, 1531, deſiring that juſtice might be done to him againſt one Diego Perez, a ſubject of his Majeſty of Portugal. Some ſtories of the like kind have been propagated with great boldneſs of Mount Hecla in Iceland, and an appeal made to the inhabitants for the truth of them, which it might be well preſumed by thoſe who made it, would never reach their ears; but unluckily it did, and offended them ſo much, as to produce a natural and general hiſtory of this country, written under the direction of it's Biſhop, in which the lye is in direct terms given to all theſe reports, only it is admitted that the waves of the ſea impelled by boiſterous winds, creep through the caverns at the bottom of this mountain, with a hollow murmuring noiſe, that a fanciful mind might miſtake for mourning (7).

E

GRESHAM [Sir RICHARD], an eminent Merchant, a great promoter of trade, and a worthy member of the city of London (a). He was the third ſon, as we have already ſhewn, of John Greſham of Holt, in the county of Norfolk, Eſq; by Alice, the daughter of Alexander Blyth, of Stratton, Eſq; (b). It does not appear at what time he was born; but his father being deſirous that he ſhould have an opportunity of enriching himſelf by his own induſtry, placed him as an apprentice with Mr John Middleton, Merchant of London, in the reign of King Henry the Seventh (c); and the firſt date that occurs with regard to his tranſactions, is that of his being admitted to the freedom of his company, which was in 1507 (d). He married, not long after he was ſettled in buſineſs, Audrey, the daughter of William Lynne, of Southwick in Northamptonſhire, Eſq; who lived with him to the twenty-eighth of December, 1522; and at her deceaſe was interred in the church of St Lawrence Jewry (e): after which he married one Mrs Taverſon, a widow, whoſe maiden-name was Worpfall, with whom he ſpent the remainder of his life (f). He was very fortunate in the management of his commerce abroad, by which he acquired great wealth, and purchaſed conſiderable eſtates in land in different counties. He was

was also Agent for King Henry the Eighth in foreign parts, chiefly for the management of money-affairs, during his wars abroad, which engaged him to visit Antwerp and other places; and in this office he gained so high a reputation for abilities and integrity, that he was continued in that employment through this whole reign, and so long as he lived under that of Edward the Sixth (*g*). His favour at court, and his credit in the city, kept an equal pace, so that in 1531, being chosen Sheriff of London (*h*), he received the same year the honour of knighthood from King Henry the Eighth (*i*) He signalized himself while in office by an application to Sir Thomas Audeley, then Lord Privy-Seal, for procuring two grants; one for the general benefit of commerce, in which he happily succeeded, and the other for the particular honour and emolument of the city of London, which as he wisely contrived, so his son Sir Thomas nobly atchieved (*k*). The first respected the liberty of banking, then granted by patent, which he represented to his Lordship as a great hardship and inconveniency, shewing at the same time how necessary it was, that all Merchants, foreigners as well as subjects, should be allowed to exercise exchanges and re-changes, without any restraint for the benefit of trade, and as the most effectual means for the preventing the exportation of specie out of the kingdom; and this he requested might be done by the King's issuing his royal proclamation for that purpose, and this it appears was attained (*l*) [*A*]. While he was yet in this office, James Bainham, Esq; of the Temple, was, through the spirit of persecution which reigned in that time, delivered into his custody, and committed to Newgate, and was afterwards carried to Smithfield and burnt as a Heretic, April 30, 1532 (*m*). The hospital of St Thomas of Acon, or Acars, being surrendered into the King's hands, October 21, 1538, it was, by the means of Sir Richard Gresham, purchased by his company, and has been since known by the name of Mercers Chapel in Cheapside (*n*). In 1537 he executed the high office of Lord-Mayor of London with great spirit and dignity (*o*); and shewed upon that occasion, as far as any prudent man could think it proper to shew in such perilous times, his favourable sentiments for the Protestant Religion, and his steady concern for the interests of the city he governed, by demanding of the King certain religious foundations, which about

[*A*] *And this it appears was attained*] They are much mistaken, who believe that in ancient times there was no care taken by the government of foreign trade, or that it was in those days either precarious or insignificant (1). On the contrary, it was the great object of our King's and of our Parliament's consideration. They went for a long series of time upon this maxim, *that* Commerce *could not be beneficial to a country, unless it was carried on* uniformly *and under proper* regulations (2). Upon this principle the notion of a staple was founded, at what time is not easily assigned, but certainly before the reign of Henry the Third, since from his time down to Henry the Seventh, we meet with a multitude of laws on this subject (3). This word staple was applied to the principal commodities of this island, such as *wool*, leather, lead, *tin*, cloths, butter, cheese, &c. The ports from whence these commodities might by law be transported, viz. London, Hull, Boston, Bristol, Southampton, Newcastle, &c. were stiled staple ports, the laws made for the direction of trade, by those who managed it, were called Staple Laws, and the principal magistrates of this society were the Mayor and Constable of the Staple; this was then reputed, instead of a restraint upon trade; the only method for preserving it's freedom, since all the King's subjects that would bring their goods to the staple, and conform themselves to the laws and ordinances thereof, might be admitted *merchants*. At these staples the King's customs were duly collected and paid into the Exchequer twice a year. By the Mayor and Constable of the Staple, the rate of exchange was settled according to certain tables posted up at Dover and elsewhere, that no frauds might be committed by suffering either our commodities or our money from passing into foreign countries for less than their real value. In those days there was no such thing as bankers. It was King Edward the Third, who may be justly stiled our English Justinian, settled these points by various good laws, and caused those tables to be set up, declaring the true value of the several species of coin in all countries, the inhabitants of which, had any dealings with his subjects (4). In his time there was not only a mint in the Tower of London, but in several other places, as at Canterbury, Kingston upon Hull, Newcastle, Bristol, and Exeter. The King had also his exchanger, who had his deputies in the several ports, and these made whatever remittances were necessary, value for value, with a very small allowance; and when any want of money was perceived in the kingdom, orders were sent to the Mayor of the Staple to procure a certain proportion of the value of goods exported to be paid in Bullion, which was afterwards sent to the nearest mint (5). In process of time things took another course, and the Lombards coming over and settling in that street which still bears their name, drew most of this business into their hands, but managed it in such a manner, as turned very little to the account of the English merchant; and therefore, after various acts of parliament made in the reign of Henry the Seventh, to remedy these mischiefs, but with very small effect, this new method was fallen upon in the reign of his son, to confine the business of banking to those who should be empowered by the King's Patent (6). This, instead of curing the old, brought in new evils, of which Sir Richard Gresham complained to the Lord Privy-Seal, putting him in mind that Bartholomew-fair was near at hand, when by taking off this restraint, a great many cloths and kersey's might be sold that would be otherwise left in the makers warehouses (7). He farther observes, that the factors were about to proceed to Bourdeaux, and to purchase wines, and that if things remained as they were, in all probability they would take gold with them, which might be prevented, by issuing such a proclamation as he desired; he adds upon this head, that what he wrote was purely to discharge his conscience out of duty to the King, and for the benefit of his subjects, by promoting the exportation of our commodities, laying it down as a maxim, that merchants can no more be without their exchanges and re-changes, than ships in the sea without water. He then passes to the house for merchants to meet in, which it was intended should be built in Lombard-street, the expence of which he calculates at two thousand pounds, and desires the King's letters may be addressed to Sir George Moneux, to dispose him to sell certain houses upon the ground of which this building might be erected; and for the money, he thought he could collect one thousand pounds before he was out of his office. In a postscript to this letter, which is dated July 5th, (1531) he tells this great minister that he had received his letter, by which he understood it to be the King's desire, that the Monastery of Walsingham should be dissolved, and assures his Lordship, that he had wrote to the Prior to further that design; he adds a request, that he might be permitted to purchase from the Crown certain lands which had been part of the Bishopric of Norwich, at the rate of twenty years purchase, provided the sum of one thousand pounds, advanced to the Duke of Buckingham by order of Cardinal Wolsey, on the King's account, were taken in part, and some of these lands were granted him about twelve years afterwards, as the reader will be informed in the text (8).

about that time were diſſolved, not for himſelf or his family, but for the reception of lame and diſeaſed perſons, that were burthenſome to this corporation, as the reader may ſee more at large, the nature of the ſubject requiring it, in the notes [*B*]. The ſame year he had a grant from the Heralds Office to him and his poſterity for additions to his arms, which grant has been ſince publiſhed (*p*). In 1541, Sir Richard and Sir John Greſham, Knights, were put into the commiſſion for herefies done in the city and dioceſe of London, in virtue of that ſanguinary law, ſo well known to poſterity by the title of *the Six Articles* (*q*). His favour with his maſter was ſo great, his ſervices ſo many and acceptable, and his intereſt ſo conſiderable, that he obtained ſeveral grants of abbies and abbey-lands to a very large amount. In the thirty-ſecond year of that King, he had the ſite of the famous abbey of Fountains, or *de Fontibus*, in Yorkſhire, formerly belonging to Monks of the Ciſtertian order (*r*); in the thirty-fifth, of the hoſpital of Carbroke in the county of Norfolk, to himſelf and Sir Richard Southwell; and the ſame year he had the hoſpital or præceptory of Batisford in the county of Suffolk, granted to himſelf alone (*s*). In the thirty-ſeventh of the ſame King, he had, in conjunction with Richard Billingford, a grant of the houſe of the White-Friers, between the weſt gate and the ſide of the river Tyne in Newcaſtle; as alſo the religious houſe of Walknol near Pandon-Gate in the ſame town (*t*); and in the thirty-eighth year of the ſame monarch's reign, the priory of Benedictine Monks at Hoxne or Hoxon in the county of Suffolk (*u*). His ordinary place of reſidence was at Bethnal-Green near London, where dying on the 21ſt of February, 1548, his corpſe was removed to the church of St Lawrence Jewry, and there ſome years afterwards a tomb with an inſcription was erected to his memory (*w*), which remained ſtanding 'till the Fire of London in 1666, when that church was conſumed. He left iſſue by his firſt wife, as the pedigree of the family bears, two ſons and two daughters; but the monumental inſcription, if faithfully copied ſays, three ſons and one daughter (*x*). A very judicious author prefers the pedigree, and we yield willingly to his judgment in that reſpect (*y*). His ſons then were Sir John Greſham, of whom ſome particulars are preſerved at the

[*B*] *In the notes*] It is very remarkable that this letter is not directed either to the Chancellor or the Lord Privy-Seal, who at this time had great power in matters of this nature, but to the King himſelf, which is a clear proof of the great intereſt he had with that monarch, to whom otherwiſe he would not have addreſſed it. His hearty zeal for the public ſervice, which he ſollicits with as much earneſtneſs as he could poſſibly have done any ſuit of his own, and his good ſenſe in urging the moſt proper arguments for obtaining his purpoſe, render this letter one of the moſt remarkable pieces extant, with reſpect to his perſonal hiſtory, thus it runs (9):

(9) Bibl. Cot. Cleopatra, E. 4.

'Moſt redoubted puiſſant and noble prince, my 'moſt dread beloved and natural ſovereign lord, I your 'poor humble and obedient ſervant, conſidering and 'ever more and more perceiving by your virtuous be'ginnings and charitable proceedings in all your cauſes, 'your perſon and Majeſty Royal, to be the elected and 'choſen veſſel of God: by whom not alone the very 'and true word of God is and ſhall be ſet forth, and 'according to the truth and verity of the ſame; but 'alſo to be he whom God hath conſtituted and or'dained to redreſs and reform all crimes, offences, and 'enormities, being repugnant to his doctrine, or to the 'detriment of the commonwealth, and hurt of the 'poor people being your natural ſubjects; and further 'to foreſee and vigilantly to provide for the charitable 'reformation of the ſame, which thing hath, and yet 'doth encourage me; and alſo my bounden duty o'bligeth me in ſpecial, being moſt unworthy your 'Lieutenant and Maior of your City Royal of London, 'to inform and advertiſe your moſt gracious Highneſs, 'of one thing in ſpecial, for the aid and comfort of 'the poor, ſick, blind, aged, and impotent perſons, 'being not able to help themſelves, nor having no 'place certain where they may be refreſhed or lodged 'at, till they be holpen and cured of their diſeaſes and 'ſickneſſes.

'So it is moſt gracious Lord, that near and within the 'city of London, be three hoſpitals or ſpittals, com'monly called St Mary Spittal, St Bartilmew's Spittal, 'and St Thomas's Spittal, and the new Abby of Tower 'Hill; founded of good devotion by auncient faders, 'and endowed with great poſſeſſions and rents, only 'for the relief, comfort, and helping of the poor and 'impotent people, not being able to help themſelves, 'and not to the maintenance of Chanons, Prieſts and 'Monks to live in pleaſure, nothing regarding the mi'ſerable people lying in every ſtreet, offending every 'clean perſon paſſing by the way, with their filthy and 'naſty favours.

'Wherefore may it pleaſe your merciful goodneſs, 'enclined to pity and compaſſion for the relief of 'Chriſt's very images, created to his own ſimilitude; 'to order by your high authority as ſupreme head of 'this Church of England, or otherwiſe by your ſage 'diſcretion, that your Maior of the City of London, 'and his brethren the Aldermen for the time being, 'ſhall and may for henceforth have the order, diſpoſi'tion, rule, and governance, both of all the lands, te'nements, and revenues appertaining and belonging to 'the ſaid hoſpitals and every of them, and of the mi'niſters which be, or ſhall be within every of them. 'And then your Grace ſhall plainly perceive, that 'where now a ſmall number of Chanons, Prieſts, and 'Monks, be found for their own profit only, and not 'for the common utility of the realm, a great number 'of poor, needy, ſickly, and indigent perſons ſhall be 'refreſhed, maintained, and comforted, and alſo 'healed and cured of their infirmities frankly and 'freely, by Phyſicians, Surgeons, and Potecaries; 'which ſhall have ſtipend and ſalary only for that pur'poſe. So that all impotent perſons not hable to la'bour, ſhall be relieved; and all ſturdy beggars not 'willing to labour, ſhall be puniſhed.

'For the which doing, your Grace ſhall not alonely 'merit highly towards God, but ſhew yourſelf to be 'more charitable to the poor, than your noble proge'nitor King Edgar, founder of ſo many Monaſteries, 'or King Henry III. renewer of Weſtminſter, or 'King Edward III. founder of the new Abby, or 'King Henry V. founder of Shene; but alſo ſhall 'have the name of Conſervator, Protector, and De'fender of the poor people, with their continual 'prayer for your health, wealth, and proſperity, long 'to endure.'

Your humble and moſt obedient ſervant,

RYCHARD GRESHAM.

What reception this letter met with, we are no where informed, but from it's conſequences we may gather, that it made a great impreſſion upon the King's mind, ſince towards the end of his life, he ſhewed a deſire that theſe hoſpitals ſhould be put into the hands of the city; which in the reign of his ſon, with reſpect to three of them, it may be not without the interpoſition of Sir Thomas Greſham, was actually brought about upon eaſy terms, which ought to be remembred to the honour of him, who firſt formed the project of preſerving them for that good purpoſe which they have ſince anſwered (10).

(b) Pedigree of the family.

[C] *At the bottom of the page*] We find in the pedigree of the family, but few particulars relating to this gentleman, which is the reaſon that we have choſen to digeſt theſe in a note. He was born in the year 1518, and brought up to buſineſs under his father (11). He was knighted by the Duke of Somerſet, Lord Protector, September the 28th, 1547, upon the memorable victory gained over the Scots in Muſſelburgh-field (12), and admitted a member of the Mercers company in 1550 (13). In the reign of Queen Mary, he is thought to have complied with the times, of which this is reported as an inſtance, that in 1556, twenty-two perſons being ſent out of Eſſex to London, in the month December, in compliance with the proclamation againſt heretics, in order to their examination before Dr Edmund Bonner, then Biſhop of London; the populace as they paſſed through the ſtreets ſhewed ſuch evident tokens of compaſſion, or as the prelate underſtood of approbation, that he ſent Sir John, who happened to be with him, to complain of this terrible inſult to the then Lord-Mayor and Sheriffs, with which, whatever his private opinion might be, it was certainly prudent in him to comply. The matter in truth was no more than this, that numbers who abhorred perſecution and had a charitable tenderneſs for perſons of good fame and credit, expoſed to ſuch ill uſage for obeying the dictates of their conſcience, went out of town to meet the poor ſufferers, and to comfort them, which being a circumſtance very few choſe to communicate, and there being alſo many of this diſpoſition, their attendance ſwelled in ſuch a manner, that by the time they entered London, their train was grown to a thouſand men, which Biſhop Bonner thought ſhould have been prevented by the vigilance of the city magiſtrates (14). A certain hiſtorian adds the title of alderman, to that of Sir John Greſham (15), which if it had been ſo, would have rendered him a very improper meſſenger; but the truth is, that Sir John Greſham, Knight and Alderman, had been about two months dead, and therefore this muſt have been his nephew (16). He married Frances, the daughter and heir of Sir Henry Thwaites, of Lownd in Yorkſhire, who ſurvived him twenty years. By her he had his only daughter Elizabeth, who married Sir Henry Neville (17), Knight, gentleman of the bed-chamber to King Edward VI. who made him very large grants of Church lands, which were reſumed by Queen Mary, and reſtored to him by Queen Elizabeth; by the daughter of Sir John Greſham, he had a ſon Henry, whoſe lineal deſcendants are ſtill in poſſeſſion of their anceſtor's eſtates in Berkſhire. Dame Elizabeth Neville, died November the 6th, 1573, and her mother, Dame Frances Greſham, in October 1580. E

GRESHAM [Sir JOHN], a very eminent Merchant, a beneficent patron to learning, and a moſt worthy magiſtrate in the city of London. He was the youngeſt ſon of John Greſham of Holt, in the county of Norfolk, Eſq; beforementioned, and ſucceeded his brother Richard as an apprentice to Mr John Middleton (a). He was admitted a member of the worſhipful company of Mercers in 1517, and by his great induſtry in trade acquired a very large fortune (b). This ſingular ſucceſs put it into his power to purchaſe ſeveral fair eſtates in the county of Norfolk, as alſo the manor of Titſey in the county of Surry, which had been granted by King Henry the Eighth to Sir John Bourchier, Knight of the Garter, and Lord Berners, who dying without heirs male, his daughter Catherine married Edward Knyvet, Eſq; from whom it was purchaſed by Mr Greſham (c). In 1537, his elder brother Sir Richard Greſham being then Lord-Mayor, he ſerved the honourable office of Sheriff of London, and was the ſame year knighted (d). He afterwards purchaſed from his eldeſt brother, William Greſham, Eſq; the capital meſſuage of Holt in the county of Norfolk, as appears by a deed, dated October 14, 1546 (e). In the ſucceeding year, Sir John Greſham himſelf was choſen Lord-Mayor of London (f). There had been an antient immemorial cuſtom, of cauſing what was called the marching watch to parade through the city at Midſummer, which, on account of ſeveral very expenſive muſters, made at the King's command ſome years before, had been forbidden in 1539 (g), and had ever ſince been laid aſide; but Sir John Greſham revived this pompous ſhew in his mayoralty, and appointed it both on the eve of St John the Baptiſt and on that of the Apoſtle St Peter, cauſing it to be executed both times with the utmoſt ſplendour (h). It was laid aſide again the very next year, and a ſtanding watch, for the ſecurity of the city, ſubſtituted in it's room. In the charter granted by King Philip and Queen Mary, for incorporating the Merchants concerned in the Ruſſia trade, and for eſtabliſhing and ſecuring their privileges, he is the firſt named to be of their Court of Aſſiſtants (i), which does him no ſmall honour, conſidering, that as this has been one of the moſt profitable, ſo it is alſo one of the beſt regulated companies ever erected in this nation. But though this may ſeem a mark of reſpect, yet he ſuffered in this reign a conſiderable loſs, by the reſuming of the manor of Weſterham in the county of Kent, which had been granted to him on the diſſolution of the abbey of Weſtminſter by King Henry the Eighth. It was however reſtored by Queen Elizabeth to his family (k). As he was a perſon of great generoſity and magnificence, he was alſo ſtrictly pious, and much diſpoſed to encourage uſeful learning. With this view he reſolved to convert the antient manſion houſe of his family into a free-ſchool, and endowed it with the manor of Holt Hales, and all it's members. By an indenture bearing date October the 16th, 1556, he ſettled the revenues and government of this ſchool upon the worſhipful company of Fiſhmongers in London, by whom it has been managed with ſingular integrity and reputation to this time, and is now in a very flouriſhing condition (l) [A]. This proviſion was very happily made, ſince he

[A] *And is now in a very flouriſhing condition.*] It was not eaſy for this worthy perſon to deviſe a method more ſignificant of his love for learning, than by converting the ancient ſeat of his family into that of the Muſes, and ſettling for it's ſupport that eſtate, which for this purpoſe he acquired by purchaſe; an undertaking

he died that day fev'nnight on which this indenture was executed viz. on the twenty-third of October (m), of what in thoſe days was ſtiled a burning ague, which ſeems rather to have been a kind of malignant fever, which in the ſpace of ten months had carried off ſeven Aldermen, five of whom had been Mayors, and ſeems now to have been at it's greateſt height, ſince in this month there died likewiſe Sir John Champney, Alderman and Skinner, who was but juſt out of his mayoralty; Sir Henry Hobblethorn, Merchant-Taylor of London, who had been likewiſe Lord-Mayor; Sir John Oliff, Surgeon to King Henry the Eighth, who had been Sheriff of London, and would have been Mayor if he had lived 'till the next year, beſides many other perſons of diſtinction (n). At the time of his demiſe, we find this worthy perſon thus entitled, viz. Sir John Greſham, Knight, Mercer and Merchant of the ſtaple at Calais, Merchant-Adventurer, late Mayor and Alderman of London (o). He was interred with great funeral ſolemnity at the church of St Michael Baſſiſhaw, not only his houſe but the ſtreet being hung with black cloth. The funeral ſermon was preached by the famous Dr Nicholas Harpsfield, after which there was an extraordinary fiſh dinner, to which all who came were admitted (p). By his laſt will he left many charitable legacies, which are deſervedly remembred to his honour [B]. At the ſame time we mention this, it may not perhaps be thought trivial to obſerve, that it was in thoſe days thought not a little ſtrange, that two ſons of the ſame man ſhould be Aldermen, Sheriffs, and Mayors of London (q). This Sir John Greſham had two wives; the firſt was Mary, daughter of Thomas Ipſwell, Eſq; by whom he had five ſons and ſix daughters, viz. William Greſham of Titſey, Eſq; of whom and of whoſe poſterity ſomething more will be ſaid at the bottom of the page (r) [C]. John Greſham of Fulham in Middleſex and Mayfield in Suſſex, Eſq; Edmund Greſham of Thorp-Market in the county of Norfolk, Eſq; but as for the other two their names are not known. As for his daughters, Mary married Sir Thomas Roe, by whom ſhe became the mother of another Sir Thomas Roe; Helen, to William Udall of Hampſhire; Urſula, who became the wife of Thomas Leveſon, or Luſon, in Kent, Eſq; Cicely, to German Cyoll, a Spaniard;

taking ſo full of beneficence and piety, that it ſeems to have merited the peculiar protection of Providence. In this famous free-ſchool of Holt, proviſion is made for the inſtruction of thirty boys of that county in grammar learning, to be choſen by the aſſignees of the company (1). And by the appointment of the founder, the maſter was to have twenty pounds, and the uſher ten pounds a year ſalary. But that of the maſter has been ſince increaſed to thirty pounds a year. He has likewiſe a large and commodious houſe, with liberty to take as many other ſcholars or boarders as he pleaſes. There is alſo a writing maſter and an uſher, the former of whom has ten pounds, and the latter ſix pounds thirteen ſhillings and four-pence a year, both of them appointed by the upper maſter. And ſuch has been the generoſity of the governors, that in the year 1729, they purchaſed a library conſiſting of the beſt claſſic writers, with a handſome pair of large globes, to near the value of an hundpounds, for the uſe of the ſchool. The preſent maſter is Mr John Holmes, who has recommended himſelf to the public by his Latin and Greek Grammars, and by ſeveral other uſeful and practical treatiſes, which not only do him honour, but thoſe alſo by whoſe choice he was fixed in that place which he ſo worthily fills, and in a manner ſo ſuitable to the donor's intention.

(1) Ward's Lives of the Profeſſors, p. 4. Mr Holmes's Dedications.

[B] *Which are deſervedly remembred to his honour.*] We have given a brief account in the text of this great man's burial, which ſeems to have been beyond the ſtandard of thoſe times, as we find it recorded by more than one author, but the deſcription by John Stowe, may perhaps ſeem not unworthy the reader's notice (2).

(2) Stowe's Survey, b. i. p. 258, 267.

'He was buried with a ſtandard and a penon of arms, 'and a coat armour of damaſk, and four penons of 'arms, beſides an helmet, a target, and a ſword, 'mantles, and the creſt, a goodly hearſe of wax, and 'ten dozen of penſils, and twelve dozen of eſcutcheons. 'He gave an hundred black gowns of fine cloth unto 'poor men and women; he had four dozen of great 'ſtaff torches, and a dozen of great long torches; he 'gave moreover an hundred of fine black gowns, two 'unto the preſent Mayor, and the old Mayor, likewiſe 'other to Sir Rowland Hill, and to Sir Andrew Judd, 'and to the Chamberlain, to Mr Blackwell, to Mr 'Common-Hunt and his man; to the porter that belonged to the Staple, and to all his farmers and his 'tenants. The church and the ſtreets were all hung 'with black, and arms in great ſtore, and on the morrow three goodly maſſes were ſung; one of the 'Trinity,' another of our Lady, and the third of Requiem.' In reſpect to his charitable legacies, he gave ten pounds to the poor of every ward in London, which are twenty-four in number; and to one hundred and twenty poor men and women, to each three yards of cloth for a gown, of eight or nine ſhillings a yard; to maids, marriages, and the hoſpitals in London, above two hundred pounds (3).

(3) Willet's Synopſ. Papiſm. 1224.

[C] *At the bottom of the page.*] William Greſham of Titſey, in the county of Surry, Eſq; married Beatrix, daughter of Thomas Guybon, of Lynn in Norfolk, Eſq (4); by whom he had Sir William Greſham of Titſey, Knight, as alſo Sir Thomas Greſham of Titſey, who for want of iſſue male, became heir to his brother; he married Mary, widow of Mr Walſingham (5), and by her had iſſue three ſons, Sir John Greſham of Titſey, who died without iſſue; Sir Edward Greſham, and Thomas (6). Sir Edward Greſham, Knight, married Mary, daughter to Mr Clark, by whom he had a ſon Thomas, whom he diſinherited, and who left no male iſſue (7). Sir Edward's ſecond lady was Mary, widow of Mr Wright, by whom he had Marmaduke Greſham of Titſey, Eſq (8); who was advanced to the degree of a Baronet by Letters Patents under the Great-Seal, bearing date July 31, 1660, in the twelfth year of King Charles the Second (9); he married Alice, daughter of Dr Richard Corbet, Biſhop of Norwich, by whom he had ſix ſons and three daughters, all of whom, except thoſe hereafter mentioned, died without iſſue (10). His ſecond ſon, Sir Edward Greſham, Baronet, married Martha, daughter of Sir John Maynard, Knight, Serjeant at Law, of Gunnerſbury in the county of Middleſex, but dying without iſſue male, he was ſucceeded in his title and eſtate by his brother Sir Charles Greſham, Baronet, who married the daughter of Mr Godfrey, and had by her three ſons and five daughters (11). He died in the month of April, 1718, in the fifty-eighth year of his age. Sir Marmaduke Greſham, Baronet, his eldeſt ſon, married Anne, daughter of William Hoſkins, of Barrow-green near Godſtone, in the county of Surry, by whom he left two ſons and a daughter, dying at Bath, January 2d, 1741-2 (12). His eldeſt ſon Sir Charles Greſham is the preſent Baronet, and is poſſeſſed of the ſeats and eſtates of his anceſtors, at Lympſfield and Titſey in Surry, and near Weſterham in Kent. Before we cloſe this note, it will be proper to obſerve, that Charles, the fifth ſon of Sir Marmaduke Greſham, the firſt Baronet, who was bred in Trinity-College, Oxford, upon the reſignation of Mr King, was unanimouſly choſen Rhetoric Profeſſor in Greſham College, Auguſt 20th, 1686, being at that time a perſon in great reputation for his learning and abilities; upon the 30th of November, 1688, he was elected a Fellow of the Royal-Society, and in 1696, he married Mary, the daughter of Dr Godfrey, of Ongar in Eſſex, which obliged him to quit his profeſſorſhip, and in 1699, he withdrew himſelf from the Royal-Society (13). E

Spaniard; Elizabeth, to James Elliot; the name of the youngeſt is not mentioned (s). His ſecond wife was Katherine, the widow of Edward Dormer of Fulham, in the county of Middleſex, Eſq; and daughter to Mr Sampſon, who ſurvived him, and died in the year 1578 (t). Beſides the principal houſe of the Greſhams of Titſey, there ſprang two other families of conſiderable note from this Sir John Greſham, one in Surry, the other in Norfolk (u). His ſecond ſon, John Greſham, of Fulham in Middleſex and Mayfield in Suſſex, married Elizabeth, daughter and heireſs of Edward Dormer of Fulham, by whom he had two ſons who married, and one who died a bachelor. The eldeſt of theſe, Thomas Greſham of Fulham, had for his ſecond wife, Judith, the daughter of Sir William Garrard, by whom he left two ſons; John Greſham ſettled at Albury in Surry, and left no iſſue male (w); and James Greſham, who lived at Haſlemere in Surry, and was ſtiled from his great knowledge of the hiſtory of his country, by way of eminence, the Antiquary (x). We find his name in the liſt of thoſe who were to have been honoured with the order of the Royal Oak, after the Reſtoration, and he at that time had an eſtate of eight hundred pounds a year (y); he married Anne, daughter of Sir Robert More of Loſely in Surry, but left no male iſſue; he died in 1687 at the age of twenty-two (z), Edmund Greſham, the third Son of Sir John, ſettled at Thorp-Market in Norfolk, and having married Joan, the eldeſt daughter of Alderman Hind of London, had by her a ſon and three daughters, and died in 1586 (a). His only ſon was Sir Richard Greſham of Thorp-Market, who married Anne, daughter of Thomas Crofts of Saxmundham in the county of Suffolk, by whom he had a ſon and two daughters (b). Beſides this, there is a more antient family of the Greſhams in Norfolk, ſeated at Wilſingham-Parva, deſcended from William Greſham, Eſq; ſecond ſon of James Greſham of Holt, Eſq; who was the grandfather of Sir Richard Greſham, mentioned in the laſt article, and of Sir John Greſham, of whom we have been ſpeaking (c).

(c) Pedigree of the family.

GRESHAM [Sir THOMAS], an eminent Merchant of London, Agent for King Edward VI. Queen Mary, and Queen Elizabeth, in the Low-Countries, and a glorious benefactor to the public. He was the younger ſon of Sir Richard Greſham, Knight, Alderman, Sheriff, and Lord-Mayor of London, the nephew of Sir John Greſham laſt mentioned, and the younger brother of Sir John Greſham, Knight, who received that honour in Muſſelborough-Field. He was born at London in 1519 (a), and having attained the rudiments of learning under proper maſters, he was removed to Gonville-Hall in Cambridge, where he ſpent ſome years in his ſtudies (b); notwithſtanding which, he reſolved, as trade had been ſo fortunate in the hands of his family to embark therein; for which his father had made proviſion, by binding him apprentice to his uncle Sir John Greſham; in conſequence of which prudent meaſure he was admitted a member of the Mercers Company in 1543 (c). In a ſhort time after this he married his wife Anne, the widow of William Read, of Fulham in the county of Middleſex, Eſq; and the daughter of William Fernley, of Weſtcreting in the county of Suffolk (d). He ſeems to have lived at home, and to have purſued the buſineſs of a Merchant with great diligence during the life of his father, and had very probably a view of ſucceeding him in his employment of managing the King's money affairs at Antwerp, a matter of great conſequence, ſince the time of King Henry the Eighth, whoſe ambition had drawn him into great difficulties both at home and in foreign parts; for here he had been obliged to debaſe his coin, and had run there into great debts, which were heightened by exorbitant uſury as well as by a variety of artifices, which were familiar to the dealers in money in thoſe times (e). It appears, however, that Mr Greſham was diſappointed in his expectations; for, upon the demiſe of his father, Sir William Danſell was appointed the King's Agent at Antwerp, by thoſe who had the direction of public affairs in the minority of Edward the Sixth (f). But his management was ſuch, that the King finding himſelf under great difficulties ſent for him home, in order to enquire more ſtrictly into the nature and amount of his debts; but Sir William thinking Antwerp the ſafer place declined his return (g); and upon this, amongſt other Merchants, Mr Greſham was ſent for to Council, and his opinion aſked about the management of theſe affairs, which he delivered ſo freely and clearly, that a reſolution was immediately taken, without any ſuit of his, to ſend him thither; and he was accordingly ſent in the cloſe of the year 1551, according to our ſtyle as it then ſtood, or in the beginning of the ſucceeding year as we now write (h). He found this a very perplexed and troubleſome buſineſs, and attended with circumſtances equally oppreſſive and diſhonourable. The King owed very large ſums of money to different perſons, for which he not only gave his own ſecurity under the broad ſeal of England, but likewiſe joined that of the city of London; and after doing all this abroad, entered into recognizances to indemnify the city at home (i). The intereſt was very high, ſeldom under ten per cent. ſometimes twelve; beſides which, other great advantages were taken, by varying the exchange, to the great prejudice of the nation, and by conſtraining the King to take jewels or goods at their own prices, to his extreme detriment (k). All theſe obſtacles Mr Greſham had to ſtruggle with, beſides ſome oppoſition the propoſals he made met with from ſome of the Council at home, who it is probable did not clearly conceive his meaning (l). For he ſeems at firſt to have ſought the confidence and good opinion of the uſurers he had to deal with, by following the practice of his predeceſſors, and recommending their goods to a good market (m), at the ſame time that he offered a ſcheme to be ſecretly managed

managed at home for diſcharging the King's debts, and bringing him out of them gradually, without feeling any of thoſe difficulties with which payments had been formerly embarraſſed, and this was by receiving twelve or thirteen-hundred pounds a week from the Exchequer, which Mr Greſham took up daily in bills at Antwerp in his own name, ſo that the remittances were made without ſinking the exchange; and thus in the ſpace of about two years, he diſcharged this monſtrous loan, raiſed the King's credit ſo high, that he might have borrowed whatever ſums he would, and at the ſame time rendered a very great ſervice to the nation (n) [A]. In the courſe of this negotiation, he had frequent occaſion to meddle with political affairs, as well as thoſe immediately committed to his charge, through the application of the Emperor's ſiſter, then Regent in the Low-Countries, as well as of the King his maſter, ſo that he made at leaſt forty journies to and from Court, during the remainder of that ſhort reign (o). It is certain that this ſervice of his was very acceptable to the young Monarch; who, as it appears from the moſt authentic memorials, thoſe under his own hand, looked at leaſt as carefully into theſe matters himſelf, as any of the Privy-Council, and in all probability was the beſt ſupport Mr Greſham had in bringing his wiſe project to bear (p). As a mark of his favour, about three weeks before his death, the King granted him one hundred pounds a year to him and his heirs for ever, promiſing him at the ſame time a more ſuitable reward, adding theſe remarkable words, *You ſhall know that you have ſerved a King* (q). He obtained beſides this in the courſe of that reign, the grant of a houſe of Grey-Friers, in the county of Carmarthen (r); and in the very laſt year of it, the reverſion of Weſtacre, a Priory of Black-Canons, in the county of Norfolk, after the demiſe of Mary, Ducheſs of Richmond, to whom King Henry VIII. had granted it, of the value of about three hundred pounds a year (s). But notwithſtanding his good ſervices, and the loſs of all his furniture coming by ſea from Antwerp, he was removed from his poſt of agent in that city for the Crown, without any reaſon aſſigned (t). Mr Greſham however was not of a diſpoſition to ſit ſtill and ſuffer without ſpeaking, on the contrary, he remonſtrated to the Queen roundly, what he had done for the Crown while worn by her brother, of which ſhe reaped all the advantage; he repreſented the loſſes he had ſuſtained, and hinted the hardſhip he laboured under in being ſhut out from her Royal preſence and favour, who had brought her brother out of his difficulties, while he ſaw ſome careſſed and preferred who had no ſmall hand in bringing him into them (u). At the ſame time he made a tender of his ſervice to the Queen, and deſired her favour with reſpect to a debt that was due to him of four hundred pounds from the Duke of Northumberland. This method though a little unuſal, had a good effect, and he was ſoon after reſtored again to his poſt, in which he remained during the reſt of her reign (w), and towards the cloſe of it was obliged to borrow money in a manner, and upon terms that muſt have been very diſagreeable to him, ſince he was obliged to give fourteen per cent. excluſive of brokerage, and at the ſame time a collateral ſecurity (x). The only favour that it appears he received during this reign, was the grant of an hoſpital at Maſſingham-Parva in Norfolk, which had been united to the priory of Weſtacre, which was in his hands before (y). Queen Elizabeth at her acceſſion found things at home and abroad in a very broken and diſtreſſed condition, which imputing rather to the circumſtances of the times, and the conſequences of her ſiſter's marriage, than to the want either of integrity or ability in her miniſters, ſhe retained as many as it was poſſible of them in her ſervice (z). Amongſt theſe was Mr Greſham, whom ſhe immediately employed in providing and buying up arms, beſtowed upon him the honour of knighthood, and engaged him

[A] *Rendered a very great ſervice to the nation.*] We learn moſt of theſe particulars with great certainty from Mr Greſham's own memorial hereafter mentioned (1). In that he informs us, that at the time he was appointed agent, the King owed two hundred and ſixty thouſand pounds Flemiſh, that the exchange was ſunk ſo low as ſixteen ſhillings Flemiſh for a pound ſterling; that the intereſt was ten per cent. and the loſs by exchange a great deal more, beſides the additional impoſition of jewels and goods, which under ſuch circumſtances could not well be avoided. But by the method that Mr Greſham adviſed, and in conſequence of his advice, the Duke of Northumberland ordered to be purſued, and that twelve hundred and twenty pounds ſhould be paid to his aſſigns every week (2); the remittances were made with ſo much care and addreſs, that the exchange was raiſed to twenty, and even to two and twenty ſhillings, and at theſe rates the King's debts were diſcharged, by which one hundred thouſand pounds were ſaved to the nation. This wiſe practice of his was alſo felt in the price of commodities, by which he computes the nation could not profit leſs than four hundred thouſand pounds. Another advantage was, that the money which had been carried out, was brought back again. It raiſed the King's credit highly abroad, ſo that from being undervalued and treated with an air of diffidence and contempt, which the bankers at Antwerp would uſe even to their own ſovereign, he came to be reſpected in the higheſt degree, ſo that he might have borrowed what ſums he pleaſed. In the performance of theſe ſervices, Mr Greſham often ſtretched his own credit, and kept up the exchange at his proper riſk, by which he loſt two or three hundred pounds at a time more than once; and on a particular occaſion took up fifty thouſand pounds for the King's ſervice. If it had not been for this management, the debt might have been continued and growing, and would have ſwelled to fifteen hundred thouſand pounds by the time in which he made this repreſentation. But after all, it was the young King's ſcheme of retrenching in his expences, and taking various methods, ſuch as keeping the lead in his own hands, by Mr Greſham's advice; ſelling ſuperfluous church plate, putting penal laws in force, and commuting all felonies for money, &c. which arts were of Northumberland's deviſing, that enabled him to comply punctually with thoſe weekly payments, as this was the grand inſtrument for removing this incumbrance (3). One or two particulars more we muſt not omit, the merchants of the Hanſe or, as called here, of the Steel-yard, for ſome miſconduct, received a ſevere check, and this was ſo acceptable to the merchants of the Staple, that they lent King Edward forty thouſand pounds (4) at one time, which ſeems to have been Mr Greſham's firſt experiment of ſerving the crown in the way of voluntary loans by it's own ſubjects, and from the facility with which this was done, Mr Greſham entertained hopes of all that he afterwards accompliſhed (5).

him to borrow a ſum of money for her at Antwerp, upon the ſecurity of the city of London, for obtaining of which, ſhe directed her letters to the Lord-Mayor and Aldermen, and thereupon her Majeſty's requeſt was very readily granted (*a*). The conduct of Sir Thomas Greſham in this and in other points of the like nature, ſeems to have been ſo acceptable to the Queen his miſtreſs, who was an excellent judge of men's abilities, and knew how to employ them in the way moſt to her advantage; that it is probable ſhe advanced him about this time to the higheſt charge of which a perſon in his ſtation was capable, by conſtituting him her merchant (*b*). That he was ſo afterwards, is on all hands acknowledged (*c*), and that he became ſo early, appears extremely probable for ſeveral reaſons; it was about this time that he built his ſpacious and magnificent houſe in Biſhopſgate-ſtreet, which is ſtill remaining, which as a judicious writer well obſerves, he muſt have been moved to erect, by his thinking it neceſſary to place himſelf in a ſituation moſt convenient and ſuitable to his character, which ſhews that he muſt have altered his condition, and have acquired a ſettlement at home (*d*). Accordingly in 1562, we find that Sir Thomas Smith, who was ſent into France to execute a commiſſion of great importance on the part of the Queen, had his credit upon him, which makes it highly likely that he was then the Queen's merchant (*e*). It is alſo certain that the care of borrowing money abroad, was committed to William Herle, as appears by his inſtructions dated Auguſt 16th, in the year laſt mentioned, upon the ſecurity of the city of London as before (*f*). In 1563, the Ducheſs of Parma then Regent for King Philip in the Low-Countries, under pretence of the plague which then raged in England, prohibited the bringing of Engliſh commodities to Antwerp, though the real cauſe of that ſtrange ſtep was an act of parliament paſſed a ſmall time before, for prohibiting pins, knives, hats, girdles, ribbons, and other ſmall manufactures, from being brought into this kingdom, our own people by the encouragement of ſome eminent Engliſh merchants, and amongſt them Sir Thomas Greſham, having lately ſet them up (*g*). But it being quickly found that the inhabitants of Antwerp ſuffered more by this prohibition than the ſubjects of England; a negotiation was ſet on foot the next year for reſtoring things to their former ſtate, in which, as Sir Thomas Greſham had no ſhare, it amounts to a full proof, that except in extraordinary caſes his agency in thoſe parts was at an end (*h*). In 1564, he loſt, to his great affliction his only ſon Richard Greſham, whoſe corps was interred in the church at St Helen's (*i*), and Sir Thomas, like a wiſe man, to alleviate the ſenſe of his private misfortunes, elevated his thoughts beyond the narrow ſphere of a family, and reſolved to place his future ſatisfaction in things of a public nature. This in all probability induced him to revive that glorious deſign which firſt entered into the mind of Sir Richard Greſham his father, of building a Burſe or public edifice in which the merchants might aſſemble, without being expoſed to the injuries of wind and weather, as in Lombard-ſtreet where they had hitherto met (*k*). He therefore made his intentions known to the city, that if they would procure him a proper piece of ground at their charge, he would erect ſuch a ſtructure at his own expence (*l*), which offer was thankfully accepted and punctually performed [*B*]. Sir Thomas had ſcarce entered upon the execution of this grand

[*B*] *Which offer was thankfully accepted, and punctually performed.*] The beſt account we have of this matter is from John Stowe, and indeed we need not wiſh a better; for in matters relating to this capital, and which happened in his own time, none could be more diligent in obſerving, or more faithful in recording. His words are theſe (6): 'In the year 1566, certain 'houſes upon Cornhill, and the like upon the back 'there of in the ward of Broad-ſtreet with three allies; 'the firſt called Swan alley, opening into Cornhill; 'the ſecond called New-alley, paſſing through out of 'Cornhill into Broad-ſtreet ward, over againſt St Bar-'tilmew-lane; the third called St Chriſtopher's-alley, 'opening into Broad-ſtreet ward, and into St Chriſto-'pher's pariſh, containing in all fourſcore houſeholds, 'were firſt purchaſed by the citizens of London, for 'more than three thouſand five hundred thirty-two 'pounds, and were ſold for four hundred ſeventy eight 'pounds, to ſuch perſons as ſhould take them down, 'and carry the ſtuff from thence; alſo the ground or 'plot was made plain at the charges of the city, and 'then poſſeſſion thereof was by certain aldermen in the 'name of the whole citizens, given to Sir Thomas 'Greſham, Knight, agent to the Queen's highneſs, 'thereupon to build a Burſe or place for merchants to 'aſſemble in at his own proper charges; and he, on 'the ſeventh of June, laying the firſt ſtone of the foun-'dation, being brick, accompanied with ſome alder-'men, every of them laid a piece of gold, which the 'workmen took up, and forthwith followed upon the 'ſame with ſuch diligence, that by the month of No-'vember in the year 1567, the ſame was covered with 'ſlate, and ſhortly after fully finiſhed. This noble 'building was a long ſquare with walks on every ſide, 'ſupported by pillars of marble, after the manner of 'the famous burſe at Antwerp, and not at all inferior 'to it in any reſpect, either of utility or magnificence; 'the upper part of this edifice was divided into ſhops, 'which were let out by Sir Thomas at a yearly rent. 'The ſize of theſe ſhops was ſeven feet and a half 'long, and five feet broad, which being ſo ſmall, it 'often happened that the ſame perſon rented more 'than one of them. And there were likewiſe at firſt, 'other ſhops fitted up in vaults below, but theſe being 'found very inconvenient by reaſon of their dampneſs 'and want of light, the vaults were ſoon let out to 'other uſes. The upper ſhops were in all one hundred 'and twenty, twenty-five on the eaſt ſide, and twenty-'five on the weſt, on the ſouth ſide thirty-five and an 'half and thirty four and an half on the north, which 'when the others were laid aſide, paid one with ano-'ther a rent of four pounds ten ſhillings a year upon 'leaſes of twenty one years. The perſons placed in 'them by Sir Thomas, were of different trades, chiefly 'young men of ſmall fortunes but induſtrious, who by 'their diligence brought great buſineſs to their ſhops, 'and employed ſome thouſands of poor people in 'working our manufactures.' Dr Ward has cauſed a very fine print of this ſtructure to be inſerted in his work, engraved from a draught made the very year it was finiſhed, on which was the following inſcription (7). *Porticum hanc* Londinenſem, *quam tanto artificio triennii ſpatio hic abſolutam vides, a fundamentis aere ſuo extruendam curavit*; Thomas Greſhamus *eques, ad Regiæ urbis ornamentum, et uſum publicum.* Anno 1566, *die* 7, *menſis* Junii But this glorious ornament of the capital of the Britiſh empire, could not reſiſt the powerful flames of that dreadful conflagration in 1666, yet was ſpeedily rebuilt by the city and the Mercers company, with a magnificence worthy of their truſt, of the public uſe for which it was deſigned, and the place in which it ſtands. We are told, and that from good information,

(6) Stowe's Survey of London, edit. 1598. p. 150.

(7) Ward's Lives of Greſham Profeſſors, p. 12.

grand deſign, when the Queen's affairs called him abroad. For in the ſame year 1566, he was ſent over to Antwerp to take up money for her Majeſty, which he did, to the ſum of fourteen thouſand ſix hundred ſixty-ſeven pounds ſix ſhillings and eight pence Flemiſh, payable at Antwerp the twentieth of February following. And there was then prolonged from the 20th of Auguſt, the ſum of thirty-four thouſand three hundred eighty-five pounds thirteen ſhillings and four pence Flemiſh, due likewiſe from the Queen, and payable the twentieth of February. Theſe ſums amounted together to forty-nine thouſand and fifty-three pounds. And in December the ſame year, there was another debt of the Queen's prolonged, being the ſum of eight thouſand five hundred thirty-two pounds Flemiſh, for ſix months (*m*). This muſt have been a matter of neceſſity, and in a particular manner convenient to the Queen's ſervice, who wanted to make uſe of that money abroad; for otherwiſe Sir Thomas Greſham would hardly have been employed therein, ſince it was directly againſt his own principle, that it was more for the Queen's honour, and at the ſame time much more for her advantage, to borrow of her own ſubjects than of foreigners, and upon which principle he had actually procured a loan three years before (*n*). It is not however either impoſſible or improbable, that by ſtating and prolonging theſe debts in the manner before mentioned, he had in view the gaining time to ſettle ſome means for paying and diſcharging them, as a neceſſary foundation for the Queen's borrowing upon eaſy terms at home for the future (*o*). His great building in Cornhill, was proſecuted with ſuch diligence, that in the month of November 1567, it was covered with ſlate, and ſoon after was in a manner finiſhed (*p*). On the thirteenth of September 1568, Cardinal Chaſtillion, who retired out of France for the ſafety of his perſon, landed at Tower-wharf, where, by a ſecret order from the Queen, he was received by Sir Thomas Greſham, and conducted to his own houſe with the Biſhop of Arles, who came over in his company, and the next day the Cardinal in his ſhort cloak and rapier by his ſide, rode with Sir Thomas and other perſons of diſtinction to the French church, to ſhew his approbation of the Proteſtant Religion, from thence to the Burſe as it was then called in Cornhill, then to St Paul's church, and ſo back again to Sir Thomas Greſham's houſe in Biſhopſgate-ſtreet to dinner (*q*). On the 20th of the ſame month, the Cardinal was conducted with all poſſible marks of honour to Court, where he had an audience of the Queen, and was very graciouſly received, which induced him to remain in England as long as he lived (*r*) [*C*]. There appears to have been more than ordinary notice taken of this foreigner, and we are aſſured that he made a very grateful return; for in about

formation, that the expence of this moſt ſuperb ſtructure, fell little, if at all, ſhort of four-ſcore thouſand pounds, which is a high and glorious inſtance of the wealth and ſpirit of the citizens of London.

[*C*] *As long as he lived.*] As we have been obliged to mention the coming over of this prelate, and ſome circumſtances of that honourable reception which he met with here, it may probably gratify the reader's curioſity to know who he was, why he came hither, and how he came to end his days by poiſon at Canterbury, a crime to which this country has been in a great meaſure an utter ſtranger (8). His name was Odet de Chatillon, a man of great quality by birth, and brother to Admiral Coligni, bred to the Church in his youth, and preferred by the influence of his family to the Biſhoprick of Beauvais and to a Cardinal's hat (9). He became notwithſtanding all this a Proteſtant, and was once very near loſing his life by a tumult of the people, on account of his celebrating the Communion in his own palace upon Eaſter-day, inſtead of being preſent at Maſs in his own cathedral as they expected (10). He was a man of a very high ſpirit, and being provoked by ſome aſperſions, as if he meant to trim between both parties, and to cloſe with that which happened to prevail, he laid aſide his robes, wore a ſecular dreſs, and took the title of Count de Beauvais, that all the world might ſee he was not aſhamed to own himſelf a Proteſtant (11). However it is reported, that being informed the Pope had excommunicated and deprived him of his dignity, he reſumed his Cardinal's habit, and was actually married in it to Elizabeth de Loſe (12). Afterwards perceiving his party betrayed in France, and his life in danger, he retired to the coaſts of Normandy; and at length finding no other way to ſecure himſelf from his enemies, diſguiſed as a ſailor embarked for England (13). How he was received here, and what important ſervice he rendered the Queen, the reader has ſeen in the text (14); but it is alſo very certain, that he was highly zealous in promoting the marriage between Monſieur and her Majeſty (15), which was equally acceptable to the Proteſtants in France, and to the Papiſts in England, both being perſuaded they ſhould have found their advantage in it (16). We are told in a certain ſecret hiſtory, that upon this occaſion, and out of zeal for this match, the Cardinal let the Queen know, the Earl of Leiceſter gave out that ſhe was contracted to him, which leſſened her reputation abroad, and reſtrained the addreſſes of foreign princes, and to this his death is aſcribed (17). It happened at Canterbury, in 1570, as he was returning to France on the invitation of his brother the Admiral, then reconciled to the Court; and it does not appear that there was much ſuſpicion of poiſon at that time. But two years afterwards a domeſtic of his being executed at Rochelle for another offence, he voluntarily confeſſed that he had poiſoned his maſter, with circumſtances that put the matter out of doubt (18). If the reader ſhould ſuppoſe that the Queen was never in earneſt as to this match, and that her miniſtry were privy to this, and conſequently the Earl of Leiceſter, under no temptations to commit ſuch a crime upon that account, he may conſult the authorities referred to in the margin, which may incline him to ſuſpend his judgment in that particular (19). On the other hand, if it ſhould be ſuppoſed more reaſonable to believe the powerful enemies of the Cardinal in France, took this method to be rid of him; it is but doing juſtice to obſerve, that they had provided another method, which was that of the maſſacre at Paris, which followed immediately after, and in which his brother the Admiral was involved, as he probably would have been, if he had not died in England (20). Yet having entered thus far into this matter, we muſt alſo let the reader know, that amongſt the libels publiſhed and diſperſed by the partizans of the court of Spain, in the Low-Countries, there was one in which it was objected, that Queen Elizabeth's friendſhip was fatal to all who relied upon it, and the names of ten or twelve noble perſons are mentioned to prove this, and amongſt theſe Cardinal Chaſtillion (21). An anſwer was penned to this by an eminent Miniſter of State, which is yet preſerved, and therein it is aſſerted, that though the cardinal was poiſoned in England, yet it was by ſubornation and practice of ſome in France, as was confeſſed by the criminal when taken and executed at Rochelle; which it is not eaſy to conceive would have been alledged, if the man's confeſſion had not been a thing notorious (22). It muſt be admitted that this is far from being a clear account of the matter; but if it be a true one, it is all that we pretended to give, and the moſt inquiſitive reader perhaps will ſcarce be able to find a better (23).

[*D*] *Who*

about ſix weeks time after his arrival, a large ſhip of Biſcay, together with four pinnaces, which the Spaniards call Aſſabres, were chaſed into the harbour of Plymouth, where they received protection (s). There was on board the large ſhip, a very conſiderable ſum in ready money, amounting to above two hundred thouſand piſtolettes, which as the money of the King of Spain, was demanded by his embaſſador Don Giraldo Deſpes, who being informed that it was brought on ſhore for ſecurity, became very uneaſy about it (t); the Cardinal Chaſtillion in the mean time informed the Queen, that this money did not belong to his Catholic Majeſty, but was in truth the property of ſome Genoeſe merchants, from whom the King of Spain had taken it by force, and meant to ſend it to the Duke of Alva in the Low-Countries, where he was in great want of money. Secretary Cecil therefore being apprized by Sir Thomas Greſham, of the great benefit that would reſult to the Queen by cauſing this money to be coined, adviſed her Majeſty to take this bold ſtep, and to acquaint the Spaniſh miniſter, that ſhe would be anſwerable to thoſe whoſe money it really was, give them ſecurity for it, and a compenſation for the loan of it, or would reſtore it when it ſhould be made appear that it actually belonged to the King of Spain (u). Proper ſecurity was accordingly given, the conſent of the Genoeſe obtained, and Sir Thomas Greſham, to countenance a ſtep which he took to be ſo much for the nation's ſervice, ſent to the Tower five ſacks of Spaniſh royals, to be coined for the Queen's uſe, each ſack weighing nine hundred ſeventy-two pounds eleven ounces (w): this bold but very judicious proceeding was attended with very ſurprizing conſequences at home and abroad, for the Duke of Alva was no ſooner acquainted with it, than he cauſed the Engliſh merchants at Antwerp to be arreſted, and all their effects to be ſeized; to retaliate which, the Queen had recourſe to the ſame extremities here in reſpect to the Spaniards, notwithſtanding there wanted not ſome amongſt her miniſters, who under the ſpecious pretence of a due regard to equity and the laws of nations, were for reſtoring the money, and throwing the whole blame upon Sir William Cecil, who, very narrowly eſcaped (x) [D]. The then ſituation of affairs might well affect even ſo great and grave a miniſter as Cecil, in a very high degree; he knew that the publick demands would require a ſupply of money, beyond the produce of the Queen's ordinary revenue; he likewiſe knew that the aſſiſtance uſually procured from Antwerp, was no longer to be expected; and he was not the leſs diſturbed at theſe conſiderations, from his being thoroughly perſwaded, that if any miniſter accident fell out, it would be wholly aſcribed to his counſels (y). Being under this dilemma he ſent for Sir Thomas Greſham, and communicated to him theſe difficulties which he laboured to remove, by ſhewing him, that if ſhe punctually adhered to her promiſes, the Queen's neceſſities might as eaſily and with much greater credit, be ſupplied at London by her own merchants, than at Antwerp by foreigners, who could have no view in any thing they did but their private advantage (z). To this many objections were made by that wary miniſter, to which Sir Thomas Greſham gave at leaſt probable ſolutions, as appears from a very curious account of this conference, which is ſtill extant, and which will remain a laſting and unqueſtionable monument of this gentleman's wonderful abilities, and honeſt exertion of them for the ſervice of his country (a) [E]. But when he had carried his point with the

[D] *Who very narrowly eſcaped.*] In another part of this work, we have repreſented this advice as proceeding entirely from Sir William Cecil, and expoſing him to more danger than almoſt any other ſtep in the courſe of his long adminiſtration; we mean not to contradict this fact here, but to explain it (24). The Queen took the advice of Secretary Cecil; Secretary Cecil might well take the advice in things that fell within the ſphere of his knowledge, of Sir Thomas Greſham. It is very probable that Cardinal Chaſtillon might acquaint his friend Sir Thomas, that this money did not belong to the King of Spain, but to the merchants of Genoa. This we ſay is very probable, but that he perſwaded ſome of the Genoeſe to conſent that it ſhould be coined, and that he ſent new Spaniſh money of his own to be coined likewiſe is very certain; but it is not quite ſo probable that he knew Secretary Cecil's reaſons for perſwading the Queen to ſtop that money, which were chiefly three, and becauſe they are not clearly ſet down elſewhere, we ſhall expreſs them here (25). In the firſt place, ſome of the greateſt perſons in England and of the Queen's council, ſuch as the Lord High-Treaſurer (Winchester), the Duke of Norfolk, the Earls of Northumberland, Arundel, and Leiſter, were inclined to ſecure their own greatneſs, by having an heir apparent to the Crown, as much in their intereſt as the reigning Queen, which induced them to think of procuring the Queen of Scot's right to be acknowledged, and to keep fair with the King of Spain, to whom moſt of theſe great men were under perſonal obligations, which was quite contrary to Cecil's ſcheme of politics, and to his miſtreſs's inclinations. The ſecond was, that the Duke of Alva, at this very time had his agents in England to ſurvey the coaſts, examine the harbours, and give him all other lights for facilitating an invaſion whenever it ſhould be neceſſary. Theſe two motives were ſufficient to determine the Secretary to detain this money, in order to diſappoint his deſigns; and the third reaſon which induced him to follow Greſham's advice was, the foreſight he had of what the conſequences muſt be of this ſtep when taken, amongſt which there was none more apparent than this, that it would put it out of the Queen's power to borrow any more money at Antwerp; which conſideration might have hindered this proceeding, notwithſtanding the two former reaſons, if the borrowing the ſilver and coining it, had not removed this objection, with all which no doubt he acquainted the Queen, who for that reaſon remained firm to him, and delivered him from thoſe who would otherwiſe have taken occaſion from hence to deſtroy him (26). We find that there never was any miniſter more diligent, more ſollicitous in his enquiries into the true intereſts of this nation, with reſpect to manufactures, foreign commerce, coin, exchanges, eſtabliſhing new companies, and other things of the like nature than Sir William Cecil, afterwards Baron of Burleigh, and in making himſelf maſter of theſe points, which he did to a great degree; there is no doubt, that he received a great part of his information from Sir Thomas Greſham, whoſe merit in this reſpect, as it was very great, ſo it ought to be known to poſterity, which is all that is here intended (27).

[E] *For the ſervice of his country.*] The paſſage referred to in the text is ſomewhat long, and the language none of the beſt; but notwithſtanding this, it is clear, curious, and to the purpoſe. Beſides it is the beſt juſtification that we can offer for what is advanced in the foregoing note, *and therefore* we cannot but recommend it to the reader's ſerious peruſal (28). 'Secretary Cecil, ſays John Stowe, who then managed 'the

the Secretary, and had procured leave to propoſe the intended loan to the Merchant-Adventurers, he found himſelf not a little deceived in the event. For they, inſtead of debating this matter with that ſerioufneſs and ſecrecy a thing of ſuch conſequence required, referred it for their own ſecurity probably to a general aſſembly, and the buſineſs being agitated by the confuſion incident to a common-hall, was with little conſideration and leſs decency rejected. Sir Thomas Greſham immediately applied himſelf to the Secretary, and propoſed a means of getting over this difficulty, which was by procuring a letter from the Privy-Council to that potent Company of Merchants, repreſenting the matter to them, and the miſtake of which they had been guilty, both roundly and rationally, as the reader may ſee at the bottom of the page (*b*) [*F*]. This had it's effects, for ſeveral aldermen

(*b*) Stowe's Survey, b. i. p. 286.

' the Exchequer, feared that the merchants ſhould not ' have money enough to carry on the trade, as they ' would have had if all were open with Antwerp. And ' the Queen owing much money to the merchants and ' to her creditors abroad, ſhe intended out of the cuſtoms of cloth to have repaid them, which ſhe feared ' therefore would fall ſhort, the trade being removed ' to a new place. Theſe doubts the Secretary imparted to Sir Thomas Greſham; who knowing well ' the ſtate of trade and of the merchants, told the Secretary, that, in his opinion, he needed not to make ' any doubt of that ſeeming difficulty, viz. of the ' Queen's payment of her creditors, if ſhe ſaw her merchants well paid in London their firſt payment, which ' was half of her debt to them For by that time the ' other money ſhould be payable here to her ſaid merchants, they ſhould have both plenty of money at ' Hamburgh and here He aſſured him the goods that ' our merchants had ſhipped from Hamburgh hither, ' were well worth one hundred thouſand pounds and ' better. And the ſhipping that they made now hence ' with our commodities, was richly worth two hundred ' thouſand pounds and better. For that there would ' be above thirty thouſand pounds worth of cloths, ' the cuſtoms whereof would be worth to the Queen, ' at the leaſt ten thouſand pounds, which would diſcharge, he ſaid, that debt, if the Queen pleaſed. ' And whereas the Secretary's greateſt care was, that our ' merchants ſhould not have money enough for to buy ' up our commodities; Greſham told him, he needed ' not doubt of it, conſidering the great vent they had at ' Hamburgh already, and were like to have. Therefore he humbly beſeeched the Secretary, for the ſtay ' and advancing of the Queen's credit, that this ' ſmall payment agreed upon already at Hamburgh, ' might be paid, conſidering that he had written before to the ſaid creditors, that they ſhould have a ' payment made there now this Auguſt; which payment he ſaid, would not a little advance her Highneſs's honour and credit. And how much her Highneſs's credit had ſtood her in ſtead beyond the ſeas for ' ready money, it was now too tedious and long a matter to trouble him withal. But that if he were able ' to perſuade the Queen's Majeſty, and him the Secretary, he would have that matter above all other ' things cared for, aſſuring him that he did know for ' certain, the Duke d'Alva was more troubled with the ' Queen's great credit, and with the vent of her commodities at Hamburgh, than he was with any thing ' elſe, and quaked for fear, as Greſham expreſſed it. ' Which, as he ſaid, was one of the chieſeſt things that ' let and hindered, that the Duke could not come by ' the tenth penny that he then demanded for the ſale ' of all goods any kind of way in the Low-Countries, ' which Greſham believed would be his utter undoing. ' He adviſed therefore, that the Queen would in this ' time uſe no ſtrangers, but her own ſubjects, whereby ' he and all other Princes might ſee what a Prince of ' power ſhe was. And by this means there was no ' doubt but that her Highneſs ſhould cauſe the Duke of ' Alva to know himſelf, and to make that end with ' the Low-Countries, that her Majeſty would herſelf, ' what bruit ſoever was there ſpread abroad to the contrary. And ſeeing he was entered ſo far, as he proceeded with the Secretary concerning the Queen's ' credit beyond the ſeas, wherein he had travailed this ' twenty years; he added, that by experience, in ' uſing our own merchants, he found great honour accrued to the Prince, and alſo great profit to the merchants and to the whole realm, whatſoever ſome of ' the merchants ſaid to the contrary. For when our ' Prince ought her own mere merchants ſixty or eighty ' thouſand pounds, then they knew themſelves, and ' were daily ready to ſerve as good, cheap as ſtran-

' gers did, which he would wiſh again in ſuch time ' of extremity to be uſed, for that he knew our mer' chants were able to do it, becauſe the debt is divided ' into many men's hands, and by no means can hinder ' them having intereſt.' This homely detail of a private conference between the Queen's great miniſter and Sir Thomas Greſham, does equal credit to both their memories; it ſhews that the miniſter, though as able a man as any of that time, was very far from having a ſelf-ſufficient conceit of his own abilities, and as far from placing an implicit confidence in the perſon he conſulted. He knew he wanted information, and he knew where he might ſeek it, but he likewiſe knew that it was fit to ſift it; and which is ſtill more than all the reſt, after he had ſought and ſo ſifted, he could be ſteady in putting the counſel he had received and approved in execution (29). It ſhews that the merchant was far from being mercenary, or from ſeeking to add to his own wealth, without conſidering from whence that addition muſt come. He knew how to conſult his private intereſt upon proper occaſions, and he knew when the intereſt of the public ſo required, that it ought to give way. In fine, it ſhews that both the miniſter and the merchant acted in this great affair from a principle of public ſpirit, and whenever we diſcover this, we may admire and applaud, but we can never wonder at the great things which ſuch men do. Public ſpirit is the Philoſopher's-ſtone, in matters of ſtate, the ground upon which, if a political Archimedes will ſtand, he may move the world.

(29) See the article of CECIL [WILLIAM].

[*F*] *At the bottom of the page.*] We have the account of this tranſaction alſo from the ſame authority, and that the reader may form a juſt notion of it, it is requiſite to give it likewiſe in his own words (30).

(30) Stowe's Survey of London, edit. 1720, b. i. p. 287.

' But this refuſal the Queen's council reſented much, ' and cauſed the Secretary to ſend a letter to the mer' chants, importing how this offer of the Queen's was ' a matter of great grace and favour, not much uſed ' before this time by any Prince, and therefore in right ' to have been very thankfully received. That this ' practice of theirs looked as though they were utterly ' careleſs of the Queen's honour, to make a hall mat' ter of it: and undiſcreetly deviſed, contrary to all ' former uſage, to make an open queſtion in a com' mon hall, with a peremptory refuſal by holding up ' of their hands, without firſt giving a probable cauſe ' of their ſo doing: a uſage unmeet for the Prince's ' cauſe: and the good offer of her Majeſty generally ' rejected, not only by the youth whom they the el' ders were commonly wont to blame to the Council for ' all diſorders in their aſſemblies, but by themſelves alſo ' the heads. The Council added, that they muſt not ' think that ſuch a dealing would be paſt over, as pre' chance as they had thought. But before they meant to ' diſcloſe the ſame to the Queen, they thought good to ' impart thus much unto them. Not that they cared ' for their payment of any money there (at Hamburgh) ' for her Majeſty; but that they (the Council) would ' firſt know how they could anſwer the ſame: and ' then they would proceed to ſuch remedy, as ſhould ' ſeem meet to them, and give them cauſe hereafter to ' to think that they could, and muſt, for her Majeſty, ' be anſwerable to all manner of perſons, according as ' they ſhould deſerve well or ill in the ſervice of her ' Majeſty and the realm. Finally, that the matter ' was ſuch, that they could not overpaſs, without im' parting to them, either to lay before them their ' great overſight, or to require for diminution of their ' conceit againſt them, ſome declaration of their doings ' to be otherwiſe than they appeared: where hereto' fore they had many times dutifully made payment of ' ſums of money for her Majeſty, on the other ſide of ' the ſeas: which had alſo been readily and juſtly re' paid them. And ſo doing, they did but the duty of ' honeſt

men and eminent merchants having duly weighed what was aſked, as well as what the conſequences might be of their refuſal, conſented in the months of November and December to lend her Majeſty ſeveral ſums of money, to the amount in the whole of ſixteen thouſand pounds for ſix months, at the rate of ſix per cent (c). For theſe ſums the Queen gave them reſpectively ſeparate bonds, and likewiſe accuſtomed bonds to diſcharge them of the ſtatute of uſury. When this term was expired, the money was continued for ſix months more, paying ſix per cent. again and brokerage, with which all parties were well ſatisfied (d). There is good reaſon to believe that the Queen did not meaſure the importance of this ſervice by the ſums borrowed, but by the facility of the method, and the conſequences with which it might be probably attended; and of this ſhe gave as clear and conſiſtent evidence as thoſe who had rendered her this ſervice could deſire (e). For on the twenty third of January 1570, the Queen attended by her nobility came from Somerſet-houſe, and entering the city by Temple-Bar, paſſed through Fleet-ſtreet, Cheapſide, and ſo by the North ſide of the Burſe, to Sir Thomas Greſham's houſe, in Biſhopſgate-ſtreet, where ſhe dined. After dinner her Majeſty returning through Cornhill, entered the Burſe on the South ſide, and after ſhe had viewed every part thereof above ground, eſpecially the pawn, which was richly furniſhed with all ſorts of the fineſt goods in the city, ſhe cauſed the ſame Burſe by a herald and trumpet to be proclaimed the Royal-Exchange, and ſo to be called from thenceforth and not otherwiſe (f). We uſe here the words of honeſt John Stowe, but Mr Camden has more elegantly expreſſed it in his Annals (g). The deſign of this was to ſhew, that the ſtructure Sir Thomas Greſham had erected, was to ſupply the place of the change at Antwerp, to be thence forward the centre of commerce, the ſeat of mercantile intercourſe, where all that had been formerly done by the Lombards, was to be tranſacted between our own ſubjects and ſtrangers, ſignifying that the trade of England was now able to go alone, to ſupport itſelf and ſupply the Crown, and that this noble edifice was therefore properly entitled, *Excambium Regium*, i. e. THE ROYAL-EXCHANGE (h). After this mark of favour to her merchant, ſhe in a few days gave the like token of her grateful approbation of her miniſter's ſervices, by creating Sir William Cecil, Baron of Burleigh, and expreſſing her reaſons in the preamble to his patent, which events we have learned from the judicious Camden, to conjoin as ſpringing from the ſame cauſe, the Queen's perſuaſion, that ſhe was now an independent Princeſs, and to expect her ſupport only from Divine-Providence and the loyal affections of her ſubjects (i). Theſe are the genuine honours of thoſe two great men, and if with reſpect to Sir Thomas Greſham, they have, to pleaſe vulgar fancies, received ſome ſtrokes of fabulous varniſh, which cannot be maintained by authentic hiſtory, it is very excuſable [G]. In 1572, the Queen being

'honeſt ſubjects. And yet were always both thanked 'and favoured for the ſame.' There were indeed ſome circumſtances that did not a little exaggerate this conduct of theirs. They were ſo far from giving Sir Thomas Greſham a denial, that though they ſhifted and doubled a little, yet at length they ſeemed ſo well diſpoſed, that he communicated to them from the Queen, how ſhe intended by ſome previous payments to aſſiſt them in rendering her this ſervice. They had never acquainted Sir Thomas with thoſe difficulties they apprehended in the execution of this ſcheme, in order to their being removed, and that without making this experiment, they had preſumed to communicate a propoſal of this high nature to their whole body, from whom it ought to have been concealed, if it could not have been brought to bear. On the other hand, certain circumſtances might be alledged on their behalf; the method of managing this buſineſs was entirely new, and conſequently the leſs underſtood by them. They had but juſt opened a correſpondence at Hamburgh, and they were very apprehenſive of giving the inhabitants any diſtaſte or diſtruſt, and the ſtate of publick affairs had not been ſo dark ſince the opening of the Queen's reign; a foreign war being apprehended; a rebellion broke out in the North; and the Queen's miniſters at variance amongſt themſelves (31). We may from hence gather the reaſons why ſo ſmall a loan, after all this ſtir, was ſo kindly accepted; Sir Thomas Greſham knew that all beginnings are difficult, and that in the hands of able men, even great deſigns have little of difficulty in them, except in their beginnings.

(31) Camden, Stowe, Strype.

[G] *It is very excuſable.*] There is a traditionary report, that the timber of which this fabric was built, was firſt framed and made in every reſpect fit to be ſet up, at Battiſford, near Ipſwich in Suffolk; this is referred to in an hiſtorical Play, conſiſting of two parts, the former of which repreſents the troubles of the Princeſs Elizabeth, under the reign of her ſiſter Queen Mary; and the latter, the building of the Exchange, and the famous victory over the Spaniſh fleet in 1588, where Sir Thomas is introduced ſpeaking to the Sword-Bearer, in the following manner (32).

(32) London, printed for Nat. Butler, 1623, 4to.

Tell them I wait here in the Mayor's Court;
Beneath, in the Sheriff's Court *my workmen wait,*
In number full an hundred; *my* frame *is ready,*
All only ſtay their pleaſure, *then out of hand,*
Up goes my work, *a* credit *to the* land.

This was well enough calculated to pleaſe a vulgar audience, and we may rely upon it was invented for that purpoſe. It would however be a very difficult if not impracticable taſk, to aſſign the exact time when it was firſt opened for the uſe of the merchants. There is indeed a very clear account in Stowe's Annals (33); but then the dates are ſtrangely inconſiſtent, he fixes the laying the firſt ſtone the ſeventh of June 1566, and ſays, it was opened in November the next year, retaining it's title of the Burſe till the Queen came thither the January following. But in the margin he places that January in the thirteenth of her reign, and in the year 1571, beginning the year with the firſt of that month. In another work of his, it is ſaid to have been ſlated only in 1567, and finiſhed ſooner. But the moſt probable and authentic account of the matter, is in the Latin inſcription on the draught before cited, where it is expreſsly aſſerted to have been three years in building, and conſequently it was not finiſhed till the ſummer of 1569, or it may be not till November in that year, and then putting 1569, for 1567, in Stowe's account of this matter in his Annals, and rectifying the laſt date in the text, by that in the margin, the whole will be very conſiſtent and probable. Yet there is reaſon to believe that the merchants met there before the ſhops and every thing in it was entirely finiſhed, ſince Sir Thomas Greſham carried Cardinal Chatillon thither in 1568. As to the change of it's name from the *Burſe of London* to the *Royal Exchange*, upon Queen Elizabeth's viſit to Sir Thomas Greſham, it is as well aſcertained as any hiſtorical fact can be (34). But in reſpect to Sir Thomas Greſham's drinking up a pearl of great price diſſolved in wine to the Queen's health at this feaſt, we may well regard it as another ſtroke of fanciful tradition, which is thus expreſſed in the play before mentioned.

(33) Stowe's Annals, p. 668.

(34) Stowe, Holinſhed, Camden.

Here

being determined to make a progreſs in the ſummer, judged it expedient not to leave the capital of her dominions and her ſeat of empire, without ſome extraordinary mark of her attention and concern, and therefore ſhe appointed a committee of nine moſt reſpectable perſons, of whom Sir Thomas Greſham was one, to confer and conſult with the ordinary magiſtrates at ſtated times; and of this her royal pleaſure (*k*), ſhe gave notice to Sir Lionel Ducket, then Lord-Mayor, in a letter worthy the reader's peruſal [*H*]. This method

(*k*) Stowe's Survey, b. v. p. 434, 435.

Here fifteen hundred *pound at one clap goes,*
Inſtead of ſugar, Greſham *drinks this* pearl,
Unto his Queen and Miſtreſs: pledge it Lords.

We have another circumſtance from a panegyric on this great man by one of his own profeſſors, relating to a great ſervice he did to the Proteſtant cauſe by a loan which he procured at Antwerp on his own credit, which at that time diſabled the Spaniards from proſecuting ſome great deſign, that muſt have been fatal to the Dutch, which is not to be collected from or reconciled to hiſtory. The author's words are theſe (35). *Cum ab* Hiſpanis *quodam anno graviter periclitantibus opitulari regina vellet grandique pecunia ad eam rem opus eſſet rationem excogitavit* Greſhamus, *qua levi diſpendio negotium conficeret: omnem nempe argentariam menſam quæ* Antverpiæ *erat ſuo nomine mutuatus* Hiſpanorum *nervos in eum annum incidit*; Belgis *vero reſpirandi tempus hoſtemque ſimul debilitandi præſtitit.* As there was no open war begun in his time, the only turn that can be given to this paſſage, is to ſuppoſe, that it has a reference to his procuring the ſtay of that vaſt maſs of ſilver which was to have been tranſported to Antwerp in 1560, and which, if the Duke of Alva had received, he would very probably have put it out of the power of the Dutch to have reſented their ill uſage, or to have defended their liberties (36). Another traditionary tale is very clearly refuted, ſo far as it regards Sir Thomas Greſham, by the hiſtorian of the Charter-houſe (37). 'It is now a well known truth, 'that Sir Francis Walſingham, upon notice that the 'King of Spain had written a letter to the Pope, with 'an account of the true deſign of his mighty prepara'tion and to beg his bleſſing upon it, got a copy of 'this letter out of the Pope's cabinet, by the help of a 'Prieſt his ſpy, and ſent thence the firſt certain intelli'gence of the dreadful Spaniſh Invaſion; and that 'thereupon, but conſummate ſtateſman prevented it 'for a whole year, by procuring our merchants to 'gather up the exchequ'r bills of the bank of Genoa, and 'to draw the money out of it, juſt as King Philip had 'procured bills upon the bank to ſet his fleet out to ſea, 'which being thereby neceſſity proteſted, there was 'no remedy but patience, and to wait the arrival of 'his plate fleet from the Indies for the neceſſary ſup'plies. And in the mean time England prepared for 'the reception of this invincible Armada, and attacked 'it in its approach ſo vigorouſly, that at it was ſoon put 'to flight, and only ſome ſhattered remnants regained 'the coaſt of Spain. It is a current tradition, that Sir 'Thomas Greſham was the chief aſſiſtant in this mer'cantile affair: but it is moſt certainly a vulgar error, 'for Sir Thomas Greſham died in 1579; but if tradi'tion will be allowed of any force, it is ſtrong at Char'ter houſe that it was Mr Sutton, and there is this 'great probability to ſupport it, that he was at that 'time the chief and richeſt merchant in London.' But after all, perhaps the tradition at Charter-houſe, is no better founded than that with reſpect to Greſham. The ſtory is told by Dr Welwood (38), and Biſhop Burnet (39), and the latter is pleaſed to inform us, that it was judged too high a ſecret of ſtate to be truſted to Camden, though by the way there is great reaſon to believe that his Annals were in a great meaſure digeſted by the Lord Treaſurer Burleigh, and the ſecret could not well be too high for him. The ſuppoſed ſource of this tradition is a hearſay from the great Earl of Cork, in which there muſt have been ſome miſtake. It is indeed a well known truth, that the Spaniſh expedition was deſigned a year before, and was prevented by the merchants of London, but in a very different manner. At their expence a ſtrong ſquadron, in thoſe days it might be called a great fleet, for it conſiſted of thirty ſail of ſtout ſhips, was fitted out under the command of Sir Francis Drake, who ſailing to the coaſt of Spain, burnt the ſtoreſhips that were provided for this expedition, as Sir William Monſon tells us of his own knowledge (40), and as we find it in Camden and other hiſtorians (41); which being a matter of fact out of all controverſy, can never be brought to conſiſt with this tradition of ſtopping the King of Spain's credit at Genoa.

[*H*] *In a letter worthy the reader's peruſal.*] This progreſs of the Queen's laſted from July, to the latter end of September, in which ſpace ſhe viſited the Lord Burleigh, the Lord Keeper Bacon, the Earl of Leiceſter, and others of her nobility, which was the reaſon of her addreſſing this letter to the Lord-Mayor of London (44).

(42) Maitland's Hiſtory of London, p. 157.

To the LORD-MAYOR of London.

'Right truſty and well beloved, we greet you well. 'Although we doubt not but that by the authority you 'have as Lord-Mayor of our city of London, with the 'aſſiſtances and advices of your brethren of the ſame; 'you may, and will ſee our ſaid city well governed, 'and by our good and faithful ſubjects, ordered and 'continued in quietneſs as other your predeceſſors and 'yourſelf have commonly done; yet for the ſpecial 'care we have for our ſaid city, and weale of our good 'ſubjects, thinking it convenient for your own eaſe to 'have you aſſiſted by other perſons of great truſt, wiſ'dom, and experience, during this time of our progreſs 'and abſence in remote parts from thence; and eſpe'cially that no diſorder ſhould ariſe in the ſuburbs or 'other places adjoining to the city out of your juriſ'diction, we have for that purpoſe made choice of the 'moſt Reverend Father in God, the Archbiſhop of 'Canterbury, the Biſhop of London, Lord Went'worth, Sir Anthony Cook, Sir Thomas Wroth, Sir 'Owen Hopton, Sir Thomas Greſham, Dr Wilſon, 'and Thomas Wilbraham, and have appointed that 'they, or ſome convenient number of them ſhall join 'with you, to deviſe by all good means, from time to 'time as occaſions may give cauſe, for quiet order to 'be continued in our ſaid city, and among our ſubjects, 'and to prevent and ſtay diſorders both there and in 'other parts near to the ſame, being out of your juriſ'diction. For which purpoſe, and for the better under'ſtanding of our deſire and intention, we have cauſed 'our Privy-Council to confer with ſome of the afore'named perſons, as you ſhall underſtand by them. 'Willing and requiring you (when you ſhall meet to'gether, or ſome of them with you) for the better do'ing thereof, to agree upon ſome certain place and time 'once every week, or oftner, as caſes may require, 'and there to meet for the due execution of our good 'meaning and pleaſure.'

There was however at the bottom, ſomething more deſigned by this commiſſion, than barely to keep things in that order in which they were. All hiſtorians agree, that luxury prevailed at this time very ſtrongly throughout England, and the truth of this might be eaſily proved from the ſermons preached to reform it; from the plays written to expoſe it, and from the laws made to ſuppreſs it. But it ſeems all would not do, the Queen herſelf loved ſtate and magnificence; ſome great men about the court availing themſelves of this pretence, puſhed things to exceſs, bad examples being infectious; this diſpoſition ſpread gradually, and mixing itſelf with that variety of ill humours which then diſturbed the body politic, broke out frequently in acts detrimental to private peace and property, and ſometimes injurious to the public tranquillity. The Lord-Keeper Bacon, had taken a note of theſe things, and had ſilently conſulted with ſome very able men how they might be corrected with ſafety, the conſequence of which was, that as all reformation creates uneaſineſs and diſquiet, it would be the ſafeſt way to do what was to be done in the abſence of the Court (43). The time was now come when that reſolution was to be carried into action, and as it was foreſeen, that extraordinary prudence would be neceſſary to manage ſuch an affair with ſpirit and temper, her Majeſty was adviſed to appoint this ſtanding committee for the ſupport and aſſiſtance of the ordinary magiſtrates; and as this ſcheme was happy in it's

(43) Stowe's Survey of London, edit. 1720. b. v. p. 745.

method anſwered her expectations ſo well, that it was afterwards purſued upon every like occaſion. In 1573, the vigilance of the Queen's miniſtry, and the prudence and punctuality of the Queen's merchant, ſufficiently appeared in the diſcharge not only of her own bonds, but of the obligations of her father and her brother that were yet ſtanding out, to the univerſal joy of the citizens, as the learned Camden tells us (*l*); and thereby ſuch a baſis of credit eſtabliſhed, as laſted throughout her reign, and enabled her to triumph over the open force and ſecret fraud of all her enemies. The deſires of this excellent and fortunate perſon therefore were thoroughly ſatisfied with reſpect to the temporal bleſſings of wealth and fame, ſo that his thoughts were chiefly confined to the proſpect of futurity, and the means of rendering that uſeful to the public, which his want of legal iſſue gave no private family any claim to inherit. He had given a ſhining proof of his zeal for commerce in building the Royal-Exchange; he was deſirous of affording poſterity as illuſtrious a mark of his affection for learning, by converting his dwelling-houſe in Biſhopſgate-ſtreet into a college (*m*). He knew from his own experience, in how great a degree the lights of ſcience aſſiſt an enterprizing genius, and how difficult, nay impracticable, a thing it is to attempt the contrivance and execution of any extenſive deſign, without a reaſonable degree of theoretical as well as practical knowledge; and that the children of the citizens of London might not be deficient in this reſpect, be put to inconvenient expence to attain it, or compelled to ſeek theſe uſeful acquiſitions at too great a diſtance, he deviſed this new nurſery of the Muſes, and reſolved that the revenues ariſing from his firſt public foundation, ſhould go to the maintenance of the ſecond, and that the ſame truſtees ſhould have the care of both (*n*). While he had this deſign in view, he was addreſſed to by the Vice-Chancellor and Senate of the Univerſity of Cambridge, who by their public orator Mr Richard Bridgewater, wrote him an elegant Latin letter, to remind him of a promiſe made by him, as they had been informed, to give them five hundred pounds, either towards building a new college, or repairing one already built (*o*). This letter was dated the 14th of March 1574-5, and it is probable that Sir Thomas might formerly have intimated ſome ſuch intention, but afterwards changed his mind when he came to enlarge his deſign, of which it is likely they were ſoon ſatisfied. For upon the 25th of the ſame month, that letter was followed by another, in which no mention is made of the five hundred pounds; but they acquaint him with another report that he had promiſed the Lady Burghley, both to found and endow a college for the profeſſion of the ſeven liberal ſciences. The only place as they obſerve proper for ſuch a deſign, was either London, Oxford, or Cambridge. They endeavour to diſſwade him from London, leſt it ſhould prove prejudicial to the two Univerſities (*p*). And they hope he will not make choice of Oxford, ſince he was himſelf bred at Cambridge, which might preſume upon a ſuperior regard from him on that account. At the ſame time they wrote another letter to the Lady Burghley, in which they earneſtly requeſt that ſhe will pleaſe to uſe her intereſt with him, to fix upon Cambridge for the place of his intended college (*q*). But theſe letters had not the deſired effect, for he perſiſted in his reſolution to ſettle it in his houſe at London. And accordingly by an indenture quadrupartite, dated the 24th of May 1575, revoking all former indentures, he made a diſpoſition of his ſeveral manors, lands, tenements, and hereditaments, with ſuch limitations and reſtrictions, particularly as to the Royal-Exchange and his manſion-houſe, as might beſt ſecure his views with regard to the uſes for which he deſigned them. This indenture was ſoon followed by two wills, one of his goods, and the other of his real eſtates. The former of theſe bears date July the fourth (*r*) enſuing, whereby he bequeathed to his wife, whom he makes his ſole executrix, all his goods, ready money, plate, jewels, chains of gold, with all his ſtock of ſheep and other cattaile within the realm of England, and ſeveral legacies to his relations and friends, and to all his ſervants, amounting in the whole to upwards of two thouſand pounds, beſides ſome ſmall annuities. The other will was dated the day following, by which he declared his laſt purpoſe and intention concerning all the eſtates mentioned and contained in the ſaid indenture, very fully expreſſed his mind with relation to his deſigned college, and made an handſome and generous proviſion for the poor (*s*) [*I*]. There is no doubt, that matters of ſuch vaſt importance,

(*s*) Fuller's Worthies, Norfolk.

it's contrivance, it was admirable in it's effects. Fleetwood, who was Recorder of London, a bold active and reſolute man, managed the judicial part with great ſpirit and vivacity; and there is an extract of a letter of his extant, written to one of the miniſtry with his accuſtomed freedom, in which he attributes the ſucceſs they had met with in ſearching all diſorders to the bottom, and treating them with a ſeaſonable ſeverity, to the Court's being at a diſtance. We have good reaſon to believe that what was now done, was very pleaſing to the Queen and her miniſters, by their ſteady adhering to this meaſure, as often as occaſion offered; and it is no ſmall honour to the memory of Sir Thomas Greſham, that in a buſineſs of ſuch conſequence, and where ſagacity was the only recommendation of ſuch as were to be truſted, he was conſtantly employed.

(44) This, with many other papers of importance, are to be found in Stowe's Appendix.

[*I*] *And made an handſome and generous proviſion for the poor.*] By this his laſt will and teſtament, he declares (44), that after the expiration of the particular uſes, eſtates, and intereſts for life, and in tail created by his deed, dated the 20th of May, in the ſeventeenth year of Queen Elizabeth, ſhall be determined; he grants the Royal-Exchange, with all it's appurtenances, one moiety thereof to the Lord-Mayor, Commonalty, and Citizens of London; and the other moiety to the Warden and Commonalty of the Myſtery of Mercers in the ſaid City of London, for the term of fifty years. He farther directs, that when the ſaid moiety ſhall come into the hands and poſſeſſion of the Mayor, Commonalty, and Citizens of London, they ſhall by half-yearly portions, at the feaſts of Lady-day and Michaelmas, pay the reſpective ſums of fifty-pounds per annum, to each learned and ſufficient lecturer in Divinity, Aſtronomy, Muſic, and Geometry; and they were farther to diſtribute the ſum of fifty-three pounds ſix ſhillings and eight-pence unto eight alms-folks, by them and their ſucceſſors, to be appointed to inhabit his eight almshouſes in the pariſh of St Peter the Poor, that is to ſay, the

importance, and in which at the ſame time he had ſo deep an intereſt, muſt have occupied his mind in a great degree; and yet we find him in 1576, in the company of William Lord Burleigh, Mr Secretary Walſingham, Richard Martin, Eſquire, Maſter of the Mint, and ſeveral other perſons, ſome diſtinguiſhed by their high quality, all by their extenſive capacities and eminent integrity, in a ſtrict enquiry into the nature of foreign exchanges, under a royal commiſſion, from which they made many uſeful diſcoveries (*t*), though it is ſaid, that after all they came to no concluſion; the ſame year as a great Antiquary informs us, he procured another loan for his ſovereign from her ſubjects, which was probably intended for the relief and aſſiſtance of the Dutch (*u*). In the month of November this year, Antwerp was ſurprized and ruined by the Spaniards, who contrary to the law of nations, put the Engliſh houſe and merchants to ranſom, and effectually deſtroyed that great mart of Europe; ſo that if through the foreſight and vigilance of Sir Thomas Greſham, a method had not been deviſed for raiſing money upon any emergency, the ſack of this city might have been infinitely more prejudicial to this nation than it was (*w*). In the next year 1577, he finiſhed his beautiful ſeat and all the improvements he had thought fit to make in Oſterly Park near Brentford, which he meant for a place of retirement near town, to which he might withdraw as often as a day or two might be ſpared from public or private buſineſs. In building and adorning this agreeable villa, Sir Thomas diſplayed, if we may be allowed the expreſſion, a kind of mercantile magnificence (*x*). This edifice which was built of brick, large, convenient, and thoroughly finiſhed, ſtood in the midſt of a pleaſant park, marked out and impaled at his expence, well wooded and furniſhed with ſeveral curious fiſh ponds, and through which the little river Brent travelled gently to meet the Thames; and for grandeur, there was near the houſe a heronry, with various contrivances to allure thoſe kind of birds thither, and to keep them fixed to their habitation when they were there. Yet in the midſt of theſe ſcenes of ſplendour and amuſement, there was ſomething alſo of buſineſs; for beſides a corn, there was alſo a paper and an oyl mill upon this river, which being new manufactures, it is probable Sir Thomas was deſirous of having them under his own eye; and it may be, that out of the produce of theſe mills, a good part of theſe improvements might be defrayed (*y*). At all events it ſhewed the evenneſs of his temper, and that his prudence was not impaired by years, or corrupted by proſperity. There is a whimſical ſtory told of him, to ſhew with what facility and vigour he proſecuted any deſign to which he applied his mind. It is this, Queen Elizabeth having been once very magnificently entertained and lodged there by Sir Thomas, found fault with the court before it, as being too large, and ſaid it would appear better if divided with a wall in the middle. He took the hint, and to ſhew his complaiſance

(*y*) MS. Remarks upon Norden

the ſum of ſix pounds thirteen ſhillings and four pence annually, to each of them quarterly; and alſo to the poor priſoners in Newgate, Ludgate, the King's Bench, the Marſhalſea, and the Compter in Wood-ſtreet, or whereſoever that Compter may be moved, the ſum of ten pounds to each of them by quarterly payments, ſo long as they ſhall hold and poſſeſs the ſaid moiety of the Royal-Exchange and it's appurtenances. He alſo charges the Warden and Commonalty of the Myſtery of Mercers and their ſucceſſors, to pay the ſum of one-hundred and fifty pounds half yearly, at the rate of fifty pounds per annum, to each of the three lecturers to be by them appointed to read in Law, Phyſic, and Rhetoric, in his ſaid dwelling-houſe; and farther, that they ſhall beſtow and expend one hundred pounds annually, in and about a feaſt or dinner for the whole company of the ſaid corporation, to be had and made in the Mercers-hall of the ſaid city of London, at every quarter day, the ſum of twenty-five pounds; and ſtill farther, the ſaid corporation ſtands charged to give and diſtribute to the poor perſons and priſoners in the hoſpitals of Chriſt Church, St Bartholomew's, Bethlehem, the hoſpital in Southwark, and the Poultry Compter, ten pounds annually to each, at four quarterly payments, for ſo long time as they ſhall hold and poſſeſs the moiety of the ſaid Royal-Exchange with it's appurtenances. He alſo deviſes to the Mayor and Commonalty of London and their ſucceſſors, the ſaid eight alms-houſes, empowering them to place in each of them one poor or impotent perſon; he alſo deviſes to the Lord-Mayor and Commonalty of London, and to the Wardens and Commonalty of the myſtery of Mercers, his manſion-houſe with the gardens, ſtables, and all and ſingular other the appurtenances in the pariſh of St Helen's and St Peter the Poor, upon truſt, to place therein the ſeven lecturers before mentioned, who are there to inhabit, ſtudy, and read the ſaid ſeveral lectures, and are to be unmarried when choſen, and are ſo to remain while they continue in poſſeſſion of the ſaid lecture. He recommends it to the city and to the corporation, to procure within the ſaid ſpace of fifty years, a licence from the Crown, to hold the premiſes deviſed to them by his will for ever, diſcharging the truſts repoſed in them. He further declares, that in conſideration of ſuch charges and wardſhip, livery and primier ſeizin, as at the time of his deceaſe ſhall happen to be due to the Queen's Majeſty, ſhall be paid and borne by Sir Henry Neville, Knight, or the heirs male by him begotten on Elizabeth, daughter of Sir John Greſham, Knight, and while living heir apparent to Sir Thomas, he wills and diſpoſes to them, their executors or aſſigns, the manors of Mayghfield and Wadhurſt, with their appurtenances; but if his couſin Sir Henry Neville, or the heirs of him and Dame Elizabeth, ſhall not bear the charges beforementioned, then the premiſes ſhall remain as the reſidue thereafter limited; and this reſidue he wills and diſpoſes to his loving wife Dame Anne Greſham, and to her heirs and aſſigns for ever, to uſe and diſpoſe of the ſame at her pleaſure. The cloſe of this will is very remarkable, and is expreſſed in the following words. 'Requiring amongſt all other things, 'that all my debts, legacies, and other duties what-'ſoever by me due, given, limited, or bequeathed to 'any perſon, or with hould from any perſon, ſhall be 'fully performed, ſatisfied, and paid and recompenced, 'as the caſe in law, right, equity, or conſcience ſhall 'require. In which behalf I do wholly put my truſt 'in her, and have no doubt but ſhe will accompliſh the 'ſame accordingly, and all other things as ſhall be requiſite or expedient for both our honeſty's fames and 'good reports in this tranſitory world, and to the profit of the common weale, and relief of the careful and 'true poor, according to the pleaſure and will of Almighty God, to whom be all honour and glory, for 'ever and ever, Amen. In witneſs whereof, I the 'ſaid Sir Thomas Greſham, have written this will all 'with myne own hand, and to each of the eight leaves 'have ſubſcribed my name, and to a labell fixed thereunto; all the eight leaves have ſet to my ſeal with 'the Graſhopper, the fifth day of July, in the ſeventeenth yere of the reign of our ſovereign Lady Queen 'Elizabeth, and in the year of our Lord God, Anno '1575.'

By me THOMAS GRESHAM.'

plaiſance to her Majeſty, immediately ſent for workmen from London, who in the night built up the wall with ſuch privacy and expedition, that the next morning the Queen to her great ſurprize, found the court divided in the manner ſhe had propoſed the day before (z). Whatever ſatisfaction Sir Thomas might take in this retreat, he made it nothing more, but continued to paſs ſo much of his time in the city, as was requiſite for the diſcharge of his buſineſs of every kind, amongſt which he reckoned the receiving and entertaining foreigners of diſtinction who came to viſit England, and to pay their reſpects to the Queen his miſtreſs, accordingly on the twenty-ſecond of January 1578, we find that when Prince John Caſimir, brother to the Elector Palatine, a Proteſtant Prince, who had done great ſervice in the Low-Countries, landed at the Tower at night, he was received by many of the moſt diſtinguiſhed nobility, the Lord-Mayor, Aldermen, and principal citizens, who conducted him by torch-light to the houſe of Sir Thomas Greſham, where he was received with the ſound of trumpets and other muſical inſtruments, commodiouſly lodged, and magnificently entertained (a). His highneſs did not remain in England long, but in that ſpace was elected Knight of the Order of the Garter, and had ſeveral and very rich preſents made him by the nobility; the Queen herſelf gave him two gold cups very richly wrought, of the value of three hundred pounds a piece; but as ſhe was naturally frugal, it was with ſome difficulty that Secretary Walſingham determined her to this act of generoſity (b). This proved one of the laſt public tranſactions of Sir Thomas's life, at leaſt of which any memorial remains, for on ſaturday November the 21ſt, 1579, coming between ſix and ſeven in the evening from the Exchange to his own houſe, he fell down ſuddenly in his kitchen, and being taken up was found ſpeechleſs, and ſoon after died (c). Thus was this eminent man removed in a manner unexpected, and at an age when he was capable of being further ſerviceable to his country for ſeveral years, for he was not ſixty one years old at his deceaſe. By his death many large eſtates in ſeveral counties of England, amounting at that time to the yearly value of two thouſand three hundred pounds and upwards, came to his Lady who ſurvived him. His obſequies were performed in a very ſolemn manner, being attended by an hundred poor men, and the like number of poor women, whom he had ordered to be cloathed in black gowns of five ſhillings and eight pence a yard, at his own expence (d). The charges of his funeral amounted to eight hundred pounds. His corps was depoſited in a vault at the North-eaſt corner of the church, which he had before provided for himſelf and family. Over the vault is a large and curious marble tomb; on the ſouth and weſt ſides of which are his own arms, argent a chevron, ermin between three mullets ſable pierced, and on the north and eaſt ſides they are impaled with thoſe of his lady, argent a bend or, on which are three bucks heads caboſſed. The tomb is fenced round with a ſtrong rail, and other ornamental iron work (e). The arms of Sir Thomas, together with thoſe of the city of London and Mercers company, are likewiſe painted in the glaſs of the eaſt window of the church above the tomb. There was no inſcription upon the tomb till the year 1736, when for the information of the inhabitants, the following words taken from the pariſh regiſter, were cut on the ſtone that covers it by order of the church-wardens. *Sir* Thomas Greſham, *Knight, was buried December the 15th* 1579 (f). His creſt was a GRASSHOPPER, which he uſed for his ſeal, and was then placed on the four angles of the Royal-Exchange, as it is now upon the pinacle of the tower on the ſouth ſide (g). He had promiſed the inhabitants of St Helen's pariſh an handſome ſteeple to their church, in conſideration of the ground taken up by his tomb, but his ſudden death prevented the performance of that promiſe. By an inventory of the goods at his houſe in Biſhopſgate-ſtreet, taken after his deceaſe, they are ſaid to have amounted to a thouſand one hundred twenty-ſeven pounds fifteen ſhillings and eight pence. He had alſo another houſe at Weſtacre in Norfolk, where the effects were valued at a thouſand ſix hundred fifty-five pounds and a ſhilling (h). But his chief ſeat ſeems to have been at Mayghfield in Suſſex, one room of which was called the Queen's chamber, and the goods and chattles belonging to it, were eſtimated at ſeven thouſand five hundred fifty-three pounds ten ſhillings and eight pence (i). This ſhews that his riches were great, but the reputation with which he acquired them greater, and the uſes to which they were applied, greateſt of all [K]. He appears from the ſtatues and pictures that

[K] *And the uſes to which they were applied greateſt of all.*] As very few perſons have been more favoured in this world by Providence, in the purſuit of that courſe of life to which he was called, than this worthy gentleman Sir Thomas Greſham, ſo very few have employed the good things of this life, either living or dying, in a manner more generally approved by his contemporaries, or applauded by poſterity, than he has done. If we trace him through the courſe of his life, we ſhall find him filling every ſtation decently, and not at all given either to under or over-act his part; content with what Providence allotted him; not eager in obtaining, yet punctual in performing the duties of any office that he obtained; active and vigilant in the ſervice of the Crown, but contriving at the ſame time how the nation might be ſerved likewiſe. A citizen without ambition; a patriot without ſpleen or private views; no lover of pomp, yet living with decent ſplendour; a grateful and generous maſter; a kind friend; a patron of learned men, as Mr Fox acknowledges, who knew it from experience (45). Hugh Goughe, in his dedication to him of the *Off-ſpring of the Houſe of* OTTOMAN, where he is very copious in his praiſes; and Richard Rowland's, more frequently called Verſtegan, in a book he likewiſe addreſſed to him called, *The Poſt of the World*. Theſe were men differing in their ſentiments, and very diſtant in their religions; yet all aſſiſted by, and all admirers of, Sir Thomas Greſham, who was bountiful to merit where-ever he found it. As Sir Thomas was a generous benefactor to the public in his life time, and more ſo at his death, ſo he managed his donations with ſuch diſcretion, as left no room for his relations to complain. It is very probable that his wife Dame Anne, brought him a large fortune; and this being in the early part of his life, might induce him to think, that he was bound to make a ſuitable return

(45) In the Latin Life prefixed to his Acts and Monuments.

that are ſtill preſerved of him, to have been a man of a ſweet and ſerene aſpect, and of a comely and graceful perſon (*k*); he was undoubtedly a man of learning, as well as perfectly acquainted with living languages, and that mixed and general knowledge which is of ſo great uſe in the right conduct of life. His abilities were early ripe, for we find him entered into active life, and not only embarked in buſineſs, but in negotiations of ſtate by that time he was turned of thirty; and after he was once employed by the Crown, which was purely the effects of his merit, he maintained himſelf in favour in times moſt difficult, and in Courts acting from very different views (*l*); in his manners he was ſo polite, that he was choſen to entertain thoſe foreigners of diſtinction, on whom the Court was deſirous that a ſtrong impreſſion ſhould be made in favour of the Engliſh nation. His merit as a merchant was very great, and he applied that ſkill and experience which he derived from his own extenſive concerns in commerce, to promote the welfare of the nation, for which his zeal was ſo great, that he was deſervedly eſteemed an eminent patriot, in an age when that beſt of characters was far from being rare (*m*). His praiſes might be carried farther and higher, and might be ſupported by the authorities of Camden, Evelyn, and other great men, if his actions did not render all helps of this ſort unneceſſary [*L*]. What deſerves to be particularly remembred is, that we have not received from any of the writers of his times, and they were times in which men wrote freely, that tends any way to his diſadvantage, except that in his youth he was of an amorous complexion, as appears from his having had a natural daughter by a woman at Bruges, whom he beſtowed honourably in marriage on Nathaniel Bacon, Eſq; ſecond ſon to the Lord Keeper, to whom ſhe brought a fortune of two hundred and eighty pounds a year in lands, ſituated in the counties of Norfolk and Suffolk (*n*). He married as we before obſerved, Anne, the widow of Mr Read of Fulham, who ſurvived him many years, and who not long after his death, having ſome diſputes with Sir Henry Nevile, who married her huſband's niece and heir at law, theſe were

turn to her; and beſides, it appears from the deed of ſettlement to which his will refers, that her conſent was neceſſary; the children of Sir Henry Nevile, who were his heirs at law, had likewiſe their ſhare. His only child Anne, married into the honourable family of the Bacon's, to which his wife was alſo allied by marriage; Sir Nicholas Bacon, Lord Keeper of the great Seal, having married for his firſt wife, Miſtreſs Jane Fernely her youngeſt ſiſter (46), ſo that Nathaniel Bacon, Eſq; who married her huſband's daughter, was her nephew. This Mr Bacon, had by Mrs Anne Greſham, three daughters (47), who were his coheirs, all married to gentlemen of as great figure as any in the county of Norfolk, viz Anne the eldeſt, to Sir Roger Townſhend of Raynham, and brought the Stiffkey eſtate into that family; the ſecond, Elizabeth, married Sir Thomas Knyvet of Aſhwellthorpe; and the youngeſt, Winifrede, Sir Robert Gawdy of Claxton.

(46) Baronetage of England, Vol. III.

(47) Pedigree of the Bacons of Norfolk.

[*L*] *Did not render all helps of this ſort unneceſſary.*] It may not however be amiſs for the reader's ſatisfaction, that what Sir Thomas did for his country, was in all times gratefully accepted, to produce ſome of the numerous tokens of reſpect paid to him both living and dead. The firſt ſhall be from Mr Goughe's dedication mentioned in the former note, who after telling him that many had been beneficent to England their native country. Some of a zealous mind, had beſtowed their ſage counſel and politic devices of the ſame. Others of a favourable affection, had given their labours to the procuring in readineſs, of ſuch neceſſary inſtruments as in time of peace might ceaſe our doubtful minds from careleſſneſs thereof; and in perilous ſeaſons of war, defend us from our daily imminent adverſaries. The reſt not being many in number, had of a godly and voluntary will, wholly applied their riches or money joined together, and laid out their treaſures to the erecting ſuch noble buildings, as might be for a public commodity unto the inhabitants of this worthy iſle of Britain; and then coming to apply this to the ſingle perſon of Sir Thomas Greſham, he proceeded. 'But alas! too few have been furniſhed 'in whom all theſe commendable qualities have 'reigned, both to be beneficial to their country by ſage 'counſel; procuring of ſafe-guard for protection of the 'ſame, and beſtowing of their ſubſtance to the build-'ing of ſuch famous and magnificent works as might 'ſerve for common utility unto all men. And by the 'diſcretion of thoſe men that be learned and wiſe, if 'ever any ſubject hath enjoyed them, they attribute it 'unto you. For who is he that is ignorant of the poli-'cies and travels which your worſhip hath uſed and 'ſuſtained, for to get ſafe-guard and requiſite furniture 'to the realm; beſides the infinite riches given to the 'building of that princely work, commonly called The 'Burſe, which already declareth, and in London is 'openly to be ſeen, what commodity generally it will 'bring to the citizens thereof? theſe noble exploits, as 'indeed they are not a little by all men praiſed, can-'not be highly enough commended.' He praiſed Sir Thomas alſo for his temper, courteſy, gentleneſs, friendſhip, and liberality towards all men; yea, and towards the unknown and ſtrangers; as divers had experienced. Raphael Hollinſhed (48), and John Stowe (49), have paid juſt honour to his memory; the great Sir Henry Spelman, mentions him as an honour to the county of Norfolk, in which his family was ſeated (50). The unknown author of a poem in Engliſh and Latin on the Fire of London, addreſſed to Sir James Langham (51), takes that melancholy occaſion to praiſe the ſtructure which Sir Thomas raiſed, and to applaud his public ſpirit.

Greſham the Kings ſurvives. The grateful flame
The founder ſpar'd, that would not ſpare the frame.

The late Lord Viſcount Cobham placed this great man in that temple of Britiſh Worthies, which is one of the nobleſt ornaments of his celebrated gardens at Stowe in Buckinghamſhire, with the following inſcription over his buſt.

Sir THOMAS GRESHAM,
Who by the honourable profeſſion of a merchant,
Having enriched himſelf and his country,
For carrying on the commerce of the world,
Built the Royal Exchange.

were at length brought to a compromiſe, and an act of parliament paſſed in the year 1581, for eſtabliſhing that agreement and carrying it into execution (o). She afterwards endeavoured to procure another act of parliament to impower her and her heirs, to make leaſes from time to time of twenty-one years, of the ſhops in the Exchange, reſerving the fines; but the Lord-Mayor and Aldermen, having fully anſwered the ſuggeſtions contained in her petition to the Privy Council, that project was diſappointed (p). However ſhe prevailed upon the tenants in the laſt year of her life to accept freſh leaſes, by which ſhe obtained fines to the amount of four thouſand pounds (q). She ſpent her winters moſtly in town, at the great houſe in Biſhopſgate-ſtreet, and the ſummer months at Oſterley Park, where however all the great improvements fell ſpeedily to ruin (r). At length ſhe deceaſed there November 23, 1596, from whence her body was brought to London and buried in the church of St Helen, in the ſame vault with her huſband Sir Thomas, on the 14th of December following (s). As to the public benefactions of Sir Thomas Greſham, the Royal-Exchange and his manſion houſe, as on the deceaſe of his Lady, they immediately came into the hands of the two corporations; ſo, according to his deſire, they obtained a patent from the Crown, bearing date February the third in the year of our Lord, One thouſand ſix hundred and fourteen, to hold them for ever, upon the terms expreſſed in the will of the donor (t).

E

GREVILE [FULKE], Lord Brook, of Beauchamp's-Court in Warwickſhire, an eminent courtier in the reign of Queen Elizabeth, Privy-Counſellor in that of King James and King Charles I. and an ingenious writer both in verſe and proſe; was deſcended of the antient and noble families of the Beauchamps of Powick, and the Willoughbys de Brook; whereof Mr Camden has recorded, that Brook-Houſe, which was ſituate upon the Avon in that county, and derived it's name from a rivulet or brook which runs into this river, had been the ſeat of John Pavely, Lord of Weſtbury, and afterwards gave the title of Baron to Robert Willoughby, deſcended from that family, when King Henry VII. advanced him to this honour (a); by which King he is reported to have been alſo made Steward of his Houſhold, and for ſome time High-Admiral of England (b). But this family ſoon expired; for he left but one ſon, named Robert Lord Brook, who had by his firſt wife a ſon, named Edward; and he dying in his father's life-time, left a daughter named Elizabeth, afterwards married to Fulke Grevile the elder, grandfather to this Lord Brooke of whom we are writing, as we find in thoſe Heraldical authors who were contemporary with him, and others who have written more particularly of the family (c). As for that Chriſtian name, we ſhall refer below to an explanation of it from Mr Camden in another of his works [A]. By that rich heireſs aforeſaid, alſo deſcended Beauchamp-Court to the ſaid Fulke the elder, which is ſituate upon the Arrow below Ouſely, and was ſo named from the Barons of Beauchamp before mentioned, from whom it devolved to that lady (d). The ſaid Sir Fulke the elder, had by her, Fulke Grevile, who was knighted in the ſeventh year of Queen Elizabeth, and Robert a younger ſon. This laſt Sir Fulke, in the twelfth of that Queen, was choſen into the commiſſion for preſerving the peace in Warwickſhire; alſo in the fourteenth of her reign; and again in the twenty-ſixth he was elected High-Sheriff of that county (e). He was in the beginning of the next reign very active in diſcovering and apprehending ſome of the powder-plotters, when they were in thoſe parts; he being then Deputy-Lieutenant of the ſaid ſhire (f). Camden ſays alſo, in the place laſt above cited, that he was no leſs eſteemed for the ſweetneſs of his temper than the dignity of his ſtation; and departing this life in the fourth of James I. aged ſeventy years, he left by Anne his wife, daughter of Ralph Nevile, Earl of Weſtmorland, this Fulke Grevile of whom we are here treating, and one daughter named Margaret, who was married to Sir Richard Verney, of Compton-Mordak in the county of Warwick, anceſtor to the preſent Lord Willoughby of Brook (g). As to a more diſtinct account of theſe anceſtors, or the lineage of the ſaid family down to this time, we have it alſo in an author, who being a native of the county wherein they flouriſhed, and having undertaken with great induſtry to preſerve the antiquities thereof, his authority may the better be depended on: therefore we ſhall here ſubjoin a ſhort extract of his genealogical deduction thereof, as what may not only confirm the aforeſaid account, but render the ſame more compleat [B].

[B] *As what may not only confirm the aforeſaid account, but render the ſame more compleat.*] This extract we ſhall make from Sir William Dugdale, who has given us an ample pedigree of the Grevils, from the Beauchamps, for ſeveral deſcents, down to his own time; which has been continued by his late editor to the latter end of Queen Anne's reign, and by Mr Collins in his work before cited, to the preſent time: but as much of it as may here concern our purpoſe, is expreſſed (in the ſaid latter edition of Dugdale) (2) in theſe words.——'Sir Richard Beauchamp married, 'in the private chapel of the mannor-houſe at Alceſter, 'called Beauchamp's Court, Elizabeth, daughter of 'Sir Humphrey Stafford, Knt. by whom he had iſſue 'three daughters, his heireſſes, viz Elizabeth, married 'to Sir Robert Willoughby, Lord Brook, whoſe fa- 'ther Sir Robert Willoughby, Knt. was firſt ſummoned 'to Parliament, by that title in the ſeventh of Henry 'VII. next, Anne married to Richard Ligon, and 'Margaret, to William Rede; which laſt Sir Robert 'had, in her right, the manour of Alceſter in partition, and died ſeized thereof the tenth of Novem- 'ber, in the thirteenth of Henry VIII. leaving Elizabeth, Anne, and Blanch, his grandchildren and next 'heirs, viz. daughters of Edward Willoughby his ſon, 'by

(2) Sir W. Dugdale's Antiquities of Warwickſhire, the ſecond edition, by Dr William Thomas, in 2 vols folio, 1730. Vol. II. p. 766, &c.

This Fulke, afterwards Lord Brook, was born, as we are informed, in the year 1554 (*b*), and as it is ſuppoſed, at Beauchamp-Court aforeſaid. Being of the ſame age with, and couſin to, Sir Philip Sidney, they imbibed their juvenile education together at an eminent ſchool in Shrewſbury. There, Sidney appears to have been in 1566, by a letter full of prudent and paternal precepts, directed to him the ſaid year, in that town, by his father Sir Henry Sidney (*i*); whence we may conclude, that young Grevile was then his ſchoolfellow and aſſociate; and indeed no leſs may be gathered from his own words, where he ſays of Sir Philip, 'with whom I ſhall ever account it honour to have been brought 'up.' And again, alluding to the earlineſs of his accompliſhments, he ſays, 'Of whoſe 'youth I will report no other wonder but this, that though I lived with him, and knew 'him from a child, yet I never knew him other than a man (*k*).' From this ſchool Fulke Grevile was removed to the univerſity. He was it ſeems ſome time a Gentleman-Commoner at Oxford, but whether fellow collegiate with Sidney at Chriſt-Church there, does not plainly appear; and the Oxonian Antiquary allows him to have been more properly of Cambridge (*l*); where, at Trinity-College, he compleated his academical ſtudies. Not long after he left the univerſities, he added the knowledge of men to that of books by travel, and returned an accompliſhed gentleman; having not only adorned his mind with the moſt agreeable flowers of polite deportment and converſation that flouriſhed in the courts through which he paſſed, but attained alſo a competent familiarity with the modern languages, and ſome expertneſs in the martial exerciſes, by which the gallant cavaliers of thoſe times were uſed to ſignalize their courage and activity; inſomuch that, though he ſeems to have been early 'introduced into the Court, by his uncle Robert Grevile, a ſer-'vant to Queen Elizabeth, where he was eſteemed a moſt ingenious perſon, and had in 'favour by all ſuch as were lovers of arts and ſciences (*m*);' and though he was, through the affection of Sir Henry Sidney, Lord-Preſident of Wales, ſoon nominated to ſome beneficial preferments in that principality, yet he could not, for many years, decline attempting to engage himſelf in ſervices abroad both by ſea and land; as what would ſooner advance him to the Queen's favour at home, than ſtruggling for it by ſuch indirect and circumventing artifices, as are wont to be practiſed among competitors for the ſame at Court; 'till the Queen herſelf, conſidering his family, fortune, and perhaps the want of ſuch athletic or corporal robuſtneſs, as might equal his lively and vigorous inclinations to endure hardſhips and peril, diſcouraged ſuch excurſions in him, and thereby conſtrained thoſe with whom he would have been a coadventurer, alſo to evade or diſcountenance his aſſociation in ſuch dangerous enterprizes with them, as he has in his more mature or declining years informed us [*C*]. It ſeems to have been from one of thoſe excurſions, that he

'by Elizabeth his wife, daughter of Richard Nevill 'Lord Latimer (3). Of which daughters, ſo in mino-'rity, Elizabeth the eldeſt, was committed to the 'tuition of Sir Edward Grevil of Milcote, Knt. who 'obtained her wardſhip, as our ſaid author was in-'formed (4), with purpoſe to marry her to John his 'ſon and heir; but ſhe better affecting Fulke, the 'younger, (and having eſtate ſufficient for both him 'and herſelf *) became his wife; to whom ſhe brought 'the manour of Alceſter, with other lands: which 'Fulke much enlarged his manour houſe (5) at Beau-'champ-Court, taking ſtone and timber from the then 'newly diſſolved priory at Alceſter for that purpoſe; 'as alſo his park, with part of the waſte belonging to 'this lordſhip, and bore the office of Sheriff for this 'county and Leiceſterſhire, in the thirty-fourth of 'Henry VIII, being then a Knight: ſo alſo in the 'firſt of Edward VI, and departed this life the tenth 'of November, Anno 1559 (6), leaving iſſue Fulke, 'his ſon and heir, and Robert a younger ſon; which 'Fulke was knighted in the ſeventh year of Queen Eli-'zabeth (7), being then twenty-nine years of age. In 'the twelfth of Elizabeth, he was firſt in commiſſion of 'the peace for that ſhire, and departing this life anno '1606, left iſſue, by Anne his wife, daughter to Ralph 'Nevil, Earl of Weſtmorland, this Fulke his ſon and 'heir, &c.' We ſhall here further add, of the firſt Robert Lord Brook, who was ſummoned to parliament by that title, in the ſeventh of Henry VII, as was obſerved, and is mentioned in the text to have been ſome time Admiral of England; that there is a letter extant, written by the ſaid King Henry to Sir Gilbert Talbot, which ſpeaks of this Lord Brook in that naval command. It is written upon the intelligence his Majeſty had received, that Perkin Warbeck and his wife were upon the ſea, with ſeven ſhips and a Britiſh prize expected to land, and make an invaſion in Cornwall: 'Whereupon, ſais the King to Sir Gilbert, we have 'ſent our right truſty counſeillour the Lord D'Aubeney, 'our Chamberlayn, by land, toward thoes parties, &c. 'for the ſubduying of him; and our right truſty Coun-'ſeillour the Lord Brooke, Steward of our houſehold 'by water, with our armee, on the ſee, now late re-'toutned, to take the ſaid Perkyn, if he retourne a-'gayn to the ſee; and we ſhall, in our owne perſone, if 'the caſe ſoo requir, goo ſo accompanyed thiderward, 'with our Lord's mercy, without delay, as we ſhal 'ſubdue the ſaid Perkyn, and all othre that wil take 'his part, if any ſuch be, &c. *' The ſaid Robert Lord Brooke, by his will, made the 19th of Auguſt, and proved the 25th of December 1502, appoints his burial in the church of that pariſh where he ſhall happen to die †: and there remains in the chapel of the borough of Callington in Cornwall, a raiſed altar monument, with his effigies thereon; having the Collar of the Order of the Garter, with the George appendant thereto ‡. Sir William Dugdale relates a remarkable ſtory at large of one of the family, named Lodovick Grevile, of Mulcote, Eſq; who contrived with a ſervant or two of his, to murder Mr Webb of Draycot in Oxfordſhire, his own tenant, who had been alſo his ſteward, that he might get all his riches. Thoſe ſervants having ſtrangled him, one of them went into his bed, and when the miniſter came, who was to make a will, the murderer in bed, with the curtains cloſe pinned about him, counterfeited a ſick and dying man, in voice, and other infirmities, till he had diſpoſed of the dead man's effects, ſeemingly in the deceaſed's own words and will, all to Mr Grevile. The murder and fraud being afterwards diſcovered, and Mr Grevile refuſing to plead, he was preſſed to death in the King's-Bench priſon, November 14, the thirty-firſt of Elizabeth; and his ſervant was hanged the ſame year 1589 ‖.

[*C*] *In his more mature, or declining years informed us*] His words upon this topic are as follow, 'When 'my youth, with favour of the Court, in ſome mode-'rate proportion to my birth and breeding, in the ac-'tiveneſs of that time, gave me opportunity of moſt 'buſineſs; then, did my yet undiſcouraged genius moſt 'affect to find, or make work for itſelf. And out of 'that freedom, having many times offered my fortune 'to the courſe of foreign employments, as the propereſt 'forges to faſhion a ſubject for the real ſervices of his 'ſovereign; I found the returns of thoſe miſplaced 'endeavours to prove, both a vain charge to myſelf, 'and an offenſive undertaking to that excellent gover-'neſs,

he mentions alſo himſelf, his return out of Germany, and the political conferences he had at Delft with William of Naſſau, Prince of Orange [*D*]. As for the civil and domeſtic employments

' neſs, over all her ſubjects duties and affections. For ' inſtance, how mild ſoever thoſe mixtures of favours ' and corrections were, in that princely lady, yet to ' ſhew that they fell heavy in croſſing a young man's ' ends, I will only chuſe and alledge a few out of many, ' ſome with leave, ſome without. Firſt, when thoſe ' two mighty armies of Don John's, and the Duke ' Caſimire's, were to meet in the Low-Countries; my ' horſes, with all other preparations, being ſhipped at ' Dover, with leave under her bill aſſigned; even then ' was I ſtaid by a princely mandate, the meſſenger Sir ' Edward Dier. Wherein, whatſoever I felt, yet I ' appeal to the judicious reader, whether there be any ' latitude left more than humble obedience, in theſe ' new caſes, between duty and ſelfneſs in a ſovereign's ' ſervice. After this, when Mr Secretary Walſing- ' ham was ſent embaſſador, to treat with thoſe two ' princes, in a buſineſs ſo much concerning chriſtian ' blood and chriſtian empires; then did the ſame irre- ' gular motion, which ſeldom reſts, but ſteals where it ' cannot tread, perſuade me, that whoſoever would ' venture to go without leave, was ſure never to be ' ſtaid. Upon which falſe axiome, truſting the reſt to ' chance, I went over with Mr Secretary unknown: ' but at my return, was forbidden her preſence for ' many months (8).' Hitherto might alſo be referred his engagement with Sir Philip Sidney, to accompany Sir Francis Drake in his laſt expedition but one to the Weſt-Indies (in 1585). But neither could they ſo cloſely keep their ſecret preparations for the ſame, from the knowledge of the State, nor Sir Francis ſo artfully diſguiſe from them, his unwillingneſs to lead them ſuch a remote and hazardous voyage, but that their whole project was fruſtrated; however he feaſted them with a great deal of outward pomp and complacency, the night they arrived at Plymouth; to which port they had travelled without ſuſpicion, becauſe, upon the rumour of Don Antonio's being on the ſeas for England, Sir Philip had put himſelf upon the employment of conducting that King to Court. Sir Philip's thoughts ſeem to have been too ſanguine and intenſe upon the enterprize, to diſcern the real inclinations of Sir Francis, through his looks or comportment; ' Yet I (ſays our ' author) that had the honor of being bred with him ' from his youth, ſo now, by his own choice, of all ' England, to be his loving and beloved Achates in this ' journey, obſerving the countenance of that gallant ' mariner, more exactly than Sir Philip's leiſure ſerved ' him to do; after we were laid in bed, acquainted ' him with my obſervation of the diſcountenance and ' depreſſion which appeared in Sir Francis; as if our ' coming were both beyond his expectation and deſire. ' Nevertheleſs that ingenuous ſpirit of Sir Philip's, ' though apt to give me credit, yet not apt to diſcredit ' others, made him ſuſpend his own, and labour to ' change and qualify my judgment; till within ſome ' few days after, finding neither the ſhips ready accord- ' ing to promiſe, nor poſſibly to be made ready in ' many days; and withal, obſerving ſome ſparks of falſe ' fire breaking out unawares from his yoke-fellow daily; ' it pleaſed him in the freedom of our friendſhip, to ' return me my own ſtock with intereſt. All this while ' Don Antonio lands not; the fleet ſeemed to us, like ' the weary paſſenger's inn, ſtill to go further from our ' deſires: letters came from the Court to haſten it a- ' way: it may be, the leaden feet and nimble thoughts ' of Sir Francis, wrought in the day, and unwrought ' in the night; while he watched an opportunity to ' diſcover us, without being diſcovered. For within a ' few days after, a poſt ſteals up to Court, upon whoſe ' arrival, an alarum is preſently taken; meſſengers ſent ' away to ſtay us, or, if we refuſed, to ſtay the whole ' fleet. Notwithſtanding this firſt Mercury, this errand ' being partly advertiſed to Sir Philip beforehand, was ' intercepted on the way; his letters taken from him, ' by two reſolute ſoldiers in mariner's apparel; brought ' inſtantly to Sir Philip, opened and read: the con- ' tents as welcome, as Bulls of Excommunication to ' the ſuperſtitious Romaniſt, when they enjoyn him ' either to forſake his right, or his Holy Mother ' Church; yet did he fit this firſt proceſs without noiſe ' or anſwer. The next was a more imperial mandate, ' carefully conveyed and delivered to himſelf by a peer ' of this realm, carrying with it in the one hand, ' grace, in the other, thunder: the grace was, an of- ' fer of an inſtant employment under his uncle (the ' Earl of Leiceſter) then going General into the Low- ' Countries; againſt which although he would have ' gladly demurred, yet all was ſacrificed to the duty of ' obedience (9).' ' Again, when my Lord of Lei- ' ceſter was ſent General of her Majeſty's forces (the ' ſame year) into the Low-Countries, and had given ' me the command of an hundred horſe; then I, giv- ' ing my humour over to good order, yet found, that ' neither the interceſſion of this grandee, ſeconded ' with my own humble ſute, and many other honour- ' able friends of mine, could prevail againſt the con- ' ſtant courſe of this excellent Lady with her ſervants, ' ſo as I was forced to tarry behind; and for this im- ' portunity of mine, to change my courſe, and ſeem to ' prefer nothing before my ſervice about her: this ' Princeſs of government, as well as kingdoms, made ' me live in her court a ſpectacle of diſfavour too long ' as I conceived. Laſtly, the univerſal fame of a bat- ' tle to be fought between the prime forces of Henry ' III. and the religious of Henry IV. then King of Na- ' varre, lifting me yet once more above this humble ' earth of duty, made me reſolve to ſee the difference ' between kings preſent and abſent, in their martial ' expeditions; ſo that, without acquainting any crea- ' ture, the Earl of Eſſex excepted, I ſhipped myſelf ' over; and at my return, was kept from her preſence ' full ſix months, and then received after a ſtrange ' manner. For this abſolute Prince, to ſever ill ex- ' ample from grace, avers my going over to be a ſe- ' cret employment of her's; and all theſe other petty ' exiles, a making good of that cloud or figure, which ' ſhe was pleaſed to caſt over my abſence: protecting ' me to the world with the honour of her employment, ' rather than ſhe would, for example ſake, be forced ' either to puniſh me further, or too eaſily forgive a ' contempt, or neglect in a ſervant ſo near about her, as ' ſhe was pleaſed to conceive it. By which many ' warnings, I, finding the ſpecious fires of youth to ' prove far more ſcorching than glorious, called my ' ſecond thoughts to council, and in that map, clearly ' diſcerning action and honour to fly with more wings ' than one, and that it was ſufficient for the plant to ' grow where his ſovereign's hand had planted it; I ' found reaſon to contract my thoughts from thoſe ' larger, but wandering horizons of the world abroad, ' and bound my proſpect within the ſafe limits of ' duty, in ſuch home ſervices as were acceptable to my ' ſovereign (10).'

(8) Sir Fulke Greville's Life of Sir Philip Sidney, from p. 167 to 169.

(9) [illegible] p. 82 to 89.

(10) Ibid. from p. 169 to 171.

[*D*] *He mentions himſelf, his return out of Germany, and his political conferences with William Prince of Orange.*] The journey in which he had ſuch conferences with the Prince of Orange, ſeems to have been that he took with Sir Francis Walſingham beforementioned, which was in 1578; becauſe young Sidney, being perſonally known to this prince the preceding year (11), might better engage that recommendation of him by the ſaid prince here preſerved by our author, among other characters given by princes and ſtateſmen, of his ſaid worthy and renowned friend. His words are as follow: ' My firſt inſtance muſt come, ſays he, ' from that worthy Prince of Orange, William of Naſ- ' ſau; with whom this young gentleman having long ' kept intelligence by word and letters, and in affairs ' of the higheſt nature, that then paſſed current upon ' the ſtages of England, France, Germany, Italy, the ' Low Countries, or Spain, it ſeems that this young ' gentleman had by his mutual freedom ſo imprinted ' the extraordinary merit of his young years into the ' large wiſdom and experience of that excellent prince, ' as I, paſſing out of Germany into England, and hav- ' ing the unexpected honor to find this prince in the ' town of Delfe, cannot think it unwelcome to deſcribe ' the clothes of this prince; his poſture of body and ' mind, familiarity and reſervedneſs, to the ingenious ' reader, that he may ſee with what divers characters ' princes pleaſe and govern cities, towns and people. ' His uppermoſt garment was a gown, yet ſuch, as I ' dare confidently affirm, a mean-born ſtudent in our ' Inns of Court would not have been well pleaſed to ' walk the ſtreets in. Unbuttoned his doublet was, ' and of like precious matter and form to the other. ' His waſte-coat, which ſhewed itſelf under it, not ' unlike

(11) Athen. Oxon. Vol. I. col. 227.

employments appointed him by Sir Henry Sidney, the firſt account we meet with thereof is in one of Sir Henry's own letters to the Lords of the Council (*n*), containing ſome propoſitions for the reformation of diſorders in the marches of Wales, eſpecially for abridging the number of attorneys in the court that was held there; which reduced number he would have regulated under a principal officer or two, by patent from her Majeſty; and Mr Fulke Grevile, with his own Secretary, Mr Edmund Molyneux, he recommends for this purpoſe. His letter is dated the 12th of November, 1576. And ſix months after, being then in his government of Ireland, we find, in ſome inſtructions he ſent over to his ſervant, Edward Waterhouſe, Eſq; ſome explanation of the buſineſs thoſe officers were to ſuperintend,

(*n*) Letters, &c. of the Sidneys, Vol. I. p. 145.

'unlike the beſt ſort of thoſe woollen knit ones, which 'our ordinary watermen row us in. His company a-'bout him, the burgeſſes of that beer-brewing town; 'and he, ſo fellow-like, encompaſſed with them, as 'had I not known his face, no exterior ſign of degree 'or deſervedneſs could have diſcovered the inequality 'of his worth, or ſtate from that multitude. Not-'withſtanding, I no ſooner came to his preſence, but 'it pleaſed him to take knowledge of me. And even 'upon that, as if it had been a ſignal to make change, 'his reſpect of a ſtranger, inſtantly begat reſpect to 'himſelf in all about him; an outward preſage of in-'ward greatneſs, which, in a popular ſtate, I thought 'worth the obſerving: becauſe there, no pedigree but 'worth, could poſſibly make a man prince, and no 'prince, in a moment, at his own pleaſure. The bu-'ſineſſes which he then vouchſafed to impart with me, 'were, the dangerous fate which the Crown of Eng-'land, States of Germany, and the Low-Countries 'did ſtand threatned with, under an ambitious and 'conquering Monarch's hand. The main inſtance, a 'ſhort deſcription of the Spaniards curious affecting to 'keep the Romans ways and ends in all their actions. 'On the other ſide, the clear ſymptoms of the hectick 'fever, univerſally then reigning among the princes of 'Chriſtendom; ordained as he thought, to behold 'this undermining diſeaſe without fear, till it ſhould 'prove dangerous, nay incurable to them. This ac-'tive King of Spain, having put on a maſk of con-'ſcience, to cover an inviſible conjunction between the 'temporal and ſpiritual ambitions of theſe two ſome-'times creeping, ſometimes commanding Romiſh and 'Spaniſh conquerors. The particulars were many, 'both excellent and enlightning. As firſt, the fatal 'neutrality of France, jealous of the Spaniſh greatneſs, 'as already wronged and threatned by it; and yet 'their kings ſo full of pleaſures, and conſequently ſo 'eaſily ſatisfied with the compliments of words, trea-'ties, or alliances; and ſince the fall of the Sorboniſts, 'their own exempted Church, ſo abſolutely poſſeſſed, 'and governed by the Jeſuits; as through the be-'witching liberties and bondages of auricular confeſ-'ſion, they were rather wrought to reſt upon a vain 'ſecurity of reputed ſtrength, than really to hazard 'loſs, and help themſelves by diverſion or aſſailing. 'Again, on the Queen's part, by the way of queſtion, 'he ſuppoſed a little neglect in her princely mildneſs, 'while ſhe did ſuffer a Proteſtant party, raiſed by God, 'in that great kingdom of France, to be a ballance or 'counterpoiſe to that dangerous heptarchy of Spain, 'then ſcarce viſible, but ſince multiplied by an unre-'ſiſtable greatneſs; I ſay for ſuffering this ſtrong and 'faithful party, through want of employment, to ſink 'into itſelf, and ſo unactively, like a meteor, to vaniſh 'or ſmother out in vain and idle apparitions. Withal, 'reverendly he demurred, whether it were an omiſſion 'in that excellent Lady's government or no, by a re-'miſs looking on, whilſt the Auſtrian aſpiring family 'framed occaſion to gain, by begging peace, or buying 'war from the Grand Signior, and both exceeding 'much to their own ends; in reſpect that, once in 'few years, this Emperor made himſelf General by it 'over all the forces of Chriſtendome, and thereby 'gained the fame of action, trained up his own inſtru-'ments martially, and got credit with his fellow-bor-'dering princes, through the common council, or par-'ticipation of fear. Beſides, that, in the concluſions of 'peace, he ever ſaved a maſs of riches, gathered by 'diets, contributions, devotions, and levies for com-'mon defence; which, out of the ill-accompting hand 'of war, became in his exchequer, treaſure to ter-'rify even thoſe Chriſtian neighbours that did contri-'bute to it. And the more eſpecially he inſiſted upon 'this, becauſe all thoſe crafty pageants of her enemies 'were diſguiſedly acted, even while her Majeſty had 'an agent of extraordinary diligence, worth, and cre-'dit, with that vaſt ſtate of Turkey, into whoſe abſo-'lute and imperious ſpirit, without any other charge 'than infuſing the jealouſies of competition, theſe 'practiſes among thoſe Auſtrian uſurpers, might eaſily 'have been interrupted. Laſtly, it pleaſed him to 'queſtion yet a greater overſight in both theſe king-'doms, England and France: becauſe while their 'princes ſtood at gaze, as upon things far off, they 'ſtill gave way for the Popiſh and Spaniſh inviſible 'arts and counſels, to undermine the greatneſs and free-'dom both of ſecular and eccleſiaſtical princes: a mortal 'ſickneſs in that vaſt body of Germany, and by their 'inſenſible fall, a raiſing up of the Houſe of Auſtria 'many ſteps towards her long affected monarchy over 'the Weſt. The ground of which opinion was, as he 'thought, in reſpect that even the catholic princes 'and biſhops themſelves, had their eyes been well 'wakened, would never have endured any cloud or 'colour of religion to have changed their princely ſo-'vereignties into ſuch a kind of low and chaplain te-'nure, as ſince they have ſleepily fallen into; but 'would rather have ſtirred them, with many hands, to 'bind this miter-ſuperſtition with the real cords of 'truth; and to that end perchance, have ſet Spain on 'work, with her new and ill digeſted conqueſts; her 'dangerous enemy Feſs; her native Moors, and Jews, 'ſince craftily tranſported; and ſo probably have 'troubled the uſurpations both of the Pope and Spain, 'over that well-tempered, though over-zealous and 'ſuperſtitious region of Italy. Theſe and ſuch other 'particulars, as I had in charge, and did faithfully de-'liver from him to her Majeſty, are ſince performed 'or periſhed with time or occaſion. The laſt branch 'was, his free expreſſing of himſelf in the honour of 'Sir Philip Sidney, after this manner: that I would 'firſt commend his humble ſervice with thoſe fore-'mentioned ideas to the Queen; and after crave leave 'of her freely to open his knowledge and opinion of a 'fellow ſervant of his, that, as he heard, lived unim-'ployed under her. With himſelf he began *ab ovo*, 'as having been of Charles the Vth's Privy-Council, 'before he was one and twenty years of age; and ſince 'as the world knew, either an actor, or at leaſt ac-'quainted with the greateſt actions and affairs of Europe; 'and likewiſe with her greateſt men and miniſters of 'ſtate. In all which ſeries of time, multitude of things 'and perſons he proteſted unto me, and for her ſervice, 'that if he could judge, her Majeſty had one of the 'ripeſt and greateſt counſellors of ſtate in Sir Philip 'Sidney, that at this day lived in Europe; to the trial 'of which, he was pleaſed to leave his own credit en-'gaged, until her Majeſty might pleaſe to employ 'this gentleman either among her friends or enemies. 'At my return into England, I performed all his other 'commandments: this that concerned Sir Philip, think-'ing to make the fine ſpun thread of friendſhip more 'firm between them, I acquainted Sir Philip with; 'not as queſtioning, but fully reſolving to do it. 'Unto which, he at firſt ſight oppoſing, diſcharged my 'faith impawned to the Prince of Orange for the deli-'very of it; as an act only intending his good, and ſo 'to be performed or diſpenſed with at his pleaſure; 'yet for my ſatisfaction, freely added theſe words: 'firſt, that the Queen had the life daily attending her; 'and if ſhe either did not, or would not value it ſo 'highly, the commendation of that worthy prince, 'could be no more at the beſt than a living picture of 'that life, and ſo of far leſs credit and eſtimation with 'her. His next reaſon was, becauſe Princes love not 'that foreign powers ſhould have extraordinary affec-'tion in their ſubjects; much leſs to be taught by 'them, how they ſhould place their own; as argu-'ments either upbraiding ignorance, or lack of large 'rewarding goodneſs in them (12).'

(12) Sir Fulke Grevile's Life of Sir Philip Sidney, p. 22 to 33.

ſuperintend, which was the framing of all original bills, and making out all orders for proceſs of appearance. But Fulke Grevile being now ſo well ſped in the reverſions of two of the beſt offices in that court, the Lord Deputy Sidney therefore recommends his ſon Robert in his room, to be joined with Mr Molyneux; and theſe inſtructions bear date 12 May, 1577 (o). Mr Waterhouſe, in a letter of his to Sir Henry Sidney, dated the tenth of June following, mentioning his ſon Philip's return from his embaſſy in Germany, ſays, that none of his attendants were ſick in the journey, only Fulke Grevile had an ague in his return, at Rocheſter (p); by which, it ſeems, we ſhould rather underſtand that it was in Sidney's return, or that Grevile only met him at the ſea-port in Kent he landed at, to eſcort him, like other friends, to London, and was ſick in that journey, than that he bore him company all the way throughout his embaſſy. It muſt be ſo early, according to the neareſt computation we can make, as the year 1580, that he had his firſt office in the court of the marches in Wales, by the conteſts which about that time appear to have riſen againſt him, concerning the profits thereof; and his friend Sidney prevailed upon his father's Secretary, Mr Molyneux, not to oppoſe his couſin Grevile's title in any part, or conſtruction of his patents, by a letter he wrote to him on the tenth of April, 1581 (q), as may be ſeen by Mr Molyneux's anſwer to the ſame (r): and when Sir Francis Walſingham appeared as Grevile's friend in the diſpute, it laid all other oppoſition aſleep. The letter he wrote upon this occaſion we ſhall here under recite [E], and thereunto annex what we have further met with relating to that office, Clerk of the Signet to the Council in Wales, which is ſaid to have brought him in yearly above two thouſand pounds *, and his other offices in the ſaid court of the marches. He was not however ſo much embarraſſed with buſineſs, but that he could make a conſpicuous figure in the grand entertainments which were made at Court this year, when the embaſſadors and great numbers of the nobility of France came over, commiſſioners from Queen Katharine de Medicis, to treat about the marriage of Queen Elizabeth with the Duke of Anjou; and after having been nobly banquetted in a ſpacious edifice, built at Weſtminſter for the purpoſe, and ſplendidly

[E] *The letter he wrote upon this occaſion we ſhall hereunder recite.*]

Sir FRANCIS WALSINGHAM to Sir HENRY SIDNEY.

'My verie good Lord,

'Abowt the end of Februarie laſt, I writt to your 'Lordſhip, on the behalfe of my couſen Fulke Grie-'vell, for the profitts of the office fallen unto him there 'in the marches, by Mr Dudley's death. At that tyme 'alſo, I writt to Mr Fox, frendly adviſing him to ſuf-'fer my couſen quietly to enjoy the ſaid office, with all 'ſuch commodities as Mr Dudley had; which no 'doubt was ment unto him by her Majeſtie; and I 'thincke to bee caried away by ſufficient words of the 'patent. Howebeit, as I underſtand by your Lord-'ſhip's lettre, and more plainly by Mr Fox himſelf, 'he intendeth to ſtand in law with my couſen, for the 'proffetts which Mr Dudley had, by the late encreaſe 'of fees in everie proceſſe paſſing the ſignet. Yf Mr 'Dudley, ſerving but a nobleman, could enjoy that 'encreaſe of fees, much more I hope my couſen ſhall, 'being her Majeſtie's ſervant, and a gentleman of 'whome ſhe maketh, as your Lordſhip doth knowe, 'ſome good accompt. I knowe your Lordſhip's good 'affection towards my couſen, and therefore doubt not 'but you have allreadie, and will further doe what 'you may with Mr Fox, to yeald to that is reaſon 'without law; which if hee will not, but that 'law muſt needs be commenced between them, 'ſurely it ſhall be proſequuted in ſuch effectual 'ſort, that Mr Fox in the end, will have ſmall cawſes 'to rejoice of the iſſue therof: whereas now, by yeald-'ing to that is required, hee may avoyd trouble, and 'purchaſe to him ſelf, not only the aſſurance of the 'good love of my ſelfe, but alſo of all other my cou-'ſen Greivill's friends, which are manie and of great 'callyng, and may ſtead Mr Fox, and his, in matters 'poſſible of greater importance than this thing nowe in 'queſtion is. Much to this effect I have nowe writ-'ten to Mr Fox; in whome, if you ſhall find no pre-'ſent diſpoſition to yeald to my requeſt, then I wyſhe 'it would pleaſe your Lordſhip, to ſequeſter the pro-'fitts in controverſie between them, as in former let-'ters was required, untill the cawſe be determined by 'lawe or otherwiſe. And thus, with my hartieſt com-'mendations to your good Lordſhip, I take my leave: 'From the Court, the 11th of April, 1581.

'Your Lordſhip's

'Aſſured loving friend,

'FRA: WALSYNGHAM (13).'

(13) Letters, &c. of the Sidneys, Vol. I. fol. 293.

This office here ſpoken of to be lately fallen to Mr Grevill, appears to be that of Clerk of the Signet; which as it is in the letter above intimated, and we are elſewhere informed he had granted him by patent from the Queen. The author who ſpeaks of it to the Queen herſelf, ſays, 'That by vertue of this clerkſhip, or 'keeper of her Majeſtie's Signet, Mr Foulke Grevill, 'doth make out all proceſſes which go out of the ſaid 'court. The fees of the Signet are,—for every letter 'at the ſuit of the party, one ſhilling; for every pla-'card, two ſhillings; for writing an exemplification, 'according to it's length, for ſealing it, ſix ſhillings 'and eight pence.' It is remarked further, 'that the 'fees, as well of this office, as in all others there, are 'far leſs than in others of her Majeſtie's courts; and 'yet the diſpatch there, is more ſpedie, and in all re-'ſpects more eaſefull to the ſuitors (14).' The ſame author, ſpeaking alſo a little before of the office of Secretary in that court, 'whoſe duetie was to conceave, 'deviſe, and write ſuch letters, acts, or public pro-'clamations, as either concern the quiet government of 'the ſubjects, within the lymitts of their authoritie, 'or the reſolutions of that board, upon cauſes of eſtate 'depending before them;' adds, 'that Mr Foulk Gre-'vill is now by patent under the Great-Seale, her Ma-'jeſtie's Secretarie at the ſaid councell: that he had 'dyett for himſelf and his ſervant in the Queen's houſe-'hold, and twenty marks fee per annum; which was 'to be defalked by the Lord Preſident and Councell, 'if he neglected attendance (15). We are likewiſe here further informed, 'That there is alſo granted to 'Mr Foulk Grevill, by another patent, the Clerkſhip 'of the Councill, to be executed by himſelf or his de-'putie. By vertue of this office, he hath the keeping 'of all recordes, the office and place of regiſter; the 'making of all copies, the entring of all orders, and 'the making of bonds and commiſſions. He, or his 'deputie, are tied to continual attendance; allowed 'diett for himſelf and one ſervant; and, for the better 'performance of his ſervice in this office, is allowed 'twelve clerks. The office is ſupplied by Thomas 'Therar, who for many years hath been deputie in the 'ſame; and for the better execution thereof, he hath 'divided his office into ſeveral parts, which being diſ-'charged by ſeveral perſons, are termed offices, after 'the name of the officer or clerk who ſerveth therein; 'as Scroop's office, Bradſhaw's office, &c.' as their names then were (16).

[F] *Some*

ſplendidly furniſhed, they were further entertained, not to ſpeak of other courtly diverſions, with the martial exerciſes of tilts and tournaments, in the moſt magnificent and expenſive manner, by Philip Earl of Arundel, Frederick Lord Windſor, Philip Sidney, and Fulke Grevile, who were challengers of all comers (*s*); in which rencounters he behaved himſelf ſo gallantly, that he won the reputation of a moſt valiant Knight (*t*). Sir William Dugdale informs us, that he was conſtituted Secretary for the principality of South and North Wales, by letters patent, bearing date the twentieth of April, in the 25th of Elizabeth, or 1583; and that the ſaid office was granted to him for life, the 24th of July, 1 James I (*u*). When Sir Philip Sidney died of his wounds at Arnham, in October 1586, he bequeathed in his laſt will 'To his dear friends, Mr Edward Dier, and Fulke 'Grevile, all his books (*w*).' In the beginning of 1588, he, among other perſons of honour and quality, was created Maſter of Arts at Oxford, which my author thinks was the higheſt degree conferred on him at that univerſity (*x*). And when Ambroſe Dudley Earl of Warwick, died in February, 1589, Fulke Grevile is mentioned to have been a mourner at his interment, on the 9th of April, 1590, in the chapel at Warwick (*y*). In December 1595, there appears to have been ſome complaint brought before the Lords of the council, againſt Mr Fulke Grevile, for certain abuſes in Kanck-Wood in Warwickſhire, and an information of fourteen thouſand pounds ſpoil, by good certificate of gentlemen dwelling thereabouts: The examination of this matter was left to the Lord Treaſurer and Sir John Forteſcue, but if it had gone hardly againſt him, it is probable we had heard more of it from the ſame pen that informs us thereof (*z*). In October 1597, he is reported to have received, with Egerton, Arthur Gorge, Vaveſor, and others, the honour of knighthood (*a*). In the beginning of March following, he made intereſt for the office of treaſurer of the wars (*b*); and he was about two years after, in the 41ſt of Elizabeth, according to Dugdale, as laſt quoted, made treaſurer of marine cauſes for life. When orders were given out to draw commiſſions for the great fleet that was ſet forth, in expectation of another invaſion by the Spaniards, in Auguſt 1599, it is reported, that Sir Fulke Grevile was to have one as Rear-Admiral (*c*). We hear no more of any ſuch charge that he was entruſted with in the navy, but what he ſomewhat humouroufly mentions himſelf upon the execution of his kinſman, the Earl of Eſſex; where he ſays, that 'Himſelf, while he remained about the Queen, was a kind of *remora*, 'ſtaying the violent courſe of that fatal ſhip, and but now was abruptly ſent away, to 'guard a figurative fleet, in danger of nothing but theſe *proſopopœia's* of inviſible ran-'cour, and kept, as in a free priſon, at Rocheſter, 'till his head was off (*d*).' In the 44th and laſt year of Queen Elizabeth, having bought up from private hands ſome claims upon the manor of Wedgnock, he obtained from the Queen a grant of the antient and ſpacious park thereunto belonging, for himſelf, his heirs, and aſſigns, in as ample manner as John Duke of Northumberland, or Ambroſe Earl of Warwick, had held it *. He was a Member of Parliament, alſo frequently of the committees, in ſeveral ſeſſions (*e*), being many times elected Knight of the ſhire with Sir Thomas Lucy: it is affirmed the county could not make a better choice, they being learned, wiſe, and honeſt †; and he is reckoned both a laſting and worthy favourite of the Queen's to the end of her reign, by authors who had the advantage of drawing their characters of him from the life, ſome particulars whereof we ſhall gather into the note below [*F*]. In 1603, he was made Knight of the Bath, at the coronation of King James I. and not long after, or in the ſecond year of that King, according to my authors, had a grant made him of the ruinous caſtle of Warwick (*f*). 'He beſtowed ſo much coſt, at leaſt twenty thouſand pounds, in the 'repairs thereof, beautifying it with the moſt pleaſant gardens, plantations, and walks, 'and adorning it with rich furniture; that, conſidering it's ſituation, no place in that 'midland part of England does compare with it for ſtatelineſs and delight (*g*).' Beſides other

[*F*] *Some particulars whereof we ſhall gather into the note below.*] A little ſpeech of his in the Houſe of Commons, the Lord Bacon has thought worthy of preſervation, among the collection of wiſe ſayings, which he publiſhed but a twelve month before he died; where he informs us that, 'Sir Fulke Grevill in parliament, when the lower houſe in a great buſineſs of 'the Queen's, ſtood much upon precedents, ſaid to 'them. *Why ſhould you ſtand ſo much upon* precedents? '*the times hereafter will be* good *or* bad: *if* good, *pre-*'*cedents will do no harm*; *if* bad, *power will make a* '*way where it finds none* (17).' Another ſpeech of his, upon the idle ſtories that uſed to be fathered upon him at Court, the ſame author has, together with a laudable character of him, alſo remembred in theſe words, 'Sir Fulk Grevill had much, and private acceſs to Queen Elizabeth, which he uſed honourably, 'and did many men good: yet he would ſay merrily 'of himſelf, *That he was like* Robin Goodfellow; *for* '*when the maids ſpilt the milk-pans, or kept any racket,* '*they would lay it upon* Robin: *ſo what tales the ladies* '*about the Queen told her, or other bad offices that they* '*did, they would put it upon him* (18).' But Sir Robert Naunton has given a larger and more general character of him, as an eminent courtier of theſe times, where he muſters him among the favourites of that Queen, which is as follows: 'Sir Fulke Grevill, ſince 'Lord Brook, had no mean place in her favour, neither did he hold it for a ſhort term; for, if I be not 'deceived, he had the longeſt leaſe and the ſmootheſt 'time, without rub of any of her favourites. He came 'to the court in his youth and prime, for that is the 'time or never. He was a brave gentleman, and honourably deſcended from Willoughby Lord Brook, 'and admiral to Henry VII. Neither illiterate, for 'he was, as he would often profeſs, a friend to Sir 'Philip Sidney; and there are of his now extant, 'ſome fragments of his poems, and of thoſe times, 'which do intereſt him in the Muſes; and which ſhow 'the Queen's election had ever a noble conduct, and it 'motions more of vertue and judgment than of fancy. 'I find that he neither ſought for, or obtained any great 'place or preferment in court, during all the time of 'his attendance; neither did he need it; for he came 'thither backed with a plentiful fortune; which, as 'himſelf was wont to ſay, was the better held together 'by a ſingle life, wherein he lived and died a conſtant 'courtier of the ladies (19).'

other grants from the crown, he had one alſo of the manor and lands of Knowle, in the ſaid county of Warwick; and he taſted the royal bounty, as yet, more in ſuch grants of land, than any offices in the State. Indeed he ſeems to have had more temptation to divert himſelf with his buildings and his books for ſome years at leaſt, in the former part of this reign, than to purſue his intereſt at court, where he met with diſcouragements from ſome perſons in power, perceived the meaſures of government and management of the ſtate quite altered, waining from the luſtre in which he had ſeen it ſhine, and found little hopes of being preferred to any thing conſiderable in the miniſtry; therefore he ſeems to have formed ſome ſchemes of retirement, that he might as much as poſſible live over again the glorious times he had been witneſs of in the late reign, by recalling the particulars thereof to his memory, and recording the ſame with his pen, which he propoſed to confirm with the moſt authentic vouchers in being: but how poſterity came to be deprived of his ſaid intended Life, or Hiſtory, of Queen Elizabeth, his own words may beſt declare [G]. When he found he could not have the uſe of thoſe papers which were neceſſary to compleat his work in the ſubſtantial manner that might be expected, he diſpoſed himſelf to reviſe the products of his juvenile ſtudies, and his poetical recreations with Sir Philip Sidney. Little of them appeared in print during his life-time, but ſince his death there have been three or four publications in his name, though it is not improbable, but he has mentioned himſelf all the pieces of his writing which he deſigned for the preſs: therefore we ſhall here ſubjoin an account of the writings which have been publickly aſcribed to him, and then what he ſays of thoſe which he intended ſhould be printed as his poſthumous works [H]. It was ſome time after the death of the Treaſurer Cecil, before we

[G] *How poſterity came to be deprived of his intended life of Queen Elizabeth, his own words may beſt declare.*] Sir Fulke Grevil, after having given us ſome ſhort memoirs, or a ſummary view in ſeveral inſtances, of the wiſe and political government of this renowned Queen, proceeds thus in apology, for not extending the ſame to it's due proportion. 'Now if any man ſhall 'demand, why I did not rather leave unto the world 'a complete hiſtory of her life, than this ſhort memo- 'rial, in ſuch ſcattered and undigeſted minutes, let 'him receive this anſwer from a dead man, be- 'cauſe I am confident no fleſh breathing, by ſeeing 'what is done, ſhall have occaſion of aſking that que- 'ſtion whilſt I am living. Preſently after the death of 'my moſt gracious Queen and miſtreſs, the falſe ſpirits 'and apparitions of idle grief haunted me exceedingly, 'and made all things ſeem either greater or leſs than 'they were; ſo that the farther I went, the more diſ- 'comfortable I found thoſe new revolutions of time, 'to my decayed and diſproportioned abilities; yet 'fearing to be curſed with the fig tree, if I bore no 'fruit, I rouſed up my thoughts upon an ancient 'axiome of wiſe men; *ſi quicquid offendit, relinquimus 'citò; inerti otio torpebit vita*; and upon a ſecond re- 'view of the world, called to mind the many duties I 'owed to that matchleſs ſovereign of mine, with a re- 'ſolution to write her life in this manner. Firſt, ſe- 'rioufly to have begun with the uniting of the red and 'white roſes, in the marriage of Henry VII. In the 'like manner, to have run over Henry the VIIIth's 'time, untill his ſeveral rents in the Church, with a 'purpoſe to have demurred more ſeriouſly upon the 'ſudden change, in his ſon Edward VI, from ſuper- 'ſtition, to the eſtabliſhment of God's ancient catho- 'lique and primitive Church. Thoſe cobwebs of re- 'converſion in Queen Mary's days, I had no intent to 'meddle with, but only, by pre-occupation to ſhew, 'that princes captived in nature, can ſeldom keep 'any thing free in their governments, but as ſoils 'manured to bring forth ill-weeds apace, muſt live to 'ſee ſchiſm ariſe in the Church, wearing out the real 'branches of immortal truth, to weave in the thin 'leaves of mortal ſuperſtition, and to behold in the 'ſtate, all their faireſt induſtries, ſpring and fade to- 'gether, like fern-ſeed: Laſtly, I intended, with ſuch 'ſpirits as age had left me, to revive my ſelf in her 'memory, under whom I was bred. Now in this 'courſe, becauſe I knew, that as the liberality of kings 'did help to cover many errors; ſo truth in a ſtory, 'would make good many other defects in a writer, I 'adventured to move the Secretary *, that I might 'have his favour to peruſe all obſolete records of the 'council-cheſt, from thoſe times, down as near to theſe, 'as he, in his wiſdom ſhould think fit. He firſt, 'friendly required my end in it, which I as freely de- 'livered him, as I have now done to you. Againſt 'her memory, he, of all men had no reaſon to keep a 'ſtrict hand, and where to beſtow a Queen Elizabeth's 'ſervant, with leſs diſadvantage to himſelf, it ſeems, 'readily appeared not; ſo that my abrupt motion took 'hold of his preſent counſell: for he liberally granted 'my requeſt, and appointed me that day three weeks 'to come for his warrant; which I did, and then 'found in ſhew, a more familiar and graceful aſpect 'than before; he deſcending to queſtion me, *why I 'would dream out my time, in writing a ſtory, being as 'like to riſe in this time, as any man he knew* Then, 'in a more ſerious and friendly manner, examining 'me, how I could clearly deliver many things done in 'that time, which might perchance be conſtrued to 'the prejudice of this? I ſhortly made anſwer, that I 'conceived an hiſtorian was bound to tell nothing but 'the truth; but to tell all the truth, were both juſtly 'to wrong and offend, not only princes and ſtates, but 'to blemiſh and ſtir up againſt himſelf, the frailty and 'tenderneſs, not only of particular men, but of many 'families, with the ſpirit of an Athenian Timon; and 'therefore ſhewed myſelf ſo far from being diſcouraged 'with that objection, as I took upon me freely to ad- 'venture all my own goods in this ſhip, which was to 'be of my own building. Immediately this noble Se- 'cretary, as it ſeems moved, but not removed with 'thoſe ſelfneſſes of my opinion, ſeriouſly aſſured me 'that, upon ſecond thoughts, *he durſt not preſume to let 'the counſell-cheſt lie open to any man living, without his 'Majeſty's knowledge and approbation.* With this *ſu- 'perſedeas*, I humbly took my leave, at the firſt ſight, 'aſſuring myſelf, this laſt project of his, would neceſ- 'ſarily require, *ſheet after ſheet to be viewed*, which I 'had no confidence in my own powers to abide the 'hazard of; and herein it may pleaſe the reader to be- 'lieve me the rather, by theſe pamphlets, which hav- 'ing ſlept out my own time, if they happen to be ſeen 'hereafter, ſhall at their own peril riſe upon the ſtage 'when I am not). Beſides, in the ſame propoſition I 'further ſay, that the many judgments which thoſe 'embrios of mine muſt probably have paſt through, 'would have brought forth ſuch a world of alterations, 'as in the end of the work itſelf, would have proved '*a ſtory of other mens writing, with my name only put 'to it*; and ſo a worſhip of time, not a voluntary ho- 'mage of duty (20).'

* Sir Robert Cecil.

(20) Sir Fulke Grevile's Life of Sir P. Sidney, from p. 236 to p. 241.

[H] *Shall here ſubjoin an account of the writings which have been publickly aſcribed to him, and then, what he has ſaid of thoſe he intended ſhould be printed as his poſthumous works.*] Moſt of our author's poetical works were publiſhed about five years after his death, but the name of any editor does not appear in that edition of them. The ſeveral pieces ſeem to be all genuine, or of his own compoſition; and, as may be ſeen before ſome of them, were licenſed to the preſs, by H. Herbert, in June 1632 (21). The firſt is, *A Treatiſe of Human Learning*, in 150 ſtanzas, of ſix lines each. 2. *An Inquiſition upon Fame and Honour*, in eighty-ſix ſtanzas. 3. *A Treatiſe of Wars*, in ſixty-eight ſtanzas. 4. *The Tragedy of Alaham.* 'Tis moſtly written in rhime, and is adorned with many moral ſentences, and political maxims. 'It ſeems an imitation of the Ancients,

(21) They are entituled, Certain learned and elegant Works of the Right Hon. Fulke Lord Brooke, written in his youth, and familiar Exerciſe with Sir P. Sidney. Lond. printed by E. P. for W. Scyle, &c. fol. 1633.

we meet with him in any favour, or advancement conſiderable, in the Court or State. In the twelfth of King James, or 1614, he was by that King made Under-Treaſurer and Chancellor

' cients, and the prologue is ſpoken by a ghoſt, one of ' the old Kings of Ormus, an iſland ſituate at the en- ' trance of the Perſian gulph, where the ſcene of the ' drama lies. This ſpectre gives an account of each ' character, poſſibly in imitation of Euripides, who ' uſually introduced one of the chief actors, as the pro- ' logue, whoſe buſineſs was to explain all thoſe circum- ' ſtances which preceded the opening of the ſtage. The ' author has been ſo careful in obſerving the rules of ' Ariſtotle and Horace, (as to the number of interlocu- ' tors) that he has in no ſcene throughout, introduced ' above two ſpeakers, except in the chorus between ' each act, and even there, he obſerves all the rules ' laid down by the latter of thoſe maſters in the art of ' poetry, &c (22).' 5. *The Tragedy of Muſtapha.* This alſo is built on the like ancient model with the former, as we ſhall ſee he never deſigned either to appear upon any modern ſtage. The author laſt quoted obſerves, that, ' an imperfect copy of this play ' appeared in print, in quarto, Lond 1609; though ' he ſuppoſes without his Lordſhip's knowledge, ſince ' it may rather be ſtiled a fragment than a tragedy: ' but thoſe imperfections are mended in this folio edi- ' tion (23).' It was upon the occaſion of this ſurreptitious impreſſion, that a poet of thoſe times, in an epigram he wrote to the author upon this play, addreſſes the ſame, *To the immortal memory, and deſerved honour of the writer of the Tragedy of Muſtapha, as it is* written, *not* printed, *by Sir Fulk Grevill, Knt* (24). Yet Mr Edmund Bolton, though he had only ſeen this firſt edition, calls it, in his *Hypercritica*, the *Matchleſs Muſtapha*, and ſays of the author, in company of ſome others of note, that his poetry, eſpecially therein, is not to be eaſily mended †. At the end of this tragedy, in the chorus *ſacerdotum*, there are ſix lines which one of our moſt reverend prelates has quoted from this play into one of his ſermons, to anſwer the ſame, as the favourite argument of thoſe who murmur at the injunctions of religion, as if it attributed to Providence, ' the ſetting ' of our nature and our duty at variance, or the giving ' us appetites one way and laws another; the force of ' which objection, ſays he, is very ſmartly expreſſed ' in thoſe celebrated verſes of a noble poet of our own, ' which are ſo frequently in the mouths of many, who ' are thought to bear no good will to religion:' and perhaps 'tis the only example that has been drawn into ſuch a ſolemn diſcourſe from an Engliſh play, by one who was ſuch an eminent member of the Church. The lines are theſe:

> Oh, wearisome condition of humanity,
> Born under one law to another bound!
> Vainly begot, and yet forbidden vanity!
> Created ſick, commanded to be ſound!
> If nature did not take delight in blood,
> She would have made more eaſy ways to good (25).

But theſe two laſt lines do not immediately follow the former in the ſaid chorus of the play itſelf; and as for the thought, it has not only been embelliſhed by other poets of wit and judgment, beſides the Lord Brook, but no leſs admired in them, without any imputation of diſreſpect to the divine ordinances of Providence; and eſpecially in thoſe celebrated lines of the famous Italian, Battiſta Guarini, which are as follow:

> *Se'l peccar' è ſi dolce,*
> *E'l non peccar ſi neceſſario; ò troppo*
> *Imperfetta natura,*
> *Che rèpugni à la legge;*
> *Ò troppo dura legge*
> *Che la natura offendi* *.

* Il Paſtor Fido, atto III. ſcen. iv.

Edward Phillips, in his *Theatrum Poetarum*, and his follower William Winſtanley, in his *Lives of the Engliſh Poets*, have aſcribed another tragedy to our author, named *Marcus Tullius Cicero*, but erroneouſly; this play not being written, at leaſt printed, till many years after his death (26). 6. *Cælica:* containing 109 ſonnets of different meaſures, but moſtly on the topic of love. This is a name our author alſo uſes in his tragedy of Alaham, for the old king's daughter: but he has likewiſe the names of Cynthia, Myra, and Myraphill, in ſome others of theſe ſonnets. 7. *A Letter to an honourable Lady.* 'Tis a long one written in proſe, tho' unfiniſhed; adviſing, how to compoſe herſelf under the irregularities of her huſband, eſpecially under the affliction of having a rival: but it is full, according to his vein, of ſuch refined ſpeculations, that it is well, if ſhe every where could be able to underſtand him. 8. *A Letter of Travel.* This is alſo written in proſe, from his ſeat known by the name of Brook-Houſe, at Hackney, in 1609, to his couſin Grevil Verney, then in France; there is a MS. of it, in the library of Univerſity College in Oxford: it contains directions to him, for his conduct and management during his continuance abroad; and theſe are the contents of this volume: what we have more to obſerve in relation to ſome caſtrations of it, is reſerved for the laſt note we ſhall make upon this article. Several good precepts, maxims, and reflections, have been extracted from the plays and poems above-mentioned, in a late collection of the beſt thoughts, &c. gathered out of our old poets (27). Afterwards, in the beginning of the civil-wars, there was an hiſtorical pamphlet publiſhed in our author's name, diſcourſing of the Earl of Northampton's coming to honour, the riſe of Carr Earl of Somerſet, the breach between the Earl of Eſſex and Lady Frances Howard his counteſs; her marriage with Carr; the Lord Treaſurer Cecil's death; the poiſoning of Sir Thomas Overbury; the death of Prince Henry; the releaſe of Sir Walter Raleigh from the Tower, and other occurrences from the year 1611, to 1616 (28): but neither the ſtyle nor ſentiments being agreeable to Sir Fulke Grevil's manner, and as he mentions not this treatiſe among his other writings, we meet with no confirmation of it's being written by him; and yet, as that period of time contains ſuch remarkable events in the reign of King James the Firſt, the tract has been lately thought worthy of another impreſſion (29). The next piece which appeared in public, with his name to it, was what the editor rather than himſelf ſeems to have entituled, *The Life of the renowned Sir Philip Sidney*; which we have, in this account of the author, been much beholden to, for ſeveral extracts relating to his Lordſhip. It is evidently a work of his own compoſing, though it lay above twenty years hoarded up in his friend's hands before it came abroad (30); and tho' it is expreſſed in the title page, to contain *Sir Philip's principal actions, councils, deſigns, and death, with the true intereſt of England, as it then ſtood, in relation to all foreign princes, and particularly for ſuppreſſing the power of Spain, as ſtated by him; together with a ſhort account of the maxims and policies uſed by Queen Elizabeth in her government:* yet his whole work has not anſwered the great ideas which the world had conceived of his worthy; finding it rather a characteriſtical draught of him, in which the author ſeems to have aimed more at thoſe delicate and courtly forms of addreſs he had been uſed to, in fine ſpun phraſes, and diſtant or general intimations, rather than to be explicite, or plainly particular as a Biographer ſhould be in ſolid matters of fact. But indeed he was in his declining years when he wrote it, from the faint and faded images that remained in his memory, without having any, or very little recourſe to books, or ſuch other memorials from whence he might have enriched his narrative with thoſe hiſtorical requiſites of time, place, and perſon, whereof it is ſo deficient. Hence Anthony Wood ſays, ' It were to be wiſhed, ' that Sir Fulk Grevil's imperfect eſſay might be ſup- ' plied (31):' and Biſhop Nicholſon obſerves, that, ' Sir Fulk has not given the ſtory of his intimate friend ' ſo accurately as we could wiſh, nor as the memory ' of that extraordinary perſon deſerves (32).' But indeed, as he ſeems not to have deſigned a perfect life, however thoſe authors were miſled by the editor's title to believe he had, ſo much as a few ſketches, or outlines, for others to fill up; and in ſhort, as the whole treatiſe, conſiſting of eighteen chapters, whereof a third part does not concern Sir Philip Sidney, appears intended but as ſo many preliminary diſcourſes or parts of a general preface, that was to be only introductory to his poetical works, it may as ſuch paſs for a very proper, polite, and ingenious performance. There is a manuſcript copy of it in the library of Trinity-College in Cambridge,

(*b*) Dugd. War. Vol. II. fol. 767.

Cambridge, which either does not, or ſhould not monopolize the whole diſcouſe under the name of Sir Philip; whoſe life it was apparently enticuled by the editor, as the moſt popular and vendible title he could give it. The laſt book which was ſet forth to the world in our author's name, called his *Remains*, conſiſts of ſome political and philoſophical poems, written much in the vein of others before ſpecified; and having himſelf, in the preceding work, partly mentioned them, we may therefore the leſs doubt their being of the ſame extraction. The Bookſeller, in his advertiſement informs us that, 'When Sir Fulk grew old, he reviſed the poems and 'treatiſes he had writ long before, and, at his death, 'committed them to his friend Mr Michael Malet, 'an aged gentleman, in whom he much confided; 'who intended what the author propoſed, to have 'had them printed all together; but by copies of ſome 'parts of them, which happened into other hands, 'ſome of them came firſt abroad; each of his works 'having had their fate, as they ſingly merit particular 'eſteem, ſo to come into the world at ſeveral times. 'He, to whom they were firſt delivered being dead, 'the truſt of theſe remaining pieces devolved on Sir J. 'M. who hath given me the licenſed copy of them: 'and that the reader may be more fully informed of 'the author and his writings, and how they are re'lated to each other, we muſt refer to that wherein, 'beſides his friend Sir Philip Sidney's life, he gives ac'count of his own, and what he hath written (33).' In theſe poetical Remains, the firſt poem is a *Treatiſe* of Monarchy, which is divided into fifteen ſections, and they were firſt deſigned, or ſome of them, as choruſes to his dramatic compoſitions: they are entituled as follow, Sect. I. Of the beginning of Monarchy. II. The Declination of Monarchy to violence. III. Of weak-minded Tyrants. IV. Cautions againſt theſe weak Extremities. V. Of ſtrong Tyrants. VI. Of the Church. VII. Of Laws. VIII. Of Nobility. IX. Of Commerce. X. Of Crown Revenue. XI. Of Peace. XII. Of War. XIII. The Excellency of Monarchy compared with Ariſtocracy. XIV. The Excellency of Monarchy compared with Democracy. XV. The Excellency of Monarchy compared with Ariſtocracy and Democracy together. The whole fifteen ſections make ſix hundred and ſixty-four ſtanzas of ſix lines. The other poem, or Treatiſe of Religion, conſiſts of an hundred and fourteen ſtanzas, and is not divided into ſections. As for the character of his writings in general, one poetical author has given them a great encomium, in an epigram he has compoſed on his Lordſhip's works, wherein he calls them food for ſtrong minds, while thoſe which are weaker, may find enough of that which is lighter, in other books; and ſays further, that great wits look upon his maſter-ſtrokes with reverence and admiration, though they are not grown into ſuch eſteem with novices, and thoſe of meaner capacity: that his works ſhall endure to poſterity, as reliques of his worth, like ſome rare ſtatue or buſto, the workmanſhip of ſome maſterly hand; whoſe excellences, a Michael Angelo, or a Barnini, had only the ſkill to diſcover, but marble-ſpoilers no taſte of †. Edward Phillips ſays, more eſpecially in regard to his poetry, 'That there is ob'ſervable in all of it, a cloſe, myſterious, and ſententious way of writing, without much regard to ele'gancy of ſtyle, or ſmoothneſs of verſe (34).' But indeed he is often very elegant, both in proſe and verſe, and ſometimes alſo, very obſcure or abſtruſe in both; as a critic of the fair ſex has very truly obſerved; where ſhe ſays, 'Perhaps few men that dealt in poetry 'had more learning or real wiſdom than this noble'man; and yet his ſtyle is ſometimes ſo dark and my'ſterious, I mean it appears ſo to me, that one would 'imagine he choſe rather to conceal than illuſtrate his 'meaning: at other times again, his wit breaks out 'with an uncommon brightneſs, and ſhines, I had al'moſt ſaid without an equal. 'Tis the ſame thing 'with his poetry; ſometimes ſo harſh and uncooth, as 'if he had no ear for muſic; at others, ſo ſmooth 'and harmonious, as if he was maſter of all it's powers '(35).' Thus having given an account of the works that have been publiſhed as our author's, and what others have ſaid of them; we ſhall now recite what he has ſaid himſelf, of thoſe he intended for publication.

This account of his ſaid political and dramatic poems, he introduces, after having informed us how he was diſcouraged from his engagements in foreign ſervices, as was before related, with his determination to take Sir Philip Sidney, in whom the exact image of quiet and action was ſo happily united, and is ſo ſeldom well divided in any, for his pattern: ſo that his compaſs, was one of his principal directions, for ſtealing ſome portions of time from his daily ſervices at home, and employing them in this kind of writing. Then he goes on in theſe words: 'Since my declining age, it is true, 'that I had for ſome years, more leiſure to diſcover 'their imperfections, than care or induſtry to amend 'them; finding in my ſelf, what all men complain of 'in the world, that it is more eaſy to find fault, ex'cuſe, or tolerate, than to examine or reform. The 'works, as you ſee are tragedies, with ſome treatiſes 'annexed. The treatiſes, to ſpeak truly of them, 'were firſt intended to be, for every act a chorus; and 'though not borne out of the preſent matter acted, 'yet, being the largeſt ſubject I could then think upon, 'and no ſuch ſtrangers to the ſcope of the tragedies, 'but that a favourable reader might ſtill find ſome con'ſanguinity between them; I preferring this general 'ſcope of profit, before the ſelf-reputation of being an 'exact artizan in that poetical myſtery, conceived that 'a perſpective into vice, and the improſperities of 'it, would prove more acceptable to every good rea'der's ends, than any bare murmur of diſcontented 'ſpirits againſt their preſent government, or horrible 'periods of exorbitant paſſions among equals. Which 'with humble ſails, after I had once ventured upon 'this ſpreading ocean of images, my apprehenſive 'youth, for lack of a well-touched compaſs, did eaſily 'wander beyond proportion. And in my old age again, 'looking back on them with a father's eye; when I 'conſidered firſt, how poorly the inward natures of 'thoſe glorious names were expreſſed; then, how 'much eaſier it was to excuſe deformities, than 'to cure them, though I found reaſon to change their 'places, yet I could not find in my heart to beſtow 'coſt or care, in altering their light and limited appa'rel in verſe. From hence, to come particularly to 'that treatiſe intitled, *The Declination of Monarchy* *, 'let me beg leave of the favourable reader to beſtow a 'few lines more in the ſtory of this changling, than I 'have done in the reſt; and yet, to uſe no more ſe'rious authority, than the rule of Diogenes, which 'was, to hang the poſie where there is moſt need. 'The firſt birth of that phantaſme was divided into 'three parts, with intention of the author, to be diſ'poſed among their fellows, into three divers acts of 'the tragedies. But, as I ſaid before, when upon a 'ſecond review, they, and the reſt, were all ordained 'to change their places, then did I, like an old and 'fond parent, unlike to get any more children, take 'pains, rather to cover the dandled deformities of theſe 'creatures, with a coat of many ſeams, than carefully 'to drive them away, as birds do their young ones. 'Yet again, when I had in my own caſe, well weighed 'the tenderneſs of that great ſubject, and conſequently 'the nice path I was to walk in, between two extre'mities; but eſpecially the danger, by treading aſide, 'to caſt ſcandal upon the ſacred foundations of monar'chy, together with the fate of many metaphyſical 'Phormio's before me, who had loſt themſelves in 'teaching of kings and princes how to govern their peo'ple; then did this new proſpect dazzle my eyes, and 'ſuſpend my travel for a time. But the familiar ſelf'love, which is more or leſs born in every man, to 'live and die with him, preſently moved me to take 'this bear-whelp up again, and lick it. Wherein, I 'roufing myſelf under the banner of this flattery, went 'about, as a fond mother, to put on richer garments, 'in hope to adorn them. But while clothes were 'in making, I perceived that coſt would but draw 'more curious eyes to obſerve deformities. So that 'from theſe checks, a new counſell aroſe in me, to 'take away all opinion of ſerioufneſs from theſe per'plexed pedigrees; and to this end, careleſsly caſt 'them into that hypocritical figure *Ironia*, wherein 'men commonly, to keep above their works, ſeem to 'make toys of the utmoſt they can do. And yet a'gain, in that confuſed miſt, when I beheld this grave 'ſubject,

* Printed in his Remains as was before obſerved.

recorded that he had for his fee, forty marks, and twelve pounds ſeventeen ſhilling and ſixpence, livery out of the wardrobe; and that his fee, as Under-Treaſurer of England, was an hundred ſeventy-three pounds ſix ſhillings and eight-pence; and livery out of the wardrobe, four pounds ſix and eight-pence (*i*). In 1617 he obtained a ſpecial charter, confirming all ſuch liberties as had been granted to any of his anceſtors, in behalf of the town of Alceſter, upon a new rent of ten ſhillings per annum, then reſerved to the ſaid King, his heirs and ſucceſſors (*k*). And having merited much for his faithful ſervices in his employments, being alſo deſcended of the noble Nevils, Willoughbys, and Beauchamps, as it is expreſſed in his patent, he was by the ſame, bearing date the ninth of January, in the eighteenth year of King James's reign, or 1620, advanced to the dignity of a Baron of this realm, by the title of Lord Brook of Beauchamps-Court (*l*), with limitation of that honour, for lack of iſſue male of his own body, unto Robert Grevile, the ſon of Fulke, ſon of Robert, a younger ſon of the firſt Fulke; which Robert, educated at Cambridge, ſucceeded him in the title, &c. and was killed by one of the royal party at Lichfield, in the beginning of the civil wars, as may be elſewhere read (*m*). According to A. Wood's reckoning, it was in September, 1621, that the Lord Brook was made one of the gentlemen of the King's bedchamber (*n*); and that thereupon, reſigning his Chancellorſhip of the Exchequer, he was ſucceeded therein by Richard Weſton, afterwards Earl of Portland, and Lord-Treaſurer of England (*o*). He was alſo Counſellor of State to King Charles I, and, in the beginning of his reign, was the founder of an Hiſtory Lecture in the
